Important notice

The present document can be downloaded from the
ETSI Search & Browse Standards application.

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format on ETSI deliver repository.

Users should be aware that the present document may be revised or have its status changed, this information is available in the Milestones listing.

If you find errors in the present document, please send your comments to the relevant service listed under Committee Support Staff.

If you find a security vulnerability in the present document, please report it through our Coordinated Vulnerability Disclosure (CVD) program.

Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.
No recommendation as to products and services or vendors is made or should be implied.
No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.
In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.
The content of the PDF version shall not be modified without the written authorization of ETSI.
The copyright and the foregoing restriction extend to reproduction in all media.

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI IPR online database.

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**® and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at 3GPP to ETSI numbering cross-referencing.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

13 Interoperability of IMS Centralized Services (ICS) over II-NNI 61
13.1 General 61
13.2 IMS Centralized Services (ICS) 61

14 Interoperability of IMS Service Continuity over II-NNI 62
14.1 General 62
14.2 PS to CS Single Radio Voice Call Continuity (SRVCC) and Single Radio Video Call Continuity (vSRVCC) 62
14.2.1 Basic PS to CS SRVCC 62
14.2.2 PS to CS SRVCC for calls in alerting phase 62
14.2.3 Using the ATCF based architecture 63
14.2.4 PS to CS SRVCC for originating calls in pre-alerting phase 63
14.2.5 PS to CS SRVCC with the MSC server assisted mid-call feature 63
14.2.6 PS to CS SRVCC for terminating calls in pre-alerting phase 63
14.3 Inter UE Transfer (IUT) 63
14.4 MSC server assisted mid-call feature 64
14.5 CS to PS Single Radio Voice Call Continuity (SRVCC) 65
14.5.1 Basic CS to PS SRVCC 65
14.5.2 CS to PS SRVCC for calls in alerting phase 65
14.5.3 CS to PS SRVCC with the assisted mid-call feature 65
14.6 PS to CS dual radio voice call continuity (DRVCC) 65
14.6.1 Basic PS to CS DRVCC 65

14.6.2 PS to CS DRVCC with the assisted mid-call feature 66
14.6.3 PS to CS DRVCC for calls in alerting phase 66
14.6.4 PS to CS DRVCC for originating calls in pre-alerting phase 66
14.7 CS to PS Dual Radio Voice Call Continuity (DRVCC) 66
14.7.1 Basic CS to PS DRVCC 66
14.7.2 CS to PS DRVCC with the assisted mid-call feature 67
14.7.3 CS to PS DRVCC for calls in alerting phase 67
14.7.4 CS to PS DRVCC for originating calls in pre-alerting phase 67
14.8 PS to PS access transfer 67

15 Presence service 68
15.0 General 68
15.1 Subscription of presence information 68
15.2 Watcher subscribing to Presence List 68
15.3 Subscription to Watcher Information 69
15.4 Subscription to state changes in XML documents 69
15.5 Presence enhancements specified in Open Mobile Alliance (OMA) Release 1.1 69
15.5.1 General 69
15.5.2 OMA subscription of presence information 69
15.5.3 OMA watcher subscribing to Presence List 69
15.5.4 OMA subscription to Watcher Information 70
15.6 Presence enhancements specified in Open Mobile Alliance (OMA) Release 2.0 70
15.6.1 General 70
15.6.2 OMA subscription of presence information 70
15.6.3 OMA watcher subscribing to Presence List 70
15.6.4 OMA subscription to Watcher Information 71
15.6.5 Subscription to state changes in XML documents 71
15.6.6 Void 71
15.6.7 Void 71

16 Messaging service 71
16.1 General 71
16.2 Page-mode messaging 72
16.4 Session-mode messaging 72
16.5 Session-mode messaging conferences 72

17 Optimal Media Routeing 73
17.1 General 73
17.2 OMR related SDP attributes 73
17.3 IP realm names 73

18 Inter-UE transfer (IUT) 73
18.1 General 73
18.2 IUT without establishment of a collaborative session 73
18.3 IUT using a collaborative session 74
18.3.1 Collaborative session of participants of the same subscription 74
18.3.2 Establishment of a collaborative session during session setup 74
18.3.3 Assignment and transfer of control of a collaborative session 75
18.3.4 Collaborative session of participants of different subscriptions 75
18.4 Session replication / media replication 75
18.4.1 Pull mode 75
18.4.2 Push mode 75

19 Roaming Architecture for Voice over IMS with Local Breakout 76

20 Delivery of Media Resource Broker address information 76

21 Overload control 76
21.1 General 76
21.2 Feedback based mechanism 77
21.3 The load filter mechanism 77

22 Delivery of original destination identity 77

23 Telepresence using IMS 77

24 Barring of premium rate numbers 78
25 P-CSCF restoration 78
25.1 General 78
25.2 PCRF or PCF based P-CSCF restoration 78
25.3 HSS or UDM/HSS based P-CSCF restoration 78
26 Resource sharing 78
27 Service access number translation 79
28 Mission critical services 79
28.1 General 79
28.2 Interoperability of mission critical services for communication over II-NNI 80
28.2.1 Mission Critical services session establishment 80
28.2.2 MBMS transmission usage and location procedures 81
28.2.3 Affiliation procedure 82
28.2.3.1 General 82
28.2.3.2 Mandatory mode 82
28.2.3.3 Negotiated mode 83
28.2.4 Conference event package subscription 83
28.2.5 Mission critical services settings 83
28.2.6 Registration procedures 84
28.2.7 Group regrouping 84
28.2.8 Signalling plane messages for mission critical data 85
28.2.9 Functional alias management procedure 85
29 Calling number verification using signature verification and attestation information 85
30 IMS emergency service 86
30.1 IMS emergency registration 86
30.2 IMS emergency session 86
30.3 Next-Generation Pan-European eCall emergency service 86
31 Restricted Local Operator Services (RLOS) 87
32 3GPP PS data off extension 87
33 IMS data channel 87
33.1 General 87
33.2 Support of data channel multiplexing 87
33.3 Support of data channel info 88
The BYE request including the DC-Info header field (defined in 3GPP TS 24.229 [5]) shall be supported at the roaming II-NNI.34 .....Support for signed attestation for emergency and priority IMS sessions 88
34.1 General 88
34.2 Calling number verification using signature verification and attestation information 88
34.3 Priority verification using assertion of priority information 88
35 Rich Call Data (RCD) authentication and verification 89
35.1 General 89
35.2 Calling number and RCD verification using signature verification and attestation information 89
35.3 RCD verification using assertion of RCD info 89
Annex A (informative): Summary of SIP header fields 90
Annex B (informative): Dynamic view of SIP header fields within SIP messages 95
B.1 Scope 95
B.2 Methodology 95
B.3 ACK method 97
B.4 BYE method 98
B.5 CANCEL method 102

B.6 INFO method....103
B.7 INVITE method....107
B.8 MESSAGE method....114

C.1 Scope....152
C.2 Format of option item table....152
C.3 Option item table....152
C.3.0 Supported II-NNI traversal scenarios....152
C.3.1 Option item table common to roaming, non-roaming II-NNI and loopback traversal scenario....153
C.3.2 Option item table specific to roaming II-NNI....164
C.3.3 Option item table specific to non-roaming II-NNI and loopback traversal scenario....167
Annex D (informative): Change history....171
History....175

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The objective of this document is to address the Inter-IMS Network to Network Interface (II-NNI) consisting of Ici and Izi reference points between IMS networks in order to support end-to-end service interoperability.

The present document addresses the issues related to control plane signalling (3GPP usage of SIP and SDP protocols, required SIP header fields) as well as other interconnecting aspects like security, numbering/naming/addressing and user plane issues as transport protocol, media and codecs actually covered in a widespread set of 3GPP specifications. A profiling of the Inter-IMS Network to Network Interface (II-NNI) is also provided.

Charging aspects are addressed as far as SIP signalling is concerned.

IMS emergency session establishment between IMS networks is addressed as far as SIP signalling is concerned.

SIP signalling traversing the NNI between a CSCF and MRB, e.g. for media control or Voice Interworking with Enterprise IP-PBX, and SIP signalling traversing the NNI on the Mr interface between the CSCF and the MRFC, or on the Mr' interface between the AS and MRFC, or on the Rc interface between AS and MRB is not considered in the present release of this specification.

SIP signalling traversing the NNI between an application server and the remaining IMS functional entities (e.g. for MCPTT interface SIP-2 in figure 7.3.1-2 in 3GPP TS 23.280 [200]) is not considered in the present release of this specification.

SIP signalling traversing the NNI between an ISC gateway and an AS in an enterprise network, e.g. for media control and voice interworking with enterprise IP-PBX, on the ISC interface between the ISC gateway and the enterprise network is not considered in the present release of this specification.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.

3 Definitions, symbols and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

example: text used to clarify abstract rules by applying them literally.

IM CN subsystem: (IP Multimedia CN subsystem) comprises of all CN elements for the provision of IP multimedia applications over IP multimedia sessions, as specified in 3GPP TS 22.228 [9].

IP multimedia session: as specified in 3GPP TS 22.228 [9] an IP multimedia session is a set of multimedia senders and receivers and the data streams flowing from senders to receivers. IP multimedia sessions are supported by the IP multimedia CN Subsystem and are enabled by IP connectivity bearers (e.g. GPRS as a bearer). A user can invoke concurrent IP multimedia sessions.

non-roaming II-NNI: the II-NNI between IMS home networks, or, if the Roaming Architecture for Voice over IMS with Local Breakout is used, alternatively the II-NNI between the caller's visited network and the callee's home network.

roaming II-NNI: the II-NNI between a visited IMS network and the IMS home network; for the Roaming Architecture for Voice over IMS with Local Breakout, the loopback traversal scenario is excluded.

loopback traversal scenario: for the Roaming Architecture for Voice over IMS with Local Breakout, the scenario where the II-NNI between the caller's home network and the caller's visited network is being traversed by an initial INVITE request from the caller's home network to the caller's visited network or any subsequent SIP message within the same dialogue on the same call leg.

home-to-visited request on roaming II-NNI: SIP request being sent from the callee's home network to the callee's visited network.

home routeing: the scenario when the caller's home network routes a dialog creating SIP request directly to the callee's home network without using the loopback traversal scenario.

visited-to-home request on roaming II-NNI: SIP request being sent from the caller's visited network to the caller's home network.

home-to-visited response on roaming II-NNI: SIP response being sent from the caller's home network to the caller's visited network.

visited-to-home response on roaming II-NNI: SIP response being sent from the callee's visited network to the callee's home network.

For the purposes of the present document, the following terms and definitions given in 3GPP TS 23.228 [4] apply:

Bootstrap data channel

For the purposes of the present document, the following terms and definitions given in 3GPP TS 23.292 [120] apply:

MSC Server enhanced for ICS

For the purposes of the present document, the following terms and definitions given in 3GPP TS 23.237 [159] apply:

MSC server enhanced for SRVCC

For the purposes of the present document, the following terms and definitions given in 3GPP TS 24.237 [131] apply:

MSC server enhanced for dual radio

For the purposes of the present document, the following term and definition given in 3GPP TS 23.218 [219] apply:

Standalone transaction

3.2 Symbols

For the purposes of the present document, the following symbols apply:

I2	Reference point between the MSC Server enhanced for ICS and the home IMS
Ici	Reference Point between an IBCF and another IBCF belonging to a different IM CN subsystem network
Ix	Reference Point between an IBCF and TrGW
Izi	Reference Point between a TrGW and another TrGW or media handling node belonging to a different IM CN subsystem network
Mi	Reference Point between a BGCF and CSCF
Mm	Reference Point between a CSCF/BGCF/IMS ALG and an IP multimedia network
Mw	Reference Point between a CSCF and another CSCF

Mx Reference Point between a CSCF/BGCF/MSC Server enhanced for ICS/ MSC Server enhanced for SRVCC / MSC server enhanced for dual radio and IBCF

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

18x A SIP status-code in the range 180 through 189
2xx A SIP status-code in the range 200 through 299

TIP	Terminating Identification Presentation
TIR	Terminating Identification Restriction
TRF	Transit and Roaming Function
TrGW	Transition Gateway
UDM	Unified Data Management
vSRVCC	Single Radio Video Call Continuity

4 Overview

Interconnection between two different IM CN subsystems shall be guaranteed in order to support end-to-end service interoperability. For this purpose, Inter-IMS Network to Network Interface (II-NNI) between two IM CN subsystem networks is adopted, according to the assumptions coming from 3GPP TS 23.002 [3] and 3GPP TS 23.228 [4].

NOTE: The end-to-end service interoperability within one IM CN subsystem over the Mi, Mm, Mw and I2 reference points not passing over the Mx reference point as defined in 3GPP TS 23.228 [4] is outside the scope of this document.

Aiming to support the delivery of IMS services between two separated IM CN subsystems, protocol interconnection has to occur:

- at a control plane level, in order that IMS procedures can be supported. In this case the adopted reference point is the Ici; and

- at a user plane level, where media streams are exchanged over the Izi reference point.

IP multimedia sessions are managed by SIP. The transport mechanism for both SIP session signalling and media transport is IPv4 (IETF RFC 791 [2]) or IPv6 (IETF RFC 8200 [7]). The 3GPP profile of SIP defining the usage of SIP within the IM CN subsystem is specified in 3GPP TS 24.229 [5]. Example call flows are provided in 3GPP TR 24.930 [6].

The general interconnection model is shown in figure 4.1.

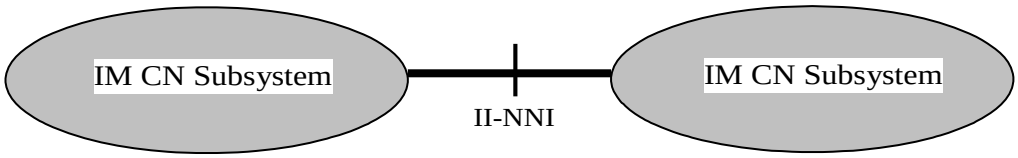

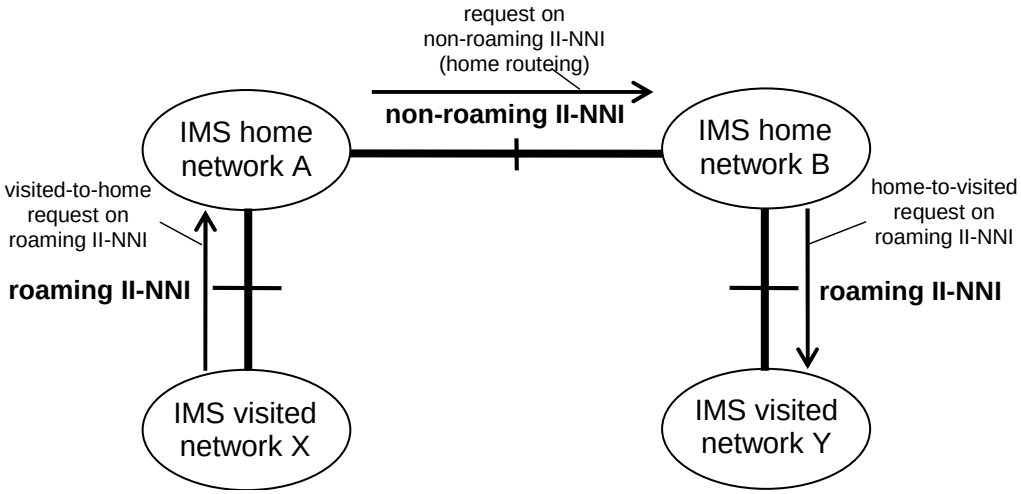

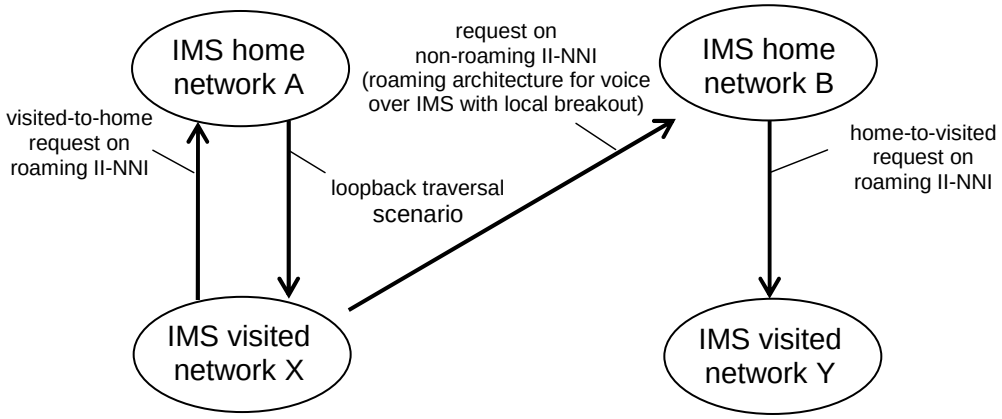

Figure 4.1: Interconnection Model for IM CN subsystems

The II-NNI traversal scenarios in this document are covered in figure 4.2, figure 4.3 and figure 4.4.

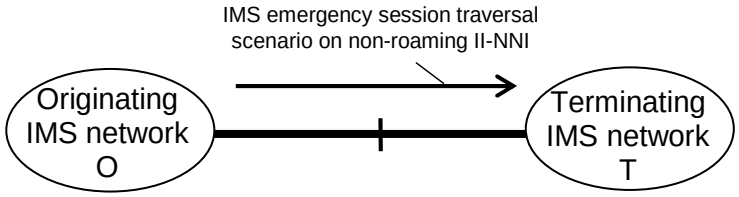

NOTE 1: Any II-NNI can contain intermediate transit network(s). The intermediate transit network can either be an IMS transit network with or without a transit function as specified in 3GPP TS 24.229 [5] or a non-IMS transit network using standards outside the scope of 3GPP.
NOTE 2: IMS home network A and IMS home network B represent the IMS home network on originating side and terminating side respectively.
NOTE 3: IMS visited network X and IMS visited network Y represent the IMS visited network on originating side and terminating side respectively.

Figure 4.2: II-NNI traversal scenarios when P-CSCF is located in visited network and when home routeing is used

NOTE 1: Any II-NNI can contain intermediate transit network(s). The intermediate transit network can either be an IMS transit network with or without a transit function as specified in 3GPP TS 24.229 [5] or a non-IMS transit network using standards outside the scope of 3GPP.
NOTE 2: IMS home network A and IMS home network B represent the IMS home network on originating side and terminating side respectively.
NOTE 3: IMS visited network X and IMS visited network Y represent the IMS visited network on originating side and terminating side respectively.

Figure 4.3: II-NNI traversal scenarios when P-CSCF is located in visited network and when the roaming architecture for voice over IMS with local breakout is used

NOTE 1: Originating IMS network O represents the IMS network to which the originating UE is attached to, and terminating IMS network T represents the IMS network which accomodates a PSAP.
NOTE 2: Originating IMS network O can be a visited IMS network or a home IMS network.
NOTE 3: The E-CSCF is located in the originating IMS network O.
NOTE 4: Any II-NNI between originating IMS network O and terminating IMS network T does not use any specific capabilities for roaming II-NNI, and is treated as non-roaming II-NNI.

Figure 4.4: IMS emergency session traversal scenario on non-roaming II-NNI

The possible functional entities involved in the signalling plane interconnection (IBCF, I-CSCF, P-CSCF, ATCF, S-CSCF, E-CSCF, BGCF, MSC Server enhanced for ICS, MSC server enhanced for SRVCC, MSC server enhanced for dual radio and TRF) and in the user plane interconnection (TrGW) are specified in 3GPP TS 24.229 [5], in 3GPP TS 24.292 [121], 3GPP TS 29.292 [130], 3GPP TS 29.162 [8] and in 3GPP TS 24.237 [131].

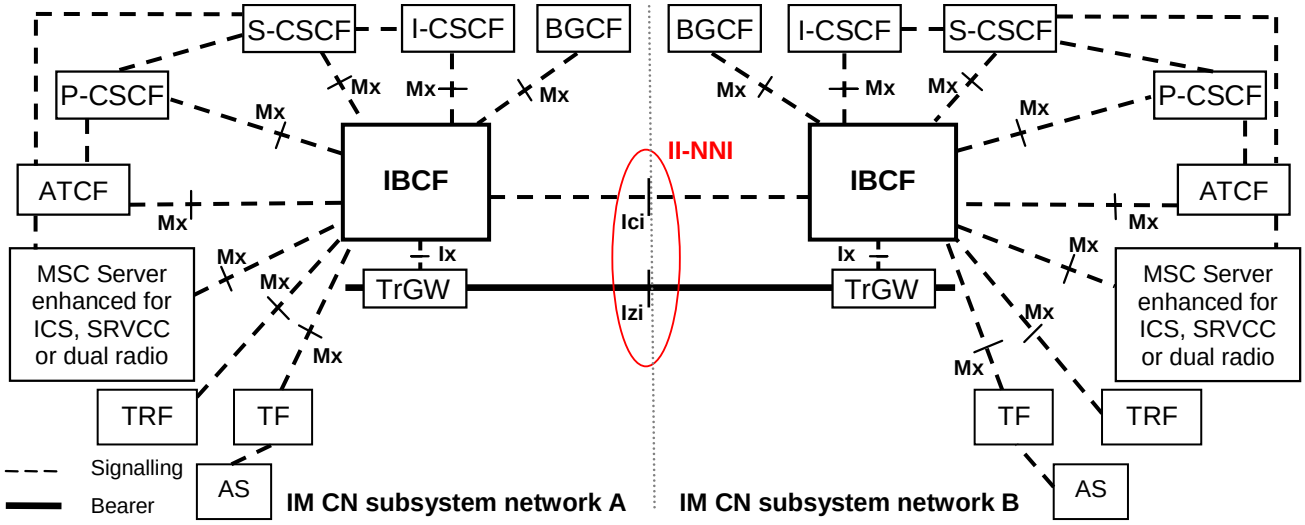

IP Version interworking is described within 3GPP TS 29.162 [8].

Examples of usage of the Inter-IMS Network to Network Interface (II-NNI) for roaming scenarios are described in 3GPP TR 29.949 [192].

5 Reference model for interconnection between IM CN subsystems

5.1 General

Figure 5.1.1 illustrates the architecture diagram given in 3GPP TS 23.228 [4] showing the Inter-IMS Network to Network Interface (II-NNI) between two IM CN subsystem networks.

NOTE: The TRF can reside in a stand-alone entity or can be combined with another functional entity.

Figure 5.1.1: Inter-IMS Network to Network Interface between two IM CN subsystem networks

The protocols over the two reference points Ici and Izi make up the Inter-IMS Network to Network Interface.

The Ici reference point allows IBCFs to communicate with each other in order to provide the communication and forwarding of SIP signalling messaging between IM CN subsystem networks. The Izi reference point allows TrGWs to forward media streams between IM CN subsystem networks.

IMS roaming performed by using II-NNI is considered, when the IBCFs are inserted at the network borders. The applicability of roaming scenario by using II-NNI is based on agreement between the operators.

Whenever the Inter-IMS Network to Network Interface is used to interconnect two IM CN subsystem networks belonging to different security domains, security procedures apply as described in 3GPP TS 33.210 [10].

When an IMS transit network is providing application services and interconnecting two IM CN subsystem networks, as described in 3GPP TS 23.228 [4], interfaces on both sides of the IMS transit network are within the scope of this document.

When two IM CN subsystem networks are interconnected for IMS emergency session establishment as described in 3GPP TS 23.167 [215], the interface between these IM CN subsystem networks is within the scope of this document.

NOTE: Implementations of functional entities at the IMS network edge might include functions that are not described in this Release of the specification, for example fault management that sends SIP OPTIONS requests between the two IBCFs over the Ici. IBCF originated SIP OPTIONS standalone transactions and any other features not described in the main body of this specification are out of scope.

5.2 Functionalities performed by entities at the edge of the network

5.2.1 Interconnection Border Control Function (IBCF)

An IBCF provides application specific functions at the SIP/SDP protocol layer in order to perform interconnection between IM CN subsystem networks by using Ici reference point. According to 3GPP TS 23.228 [4], IBCF can act both as an entry point and as an exit point for the IM CN subsystem network.

The functionalities of IBCF are indicated in the 3GPP TS 23.228 [4] and specified in 3GPP TS 24.229 [5]. They include:

- network topology hiding;
- application level gateway (for instance enabling communication between IPv6 and IPv4 SIP applications, or between a SIP application in a private IP address space and a SIP application outside this address space);
- controlling transport plane functions;
- controlling media plane adaptations;
- screening of SIP signalling information;
- selecting the appropriate signalling interconnect;
- generation of charging data records;
- privacy protection;
- additional routeing functionality; and
- inclusion of a transit IOI in requests when acting as an entry point for a transit network and in responses when acting as an exit point for a transit network.

Based on local configuration, the IBCF performs transit routing functions as specified in 3GPP TS 24.229 [5] clause I.2.

The IBCF acts as a B2BUA when it performs IMS-ALG functionality.

5.2.2 Transition Gateway (TrGW)

According to 3GPP TS 23.002 [3], the TrGW is located at the network borders within the media path and is controlled by an IBCF. Forwarding of media streams between IM CN subsystem networks is applied over Izi reference point.

The TrGW provides functions like network address/port translation and IPv4/IPv6 protocol translation. NAT-PT binds addresses in IPv6 network with addresses in IPv4 network and vice versa to provide transparent routing between the two IP domains without requiring any changes to end points. NA(P)T-PT provides additional translation of transport identifier (TCP and UDP port numbers). The approach is similar to that one described also in 3GPP TS 29.162 [8].

Further details are described in 3GPP TS 23.228 [4].

5.3 Identifying II-NNI traversal scenario

5.3.1 General

The procedures for identifying the II-NNI traversal scenario using the "iotl" SIP URI parameter defined in IETF RFC 7549 [188] is specified in 3GPP TS 24.229 [5].

This specification uses the following II-NNI traversal scenarios when describing requirements at II-NNI:

- the non-roaming II-NNI traversal scenario;
- the roaming II-NNI traversal scenario; and

- the loopback II-NNI traversal scenario.

When a requirement at II-NNI is dependent on direction the roaming II-NNI traversal scenario is further divided into:

- the home-to-visited II-NNI traversal scenario; and
- the visited-to-home II-NNI traversal scenario.

See figure 4.2 and figure 4.3 for information on how the II-NNI traversal scenarios above are applied between networks.

5.3.2 Mapping of the "iotl" SIP URI parameter to II-NNI traversal scenario

Table 5.3.2.1 describes how the "iotl" SIP URI parameter shall be used to identify the II-NNI traversal scenario. The table 5.3.2.1 contains the following items:

- the first column, named "II-NNI traversal scenario", shows the II-NNI traversal scenarios within the scope of this specification; and
- the second column, named "Value of the "iotl" parameter", shows the value of the "iotl" SIP URI parameter as specified in IETF RFC 7549 [188].

Table 5.3.2.1: Mapping of the "iotl" SIP URI parameter to II-NNI traversal scenario

II-NNI traversal scenario	Value of the "iotl" parameter
Non-roaming II-NNI traversal scenario (NOTE 1)	"homeA-homeB" or "visitedA-homeB"
Loopback traversal scenario	"homeA-visitedA"
Roaming II-NNI traversal scenario	"visitedA-homeA" or "homeB-visitedB" (NOTE 2)
Home-to-visited traversal scenario	"homeB-visitedB"
Visited-to-home traversal scenario	"visitedA-homeA"
NOTE 1: This is the default II-NNI traversal scenario, if the "iotl" SIP URI parameter is not present in the Request-URI or in any of the Route header fields in the SIP request and if an implementation dependent method of identifying the II-NNI traversal scenario is not used. NOTE 2: When the requirement at II-NNI is independent on direction any of the "visitedA-homeA" or "homeB-visitedB" can be used to identify the roaming II-NNI traversal scenario.	

6 Control plane interconnection

6.1 Definition of Inter-IMS Network to Network Interconnection

6.1.1 SIP methods and header fields

6.1.1.1 General

The functional entity closest to the border of an II-NNI (see reference model in clause 5) shall provide the capabilities specified for that network element in clause A.2 of 3GPP TS 24.229 [5] with modifications as described in the following clauses.

6.1.1.2 SIP methods

3GPP TS 24.229 [5] defines the methods allowing an IBCF to interconnect to an IBCF placed in another IM CN subsystem.

The following SIP methods are supported on the II-NNI as defined in table 6.1.

The following table is based on table A.5 and table A.163 of 3GPP TS 24.229 [5] and endorsed for this document:

Table 6.1: Supported SIP methods

Item	Method	Ref.	II-NNI	
			Sending	Receiving
1	ACK request	IETF RFC 3261 [13]	m	m
2	BYE request	IETF RFC 3261 [13]	m	m
3	BYE response	IETF RFC 3261 [13]	m	m
4	CANCEL request	IETF RFC 3261 [13]	m	m
5	CANCEL response	IETF RFC 3261 [13]	m	m
5A	INFO request	IETF RFC 6086 [39]	o	o
5B	INFO response	IETF RFC 6086 [39]	o	o
8	INVITE request	IETF RFC 3261 [13]	m	m
9	INVITE response	IETF RFC 3261 [13]	m	m
9A	MESSAGE request	IETF RFC 3428 [19]	o	o
9B	MESSAGE response	IETF RFC 3428 [19]	o	o
10	NOTIFY request	IETF RFC 6665 [20]	c1	c1
11	NOTIFY response	IETF RFC 6665 [20]	c1	c1
12	OPTIONS request	IETF RFC 3261 [13]	m	m
13	OPTIONS response	IETF RFC 3261 [13]	m	m
14	PRACK request	IETF RFC 3262 [18]	m	m
15	PRACK response	IETF RFC 3262 [18]	m	m
15A	PUBLISH request	IETF RFC 3903 [21]	c1	c1
15B	PUBLISH response	IETF RFC 3903 [21]	c1	c1
16	REFER request	IETF RFC 3515 [22]	o	o
17	REFER response	IETF RFC 3515 [22]	o	o
18	REGISTER request	IETF RFC 3261 [13]	c2	c2
19	REGISTER response	IETF RFC 3261 [13]	c2	c2
20	SUBSCRIBE request	IETF RFC 6665 [20]	c1	c1
21	SUBSCRIBE response	IETF RFC 6665 [20]	c1	c1
22	UPDATE request	IETF RFC 3311 [23]	m	m
23	UPDATE response	IETF RFC 3311 [23]	m	m
c1:	In case of roaming II-NNI, the support of the method is m, else o.			
c2:	In case of roaming II-NNI, the support of the method is m, else n/a.			
NOTE:	In the above table, m, o and c and n/a have the meanings indicated in table 6.3			

6.1.1.3 SIP header fields

6.1.1.3.0 General

The IBCF shall provide the capabilities to manage and modify SIP header fields according to clause 5.10 and annex A of 3GPP TS 24.229 [5] with modifications as described in the following clauses.

6.1.1.3.1 Trust and no trust relationship

The IBCF acting as exit point applies the procedures described in clause 5.10.2 of 3GPP TS 24.229 [5] before forwarding the SIP signalling to the IBCF acting as entry point. The IBCF acting as entry point applies the procedures described in clause 5.10.3 of 3GPP TS 24.229 [5].

Additionally, in case there is no trust relationship between the two IM CN subsystems connected by II-NNI, the IBCF applies the procedures described in clause 4.4 of 3GPP TS 24.229 [5], before forwarding the SIP signalling.

These procedures may be utilized on a per header field basis to realize overall trust as well as per service level screening of header fields. Trust relationships and trust domains may be defined by inter-operator agreements for individual services and/or individual SIP header fields.

The management of the SIP header fields (if present) over II-NNI in case of a presence or not of a trust relationship between the two interconnected IM CN subsystems is wrapped up in the following table.

Table 6.2: Management of SIP header fields and parameters over II-NNI in presence or not of a trust relationship

Item	Header field or parameter	Reference	Trust relationship	Not trust relationship
1	P-Asserted-Identity	IETF RFC 3325 [44]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
2	P-Access-Network-Info	IETF RFC 7315 [24]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
3	Resource-Priority	IETF RFC 4412 [78]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
4	History-Info	IETF RFC 7044 [25]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in clause 7 of IETF RFC 7044 [25] and in 3GPP TS 24.229 [5], clause 4.4
5	P-Asserted-Service	IETF RFC 6050 [26]	As specified in 3GPP TS 24.229 [5], clause 4.4 (NOTE 3)	As specified in 3GPP TS 24.229 [5], clause 4.4 (NOTE 3)
6	P-Charging-Vector	IETF RFC 7315 [24]	As specified in 3GPP TS 24.229 [5], clause 5.10	As specified in 3GPP TS 24.229 [5], clause 5.10
7	P-Charging-Function-Addresses (NOTE 4)	IETF RFC 7315 [24]	As specified in 3GPP TS 24.229 [5], clause 5.10	As specified in 3GPP TS 24.229 [5], clause 5.10
8	P-Profile-Key (NOTE 2)	IETF RFC 5002 [64]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
9	P-Private-Network-Indication	IETF RFC 7316 [84]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
10	P-Served-User (NOTE 1, NOTE 2)	IETF RFC 5502 [85]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
11	Reason (in a response)	IETF RFC 6432 [49]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
12	P-Early-Media	IETF RFC 5009 [74]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
13	Feature-Caps	IETF RFC 6809 [143]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
14	Priority (NOTE 6)	IETF RFC 7090 [184]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
15	"iotl" SIP URI parameter (NOTE 7)	IETF RFC 7549 [188]	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
16	"cpc" tel URI parameter (NOTE 5)	3GPP TS 24.229 [5] clause 7.2A.12	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
17	"oli" tel URI parameter (NOTE 5)	3GPP TS 24.229 [5] clause 7.2A.12	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
18	Restoration-Info (NOTE 2)	3GPP TS 24.229 [5] clause 7.2.11	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
19	Relayed-Charge (NOTE 4)	3GPP TS 24.229 [5] clause 7.2.12	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
20	Service-Interact-Info	3GPP TS 24.229 [5] clause 7.2.14	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
21	Cellular-Network-Info	3GPP TS 24.229 [5] clause 7.2.15	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4

22	Response-Source	3GPP TS 24.229 [5] clause 7.2.17	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
23	Attestation-Info (NOTE 8)	3GPP TS 24.229 [5] clause 7.2.18	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
24	Origination-Id (NOTE 8)	3GPP TS 24.229 [5] clause 7.2.19	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
25	Additional-Identity	3GPP TS 24.229 [5] clause 7.2.20	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
26	Priority-Verstat (NOTE 8)	3GPP TS 24.229 [5] clause 7.2.21	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
27	DC-Info	3GPP TS 24.229 [5] clause 7.2.23	As specified in 3GPP TS 24.229 [5], clause 4.4	As specified in 3GPP TS 24.229 [5], clause 4.4
NOTE 1: For a roaming II-NNI, a trust relationship with respect to this header field is required. NOTE 2: This header field is only applicable on a roaming II-NNI. NOTE 3: In addition, value-dependent operator policies may be applied. NOTE 4: This header field is not applicable at II-NNI. NOTE 5: The tel URI parameters "cpc" and "oli" can be included in the URI in the P-Asserted-Identity header field. NOTE 6: Only the "psap-callback" value is part of the trust domain. NOTE 7: The "iotl" SIP URI parameter can be transported in the Request-URI, Route header field, Path header field, Service-Route header field, "+g.3gpp.trf" header field parameter, "+g.3gpp.atcf-mgmt-uri" header field parameter and in the "ATU-STI" parameter in the "application/vnd.3gpp.srvcc-info+xml" MIME body. NOTE 8: This header field is only applicable on non-roaming II-NNI.				

6.1.1.3.2 Derivation of applicable SIP header fields from 3GPP TS 24.229 [5]

For any method in table 6.1, the SIP header fields applicable on the II-NNI are detailed in the corresponding method tables for the UA role and proxy role sending behaviour in annex A of 3GPP TS 24.229 [5]. Unless other information is specified in the normative part of the present specification, the applicability of header fields at the II-NNI can be derived for each method from the corresponding tables in annex A of 3GPP TS 24.229 [5] as follows:

- All header fields not present in the corresponding tables in annex A of 3GPP TS 24.229 [5] or marked as "n/a" in both the "RFC status" and "profile status" columns for the UA role and proxy role sending behaviour of that tables are not applicable at the II-NNI.

NOTE 1: Operators could choose to apply header fields for other SIP extensions on an II-NNI based on bilateral agreements, but this is outside the scope of the present specification.

- All header fields which are marked as "o" in at least one of the "RFC status" or the "profile status" profile columns for the sending behaviour in the corresponding UA role and proxy role tables in annex A of 3GPP TS 24.229 [5] and as "n/a" or "o" in the other such columns are applicable at II-NNI based on bilateral agreement between operators.

- All header fields which are marked as "m" in at least one of the "RFC status" or the "profile status" columns for the sending behaviour in the corresponding UA role or proxy role table in annex A of 3GPP TS 24.229 [5] and as "n/a", "o", or "m" in the other such columns are applicable at the II-NNI.

- If conditions are specified, they are also applicable at the II-NNI and the above rules are applicable to the "n/a", "o" and "m" values within the conditions.

NOTE 2: In the above rules, the RFC profile columns are taken into account in order to enable interworking with non-3GPP networks.

An informative summary of SIP header fields to be used over the II-NNI is proposed in annex A.

6.1.1.3.3 Applicability of SIP header fields on a roaming II-NNI

The following SIP header fields are applicable on a roaming II-NNI but not on a non-roaming II-NNI:

- Authentication-Info
- Authorization
- P-Associated-URI
- P-Called-Party-ID
- P-Preferred-Service
- P-Profile-Key
- P-Served-User
- P-Visited-Network-ID
- Path
- Priority-Share
- Proxy-Authenticate
- Proxy-Authorization
- Resource-Share
- Restoration-Info
- Service-Route
- WWW-Authenticate

6.1.1.3.4 Applicability of SIP header fields on a non-roaming II-NNI

The following SIP header fields are only applicable on a non-roaming II-NNI:

- P-Refused-URI-List;
- Identity;
- Attestation-Info;
- Origination-Id; and
- Priority-Verstat.

6.1.1.4 Notations of the codes

In the table 6.1 the status codes "m", "o", "c" and "n/a" have the following meanings:

Table 6.3: Key to notation codes for SIP messages

Notation code	Notation name	Sending side	Receiving side
m	mandatory	The message shall be supported at II-NNI. Supporting sending a SIP message at the II-NNI means that this message shall be sent over the II-NNI if received from the serving network. It does not imply that network elements inside the serving network or user equipment connected to this network shall support this message.	Supporting receiving a SIP message at the II-NNI means that this message shall be forwarded to the serving network unless the operator's policy is applied as defined in clause 5.10.1 of 3GPP TS 24.229 [5]. It does not imply that network elements inside the serving network or user equipment connected to this network are supporting this message.
o	optional	The message may or may not be supported at II-NNI. The support of the message is provided based on bilateral agreement between the operators.	Same as for sending side.
n/a	not applicable	It is impossible to use/support the message.	It is impossible to use/support the message. This message will be discarded by the IBCF.
c <integer>	conditional	The requirement on the message ("m", "o" or "n/a") depends on the support of other optional or conditional items. <integer> is the identifier of the conditional expression.	Same as for sending side.

6.1.1.5 Modes of signalling

Overlap signalling may be used if agreement exists between operators to use overlap and which method to be used, otherwise enbloc shall be used at the II-NNI.

6.1.2 SDP protocol

6.1.2.1 General

The functional entity closest to the border of an II-NNI (see reference model in clause 5) shall provide the capabilities specified for that network element in clause A.3 of 3GPP TS 24.229 [5].

The "application/sdp" MIME bodies shall be encoded as described in IETF RFC 3261 [13] and in IETF RFC 4566 [147].

The offer/answer model with the SDP as defined in IETF RFC 3264 [146] shall be applied.

The procedures and the SDP rules as defined in IETF RFC 4145 [162] may be applied if media streams with TCP is used.

6.1.3 Major capabilities

This clause contains the major capabilities to be supported over the II-NNI.

The table 6.1.3.1 specifies which capabilities are applicable for II-NNI. The profile status codes within table 6.1.3.1 are defined in table 6.1.3.2.

For the "Basic SIP" capabilities part of table 6.1.3.1, the last column "Profile status over II-NNI" specifies the general status of applicability of the IETF RFC 3261 [13] main mechanisms described in the 2nd column "Capability over the Ici".

For the "Extensions to basic SIP" capabilities part, the last column "Profile status over II-NNI" specifies the general status of applicability of the RFC referenced in the 2nd column "Capability over the Ici".

If necessary, the applicability of RFCs at the II-NNI level is further detailed in the present Technical Specification.

The columns "Reference item in 3GPP TS 24.229 [5] for the profile status" provide informative references for comparison purposes into the UA and Proxy role major capabilities tables in 3GPP TS 24.229 [5], where the capabilities are defined via additional references.

Table 6.1.3.1: Major capabilities over II-NNI

Item	Capability over the Ici	Reference item in 3GPP TS 24.229 [5] for the profile status		Profile status over II-NNI
		UA Role (NOTE 1)	Proxy role (NOTE 2)	
	Basic SIP (IETF RFC 3261 [13])			
1	registrations	1, 2, 2A	-	c2
2	initiating a session	2B, 3, 4	-	m
3	terminating a session	5	3	m
4	General proxy behaviour	-	4, 5, 14, 15	n/a
5	Managing several responses due to forking	9,10	6	m
6	support of indication of TLS connections in the Record-Route header	-	7, 8	n/a
7	Support of authentication	7, 8, 8A	8A	c2
8	Timestamped requests (Timestamp header field)	6	-	m
9	Presence of date in requests and responses (Date header field)	11	9	m
10	Presence of alerting information data (Alert-info header field)	12	10	o
11	Support and handling of the Require header field for REGISTER and other requests or responses for methods other than REGISTER	-	11, 12, 13	m
12	Support and reading of the Supported and Unsupported header fields	-	16, 17, 18	m
13	Support of the Error-Info header field in 3xx - 6xx responses	-	19	o
14	Support and handling of the Organization header field	-	19A, 19B	m
15	Support and handling of the Call-Info header field	-	19C, 19D	m
16	Support of the Contact header field in 3xx response	-	19E	m
16A	Proxy reading the contents of a body or including a body in a request or response	-	19F	n/a
	Extensions to basic SIP			
16B	3GPP TS 24.237 [131]: proxy modifying the content of a body	-	19G	n/a
17	IETF RFC 6086 [39]: SIP INFO method and package framework	13	20	o
17A	IETF RFC 6086 [39]: legacy INFO usage	13A	20A	o
18	IETF RFC 3262 [18]: reliability of provisional responses in SIP (PRACK method)	14	21	m
19	IETF RFC 3515 [22]: the SIP REFER method	15	22	o
19A	IETF RFC 7647 [194]: Clarifications for the Use of REFER with RFC6665	15A	22A	n/a
19B	IETF RFC 7614 [195]: Explicit Subscriptions for the REFER Method	15B	22B	o
20	IETF RFC 3312 [40] and IETF RFC 4032 [41]: integration of resource management and SIP (Preconditions framework)	2C, 16	23	o
21	IETF RFC 3311 [23]: the SIP UPDATE method	17	24	m
22	IETF RFC 3313 [42]: SIP extensions for media authorization (P-Media-Authorization header field)	19	26	n/a
23	IETF RFC 6665 [20]: SIP specific event notification (SUBSCRIBE/NOTIFY methods)	20, 22, 23	27	c1
23A	IETF RFC 7621 [196]: A Clarification on the Use of Globally Routable User Agent URIs (GRUUs) in the Session Initiation Protocol SIP Event Notification Framework	22A	28	n/a
24	IETF RFC 3327 [43]: session initiation protocol extension header field for registering non-adjacent contacts (Path header field)	24	29	c2
25	IETF RFC 3325 [44]: private extensions to the Session Initiation Protocol (SIP) for network asserted identity within trusted networks	25	30	c4
26	IETF RFC 3325 [44]: the P-Preferred-Identity header field extension	-	-	n/a
27	IETF RFC 3325 [44]: the P-Asserted-Identity header field extension	-	-	c4

28	IETF RFC 3323 [34], IETF RFC 3325 [44] and IETF RFC 7044 [25]: a privacy mechanism for the Session Initiation Protocol (SIP) (Privacy header field)	26, 26A, 26B, 26C, 26D, 26E, 26F, 26G, 26H	31, 31A, 31B, 31C, 31D, 31E, 31F, 31G, 31H	m
29	IETF RFC 3428 [19]: a messaging mechanism for the Session Initiation Protocol (SIP) (MESSAGE method)	27	33	o
30	IETF RFC 3608 [45]: session initiation protocol extension header field for service route discovery during registration (Service-Route header field)	28	32	c2
31	IETF RFC 3486 [46]: compressing the session initiation protocol	29	34	n/a
32	IETF RFC 7315 [24]: private header extensions to the session initiation protocol for the 3rd-Generation Partnership Project (3GPP)	30	35	o
32A	IETF RFC 3325 [44]: act as first entity within the trust domain for asserted identity	30A	30A	n/a
32B	IETF RFC 3325 [44]: act as entity within trust network that can route outside the trust network	30B	30B	n/a
32C	IETF RFC 3325 [44]: act as entity passing on identity transparently independent of trust domain	30C	30C	n/a

c1: m in case of roaming II-NNI, else o c2: m in case of roaming II-NNI, else n/a c3: o in case of roaming II-NNI, else n/a c4: m in case of trust relationship between the interconnected networks, else n/a c5: o in case of non-roaming II-NNI and loopback traversal scenario, else n/a c6: o in case of trust relationship between the interconnected networks, else n/a c7: m in case of IMS emergency session traversal scenario on non-roaming II-NNI, else n/a c8: o in case of IMS emergency session traversal scenario on non-roaming II-NNI, else n/a				
NOTE 1: The item numbering corresponds to the one provided in table A.4 in 3GPP TS 24.229 [5]. NOTE 2: The item numbering corresponds to the one provided in table A.162 in 3GPP TS 24.229 [5]. NOTE 3: A common URI namespace is required to apply this feature on the II-NNI. NOTE 4: For the roaming II-NNI the support of this major capability is recommended.				

Table 6.1.3.2: Key to notation codes for major capabilities

Notation code	Notation name	Explanation
m	mandatory	The capability shall be supported at II-NNI. SIP message relating to this capability shall be sent over the II-NNI if received from the serving network, unless they also make use of other unsupported capabilities. SIP headers or other information elements relating to this capability shall be passed over the II-NNI if received from the sending side. This does not imply that network elements inside the serving network or served network or user equipment connected to these networks shall support this capability.
o	optional	The capability may or may not be supported at II-NNI. The support of the capability is provided based on bilateral agreement between the operators.
n/a	not applicable	It is impossible to use/support the capability at the II-NNI.
c <integer>	conditional	The support of the capability ("m", "o" or "n/a") depends on the support of other optional or conditional items. <integer> is the identifier of the conditional expression.

6.1.4 SIP message bodies

The MIME type "application/sdp" and multipart message bodies (multipart/mixed, multipart/related and multipart/alternative) shall be supported according to IETF RFC 5621 [89] over the II-NNI. Other MIME types may be supported over the II-NNI based on agreement between operators.

The SDP message bodies contained in the INVITE request shall not be encrypted over the II-NNI.

NOTE 1: Some MIME types in SIP requests and responses are listed in annex A of 3GPP TS 24.229 [5].

NOTE 2: The multipart message bodies are used for carrying two or more message body types as described in IETF RFC 5621 [89].

NOTE 3: The IBCF can provide the capabilities to examine the length of a SIP message body and take an appropriate action (e.g. reject the request, remove the body) as specified in clause 5.10.6.3 of 3GPP TS 24.229 [5].

NOTE 4: In the INVITE request, the SDP message body is present over the II-NNI, except when the INVITE request without SDP message body is required to provide services (e.g. 3rd party call control).

Table 6.1.4.1: List of MIME bodies

Item	MIME body name	II-NNI requirements in ref (NOTE 1)	Defined in ref (NOTE 2)
1	application/3gpp-ims+xml	-	3GPP TS 24.229 [5], clause 7.6
3	message/cpim	-	IETF RFC 3862 [92]

51	application/vnd.3gpp.mcdata-signalling	clause 28.2.1, clause 28.2.8	3GPP TS 24.282 [211], clause E.1
52	application/vnd.3gpp.mcdata-payload	clause 28.2.8	3GPP TS 24.282 [211], clause E.2
53	application/vnd.3gpp.mcdata-info+xml	clause 28.2.1 clause 28.2.3.2, clause 28.2.3.3, clause 28.2.5, clause 28.2.6, clause 28.2.8	3GPP TS 24.282 [211], clause D.1.4
54	application/vnd.3gpp.mcdata-affiliation-command+xml	clause 28.2.3.3	3GPP TS 24.282 [211], clause D.3.4

NOTE 1: When no specific II-NNI requirements are defined, the II-NNI requirements may be derived from the additional information about MIME types in SIP requests and responses in annex A of 3GPP TS 24.229 [5].
NOTE 2: This column references the definition of the MIME body for informative purpose only, the usage is defined in other specifications not listed here.
NOTE 3 The MIME body contains a string that is coded as described in the IETF RFC 1866 [198].

Applicable characteristics of the SIP message body MIMEs (i.e. the value(s) of Content-Disposition header field and Content-Language header field) over the II-NNI may be a subject of operator agreements.

6.2 Control Plane Transport

6.2.1 General

The control plane transport of the II-NNI shall comply with clause 4.2A of 3GPP TS 24.229 [5].

Support of SCTP as specified in IETF RFC 4168 [27] is optional for an IBCF connected by II-NNI. Nevertheless this option is favourable if the operators would like to improve reliability over the Ici.

6.3 SIP timers

Table 6.3.1 shows values of SIP timers that should be supported at II-NNI. It contains the following items:

- the first column, titled "SIP Timer", shows the timer names as defined in IETF RFC 3261 [13] or IETF RFC 6026 [125];
- the second column reflects the timer meaning as defined in IETF RFC 3261 [13];
- the third column reflects the reference to the proper clause in the IETF RFC 3261 [13] and in 3GPP TS 24.229 [5] and
- the final column lists the values recommended for the functional entities closest to the border of an II-NNI (see reference model in clause 5).

Table 6.3.1 reports information from 3GPP TS 24.229 [5], table 7.7.1. Values between IM CN subsystem elements shown in the second column in 3GPP TS 24.229 [5], table 7.7.1 are applicable for the II-NNI and are reported in the fourth column of table 6.3.1. If there are any differences between table 6.3.1 and 3GPP TS 24.229 [5], table 7.7.1, the information within 3GPP TS 24.229 [5], table 7.7.1 is applicable.

Table 6.3.1: SIP timers at II-NNI

SIP Timer	Meaning	Reference	Recommended values
T1	RTT estimate	[13] clause 17.1.1.1 [5] table 7.7.1	500ms default (see NOTE)
T2	The maximum retransmit interval for non-INVITE requests and INVITE responses	[13] clause 17.1.2.2 [5] table 7.7.1	4s (see NOTE)
T4	Maximum duration a message will remain in the network	[13] clause 17.1.2.2 [5] table 7.7.1	5s (see NOTE)
Timer A	INVITE request retransmit interval, for UDP only	[13] clause 17.1.1.2 [5] table 7.7.1	initially T1
Timer B	INVITE transaction timeout timer	[13] clause 17.1.1.2 [5] table 7.7.1	64*T1
Timer C	proxy INVITE transaction timeout	[13] clause 16.6 [5] table 7.7.1	> 3min
Timer D	Wait time for response retransmits	[13] clause 17.1.1.2 [5] table 7.7.1	> 32s for UDP
		[13] clause 17.1.1.2 [5] table 7.7.1	0s for TCP/SCTP
Timer E	non-INVITE request retransmit interval, UDP only	[13] clause 17.1.2.2 [5] table 7.7.1	initially T1
Timer F	non-INVITE transaction timeout timer	[13] clause 17.1.2.2 [5] table 7.7.1	64*T1
Timer G	INVITE response retransmit interval	[13] clause 17.2.1 [5] table 7.7.1	initially T1
Timer H	Wait time for ACK receipt.	[13] clause 17.2.1 [5] table 7.7.1	64*T1
Timer I	Wait time for ACK retransmits	[13] clause 17.2.1 [5] table 7.7.1	T4 for UDP
		[13] clause 17.2.1 [5] table 7.7.1	0s for TCP/SCTP
Timer J	Wait time for non-INVITE request retransmits	[13] clause 17.2.2 [5] table 7.7.1	64*T1 for UDP
		[13] clause 17.2.2 [5] table 7.7.1	0s for TCP/SCTP
Timer K	Wait time for response retransmits	[13] clause 17.1.2.2 [5] table 7.7.1	T4 for UDP
		[13] clause 17.1.2.2 [5] table 7.7.1	0s for TCP/SCTP
Timer L	Wait time for accepted INVITE request retransmits	[125] clause 8.11 [5] table 7.7.1	64*T1
Timer M	Wait time for retransmission of 2xx to INVITE or additional 2xx from other branches of a forked INVITE	[125] clause 8.11 [5] table 7.7.1	64*T1
Timer N	Wait time for receipt of a NOTIFY request upon sending SUBSCRIBE	[20] clause 4.1.2 [5] table 7.7.1	64*T1
NOTE: As a network option, SIP T1 Timer's value can be extended, along with the necessary modifications of SIP T2 and SIP T4 Timer values, to take into account the specificities of the supported services when the MRFC and the controlling AS are under the control of the same operator and the controlling AS knows, based on local configuration, that the MRFC implements a longer value of SIP T1 Timer.			

7 User plane Interconnection

7.1 Media and Codec

For "end-to-end" media session involving the II-NNI, the SIP/SDP codec negotiation procedure can be applied between IM CN subsystems using different media codecs. It is possible that the end-to-end codec negotiation could fail because no common codec could be supported by the UEs, in particular for voice services.

To enhance interoperability, the IBCF, the MRFC, or other IMS network entities can interfere with the end-to-end codec negotiation to offer additional codec(s) available via transcoding, or to remove codecs. The IBCF can configure an attached TrGW to transcode, and the MRFC can configure an attached MRFP to transcode.

Codecs applicable at the II-NNI may be a subject of interworking agreements.

NOTE 1: Possible codecs which could be used at the II-NNI are described in 3GPP TS 26.114 [11] and ETSI TS 181 005 [12].

NOTE 2: As described in 3GPP TS 24.229 [5], the IETF RFC 4733 [157] is used to encode DTMF events and a payload type number associated with the MIME subtype "telephone-event" is included in a SDP message.

However, to avoid that transcoding is performed several times, applicable codecs at the II-NNI should be restricted as little as possible in the inter-operator agreements. It is not recommended to set only codecs which are not agreed to use by the inter-operator agreement into the SDP of the SIP message at the II-NNI. Whether it is allowed to offer codecs which are not included in the applicable codec list made by inter-operator agreements over the II-NNI is also determined by the inter-operator agreement if necessary.

NOTE 3: Transcoding can be performed in an IMS network serving an SDP offerer or in an IMS network serving an SDP answerer. To avoid that transcoding is performed multiple times, inter-operator agreements can clarify if it is preferred that IMS network serving an SDP offerer (with respect to the initial offer-answer exchange) or IMS network serving an SDP answerer (with respect to the initial offer-answer exchange) modify an SDP offer to offer transcoding. Furthermore, if transcoding is ongoing then subsequent SDP negotiation should avoid adding transcoding steps as specified in 3GPP TS 24.229 [5] Annex T.2 steps G), H), and I).

If the IBCF performs media transcoding control, the IBCF shall apply the related procedures in 3GPP TS 24.229 [5].

7.2 User Plane Transport

The user plane transport of the II-NNI may use the protocols listed in table 7.2.1. Protocols that use UDP, RTP, SCTP or TCP as the underlying transport protocol may be used based on agreements between operators. The used protocols to transport media are negotiated by means of the SDP offer/answer procedure specified in IETF RFC 3264 [146].

Table 7.2.1: Supported transport-level RFCs to be described in SIP/SDP messages

Item	RFC	Title	Support
1	IETF RFC 3550 [151]	RTP: A Transport Protocol for Real-Time Applications	Mandatory
2	IETF RFC 768 [152]	User Datagram Protocol	Mandatory
3	IETF RFC 3551 [153]	RTP Profile for Audio and Video Conferences with Minimal Control	Mandatory
4	IETF RFC 3556 [154]	Session Description Protocol (SDP) Bandwidth Modifiers for RTP Control Protocol (RTCP) Bandwidth	Mandatory
5	IETF RFC 4585 [155]	Extended RTP Profile for Real-time Transport Control Protocol (RTCP) - Based Feedback (RTP/AVPF)	Optional (NOTE 1)
6	IETF RFC 793 [156]	Transmission Control Protocol	Optional (NOTE 2)
7	IETF RFC 8841 [190]	Session Description Protocol (SDP) Offer/Answer Procedures for Stream Control Transmission Protocol (SCTP) over Datagram Transport Layer Security (DTLS) Transport	Optional (NOTE 3)
NOTE 1: Used by MTSI, as indicated in 3GPP TS 26.114 [11]. NOTE 2: Used for MSRP service. NOTE 3: Used for data channel in telepresence using IMS, as indicated in 3GPP TS 24.103 [189].			

8 Numbering, Naming and Addressing

8.1 Numbering, Naming and Addressing for SIP message

The following URI formats in SIP messages may be applied at the Ici as standardized in 3GPP TS 24.229 [5]:

- SIP URI defined in IETF RFC 3261 [13];
- tel URI defined in IETF RFC 3966 [14];
- IM URI defined in IETF RFC 3860 [15]; and
- PRES URI defined in IETF RFC 3859 [16].

According to 3GPP TS 24.229 [5], the IBCF acting as an exit or entry point in the IMS network supports these URI formats. These URI formats shall be supported at the roaming II-NNI. The SIP URI format shall be supported at the non-roaming II-NNI. For the loopback traversal scenario both the SIP URI and the tel URI shall be supported. The tel URI, IM URI and PRES URI formats may be supported at the non-roaming II-NNI based on agreement between operators. For the loopback traversal scenario the IM URI and PRES URI may be supported based on agreement between operators. Other URI formats may be supported over the II-NNI depending on the operator agreements.

A global number as defined in IETF RFC 3966 [14] shall be used in a tel URI or in the user portion of a SIP URI with the user=phone parameter when conveyed via a non-roaming II-NNI or for the loopback traversal scenario in the Request-URI and in the P-Asserted-Identity header field, except when agreement exists between the operators to also allow other kinds of numbers.

NOTE 1: In a SIP URI the user portion of the Request-URI represents a telephone number only if the SIP URI includes the user=phone parameter.

NOTE 2: Agreements can exist between operators to allow local number (e.g. national service numbers, business trunking numbers, or private numbers) at a non-roaming II-NNI or for the loopback traversal scenario. A SIP URI with such a number, a user=phone parameter, and a phone-context parameter agreed between the operators can then be used.

NOTE 3: 3GPP TS 24.229 [5] allows to restrict the number within a SIP Request-URI with user=phone parameter at a non-roaming II-NNI or for the loopback traversal scenario to be a global number (i.e. E.164 in international format) via an appropriate Application Server. Suitable configuration by the operator is needed to achieve the desired modification of the format.

NOTE 4: The allowed phone number formats in the P-Asserted-Identity header field of a served user are configured by the operator. According to 3GPP TS 23.003 [35], international E.164 format is used within a P-Asserted-Identity header field.

NOTE 5: The global number format usage within a SIP Request-URI with the user=phone parameter at a non-roaming II-NNI or for the loopback traversal scenario allows the terminating network to find the called subscriber, via HSS interrogation, without any further number translation and thus improves the success of the interconnection between IMS operators.

NOTE 6: According to 3GPP TS 23.003 [35] and 3GPP TS 24.229 [5], public user identity takes the form of either SIP URI or tel URI.

NOTE 7: Agreements can exist between operators to allow the "Unavailable User Identity" as defined in 3GPP TS 23.003 [35] in the P-Asserted-Identity header field at a non-roaming II-NNI or for the loopback traversal scenario.

The optional "oli" and "cpc" tel URI parameters associated with a tel URI or a SIP URI with user=phone are described in 3GPP TS 24.229 [5] clause 7.2A.12 and can be part of the P-Asserted-Identity header field. Depending on operator agreements, those URI parameters may be supported at the non-roaming II-NNI or for the loopback traversal scenario.

The "sos" SIP URI parameter associated with a URI in the Contact header field of a REGISTER request or a 200 (OK) response to REGISTER request is described in 3GPP TS 24.229 [5]. The "sos" SIP URI parameter shall be supported at the roaming II-NNI.

The "sos" SIP URI parameter associated with the Request-URI for all dialogs and standalone SIP requests described in clause 5.2.10.3 of 3GPP TS 24.229 [5] and shall be supported at the roaming II-NNI.

The "rn" and "npdi" number portability parameters for the tel URI and the SIP URI with user=phone as described within IETF RFC 4694 [75] can be part of the Request-URI. Depending on operator agreements these parameters may be exchanged over the non-roaming II-NNI or for the loopback traversal scenario.

NOTE 7: The "rn" and "npdi" parameters can be used to address the entry point of the terminating operator depending on national rules for number portability.

The "isub" tel URI parameter for the tel URI and the SIP URI with user=phone as described within IETF RFC 3966 [14] can be part of the Request-URI, To header field and P-Asserted-Identity header field. Depending on operator agreements, this URI parameter may be exchanged over the II-NNI.

The "premium-rate" tel URI parameter for the tel URI and the SIP URI with user=phone as described within 3GPP TS 24.229 [5] clause 7.2A.17 can be part of the Request-URI. Depending on operator agreements, this URI parameter may be exchanged at the roaming II-NNI.

The public service identity (PSI) that takes a form of a SIP URI without including a port number as described in clause 13.5 of 3GPP TS 23.003 [35] may be exchanged over the II-NNI depending on operator agreements.

8.2 Numbering, Naming and Addressing for SDP

The following URI format in the SDP exchange may be applied at the Ici as standardized in 3GPP TS 24.229 [5]:

- MSRP URI for a session of instant messages defined in IETF RFC 4975 [17].

This URI format shall be supported at the roaming II-NNI and may be supported at the non-roaming II-NNI and for the loopback traversal scenario based on agreement between operators. Other URI formats may be supported over the II-NNI depending on the operator's agreements.

9 IP Version

The network elements interconnected by means of the II-NNI may support IPv4 only, IPv6 only or both.

The support of one or both of the IP versions is an operator option and should be based on bilateral agreement.

In case IPv4 and IPv6 networks are interconnected, the involved IBCFs and TrGWs shall apply the IP version interworking procedures as indicated in 3GPP TS 29.162 [8].

10 Security

The supported security mechanisms for IP signalling transport over II-NNI interfaces are described in 3GPP TS 33.210 [10].

11 Charging

11.1 General

The accounting information to be supported over the Ici is described in 3GPP TS 32.260 [29] and 3GPP TS 32.240 [183]. It shall be configurable by the operator to use or not the accounting mechanisms provided by the IBCF.

11.2 Inter-operator accounting

For inter-operator accounting, the procedures related to the P-Charging-Vector header field specified in 3GPP TS 24.229 [5] shall be supported over the II-NNI as further specified below.

NOTE 1: The "icid-value" header field parameter identifying a dialog or a transaction outside a dialog is included in the P-Charging-Vector header field as specified in 3GPP TS 24.229 [5]. The "icid-value" header field parameter value of a SIP response to a SIP request is identical to the "icid-value" of the SIP request.

For the roaming II-NNI:

- the P-Charging-Vector header field in the REGISTER requests, initial SIP requests and stand-alone SIP requests, containing the type 1 "orig-ioi" with the entry which identifies the visited network; and

- the P-Charging-Vector header field in the REGISTER responses (except the 100 (Trying) response), SIP responses (except the 100 (Trying) response) to initial SIP requests and SIP stand-alone requests, containing type 1 "orig-ioi" and type 1 "term-ioi" header field parameters with the entries which identify the visited network and the home network respectively;

shall be supported.

NOTE 2: Operator network identifiers populated in the type 1 "orig-ioi" and type 1 "term-ioi" header field parameters need to be exchanged by inter-operator agreements in advance.

For the II-NNI between IMS home networks:

- the P-Charging-Vector header field in the SIP requests containing the type 2 "orig-ioi" with the entry which identifies the home originating network; and

- the P-Charging-Vector header field in the SIP responses (except the 100 (Trying) response) containing the type 2 "orig-ioi" and type 2 "term-ioi" header field parameters with the entries which identify the home originating network and the home terminating network respectively;

may be supported based on inter-operator agreements.

If the roaming architecture for voice over IMS with local breakout is used, for the II-NNI between the caller's visited network and the callee's home network except for the roaming II-NNI:

- the P-Charging-Vector header field in the SIP requests containing the type 2 "orig-ioi" with the entry which identifies the visited originating network; and

- the P-Charging-Vector header field in the SIP responses (except the 100 (Trying) response) containing the type 2 "orig-ioi" and type 2 "term-ioi" header field parameters with the entries which identify the visited originating network and the home terminating network respectively;

may be supported based on inter-operator agreements.

NOTE 3: Operator network identifiers populated in the type 2 "orig-ioi" and type 2 "term-ioi" header field parameters need to be exchanged by inter-operator agreements in advance.

For the II-NNI for the transit scenario:

- the P-Charging-Vector header field in the SIP requests and responses (except the 100 (Trying) response) containing the "transit-ioi" header field parameter with the entry(ies) which identify the transit network(s);

may be supported based on inter-operator agreements.

NOTE 4: Operator network identifiers populated in the value(s) of "transit-ioi" header field parameter need to be exchanged by inter-operator agreements in advance.

11.3 Transfer of IP multimedia service tariff information

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), transfer of IP multimedia service tariff information as specified in 3GPP TS 29.658 [186] may be supported on the II-

NNI between two IMS networks. The support of transfer of IP multimedia service tariff information is based on agreement between operators.

If transfer of IP multimedia service tariff information is supported, the "application/vnd.etsi.sci+xml" MIME body with the Content-Disposition header field set to either "render" with the "handling" parameter set to "optional" or to "signal" with the "handling" parameter set to "required" or "optional" based on operator agreement in 18x responses to the INVITE request and in the INFO request shall be supported at the II-NNI.

12 Supplementary services associated with the IMS multimedia telephony communication service

12.1 General

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), the associated supplementary services of the multimedia telephony communication service may be supported on the II-NNI between the two IMS networks.

The MMTEL communication service is identified by means of the "urn:urn-7:3gpp-service.ims.icsi.mmtel" URN. The "urn:urn-7:3gpp-service.ims.icsi.mmtel" can appear in:

- the media feature tag "g.3gpp.icsi-ref" (specified in 3GPP TS 24.229 [5] clause 7.2A.8) in the Contact header field and the Accept-Contact header field;
- the feature-capability indicator "g.3gpp.icsi-ref" (specified in 3GPP TS 24.229 [5] clause 7.9A.2) in the Feature-Caps header field; and
- the P-Asserted-Service header field.

The support of each associated supplementary service is based on agreement between operators.

If a supplementary service is supported, the related procedures from the 3GPP TS 22.173 [30], the protocol details from the 3GPP TS 24.173 [31] and specifications referenced in the 3GPP TS 24.173 [31] shall be applied with the requirements in the relevant clause below due to the crossing of the II-NNI.

A classification of the importance of supplementary services applicable over the II-NNI is available in the informative annex Db of 3GPP TS 22.173 [30].

NOTE: Agreeing on interworking of entire class of services according to this classification can simplify the cooperation between interconnecting networks but remains optional.

12.2 Malicious Communication IDentification (MCID)

Service specific requirements in accordance with 3GPP TS 24.616 [33] shall be supported over the II-NNI.

The P-Asserted-Identity header field shall be supported at the II-NNI.

The INFO request and the 200 (OK) response to the INFO request containing the "application/vnd.etsi.mcid+xml" MIME body defined in 3GPP TS 24.616 [33] may be supported at the II-NNI.

If a network terminating the dialog supports MCID, the terminating network shall only deliver the MCID request in the "application/vnd.etsi.mcid+xml" MIME body, as specified in the 3GPP TS 24.616 [33], if an agreement to use the MCID supplementary service according to the 3GPP TS 24.616 [33] exists with the network originating the dialog and if the INVITE request received by the terminating network does not contain the information of the originating party.

NOTE: The IBCF and the AS in the terminating network interact to deliver the MCID request only if an agreement to use the MCID supplementary service exists, as specified in 3GPP TS 24.616 [33] and 3GPP TS 24.229 [5].

The originating network and the terminating network shall have a bilateral agreement to support transportation of the minimum information specified in clause 4.5.2.5.0 of the 3GPP TS 24.616 [33] between the networks.

12.3 Originating Identification Presentation (OIP) and Originating Identification Restriction (OIR)

Service specific requirements in accordance with 3GPP TS 24.607 [32] and 3GPP TS 24.229 [5] shall be supported over the II-NNI.

The P-Asserted-Identity header field and the Privacy header field with values "id", "user", "none", "header" and "critical" shall be supported at the II-NNI.

NOTE 1: P-Asserted-Identity header fields are intended for end-to-end operation. Removal of such header fields will impact the intended end-to-end operation between the end users. Where a trust relationship exists on the P-Asserted-Identity header field between the two IMS networks, this header field cannot be altered when passing through the II-NNI according to 3GPP TS 24.229 [5]. Where no trust relationship exists on the P-Asserted-Identity header field between the two IMS networks, the IBCF determines whether to remove the P-Asserted-Identity header field according to procedures described in 3GPP TS 24.229 [5] clause 4.4.2 referencing IETF RFC 3325 [44] and local policy rules for using additional screening capabilities as defined in 3GPP TS 24.229 [5] clause 5.10.6.

NOTE 2: Where a trust relationship exists with the remote domain the From header field will be passed transparently by the IBCF. If a SIP request is received by the terminating network and the application of the OIR service is required with the value "user" for the Privacy header field then the From header field will be anonymised in accordance with IETF RFC 3323 [34] by the terminating network. Where no trust relationship exists with the remote domain, the From header field can be, based on local policy rules, anonymised by the IBCF of the originating network prior passing through the II-NNI using screening capabilities defined in 3GPP TS 24.229 [5] clause 5.10.6 and clause 5.10.8.

NOTE 3: The privacy level "session" and "critical" are not used in the OIP/OIR service as described in 3GPP TS 24.607 [32].

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.4 Terminating Identification Presentation (TIP) and Terminating Identification Restriction (TIR)

Service specific requirements in accordance with 3GPP TS 24.608 [113] shall be supported over the II-NNI.

The P-Asserted-Identity header field and the Privacy header field with values "id", "user", "none", "header" and "critical" shall be supported at the II-NNI.

NOTE: P-Asserted-Identity header fields are intended for end-to-end operation. Removal of such header fields will impact the intended end-to-end operation between the end users. Where a trust relationship exists on the P-Asserted-Identity header field between the two IMS networks, this header field will be passed transparently through the II-NNI according to 3GPP TS 24.229 [5]. Where no trust relationship exists on the P-Asserted-Identity header field between the two IMS networks, the IBCF determines whether to remove the P-Asserted-Identity header field according to procedures described in 3GPP TS 24.229 [5] clause 4.4.2, referencing IETF RFC 3325 [44] and local policy rules for using additional screening capabilities as defined in 3GPP TS 24.229 [5] clause 5.10.6.

The option tag "from-change" defined in IETF RFC 4916 [158], in the Supported header field should be supported at II-NNI.

12.5 Anonymous Communication Rejection (ACR)

Service specific requirements in accordance with 3GPP TS 24.611 [114] shall be supported over the II-NNI.

The P-Asserted-Identity header field and the Privacy header field shall be supported at the II-NNI.

Procedures as described in clause 12.21.4 are used to provide announcements.

The response code 433 (Anonymity Disallowed) shall be supported at the II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.6 Communication DIVersion (CDIV)

Service specific requirements in accordance with 3GPP TS 24.604 [117] shall be supported over the II-NNI.

NOTE 1: The support of the Diversion header field not adopted in 3GPP TS 24.604 [117] requires bilateral agreement between the operators.

Procedures as described in clause 12.21.2 are used to provide announcements.

The Privacy header field with a priv-value set to "history" included in the hi-targeted-to-uri or as a standalone header field shall be supported at the II-NNI.

The History-Info header field as described by 3GPP TS 24.604 [117] containing an "mp" header field parameter as defined by IETF RFC 7044 [25] and a "cause" SIP URI parameter with cause values as defined by the IETF RFC 4458 [58] shall be supported over the II-NNI.

NOTE 2: The networks can have an internal limit in the number of allowed diversions, as described in 3GPP TS 24.604 [117], clause 4.5.2.6.1. To ensure efficiency of this control operators can indicate in their bilateral agreements their own number of allowed communication diversions, the parameter that is used for counting, and the network behavior when the internal limit is reached.

The response code 181 (Call Is Being Forwarded) shall be supported at the II-NNI.

The MESSAGE request procedure for indication of communication diversion to the diverting user as specified in 3GPP TS 24.604 [117] and 3GPP TS 24.229 [5] should be supported at the roaming II-NNI.

NOTE 3: The content of the MESSAGE request is operator specific.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.7 Communication Waiting (CW)

Service specific requirements in accordance with 3GPP TS 24.615 [37] shall be supported over the II-NNI.

The "application/vnd.3gpp.cw+xml" MIME body defined in 3GPP TS 24.615 [37] in the INVITE request shall be supported at the roaming II-NNI.

The Alert-Info header field set to "urn:alert:service:call-waiting" in a 180 (Ringing) response shall be supported at the II-NNI.

As a network option, in case of expiry of the CW timer, the response code 480 (Temporarily Unavailable) including a Reason header field containing the protocol value "Q.850" and the "cause" header field parameter set to "19" shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

Procedures as described in clause 12.21.2 are used to provide announcements.

12.8 Communication HOLD (HOLD)

Service specific requirements in accordance with 3GPP TS 24.610 [36] shall be supported over the II-NNI.

NOTE: The support of an alternative method not adopted in 3GPP TS 24.610 [36] requires bilateral agreement between the operators and is outside the scope of the present document.

Procedures as described in clause 12.21.3 are used to provide announcements.

12.9 Message Waiting Indication (MWI)

Service specific requirements in accordance with 3GPP TS 24.606 [112] shall be supported over the II-NNI.

The event package name "message-summary" in the Event header field according to IETF RFC 6665 [20] and 3GPP TS 24.229 [5] in the SUBSCRIBE request shall be supported at the roaming II-NNI.

The "application/simple-message-summary" MIME body described in 3GPP TS 24.606 [112] in the NOTIFY request shall be supported at the roaming II-NNI.

12.10 Communication Barring (CB)

12.10.1 Incoming Communication Barring (ICB)

Service specific requirements in accordance with 3GPP TS 24.611 [114] shall be supported over the II-NNI.

Procedures as described in clause 12.21.4 are used to provide announcements.

The response code 603 (Decline) including a Reason header field containing the protocol value set to "SIP" and the "cause" header field parameter set to value "603" as described in 3GPP TS 24.611 [114] shall be supported at the II-NNI.

A Reason header field containing the protocol value set to "SIP" and the "cause" header field parameter set to value "603" as described in 3GPP TS 24.611 [114] included in the BYE request shall be supported at the II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

If the option IIFC (Inhibition of Incoming Forwarded Calls) is supported the transparency of information related to communication diversion (see clause 12.6) shall be supported at II-NNI.

12.10.2 Outgoing Communication Barring (OCB)

Service specific requirements in accordance with 3GPP TS 24.611 [114] shall be supported over the II-NNI.

Procedures as described in clause 12.21.4 are used to provide announcements.

The response code 603 (Decline) including a Reason header field containing the protocol value set to "SIP" and the "cause" header field parameter set to "603" as described in 3GPP TS 24.611 [114] shall be supported at the roaming II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.11 Completion of Communications to Busy Subscriber (CCBS)

Service specific requirements in accordance with 3GPP TS 24.642 [109] shall be supported over the II-NNI.

The response code 486 (Busy Here) containing a Call-Info header field with a "purpose" header field parameter set to "call-completion" and the "m" parameter set to "BS" shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

For invoking and revoking of the CCBS supplementary service, announcement procedures shall be used to provide announcements and inband-interaction procedures as described in clause 12.21.3 and clause 12.21.4 shall be supported at the roaming II-NNI.

The response code 199 (Early Dialog Terminated) shall be supported at the roaming II-NNI.

Basic call procedures and in case of a call-completion recall initiated by a REFER request, normal REFER method handling procedures according to 3GPP TS 24.229 [5] shall be supported at the roaming II-NNI.

As a network option the special REFER request handling procedures according to 3GPP TS 24.628 [38] should be supported at the roaming II-NNI.

NOTE 1: 3rd party call control procedures can be used when the REFER request is not supported at the II-NNI.

NOTE 2: A REFER request can be rejected by IBCF based on operator policy as specified by 3GPP TS 24.229 [5].

The SUBSCRIBE and NOTIFY methods according to IETF RFC 6665 [20] and 3GPP TS 24.229 [5] containing the event package name "call-completion" in the Event header field and the Call-Info header field with a purpose parameter set to 'call-completion' and the m parameter set to "BS" shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

The NOTIFY request containing the "application/call-completion" MIME body as defined in IETF RFC 6910 [208] shall be supported at the non-roaming II-NNI.

The Request-URI with the "m" SIP URI parameter with a value set to "BS" and the Call-Info header field with a purpose parameter set to 'call-completion' and the "m" parameter set to "BS" in the INVITE method shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

The Date header field in the 486 (Busy Here) response to the INVITE request shall be supported at the roaming II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.12 Completion of Communications by No Reply (CCNR)

Service specific requirements in accordance with 3GPP TS 24.642 [109] shall be supported over the II-NNI.

The response code 180 (Ringing) containing a Call-Info header field with a purpose parameter set to 'call-completion' and the "m" parameter set to "NR" shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

For invoking and revoking of the CCNR supplementary service, announcement procedures shall be used to provide announcements and inband-interaction procedures as described in clause 12.21.3 and clause 12.21.4 shall be supported at the roaming II-NNI.

The response code 199 (Early Dialog Terminated) shall be supported at the roaming II-NNI.

Basic call procedures and in case of a call-completion recall initiated by a REFER request, normal REFER method handling procedures according to 3GPP TS 24.229 [5] shall be supported at the roaming II-NNI.

As a network option the special REFER request handling procedures according to 3GPP TS 24.628 [38] should be supported at the roaming II-NNI.

NOTE 1: 3rd party call control procedures can be used when the REFER request is not supported at the II-NNI.

NOTE 2: A REFER request can be rejected by IBCF based on operator policy as specified by 3GPP TS 24.229 [5].

The SUBSCRIBE and NOTIFY methods according to IETF RFC 6665 [20] and 3GPP TS 24.229 [5] containing the event package name "call-completion" in the Event header field and the Call-Info header field with a purpose parameter set to 'call-completion' and the m parameter set to "NR" shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

The NOTIFY request containing the "application/call-completion" MIME body as defined in IETF RFC 6910 [208] shall be supported at the non-roaming II-NNI.

The Request-URI with the "m" SIP URI parameter with a value set to "NR" and the Call-Info header field with a purpose parameter set to 'call-completion' and the "m" parameter set to "NR" in the INVITE method shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

The Date header field in the 480 (Temporarily Unavailable) response to the INVITE request shall be supported at the roaming II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.13 Explicit Communication Transfer (ECT)

12.13.1 Consultative and blind transfer

Service specific requirements in accordance with 3GPP TS 24.629 [116] shall be supported over the II-NNI.

The REFER method, the Referred-By header field and the Replaces header field as specified in 3GPP TS 24.629 [116] and the NOTIFY method containing an "application/sipfrag" MIME body shall be supported at the II-NNI for call transfer without third party call control.

The REFER method, the Referred-By header field and the Replaces header field as specified in 3GPP TS 24.629 [116] and the NOTIFY method containing an "application/sipfrag" MIME body shall be supported at the roaming II-NNI for call transfer with third party call control.

The Refer-To URI header parameter in the REFER request containing the Require header field set to "replaces" shall be supported at the roaming II-NNI.

The Replaces header field in the INVITE request shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

12.13.2 Assured transfer

The requirements for the assured transfer are the same as in clause 12.13.1 with the additional requirements in this clause.

An Expires header field parameter in the Refer-To URI of the REFER Request shall be supported at the II-NNI for call transfer without third party call control.

An Expires header field parameter in the Refer-To URI of the REFER Request shall be supported at the roaming II-NNI for call transfer with third party call control.

The Refer-To header field in the REFER request containing the method parameter set to "CANCEL" shall be supported at the II-NNI for call transfer without third party call control.

The Refer-To header field in the REFER request containing the method parameter set to "CANCEL" shall be supported at the roaming II-NNI with third party call control.

12.14 Customized Alerting Tone (CAT)

Service specific requirements in accordance with 3GPP TS 24.182 [129] shall be supported over the II-NNI.

The P-Early-Media header field as described in 3GPP TS 24.182 [129] shall be supported at the II-NNI.

The response code 180 (Ringing) and the response code 183 (Session Progress) including a P-Early-Media header field shall be supported over the II-NNI.

The response code 199 (Early Dialog Terminated) shall be supported over the II-NNI.

The Supported header field and the Require header field with "early-session" option-tag shall be supported at the II-NNI, if the early session model is supported.

An "application/sdp" MIME body with the Content-Disposition header field set to "early-session" as specified in IETF RFC 3959 [96] shall be supported at II-NNI, if the early session model is supported.

A SDP "a=content" attribute with a "g.3gpp.cat" value in the 18x responses shall be supported at the II-NNI.

The SIP INFO mechanism for DTMF transport, as defined in 3GPP TS 24.229 [5] may be supported at the roaming II-NNI.

NOTE 1: For telephone-event based DTMF transport, the DTMF digits are sent as media and not visible in the control plane.

NOTE 2: Multiple methods for DTMF transport are defined in 3GPP TS 24.182 [129].

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.15 Customized Ringing Signal (CRS)

Service specific requirements in accordance with 3GPP TS 24.183 [98] shall be supported over the II-NNI.

An Alert-Info header field in the initial INVITE request containing an URI followed by a URN "urn:alert:service:crs" shall be supported at the II-NNI.

An "application/vnd.3gpp.crs+xml" MIME body in the initial INVITE request shall be supported at the II-NNI.

A SDP "a=content" attribute with a "g.3gpp.crs" value in the PRACK request or the re-INVITE request may be supported at the II-NNI.

The Supported header field and the Require header field with "early-session" option-tag may be supported at the II-NNI.

An "application/sdp" MIME body with the Content-Disposition header field set to "early-session" as specified in IETF RFC 3959 [96] may be supported at II-NNI.

The SIP INFO mechanism for DTMF transport, as defined in 3GPP TS 24.229 [5] may be supported at the II-NNI.

NOTE: For telephone-event based DTMF transport, the DTMF digits are sent as media and not visible in the control plane.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.16 Closed User Group (CUG)

Service specific requirements in accordance with 3GPP TS 24.654 [103] shall be supported over the II-NNI.

The "application/vnd.etsi.cug+xml" MIME body as specified 3GPP TS 24.654 [103] shall be supported in INVITE requests at the II-NNI.

NOTE: If no agreement between the originating network and the terminating network exists to support the CUG supplementary service the INVITE request is rejected as described in IETF RFC 5621 [89] when the "handling" parameter in the Content-Disposition header field of the " application/vnd.etsi.cug+xml" MIME body is set to "required".

The 403 (Forbidden) response, the 603 (Decline) response and the 500 (Server Internal Error) response shall be supported at II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.17 Personal Network Management (PNM)

Service specific requirements in accordance with 3GPP TS 24.259 [99] shall be supported over the II-NNI.

A "g.3gpp.iari_ref" feature tag with the value "urn:urn-7:3gpp-application.ims.iari.pnm-controller" in the Contact header field of the REGISTER request shall be supported at the roaming II-NNI.

A "g.3gpp.iari_ref" feature tag with the value "urn:urn-7:3gpp-application.ims.iari.pnm-controller" in the Accept-Contact header field shall be supported at the II-NNI.

The History-Info header field shall be supported at II-NNI.

A "histinfo" option tag as described by 3GPP TS 24.259 [99] in the Supported header field shall be supported at II-NNI.

12.18 Three-Party (3PTY)

Service specific requirements in accordance with 3GPP TS 24.605 [105] shall be supported over the II-NNI.

NOTE 1: The requirements below can be relaxed by bilateral agreements between operators.

The requirements for the 3PTY supplementary service are the same as for the CONF supplementary service specified in clause 12.19 with the following additional requirement:

- If a REFER request is supported at the II-NNI, a Replaces header field in the header portion of the SIP URI of the Refer-to header field of the REFER request shall also be supported at II-NNI.

NOTE 2: Clause 12.19 describes the conditions for the support of the REFER request.

12.19 Conference (CONF)

Service specific requirements in accordance with 3GPP TS 24.605 [105] and 3GPP TS 24.147 [106] shall be supported over the II-NNI.

NOTE 1: The requirements below can be relaxed by bilateral agreements between operators.

The REFER request shall be supported at the roaming II-NNI in the direction from visited to home network. Based on inter-operator agreement, the REFER request may be supported at the non-roaming II-NNI, for the loopback traversal scenario, and at the roaming II-NNI in the direction from home network to visited network.

NOTE 2: If the REFER request is not supported at the non-roaming II-NNI, for the loopback traversal scenario, or at the roaming II-NNI in the direction from home network to visited network, an attempt of an UE to send the REFER directly to peers to invite them to a conference without involvement of the conference focus can fail over such an II-NNI. However such failures can also occur if a peer is located in a circuit switched network, or if a peer does not support the REFER method. An operator can avoid such failures by configuring an AS to convert the REFER to an INVITE, as detailed in 3GPP TS 24.628 [38]. Information on security risks associated with the REFER request is provided within the "security consideration" of IETF RFC 3515 [22].

NOTE 3: A REFER request can be rejected by IBCF based on operator policy as specified by 3GPP TS 24.229 [5].

The "application/resource-lists+xml" MIME body in the INVITE request shall be supported at the roaming II-NNI.

The Referred-By header field in the INVITE request shall be supported at the II-NNI.

The "isfocus" feature parameter indicated in Contact header field of the INVITE request and in the 200 (OK) response shall be supported at the II-NNI.

The SUBSCRIBE request including the "conference" event package name in the Event header field and the Accept header field containing an "application/conference-info+xml" MIME type shall be supported at the II-NNI.

The NOTIFY request including an "application/conference-info+xml" MIME body shall be supported at the II-NNI.

NOTE 4: The subscription to "conference event" package does not apply at the roaming II-NNI between the MSC Server enhanced for ICS/MSC Server enhanced for SRVCC/MSC server enhanced for dual radio and the IMS network where the communication is anchored.

The Allow-Events header field in the INVITE request with the value "conference" shall be supported at the roaming II-NNI and may be supported at the non-roaming II-NNI and for the loopback traversal scenario.

12.20 Flexible Alerting (FA)

Service specific requirements in accordance with 3GPP TS 24.239 [101] shall be supported over the II-NNI.

The 486 (Busy Here) response code shall be supported at the II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.21 Announcements

12.21.1 General

Announcements may be provided during the establishment of a communication session, during an established communication session or when a communication request is rejected. All of them shall be managed over the II-NNI.

12.21.2 Providing announcements during the establishment of a communication session

Procedures as described in 3GPP TS 24.628 [38] are used to provide announcements during the establishment of a communication session.

There are two methods defined in 3GPP TS 24.628 [38] to provide the announcement:

1) sending an announcement as an early media; and

NOTE 1: There are two methods to use early media for sending the announcement in-band. First method is the gateway model defined by IETF RFC 3960 [150] and 3GPP TS 24.628 [38] annex G, second method is described in 3GPP TS 24.628 [38] annex D.

2) sending an Alert-Info header field in 180 (Ringing) response to the INVITE request.

The P-Early-Media header field authorizing early media as defined in IETF RFC 5009 [74] during the establishment of a communication shall be supported at the II-NNI.

The Alert-Info header field in the 180 (Ringing) response to the INVITE request during the establishment of a communication, should be supported at the II-NNI.

NOTE 2: The IBCF can decide to remove the Alert-Info header field if required by local policy.

12.21.3 Providing announcements during an established communication session

Procedures as described in 3GPP TS 24.628 [38] are used to provide announcements during an established communication session.

In case of provision of an announcement to a user over the II-NNI during an established communication, the Call-Info header field in a re-INVITE request should be supported at the II-NNI.

NOTE 1: An alternative method to provide announcements is to use the existing media stream.

NOTE 2: The IBCF can decide to remove the Call-Info header field if required by local policy.

12.21.4 Providing announcements when communication request is rejected

Procedures as described in 3GPP TS 24.628 [38] are used to provide announcements when a communication request is rejected.

There are three methods defined in3GPP TS 24.628 [38] to provide the announcement:

1) sending an announcement as an early media;

NOTE 1: There are two methods to use early media for sending the announcement in-band. First method is the gateway model defined by IETF RFC 3960 [150] and 3GPP TS 24.628 [38] annex G, second method is described in 3GPP TS 24.628 [38] annex D.

2) sending an Error-Info header field in the 3xx, 4xx, 5xx or 6xx response to the INVITE request; and

3) accept the communication request and then provide the announcement.

NOTE 2: The II-NNI requirements for accepting the communication request and then provide the announcement is not within the scope of this clause.

The P-Early-Media header field authorizing early media as defined in IETF RFC 5009 [74] and the Reason header field with the proper cause value shall be supported at the II-NNI.

The Error-Info header field in the 3xx, 4xx, 5xx or 6xx response to the INVITE request when rejecting the communication request, should be supported at the II-NNI.

NOTE 3: The IBCF can decide to remove the Error-Info header field if required by local policy.

12.22 Advice Of Charge (AOC)

Service specific requirements in accordance with 3GPP TS 24.647 [122] shall be supported over the II-NNI.

The Accept header field with "application/vnd.etsi.aoc+xml" shall be supported at the roaming II-NNI.

The INVITE method containing an "application/vnd.etsi.aoc+xml" MIME body shall be supported at the roaming II-NNI.

Non-100 provisional responses and the 200 (OK) response to the initial INVITE request containing an "application/vnd.etsi.aoc+xml" MIME body shall be supported at the roaming II-NNI.

The INFO method containing an "application/vnd.etsi.aoc+xml" MIME body shall be supported at the roaming II-NNI.

The response code 504 (Server Time-out) shall be supported at the II-NNI.

A Reason header field containing the protocol value set to "SIP" and the "cause" header field parameter set to "504" or containing the protocol value set to "Q.850" and the "cause" header field parameter set to "31" in the BYE method shall be supported at the II-NNI.

An "application/vnd.etsi.aoc+xml" MIME body in the BYE request or the final response to the BYE request shall be supported over the roaming II-NNI.

12.23 Completion of Communications on Not Logged-in (CCNL)

Service specific requirements in accordance with 3GPP TS 24.642 [109] shall be supported over the II-NNI.

The response code 480 (Temporarily unavailable) containing a Call-Info header field with a purpose parameter set to 'call-completion' and the "m" parameter set to "NL" shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

For invoking and revoking of the CCNL supplementary service, announcement procedures shall be used to provide announcements and inband-interaction procedures as described in clause 12.21.3 and clause 12.21.4 shall be supported at the roaming II-NNI.

The response code 199 (Early Dialog Terminated) shall be supported at the roaming II-NNI.

Basic call procedures and in case of a call-completion recall initiated by a REFER request, normal REFER method handling procedures according to 3GPP TS 24.229 [5] shall be supported at the roaming II-NNI.

As a network option the special REFER request handling procedures according to 3GPP TS 24.628 [38] should be supported at the roaming II-NNI.

NOTE: 3rd party call control procedures can be used when the REFER request is not supported at the II-NNI.

The SUBSCRIBE and NOTIFY methods according to IETF RFC 6665 [20] and 3GPP TS 24.229 [5] containing the event package name "call-completion" in the Event header field and the Call-Info header field with a purpose parameter set to 'call-completion' and the "m" parameter set to "NL" shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

The NOTIFY request containing the "application/call-completion" MIME body as defined in IETF RFC 6910 [208] shall be supported at the non-roaming II-NNI.

The Request-URI with the "m" SIP URI parameter with a value set to "NL" and the Call-Info header field with a purpose parameter set to 'call-completion' and the "m" parameter set to "NL" in the INVITE method shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

The Date header field in the 480 (Temporarily Unavailable) response to the INVITE request shall be supported at the roaming II-NNI.

SIP based user configuration as described in 3GPP TS 24.238 [100] shall be supported at the roaming II-NNI.

12.24 Unstructured Supplementary Service Data (USSD)

Service specific requirements in accordance with 3GPP TS 24.390 [163] shall be supported over the II-NNI.

The Recv-Info header field containing the "g.3gpp.ussd" info package name and the "application/vnd.3gpp.ussd" MIME body as described in annex B of 3GPP TS 24.390 [163] in the INVTE request shall be supported at the roaming II-NNI.

The Recv-Info header field containing the "g.3gpp.ussd" info package name in the 200 (OK) response to the INVITE request shall be supported at the roaming II-NNI.

The INFO request containing "application/vnd.3gpp.ussd" MIME body and the Info-Package header field containing the "g.3gpp.ussd" info package name shall be supported at the roaming II-NNI.

The "application/vnd.3gpp.ussd" MIME body in the BYE request shall be supported at the roaming II-NNI.

12.25 Enhanced Calling Name (eCNAM)

Service specific requirements in accordance with 3GPP TS 24.196 [217] shall be supported over the II-NNI.

An initial INVITE request with:

- a display-name in a From header field;
- a display-name in a P-Asserted-Identity header field; and
- Call-Info header field(s),

shall be supported at the roaming II-NNI in the direction from home to visited network.

12.26 Multi-Device and Multi-Identity (MuD and MiD)

12.26.1 Multi-Device (MuD)

Service specific requirements in accordance with 3GPP TS 24.174 [218] shall be supported over the II-NNI.

NOTE: No specific SIP signalling requirements exist for MuD over the II-NNI.

12.26.2 Multi-Identity (MiD)

Service specific requirements in accordance with 3GPP TS 24.174 [218] shall be supported over the II-NNI.

An initial INVITE request, a REFER request and a MESSAGE request with an Additional-Identity header field (as defined in 3GPP TS 24.229 [5] clause 7.2.20) shall be supported over the roaming II-NNI.

13 Interoperability of IMS Centralized Services (ICS) over II-NNI

13.1 General

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), the associated service of the IMS Centralized Services (ICS) may be supported on the II-NNI between two IMS networks. The support of ICS is based on agreement between operators.

If ICS is supported, the related procedures from the 3GPP TS 24.292 [121] and 3GPP TS 29.292 [130] shall be applied with the requirements in the clause 13.2 due to the crossing of the II-NNI.

13.2 IMS Centralized Services (ICS)

Service specific requirements in accordance with 3GPP TS 24.292 [121] and 3GPP TS 29.292 [130] shall be supported over the II-NNI.

The "g.3gpp.ics" media feature tag in the Contact header field as specified in annex B of 3GPP TS 24.292 [121] shall be supported at the roaming II-NNI.

The "g.3gpp.accesstype" media feature tag in the Contact header field as specified in annex B of 3GPP TS 24.292 [121] shall be supported at the roaming II-NNI.

The "g.3gpp.icsi-ref" media feature tag as specified in 3GPP TS 24.229 [5] the value for the IMS Multimedia Telephony Communication Service as specified in 3GPP TS 24.173 [31] shall be supported at the roaming II-NNI.

An Accept-Contact header field and a Reject-Contact header field including the media feature tag "g.3gpp.accesstype" and the media feature tag "g.3gpp.ics" in any combination in the INVITE request shall be supported at the roaming II-NNI.

The Target-Dialog header field in the INVITE request shall be supported at the roaming II-NNI.

The P-Early-Media header field in the INVITE request and in non-100 provisional responses to the INVITE request shall be supported on the roaming II-NNI.

The Reason header field containing the protocol value "Q.850" and the header field parameter "cause" with a various set of values in the CANCEL request, the BYE request and in 4xx responses and 6xx responses to the INVITE request shall be supported at the roaming II-NNI.

The REFER request with the "method" SIP URI parameter set to the value "BYE" or "INVITE" or without the "method" SIP URI parameter in the Refer-To header field as specified in 3GPP TS 24.292 [121] shall be supported at the roaming II-NNI.

The Event header field containing the event package name "conference" and the Accept header field with "application/conference-info+xml" in a SUBSCRIBE request shall be supported at the roaming II-NNI.

The Allow-Event header field with "application/conference-info+xml" in an INVITE request shall be supported at the roaming II-NNI.

The "application/conference-info+xml" MIME body and the Event header field containing the event package name "conference" in a NOTIFY request shall be supported at the roaming II-NNI.

NOTE: Supplementary services as specified in clause 12 can be supported based on agreement between operators.

14 Interoperability of IMS Service Continuity over II-NNI

14.1 General

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), the associated services of the IMS Service Continuity may be supported on the II-NNI between two IMS networks. The support of each service is based on agreement between operators.

If a service is supported, the related procedures from the 3GPP TS 24.237 [131] shall be applied with the requirements in the relevant clause below due to the crossing of the II-NNI.

14.2 PS to CS Single Radio Voice Call Continuity (SRVCC) and Single Radio Video Call Continuity (vSRVCC)

14.2.1 Basic PS to CS SRVCC

Service specific requirements in accordance with 3GPP TS 24.237 [131] shall be supported over the roaming II-NNI.

Media type "video" in SDP m-lines may be supported at the roaming II-NNI. Related SDP can appear in SDP offer answer exchanges within INVITE dialogues at the roaming II-NNI, and in responses to OPTIONS requests at the roaming II-NNI. If media type "video" is supported within INVITE dialogues at the roaming II-NNI, it shall also be supported within responses to OPTIONS requests at the roaming II-NNI.

The "+g.3gpp.srvcc" header field parameter (specified in 3GPP TS 24.237 [131] annex C) in the Feature-Caps header field of the INVITE request and in non-100 provisional responses or the 2xx response should be supported at the roaming II-NNI.

The Reason header field containing the protocol value set to "SIP" and "cause" header field parameter set to "487" in the re-INVITE request shall be supported at the roaming II-NNI.

The Reason header field containing the protocol value set to "SIP" and "cause" header field parameter set to "503" in the BYE request shall be supported at the roaming II-NNI.

Procedures as described in clause 14.4 are used to provide MSC server assisted mid-call features.

14.2.2 PS to CS SRVCC for calls in alerting phase

The requirements for the PS to CS transfer for alerting calls are the same as in clause 14.2.1 with the following additional requirements:

The "g.3gpp.srvcc-alerting" media feature tag (described in 3GPP TS 24.237 [131] annex C) in a Contact header field of the INVITE request and in non-100 provisional responses and the 2xx response to the INVITE request shall be supported at the roaming II-NNI.

The "+g.3gpp.srvcc-alerting" header field parameter (described in 3GPP TS 24.237 [131] annex C) included in a Feature-Caps header field as described in IETF RFC 6809 [143] in an INVITE request and in non-100 provisional responses and the 2xx response to the INVITE request or in the UPDATE request and in the 2xx response to the UPDATE request shall be supported at the roaming II-NNI.

The Target-Dialog header field in the INVITE request shall be supported at the roaming II-NNI.

An INFO request containing the Info-Package header field as specified in IETF RFC 6086 [39] with "3gpp.state-and-event" info package name and an "application/vnd.3gpp.state-and-event-info +xml" XML body shall be supported at the roaming II-NNI.

14.2.3 Using the ATCF based architecture

The requirements for the ATCF based architecture is the same as in clause 14.2.1 with the following additional requirements:

The "+g.3gpp.atcf", the "+g.3gpp.atcf-mgmt-uri" and the "+g.3gpp.atcf-path" header field parameters (specified in 3GPP TS 24.237 [131] annex C) in the Feature-Caps header field of the REGISTER request as described in IETF RFC 6809 [143] shall be supported at the roaming II-NNI.

A MESSAGE request containing the "application/vnd.3gpp.srvcc-info+xml" MIME body as defined in annex D of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

The URIs of SCC ASs authorised to provide PS to CS SRVCC information in the MESSAGE request need to be specified in the roaming agreement.

The Target-Dialog header field in the INVITE request shall be supported at the roaming II-NNI.

14.2.4 PS to CS SRVCC for originating calls in pre-alerting phase

The requirements for the PS to CS transfer for originating calls in pre-alerting phase are the same as in clause 14.2.1 and in clause 14.2.2 with the additional requirements in this clause.

NOTE: If PS to CS transfer for originating calls in pre-alerting phase is supported also PS to CS SRVCC for calls in alerting phase specified in clause 14.2.2 is supported.

The "g.3gpp.ps2cs-srvcc-orig-pre-alerting" media feature tag described in 3GPP TS 24.237 [131] annex C in a Contact header field of the REGISTER request and in the INVITE request shall be supported at the roaming II-NNI.

The "g.3gpp.ps2cs-srvcc-orig-pre-alerting" feature-capability indicator as described in 3GPP TS 24.237 [131] annex C in the Feature-Caps header field as described in IETF RFC 6809 [143] in non-100 provisional responses and the 2xx response to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

14.2.5 PS to CS SRVCC with the MSC server assisted mid-call feature

The requirements for the PS to CS SRVCC with the assisted mid-call feature are the same as in clause 14.2.1 and in clause 14.4.

14.2.6 PS to CS SRVCC for terminating calls in pre-alerting phase

The requirements for the PS to CS transfer for terminating calls in pre-alerting phase are the same as in clause 14.2.1 and in clause 14.2.2 with the additional requirements in this clause.

NOTE: If PS to CS transfer for terminating calls in pre-alerting phase is supported also PS to CS SRVCC for calls in alerting phase specified in clause 14.2.2 is supported.

The "g.3gpp.ps2cs-srvcc-term-pre-alerting" media feature tag described in 3GPP TS 24.237 [131] annex C in a Contact header field of the REGISTER request and in the INVITE request shall be supported at the roaming II-NNI.

The g.3gpp.ps2cs-srvcc-term-pre-alerting feature-capability indicator as described in 3GPP TS 24.237 [131] annex C in the Feature-Caps header field as described in IETF RFC 6809 [143] in non-100 provisional responses and the 2xx response to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

14.3 Inter UE Transfer (IUT)

IUT is described in clause 18.

14.4 MSC server assisted mid-call feature

Service specific requirements in accordance with 3GPP TS 24.237 [131] shall be supported over the roaming II-NNI.

The Contact header field of the REGISTER request and the 200 (OK) response containing "g.3gpp.mid-call" media feature tag as described in annex C of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

The Feature-Cap header field of the REGISTER request and the 200 (OK) response containing "+g.3gpp.mid-call" header field parameter specified in annex C of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

The media feature tag "g.3gpp.accesstype" in the Contact header field of the REGISTER request shall be supported at roaming II-NNI.

A Contact header field of the INVITE request and the 200 (OK) response containing the "g.3gpp.mid-call" media feature tag as described in annex C of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

The "g.3gpp.mid-call" feature-capability indicator according to 3GPP TS 24.237 [131] annex C included in the Feature-Caps header field of the INVITE request, in responses to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

The Recv-Info header field containing the "g.3gpp.mid-call" package name in the INVITE request as specified in annex D of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

An Accept header field in the INVITE request containing the MIME type "application/vnd.3gpp.mid-call+xml" as specified in clause D.1 of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

The "application/vnd.3gpp.mid-call+xml" MIME body described in clause D.1.3 of 3GPP TS 24.237 [131] in the INVITE request shall be supported at the roaming II-NNI.

The SUBSCRIBE request containing a "g.3gpp.mid-call" media feature tag in the Contact header field shall be supported at the roaming II-NNI.

NOTE: The "g.3gpp.mid-call" media feature tag in the Contact header field of the SUBSCRIBE request may appear if the CONF supplementary service is supported at roaming II-NNI as described in clause 12.9.

An INFO request containing the Info-Package header field as specified in IETF RFC 6086 [39] with "3gpp.state-and-event" info package name and an "application/vnd.3gpp.state-and-event-info+xml" XML body shall be supported at the roaming II-NNI.

A REFER request sent inside an existing SIP dialog containing the "application/vnd.3gpp.mid-call+xml" MIME body specified in the clause D.1.3 of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

The Contact header field of the REFER request and the 2xx response to the request containing "g.3gpp.mid-call" media feature tag as described in annex C of 3GPP TS 24.237 [131] shall be supported at the roaming II-NNI.

The Target-Dialog header field in the INVITE request shall be supported at the roaming II-NNI.

The communication HOLD supplementary service as specified in clause 12.8 for the roaming II-NNI shall be supported.

The Allow-Event header field with "application/conference-info+xml" in an INVITE request shall be supported at the roaming II-NNI.

The Event header field containing the event package name "conference" and the Accept header field with "application/conference-info+xml" in a SUBSCRIBE request shall be supported at the roaming II-NNI.

The "application/conference-info+xml" MIME body and the Event header field containing the event package name "conference" in a NOTIFY request shall be supported at the roaming II-NNI.

The REFER request with the "method" header field parameter set to the value "BYE" sent in the Refer-To header field shall be supported at the roaming II-NNI.

14.5 CS to PS Single Radio Voice Call Continuity (SRVCC)

14.5.1 Basic CS to PS SRVCC

Service specific requirements in accordance with 3GPP TS 24.237 [131] shall be supported over the roaming II-NNI.

Requirements for the ATCF based architecture at II-NNI as described in clause 14.2.3 shall be supported at the roaming II-NNI.

Requirements for IMS Centralized Services (ICS) at II-NNI as described in clause 13 shall be supported at the roaming II-NNI.

The "g.3gpp.cs2ps-srvcc" and "g.3gpp.path" media feature tags in the Contact header field of the REGISTER request shall be supported at the roaming II-NNI.

The Feature-Caps header field with the "g.3gpp.cs2ps-srvcc" feature-capability indicator in the REGISTER request shall be supported at the roaming II-NNI.

The MESSAGE request containing the Accept-Contact header field with the "g.3gpp.path" media feature tag and the "application/vnd.3gpp.srvcc-ext+xml" MIME body shall be supported at the roaming II-NNI.

The URIs of SCC ASs authorised to provide CS to PS SRVCC information in the MESSAGE request need to be specified in the roaming agreement.

14.5.2 CS to PS SRVCC for calls in alerting phase

The requirements for the CS to PS SRVCC for calls in alerting phase are the same as in clause 14.5.1 with the following additional requirement:

The "g.3gpp.cs2ps-srvcc-alerting" media feature tag in the Contact header field of the REGISTER request shall be supported at the roaming II-NNI.

The REFER request sent inside an existing SIP dialog with the Refer-Sub header field and the "application/vnd.3gpp.state-and-event-info+xml" MIME body shall be supported at the roaming II-NNI.

The INFO request with the Info-Package header field containing the "g.3gpp.state-and-event" package name and the "application/vnd.3gpp.state-and-event-info+xml" MIME body shall be supported at the roaming II-NNI.

14.5.3 CS to PS SRVCC with the assisted mid-call feature

The requirements for the CS to PS SRVCC with the assisted mid-call feature are the same as in clause 14.5.1 with the following additional requirement:

The "application/vnd.3gpp.access-transfer-events+xml" MIME body in the REFER request shall be supported at the roaming II-NNI.

14.6 PS to CS dual radio voice call continuity (DRVCC)

14.6.1 Basic PS to CS DRVCC

Service specific requirements in accordance with 3GPP TS 24.237 [131] shall be supported over the roaming II-NNI.

The "g.3gpp.dynamic-stn" media feature tag according to 3GPP TS 24.237 [131] annex C included in the Contact header field of the INVITE request and in responses to the INVITE request shall be supported at the roaming II-NNI.

The "g.3gpp.dynamic-stn" feature-capability indicator according to 3GPP TS 24.237 [131] annex C included in the Feature-Caps header field of the INVITE request, in responses to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

NOTE 1: The g.3gpp.dynamic-stn feature capability indicator from the home network contains an STN. The STN is a tel URI that the UE will use when establishing the call in CS. If the STN is known by the visited network the STN can also be used to identify that a call from a UE is a PS to CS dual radio access transfer allowing the visited network to suppress services and announcement that otherwise is executed during the CS call setup. The value of the tel URI STN needs to be communicated between operators when DRVCC is supported.

The requirements for providing IMS Centralized Services (ICS) as described in clause 13.2 should be supported at the roaming II-NNI.

NOTE 2: The support of IMS Centralized Services (ICS) as described in clause 13.2 is only needed if MSC servers in the visited network are enhanced for ICS.

14.6.2 PS to CS DRVCC with the assisted mid-call feature

The requirements for the PS to CS DRVCC with the assisted mid-call feature are the same as in clause 14.6.1 and in clause 14.4.

NOTE: Transfer of an additional call requires the use of IMS Centralized Services (ICS).

14.6.3 PS to CS DRVCC for calls in alerting phase

The requirements for the PS to CS DRVCC for calls in alerting phase are the same as in clause 14.6.1 with the additional requirements in this clause.

The "g.3gpp.drvcc-alerting" media feature tag according to 3GPP TS 24.237 [131] annex C and IETF RFC 3840 [56] included in the Contact header field of the INVITE request and in responses to the INVITE request shall be supported at the roaming II-NNI.

The "g.3gpp.drvcc-alerting" feature-capability indicator according to 3GPP TS 24.237 [131] annex C included in the Feature-Caps header field of the INVITE request, in responses to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

A 488 (Not Acceptable Here) response to the INVITE request without an SDP body shall be supported at the roaming II-NNI.

14.6.4 PS to CS DRVCC for originating calls in pre-alerting phase

The requirements for the PS to CS DRVCC for originating calls in pre-alerting phase are the same as in clause 14.6.1 and in clause 14.6.3 with the additional requirements in this clause.

The "g.3gpp.ps2cs-drvcc-orig-pre-alerting" media feature tag according to 3GPP TS 24.237 [131] annex C and IETF RFC 3840 [56] in the Contact header field of the INVITE request shall be supported at the roaming II-NNI.

The "g.3gpp.ps2cs-drvcc-orig-pre-alerting" feature-capability indicator according to 3GPP TS 24.237 [131] annex C included in the Feature-Caps header field of the INVITE request, in responses to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

14.7 CS to PS Dual Radio Voice Call Continuity (DRVCC)

14.7.1 Basic CS to PS DRVCC

Service specific requirements in accordance with 3GPP TS 24.237 [131] shall be supported over the roaming II-NNI.

The requirements for providing IMS Centralized Services (ICS) as described in clause 13.2 should be supported at the roaming II-NNI.

NOTE: The support of IMS Centralized Services (ICS) as described in clause 13.2 is only needed if MSC servers in the visited network are enhanced for ICS.

14.7.2 CS to PS DRVCC with the assisted mid-call feature

The requirements for the PS to CS DRVCC with the assisted mid-call feature are the same as in clause 14.7.1 and in clause 14.4.

14.7.3 CS to PS DRVCC for calls in alerting phase

The requirements for the CS to PS DRVCC for calls in alerting phase are the same as in clause 14.7.1 with the additional requirements in this clause.

The "g.3gpp.cs2ps-drvcc-alerting" media feature tag as described included in the Contact header field of the INVITE request and in responses to the INVITE request shall be supported at the roaming II-NNI.

The "g.3gpp.cs2ps-drvcc-alerting" feature-capability indicator according to 3GPP TS 24.237 [131] annex C included in the Feature-Caps header field of the INVITE request, in responses to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

A 488 (Not Acceptable Here) response to the INVITE request without an SDP body shall be supported at the roaming II-NNI.

14.7.4 CS to PS DRVCC for originating calls in pre-alerting phase

The requirements for the CS to PS DRVCC for originating calls in pre-alerting phase are the same as in clause 14.7.1 and in clause 14.7.3 with the following additional requirements:

The "g.3gpp.cs2ps-drvcc-orig-pre-alerting" media feature tag according to 3GPP TS 24.237 [131] annex C and IETF RFC 3840 [56] in the Contact header field of the INVITE request shall be supported at the roaming II-NNI.

The "g.3gpp.cs2ps-drvcc-orig-pre-alerting" feature-capability indicator according to 3GPP TS 24.237 [131] annex C included in the Feature-Caps header field of the INVITE request, in responses to the INVITE request and in any target refresh request and in non-100 provisional responses or the 2xx response to target refresh request shall be supported at the roaming II-NNI.

14.8 PS to PS access transfer

Service specific requirements in accordance with 3GPP TS 24.237 [131] clause 10 shall be supported over the roaming II-NNI.

The "g.3gpp.pstops-sti" media feature tag in the Contact header field of the REGISTER request shall be supported at the roaming II-NNI.

The INVITE request containing:

a) the "g.3gpp.ics" media feature tag; and

b) either:

- the Replaces header field and the option tag value "replaces" in the Require header field; or
- the Target-Dialog header field and the option tag value "tdialog" in the Require header field,

shall be supported at the roaming II-NNI.

A Recv-Info header field containing the "g.3gpp.state-and-event" info package name in the 183 (Session Progress) response shall be supported at the roaming II-NNI.

The INFO request containing the Info-Package header field as specified in IETF RFC 6086 [39] with the "g.3gpp.state-and-event" info package name and the "application/vnd.3gpp.state-and-event-info+xml" XML body shall be supported at the roaming II-NNI.

15 Presence service

15.0 General

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), the associated functions of the Presence service may be supported on the II-NNI between two IMS networks. The support of each function is based on agreement between operators.

If a function is supported, the related procedures from the 3GPP TS 24.141 [132] shall be applied with the requirements in the relevant clause below due to the crossing of the II-NNI.

15.1 Subscription of presence information

Service specific requirements in accordance with 3GPP TS 24.141 [132] shall be supported over the II-NNI.

A PUBLISH request identifying the presentity using a SIP URI, a tel URI or a PRES URI and the Event header field with the value "presence" and containing an "application/pidf+xml" MIME body shall be supported at the roaming II-NNI.

Additionally to the above and in any combination, a Content-Type header field with the value "multipart/related" and an "application/pidf-diff+xml" MIME body can be included in the PUBLISH request and shall be supported at the roaming II-NNI.

A SUBSCRIBE request with a Request-URI containing a SIP URI, a tel URI or a pres URI, the Event header field set to "presence" and Accept header fields with values "application/pidf+xml" and "multipart/related" shall be supported at the II-NNI.

Additionally to the above an "application/simple-filter+xml" MIME body can appear in the SUBSCRIBE request and shall be supported at the II-NNI.

Additionally to the above and in any combination a Content-Type header field with the value "multipart/mixed" and an "application/resource-lists" MIME body can appear in the SUBSCRIBE request and shall be supported at the roaming II-NNI.

A NOTIFY request including an Event header field with the value "presence" and an "application/pidf" MIME body shall be supported at the II-NNI.

NOTE: The NOTIFY request can contain substantial amount of data and TCP is expected to be used as the transport protocol.

The Allow-Events header field with the value "presence" shall be supported at the roaming II-NNI and may be supported at the non-roaming II-NNI.

15.2 Watcher subscribing to Presence List

Service specific requirements in accordance with 3GPP TS 24.141 [132] shall be supported over the II-NNI.

The requirements for the watcher subscribing to the Presence List are the same as subscribing to presence information as specified in clause 15.1 with the following additional requirement:

- The SUBSCRIBE request containing a Supported header field with the value "eventlist" shall also be supported at the roaming II-NNI;
- The SUBSCRIBE request containing a Accept header field with the value "application/rlmi+xml" shall be supported at the roaming II-NNI;
- A response code 200 (OK) to the SUBSCRIBE request containing the Require header field with the value "eventlist" shall be supported at the roaming II-NNI; and
- A NOTIFY message containing the "multipart/related" content type and an "application/rlmi+xml" MIME body shall be supported at the roaming II-NNI.

NOTE: The NOTIFY request can contain substantial amount of data and TCP is expected to be used as the transport protocol.

15.3 Subscription to Watcher Information

Service specific requirements in accordance with 3GPP TS 24.141 [132] shall be supported over the II-NNI.

A SUBSCRIBE request containing an Event header field with the value "presence.wininfo" and an Accept header field with value "application/watcherinfo+xml" shall be supported at the roaming II-NNI.

A NOTIFY request containing the Event header field with the value "presence.wininfo" and an "application/watcherinfo+xml" MIME body shall be supported at the roaming II-NNI.

NOTE: The NOTIFY request can contain substantial amount of data and TCP is expected to be used as the transport protocol.

The Allow-Events header field with the value "presence.wininfo" shall be supported at the roaming II-NNI and may be supported at the non-roaming II-NNI.

15.4 Subscription to state changes in XML documents

Service specific requirements in accordance with 3GPP TS 24.141 [132] shall be supported over the II-NNI.

A SUBSCRIBE request containing the Event header field with the value "xcap-diff" and parameters specified in IETF RFC 5875 [134], using the updated procedures from IETF RFC 6665 [20], shall be supported at the roaming II-NNI.

A NOTIFY request containing the Event header field with the value "xcap-diff", the Content-Type header field with the value "multipart/mixed" and any MIME body shall be supported at the roaming II-NNI.

NOTE: The NOTIFY request can contain substantial amount of data and TCP is expected to be the transport protocol.

The Allow-Events header field with the value "xcap-diff" shall be supported at the roaming II-NNI and may be supported at the non-roaming II-NNI.

For backward compatible reasons the Event header field with the value "ua-profile" should be supported at the roaming II-NNI.

15.5 Presence enhancements specified in Open Mobile Alliance (OMA) Release 1.1

15.5.1 General

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), the associated functions of the OMA Presence service may be supported on the II-NNI between two IMS networks. The support of each function is based on agreement between operators.

If a function of the OMA Presence Release 1.1 is supported, the related procedures from the OMA-TS-Presence_SIMPLE-V1_1_1 [142] shall be applied with the requirements in the relevant clause below due to the crossing of the II-NNI.

15.5.2 OMA subscription of presence information

The requirements for the OMA subscription of presence information are the same as clause 15.1.

15.5.3 OMA watcher subscribing to Presence List

The requirements for the OMA watcher subscribing to Presence List are the same as clause 15.2.

15.5.4 OMA subscription to Watcher Information

The requirements for the OMA subscription to Watcher Information are the same as clause 15.3.

15.6 Presence enhancements specified in Open Mobile Alliance (OMA) Release 2.0

15.6.1 General

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), the associated functions of the OMA Presence service may be supported on the II-NNI between two IMS networks. The support of each function is based on agreement between operators.

If a function of the OMA Presence Release 2.0 is supported, the related procedures from the OMA-TS-Presence_SIMPLE-V2_0 [138] shall be applied with the requirements in the relevant clause below due to the crossing of the II-NNI.

15.6.2 OMA subscription of presence information

The requirements for the OMA subscription of presence information are the same as clause 15.5.2 with the following additional requirement:

- An Allow header field containing the value "REFER" in a PUBLISH request shall be supported at the II-NNI.
- A Policy-Contact header field defined in IETF RFC 6794 [133] in a 488 (Not Acceptable Here) response to a PUBLISH request shall be supported at the II-NNI.

NOTE: Conveyance of this header field in a 488 response to a PUBLISH request is not supported by IETF RFC 6794 [133] but is required to support Presence services according to OMA specifications OMA-TS-Presence_SIMPLE-V2_0 [138].

- A Suppress-If- Match header field in a SUBSCRIBE request shall be supported at the II-NNI.
- An Accept-Encoding header field containing the value "gzip" in a SUBSCRIBE request shall be supported at the II-NNI.
- An "application/vnd.oma.suppnot+xml" MIME body in a SUBSCRIBE request shall be supported at the II-NNI.
- A Content-Encoding header field containing the value "gzip" in a NOTIFY request shall be supported at the II-NNI.
- A Content-Type header field with the value "multipart/mixed" in a SUBSCRIBE request shall be supported at the II-NNI.
- A Refer-To header field with the value "method=PUBLISH?event=presence", a Refer-Sub header field and a SIP-If-Match header field in a REFER request shall be supported at the II-NNI.

15.6.3 OMA watcher subscribing to Presence List

The requirements for the OMA watcher subscribing to Presence List are the same as clause 15.5.3 with the following additional requirements:

- A Suppress-If-Match header field in a SUBSCRIBE request shall be supported at the II-NNI.
- An Accept-Encoding header field containing the value "gzip" in a SUBSCRIBE request shall be supported at the II-NNI.
- An "application/vnd.oma.suppnot+xml" MIME body in a SUBSCRIBE request shall be supported at the II-NNI.
- An "application/resource-lists+xml" MIME body in a SUBSCRIBE request shall be supported at the II-NNI.

- A Content-Type header field with the value "multipart/mixed" in a SUBSCRIBE request shall be supported at the II-NNI.
- A NOTIFY request with a Content-Encoding header field containing the value "gzip" shall be supported at the II-NNI.

15.6.4 OMA subscription to Watcher Information

The requirements for the OMA subscription to Watcher Information are the same as clause 15.5.4 with the following additional requirements:

- Indicating support for "multipart/mixed" and "application/simple-filter+xml" in the Accept header field of the SUBSCRIBE request shall be supported at the II-NNI.
- Multiple "application/simple-filter+xml" MIME bodies in the NOTIFY request shall be supported at the II-NNI.
- A Suppress-If-Match header field in a SUBSCRIBE request shall be supported at the II-NNI.
- An Accept-Encoding header field containing the value "gzip" in the SUBSCRIBE request shall be supported at the II-NNI.
- A Content-Type header field with the value "multipart/mixed" in a NOTIFY request shall be supported at the II-NNI.
- A Content-Encoding header field with the value "gzip" in a NOTIFY request shall be supported at the II-NNI.
- A Refer-To header field with the value "method=SUBSCRIBE?Event=presence.winfo" and a Refer-Sub header field in a REFER request sent to a Watcher Information Subscriber shall be supported at the II-NNI.

15.6.5 Subscription to state changes in XML documents

The requirements for the OMA watcher subscribing to Presence List are the same as clause 15.4 with the following additional requirements:

- An Accept header field indicating the support for "application/xcap-diff+xml", "application/rlmi+xml" and "multipart/related" in a SUBSCRIBE request shall be supported at the II-NNI.
- An Accept-Encoding header field with the value "gzip" in a SUBSCRIBE request shall be supported at the II-NNI.
- A Content-Encoding header field containing the value "gzip" in a NOTIFY request shall be supported at the II-NNI.
- Multiple "multipart/related" MIME bodies in a NOTIFY request shall be supported at the II-NNI.
- An "application/rlmi+xml" MIME bodies in a NOTIFY request shall be supported at the II-NNI.

15.6.6 Void

15.6.7 Void

16 Messaging service

16.1 General

In order to assure the end-to-end service interoperability through the Inter-IMS Network to Network Interface (II-NNI), the associated function of the messaging service may be supported on the II-NNI between two IMS networks.

If a function is supported, the related procedures from the 3GPP TS 24.247 [139] shall be applied with the requirements in the relevant clause below due to the crossing of the II-NNI.

16.2 Page-mode messaging

Service specific requirements in accordance with clause 5 of 3GPP TS 24.247 [139] shall be supported over the II-NNI.

A MESSAGE request containing the "application/recipient-list" MIME body specified in IETF RFC 5365 [67], a Required header field with the 'recipient-list-message' option-tag; and a body carrying payload shall be supported at the roaming II-NNI.

A MESSAGE request containing:

- a body that carrying payload; or
- the "application/im-iscomposing+xml" MIME body,

shall be supported at the II-NNI.

The response code 415 (Unsupported Media Type) and the response code 202 (Accepted) shall be supported at the II-NNI.

16.4 Session-mode messaging

Service specific requirements in accordance with clause 6 of 3GPP TS 24.247 [139] shall be supported over the II-NNI.

No restrictions at the II-NNI identified.

16.5 Session-mode messaging conferences

Service specific requirements in accordance with clause 7 of 3GPP TS 24.247 [139] and 3GPP TS 24.147 [106] shall be supported over the II-NNI.

The "application/resource-lists+xml" MIME body included in the INVITE request shall be supported at the roaming II-NNI.

The media feature tag "isfocus" in the Contact header field of the INVITE request and responses to the INVITE request shall be supported at the II-NNI.

The SUBSCRIBE request including the "conference" event package name in the Event header field and the Accept header field containing an "application/conference-info+xml" MIME type shall be supported at the II-NNI.

The NOTIFY request including an "application/conference-info+xml" MIME body shall be supported at the II-NNI.

The REFER request containing a Referred-By header field and NOTIFY requests procedures shall be supported at the II-NNI.

The REFER request containing the BYE method URI parameter in the Refer-To header field shall be supported at the II-NNI.

The Referred-By header field in the INVITE request shall be supported at the II-NNI.

The Allow-Events header field in the INVITE request with the value "conference" shall be supported at the roaming II-NNI and may be supported at the non-roaming II-NNI.

17 Optimal Media Routeing

17.1 General

Based on inter-operator agreement, the Optimal Media Routeing (OMR) procedures may be supported over the II-NNI.

If OMR procedures are supported, the procedures in 3GPP TS 29.079 [148] shall be applied and the capabilities below shall be provided at the II-NNI.

17.2 OMR related SDP attributes

The "visited-realm", "secondary-realm", "omr-codecs", "omr-m-att", "omr-s-att", "omr-m-bw", "omr-s-bw", "omr-s-cksum", and "omr-m-cksum" SDP attributes defined in 3GPP TS 24.229 [5] shall be supported at the II-NNI.

17.3 IP realm names

Operators need to agree on unique names for IP realms (as defined in 3GPP TS 29.079 [148]) used in their own and interconnecting networks to avoid a collision of IP realm names. Operators may choose to share an IP realm, and shall then also assign a single unique name to that realm. As defined in 3GPP TS 24.229 [5], a public IPv4 or IPv6 address reachable from the open internet is associated with the special realm "IN".

18 Inter-UE transfer (IUT)

18.1 General

Inter-UE transfer may be supported over the II-NNI. The IUT consist of several functional blocks, as described in the clauses below. The support of each of these functional blocks is based on agreement between operators.

If a function is supported, the related procedures from the 3GPP TS 24.337 [149] shall be applied with the requirements in the relevant clause below.

18.2 IUT without establishment of a collaborative session

Service specific requirements in accordance with 3GPP TS 24.337 [149] shall be supported over the II-NNI.

The REFER request shall be supported at the roaming II-NNI.

The Refer-To header field containing a body parameter including a Replaces header field and the Require header field set to "replaces" shall be supported at the roaming II-NNI.

The Refer-To header field containing a body parameter including a Target-Dialog header field and the Require header field set to "tdialog" shall be supported at the roaming II-NNI.

The Refer-To header field containing a body parameter including an Accept-Contact header field with the "g.3gpp.icsi-ref" media feature tag and a P-Preferred-Service header field set to the IMS communication service identifier shall be supported at the roaming II-NNI.

The Contact header field of the REFER request containing a public GRUU or temporary GRUU as specified in 3GPP TS 24.229 [5] shall be supported at the roaming II-NNI.

The "g.3gpp.icsi-ref" media feature tag in the Accept-Contact header field of the REFER request shall be supported at the roaming II-NNI.

NOTIFY requests containing a "sipfrag" MIME body as specified in IETF RFC 3515 [22], using the updated procedures from IETF RFC 6665 [20], shall be supported at the roaming II-NNI.

18.3 IUT using a collaborative session

18.3.1 Collaborative session of participants of the same subscription

This clause describes the requirements at the II-NNI for an ongoing session. Service specific requirements in accordance with 3GPP TS 24.337 [149] shall be supported over the II-NNI.

The "g.3gpp.iut-controller" media feature tag in the Accept-Contact header field in the REGISTER request shall be supported.

A REFER request sent outside an existing dialog shall be supported at the roaming II-NNI with the following additional requirements:

- The Refer-To header field containing a body parameter including a MIME sdp body and no method parameter, the method parameter set to "INVITE" or "BYE" shall be supported at the roaming II-NNI.
- The Accept header field containing the MIME type "message/sipfrag" in the REFER request shall be supported at the roaming II-NNI.
- The Target-Dialog header field in the REFER request shall be supported at the roaming II-NNI.
- The Contact header field in the REFER request containing the "g.3gpp.iut-controller" media feature tag as described in annex B of 3GPP TS 24.337 [149] shall be supported at the roaming II-NNI.
- The Contact header field in the REFER request containing the "g.3gpp current-iut-controller" media feature tag as described in annex B of 3GPP TS 24.337 [149] shall be supported at the roaming II-NNI.
- The "g.3gpp.iut-controller" media feature tag in the Accept-Contact header field shall be supported at the roaming II-NNI.
- The Referred-By header field shall be supported at the roaming II-NNI at the roaming II-NNI.

The NOTIFY request containing a "sipfrag" MIME body as specified in IETF RFC 3515 [22], using the updated procedures from IETF RFC 6665 [20], shall be supported at the roaming II-NNI.

Initial INVITE requests and re-INVITE requests as follows:

- The Referred-By header field included in initial INVITE requests and re-INVITE requests shall be supported at the roaming II-NNI;
- The "g.3gpp.iut-controller" media feature tag as described in annex B of 3GPP TS 24.337 [149] in the Contact header field shall be supported at the roaming II-NNI.

The "g.3gpp.iut-controller" media feature tag in responses to the INVITE request shall be supported at the roaming II-NNI.

The SUBSCRIBE request including the Event header field with the "dialog" event package; and including the Accept-Contact header field with the "g.3gpp.iut-focus" media feature shall be supported at the roaming II-NNI.

The "dialog-info+xml" MIME body in NOTIFY requests shall be supported at the roaming II-NNI.

18.3.2 Establishment of a collaborative session during session setup

Service specific requirements in accordance with 3GPP TS 24.337 [149] shall be supported over the II-NNI.

The Accept header field containing the MIME type "application/vnd.3gpp.iut+xml" in initial INVITE requests shall be supported at the roaming II-NNI.

A Content-Type header field containing the MIME type "application/vnd.3gpp.iut+xml" and an "application/vnd.3gpp.iut+xml" MIME body in the 300 (Multiple Choices) response shall be supported at the roaming II-NNI.

18.3.3 Assignment and transfer of control of a collaborative session

Service specific requirements in accordance with 3GPP TS 24.337 [149] shall be supported over the II-NNI.

The "g.3gpp current-iut-controller" media feature tag in the Contact header field of the 200 (OK) response to INVITE request shall be supported at the roaming II-NNI.

A "multipart/mixed" MIME body containing the "application/vnd.3gpp.iut+xml" and the "application/sdp" MIME bodies in the INVITE request shall be supported at the roaming II-NNI.

18.3.4 Collaborative session of participants of different subscriptions

Service specific requirements in accordance with 3GPP TS 24.337 [149] shall be supported over the II-NNI.

In addition to the requirements in clause 18.3.1, 18.3.2 or 18.3.3 the following applies:

- The "g.3gpp.iut-focus" media feature tag (specified in 3GPP TS 24.337 [149] annex B) in the Contact header field shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.
- The "+g.3gpp.iut-focus" header field parameter (specified in 3GPP TS 24.337 [149] annex B) in the Feature-Caps header field as described in IETF RFC 6809 [143] shall be supported at the non-roaming II-NNI and for the loopback traversal scenario.

18.4 Session replication / media replication

18.4.1 Pull mode

Service specific requirements in accordance with 3GPP TS 24.337 [149] shall be supported over the II-NNI.

The Target-Dialog header field and the Accept-Contact header field containing the "g.3gpp.iut-focus" media feature tag of the INVITE request shall be supported at the roaming II-NNI.

A REFER request including:

- the method parameter set to "MESSAGE" in the Refer-To header field;
- the In-Reply-To header field;
- the Target-Dialog header field;
- the Require header field populated with the option tag value "tdialog"; and
- the "application/vnd.3gpp.replication+xml" MIME body,

shall be supported at the roaming II-NNI.

A MESSAGE request including the In-Reply-To header field and the "application/vnd.3gpp.replication+xml" MIME body shall be supported at the roaming II-NNI.

18.4.2 Push mode

Service specific requirements in accordance with 3GPP TS 24.337 [149] shall be supported over the II-NNI.

A REFER request including:

- the Accept-Contact header field containing the "g.3gpp.iut-focus" media feature tag with explicit and require tags;
- the Target-Dialog header field; and
- the Refer-To header field containing the Accept-Contact header field, the P-Preferred-Service header field and the "application/sdp" MIME body,

shall be supported at the roaming II-NNI.

The "application/vnd.3gpp.replication+xml" MIME body of the REFER request shall be supported at the roaming II-NNI.

19 Roaming Architecture for Voice over IMS with Local Breakout

Based on inter-operator agreement, the roaming architecture for voice over IMS with local breakout procedure may be supported over the II-NNI.

If the roaming architecture for voice over IMS with local breakout procedure is supported, the procedures in 3GPP TS 24.229 [5] shall be applied and the capabilities below shall be provided at the II-NNI.

The "+g.3gpp.trf" header field parameter (defined in 3GPP TS 24.229 [5] clause 7.9A.3) with a TRF address included in a Feature-Caps header field as described in IETF RFC 6809 [143] in the INVITE request or in the UPDATE request and in the 2xx response to the UPDATE request shall be supported at the roaming II-NNI.

The "+g.3gpp.loopback" header field parameter (defined in 3GPP TS 24.229 [5] clause 7.9A.4) with the identity of the caller's home network included in the Feature-Caps header field as described in IETF RFC 6809 [143] in the INVITE request or in the UPDATE request and in the 2xx response to the UPDATE request shall be supported for the loopback traversal scenario.

The "loopback-indication" header field parameter (defined in 3GPP TS 24.229 [5] clause 7.2A.5) included the P-Charging-Vector header field in 18x and 2xx responses to the INVITE request , in subsequent requests and in responses to subsequent requests shall be supported for the loopback traversal scenario and at the roaming II-NNI.

The procedures in clause 17 shall be supported at the II-NNI.

20 Delivery of Media Resource Broker address information

Based on inter-operator agreement, the procedure to deliver MRB address information may be supported over the roaming II-NNI.

NOTE: Subsequent interaction between home network MRB and visited network MRB is outside the scope of this document.

If the procedure to enable optimised allocation of media resources is supported, the procedures in 3GPP TS 24.229 [5] shall be applied and the capabilities below shall be provided at the roaming II-NNI.

The "g.3gpp.mrb" feature-capability indicator (defined in 3GPP TS 24.229 [5] clause 7.9A.6) with the MRB address included in the Feature-Caps header field as described in IETF RFC 6809 [143] in the INVITE request or in the UPDATE request and in the 2xx response to the UPDATE request shall be supported at the roaming II-NNI.

21 Overload control

21.1 General

Based on inter-operator agreement, overload control may be supported over the II-NNI.

The overload control defines two optional mechanisms:

- a feedback based mechanism;
- and a load filter mechanism.

The support of either one of the mechanism is based on operator agreements.

If a mechanism is supported, the related procedures from the 3GPP TS 24.229 [5] shall be applied with the requirements in the relevant clause below.

Based on regional/national requirements and inter-operator agreement, Multimedia Priority Service (MPS), as specified in 3GPP TS 22.153 [187], shall be exempted from SIP overload controls across II-NNI up to the point where further exemption would cause network instability.

21.2 Feedback based mechanism

The procedures in 3GPP TS 24.229 [5] shall be applied and the capabilities below shall be provided at the II-NNI.

The feedback based mechanism, defined in IETF RFC 7339 [165], requires no additional support at the II-NNI as it is supported using header field parameters within existing header fields supported at the II-NNI.

NOTE: An algorithm will need to be selected. The IETF RFC 7339 [165] also defines the default algorithm for usage of the feedback based mechanism in the IM CN subsystem. Additional algorithms are either already defined, e.g. the rate-based scheme defined in IETF RFC 7415 [166], or can also be defined in the future.

21.3 The load filter mechanism

The procedures in 3GPP TS 24.229 [5] shall be applied and the capabilities below shall be provided at the II-NNI.

A SUBSCRIBE request containing the Event header field "load-control" and, optionally, an Accept header field containing the "application/load-control+xml" MIME type as defined in IETF RFC 7200 [167] shall be supported on the II-NNI.

NOTE: The addresses to targets that can be supervised need to form part of the service level agreement.

A NOTIFY request containing the "application/load-control+xml" MIME body defined in IETF RFC 7200 [167] shall be supported on the II-NNI.

22 Delivery of original destination identity

Based on inter-operator agreement, the procedure to deliver original identity may be supported over the II-NNI.

NOTE: Service requirement related to the procedure is available in 3GPP TS 22.228 [9].

If the procedure to enable delivery of original destination identity is supported, the procedures in 3GPP TS 24.229 [5] shall be supported as further specified below.

The "mp" header field parameter in the History-Info header field of the initial INVITE request, as defined in IETF RFC 7044 [25], shall be supported over the II-NNI.

23 Telepresence using IMS

Based on inter-operator agreement, the procedure to support telepresence using IMS may be supported over the II-NNI.

NOTE: Service requirement related to the procedure is available in clause 7.10.2.2 of 3GPP TS 22.228 [9].

If the telepresence using IMS is supported, the procedures in 3GPP TS 24.103 [189] shall be applied and the capabilities below shall be provided at the II-NNI.

The "+sip.clue" header field parameter included in a Contact header field as described in 3GPP TS 24.103 [189] in the INVITE request or in the UPDATE request and in the 2xx response to the UPDATE request shall be supported at the II-NNI.

24 Barring of premium rate numbers

Based on inter-operator agreement, barring of premium rate numbers as described in 3GPP TS 24.315 [191] may be supported over the II-NNI.

If barring of premium rate numbers is supported, the "premium-rate" tel URI parameter defined in 3GPP TS 24.229 [5] clause 7.2A.17 shall be supported at the roaming II-NNI.

25 P-CSCF restoration

25.1 General

Based on inter-operator agreement, P-CSCF restoration may be supported over the II-NNI.

The P-CSCF restoration defines two optional mechanisms:

- a PCRF or PCF based mechanism; and

NOTE 1: In 5GS the mechanism is called "PCF based P-CSCF restoration" since the PCF takes the role of the PCRF.

- an HSS or UDM/HSS based mechanism.

NOTE 2: In 5GS the mechanism is called "UDM/HSS based P-CSCF restoration" since the UDM participates in the procedure.

The support of either one of the mechanisms is based on operator agreements.

If a mechanism is supported, the related procedures from the 3GPP TS 24.229 [5] shall be applied with the requirements in the relevant clause below.

25.2 PCRF or PCF based P-CSCF restoration

The procedures in 3GPP TS 24.229 [5] shall be applied and the capabilities below shall be provided at the II-NNI.

The Restoration-Info header field containing IMSI information defined in 3GPP TS 24.229 [5] in the home-to-visited initial INVITE request shall be supported on the roaming II-NNI.

25.3 HSS or UDM/HSS based P-CSCF restoration

The procedures in 3GPP TS 24.229 [5] shall be applied and the capabilities below shall be provided at the II-NNI.

The Restoration-Info header field containing information about failed node defined in 3GPP TS 24.229 [5] in the 408 (Request Timeout) response to the home-to-visited initial INVITE request and in the 504 (Server Time-out) response to the MESSAGE request, NOTIFY request, OPTIONS request, PUBLISH request, REFER request and the SUBSCRIBE request shall be supported on the roaming II-NNI.

26 Resource sharing

Based on inter-operator agreement, resource sharing may be supported over the II-NNI.

If resource sharing is supported, the related procedures from the 3GPP TS 24.229 [5] shall be applied with the requirements in this clause.

The Resource-Share header field shall be supported on the roaming II-NNI in the following SIP requests and SIP responses:

- the ACK request, the INVITE request, the PRACK request, the REGISTER and UPDATE;
- 18x responses to the INVITE request; and
- 2xx responses to the PRACK request, INVITE request and the UPDATE request.

27 Service access number translation

Based on inter-operator agreement, service access number translation may be supported over the II-NNI.

If service access number translation is supported, the related procedures in 3GPP TS 24.229 [5] shall be applied with the requirements in this clause.

The Request-URI containing a "cause" SIP URI parameter, defined in IETF RFC 4458 [58], set to the value "380" defined in IETF RFC 8119 [193] shall be supported at the II-NNI.

The History-Info header field containing a "cause" SIP URI parameter, defined in IETF RFC 4458 [58], set to the value "380" defined in IETF RFC 8119 [193] shall be supported at the II-NNI.

28 Mission critical services

28.1 General

In order to assure the end-to-end service interoperability through the II-NNI, the associated services of the Mission Critical communication may be supported on the II-NNI. The support of mission critical services is based on the business relationships defined in 3GPP TS 23.280 [200] clause 6.

II-NNI requirements for SIP signalling related to mission critical services interface SIP-1 and SIP-3 (see figure 7.3.1-2 in 3GPP TS 23.280 [200]) are addressed in the present specification as follows:

- Apart from differences specified in the present clause 28, the SIP-1 interface is identical to the roaming II-NNI.
- Apart from differences specified in the present clause 28, the SIP-3 interface is identical to the non-roaming II-NNI.

SIP signalling traversing the NNI between an mission critical services server and a SIP core (interface SIP-2 in figure 7.3.1-2 in 3GPP TS 23.280 [200]) is not considered in the present release of this specification.

The mission critical services are identified by means of the following IMS Communication Service Identifiers:

1) for MCPTT, the "urn:urn-7:3gpp-service.ims.icsi.mcptt" URN (defined in annex E of 3GPP TS 24.379 [201]) ;
2) for mission critical video communications, the "urn:urn-7:3gpp-service.ims.icsi.mcvideo" URN (defined in annex E of 3GPP TS 24.281 [210]); and
3) for mission critical data communications, the "urn:urn-7:3gpp-service.ims.icsi.mcdata" URN (defined in annex C of 3GPP TS 24.282 [211]) and additionally:
    - for Short Data Service (SDS), the "urn:urn-7:3gpp-service.ims.icsi.mcdata.sds" URN (defined in annex C of 3GPP TS 24.282 [211]); and
    - for File Distribution (FD), the "urn:urn-7:3gpp-service.ims.icsi.mcdata.fd" URN (defined in annex C of 3GPP TS 24.282 [211]).

The IMS Communication Service Identifiers listed above can appear in:

- the media feature tag "g.3gpp.icsi-ref" (specified in 3GPP TS 24.229 [5] clause 7.9.2) in the Contact header field and the Accept-Contact header field;
- the P-Asserted-Service header field; and

- the P-Preferred-Service header field.

If the mission critical services are supported, the related procedures from 3GPP TS 24.379 [201], 3GPP TS 24.380 [202], 3GPP TS 24.281 [210], 3GPP TS 24.581 [212], 3GPP TS 24.282 [211] and 3GPP TS 24.582 [213] shall be applied with the requirements in the clauses below due to the crossing of the II-NNI.

28.2 Interoperability of mission critical services for communication over II-NNI

28.2.1 Mission Critical services session establishment

Service specific requirements in accordance with 3GPP TS 22.179 [199], 3GPP TS 22.280 [209], 3GPP TS 24.379 [201], 3GPP TS 24.281 [210] and 3GPP TS 24.282 [211] shall be supported over the II-NNI.

The INVITE request including:

A) For MCPTT:

1) the "g.3gpp.mcptt" media feature tag (defined in annex C of 3GPP TS 24.379 [201]) in the Contact header field;

2) the media feature tag "isfocus" (defined in IETF RFC 3840 [56]) in the Contact header field;

3) the Content-Type header field with the value "multipart/mixed"; and

4) the "application/vnd.3gpp.mcptt-info+xml" MIME body;

B) For MCVideo:

1) the "g.3gpp.mcvideo" media feature tag (defined in annex D of 3GPP TS 24.281 [210]) in the Contact header field;

2) the media feature tag "isfocus" (defined in IETF RFC 3840 [56]) in the Contact header field;

3) the Content-Type header field with the value "multipart/mixed"; and

4) the "application/vnd.3gpp.mcvideo-info+xml" MIME body;

C) For MCData:

1) the:

a) "g.3gpp.mcdata.sds" media feature tag; or

b) "g.3gpp.mcdata.fd" media feature tag,

(defined in annex B of 3GPP TS 24.282 [211]) in the Contact header field;

2) the media feature tag "isfocus" (defined in IETF RFC 3840 [56]) in the Contact header field;

3) the Content-Type header field with the value "multipart/mixed";

4) the "application/vnd.3gpp.mcdata-info+xml" MIME body; and

5) the "application/vnd.3gpp.mcdata-signalling" MIME body;

shall be supported at the II-NNI.

Responses to the INVITE request including:

1) the:

a) "g.3gpp.mcptt";

b) "g.3gpp.mcvideo";

c) "g.3gpp.mcdata.sds"; or

d) "g.3gpp.mcdata.fd"

media feature tag in the Contact header field;

2) the media feature tag "isfocus" in the Contact header field;

3) the Content-Type header field with the value "multipart/mixed";

4) the "application/vnd.3gpp.mcptt-info+xml" for MCPTT or "application/vnd.3gpp.mcvideo-info+xml" for MCVideo or "application/vnd.3gpp.mcdata-info+xml" for MCData MIME body; and

5) the Warning header field with the warn-code set to "399" and with the warn-text set to a quoted-string as specified in 3GPP TS 24.379 [201] clause 4.4.2 and 3GPP TS 24.281 [210] clause 4.4.2 and 3GPP TS 24.282 [211] clause 4.9;

shall be supported at the II-NNI.

The initial INVITE request including the Priority-Share header field (defined in 3GPP TS 24.229 [5]), the Resource-Share header field (defined in 3GPP TS 24.229 [5]) and the "application/resource-lists+xml" MIME body shall be supported at the roaming II-NNI.

The Resource-Share header field and the Priority-Share header field in 18x and 2xx responses to the INVITE request shall be supported at the roaming II-NNI.

The Resource-Share header field and the Priority-Share header field in the PRACK requests, the UPDATE requests, the ACK requests and in 2xx responses to the PRACK requests and the UPDATE requests shall be supported at the roaming II-NNI.

The REFER request containing an "application/vnd.3gpp.mcptt-info+xml" MIME body in the headers portion in the Refer-To header field shall be supported at the roaming II-NNI.

NOTE: How the "application/vnd.3gpp.mcptt-info+xml" MIME body is included in the headers portion is described in IETF RFC 3261 [13] clause 19.1.1.

The "m="line set to "application <portnumber> UDP MCPTT" and associated parameters in the "a=fmpt:MCPTT" media line attribute shall be supported at the II-NNI.

An "i=" line set to "speech" in the audio media definition in the SDP offer and SDP answer shall be supported at the II-NNI.

28.2.2 MBMS transmission usage and location procedures

For MCPTT:

a) Service specific requirements in accordance with 3GPP TS 24.379 [201] clauses 13 and 14 shall be supported over the II-NNI.

b) The MESSAGE request containing the "application/vnd.3gpp.mcptt-info+xml" MIME body shall be supported over the roaming II-NNI.

c) The MESSAGE request containing the "application/vnd.3gpp.mcptt-location-info+xml" MIME body shall be supported over the roaming II-NNI.

d) The MESSAGE request containing the "application/vnd.3gpp.mcptt-mbms-usage-info+xml" MIME body shall be supported over the roaming II-NNI.

e) The P-Preferred-Service header field with the value "urn:urn-7:3gpp-service.ims.icsi.mcptt" of the MESSAGE request shall be supported at the roaming II-NNI.

f) The "g.3gpp.mcptt" media feature tag in the Accept-Contact header field of the MESSAGE request from the home network to the visited network shall be supported at the roaming II-NNI.

g) The "g.3gpp.icsi-ref" media feature tag with the value "urn:urn-7:3gpp-service.ims.icsi.mcptt" in the Accept-Contact header field of the MESSAGE request shall be supported at the roaming II-NNI.

For MCVideo:

a) Service specific requirements in accordance with 3GPP TS 24.281 [210] clauses 16 shall be supported over the II-NNI.

b) The MESSAGE request containing the "application/vnd.3gpp.mcvideo-info+xml" MIME body shall be supported over the roaming II-NNI.

c) The MESSAGE request containing the "application/vnd.3gpp.mcvideo-location-info+xml" MIME body shall be supported over the roaming II-NNI.

d) The MESSAGE request containing the "application/vnd.3gpp.mcvideo-mbms-usage-info+xml" MIME body shall be supported over the roaming II-NNI.

e) The P-Preferred-Service header field with the value "urn:urn-7:3gpp-service.ims.icsi.mcvideo" of the MESSAGE request shall be supported at the roaming II-NNI.

f) The "g.3gpp.mcvideo" media feature tag in the Accept-Contact header field of the MESSAGE request from the home network to the visited network shall be supported at the roaming II-NNI.

g) The "g.3gpp.icsi-ref" media feature tag with the value "urn:urn-7:3gpp-service.ims.icsi.mcvideo" in the Accept-Contact header field of the MESSAGE request shall be supported at the roaming II-NNI.

28.2.3 Affiliation procedure

28.2.3.1 General

The affiliation consists of two procedures. One mandatory mode procedure and one negotiated mode procedure.

Both procedures shall be supported over the II-NNI.

28.2.3.2 Mandatory mode

Service specific requirements in accordance with 3GPP TS 24.379 [201] clause 9, 3GPP TS 24.281 [210] clause 8 and 3GPP TS 24.282 [211] clause 8 shall be supported over the II-NNI.

The SIP PUBLISH request including:

1) an Event header field set to the value "presence";

2) an "application/vnd.3gpp.mcptt-info+xml" for MCPTT, "application/vnd.3gpp.mcvideo-info+xml" for MCVideo or "application/vnd.3gpp.mcdata-info+xml" for MCData MIME body; and

3) an "application/pidf+xml" MIME body;

shall be supported at the II-NNI.

A SUBSCRIBE request including:

1) an Event header field set to the value "presence";

2) an "application/vnd.3gpp.mcptt-info+xml" for MCPTT or "application/vnd.3gpp.mcvideo-info+xml" for MCVideo or "application/vnd.3gpp.mcdata-info+xml" for MCData MIME body;

3) an Accept header field containing the "application/pidf+xml" MIME type; and

4) an "application/simple-filter+xml" MIME body according to IETF RFC 4661 [176];

shall be supported at the II-NNI.

An NOTIFY request including:

1) an Event header field set to the value "presence"; and

2) an "application/pidf+xml" MIME body

shall be supported at the II-NNI.

28.2.3.3 Negotiated mode

Service specific requirements in accordance with 3GPP TS 24.379 [201] clause 9, 3GPP TS 24.281 [210] clause 8 and 3GPP TS 24.282 [211] clause 8 shall be supported over the II-NNI.

A MESSAGE request including:

1) an "application/vnd.3gpp.mcptt-info+xml" for MCPTT, "application/vnd.3gpp.mcvideo-info+xml" for MCVideo or "application/vnd.3gpp.mcdata-info+xml" for MCData MIME body; and

2) an "application/vnd.3gpp.mcptt-affiliation-command+xml" for MCPTT, "application/vnd.3gpp.mcvideo-affiliation-command+xml" for MCVideo or "application/vnd.3gpp.mcdata-affiliation-command+xml" for MCData MIME body;

shall be supported at the II-NNI.

28.2.4 Conference event package subscription

Service specific requirements in accordance with 3GPP TS 24.379 [201] clause 10.1.3 shall be supported over the II-NNI.

The SUBSCRIBE request including:

1) a "conference" event package name in the Event header field;

2) an Accept header field containing the "application/conference-info+xml" MIME type; and

3) an "application/vnd.3gpp.mcptt-info+xml" for MCPTT or "application/vnd.3gpp.mcvideo-info+xml" for MCVideo MIME body;

shall be supported at the II-NNI.

The NOTIFY request including:

1) the "conference" event package name in the Event header field;

2) the Content-Type header field with the value "multipart/mixed";

3) an "application/vnd.3gpp.mcptt-info+xml" for MCPTT or "application/vnd.3gpp.mcvideo-info+xml" for MCVideo MIME body; and

4) an "application/conference-info+xml" MIME body;

shall be supported at the II-NNI.

28.2.5 Mission critical services settings

Service specific requirements in accordance with 3GPP TS 24.379 [201] clause 7, 3GPP TS 24.281 [210] clause 7 and 3GPP TS 24.282 [211] clause 7 shall be supported over the roaming II-NNI.

A PUBLISH request including:

1) an Event header field set to the "poc-settings" value;

2) one of the following sets of MIME bodies:

   - an "application/vnd.3gpp.mcptt-info+xml" for MCPTT;

   - an "application/vnd.3gpp.mcvideo-info+xml" MIME body and an "application/vnd.3gpp.mcptt-signed+xml" for MCVideo MIME body; or

   - an "application/vnd.3gpp.mcdata-info+xml" MIME body and an "application/vnd.3gpp.mcptt-signed+xml" MIME body for MCData; and

3) an "application/poc-settings+xml" MIME body according to IETF RFC 4354 [205];

shall be supported at the roaming II-NNI.

28.2.6 Registration procedures

Service specific requirements in accordance with 3GPP TS 24.379 [201] clause 7 shall be supported over the roaming II-NNI.

The REGISTER request including:

1) the:

   a) "g.3gpp.mcptt";

   b) "g.3gpp.mcvideo";

   c) "g.3gpp.mcdata.sds"; or

   d) "g.3gpp.mcdata.fd"

   media feature tag in the Contact header field;

2) the Content-Type header field with the value "multipart/mixed";

3) the application/mikey MIME body;

4) one of the following sets of MIME bodies:

   - an "application/vnd.3gpp.mcptt-info+xml" for MCPTT;

   - an "application/vnd.3gpp.mcvideo-info+xml" MIME body and an "application/vnd.3gpp.mcptt-signed+xml" for MCVideo MIME body; or

   - an "application/vnd.3gpp.mcdata-info+xml" MIME body and an "application/vnd.3gpp.mcptt-signed+xml" MIME body for MCData;

5) the Resource-Share header field (defined in 3GPP TS 24.229 [5]); and

6) the "g.3gpp.priority-share" feature-capability indicator (defined in 3GPP TS 24.229 [5] clause 7.9A.10) in the Feature-Caps header field;

shall be supported at the roaming II-NNI.

28.2.7 Group regrouping

Service specific requirements in accordance with 3GPP TS 24.379 [201] clause 10 shall be supported over the non-roaming II-NNI.

In addition to the requirements in clause 28.2.1 the 403 (Forbidden) response to the INVITE request including a P-Refused-URI-List header field and an "application/resource-lists+xml" MIME body shall be supported at the non-roaming II-NNI.

The MESSAGE request including:

1) a Content-Type header field with the value "multipart/mixed";

2) an "application/vnd.3gpp.mcptt-info+xml" MIME body; and

3) an "application/vnd.3gpp.mcptt-floor-request+xml" MIME body;

shall be supported at the non-roaming II-NNI.

28.2.8 Signalling plane messages for mission critical data

Service specific requirements in accordance with 3GPP TS 24.282 [211] clause 9.2.2 shall be supported over the II-NNI.

A MESSAGE request including:

1) an "application/vnd.3gpp.mcdata-info+xml" MIME body; and
2) an "application/vnd.3gpp.mcdata-signalling" MIME body or an "application/vnd.3gpp.mcdata-payload" MIME body or both;

shall be supported at the II-NNI.

28.2.9 Functional alias management procedure

Service specific requirements in accordance with 3GPP TS 24.379 [201] clause 9A shall be supported over the II-NNI.

A SIP PUBLISH request including:

1) an Event header field set to the value "presence";
2) an "application/vnd.3gpp.mcptt-info+xml" MIME body for MCPTT; and
3) an "application/pidf+xml" MIME body;

shall be supported at the II-NNI.

A SIP SUBSCRIBE request including:

1) an Event header field set to the value "presence";
2) an "application/vnd.3gpp.mcptt-info+xml" MIME body; and
3) an Accept header field containing the "application/pidf+xml" MIME body;

shall be supported at the II-NNI.

A SIP NOTIFY request including:

1) an Event header field set to the value "presence"; and
2) an "application/pidf+xml" MIME body.

shall be supported at the II-NNI.

29 Calling number verification using signature verification and attestation information

Based on inter-operator agreement, "Calling number verification using signature verification and attestation information " functionality, as described in IETF RFC 8224 [206] and 3GPP TS 24.229 [5], may be supported over the II-NNI.

If the "Calling number verification using signature verification and attestation information" is supported, the related procedures in 3GPP TS 24.229 [5] shall be applied with the requirements in this clause.

A 200 (OK) response to a REGISTER request including a "g.3gpp.verstat" feature-capability indicator (defined in 3GPP TS 24.229 [5] clause 7.9A.11) and a "sip.607" feature-capability indicator (defined in IETF RFC 8197 [207]) in a Feature-Caps header field shall be supported at the roaming II-NNI.

An initial INVITE request and a MESSAGE request containing a P-Asserted-Identity header field and a From header field with a "verstat" tel URI parameter (defined in 3GPP TS 24.229 [5] clause 7.2A.20) in a tel URI or in a SIP URI with a "user=phone" parameter shall be supported at the roaming II-NNI.

An initial INVITE request and a MESSAGE request containing:

- an Identity header field (defined in IETF RFC 8224 [206]);
- an Attestation-Info header field (defined in 3GPP TS 24.229 [5] clause 7.2.18); and
- an Origination-id header field (defined in 3GPP TS 24.229 [5] clause 7.2.19),

shall be supported at the non-roaming II-NNI.

A 607 (Unwanted) response (defined in IETF RFC 8197 [207]) to an initial INVITE request and a MESSAGE request shall be supported at the II-NNI.

A Reason header field with a protocol value set to "SIP" and a "cause" header field parameter set to "607" in a BYE request shall be supported at the II-NNI.

A Reason header field with a protocol value set to "STIR", "cause" and "ppi" header field parameters (specified in IETF RFC 9410 [220]) in a provisional response or a final response to an initial INVITE or a MESSAGE request shall be supported at the non-roaming II-NNI.

NOTE: Multiple Reason header fields with the protocol value set to "STIR" can be present in a provisional response or a final response to an initial INVITE or a MESSAGE request.

30 IMS emergency service

30.1 IMS emergency registration

See clause 8.1 for the signalling requirements of IMS emergency registration regarding the "sos" URI parameter on the roaming II-NNI.

30.2 IMS emergency session

Based on inter-operator agreements or national requirements, IMS emergency session may be supported over the non-roaming II-NNI.

NOTE 1: The details of the SIP signalling requirements for IMS emergency session on the non-romaing II-NNI can be defined by inter-operator agreements or national requirements.

If the IMS emergency session is supported, the related procedures in 3GPP TS 24.229 [5] shall be applied with the requirements in this clause.

The Request-URI containing a uniform resource name (URN) for emergency services, defined in IETF RFC 5031 [61] and 3GPP TS 24.229 [5], shall be supported for the IMS emergency session traversal scenario on the non-roaming II-NNI.

NOTE 2: The emergency service URN(s) to use can be defined by inter-operator agreements or national requirements.

30.3 Next-Generation Pan-European eCall emergency service

Based on inter-operator agreements or national requirements, Next-Generation Pan-European eCall emergency service may be supported over the non-roaming II-NNI.

If Next-Generation Pan-European eCall emergency service is supported, the related procedures in 3GPP TS 24.229 [5] shall be applied with the requirements in this clause.

The MSD in an INVITE and INFO request shall be supported over the non-roaming II-NNI as described in 3GPP TS 24.229 [5].

31 Restricted Local Operator Services (RLOS)

Based on inter-operator agreement, RLOS as described in 3GPP TS 24.229 [5] may be supported over the roaming II-NNI.

If RLOS is supported, a REGISTER request with a "+g.3gpp.rlos" Contact header field parameter, as defined in 3GPP TS 24.229 [5] clause 7.9.9 shall be supported at the roaming II-NNI.

An initial request for a dialog or a request for a standalone transaction with the Request-URI containing the dummy MSISDN value as defined in 3GPP TS 23.003 [35] or a RLOS service specific dial string and a P-Preferred-Service header field set to "urn:urn-7:3gpp-service.ims.icsi.rlos", as defined in 3GPP TS 24.229 [5] clause 7.11.2 shall be supported at the roaming II-NNI.

32 3GPP PS data off extension

Based on inter-operator agreement, 3GPP PS data off extension as described in 3GPP TS 24.229 [5] may be supported over the roaming II-NNI.

If the 3GPP PS data off extension is supported, "+g.3gpp.ps-data-off" media feature tag in the Contact header field parameter of the REGISTER request shall be supported at the roaming II-NNI.

33 IMS data channel

33.1 General

Based on inter-operator agreement, the MMTEL service with IMS data channel as described in 3GPP TS 23.228 [4], 3GPP TS 24.186 [222] and 3GPP TS 26.114 [11] may be supported at the II-NNI.

If the MMTEL service with IMS data channel is supported, the procedures specified in 3GPP TS 24.186 [222] shall be applied and the capabilities below shall be provided at the II-NNI.

The "+sip.app-subtype" media feature tag with a value of "webrtc-datachannel" in the Contact header field parameter of the REGISTER request shall be supported at the roaming II-NNI.

The feature-capability indicator "g.3gpp.datachannel" (defined in 3GPP TS 24.186 [222] clause B.1.1) in the Feature-Caps header field of 200 (OK) response to REGISTER request shall be supported at the roaming II-NNI.

The "+sip.app-subtype" media feature tag with a value of "webrtc-datachannel" in the Contact header field parameter of INVITE and UPDATE requests and in 18x and 2xx responses to INVITE and UPDATE requests shall be supported at the II-NNI.

The "+sip.app-subtype" media feature tag (defined in IETF RFC 5688 [81]) with a value "webrtc-datachannel" in the Accept-Contact header field parameter of initial INVITE request may be supported at the II-NNI.

The "m=" line set to "application <port number> UDP/DTLS/SCTP webrtc-datachannel" and associated parameters in the media attribute lines "a=dcmap", "a=3gpp-qos-hint", "a=3gpp-req-app" and "a=3gpp-bdc-used-by" of the SDP body shall be supported at the II-NNI. For the "bootstrap" data channel as defined in table 6.2.10.1-2 of 3GPP TS 26.114 [11] only stream ID values 100 and 110 shall be supported at the II-NNI.

NOTE: The "bootstrap" data channels with stream ID values 0 and 10 are strictly local between the UE and its local network.

33.2 Support of data channel multiplexing

If the data channel multiplexing is supported, the procedures specified in 3GPP TS 24.186 [222] clause 9.2A, 9.3.2.2.7 and 9.3.3.2.6 shall be applied and the capabilities below shall be provided at the II-NNI.

The "+g.3gpp.dc-mux" media feature tag in the Contact header field (defined in 3GPP TS 26.114 [11] clause AB) of the REGISTER request shall be supported at the roaming II-NNI.

The feature-capability indicator "g.3gpp.dc-mux" (defined in 3GPP TS 24.186 [222] clause B.1.2) in the Feature-Caps header field of 200 (OK) response to REGISTER request shall be supported at the roaming II-NNI.

The "+g.3gpp.dc-mux" media feature tag in the Contact header field parameter of INVITE and UPDATE requests and in 18x and 2xx responses to INVITE and UPDATE requests shall be supported at the II-NNI.

33.3 Support of data channel info

If the data channel info is supported, the procedures specified in 3GPP TS 24.186 [222] clause 9.3.2.2.1A, 9.3.2.2.2.4, 9.3.2.2.2.6 and 9.3.2.2.3 shall be applied.

The initial INVITE request and re-INVITE including the DC-Info header field (defined in 3GPP TS 24.229 [5]) shall be supported at the II-NNI.

The BYE request including the DC-Info header field (defined in 3GPP TS 24.229 [5]) shall be supported at the roaming II-NNI.34Support for signed attestation for emergency and priority IMS sessions

34.1 General

Where a network has requirements on a signed attestation for emergency IMS sessions the "Calling number verification using signature verification and attestation information" and "Priority verification using assertion of priority information" features described in 3GPP TS 24.229 [5] need to be supported.

Where a network has requirements on a signed attestation for priority IMS sessions (e.g., MPS sessions) the "Priority verification using assertion of priority information" feature described in 3GPP TS 24.229 [5] needs to be supported and the "Calling number verification using signature verification and attestation information" feature described in 3GPP TS 24.229 [5] might need to be supported.

Based on inter-operator agreement, the signed attestation for emergency and priority IMS sessions may be supported over the II-NNI as further specified below.

34.2 Calling number verification using signature verification and attestation information

The requirements to support the "Calling number verification using signature verification and attestation information" functionality for emergency and priority IMS sessions over the II-NNI are the same as in clause 29.

34.3 Priority verification using assertion of priority information

"Priority verification using assertion of priority information" functionality, as described in 3GPP TS 24.229 [5], may be supported over the II-NNI.

If the "Priority verification using assertion of priority information" is supported, the related procedures in 3GPP TS 24.229 [5] shall be applied with the requirements in this clause.

An initial INVITE request containing:

- a Resource-Priority header field; and
- optionally, a Priority header field with a "psap-callback" header field value, for emergency call-back cases;

shall be supported at the II-NNI.

An initial INVITE request containing:

- an Identity header field (defined in IETF RFC 8224 [206]); and
- a Priority-Verstat header field (defined in 3GPP TS 24.229 [5] clause 7.2.21)

shall be supported at the non-roaming II-NNI.

A re-INVITE request containing a Resource-Priority header field shall be supported at the II-NNI.

A re-INVITE request containing:

- an Identity header field (defined in IETF RFC 8224 [206]); and
- a Priority-Verstat header field (defined in 3GPP TS 24.229 [5] clause 7.2.21)

shall be supported at the non-roaming II-NNI.

35 Rich Call Data (RCD) authentication and verification

35.1 General

Based on inter-operator agreement, RCD authentication and verification, as described in IETF RFC 9796 [206] and 3GPP TS 24.229 [5], may be supported over the II-NNI.

As specified in 3GPP TS 24.229 [5] the RCD authentication and verification functionality can be implemented in two ways:

1) within the "Calling number verification using signature verification and attestation information" feature which is enhanced to authenticate and verify RCD info; or
2) as standalone "RCD verification using assertion of RCD info" feature.

35.2 Calling number and RCD verification using signature verification and attestation information

If the RCD verification is supported within the "Calling number verification using signature verification and attestation information" feature, the related procedures in 3GPP TS 24.229 [5] shall be applied with the requirements defined in clause 29 and this clause.

An initial INVITE request and a MESSAGE request with a Call-Info header field(s) containing RCD parameters (defined in IETF RFC 9796 [223]) shall be supported at the non-roaming II-NNI.

35.3 RCD verification using assertion of RCD info

If the RCD verification is supported within the "RCD verification using assertion of RCD info" feature, the related

An initial INVITE request and a MESSAGE request containing:

- an Identity header field (defined in IETF RFC 8224 [206]); and
- a Call-Info header field(s) containing RCD parameters (defined in IETF RFC 9796 [223]),

shall be supported at the non-roaming II-NNI.

Annex A (informative): Summary of SIP header fields

A summary of the SIP header fields to be used in case of interconnection by using II-NNI is proposed in table A.1.

The starting point is the sending behaviour described for proxy and UA roles in annex A of 3GPP TS 24.229 [5]:

- In case of misalignment between table A.1 and the behaviour described in 3GPP TS 24.229 [5], the behaviour in 3GPP TS 24.229 [5] has the precedence.
- In case a header field is not described in table A.1 and it is described in 3GPP TS 24.229 [5], the description in 3GPP TS 24.229 [5] is applicable over II-NNI.
- If a header field is not described in 3GPP TS 24.229 [5], the description in table A.1 is applicable over II-NNI.

The definition of the notation codes used in table A.1 is provided in table A.2.

Table A.1: Supported header fields

Item	Header field	Ref.	II-NNI
1	Accept	[5]	m
2	Accept-Contact	[5]	m
3	Accept-Encoding	[5]	m
4	Accept-Language	[5]	m
4a	Accept-Resource-Priority	[5]	o
4b	Additional-Identity	[5], clause 6.1.1.3.1 (table 6.2, item 25) and clause 12.26.2	o in case of a trust relationship between the interconnected networks, else n/a
5	Alert-Info	[5]	o
6	Allow	[5]	m
7	Allow-Events	[5]	m on roaming II-NNI, else o
7a	Attestation-Info	[5], clause 6.1.1.3.1 (table 6.2, item 23) and clause 29	o on non-roaming II-NNI, else n/a
8	Authentication-Info	[5]	m on roaming II-NNI, else n/a
9	Authorization	[5]	m on roaming II-NNI, else n/a
9a	Answer-Mode	[5]	o
10	Call-ID	[5]	m
11	Call-Info	[5]	m
11a	Cellular-Network-Info	clause 6.1.1.3.1 (table 6.2, item 21)	o
12	Contact	[5]	m
13	Content-Disposition	[5]	m
14	Content-Encoding	[5]	m
14a	Content-ID	[5]	o
15	Content-Language	[5]	m
16	Content-Length	[5]	m
17	Content-Type	[5]	m
18	CSeq	[5]	m
19	Date	[5]	m
19a	DC-Info	[5]	o in case of a trust relationship between the interconnected networks, else n/a
20	Error-Info	[5]	o
21	Expires	[5]	m
21a	Flow-Timer	[5]	m on roaming II-NNI, else o
21b	Feature-Caps	clause 6.1.1.3.1 (table 6.2, item 13)	o
22	Event	[5]	m
23	From	[5]	m
24	Geolocation	[5]	m
24a	Geolocation-Error	[5]	m
24b	Geolocation-Routing	[5]	m
25	History-Info	clause 6.1.1.3.1 (table 6.2, item 4)	o
25b	Identity	[206], clause 29 and clause 34	o on non-roaming II-NNI, else n/a
25a	Info-Package	[5]	o
26	In-Reply-To	[5]	o
27	Join	[5]	o
27a	Max-Breadth	[5]	m
28	Max-Forwards	[5]	m
29	Min-Expires	[5]	m
30	MIME-Version	[5]	m
31	Min-SE	[5]	m
32	Organization	[5]	m
32a	Origination-Id	[5], clause 6.1.1.3.1 (table 6.2, item 24) and clause 29	o on non-roaming II-NNI, else n/a
33	P-Access-Network-Info	clause 6.1.1.3.1 (table 6.2, item 2)	m in case of a trust relationship between the interconnected networks, else n/a
33a	P-Answer-state	[5]	o
34	P-Asserted-Identity	clause 6.1.1.3.1 (table 6.2, item 1)	m in case of a trust relationship between the interconnected networks, else n/a

Item	Header field	Ref.	II-NNI
35	P-Asserted-Service	clause 6.1.1.3.1 (table 6.2, item 5)	o
35a	P-Associated-URI	[5]	m on roaming II-NNI, else n/a

Table A.2: Key to notation codes for SIP header fields

Notation code	Meaning
m	The SIP header field is applicable at II-NNI. Supporting a SIP header field at the II-NNI means that this header field is passed through the IBCF. It does not imply that network elements inside the serving and served networks or user equipment connected to these networks shall support this header field, where 3GPP TS 24.229 [5] is applied. If specified in 3GPP TS 24.229 [5], the IBCF modifies the SIP header field.
o	The applicability of SIP header field at II-NNI depends on bilateral agreement between the operators.
n/a	It is impossible to use the SIP header field at the II-NNI. This header field could be discarded by the IBCF.

Annex B (informative): Dynamic view of SIP header fields within SIP messages

B.1 Scope

This annex provides the applicability of SIP header fields in SIP messages over II-NNI by using the methodology of a so-called "dynamic view", as used in IETF RFC 3261 [13] and other SIP related RFCs. This methodology documents the presence of SIP header fields in SIP messages over the II-NNI and also takes into account dynamic conditions, for instance the presence of a SIP header field in a SIP request message as condition for the SIP header field in the corresponding SIP response message.

Specific information about the applicability of SIP header fields in SIP messages in a dynamic view is also provided for cases where an MMTEL supplementary service is supported over the II-NNI between operators.

The applicability of SIP header fields described in this annex is based on the procedures described in 3GPP TS 24.229 [5] and the list of SIP header fields in annex A of 3GPP TS 24.229 [5].

B.2 Methodology

The meaning of the notation codes used in the tables in subsequent clauses is as follows:

In the "RFC status" column, the notation codes defined in IETF RFC 3261 [13] clause 20 are applied.

In the "II-NNI condition" column the notation codes defined in table B.2.1 are used. If a capability of a SIP header field is specified as either optional or conditional in table 6.1.3.1, then "II-NNI condition" of the SIP header field is described with conditional expression.

In each request-related table, the order of SIP header fields inherits that of clause A.2.2 of 3GPP TS 24.229 [5].

In each response-related table, the SIP status code for which the header field is applicable is described in the "SIP status code" column. The notation codes for the "where" column as defined in IETF RFC 3261 [13] clause 20 are applied. The notation code "r" in "SIP status code" column corresponds to any SIP status code which is described in annex A of 3GPP TS 24.229 [5] for the corresponding method. Any SIP header field not listed in a table is not applicable for the corresponding SIP message.

Table B.2.1: Key to notation codes for SIP header fields in dynamic view for II-NNI

Notation code (NOTE 1)	Meaning
dc	The SIP header field is required to be present in a SIP message over II-NNI according to the procedures specified in other specifications e.g. 3GPP TS 24.229 [5].
dm	The SIP header field shall be always present in a SIP message over II-NNI, and if received, it must be handled according to 3GPP TS 24.229 [5].
dm*	The SIP header field should be present in a SIP message over II-NNI, but the IMS network need to be prepared to receive a SIP message without that header field.
do	The SIP header field can be present in a SIP message over II-NNI, and if received, it must be handled according to 3GPP TS 24.229 [5]. (NOTE 2)
dt	The header field should be present in a SIP message over II-NNI, but the IMS network need to be prepared to receive a SIP message without that header field. If TCP is used as a transport, then the header field must be present in a SIP message.
d*	The SIP header field is required to be present in a SIP message if the message body is not empty.
dn/a	The SIP header field is shall not be present in a SIP message over II-NNI. (NOTE 3)
dc<integer>	The condition for the presence of the SIP header field. <integer> is the identifier of the condition. This notation code is applied only in each request-related or response-related table.
NOTE 1: The meaning of the notation codes is same as in IETF RFC 3261 [13] clause 20 and "d" is used to emphasise the dynamic view. NOTE 2: If specified by local policy rules, the IBCF acting as entry point may omit or modify any received SIP header fields prior to forwarding SIP messages as specified in 3GPP TS 24.229 [5] clause 5.10.6.2. NOTE 3: The SIP header field can be removed at the IBCF acting as exit point by using screening functionality defined in 3GPP TS 24.229 [5] clause 5.10.6.2.	

B.3 ACK method

The table B.3.1 lists the supported header fields within the ACK request.

Table B.3.1: Supported header fields within the ACK request

Item	Header field	Ref.	RFC status	II-NNI condition

NOTE 1: The SIP status code is only applicable over the roaming II-NNI.
NOTE 2: If the capability specified in table 6.1.3.1 is not supported over the II-NNI, the IBCF in the receiving network can omit or modify the SIP header fields in the received SIP message prior to forwarding the SIP message as specified in 3GPP TS 24.229 [5] clause 5.10.6.2.

Annex C (informative): The list of option items for II-NNI

C.1 Scope

This annex provides a list of items that are recommended to be selected by inter-operator agreements for the interconnection between IMS operators using the II-NNI. The items in this annex have an influence on the service interconnection.

For the purposes of this annex, these items are called "option items". The option items are extracted from the present document other than this annex, and are categorized from the aspect of service provisioning by IMS operators.

If an option item is used based on inter-operator agreements, then relating capabilities described in the references are used over the II-NNI. In case of misalignment between the normative part of the present document and this annex, the normative part of the present document takes precedence.

C.2 Format of option item table

The format of option item table used in the subsequent clauses is as follows:

- The 2nd column "Option item" shows the option item.
- The 3rd column "References" shows the relevant clauses of the present document for each option item.
- The 4th column "Applicability at the II-NNI" shows the selectable patterns for each option item.
- The 5th column "Details for operator choice" shows the details for the inter-operator agreements in case the corresponding pattern is chosen. This column intends to be used to exchange each detailed conditions of the II-NNI by means of filling the conditions in the columns corresponding to the selected pattern. Blank row intends to be used as a place holder for describing additional detailed II-NNI conditions specific to the operator network not associated with the explicit descriptions in this annex.

C.3 Option item table

C.3.0 Supported II-NNI traversal scenarios

In this clause the table C.3.0.1 shows the supported II-NNI traversal scenarios option items.

Table C.3.0.1: Supported II-NNI traversal scenarios

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Roaming II-NNI support	entire present specification	Yes	Option items in clauses C.3.1 and C.3.2.
				Applicability of "Roaming Architecture for Voice over IMS with Local Breakout" (Clause 19).
				If "Roaming Architecture for Voice over IMS with Local Breakout" is applicable: + option items in clause C.3.3; and + the default TRF address to use when not included in the "g.3gpp.trf" feature-capability indicator.
			No	
2	Non-roaming II-NNI support	entire present specification	Yes	Option items in clauses C.3.1 and C.3.3.
			No	

C.3.1 Option item table common to roaming, non-roaming II-NNI and loopback traversal scenario

This clause describes the option item tables common to the roaming II-NNI, the loopback traversal scenario, and the non-roaming II-NNI as follows:

- Table C.3.1.1 shows the SIP methods option items.
- Table C.3.1.1A shows the SIP overload control option items.
- Table C.3.1.2 shows the SIP negotiation of resource reservation option item.
- Table C.3.1.2A shows the periodic refresh of SIP sessions option item.
- Table C.3.1.3 shows the replacing of SIP dialogs option item.
- Table C.3.1.4 shows the session participation option item.
- Table C.3.1.5 shows the conveying capabilities of UE option item.
- Table C.3.1.5A shows the authorization of early media option item.
- Table C.3.1.6 shows the asserting the service of authenticated users option item.
- Table C.3.1.7 shows the mode of signalling.
- Table C.3.1.7A shows the SIP message bodies option item.
- Table C.3.1.7B shows the SIP message body size option item.
- Table C.3.1.8 shows the control plane transport option item.
- Table C.3.1.9 shows the user plane transport, media, and codec option items.
- Table C.3.1.10 shows the dual tone multi frequency (DTMF) option item.
- Table C.3.1.10A shows the numbering, naming and addressing option item.
- Table C.3.1.11 shows the IP version option item.

- Table C.3.1.12 shows the supplementary services option items.
- Table C.3.1.13 shows the additional functions option items.
- Table C.3.1.14 shows the SDP lines option items.
- Table C.3.1.15 shows the emergency services option items.
- Table C.3.1.16 shows indicating the II-NNI traversal scenario option items.
- Table C.3.1.17 shows the Mission critical services option items.
- Table C.3.1.18 shows the Calling number verification using signature verification and attestation information option items.
- Table C.3.1.19 shows the Signed attestation for emergency and priority IMS sessions option items.
- Table C.3.1.20 shows the RCD authentication and verification option items.

Table C.3.1.1: SIP method

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	INFO method	table 6.1/5A table 6.1/5B	Yes	Info package name to use.
			No	
2	MESSAGE method	table 6.1/9A table 6.1/9B	Yes	Inside or outside existing dialog, and content of MESSAGE request.
			No	
3	REFER method	table 6.1/16 table 6.1/17	Yes	Inside or outside existing dialog.
			No	

Table C.3.1.1A: SIP overload control

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	SIP overload control	table 6.1.3.1/106 clause 21.1	Yes	Mechanisms to be used.
				Whether to exempt MPS from SIP overload controls.
			No	
2	Feedback control	table 6.1.3.1/107 clause 21.2	Yes	Algorithm to be used if not default (see clause 21.2).
			No	
3	Event control	table 6.1.3.1/108 clause 21.3	Yes	Addresses to targets that can be supervised.
			No	

Table C.3.1.2: Negotiation of resource reservation

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Negotiation of resource reservation (precondition)	table 6.1.3.1/20	Yes	
			No	

Table C.3.1.2A: Periodic refresh of SIP sessions

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	SIP session timer (timer)	table 6.1.3.1/45	Yes	Use conditions (Possible restriction on range of times and whether SIP session timer is applied in all sessions).

Table C.3.1.3: Replacing of SIP dialogs

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Replacing of SIP dialogs (replaces)	table 6.1.3.1/47	Yes	
			No	

Table C.3.1.4: Session participation

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Session participation (join)	table 6.1.3.1/48	Yes	
			No	

Table C.3.1.5: Conveying capabilities of UE

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Conveying capabilities of UE	table 6.1.3.1/49	Yes	
			No	

Table C.3.1.5A: Authorization of early media

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Authorization of early media	table 6.1.3.1/69	Yes	Whether to use authorization request of early media generated by the entity outside the IMS network.
			No	

Table C.3.1.6: Asserting the service of authenticated users

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Managing the indication of the asserted service (P-Asserted-Service header field)	table 6.1.3.1/77	Yes	Service identifier values to use.
			No	

Table C.3.1.7: Mode of signalling

No.	Option item		References	Applicability at the II-NNI	Details for operator choice
1	Overlap signalling	In-dialog method	clause 6.1.1.5	Yes	
				No	
		Multiple-INVITE method		Yes	
				No	

Table C.3.1.7A: SIP message bodies

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	MIME type	clause 6.1.4	Yes	MIME types to use.
				Applicable characteristics of the SIP message body MIMEs (i.e. the value(s) of Content-Disposition header field and Content-Language header field) if necessary.

Table C.3.1.7B: SIP message body size

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Limitation on maximum length of a SIP message body	clause 6.1.4	Yes	Maximum length accepted.
			No	

Table C.3.1.8: Control plane transport

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	TCP	clause 6.2	Yes	Use conditions (e.g. port number to accept, number of simultaneous connections in case of reuse of the existing connections).
			No	
2	UDP	clause 6.2	Yes	Use conditions (e.g. port number to accept).
			No	
3	SCTP	clause 6.2	Yes	Use conditions (e.g. port number to accept).
			No	

Table C.3.1.9: User plane transport, media, and codec

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Speech media (m=audio)	clause 7.1	Yes	Names of speech codecs to use. (NOTE 1, NOTE 2)
2	Video media (m=video)	clause 7.1	Yes	Names of video codecs to use. (NOTE 1, NOTE 2)
			No	
3	Other media	clause 7.1	Yes	Media type (m=line of SDP) to use (e.g. application, image, message).
			No	
4	RTP/AVPF	clause 7.2	Yes	Media type (m=line of SDP) that uses the protocol.
			No	
5	Transmission Control Protocol	clause 6.1.2.1 clause 7.2	Yes	Media type (m=line of SDP) that uses the protocol.
			No	
6	Other user plane protocols	clause 7.2	Yes	Protocols to use (e.g. udptl, TCP/MSRP) and media types (m=line of SDP) that describe the protocols.
			No	

NOTE 1: Codecs which are included in the applicable codec list made by inter-operator agreements are guaranteed to be supported at the II-NNI by the peer operators.
NOTE 2: Whether it is allowed to offer codecs which are not included in the applicable codec list made by inter-operator agreements over the II-NNI is also determined by the inter-operator agreement if necessary.

Table C.3.1.10: Dual tone multi frequency (DTMF)

No.	Option item		References	Applicability at the II-NNI	Details for operator choice
1	DTMF transport	"telephone-event" based DTMF transport	clause 7.1 table 6.1/5A table 6.1/5B clause 12.14 clause 12.15	Yes	Sampling rate to use.
				No	
		The SIP INFO mechanism		Yes	
				No	

Table C.3.1.10A: Numbering, naming and addressing

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Subaddress ("isub" tel URI parameter)	clause 8.1	Yes	
			No	

Table C.3.1.11: IP version

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	IPv4	clause 9	Yes	Use conditions (e.g. for control plane, for user plane).
			No	
2	IPv6	clause 9	Yes	Use conditions (e.g. for control plane, for user plane).
			No	

Table C.3.1.12: Supplementary services

No.	Option item		References	Applicability at the II-NNI	Details for operator choice
1	Malicious Communication IDentification (MCID)		clause 12.2	Yes	Minimum information exchanged over the II-NNI.
				No	
2	Originating Identification Presentation (OIP) and Originating Identification Restriction (OIR)		clause 12.3	Yes	
				No	
3	Terminating Identification Presentation (TIP) and Terminating Identification Restriction (TIR)		clause 12.4	Yes	
				No	
4	Anonymous Communication Rejection (ACR)		clause 12.5	Yes	
				No	
5	Communication DIVersion (CDIV)		clause 12.6	Yes	
				No	
6	Communication Waiting (CW)		clause 12.7	Yes	
				No	
7	Communication HOLD (HOLD)		clause 12.8	Yes	
				No	
8	Message Waiting Indication (MWI)		clause 12.9	Yes	
				No	
9	Incoming Communication Barring (ICB)		clause 12.10.1	Yes	
				No	
10	Completion of Communications to Busy Subscriber (CCBS)		clause 12.11	Yes	
				No	
11	Completion of Communications by No Reply (CCNR)		clause 12.12	Yes	
				No	
12	Explicit Communication Transfer (ECT)		clause 12.13	Yes	Type of explicit communication transfer to support.
				No	
13	Customized Alerting Tone (CAT)		clause 12.14	Yes	CAT model to use (Gateway model, forking model and early session model).
					Media type (m=line of SDP) applicable to CAT.
				No	
14	Customized Ringing Signal (CRS)		clause 12.15	Yes	
				No	
15	Closed User Group (CUG)		clause 12.16	Yes	
				No	
16	Personal Network Management (PNM)		clause 12.17	Yes	
				No	
17	Three-Party (3PTY)		clause 12.18	Yes	
				No	
18	Conference (CONF)		clause 12.19	Yes	
				No	
19	Flexible Alerting (FA)		clause 12.20	Yes	
				No	
20	Announcements	During the establishment of a session	clause 12.21.2	Yes	Methods for sending announcement.
				No	
		During an established communication session	clause 12.21.3	Yes	Methods for sending announcement.
				No	
			clause 12.21.4	Yes	Methods for sending announcement.

No.	Option item		References	Applicability at the II-NNI	Details for operator choice
		Providing announcements when communication request is rejected		No	
21	Advice Of Charge (AOC)		clause 12.22	Yes	
				No	
22	Completion of Communications on Not Logged-in (CCNL)		clause 12.23	Yes	
				No	
23	Presence service		clause 15	Yes	Presence services to use (TS 24.141 [132], OMA 1.1 [142] or OMA 2.0 [138]).
				No	
24	Messaging service	Page-mode messaging	clause 16.2	Yes	
				No	
		Session-mode messaging	clause 16.4	Yes	
				No	
		Session-mode messaging conferences	clause 16.5	Yes	
				No	
24A	Delivery of original destination identity		clause 22	Yes	Services to apply the function.
				No	
24B	Service access number translation		table 6.1.3.1/52A clause 27	Yes	
				No	
25	Other additional service using other SIP extensions		clause 6.1.1.3.2 clause 12.6	Yes	The SIP extensions to use and the service that uses the extensions.
				No	
26	Multi-Identity (MiD)		clause 6.1.1.3.1 table 6.1.3.1/126 clause 12.26.2	Yes	Types of non-native identities to support. (NOTE)
				No	
NOTE: The non-native identities, as defined in 3GPP TS 24.174 [218] are: an alternative identity, an external alternative identity and a virtual identity.					

Table C.3.1.13: Additional functions

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Optimal Media Routeing	clause 17	Yes	
			No	
2	Applying forking (NOTE 1)	table 6.1.3.1/5	Yes	Usage of Request-Disposition header field with value "no-fork". (NOTE 3)
			No (NOTE 2)	
3	Transfer of IP multimedia service tariff information	clause 11.3	Yes	The value of the Content-Disposition header field.
			No	
4	Telepresence using IMS	clause 23	Yes	The value of "+sip.clue" media feature tag in Contact header field.
			No	
5	Dynamic services interactions	table 6.1.3.1/125	Yes	The identities of the services in the Service-Interact-Info header field.
			No	
6	IMS data channel	clause 33	Yes	The value "webrtc-datachannel" of "+sip.app-subtype" media feature tag in Contact and Accept-Contact header fields.
			No	
7	IMS data channel multiplexing	clause 33.2	Yes	The "+g.3gpp.dc-mux" media feature tag in Contact header fields.
			No	

NOTE 1: Support of handling of several responses due to forking and of the Request-Disposition header field, is mandated on the II-NNI.
NOTE 2: In case the operator interconnects with IMS non-compliant networks, and wishes to use the II-NNI anyway, then the operators might want to negotiate if the forking procedures are applicable.
NOTE 3: The Request-Disposition header field with value "no-fork" can be used to suppress that forking occurs. However, a peer operator might require the usage of forking e.g. to implement certain services.

Table C.3.1.14: SDP lines

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	m=line	clause 6.1.2	Yes	Used static RTP payload type numbers.
2	b=line	clause 6.1.2	Yes	Used bandwidth modifier types.
3	a=line	clause 6.1.2	Yes	Used attributes.
				For the "rtpmap" attribute, used "encoding names".

Table C.3.1.15: Emergency services

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Public Safety Answering Point (PSAP) Callback	table 6.1.3.1/110	Yes	Used PSAP callback indicator.
			No	

Table C.3.1.16: Indicating the II-NNI traversal scenario

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Support of the "iotl" SIP URI parameter indicating the II-NNI traversal scenario	table 6.1.3.1/112 clause 5.3	Yes	
			No	

Table C.3.1.17: Mission critical services

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Support of Mission critical services	clause 28.2.2	Yes	MBMS transmission usage and location procedures support.
			No	

Table C.3.1.18: Calling number verification using signature verification and attestation information

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Calling number verification using signature verification and attestation information	table 6.1.3.1/119 table 6.1.3.1/120 table 6.1.3.1/123 table 6.1.3.1/124 clause 29	Yes	
			No	

Table C.3.1.19: Signed attestation for emergency and priority IMS sessions

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Calling number verification using signature verification and attestation information	table 6.1.3.1/119 table 6.1.3.1/120 table 6.1.3.1/123 table 6.1.3.1/124 clause 34.2	Yes	Support for emergency, emergency callback and/or priority IMS sessions.
			No	
2	Priority verification using assertion of priority information	table 6.1.3.1/73 table 6.1.3.1/110 table 6.1.3.1/119 table 6.1.3.1/128 clause 34.3	Yes	Support for emergency, emergency callback and/or priority IMS sessions.
			No	

Table C.3.1.20: RCD authentication and verification

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Calling number and RCD verification using signature verification and attestation information	table 6.1.3.1/119 table 6.1.3.1/120 table 6.1.3.1/123 table 6.1.3.1/124 table 6.1.3.1/128 clause 35.2	Yes	
			No	
2	RCD verification using assertion of RCD info	table 6.1.3.1/119 table 6.1.3.1/120 table 6.1.3.1/128 clause 35.3	Yes	
			No	

C.3.2 Option item table specific to roaming II-NNI

This clause describes the option item tables specific to roaming II-NNI as follows:

- Table C.3.2.1 shows the mechanism for authentication option items.
- Table C.3.2.1A shows the charging option items.
- Table C.3.2.2 shows the key of service profile for HSS query option item.
- Table C.3.2.3 shows the numbering, naming and addressing option items.
- Table C.3.2.4 shows the supplementary services option items.
- Table C.3.2.5 shows the access transfer services option items.
- Table C.3.2.6 shows the registration of bulk number contacts option items.
- Table C.3.2.7 shows the P-CSCF restoration option items.
- Table C.3.2.8 shows the resource sharing option items.
- Table C.3.2.9 shows the Priority sharing option items.
- Table C.3.2.9A shows the PS data off extension option items.
- Table C.3.2.10 shows the RLOS option items.

Table C.3.2.1: Mechanism for authentication

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	IMS AKA plus Ipsec ESP	table 6.1.3.1/7	Yes	
			No	
2	SIP digest plus check of IP association	table 6.1.3.1/7	Yes	
			No	
3	SIP digest plus Proxy Authentication	table 6.1.3.1/7	Yes	
			No	
4	SIP digest with TLS	table 6.1.3.1/7	Yes	
			No	

Table C.3.2.1A: Charging

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Inter-operator accounting	table 6.1.3.1/38 clause 11.2	Yes	Operator network identifiers populated in the type 1 "orig-ioi" and "term-ioi" header field parameters of the P-Charging-Vector header field.
2	Inter-operator accounting for the transit scenario	clause 11.2	Yes	Operator network identifiers populated in the "transit-ioi" header field parameters of the P-Charging-Vector header field.
			No	

Table C.3.2.2: The key of service profile for HSS query

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	The key of service profile for HSS query (P-Profile-Key header field)	table 6.1.3.1/59	Yes	
			No	

Table C.3.2.3: Numbering, naming and addressing

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Dial string ("user=dialstring" SIP URI parameter)	table 6.1.3.1/67	Yes	
			No	
2	Barring of premium numbers ("premium-rate" tel URI parameter)	clause 8.1, clause 24	Yes	
			No	

Table C.3.2.4: Supplementary services

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Outgoing Communication Barring (OCB)	clause 12.10.2	Yes	
			No	
2	Unstructured Supplementary Service Data	clause 12.24	Yes	
			No	
3	Enhanced Calling Name	clause 12.25	Yes	
			No	

Table C.3.2.5: Access transfer services

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	IMS Centralized Services (ICS)	clause 13	Yes	
			No	
2	PS to CS Single Radio Voice Call Continuity (SRVCC)	clause 14	Yes	Additional use conditions (PS to CS SRVCC for calls in alerting phase, support of ATCF architecture, PS to CS SRVCC for calls in pre-alerting phase and PS to CS SRVCC with the MSC server assisted mid-call feature).
				If the ATCF architecture applies, the URIs of SCC ASs authorised to provide PS to CS SRVCC information in the MESSAGE request.
			No	
3	Single Radio Video Call Continuity (vSRVCC)	clause 14	Yes	Additional use condition (transfer in alerting phase).
			No	
4	Inter UE Transfer (IUT)	clause 18	Yes	
			No	
5	CS to PS Single Radio Voice Call Continuity (SRVCC)	clause 14.5	Yes	The URIs of SCC ASs authorised to provide CS to PS SRVCC information in the MESSAGE request.
				Additional use conditions (support of CS to PS SRVCC for calls in alerting phase and support of CS to PS SRVCC with the assisted mid-call feature).
			No	
6	PS to CS Dual Radio Voice Call Continuity (DRVCC)	clause 14.6	Yes	Additional use conditions (PS to CS DRVCC for calls in alerting phase, PS to CS DRVCC for originating calls in pre-alerting phase, PS to CS DRVCC with the MSC server assisted mid-call feature and the use of IMS Centralized Services (ICS) and the tel URI in STN).
			No	
7	CS to PS Dual Radio Voice Call Continuity (DRVCC)	clause 14.7	Yes	Additional use conditions (CS to PS DRVCC for calls in alerting phase, CS to PS DRVCC for originating calls in pre-alerting phase, CS to PS DRVCC with the MSC server assisted mid-call feature) and the use of IMS Centralized Services (ICS).
			No	

Table C.3.2.6: Registration of bulk number contacts

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Registration of bulk number contacts	table 6.1.3.1/104	Yes	
			No	

Table C.3.2.7: P-CSCF restoration

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	PCRF or PCF based P-CSCF restoration	clause 25.2	Yes	
			No	
2	HSS or UDM/HSS based P-CSCF restoration	clause 25.3	Yes	
			No	

Table C.3.2.8: Resource sharing

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Resource sharing	clause 26	Yes	
			No	

Table C.3.2.9: Priority sharing

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Priority sharing	clause 28, table 6.1.3.1/118	Yes	
			No	

Table C.3.2.9A: 3GPP PS data off extension

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	3GPP PS data off extension	clause 32, table 6.1.3.1/121A	Yes	
			No	

Table C.3.2.10: RLOS

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	RLOS	clause 31, table 6.1.3.1/127	Yes	
			No	

C.3.3 Option item table specific to non-roaming II-NNI and loopback traversal scenario

This clause describes the option item tables specific to the non-roaming II-NNI and the loopback traversal scenario as follows:

- Table C.3.3.1 shows the SIP method option items.
- Table C.3.3.2 shows the charging option items.
- Table C.3.3.3 shows the GRUU option items.
- Table C.3.3.4 shows the media feature tags option items.
- Table C.3.3.5 shows the ISDN interworking option items.
- Table C.3.3.6 shows the corporate network option items.
- Table C.3.3.7 shows the numbering, naming and addressing option items.
- Table C.3.3.8 shows the additional functions option item.

- Table C.3.3.9 shows IMS emergency session traversal scenario option item.

Table C.3.3.1: SIP method

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	NOTIFY method	table 6.1/10 table 6.1/11	Yes	Event package name to use.
			No	
2	SUBSCRIBE method	table 6.1/20 table 6.1/21	Yes	Event package name to use.
			No	
3	PUBLISH method	table 6.1/15A table 6.1/15B	Yes	Event package name to use.
			No	

Table C.3.3.2: Charging

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Inter-operator accounting	table 6.1.3.1/38 clause 11.2	Yes	Operator network identifiers populated in the type 2 "orig-ioi" and "term-ioi" header field parameters of the P-Charging-Vector header field.
			No	
2	Inter-operator accounting for the transit scenario	clause 11.2	Yes	Operator network identifiers populated in the "transit-ioi" header field parameters of the P-Charging-Vector header field.
			No	

Table C.3.3.3: Globally routable user agent URIs (GRUU)

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Globally Routable User Agent URIs (gruu)	table 6.1.3.1/56	Yes	
			No	

Table C.3.3.4: Media feature tags

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Media feature tags	table 6.1.3.1/76 clause 12 clause 13 clause 14 clause 16 clause 18	Yes	Names of media feature tags to use.
			No	

Table C.3.3.5: ISDN interworking

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	User to User Call Control Information in SIP for ISDN Interworking (uui)	table 6.1.3.1/79	Yes	
			No	

Table C.3.3.6: Corporate network

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Private network traffic (P-Private-Network-Indication header field)	table 6.1.3.1/80	Yes	
			No	

Table C.3.3.7: Numbering, naming and addressing

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
0	SIP URI	clause 8.1	Yes	Any local numbers that are allowed in addition to global numbers.
				Domain name(s) and/or IP address(es) of hostportion to accept.
				Applicability of PSI to use.
				Applicability of "Unavailable User Identity" in the P-Asserted-Identity header filed.
0A	tel URI (NOTE)	clause 8.1	Yes	Any local numbers that are allowed in addition to global numbers.
				Applicability of the URI in the P-Asserted-Identity header field and/or Request-URI.
			No	
0B	IM URI	clause 8.1	Yes	
			No	
0C	PRES URI	clause 8.1	Yes	
			No	
1	Number Portability Routing Number ("rn" and "npdi" tel URI parameters)	clause 8.1	Yes	
			No	
2	Calling Party's Category ("cpc" tel URI parameter)	clause 8.1	Yes	cpc-values to use.
			No	
3	Originating Line Information ("oli" tel URI parameter)	clause 8.1	Yes	oli-values to use.
			No	
NOTE: The option item is only for the non-roaming II-NNI.				

Table C.3.3.8: Additional functions

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	Support of out-of-dialog OPTIONS method	table 6.1/12 table 6.1/13	Yes	The purpose of the method.
			No	

Table C.3.3.9: IMS emergency session traversal scenario

No.	Option item	References	Applicability at the II-NNI	Details for operator choice
1	IMS emergency session traversal scenario	table 6.1.3.1/55 clause 30.1 clause 30.2	Yes	The emergency service URN(s) to use.
				The PSAP URI to use in the Route header field, if applicable.
			No	
2	Next-Generation Pan-European eCall emergency service	clause 30.3	Yes	
			No	

Annex D (informative): Change history

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
03/2015	CT-67	CP-150129	736	1	Addition of an optional capability regarding a new cause-param value for service number translation	12.7.0	13.0.0
03/2015	CT-67	CP-150130	719		Correction of a minor error in subclause C.3.1	12.7.0	13.0.0
03/2015	CT-67	CP-150130	723		Annex A corrections	12.7.0	13.0.0

Change history							
Date	TSG #	TSG Doc.	CR	Rev	Cat	Subject/Comment	New
2016-03	CT#71	CP-160088	0813	2	B	Adding MBMS usage info and location info procedure	13.4.0
2016-03	CT#71	CP-160088	0814	2	F	Adding "application/vnd.3gpp.mcptt-info" MIME body	13.4.0
2016-03	CT#71	CP-160088	0815	2	B	Adding MCPTT as option item in annex C	13.4.0
2016-03	CT#71	CP-160088	0816	1	B	Adding affiliation	13.4.0
2016-03	CT#71	CP-160098	0817	1	F	Adding "Timer N" in the timer table	13.4.0
2016-03	CT#71	CP-160096	0819	1	A	Updating "Details for operator choice" in DRVCC to include the STN	13.4.0
2016-03	CT#71	CP-160088	0821	1	F	Addressed MCPTT SIP interfaces	13.4.0
2016-06	CT#72	CP-160262	0822	2	F	Some error corrections and removing an editor's note	13.5.0
2016-06	CT#72	CP-160262	0823	2	F	Group regrouping	13.5.0
2016-06	CT#72	CP-160262	0824	1	F	Conference event package subscription	13.5.0
2016-06	CT#72	CP-160262	0825	1	F	MCPTT service settings	13.5.0
2016-06	CT#72	CP-160262	0826	-	F	Clarifying the Accept-Contact header field in MBMS usage info	13.5.0
2016-06	CT#72	CP-160262	0827	2	F	The affiliation procedure update	13.5.0
2016-06	CT#72	CP-160259	0828	1	F	Adding the Cellular-Network-Info header field	13.5.0
2016-06	CT#72	CP-160258	0834	1	A	Adding draft-mohali-dispatch-originating-cdiv-parameter	13.5.0
2016-06	CT#72	CP-160258	0840	1	A	Updates to RFC 7315 P-header extensions usage in SIP requests/responses	13.5.0
2016-06	CT#72	CP-160258	0843	1	A	P-Access-Network-Info ABNF Update	13.5.0
2016-06	CT#72	CP-160261	0844	1	F	Update ref to draft-mohali-dispatch-cause-for-service-number-06	13.5.0
2016-06	CT#72	CP-160273	0830	1	F	Clarification of the note about forking	14.0.0
2016-06	CT#72	CP-160273	0831	-	F	Changing content type to correct terminology	14.0.0
2016-06	CT#72	CP-160273	0835	1	F	Clarification of Public Service Identitiy at II-NNI	14.0.0
2016-06	CT#72	CP-160273	0836	1	F	Correcting the subscription to the conference package for CONF and the session-mode messaging service	14.0.0
2016-06	CT#72	CP-160273	0837	1	F	Clarification on the applicability of P-Early-Media header field and early media over the II-NNI	14.0.0
2016-09	CT#73	CP-160446	0846	1	A	Usage of the Resource-Share header field	14.1.0
2016-09	CT#73	CP-160447	0852	1	A	Reference update: RFC 7913	14.1.0
2016-09	CT#73	CP-160449	0855	1	A	Updated ref to draft-mohali-dispatch-cause-for-service-number-07	14.1.0
2016-12	CT#74	CP-160624	0857	1	A	Updated ref to draft-mohali-dispatch-cause-for-service-number-09	14.2.0
2016-12	CT#74	CP-160620	0861	1	A	Updated ref to draft-mohali-dispatch-originating-cdiv-parameter-02	14.2.0
2016-12	CT#74	CP-160620	0865	-	A	Reference update: RFC 7976	14.2.0
2016-12	CT#74	CP-160621	0875	-	A	Reference update: RFC 7989	14.2.0
2016-12	CT#74	CP-160623	0877	2	A	Missing support of priority sharing	14.2.0
2016-12	CT#74	CP-160631	0878	-	F	Additional routeing functionality at the IBCF	14.2.0
2017-03	CT#75	CP-170087	0882	1	A	Correction on PSAP callback indicator option item	14.3.0
2017-03	CT#75	CP-170087	0883	1	A	Correction on the architecture diagram of II-NNI	14.3.0
2017-03	CT#75	CP-170087	0884	1	A	Addition of application/call-completion MIME Type	14.3.0
2017-03	CT#75	CP-170080	0886	1	A	Update ref to draft-mohali-dispatch-cause-for-service-number	14.3.0
2017-03	CT#75	CP-170078	0890	2	A	Update ref to draft-mohali-dispatch-originating-cdiv-parameter	14.3.0
2017-03	CT#75	CP-170079	0894	-	A	Reference update: RFC 8055	14.3.0
2017-03	CT#75	CP-170077	0896	-	A	Applicability of Resource-Share header field	14.3.0
2017-03	CT#75	CP-170085	0897	1	B	Support of "Calling number verification"	14.3.0
2017-06	CT#76	CP-171134	0872	5	F	Clarification of II-NNI for IMS emergency session	14.4.0
2017-06	CT#76	CP-171130	0898	2	B	Addition of the location parameter	14.4.0
2017-06	CT#76	CP-171128	0900	-	A	MIME body types used by MCPTT	14.4.0
2017-06	CT#76	CP-171126	0901	-	F	Modifying references to align with rel-14 MCPTT stage 1 and stage 2 restructuring	14.4.0
2017-06	CT#76	CP-171134	0902	1	F	Missing support of Response-Source header field	14.4.0
2017-06	CT#76	CP-171124	0904	1	A	Reference Update RFC8119	14.4.0
2017-06	CT#76	CP-171123	0908	1	A	Update ref to new naming of draft-mohali-sipcore-originating-cdiv-parameter	14.4.0
2017-06	CT#76	CP-171131	0909	2	F	Support of feature capability indicator "sip.607"	14.4.0
2017-06	CT#76	CP-171122	0913	-	A	Reference update: draft-ietf-mmusic-sctp-sdp	14.4.0
2017-06	CT#76	CP-171131	0914	-	F	Reference update: draft-ietf-stir-rfc4474bis	14.4.0
2017-06	CT#76	CP-171125	0915	3	B	IMS Trace (ISAT) Procedures	14.4.0
2017-06	CT#76	CP-171127	0916	3	B	Adding other Mission Critical services	14.4.0
2017-06	CT#76	CP-171135	0910	1	F	Added unspecified abbreviations	15.0.0
2017-06	CT#76	CP-171135	0918	2	F	Misalignment regarding transcoding between TS 24.229 and TS 29.165	15.0.0
2017-06	CT#76					Editorial changes by MCC	15.0.1
2017-09	CT#77	CP-172049	0919	1	A	Added the profile status in proxy role regarding “A SIP Response Code for Unwanted Calls”	15.1.0
2017-09	CT#77	CP-172040	0920	1	B	Support of IETF draft-ietf-sipcore-content-id	15.1.0
2017-09	CT#77	CP-172045	0922	1	A	Reference Update for the ISUP location parameter	15.1.0

2017-09	CT#77	CP-172049	0925	-	A	Reference update from draft-ietf-sipcore-status-unwanted-06 to RFC 8197	15.1.0
2017-12	CT#78	CP-173099	0928	1	A	Reference Update for the ISUP location parameter	15.2.0
2017-12	CT#78	CP-173091	0933	1	A	Update draft ref for Originating-CDIV param in P-Served-User	15.2.0
2017-12	CT#78	CP-173090	0934	-	D	Editorial modification	15.2.0
2017-12	CT#78	CP-173095	0935	1	A	Adding MCData related MIME bodies	15.2.0
2017-12	CT#78	CP-173098	0938	1	A	Correction of II-NNI condition related to P-Early-Media header field	15.2.0
2017-12	CT#78	CP-173102	0940	-	A	Correction of II-NNI condition related to P-Early-Media header field for the UPDATE request	15.2.0
2017-12	CT#78	CP-173096	0943	-	A	Addition of sign XML MIME body	15.2.0
2017-12	CT#78	CP-173092	0945	-	F	Reference update: RFC 8262	15.2.0
2018-03	CT#79	CP-180038	0946	1	B	Support of "Enhanced calling name" service	15.3.0
2018-03	CT#79	CP-180048	0947	-	F	bSRVCC-MT NNI	15.3.0
2018-03	CT#79	CP-180048	0948	1	F	Operator choice of DTMF sampling rate	15.3.0
2018-03	CT#79	CP-180042	0950	-	A	Reference Update for the ISUP location parameter	15.3.0
2018-03	CT#79	CP-180048	0951	-	F	Updating the title of referenced TS 22.179	15.3.0
2018-03	CT#79	CP-180044	0953	-	A	Reference update: RFC 8224	15.3.0
2018-03	CT#79	CP-180048	0955	-	F	Correction on the terminology of non-global number	15.3.0
2018-03	CT#79	CP-180048	0956	-	F	Correction of the option item name for Calling number verification	15.3.0
2018-03	CT#79	CP-180048	0957	1	F	Operator choice of CAT media type	15.3.0
2018-06	CT#80	CP-181022	0958	1	F	Missing explanation of abbreviation "5xx"	15.4.0
2018-06	CT#80	CP-181016	0959	1	B	Calling number verification using signature verification and attestation information	15.4.0
2018-06	CT#80	CP-181170	0960	4	F	MBMS transmission and location procedures for MCVideo service	15.4.0
2018-09	CT#81	CP-182021	0961	1	B	Functional Alias Management over II-NNI	15.5.0
2018-09	CT#81	CP-182020	0966	1	A	Update draft ref for Originating-CDIV param in P-Served-User	15.5.0
2018-09	CT#81	CP-182018	0967	1	F	Correction of NOTE numbering for trust relationship	15.5.0
2018-09	CT#81	CP-182024	0969	-	A	Reference Update for the ISUP Q.850 location parameter	15.5.0
2018-12	CT#82	CP-183113	0974	2	A	Update draft ref for Originating-CDIV param in P-Served-User	15.6.0
2018-12	CT#82	CP-183114	0977	1	A	Removal of editor's note on Service-Interact-Info	15.6.0
2018-12	CT#82	CP-183111	0978	-	F	Support of Origination-Id in INVITE and MESSAGE methods	15.6.0
2019-03	CT#83	CP-190124	0980	2	A	References update for ISAT after related RFC completed in IETF	15.7.0
2019-03	CT#83	CP-190126	0982	2	A	Reference Update for the ISUP Cause Location Parameter Draft	15.7.0
2019-03	CT#83	CP-190123	0988	1	A	P-Served-User case orig-cdiv is now RFC 8498	15.7.0
2019-06	CT#84	CP-191094	0989	-	A	Reference Update for the ISUP Cause Location Parameter Draft	15.8.0
2019-09	CT#85	CP-192166	0992	1	A	Reference Update RFC8606	15.9.0
2019-09	CT#85	CP-192174	0990	3	F	Clarification of the usage restriction of P-Asserted-Identity header field over the II-NNI.	16.0.0
2019-09	CT#85	CP-192162	0993	1	B	Support of "Multi-Device" and "Multi-Identity" services	16.0.0
2019-12	CT#86	CP-193190	0995	2	A	P-CSCF restoration in 5GS	16.1.0
2019-12	CT#86	CP-193205	0996		B	Additional-Identity header in REFER request	16.1.0
2019-12	CT#86	CP-193207	1004	1	A	Correction for setting condition of the Contact header field	16.1.0
2020-03	CT#87e	CP-200229	1005	2	F	Clarification of the scope	16.2.0
2020-06	CT#88e	CP-201329	1006		F	Corrections on the II-NNI specifications on the P-Charging-Vector header field	16.3.0
2020-06	CT#88e	CP-201240	1007	1	F	Re-structure of subclause for MuD/MiD service	16.3.0
2020-06	CT#88e	CP-201242	1008	1	F	Adding the RLOS requirements over the II-NNI	16.3.0
2020-09	CT#89e	CP-202076	1011	1	A	Addition of missing capability	16.4.0
2020-09	CT#89e	CP-202075	1015	-	A	Support of P-Charging-Vector header field in BYE and PRACK	16.4.0
2020-12	CT#90e	CP-203145	1016	2	F	Adding the description of Ix reference point.	17.0.0
2021-03	CT#91e	CP-210213	1017	1	F	Correction of the dynamic view status for History-Info header field.	17.1.0
2021-03	CT#91e	CP-210242	1023	-	A	Reference update: RFC 8841	17.1.0
2021-06	CT#92e	CP-211236	1024	3	A	IMS data channel at the II-NNI	17.2.0
2021-06	CT#92e	CP-211222	1028	-	A	Correction on Calling number verification using signature verification and attestation information	17.2.0
2021-06	CT#92e	CP-211258	1029	1	B	Support for signed attestation for emergency and priority IMS sessions	17.2.0
2021-09	CT#93e	CP-212227	1030	1	B	IBCF RPH signing for MPS	17.3.0
2022-09	CT#97e	CP-222124	1032	2	F	Support of Reason header for handling of Identity header errors	17.4.0
2022-12	CT#98e	CP-223195	1033		F	Capability alignment: Identity Header Error Handling	17.5.0
2022-12	CT#98e	CP-223195	1034	1	F	Reference update: draft-ietf-stir-identity-header-errors-handling	17.5.0
2022-12	CT#98e	CP-223182	1035		B	Support of IETF draft-ietf-sipcore-multiple-reasons	18.0.0
2023-06	CT#100	CP-231187	1036		F	Reference update: RFC 9366	18.1.0
2023-09	CT#101	CP-232117	1038		A	Reference update: RFC 9410	18.2.0
2024-03	CT#103	CP-240206	1039	1	B	Support of IMS data channels	18.3.0
2025-06	CT#108	CP-251093	1041	1	B	Support of data channel multiplexing	19.0.0
2025-06	CT#108	CP-251109	1042	1	F	Updates to obsoleted IETF RFC	19.0.0
2025-09	CT#109	CP-252076	1043	-	B	Support for RCD verification and authentication	19.1.0

2025-12	CT#110	CP-253039	1045	3	B	Introduce DC-Info to indicate a DC operation request is initiated by the DC AS	19.2.0
