Contents of IMMEDIATE ASSIGNMENT message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 20. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions),Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 20. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT REJECT message:

| | |

| Message Type | 00100001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile Identity 1 | |
| - odd/even indication | Even. |
| - Type of Identity | TMSI. |
| - Identity Digits | TMSI previously allocated to MS. |
| Mobile Identity 2 | Not present. |
| P1 rest octets | Not used (all bits set to spare). |

Contents of PAGING REQUEST TYPE 2 message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the P2 rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management.. |
| Skip Indicator | 0000 |
| Message Type | 00100010 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile Identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile Identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile Identity | Not present. |
| P2 rest octets | Not used (all bits set to spare). |

Contents of PAGING REQUEST TYPE 3 message:

| | |
|---|---|
| L2 pseudo length | 19 |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100100 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

### 26.13.1.6.2 Default contents of DCS 1 800 layer 3 messages for RR tests

This section contains the default values of DCS 1 800 L3 messages, which unless indicated otherwise in section 26.6 shall be transmitted by the system simulator and which are required to be received from the DCS 1 800 MS under test. These values are used in order to be consistent with the phase 2 version of 26.6.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this section, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

**Default SYSTEM INFORMATION:**

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

SYSTEM INFORMATION 5 bis is not sent as a default message. For those tests that require SYSTEM INFORMATION 5 bis see the specific message contents for that test.

**Cell A**

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|---|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 512. |
| - Cell Allocation ARFCN | Channel Numbers, 590, 650, 750 and 850. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set, 0 |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | MS shall not apply. |
| - BS_AG_BLKS_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal. |
| - Mobile Network Code | 01 decimal. |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 512. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels numbers, 520, 590, 600, 700, 764, 780, 810, 870. |
| - EXT-IND | This IE carries the complete BA. EXT-IND is 0. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not Allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|---|---|
| Downlink input level | 63 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class |
| Propagation profile | static. |
| BCCH/CCCH carrier number | ARFN 590. |

**Cell B**

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|---|---|
| Cell Channel Description | |
| - Format Identifier | Range 512. |
| - Cell Allocation ARFCN | Channel Number 520. |

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

| | |
|---|---|
| Cell Identity | |
| - Cell Identity Value | 0002H |

Default settings for cell B:

| | |
|---|---|
| Downlink input level | 53 dBmicroVolt emf(). |
| Uplink output power | minimum supported by the MS's power class |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 520 |

Contents of ALERTING message (SS to MS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description | |
| - Channel Type and TDMA offset | Bm + ACCHs. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | Appropriate for the test |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode 1=<X<=8 | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 650. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Same as in the CHANNEL MODE MODIFY message. |
| - Hopping | Single RF channel. |
| - Frequency Band | Band number 0. |
| - ARFCN | Channel number 650. |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message:

| | |
|---|---|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | |
| - RF Power Capability | See PICS/PIXIT. |
| - Frequency Capability | Set to 0. |
| Mobile Station Classmark 3 | For presence and contents see PICS/PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|---|---|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message:

| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even. |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

### 26.13.1.6.3 Default contents of GSM 450 layer 3 messages for RR tests

This section contains the default values of GSM 450 L3 messages, which unless indicated otherwise in section 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 450 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this section, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|---|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 128. |
| - Cell Allocation ARFCN | Channels 263, 267, 275 and 279. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKS_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 128. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 262, 263, 274, 282, 284, 287, 290 and 293. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|---|---|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 263 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|---|---|
| Cell Channel Description | |
| - Format Identifier | Range 128. |
| - Cell Allocation ARFCN | Channel Number 261. |

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|---|---|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 261 |

Contents of ALERTING message (SS to MS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 267. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 267. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Same as in the CHANNEL MODE MODIFY message. |
| - Hopping | Single RF channel. |
| - Frequency Band | Band number 0. |
| - ARFCN | Channel number 267. |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message

| | |
|---|---|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | See PICS/PIXIT. |
| Mobile Station Classmark 3 | For presence and contents see PICS/PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|---|---|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message

| | |
|---|---|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 0X100100 |
| Other information elements | Not checked. |

Contents of CONFIGURATION CHANGE COMMAND message (SS to MS)

| | |
|---|---|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110000 |
| Multislot allocation | Appropriate for the test |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode 1=<X<=8 | Appropriate for the test |

Contents of CONFIGURATION CHANGE ACKNOWLEDGE message (MS to SS)

| | |
|---|---|

| | |
|---|---|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110011 |
| RR Cause | Protocol Error Unspecified |

Contents of CONNECT message (SS to MS)

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 |
| Message Type | 00000111 |
| All other information elements | Not present. |

Contents of CONNECT ACKNOWLEDGE message (MS to SS)

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 0 |
| Message Type | 0X001111 |

Contents of HANDOVER ACCESS message:

| | |
|---|---|
| Handover Reference | Equal to the value included in the Handover Command message. |

Contents of HANDOVER COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101011 |
| Cell Description | |
| - Network Colour Code | 1 |
| - Base station Colour Code | Corresponding to target cell |
| - BCCH Carrier Number | Set to the BCCH carrier number of cell B. (one of 261, 263, 282, 284, 287, 290 or 293). |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Chosen arbitrarily by the test house from those supported on the target cell. |
| Handover Reference | |
| - Handover Reference Value | Chosen arbitrarily by the test house. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode | Appropriate for the test |

| - second channel | any channel. |
| Mobile identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

### 26.13.1.6.4 Default contents of GSM 480 layer 3 messages for RR tests

This section contains the default values of GSM 480 L3 messages, which unless indicated otherwise in section 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 480 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this section, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|---|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | Range 128 |
| - Cell Allocation ARFCN | Channels 310, 315, 322 and 326. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKS_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | Range 128 |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 308, 310, 321, 329, 331, 334, 337 and 340. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|---|---|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 310 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|---|---|
| Cell Channel Description | |
| - Format Identifier | Range 128 |
| - Cell Allocation ARFCN | Channel Number 308. |

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|---|---|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 308 |

Contents of ALERTING message (SS to MS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 315. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 315. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Same as in the CHANNEL MODE MODIFY message. |
| - Hopping | Single RF channel. |
| - Frequency Band | Band number 0. |
| - ARFCN | Channel number 315. |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message

| | |
|---|---|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |
| - algorithm identifier | cipher with A5/1. |
| - SC | Start ciphering. |
| Cipher Response | IMEI shall not be included. |

Contents of CIPHERING MODE COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110010 |
| Mobile Identity | Not present. |

Contents of the CLASSMARK CHANGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 000100110 |
| Mobile Station Classmark 2 | See PICS/PIXIT. |
| Mobile Station Classmark 3 | For presence and contents see PICS/PIXIT. |

Contents of CM SERVICE ACCEPT message:

| | |
|---|---|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |

Contents of CM SERVICE REQUEST message

| | |
|---|---|
| Protocol Discriminator | Mobility Management. |
| Skip Indicator | 0000 |
| Message Type | 0X100100 |
| Other information elements | Not checked. |

Contents of CONFIGURATION CHANGE COMMAND message (SS to MS)

| | |
|---|---|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110000 |
| Multislot allocation | Appropriate for the test |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode 1=<X<=8 | Appropriate for the test |

Contents of CONFIGURATION CHANGE ACKNOWLEDGE message (MS to SS)

| | |
|---|---|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110001 |

Contents of CONFIGURATION CHANGE REJECT message (MS to SS)

| | |
|---|---|
| Protocol Discriminator | Radio Resource |
| Skip Indicator | 0000 |
| Message type | 00110011 |
| RR Cause | Protocol Error Unspecified |

Contents of CONNECT message (SS to MS)

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 |
| Message Type | 00000111 |
| All other information elements | Not present. |

Contents of CONNECT ACKNOWLEDGE message (MS to SS)

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 0 |
| Message Type | 0X001111 |

Contents of HANDOVER ACCESS message:

| | |
|---|---|
| Handover Reference | Equal to the value included in the Handover Command message. |

Contents of HANDOVER COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101011 |
| Cell Description | |
| - Network Colour Code | 1 |
| - Base station Colour Code | Corresponding to target cell |
| - BCCH Carrier Number | Set to the BCCH carrier number of cell B. (one of 308, 310, 329, 331, 334, 337 or 340). |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Chosen arbitrarily by the test house from those supported on the target cell. |
| Handover Reference | |
| - Handover Reference Value | Chosen arbitrarily by the test house. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of HANDOVER COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101100 |
| RR cause | Normal event. |
| Time difference | Not present. |

Contents of HANDOVER FAILURE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101000 |
| RR cause | Dependent on the test. |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 310. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions),Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 310. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT REJECT message:

| | |
|---|---|
| L2 pseudo length | 19 |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111010 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Wait Indication | 0 seconds. |
| Request Reference | Not pertaining to the MS under test. |
| Wait Indication | 0 seconds. |
| Request Reference | Not pertaining to the MS under test. |
| Wait Indication | 0 seconds. |
| Request Reference | Not pertaining to the MS under test. |
| Wait Indication | 0 seconds. |
| IAR rest octets | Not used (all bits set to spare). |

Contents of LOCATION UPDATING REQUEST message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X001000 |
| Other information elements | Not checked. |

Contents of PAGING REQUEST TYPE 1 message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the P1 rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 9. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile Identity 1 | |
| - odd/even indication | Even. |
| - Type of Identity | TMSI. |
| - Identity Digits | TMSI previously allocated to MS. |
| Mobile Identity 2 | Not present. |
| P1 rest octets | Not used (all bits set to spare). |

Contents of PAGING REQUEST TYPE 2 message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the P2 rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management.. |
| Skip Indicator | 0000 |
| Message Type | 00100010 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile Identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile Identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile Identity | Not present. |
| P2 rest octets | Not used (all bits set to spare). |

Contents of PAGING REQUEST TYPE 3 message:

| | |
|---|---|
| L2 pseudo length | 19 |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100100 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channels needed | |
| - first channel | any channel. |
| - second channel | any channel. |
| Mobile identity 1 | |
| - TMSI value | TMSI previously allocated to MS. |
| Mobile identity 2 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 3 | |
| - TMSI value | TMSI not allocated to MS. |
| Mobile identity 4 | |
| - TMSI value | TMSI not allocated to MS. |
| P3 rest octets | Not used (all bits set to spare). |

Contents of PAGING RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00100111 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Key sequence number previously allocated to MS, or "111" if no key is available. |
| Mobile Station Classmark 2 | |
| Mobile Identity | |
| - odd/even indication | Even |
| - Type of identity | TMSI |
| - Identity Digits | TMSI previously allocated to MS. |

Contents of PHYSICAL INFORMATION message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

### 26.13.1.6.5 Default contents of GSM 700 layer 3 messages for RR tests

This section contains the default values of GSM 700 L3 messages, which unless indicated otherwise in section 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 700 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this section, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|---|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channels 457, 467, 470 and 475. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKS_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | 128 range |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 447, 457, 477, 480, 499, 504, 507 and 510. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|---|---|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | Static. |
| BCCH/CCCH carrier number | 457 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|---|---|
| Cell Channel Description | |
| - Format Identifier | 128 range. |
| - Cell Allocation ARFCN | Channel Number 447. |

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|---|---|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 447 |

Contents of ALERTING message (SS to MS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 467. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 467. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Same as in the CHANNEL MODE MODIFY message. |
| - Hopping | Single RF channel. |
| - Frequency Band | Band number 0. |
| - ARFCN | Channel number 467. |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |

|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101000 |
| RR cause | Dependent on the test. |

Contents of IMMEDIATE ASSIGNMENT message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IA rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 11. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111111 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see initial conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions), Channel number 467; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 20. |
| Request Reference | Pertaining to last Channel Request sent by the MS. |
| Timing Advance | |
| - Timing advance value | 30 bit periods. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IA rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT EXTENDED message:

| | |
|---|---|
| L2 pseudo length | This is the sum of the lengths of all the information elements present in the message except for the IAX rest octets and L2 pseudo length IEs. For the default message the L2 pseudo length is 18. |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111001 |
| Page Mode | |
| - Page Mode | Normal Paging. |
| Channel Description 1 | |
| - Channel Type and TDMA offset | For non-combined CCCH/SDCCH (see test conditions), SDCCH/8, with subchannel chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, with subchannel chosen arbitrarily by the test house. |
| - Timeslot Number | For non-combined CCCH/SDCCH (see test conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, timeslot zero. |
| - Training Sequence Code | For non-combined CCCH/SDCCH (see initial conditions), chosen arbitrarily by the test house; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, TSC=5 (same as the BCC). |
| - Hopping | Single RF channel. |
| - ARFCN | For non-combined CCCH/SDCCH (see initial conditions),Channel number 30; For combined CCCH/SDCCH (default SS conditions), SDCCH/4, Channel number 457. |
| Request Reference 1 | Pertaining to last Channel Request sent by the MS. |
| Timing Advance 1 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Same channel type as in Channel Description 1, but different TDMA offset to that in Channel Description 1. |
| - Timeslot Number | equal to the value in Channel Description 1. |
| - Training Sequence Code | equal to the value in Channel Description 1. |
| - Hopping | Single RF channel. |
| - ARFCN | equal to the value in Channel Description 1. |
| Request Reference 2 | Not pertaining to any Channel Requests sent by the MS. |
| Timing Advance 2 | |
| - Timing advance value | Chosen arbitrarily by the test house. |
| Mobile Allocation | |
| - Length | 0 |
| Starting Time | Not present. |
| IAX rest octets | Not used (all bits set to spare). |

Contents of IMMEDIATE ASSIGNMENT REJECT message:

| | |
|---|---|
| L2 pseudo length | 19 |
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00111010 |
| Page Mode | |
| - Page Mode | Normal Paging. |

|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101101 |
| Timing advance | 20 bit periods. |

Contents of SETUP message; (MS to SS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | any value from the set {0, ..., 6}. |
| TI flag | 0 |
| Message Type | 0X000101 |
| Other information elements | Not checked. |

### 26.13.1.6.6 Default contents of GSM 850 layer 3 messages for RR tests

This section contains the default values of GSM 850 L3 messages, which unless indicated otherwise in section 26.13 shall be transmitted by the system simulator and which are required to be received from the GSM 850 MS under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements that are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this section, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION 2 bis, SYSTEM INFORMATION 5 bis, SYSTEM INFORMATION 7, and SYSTEM INFORMATION 8 messages are not used.

Cell A

Contents of information elements in SYSTEM INFORMATION TYPE 1 to 6 messages for cell A.

| | |
|---|---|
| (CBCH) Channel Description | Not present. |
| (CBCH) Mobile Allocation | Not present. |
| Cell Channel Description | |
| - Format identifier | 128 range. |
| - Cell Allocation ARFCN | Channels 147, 157, 177 and 197. |
| Cell Identity | |
| - Cell Identity Value | 0001H |
| Cell Options | |
| - Power Control Indicator | Power Control Indicator is not set. |
| - DTX Indicator | MS shall not use DTX. |
| - Radio_Link_Timeout | 8 SACCH blocks. |
| Cell Selection Parameters | |
| - Cell_Reselect_Hysteresis | 12 dB. |
| - MX_TXPWR_MAX_CCH | Minimum level. |
| - ACS | No addition cell parameters are present in SYSTEM INFORMATION messages 7 and 8. |
| - NECI | New establishment causes not supported. |
| - RXLEV_ACCESS_MIN | Minimum level. |
| Control Channel Description | |
| - Attach-Detach allowed | No Attach/Detach. |
| - BS_AG_BLKS_RES | 0 blocks reserved for access grant. |
| - CCCH_CONF | 1 basic physical channel used for CCCH, combined with SDCCHs. |
| - BS_PA_MFRMS | 5 multiframe periods for transmission of paging messages. |
| - T3212 Time-out value | Infinite. |
| L2 pseudo length | |
| - System information 1 | 21 |
| - System information 2 | 22 |
| - System information 3 | 18 |
| - System information 4 | 12 |
| Location Area Identification | |
| - Mobile Country Code | 001 decimal |
| - Mobile Network Code | 01 decimal |
| - Location Area Code | 0001H |
| Message Type | |
| - System information 1 | 00011001 |
| - System information 2 | 00011010 |
| - System information 3 | 00011011 |
| - System information 4 | 00011100 |
| - System information 5 | 00011101 |
| - System information 6 | 00011110 |
| Neighbour Cells Description | |
| - Format identifier | 128 range. |
| - BCCH Allocation Sequence | 0 |
| - BCCH Allocation ARFCN | Channels 137, 147, 167, 207, 217, 227, 237 and 247. |
| - EXT-IND | This IE carries the complete BA. |
| NCC Permitted | 0000 0010 |
| RACH Control Parameters | |
| - Max Retrans | Max 1 retrans. |
| - Tx-integer | 5 slots used. |
| - Cell Barred for Access | Cell is not barred. |
| - Call Reestablishment Allowed | Not allowed. |
| - Access Control Class | Access is not barred. |
| - Emergency Call allowed | Yes. |
| SI 1 rest octets | Not used (all bits are set to spare). |
| SI 2 rest octets | Not used (all bits are set to spare). |
| SI 3 rest octets | Not used (all bits are set to spare). |
| SI 4 rest octets | Not used (all bits are set to spare). |

Default settings for cell A:

| | |
|---|---|
| Downlink input level | 63 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 147 |

Cell B

The contents of SYSTEM INFORMATION TYPE 1 to 6 messages for cell B are identical to those of cell A with the following exceptions:

| | |
|---|---|
| Cell Channel Description | |
| - Format Identifier | 128 range. |
| - Cell Allocation ARFCN | Channel Number 137. |

NOTE 2: This IE needs modification when used in handover tests that command the MS to go to a frequency hopping channel in cell B.

Cell Identity

- Cell Identity Value 0002H

Default settings for cell B:

| | |
|---|---|
| Downlink input level | 53 dBmicroVolt emf. |
| Uplink output power | minimum supported by the MS's power class. |
| Propagation profile | static. |
| BCCH/CCCH carrier number | 137 |

Contents of ALERTING message (SS to MS):

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000001 |
| All other information elements | Not present. |

Contents of ASSIGNMENT COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101110 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Bm + ACCHs |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 157. |
| Power Command | |
| - Power level | Chosen arbitrarily by the test house. |
| Multislot allocation | |
| - Downlink assignment | Appropriate for the test |
| - Uplink assignment | Appropriate for the test |
| - Channel set 1=<X<=8 | Appropriate for the test |
| Channel mode | Appropriate for the test |

Contents of ASSIGNMENT COMPLETE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101001 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of ASSIGNMENT FAILURE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00101111 |
| RR Cause | |
| - RR Cause Value | Depending on test. |

Contents of AUTHENTICATION REQUEST message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 00010010 |
| Ciphering Key Sequence Number | |
| - Key Sequence | Chosen arbitrarily by the test house from the range 0 to 6. |
| Authentication Parameter RAND | |
| - RAND value | Chosen arbitrarily by the test house. |

Contents of AUTHENTICATION RESPONSE message:

| | |
|---|---|
| Protocol Discriminator | MM message. |
| Skip Indicator | 0000 |
| Message Type | 0X010100 |
| Other information element(s) | Not checked. |

Contents of CALL PROCEEDING message:

| | |
|---|---|
| Protocol Discriminator | Call Control. |
| Transaction Identifier | |
| TI value | As used in the SETUP message. |
| TI flag | 1 (destination side). |
| Message Type | 00000010 |
| All other information elements | Not present. |

Contents of CHANNEL MODE MODIFY message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010000 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Chosen arbitrarily by the test house. |
| - Training Sequence Code | Chosen arbitrarily by the test house. |
| - Hopping | Single RF channel. |
| - ARFCN | Channel number 157. |
| Channel Mode | |
| - Mode | Depending on test. |

Contents of CHANNEL MODE MODIFY ACKNOWLEDGE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00010111 |
| Channel Description 2 | |
| - Channel Type and TDMA offset | Depending on test. |
| - Timeslot Number | Same as in the CHANNEL MODE MODIFY message. |
| - Training Sequence Code | Same as in the CHANNEL MODE MODIFY message. |
| - Hopping | Single RF channel. |
| - Frequency Band | Band number 0. |
| - ARFCN | Channel number 157. |
| Channel Mode | |
| - Mode | Same as in the CHANNEL MODE MODIFY message. |

Contents of CHANNEL RELEASE message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00001101 |
| RR Cause | |
| - RR Cause Value | Normal event. |

Contents of CHANNEL REQUEST message

| | |
|---|---|
| Establishment Cause | Not checked. |
| Random Reference | Not checked. |

Contents of CIPHERING MODE COMMAND message:

| | |
|---|---|
| Protocol Discriminator | RR Management. |
| Skip Indicator | 0000 |
| Message Type | 00110101 |
| Cipher Mode Setting | |

## 26.13.2 Multislot signalling / CC

### 26.13.2.1 Multislot signalling / CC / In-call functions

#### 26.13.2.1.1 Multislot signalling / CC / In-call functions / User initiated service level upgrade / successful

This test is applicable to all MS that supports multislot configuration.

##### 26.13.2.1.1.1 Definition and applicability

Multislot connection is established. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is successfully performed.

This test is applicable for any equipment supporting multislot connection.

##### 26.13.2.1.1.2 Conformance requirements

1) MS shall send MODIFY message to SS indicating that User initiated service level upgrade is initiated.

2) MS enters CC state ‘Mobile originating modify (U26)’ after sending MODIFY.

3) MS enters CC state ‘Active (U10)’ when MODIFY COMPLETE is received.

##### References

Conformance requirement 1: GSM 04.08, section 9.3.13
Conformance requirement 2: GSM 04.08, section 5.3.5.1
Conformance requirement 3: GSM 04.08, section 5.3.5.2

##### 26.13.2.1.1.3 Test purpose

1) To verify that the procedure is initiated by the MS in the “active” state of a multislot connection. It sends a MODIFY message including the wanted value of the “maximum number of traffic channels” and/or the “wanted air interface” parameters; and enters the “mobile originating modify” state. Other parameters of the bearer capability given in MODIFY message and already negotiated and agreed during the establishment phase of the call, may not be changed.

2) To verify that upon receipt of the MODIFY COMPLETE message with bearer capability negotiated at call setup in the MS enters the “active” state.

##### 26.13.2.1.1.4 Method of test

##### Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection.

System simulator:

- 1 cell, default parameters except:

- Early classmark sending enabled in SI3 rest octets

##### Related PICS/PIXIT statement(s)

- Supported teleservices/bearer services

- Classmark

- Multislot class

Foreseen final state of the MS

MS is in the active state of a service using a multislot connection.

Test procedure

MS is in the active state of a multislot connection. Multislot configuration with one TCH/F is allocated. User initiates User initiated service level upgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS. The MS enters 'mobile originating modify' state. This is verified by a status enquiry procedure.

MS receives MODIFY COMPLETE message from SS and enters the 'active' state. This is verified by a status enquiry procedure.

Maximum duration of test

3 min

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | MODIFY | User initiated service level upgrade is initiated. |
| 2 | MS | | MS enters the Mobile originating modify state |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U26 Mobile originated modify. |
| 5 | SS -> MS | MODIFY COMPLETE | |
| 6 | MS | | MS enters the active state |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U10 Active. |

Specific message contents

MODIFY

| Information element | Value/remark |
|---|---|
| Bearer capability | Maximum number of TCH/F's the MS is able to support and channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

## 26.13.2.1.2 Multislot signalling / CC / In-call functions / User initiated service level downgrade / successful

### 25.13.2.1.2.1 Definition and applicability

Multislot connection is established. Multislot configuration has the maximum number of timeslots supported by the MS. User initiated service level downgrade is successfully performed.

This test is applicable for any equipment supporting multislot configuration.

### 26.13.2.1.2.2 Conformance requirements

1) MS shall send MODIFY message to SS indicating that User initiated service level downgrade is initiated.

2) MS enters CC state 'Mobile originating modify (U26)' after sending MODIFY.

3) MS enters CC state 'Active (U10)' when MODIFY COMPLETE is received.

References

Conformance requirement 1: GSM 04.08, section 9.3.13

Conformance requirement 2: GSM 04.08, section 5.3.5.1

Conformance requirement 3: GSM 04.08, section 5.3.5.2

### 26.13.2.1.2.3 Test purpose

1) To verify that the procedure is initiated by the MS in the “active” state of a multislot connection. It sends a MODIFY message including the wanted value of the “maximum number of traffic channels” and/or the “wanted air interface” parameters; and enters the “mobile originating modify” state. Other parameters of the bearer capability given in MODIFY message and already negotiated and agreed during the establishment phase of the call, may not be changed.

2) To verify that upon receipt of the MODIFY COMPLETE message with bearer capability negotiated at call setup in the MS enters the “active” state.

### 26.13.2.1.2.4 Method of test

#### Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection. Multislot configuration has maximum number of timeslots supported by the MS.

System simulator:

- 1 cell, default parameters except:
- Early classmark sending enabled in SI3 rest octets

#### Related PICS/PIXIT statement(s)

- Supported teleservices/bearer services
- Classmark
- Multislot class

#### Foreseen final state of the MS

MS is in the active state of a service using a multislot connection.

#### Test procedure

MS in the active state of a multislot connection. Multislot configuration has maximum number of timeslots supported by the MS. User initiates User initiated service level downgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS. The MS enters ‘mobile originating modify’ state. This is verified by a status enquiry procedure.MS receives MODIFY COMPLETE message from SS and enters the active state. This is verified by a status enquiry procedure.

#### Maximum duration of test

3 min

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | MODIFY | User initiated service level downgrade is initiated. |
| 2 | MS | | MS enters the Mobile originating modify state |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U26 Mobile originated modify. |
| 5 | SS -> MS | MODIFY COMPLETE | |
| 6 | MS | | MS enters the active state |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U10 Active. |

Specific message contents

MODIFY

| Information element | Value/remark |
|---|---|
| Bearer capability | One TCH/F is indicated and the channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

### 26.13.2.1.3 Multislot signalling / CC / In-call functions / User initiated service level upgrade / Time-out of timer T323

#### 26.13.2.1.3.1 Definition and applicability

Multislot connection is established. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is requested. Timer T323 expires. Call is cleared.

This test is applicable for any equipment supporting multislot configuration.

#### 26.13.2.1.3.2 Conformance requirements

1) MS shall send MODIFY message to SS indicating that User initiated service level upgrade is initiated.

2) After timer T323 has expired MS starts call clearing by sending DISCONNECT message.

3) After receipt of RELEASE message the MS sends RELEASE COMPLETE message and goes to idle updated state.

References

Conformance requirement 1: GSM 04.08, section 9.3.13

Conformance requirement 2: GSM 04.08, section 9.3.7

Conformance requirement 3: GSM 04.08, sections 9.3.18 and 9.1.7 and 5.4.4.2.2

#### 26.13.2.1.3.3 Test purpose

1) To verify that upon expiration of T323 (accuracy +/- 10%) the MS shall initiate the procedures for call clearing with cause #102 “recovery on timer expiry”.

26.13.2.1.3.4 Method of test

Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection.

System simulator:

- 1 cell, default parameters

Related PICS/PIXIT statement(s)

- Supported teleservices/bearer services
- Classmark
- Multislot class

Foreseen final state of the MS

"Idle, updated", with TMSI allocated.

Test procedure

MS is in the active state of a multislot connection. Multislot configuration with one TCH/F is allocated. User initiates User initiated service level upgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS.

Timer T323 expires and MS starts call clearing procedure by sending DISCONNECT message to SS. After MS receives RELEASE message it sends RELEASE COMPLETE message. SS sends CHANNEL RELEASE message to MS and the main signalling link is released.

Maximum duration of test

3 min

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | MODIFY | User initiated service level upgrade is initiated. |
| 2 | MS | | Timer T323 expires |
| 3 | MS -> SS | DISCONNECT | Cause = #102 "recovery on timer expiry" |
| 4 | SS -> MS | RELEASE | |
| 5 | MS -> SS | RELEASE COMPLETE | |
| 6 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

Specific message contents

MODIFY

| Information element | Value/remark |
|---|---|
| Bearer capability | Maximum number of TCH/F's the MS is able to support and channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

### 26.13.2.1.4 Multislot signalling / CC / In-call functions / User initiated service level upgrade / modify reject

#### 26.13.2.1.4.1 Definition and applicability

Multislot connection is established. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is requested. SS responds to upgrade request by rejecting it. MS enters the active multislot connection state.

This test is applicable for any equipment supporting multislot configuration.

#### 26.13.2.1.4.2 Conformance requirements

1) MS shall send MODIFY message to SS indicating that User initiated service level upgrade is initiated.

2) MS enters CC state 'Mobile originating modify (U26)' after sending MODIFY.

3) MS enters CC state 'Active (U10)' when MODIFY REJECT is received.

##### References

Conformance requirement 1: GSM 04.08, section 9.3.13

Conformance requirement 2: GSM 04.08, section 5.3.5.1

Conformance requirement 3: GSM 04.08, section 5.3.5.3

#### 26.13.2.1.4.3 Test purpose

1) To verify that upon receipt of the MODIFY REJECT message with the bearer capability negotiated at the call setup, the MS is continuously sending user information according to current call mode.

#### 26.13.2.1.4.4 Method of test

##### Initial conditions

Mobile station:

- MS in the active state of a service using a multislot connection.

System simulator:

- 1 cell, default parameters

##### Related PICS/PIXIT statement(s)

- Supported teleservices/bearer services
- Classmark
- Multislot class

##### Foreseen final state of the MS

MS is in the active state of a service using a multislot connection.

##### Test procedure

MS is in the active state of a multislot connection. Multislot configuration with one TCH/F is allocated. Then user initiates User initiated service level upgrade by sending MODIFY message including the wanted value of the Maximum number of traffic channels, this being one supported by the MS and channel modes supported by the MS. The MS enters 'mobile originating modify' state. This is verified by a status enquiry procedure.SS responds to MODIFY message by sending MODIFY REJECT message to MS. MS enters the active state. This is verified by a status enquiry procedure.Maximum duration of test

1 min

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | MODIFY | User initiated service level upgrade is initiated. |
| 2 | SS -> MS | STATUS ENQUIRY | |
| 3 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U26 Mobile originated modify. |
| 4 | SS -> MS | MODIFY REJECT | Cause = #58 "bearer capability not presently available". |
| 5 | MS | | MS enters in the active state of multislot call |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | Cause shall be 30# (response to enq.) and state U10 Active. |

Specific message contents

MODIFY

| Information element | Value/remark |
|---|---|
| Bearer capability | Maximum number of TCH/F's the MS is able to support and channel modes supported by the MS |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

### 26.13.2.1.5 Multislot signalling / CC / In call functions / contents of some of the messages

The following messages are used for testing in-call modification procedures, test cases 26.13.2.1.*, as default messages for those ones defined below. If any other values are defined in the expected sequence of the actual test cases, those values take precedence over the ones defined hereafter.

SETUP (MS to SS)

| Information element | Value/remark |
|---|---|
| BC Repeat indicator | Omitted |
| Bearer capability 1 | Appropriate for the teleservice/Bearer Service selected as an initial call mode |
| Bearer capability 2 | Omitted |
| Facility | Omitted |
| Calling party subaddress | Omitted |
| Called party BCD number | As entered |
| Called party subaddress | Omitted |
| LLC repeat indicator | Omitted |
| Low layer compatibility I | See note 1 |
| Low layer compatibility II | Omitted |
| HLC repeat indicator | Omitted |
| High layer compatibility I | See note 1 |
| High layer compatibility ii | Omitted |
| User-user | Omitted |
| SS version | Omitted |
| CLIR suppression | Omitted |
| CC Capabilities | present, but contents not checked |

NOTE 1: HLC/LLC may or may not be present. The contents of HLC/LLC are not verified.

CALL PROCEEDING

| Information element | Value/remark |
|---|---|
| Repeat Indicator | Omitted |
| Bearer Capability 1 | GSM 04.08 section 10.5.4.5 |
| Bearer Capability 2 | Omitted |
| Facility | Omitted |
| Progress indicator | Omitted |

MODIFY

| Information element | Value/remark |
|---|---|
| Bearer capability | Appropriate for the selected test |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

MODIFY COMPLETE

| Information element | Value/remark |
|---|---|
| Bearer capability | Appropriate for the selected test |
| Low layer comp. | Appropriate for the basic service selected for the test |
| High layer comp. | Appropriate for the basic service selected for the test |
| Reverse call setup direction | Presence and value not checked |

MODIFY REJECT

| Information element | Value/remark |
|---|---|
| Bearer capability | Appropriate for the selected test |
| Cause | #58 "bearer capability not presently available". |
| Low layer compatibility | Appropriate for the basic service selected for the test |
| High layer compatibility | Appropriate for the basic service selected for the test |

## 26.13.3 Multislot signalling / Structured procedures

### 26.13.3.1 Multislot signalling / Structured procedures / MS originated call / early assignment / HSCSD / non-transparent

This test is applicable to all MS that supports multislot configuration.

#### 26.13.3.1.1 Conformance requirements

1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.

2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS, starts to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.

3) Subsequently after establishment of a MM connection, after MS sends its multislot class in CLASSMARK CHANGE message, the MS shall send a SETUP message with correct parameters.

4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

   4.1) attach the user connection to the radio path;

4.2) return a CONNECT ACKNOWLEDGE message;

4.3) establish the RLP link.

5) User initiated service level upgrade is initiated by sending MODIFY message. After receipt of MODIFY COMPLETE message MS enters the active state.

6) After receipt of a CONFIGURATION CHANGE COMMAND message MS sends CONFIGURATION CHANGE ACKNOWLEDGE message.

7) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.

8) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

Conformance requirement 8: GSM 04.08 section 9.1.7

### 26.13.3.1.2 Test purpose

1) To verify that the MS in MM state “idle, updated” with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.

2) To verify that the MS in MM state “idle, updated” and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.

3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after MS sends it’s multislot class in CLASSMARK CHANGE message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.

4) Multislot configuration with one TCH/F is allocated. To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCH, after having completed the early assignment procedure by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.

5) To verify that subsequently the MS has attached the user connection to the radio path. This is verified by checking that the MS establishes the RLP link correctly and sends and receives correct RLP frames in each data block.

6) To verify that subsequently upon user requests User initiated service level upgrade, the MS sends MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.

7) To verify that subsequently, after receipt of a CONFIGURATION CHANGE COMMAND, after MS sends CONFIGURATION CHANGE ACKNOWLEDGE, MS through connects all bi-directional channel(s) in

multislot configuration in both directions and all uni-directional channels in downlink direction. Multislot configuration is upgraded from the simplest case up to the maximum number of channels supported by MS in the HSCSD configuration. This is verified by checking that the MS sends and receives correct RLP frames in each data block.

8) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.

9) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

#### 26.13.3.1.3 Method of test

##### Initial conditions

Mobile Station:

- The MS is in MM-state “idle, updated” with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
- Early classmark sending enabled in SI3 rest octets

##### Related PICS/PIXIT statement(s)

- Interface to human user (p1 = Y/N)
- Way to display the called number (only applicable if the MS has an interface to human user)
- Supported teleservices/bearer services
- Classmark
- Multislot class

##### Foreseen final state of the MS

MS is in MM-state “idle, updated” with valid TMSI and CKSN.

##### Test procedure

The MS is made to initiate a HSCSD connection. The call is established with early assignment. MS enters the active state. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is successfully performed. The SS sends CONFIGURATION CHANGE COMMAND message to MS and it reply’s with CONFIGURATION CHANGE ACKNOWLEDGE message. This is repeated from simplest case up to the maximum number of channels supported by the MS in the HSCSD configuration (this is performed within highest multislot class that the MS supports).

##### Maximum duration of test

7 min

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The “called number” is entered |
| 2 | MS | | If p1 = Y, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Originating call and TCH/F is needed, or originating call and the network does not set NECI bit to 1” |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM |
| 6 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | Non-transparent connection |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation only one timeslot is allocated. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | ALERTING | |
| 17 | MS | | |
| 18 | SS -> MS | CONNECT | |
| 19 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | The appropriate bearer channel is through connected in both directions. The RLP link establishment is initiated by the MS. |
| 21 | MS -> SS | MODIFY | User initiated service level upgrade is initiated |
| 22 | SS -> MS | MODIFY COMPLETE | |
| 23 | MS | | MS enters the active state |
| 24 | | | Next three steps are performed as many times as used multislot class has different channel combinations. Timeslot allocation starts from simplest case and is upgraded up to the maximum that MS multislot class supports, one step at the time (within highest multislot class that the MS supports). |
| 24A | SS -> MS | CONFIGURATION CHANGE COMMAND | Appropriate number of timeslots is selected. |
| 24B | MS -> SS | CONFIGURATION CHANGE ACKNOWLEDGE | |
| 24C | MS | | TCH(s) shall be through connected in both directions |
| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

## 26.13.3.2 Multislot signalling / Structured procedures / MS originated call / late assignment / HSCSD / non-transparent

This test is applicable to all MS that supports multislot configuration.

### 26.13.3.2.1 Conformance requirements

1) An MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS , shall start to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.

2) Subsequently after establishment of a MM connection, after MS sends its multislot class in CLASSMARK CHANGE message, the MS shall send a SETUP message with correct parameters.

3) Upon receipt of the ASSIGNMENT COMMAND message, the Mobile Station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the data links). After the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message, specifying cause "normal event", to the network on the main DCCH.

4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

4.1) attach the user connection to the radio path;

4.2) return a CONNECT ACKNOWLEDGE message;

4.3) establish the RLP link.

5) MS sends User initiated service level upgrade with MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.

6) MS receives CONFIGURATION CHANGE COMMAND and answers to it by sending CONFIGURATION CHANGE ACKNOWLEDGE message.

7) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.

8) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

Conformance requirement 8: GSM 04.08 section 9.1.7

### 26.13.3.2.2 Test purpose

1) To verify that the MS in MM state “idle, updated” and in RR idle mode with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message.

2) Multislot configuration with one TCH/F is allocated. To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after MS sends it’s multislot class in CLASSMARK CHANGE message, after having successfully performed the authentication and cipher mode setting procedures, after having sent a SETUP message, after having received of a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating an appropriate TCH, the MS sends an ASSIGNMENT COMPLETE message.

3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.

4) To verify that subsequently the MS has attached the user connection to the radio path. This is verified by checking that the MS establishes the RLP link correctly and sends and receives correct RLP frames in each data block.

5) To verify that subsequently upon user requests User initiated service level upgrade, the MS sends MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.

6) To verify that subsequently, after receipt of a CONFIGURATION CHANGE COMMAND, after MS sends CONFIGURATION CHANGE ACKNOWLEDGE, MS through connects all bi-directional channel(s) in multislot configuration in both directions and all uni-directional channels in downlink direction. Multislot configuration is upgraded from the simplest case up to the maximum number of channels supported by MS in the HSCSD configuration. This is verified by checking that the MS sends and receives correct RLP frames in each data block.

7) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.

8) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

#### 26.13.3.2.3 Method of test

##### Initial conditions

Mobile Station:

- The MS is in MM-state “idle, updated” with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
- Early classmark sending enabled in SI3 rest octets

##### Related PICS/PIXIT statement(s)

- Interface to human user (p1 = Y/N)
- Way to display the called number (only applicable if the MS has an interface to human user)
- Supported teleservices/bearer services
- Classmark
- Multislot class

##### Foreseen final state of the MS

MS is in MM-state “idle, updated” with valid TMSI and CKSN.

##### Test procedure

The MS is made to initiate a HSCSD connection. The call is established with late assignment. MS enters the active state. Multislot configuration with one TCH/F is allocated. User initiated service level upgrade is successfully performed. The SS sends CONFIGURATION CHANGE COMMAND message to MS and it reply’s with CONFIGURATION CHANGE ACKNOWLEDGE message. This is done from simplest case up to the maximum number of channels supported by the MS in the HSCSD configuration (this is performed within highest multislot class that MS supports).

##### Maximum duration of test

7 min

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The “called number” is entered |
| 2 | MS | | If p1 = Y, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Originating call and TCH/F is needed, or originating call and the network does not set NECI bit to 1” |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM |
| 6 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | Non-transparent connection |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | ALERTING | |
| 15 | MS | | |
| 16 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation only one timeslot is allocated. |
| 17 | MS -> SS | ASSIGNMENT COMPLETE | |
| 18 | SS -> MS | CONNECT | |
| 19 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | The appropriate bearer channel is through connected in both directions. The RLP link establishment is initiated by the MS. |
| 21 | MS -> SS | MODIFY | User initiated service level upgrade is initiated |
| 22 | SS -> MS | MODIFY COMPLETE | |
| 23 | MS | | MS enter the active state |
| 24 | | | Next three steps are performed as many times as used multislot class has different channel combinations. Timeslot allocation starts from simplest case and is upgraded up to the maximum that MS multislot class supports, one step at the time (within highest multislot class that the MS supports). |
| 24A | SS -> MS | CONFIGURATION CHANGE COMMAND | Appropriate number of timeslots is selected. |
| 24B | MS -> SS | CONFIGURATION CHANGE ACKNOWLEDGE | |

| 25 | SS -> MS | DISCONNECT | |
| 26 | MS -> SS | RELEASE | |
| 27 | SS -> MS | RELEASE COMPLETE | |
| 28 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

## 26.13.3.3 Multislot signalling / Structured procedures / MS originated call / early assignment / HSCSD / Transparent

This test is applicable to all MS that supports multislot configuration.

### 26.13.3.3.1 Conformance requirement

1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.

2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS, starts to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.

3) Subsequently after establishment of a MM connection, after MS sends its multislot class in CLASSMARK CHANGE message, the MS shall send a SETUP message with correct parameters.

4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

   4.1) attach the user connection to the radio path;

   4.2) return a CONNECT ACKNOWLEDGE message.

   4.3) establish the TDS link.

5) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.

6) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

Reference

Conformance requirement 2: GSM 02.07 and GSM 04.08 sections 3.3.1.1 and 9.1.8

Conformance requirement 3: GSM 04.08 sections 9.1.11 and 9.3.23

Conformance requirement 4: GSM 04.08 sections 9.3.5 and 9.3.6, GSM 07.01 section 8

Conformance requirement 5: GSM 04.08 sections 9.3.7 and 9.3.18 and 5.4.4.2.2

Conformance requirement 6: GSM 04.08 section 9.1.7

#### 26.13.3.3.2 Test purpose

1) To verify that the MS in MM state “idle, updated” with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, displays the dialled number in the way described in a PICS/PIXIT statement.

2) To verify that the MS in MM state “idle, updated” and in RR idle mode, with a TMSI assigned, when made to initiate a call for a selected teleservice/bearer service for HSCSD that is supported by the MS as declared in a PICS/PIXIT statement, starts to initiate an immediate assignment procedure by sending the CHANNEL REQUEST message with correct establishment cause.

3) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST message, after MS sends it’s multislot class in CLASSMARK CHANGE message, after having successfully performed the authentication and cipher mode setting procedures, the MS sends a SETUP message with correct parameters.

4) Multislot configuration with maximum number of channels supported by MS in a HSCSD configuration, is allocated. To verify that subsequently, after receipt of a CALL PROCEEDING message and of an ASSIGNMENT COMMAND message allocating an appropriate TCHs, after having completed the early assignment procedure for all traffic channel in multislot configuration by replying with the ASSIGNMENT COMPLETE message, after receipt of an ALERTING message and a CONNECT message, the MS returns a CONNECT ACKNOWLEDGE message.

5) To verify that subsequently the MS has attached the user connection to the radio path. This is verified by checking that the MS synchronises correctly to the TCHs and sends and receives correct data frames in each data block.

6) To verify that subsequently upon the network initiating call clearing by sending a DISCONNECT message, the MS proceed to release the call with RELEASE.

7) To verify that subsequently, on receipt of a RELEASE COMPLETE message followed by a CHANNEL RELEASE message, the MS disconnects the main signalling link.

26.13.3.3.3 Method of test

Initial conditions

Mobile Station:

- The MS is in MM-state “idle, updated” with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
- Early classmark sending enabled in SI3 rest octets

Related PICS/PIXIT statement(s)

- Interface to human user (p1 = Y/N)
- Way to display the called number (only applicable if the MS has an interface to human user)
- Supported teleservices/bearer services - Classmark
- Multislot class

Foreseen final state of the MS

MS is in MM-state “idle, updated” with valid TMSI and CKSN.

Test procedure

The MS is made to initiate a HSCSD connection. Maximum number of channels supported by the MS in a HSCSD configuration, is allocated. The call is established with early assignment. Having reached the active state, the call is cleared by the SS.

Maximum duration of test

7 min

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The “called number” is entered |
| 2 | MS | | If p1 = Y, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Originating call and TCH/F is needed, or originating call and the network does not set NECI bit to 1” |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM |
| 6 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 9 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 10 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 11 | SS | | SS starts ciphering. |
| 12 | MS -> SS | SETUP | Transparent connection |
| 13 | SS -> MS | CALL PROCEEDING | |
| 14 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation maximum number of timeslots, that MS supports, is allocated. |
| 15 | MS -> SS | ASSIGNMENT COMPLETE | |
| 16 | SS -> MS | ALERTING | |
| 17 | MS | | |
| 18 | SS -> MS | CONNECT | |
| 19 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | The appropriate bearer channel is through connected in both directions |
| 21 | SS -> MS | DISCONNECT | |
| 22 | MS -> SS | RELEASE | |
| 23 | SS -> MS | RELEASE COMPLETE | |
| 24 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |

## 26.13.3.4 Multislot signalling / Structured procedures / MS Terminated call / early assignment / HSCSD / non-transparent

This test is applicable to all MS that supports multislot configuration.

### 26.13.3.4.1 Conformance requirement

1) The MS is in MM state “idle, updated” and in RR idle mode when being paged by the network.

2) The MS sends CHANNEL REQUEST message to the network and after that it receives IMMEDIATE ASSIGNMENT message from the network

3) The MS sends PAGING RESPONSE message to network and after that MS sends its multislot class in CLASSMARK CHANGE message to the network.

4) The MS performs successfully authentication and cipher mode setting procedures.

5) The MS shall acknowledge the SETUP message with a CALL CONFIRMED message, if compatibility checking was successful, the MS is not busy, and the user does not refuse the call.

6) Upon receipt of the ASSIGNMENT COMMAND message the MS continues a mobile terminating call establishment with early establishment of the traffic channel(s)

   6.1) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and

   6.2) if the MS supports immediate connect, by continuing the call establishment by through-connecting the traffic channel(s) in both directions, or if the MS does not support immediate connect, by sending an ALERTING message

7) An MS indicates acceptance of a MT call by sending CONNECT.

8) After receiving the CONNECT ACKNOWLEDGE message from the network the MS shall establish the RLP link.

9) User requests User initiated service level upgrade. MS sends MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.

10) MS receives CONFIGURATION CHANGE COMMAND message and reply's to SS by sending CONFIGURATION CHANGE ACKNOWLEDGE message.

11) The MS initiates call clearing of an active call by sending a DISCONNECT message.

12) The MS in this phase of call release, upon receipt of a RELEASE message, shall return a RELEASE COMPLETE message.

13) Subsequently the MS, upon receipt of a CHANNEL RELEASE message, shall disconnect the main signalling link.

Conformance requirement 13: GSM 04.08 section 9.1.7

### 26.13.3.4.2 Test purpose

1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having sent a PAGING RESPONSE message on the allocated SDCCH, after having sent multislot class in CLASSMARK CHANGE message, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message not containing a signal information element, returns a CALL CONFIRMED message.

2) Multislot configuration with one TCH/F is allocated. To verify that subsequently, the SS sending an ASSIGNMENT COMMAND message, the MS successfully continues a mobile terminating call establishment with early assignment of traffic channel(s):

   2.1) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and

   2.2) by continuing the call establishment by either sending a CONNECT message or sending an ALERTING message depending on PICS/PIXIT statement.

3) To verify that the MS generates an alerting indication if an ALERTING message had to be sent.

4) To verify that if an ALERTING had been sent, subsequently, when the user accepts the call (possibly internal action as declared in PICS/PIXIT statement), the MS returns a CONNECT message.

5) To verify that the MS after receipt of a CONNECT ACKNOWLEDGE message subsequently attaches the user connection to the radio path. This is verified by checking that the MS establishes the RLP link correctly and sends and receives correct RLP frames in each data block.

6) To verify that subsequently upon user requests User initiated service level upgrade, the MS send MODIFY message and after receipt of MODIFY COMPLETE message the MS enters the active state.

7) To verify that subsequently, after receipt of a CONFIGURATION CHANGE COMMAND, after MS sends CONFIGURATION CHANGE ACKNOWLEDGE, MS through connects all bi-directional channel(s) in multislot configuration in both directions and all uni-directional channels in downlink direction. Multislot configuration is upgraded from simplest case up to the maximum number of channels supported by MS in the HSCSD configuration. This is verified by checking that the MS sends and receives correct RLP frames in each data block.

8) To verify that subsequently, the MS can initiate call clearing by sending DISCONNECT message.

9) To verify that the MS in this phase of call release, upon receipt of a RELEASE message, returns a RELEASE COMPLETE message.

10) To verify that subsequently the MS, upon receipt of a CHANNEL RELEASE message, disconnects the main signalling link.

#### 26.13.3.4.3 Method of test

##### Initial conditions

Mobile Station:

- The MS is in MM-state “idle, updated” with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
- Early classmark sending enabled in SI3 rest octets

##### Related PICS/PIXIT statement(s)

- Interface to the human user (p1= Y/N)
- Way to indicate alerting (only applicable if the MS supports the feature).
- Way to make the MS accept an incoming call after alerting (possibly dependent on teleservice/bearer service and configuration)
- Supported teleservices/bearer service
- Classmark
- Immediate connect supported (Y/N)
- Multislot class

##### Foreseen final state of the MS

MS is in MM-state “idle, updated” with valid TMSI and CKSN.

Test procedure

The MS is paged and the resulting HSCSD connection is established. Multislot configuration with one TCH/F is allocated. User service level upgrade is performed. MS enters the active state. Then CONFIGURATION CHANGE COMMAND message is sent to MS and it reply's with CONFIGURATION CHANGE ACKNOWLEDGE message. This is done from simplest case up to the maximum number of channels supported by the MS in the HSCSD configuration (this is performed within highest multislot class that MS supports).

Maximum duration of test

7 min

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | MS -> SS | CLASSMARK CHANGE | Multislot class |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | SETUP | Message does not contain the signal IE. Setup indicates non-transparent connection. |
| 12 | MS -> SS | CALL CONFIRMED | If the MS supports immediate connect then branch A applies. If the MS does not support immediate connect then branch B applies |
| A13 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation only one timeslot is allocated. |
| A14 | MS -> SS | ASSIGNMENT COMPLETE | |
| A15 | MS -> SS | CONNECT | |
| B13 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation only one timeslot is allocated. |
| B14 | MS -> SS | ASSIGNMENT COMPLETE | |
| B15 | MS -> SS | ALERTING | |
| B16 | MS | | An alerting indication as defined in a PICS/PIXIT statement is given by the MS |
| B17 | MS | | The MS is made to accept the call in the way described in a PICS/PIXIT statement |
| B18 | MS -> SS | CONNECT | |
| 19 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | TCH shall be through connected in both directions. The RLP link establishment is initiated by the MS. |
| 21 | MS -> SS | MODIFY | User initiated service level upgrade is initiated |
| 22 | SS -> MS | MODIFY COMPLETE | |
| 23 | MS | | MS enters the active state |
| 24 | | | Next three steps are performed as many times as used multislot class has different channel combinations. Timeslot allocation starts from simplest case and is upgraded up to the maximum that MS multislot class supports, one step at the time (within the highest multislot class that MS supports). |
| 24A | SS -> MS | CONFIGURATION CHANGE COMMAND | Appropriate number of timeslots is selected. |
| 24B | MS -> SS | CONFIGURATION CHANGE ACKNOWLEDGE | |
| 24C | MS | | MS connects all bi-directional channels in both directions and all uni-directional channels in downlink direction. |
| 25 | MS | | The MS is made to release the call. |
| 26 | MS -> SS | DISCONNECT | |
| 27 | SS -> MS | RELEASE | |
| 28 | MS -> SS | RELEASE COMPLETE | |
| 29 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

## 26.13.3.5 Multislot signalling / Structured procedures / MS Terminated call / early assignment / HSCSD / Transparent

This test is applicable to all MS that supports multislot configuration.

### 26.13.3.5.1 Conformance requirement

1) The MS is in MM state “idle, updated” and in RR idle mode when being paged by the network.

2) The MS sends CHANNEL REQUEST message to the network and after that it receives IMMEDIATE ASSIGNMENT message from the network

3) The MS sends PAGING RESPONSE message to network and after that MS sends its multislot class in CLASSMARK CHANGE message to the network.

4) The MS performs successfully authentication and cipher mode setting procedures.

5) The MS shall acknowledge the SETUP message with a CALL CONFIRMED message, if compatibility checking was successful, the MS is not busy, and the user does not refuse the call.

6) Upon receipt of the ASSIGNMENT COMMAND message the MS continues a mobile terminating call establishment with early establishment of the traffic channel(s)

   6.1) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and

   6.2) if the MS supports immediate connect, by continuing the call establishment by through-connecting the traffic channel(s) in both directions, or if the MS does not support immediate connect, by sending an ALERTING message

7) An MS indicates acceptance of a MT call by sending CONNECT.

8) The mobile station shall attach the user connection and establish the TDS link when receiving the CONNECT ACKNOWLEDGE message from the network.

9) MS correctly uses different ciphering bit streams on the different timeslots in a multislot configuration.

10) The MS initiates call clearing of an active call by sending a DISCONNECT message.

11) The MS in this phase of call release, upon receipt of a RELEASE message, shall return a RELEASE COMPLETE message.

12) Subsequently the MS, upon receipt of a CHANNEL RELEASE message, shall disconnect the main signalling link.

## Reference

Conformance requirement 1: GSM 02.07

Conformance requirement 2: GSM 04.08 sections 3.3.1.1 and 9.1.8

Conformance requirement 3: GSM 04.08 sections 3.3.2.2, 9.1.25 and 9.1.11

Conformance requirement 4: GSM 04.08 sections 4.3.2, 9.2.2, 9.2.3, 3.4.7, 9.1.9, 9.1.10

Conformance requirement 5: GSM 04.08, sections 9.3.23 and 9.3.2

Conformance requirement 6: GSM 04.08 sections 9.1.2 and 9.1.3

Conformance requirement 7: GSM 04.08 section 9.3.5

Conformance requirement 8: GSM 04.08 section 9.3.6, GSM 07.01 section 8

Conformance requirement 9: GSM 03.34 section 5.2.5, GSM 04.08 sections 3.4.7 and 9.1.9

Conformance requirement 10: GSM 04.08 section 9.3.7

Conformance requirement 11: GSM 04.08 section 9.3.19

Conformance requirement 12: GSM 04.08 section 9.1.7

#### 26.13.3.5.2 Test purpose

1) To verify that the MS in MM state "idle, updated" and in RR idle mode with a TMSI assigned, after being paged by the network on the correct paging subchannel, after initiating the immediate assignment procedure by sending the CHANNEL REQUEST message, after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after having sent a PAGING RESPONSE message on the allocated SDCCH, after having sent multislot class in CLASMARK CHANGE message which has been explicitly accepted by the network, as indicated in the last reception in the accessed cell of the SYSTEM INFORMATION TYPE 3 message, after having performed successful authentication and cipher mode setting procedures, after receipt of a SETUP message not containing a signal information element, returns a CALL CONFIRMED message.

2) Multislot configuration with maximum number of channels supported by MS in a HSCSD configuration, is allocated. To verify that subsequently, the SS sending an ASSIGNMENT COMMAND message, the MS successfully continues a mobile terminating call establishment with early assignment of traffic channel(s):

   2.1) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and

   2.2) by continuing the call establishment by either sending a CONNECT messages or sending an ALERTING message depending on PICS/PIXIT statement.

3) To verify that the MS generates an alerting indication if an ALERTING message had to be sent.

4) To verify that if an ALERTING had been sent, subsequently, when the user accepts the call (possibly internal action as declared in PICS/PIXIT statement), the MS returns a CONNECT message.

5) To verify that the MS after receipt of a CONNECT ACKNOWLEDGE message subsequently attaches the user connection to the radio path. This is verified by checking that the MS synchronises correctly to the TCHs and sends and receives correct data frames in each data block.

6) To verify that the MS correctly uses different ciphering bit streams on the different timeslots in a multislot configuration.

7) To verify that subsequently, the MS can initiate call clearing by sending a DISCONNECT message.

8) To verify that the MS in this phase of call release, upon receipt of a RELEASE message, returns a RELEASE COMPLETE message.

9) To verify that subsequently the MS, upon receipt of a CHANNEL RELEASE message, disconnects the main signalling link.

These test purposes are tested for all rates supported by the MS (full rate).

#### 26.13.3.5.3 Method of test

##### Initial conditions

Mobile Station:

- The MS is in MM-state “idle, updated” with valid TMSI and CKSN.

System Simulator:

- 1 cell, default parameters except:
- Early classmark sending enabled in SI3 rest octets

##### Related PICS/PIXIT statement(s)

- Interface to the human user (p1= Y/N)
- Way to indicate alerting (only applicable if the MS supports the feature).
- Way to make the MS accept an incoming call after alerting (possibly dependent on teleservice/bearer service and configuration)

- Supported teleservices/bearer service
- Classmark
- Immediate connect supported (Y/N)
- Multislot class

### Foreseen final state of the MS

MS is in MM-state “idle, updated” with valid TMSI and CKSN.

### Test procedure

The MS is paged and the resulting HSCSD connection is established. Maximum number of channels supported by the MS in a HSCSD configuration, is allocated. Having reached the active state, the MS is made to clear the call.

### Maximum duration of test

7 min

### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | MS -> SS | CLASSMARK CHANGE | Early classmark sending Multislot class indicated |
| 6 | SS -> MS | AUTHENTICATION REQUEST | |
| 7 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 8 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 9 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 10 | SS | | SS starts ciphering. |
| 11 | SS -> MS | SETUP | Message does not contain the signal IE. |
| 12 | MS -> SS | CALL CONFIRMED | If the MS supports immediate connect then branch A applies. If the MS does not support immediate connect then branch B applies |
| A13 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation maximum number of timeslots that MS supports, is allocated. |
| A14 | MS -> SS | ASSIGNMENT COMPLETE | |
| A15 | MS -> SS | CONNECT | |
| B13 | SS -> MS | ASSIGNMENT COMMAND | In multislot allocation maximum number of timeslots that MS supports, is allocated. |
| B14 | MS -> SS | ASSIGNMENT COMPLETE | sent on the TCH/Sm channel |
| B15 | MS -> SS | ALERTING | |
| B16 | MS | | An alerting indication as defined in a PICS/PIXIT statement is given by the MS |
| B17 | MS | | The MS is made to accept the call in the way described in a PICS/PIXIT statement |
| B18 | MS -> SS | CONNECT | |
| 19 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 20 | MS | | The appropriate bearer channel is through connected in both directionsand the MS correctly uses different ciphering bit streams on the different timeslots. |
| 21 | MS | | The MS is made to release the call. |
| 22 | MS -> SS | DISCONNECT | |
| 23 | SS -> MS | RELEASE | |
| 24 | MS -> SS | RELEASE COMPLETE | |
| 25 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

### 26.13.3.6 Default test conditions during layer 3 tests

During tests in section 26.13 the following default test conditions shall apply if not otherwise stated within the test description. In the table below, decimal values are normally used. Sometimes a hexadecimal value, indicated with a "H", or a binary value, indicated with a "B" is given.

| | GSM 450 | GSM 480 |
|---|---|---|
| General signalling conditions for all carriers | | |
| Ciphering | yes | yes |

These information's are provided by system information 1, 2, 3 and 4 messages.

The system information elements that are broadcast on the SACCH/M during the dedicated mode should be consistent with those sent on the BCCH when the MS was in idle mode prior to the channel request.

In addition, all fill paging messages sent on the paging sub-channels will have by default, their page mode set to NORMAL PAGING.

### 26.13.3.7 Default contents of messages

ALERTING (mobile station to network direction)

| Information element | Value/remark |
|---|---|
| Facility | Not checked |
| User-user | Not checked |
| SS version | Not checked |

ALERTING (network to mobile station direction)

| Information element | Value/remark |
|---|---|
| Facility | Omitted |
| Progress indicator | Omitted |
| User-user | Omitted |

ASSIGNMENT COMMAND

| Information element | Value/remark |
|---|---|
| Description of the first channel | describes non-hopping Bm+ACCHs or Lm+ACCHs as appropriate for the test |
| Power Command | As in section 26.1.1 |
| Frequency list | Omitted |
| Cell channel description | Omitted |
| Description of the multislot configuration | Appropriate for the teleservice selected for the test |
| Mode of the channel set X (1=<X<=8) | Appropriate for on bearer capability chosen for the test |
| Description of the second channel | Omitted |
| Mode of the second channel | Omitted |
| Mobile allocation | Omitted |
| Starting time | Omitted |
| Cipher mode setting | Omitted |

ASSIGNMENT COMPLETE

| Information element | Value/remark |
|---|---|
| RR cause | normal event |

AUTHENTICATION REQUEST

| Information element | Value/remark |
|---|---|
| Ciphering key sequence number | Arbitrary |
| Spare half octet | (spare bits) |
| Authentication parameter RAND | Arbitrary |

AUTHENTICATION RESPONSE

| Information element | Value/remark |
|---|---|
| Authentication parameter SRES | Correct for given SRES |

CALL CONFIRMED

| Information element | Value/remark |
|---|---|
| Repeat indicator | Omitted |
| Bearer capability 1 | GSM 04.08 section 10.5.4.5 |
| Bearer capability 2 | Omitted |
| Cause | Omitted |

CALL PROCEEDING

| Information element | Value/remark |
|---|---|
| Repeat Indicator | Omitted |
| Bearer Capability 1 | GSM 04.08 section 10.5.4.5 |
| Bearer Capability 2 | Omitted |
| Facility | Omitted |
| Progress indicator | Omitted |

CHANNEL RELEASE

| Information element | Value/remark |
|---|---|
| RR cause | Normal event |

CHANNEL REQUEST

| Information element | Value/remark |
|---|---|
| Establishment cause | Answer to paging (100) |
| Random reference | Arbitrary value of 5 bits length |

CIPHERING MODE COMMAND

| Information element | Value/remark |
|---|---|
| Cipher mode setting | |
| algorithm identifier | indicates a supported algorithm |
| SC | Start ciphering |
| Cipher response | |
| CR | IMEI must not be included |

CIPHERING MODE COMPLETE

| Information element | Value/remark |
|---|---|
| Mobile equipment identity | Omitted |

CLASSMARK CHANGE

| Information element | Value/remark |
|---|---|
| MS classmark | Multislot classmark value appropriate for the test |
| Additional mobile station classmark information | Omitted |

CM SERVICE ACCEPT

| Information element | Value/remark |
|---|---|
| none but message head | |

CM SERVICE REQUEST

| Information element | Value/remark |
|---|---|
| CM service type | Mobile originating call establishment or packet mode connection establishment |
| Ciphering key sequence number | CKSN of the MS |
| Mobile station classmark 2 | as given by PICS. |
| Mobile identity | TMSI of MS |

CONFIGURATION CHANGE COMMAND

| Information element | Value/remark |
|---|---|
| Description of the multislot configuration | Appropriate for the teleservice selected for the test |
| Mode of channel set X (1=<X<=8) | Appropriate channel mode is selected |

CONFIGURATION CHANGE REJECT

| Information element | Value/remark |
|---|---|
| RR Cause | Cause = “Channel mode unacceptable” |

CONNECT (network to mobile station direction)

| Information element | Value/remark |
|---|---|
| Facility | Omitted |
| Progress indicator | Omitted |
| Connected number | Omitted |
| Connected subaddress | Omitted |
| User-user | Omitted |

CONNECT (mobile station to network direction)

| Information element | Value/remark |
|---|---|
| Facility | Not checked |
| Connected subaddress | Not checked |
| User-user | Not checked |
| SS version | Not checked |

CONNECT ACKNOWLEDGE

| Information element | Value/remark |
|---|---|
| none but message head | |

DISCONNECT (network to mobile station direction)

| Information element | Value/remark |
|---|---|
| Cause | |
| Coding standard | GSM |
| Location | User |
| Cause value | Normal clearing |
| Facility | Omitted |
| Progress indicator | Omitted |
| User-user | Omitted |

DISCONNECT (mobile station to network direction)

| Information element | Value/remark |
|---|---|
| Cause | |
| Coding standard | GSM |
| Location | User |
| Cause value | Normal clearing |
| Facility | Not checked |
| User-user | Not checked |
| SS version | Not checked |

IMMEDIATE ASSIGNMENT

| Information element | Value/remark |
|---|---|
| Page mode | Normal paging |
| Channel description | describes a valid SDCCH+SACCH in non-hopping mode |
| Request reference | |
| Random access information | As received from MS |
| N51, N32, N26 | Corresponding to frame number of the CHANNEL REQUEST |
| Timing advance | Arbitrary |
| Mobile allocation | Empty (L=0) |
| Starting time | Omitted |

MODIFY

| Information element | Value/remark |
|---|---|

# 26.14 VGCS and VBS Tests

This clause applies to mobile station supporting Voice Group Call Service (TS 91) and/or Voice Broadcast Service (TS 92). The objective of this clause is to test VGCS/VBS concerned procedures. A specific VGCS/VBS SIM card is needed for testing. If a mobile supports both VGCS and VBS, the VGCS is selected for tests except when otherwise stated.

For VGCS and VBS, the following possible mobile station implementations exist:

- support of VBS listening
- support of VBS originating
- support of VGCS listening
- support of VGCS talking. This always includes the implementation for VGCS listening
- support of VGCS originating. This always includes the implementation for VGCS talking

Apart from the explicitly mentioned combinations, all possible combinations are optional.

In this clause some L3 messages are sent in UI format to which no L2 acknowledgement/re-transmission mechanism is applied. It is important for overall tests in this clause to ensure that the radio conditions are ideal.

Table 26.14.1 to 26.14.3 define generic procedures to bring the MS into an initial state. For establishment of group transmit mode Table 26.14.1 is used if the MS supports VGCS talking. If an MS supporting VBS originating rather than VGCS, Table 26.14.2 is used for establishment of a VBS call and to bring the MS into group transmit mode. For establishment of group receive mode Table 26.14.3 is applied.

Unless indicated in individual sub-clauses, the default message contents in clause 26.14.10 are applied.

**Table 26.14.1: Establishment of group transmit mode for VGCS**

| Step | Direction | Message | Comments |
|---|---|---|---|

## 26.14.1 VGCS-VBS / Notification

The notification procedure is mandatory for mobile stations supporting VGCS listening or VBS listening.

### 26.14.1.1 VGCS-VBS / Notification / notification indication

#### 26.14.1.1.1 Conformance requirement

1. Having received a NOTIFICATION/NCH or NOTIFICATION/FACCH which contains group call reference(s) that are active in the MS, the MS shall correctly indicate the notified group/broadcast call reference(s).

2. On request to respond to the call notification, the MS shall join the VGCS/VBS call on the correct channel if a description for the VGCS/VBS channel is included.

3. On request to respond to the call notification, the MS shall establish an RR connection to respond the notification if no description for the VGCS/VBS channel is included.

4. The MS shall ignore any NOTIFICATION/NCH or NOTIFICATION/FACCH which contains group call reference(s) that are not active in the MS.

Reference(s)

GSM 04.08 clause 3.3.3.1, 3.3.3.2.

GSM 03.68 clause 4.1, 11.3.1.3a, 11.3.1.3b.

GSM 03.69 clause 4.1, 11.3.1.3a, 11.3.1.3b.

#### 26.14.1.1.2 Test purpose

To verify that the MS indicates correctly the notified group/broadcast call reference(s) after receiving a NOTIFICATION/NCH or NOTIFICATION/FACCH message which contains group call reference(s) that are active in the MS.

To verify that the MS, on request to respond to a call notification, joins the VGCS/VBS call on the correct channel if a description for the VGCS/VBS channel is included in the NOTIFICATION message.

To verify that the MS, on request to respond to a call notification, establishes an RR connection to respond to the notification if no description for the VGCS/VBS channel is included in the NOTIFICATION message.

To verify that the MS ignores any NOTIFICATION/NCH or NOTIFICATION/FACCH which contains group call reference(s) that are not active in the MS.

To verify that there is no uplink transmission from the MS on TCH after the MS join the call.

#### 26.14.1.1.3 Method of test

##### Initial Conditions

System Simulator:

1 cell default parameters for ASCI testing

Mobile Station:

The MS is in MM-state "idle, updated". No automatic answering is configured.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support VGCS listening.

Support VGCS talking.

Support VBS listening.

Support VBS originating.

Way to configure VGCS or VBS.

Way to indicate a call notification.

Way to accept a VGCS or VBS.

Way to verify the downlink speech path.

##### Foreseen Final State of the MS

"Idle, updated".

##### Test Procedure

The MS is in idle mode, the SS sends NOTIFICATION/NCH containing VGCS/VBS channel description and VGCS/VBS call reference not active in the MS. It is checked that the MS ignores the message. The SS sends NOTIFICATION/NCH containing VGCS/VBS channel description and VGCS/VBS call reference active in the MS (“good reference”). It is checked whether the MS indicates correctly the notified group call reference(s) and joins VGCS/VBS call on request of responding to the notification. The group call is terminated. The SS sends NOTIFICATION/NCH which contains the “good reference” but no VGCS/VBS channel description. It is checked that the MS indicates correctly the notified group call reference(s) and establishes a RR connection to respond to the notification on request of responding to the call, then joins the call. The group call is terminated.

The MS is brought to group receive mode or CC state U10 or dedicated mode with signalling connection or group transmit mode (for k=1, 2, 3, 4 respectively), the SS sends NOTIFICATION/FACCH containing the “good reference” but no VGCS/VBS channel description. It is checked that the MS gives correct notified group call reference(s) and on request of responding to the call, establishes a RR connection to respond to the notification and joins the call. The call is terminated.

Finally, the MS is brought to group receive mode or CC state U10 or dedicated mode with signalling connection or group transmit mode (for k=1, 2, 3, 4 respectively), the SS sends NOTIFICATION/FACCH containing the “good reference” and VGCS/VBS channel description. It is checked the MS indicates correctly the notified group call reference(s) and joins VGCS/VBS call on request of responding to the notification. The group call is terminated.

### Maximum Duration of Test

10 minutes excluding operator operations.

### Expected Sequence

Test steps 20 to 50 are executed for k=1, 2, 3, 4 conditionally. If the MS does not support CC state U10, test steps 20 to 50 are not executed for k=2. If the MS does not support VGCS talking or VBS originating, test steps 20 to 50 are not executed for k=4.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is in idle mode |
| 1 | SS -> MS | NOTIFICATION/NCH | with a description of VGCS/VBS channel and a VGCS/VBS call reference not active in the MS |
| 2 | MS | | check that the MS ignores the notification and there is no uplink transmission on that channel for 10 s. |
| 3 | SS -> MS | NOTIFICATION/NCH | with a description of VGCS/VBS channel and a VGCS/VBS call reference active in the MS |
| 4 | MS | | check that the MS gives an indication containing the notified group call reference |
| 5 | MS | | MMI action to join the VGCS/VBS call |
| 6 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |
| 7 | SS | | stop sending NOTIFICATION/NCH |
| 8 | SS -> MS | CHANNEL RELEASE | UI format, return to the idle updated state |
| 9 | SS | | wait for the MS returning to idle updated mode and listening to NCH again |
| 10 | SS -> MS | NOTIFICATION/NCH | with a VGCS/VBS call reference active in the MS but different from step 3 and no VGCS/VBS channel description |
| 11 | MS | | MMI action to join the VGCS/VBS call |
| 12 | MS -> SS | CHANNEL REQUEST | |
| 13 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 14 | MS -> SS | NOTIFICATION RESPONSE | L2: SABM / UA |
| 15 | SS -> MS | CHANNEL RELEASE | release the dedicated channel with a group channel description. The MS releases L2 multiple frame link L2:DISC/UA. |
| 16 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |
| 17 | SS | | stop sending NOTIFICATION/NCH |
| 18 | SS -> MS | CHANNEL RELEASE | UI format, to return to idle updated state |
| 19 | | | wait 5s. |
| A20 | MS | | for k=1, the MS is brought into group receive mode |
| B20 | | | for k=2, the MS is brought into CC state U10 |
| C20 | | | for k=3, the MS is brought into dedicated mode with a signalling connection |
| D20 | | | for k=4, the MS is brought into group transmit mode |
| 21 | SS -> MS | NOTIFICATION/FACCH | with a VGCS/VBS call reference not active in the MS, but no VGCS/VBS channel description |
| 22 | MS | | check that the MS ignores the notification and there is no uplink transmission on that channel for 10 s. |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 23 | SS -> MS | NOTIFICATION/FACCH | with a VGCS/VBS call reference active in the MS, but no VGCS/VBS channel description |
| 24 | MS | | check the MS's indication of the notified VGCS/VBS call reference |
| 25 | MS | | MMI action to join the VGCS/VBS call |
| A26 | | | for k=1, no signalling needed |
| B26 | MS -> SS | DISCONNECT | for k=2, release the old call and the channel |
| B27 | SS -> MS | RELEASE | |
| B28 | MS -> SS | RELEASE COMPLETE | |
| B29 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |
| C26 | MS -> SS | DISC/UA | for k=3, release the original dedicated. The MS releases L2 multiple frame link L2:DISC/UA. |
| D26 | MS -> SS | UPLINK RELEASE | for k=4, release original uplink - for VGCS only |
| D27 | SS -> MS | CHANNEL RELEASE | UI format, to return to idle updated state - for VGCS only |
| D28 | MS -> SS | TERMINATION REQUEST | for VBS call only |
| D29 | SS -> MS | TERMINATION | for VBS call only |
| D30 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA -for VBS call only |
| 31 | MS -> SS | CHANNEL REQUEST | |
| 32 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 33 | MS -> SS | NOTIFICATION RESPONSE | L2: SABM / UA |
| 34 | SS -> MS | CHANNEL RELEASE | with group channel description. The MS releases L2 multiple frame link L2:DISC/UA. |
| 35 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. if the MS supports VGCS talking |
| 36 | SS | | stop sending NOTIFICATION/NCH |
| 37 | SS -> MS | CHANNEL RELEASE | UI format, return to the idle updated state |
| 38 | | | wait for the MS returning to idle updated mode |
| A | MS | | for k=1, the MS is brought into group receive mode |
| B40 | | | for k=2, the MS is brought into CC state U10 |
| C40 | | | for k=3, the MS is brought into dedicated mode with a signalling connection |
| D40 | | | for k=4, the MS is brought into group transmit mode |
| 41 | SS -> MS | NOTIFICATION/FACCH | with VGCS/VBS channel description and VGCS/VBS call reference active in the MS |
| 42 | MS | | check the indication of the notified VGCS/VBS call reference |
| 43 | MS | | MMI action to join the VGCS/VBS call |
| A44 | | | for k=1, no signalling needed |
| B44 | MS -> SS | DISCONNECT | for k=2, release the old call and the channel |
| B45 | SS -> MS | RELEASE | |
| B46 | MS -> SS | RELEASE COMPLETE | |
| B47 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |
| C44 | MS -> SS | DISC/UA | for k=3, release the original dedicated channel. The MS releases L2 multiple frame link L2:DISC/UA. |
| D44 | MS -> SS | UPLINK RELEASE | for k=4, release original uplink - for VGCS call only |
| D45 | SS -> MS | CHANNEL RELEASE | UI format, to return to idle updated state - for VGCS only |
| D46 | MS -> SS | TERMINATION REQUEST | for VBS call only |
| D47 | SS -> MS | TERMINATION | for VBS call only |
| D48 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA -for VBS call only |
| 49 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 50 | SS | | stop sending NOTIFICATION/NCH |
| 51 | SS -> MS | CHANNEL RELEASE | UI format, to return to the idle updated state |

## 26.14.1.2 VGCS-VBS / Notification / NCH position

### 26.14.1.2.1 Conformance requirement

The MS shall recognise correctly different NCH positions and blocks if supporting VGCS or VBS.

In the case the CCCH configuration is not compatible with the NCH position, the MS shall behave as if the NCH position field was not present.

#### Reference(s)

GSM 05.02, clause 6.5.1, 6.5.5, 7 Table 3

GSM 04.08, clause 10.5.2.32

### 26.14.1.2.2 Test purpose

To verify that the MS recognises correctly different NCH positions of first block and number of blocks.

To verify that the MS behaves as if the NCH position field was not present when the CCCH configuration is not compatible with the NCH position.

### 26.14.1.2.3 Method of test

#### Initial Conditions

System Simulator:

1 cell, BS_AG_BLKS_RES = 5, CCCH non-combined.

Mobile Station:

The MS is in MM-state "idle, updated". No automatic answering is configured.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Way to configure VGCS or VBS.

Way to indicate a call notification.

#### Foreseen Final State of the MS

"Idle, updated".

### Test Procedure

The MS is in idle mode, the SS sends SI 1 containing the 1st NCH block number = 3 (B3) and No. of blocks = 1. After the MS decodes the SI 1, the SS sends on the block B1 NOTIFICATION/NCH containing VGCS/VBS channel description and VGCS/VBS call reference active in the MS. It is checked that the MS ignores the notification. The SS stops sending NOTIFICATION/NCH on block B1, but sends on block B3 containing VGCS/VBS channel description and VGCS/VBS call reference active in the MS. It is checked that the MS indicates correctly the notified group call reference(s).

The SS stops sending NOTIFICATION/NCH on block B3 and changes SI 1 containing The 1st NCH block number = 1 and No. of blocks = 2. After the MS decodes the SI the SS sends NOTIFICATION/NCH on the block B2 containing VGCS/VBS channel description and VGCS/VBS call reference active in the MS. It is checked that the MS indicates correctly the notified group call reference(s).

The SS stops sending NOTIFICATION/NCH on block B2 and changes the CCCH configuration with combined SDCCH, BS_AG_BLKS_RES = 1. Wait 30 s. and then sends NOTIFICATION/NCH on the block B2 containing VGCS/VBS channel description and VGCS/VBS call reference active in the MS. It is checked that the MS ignores the notification.

### Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is in idle mode |
| 1 | SS -> MS | SYSTEM INFORMATION TYPE1 | containing The 1st NCH block number = 3 and No. of blocks = 1 |
| 2 | SS | | wait for 5 s. |
| 3 | SS -> MS | NOTIFICATION/NCH | sent on block B1, containing a VGCS/VBS channel description and a VGCS/VBS call reference active in the MS |
| 4 | MS | | check that the MS ignores the notification |
| 5 | SS | | stop sending NOTIFICATION/NCH on block 1 |
| 6 | SS -> MS | NOTIFICATION/NCH | sent on block B3, containing a VGCS/VBS channel description and a VGCS/VBS call reference active in the MS |
| 7 | MS | | check that the MS indicates the notification to user |
| 8 | MS | | user action to reject the group/broadcast call |
| 10 | SS | | stop sending NOTIFICATION/NCH on block 3 |
| 11 | SS -> MS | SYSTEM INFORMATION TYPE 1 | containing The 1st NCH block number = 1 and No. of blocks = 2 |
| 12 | SS | | wait for 30 s. |
| 13 | SS -> MS | NOTIFICATION/NCH | sent on block B2, containing a VGCS/VBS channel description and a VGCS/VBS call reference active in the MS |
| 14 | MS | | check that the MS indicates the notification to user |
| 15 | MS | | user action to reject the group/broadcast call |
| 20 | SS | | change CCCH with combined SDCCH, BS_AG_BLKS_RES = 1 and stop sending NOTIFICATION/NCH on block B2 |
| 21 | SS -> MS | SYSTEM INFORMATION TYPE 1 | containing The 1st NCH block number = 0 and No. of block = 1 |
| 22 | SS | | wait for 30 s. |
| 23 | SS -> MS | NOTIFICATION/NCH | sent on block B2, containing a VGCS/VBS channel description and a VGCS/VBS call reference active in the MS |
| 24 | MS | | check that the MS ignores the notification |

## 26.14.1.3 VGCS-VBS / Notification / Reduced NCH monitoring

### 26.14.1.3.1 Conformance requirement

1. When the mobile station in idle mode enters a cell and deduces from the BCCH that an NCH is present, it shall read the NCH until it has received at least two messages on the NCH indicating NLN, with the two last received NLN being identical. Then it may stop reading the NCH until it receives on the PCH an NLN(PCH) different from the last previously received NLN.

2. If the reduced NCH monitoring mechanism is used on the NCH, when the MS in group receive mode or group transmit mode enters a cell, it should read the NCH until it has received at least two messages on the NCH indicating NLN, with the two last received NLN being identical. Then it should stop reading the NCH until it receives on the SACCH an NLN(SACCH) different from the last previously received NLN.

3. A change of the NLN status field indicates a change of information on the NCH which is not related to new calls.

Reference(s)

GSM 04.08 clause 3.3.3.3.

GSM 04.08 clause 3.4.15.1.2.4.1.

### 26.14.1.3.2 Test purpose

To verify that:

1. when the MS in idle mode on a cell where a reduced monitoring is activated, it reads the NCH until it has received at least two NLN (NCH) being identical. Then it stops reading the NCH until it receives a PAGING REQUEST message of any TYPE containing an NLN (PCH) different from the last previously received NLN.

2. after the MS entered in group receive mode or group transmit mode it continues the reduced monitoring until it receives SI6 containing an NLN (SACCH) different from the last previously received NLN (SACCH).

3. when the MS in group receive mode or group transmit mode enters a new cell, it reads the NCH until it has received at least two messages on the NCH indicating NLN, with the two last received NLN being identical. Then it stops reading the NCH until it receives SI6 on the SACCH an NLN(SACCH) different from the last previously received NLN.

4. the MS understands the change of the NLN status field.

### 26.14.1.3.3 Method of test

Initial Conditions

System Simulator:

2 cells with default parameters for ASCI testing, same LAI.

The values specified in Table 26.14.1.3 override the values in default contents of SI messages in clause 26.6.14. and 26.6.15.

**Table 26.14.1.3: Default values of the system information fields**

| Parameter | GSM 04.08 reference | Abbr. | Normal Setting |
|---|---|---|---|
| CELL_BAR_QUALIFY | 10.5.2.35 | CBQ | 0 |
| CELL_RESELECT_OFFSET | 10.5.2.35 | CRO | 0 |
| TEMPORARY_OFFSET | 10.5.2.35 | TO | 0 |
| PENALTY_TIME | 10.5.2.35 | PT | 31 |
| Power Offset | 10.5.2.35 | PO | 0 |

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated on cell A. No automatic answering configured.

Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support reduced NCH monitoring.

Support VGCS listening.

Support VGCS talking.

Support VBS listening.

Support VBS originating.

Support NCH monitoring in group receive mode

Support NCH monitoring in group transmit mode

Support NCH monitoring in dedicated mode

Way to configure VGCS or VBS.

Way to indicate uplink granted/rejected.

Way to accept a VGCS or VBS.

Way to request uplink.

### Foreseen Final State of the MS

"Idle, updated" on cell B.

### Test Procedure

The MS is in idle mode on cell A. The SS sends NOTIFICATION/NCH with NLN (value is ‘00’B) but not addressing the MS on cell A. After at least 2 such messages have been received by the MS, the SS sends another NLN value (‘01’B) in the NOTIFICATION/NCH message which contains call reference active in the MS and VGCS/VBS channel description. It is checked that the MS does not indicate the notification. The SS sends PAGING REQUEST TYPE1 message on the MS’s paging sub-channel on cell A with NLN(PCH) containing value ‘01’B. It is checked that the MS indicates the notification to the user. The MS rejects the VGCS/VBS call on request from MMI. The same procedure is repeated once except SS sends PAGING REQUEST TYPE2 message instead of PAGING REQUEST TYPE1. The NLN value is set to ‘10’B.

Change the RF levels of cell A and cell B so that the MS re-selects cell B. The same test procedure as described above is repeated once except the SS sends PAGING REQUEST TYPE 3 message on the MS’s paging sub-channel on cell B. The NLN value is set to ‘11’B. The MS joins the VGCS/VBS call on request from MMI and is in group receive mode on cell B.

On cell A the SS sends NOTIFICATION/NCH containing VGCS/VBS channel description, the same call reference and NLN value as those of cell B. Adjust the RF levels of cell A and cell B so that cell B keeps suitable but the MS re-selects cell A. The MS is still in group receive mode. After the MS has consecutively received at least two identical NLN (NCH) the SS sends NOTIFICATION/NCH containing an NLN valued ‘01’B, VGCS/VBS channel description and call reference active in the MS. It is checked that the MS does not indicate the notification. The SS changes NLN value to ‘01’B in SI 6 message. It is checked that the MS indicates the notification to the user. The call is rejected. The SS changes NLN status value to ‘1’B in SI 6 message. It is checked that the MS does not indicate any new notification to the user.

The MS is brought into group transmit mode and handed over to cell B. After at least two NOTIFICATION/NCH messages received on cell B, the SS sends an another NOTIFICATION/NCH message with NLN value (‘00’B) and addressing the MS on cell B. It is checked that the MS does not indicate the notification. The SS changes NLN value to ‘00’B in SI 6 message. It is checked that the MS indicates the notification to the user.

### Maximum Duration of Test

10 minutes

### Expected Sequence

Test steps 0 to 8 are executed for k=1, 2, 3. When finished the test then goes to step 9. If the MS does not support VGCS talking, test step 18 to 44 are not executed.

| Step | Direction | Message | Comments |
|---|---|---|---|
| A0, B0 | MS | | for k=1, 2 the MS is in idle mode on cell A. The following messages are received and sent on cell A. |
| C0 | | | for k=3, adjust the power level of cell A to 32 dBµV emf() so that the MS re-selects cell B. The following messages are sent and received on cell B. |
| 1 | SS -> MS | NOTIFICATION/NCH | with an initial NLN, a channel description and a call reference not addressing MS. |
| 2 | SS | | wait 1 second, ensuring that the MS has consecutively received at least two identical NLN (NCH). |
| 3 | SS -> MS | NOTIFICATION/NCH | with an NLN different to step 1, a call reference active in the MS. For k= 1, 2, 3, each NLN is different. |
| A5 | SS -> MS | PAGING REQUEST TYPE 1 | for k=1, with the NLN (PCH) same as step 3 |
| B5 | SS -> MS | PAGING REQUEST TYPE 2 | for k=2, with the NLN (PCH) same as step 3. |
| C5 | SS -> MS | PAGING REQUEST TYPE 3 | for k=3, with the NLN (PCH) same as step 3. |
| 6 | SS | | wait 1 s. |
| 7 | MS | | check that the MS indicates the notification sent in step 5. |
| A8, B8 | | | MMI action to reject the VGCS/VBS call. The MS remains in idle mode on cell A. |
| C8 | | | MMI action to join the VGCS/VBS call. The MS is in group receive mode on cell B. |
| | | | |
| 9 | SS -> MS | NOTIFICATION/NCH | sent on cell A with a channel description, the same NLN and the call reference in step C5. |
| 10 | SS | | adjust the power levels of cell A to 63 dBµV emf() and cell B to 45 dBµV emf() so that the MS re-selects cell A. Wait 30 s. The following messages are sent and received on cell A. |
| 12 | SS -> MS | NOTIFICATION/NCH | with a different NLN from step C5, a valid channel description, a call reference active in the MS . |
| 14 | SS -> MS | SYSTEM INFORMATION TYPE 6 | with the NLN(SACCH) same as step 12. |
| 15 | MS | | wait 5 s. and check that the MS indicates the notification, MMI action to reject the new call. |
| 18 | SS -> MS | UPLINK FREE | |
| 19 | MS | | MMI action to request uplink access of the call. |
| 20 | MS -> SS | UPLINK ACCESS | |
| 21 | MS -> SS | UPLINK ACCESS | |
| 22 | SS -> MS | UPLINK BUSY | |
| 23 | SS -> MS | VGCS UPLINK GRANT | Reference to step 21. |
| 24 | MS -> SS | TALKER INDICATION | L2: SABM / UA |
| 25 | MS | | check that the TCH is through connected and the MS gives indication to the user. |
| 26 | SS -> MS | NOTIFICATION/NCH | with a different NLN from step 12, a valid channel description, a call reference active in the MS. |
| 27 | MS | | check that the MS does not indicate the notification. |
| 28 | SS -> MS | SYSTEM INFORMATION TYPE 6 | with the NLN (SACCH) same as step 26. |
| 29 | MS | | wait 5 s. and check that the MS indicates the notification, MMI action to reject the new call. |
| | | | |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 30 | SS -> MS | HANDOVER COMMAND | handover to cell B. The following messages are sent and received on cell B. |
| 31 | MS -> SS | HANDOVER ACCESS | |
| 32 | MS -> SS | HANDOVER ACCESS | |
| 33 | MS -> SS | HANDOVER ACCESS | |
| 34 | MS -> SS | HANDOVER ACCESS | |
| 35 | MS -> SS | SABM | Sent without information field. |
| 36 | SS -> MS | UA | |
| 37 | MS -> SS | HANDOVER COMPLETE | |
| 38 | MS | | wait 1 second, for the MS receiving consecutively at least two identical NLN (NCH). |
| 39 | SS -> MS | NOTIFICATION/NCH | with an NLN different from those in step 12 and 26, a valid channel description, a call reference active in the MS. |
| 41 | SS -> MS | SYSTEM INFORMATION TYPE 6 | with the NLN(SACCH) same as step 39. |
| 42 | MS | | check that the MS indicates the notification. MMI action to reject the new call. |
| 43 | SS -> MS | UPLINK RELEASE | |
| 44 | SS -> MS | CHANNEL RELEASE | The MS returns to idle mode. L2:DISC/UA. |

## 26.14.1.4 VGCS-VBS / Notification / Limited Service state

### 26.14.1.4.1 Conformance requirement

In state MM IDLE and service state LIMITED SERVICE:

1. The MS shall indicate notifications to the GCC or BCC sub-layer for which a channel description has been received in the notification by the RR sub-layer.

2. The MS shall reject requests of the GCC or BCC sub-layer to respond to notifications for which no channel description has been received in the notification by the RR sub-layer.

3. The MS shall request the RR sub-layer to receive a voice group or broadcast call if the GCC or BCC sublayer requests the reception of a voice group or broadcast call for which a channel description has been received in the notification by the RR sublayer and then go to the service state RECEIVING GROUP CALL (LIMITED SERVICE).

4. The MS shall reject any request of establishing a group call.

Reference(s)

GSM 04.08 clause 4.2.2.3.

### 26.14.1.4.2 Test purpose

To verify that while in state MM IDLE and service state LIMITED SERVICE:

1. The MS rejects requests from user to respond to notifications for which no channel description has been received in the notification by the RR sub-layer.

2. The MS indicates notifications for which a channel description has been received in the notification.

3. The MS accepts user requests to respond to notifications for which channel description has been received in the notification and goes to the service state RECEIVING GROUP CALL (LIMITED SERVICE).

4. The MS rejects any request of establishing a group call.

### 26.14.1.4.3 Method of test

Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS, with SIM, is in MM-state “idle, limited service” because LA not allowed.

### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Support VGCS originating.

Support VBS originating.

Way to configure VGCS or VBS.

Way to indicate a call notification.

Way to accept VGCS or VBS call.

Way to initiate a normal VGCS/VBS call.

### Foreseen Final State of the MS

"limited service" mode.

### Test Procedure

The MS, with SIM, is in MM idle limited service state because LA is not allowed. The SS sends NOTIFICATION/NCH message containing call reference active in the MS but no VGCS/VBS channel description. It is checked that the MS indicates the notification and rejects the request of joining the notified call. The SS sends NOTIFICATION/NCH message containing call reference active in the MS and VGCS/VBS channel description. It is checked that the MS indicates the notification, and joins the notified call on request. If the MS supports VGCS/VBS originating, the MS is requested to initiate VGCS/VBS call. It is checked that the MS rejects the request.

### Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |

## 26.14.2 VGCS-VBS / Paging

### 26.14.2.1 VGCS-VBS / Paging / Paging indication

#### 26.14.2.1.1 Conformance requirement

1. Paging into on-going voice group calls shall be provided as an implementation option.

2. In group receive mode the MS shall be ready to receive paging information on the FACCH containing the mobile subscriber identity and the priority level if eMLPP applies.

3. In group transmit mode if the MS has received a paging message with the own mobile station identity on the PCH or on the voice group call channel downlink, the RR entity shall provide an indication to the upper layers, together with the related priority, if applicable.

4. In group transmit mode if the MS receives information on the voice group call channel of the existence of a paging message in its paging subgroup of the PCH, the RR entity shall pass this information to the upper layers together with the related priority.

Reference(s)

GSM 04.08 clause 3.4.12, 9.1.21a, 3.4.15.1.2.4, 10.5.2.23, 10.5.2.24, 10.5.2.25.

GSM 03.68 clause 11.3.1.3c.

GSM 03.69 clause 11.3.1.3c.

#### 26.14.2.1.2 Test purpose

It is checked that:

1. When the MS in group receive mode if a NOTIFICATION/FACCH message on the voice group call channel containing in-band paging information is received, the MS provides an indication with the correct priority if applicable.

2. When the MS in group receive mode if a paging message with the own mobile station identity on PCH is received, it provides an indication with the correct priority.

3. When the MS in group transmit mode if a NOTIFICATION/FACCH message on the voice group call channel containing in-band paging information is received, the MS provides an indication with the correct priority.
4. If the MS in group transmit mode if a paging message with the own mobile station identity on PCH is received, it provides an indication with the correct priority.

#### 26.14.2.1.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

No automatic answering configured.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM , DCS 1800 or PCS 1900).

Support VGCS talking.

Support VBS originating.

Support eMLPP.

Support monitoring on PCH in group transmit mode.

Way to configure VGCS or VBS.

Way to request uplink.

##### Foreseen Final State of the MS

"Idle, updated".

##### Test Procedure

The MS is in group receive mode. The SS sends NOTIFICATION/FACCH message containing Paging Information IE which addresses the MS. It is checked that the MS indicates the paging information.

The SS changes SI 6 indicating no support of in-band paging. After waiting 5s. the SS sends a PAGING REQUEST TYPE 1 message addressing the MS on the paging sub-channel of the MS. It is checked that the MS indicates the paging information, together with the priority level if it supports eMLPP. The test procedure is repeated for sending PAGING REQUEST TYPE 2 and PAGING REQUEST TYPE 3 messages.

The same test procedure is repeated for the MS in group transmit mode if supporting VGCS talking or VBS originating.

##### Maximum Duration of Test

5 minutes

##### Expected Sequence

If the MS mode supports VGCS talking or VBS originating the test sequence is repeated once for k=2. If the MS supports monitoring PCH in group transmit mode steps 5 - 17 for k=2 are executed.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | SS | | broadcast the default SIs. |
| A1 | MS | | for k=1, the MS is brought in group receive mode. |
| B1 | | | for k=2, the MS is in brought group transmit mode. |
| 2 | SS -> MS | NOTIFICATION/FACCH | In-band paging Information addresses the MS. |
| 3 | MS | | check that the MS indicates correctly the paging information of a new MT call with priority 4 if the MS supports eMLPP. |
| 4 | MS | | user action to reject the point-to-point MT call. |
| 5 | SS -> MS | SYSTEM INFORMATION TYPE 6 | indicating no in-band paging on FACCH |
| 6 | SS | | wait 5s. |
| 7 | SS -> MS | PAGING REQUEST TYPE 1 | with priority 2 |
| 8 | MS | | check that the MS indicates correctly the paging information of a new MT call with the priority if the MS supports eMLPP. |
| 9 | MS | | user action to reject the incoming call. |
| 10 | SS | | wait 5 s. |
| 11 | SS -> MS | PAGING REQUEST TYPE 2 | with priority 3 |
| 12 | MS | | check that the MS indicates correctly the paging information of a new MT call with the priority if the MS supports eMLPP. |
| 13 | MS | | user action to reject the incoming call. |
| 14 | SS | | wait 5s. |
| 15 | SS -> MS | PAGING REQUEST TYPE 3 | no priority |
| 16 | MS | | check that the MS indicates correctly the paging information of a new MT call which no priority is provided to. |
| 17 | MS | | user action to reject the incoming call. |
| A18 | | | for k=1, no signalling |
| B18 | SS -> MS | UPLINK RELEASE | for k=2, return to group receive mode. Only for a VGCS call. |
| 19 | SS -> MS | CHANNEL RELEASE | UI format, the MS returns to idle updated state. For (k=1) and (k=2 in case of VGCS call). |
| 20 | SS -> MS | CHANNEL RELEASE | For k=2, for a VBS call, the MS returns to idle mode. L2:DISC/UA. |

## 26.14.2.2 VGCS-VBS / Paging / Notification

### 26.14.2.2.1 Conformance requirement

A PAGING REQUEST TYPE 1 message may have an additional notification coded in the P1 rest octets information element. It allows to notify the mobile an emergency group or broadcast call even when the MS at the moment does not monitor the NCH channel.

Reference(s)

GSM 04.08 clause 3.3.2.1, 3.3.3.1, 10.5.2.23.

### 26.14.2.2.2 Test purposes

To verify that

1. the MS in idle mode indicates correctly an incoming broadcast or group call when having received a PAGING REQUEST TYPE 1 message whose P1 rest octets information element contains group call information addressing the MS.

2. the MS in group receive mode indicates correctly an incoming broadcast or group call when having received a PAGING REQUEST TYPE 1 message whose P1 rest octets information element contains group call information addressing the MS.

#### 26.14.2.2.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support VGCS listening.

Support VGCS talking.

Support VBS listening.

Support VBS originating.

Way to configure VGCS or VBS.

Way to indicate a call notification.

Way to accept a VGCS or VBS.

Way to verify the downlink speech path.

##### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

##### Test Procedure

The MS is in idle mode. The SS sends in the NCH block only access grant messages. The SS sends a PAGING REQUEST TYPE 1 message on the paging sub-channel of the MS. The Mobile Identity in the message does not address the MS. The P1 rest octets in the message contains VGCS/VBS channel description and VGCS/VBS call reference not active in the MS. It is checked that the MS ignores the paging message. Similarly, the SS sends again the PAGING REQUEST TYPE 1 message on the paging sub-channel of the MS, not addressing the MS. The message contains VGCS/VBS channel description and VGCS/VBS call reference active in the MS. It is checked that the MS indicates correctly the notified group call reference(s) and joins VGCS/VBS call on request of responding to the notification. The group call is terminated. The SS sends PAGING REQUEST TYPE 1 message on the paging sub-channel of the MS which contains the “good reference” but no VGCS/VBS channel description. The Mobile Identity in the message does not address the MS. It is checked that the MS indicates correctly the notified group call reference(s) and establishes a RR connection to respond to the notification on request of responding to the call, then joins the call. The group call is terminated.

The initial conditions for SS are set to the same as ASCI default. The MS is brought to group receive mode the test procedure is repeated once.

##### Maximum Duration of Test

5 minutes.

Expected Sequence

Test steps 0 to 19 are executed for k=1, 2.

| Step | Direction | Message | Comments |
|---|---|---|---|
| A0 | SS | | For k = 1, the initial conditions for SS are same as ASCI default, except the NCH block containing only access grant messages. |
| A1 | MS | | the MS is in idle mode. |
| B0 | SS | | For k = 2, the initial conditions for SS are same as ASCI default, except the NCH block containing only access grant messages. |
| B1 | MS | | the MS is brought in group receive mode |
| 2 | SS -> MS | PAGING REQUEST TYPE 1 | with a description of VGCS/VBS channel and a VGCS/VBS call reference not active in the MS |
| 3 | MS | | check that the MS ignores the notification and there is no uplink transmission on that channel for 10 s. |
| 4 | SS -> MS | PAGING REQUEST TYPE 1 | with a description of VGCS/VBS channel and a VGCS/VBS call reference active in the MS |
| 5 | MS | | check that the MS gives an indication containing the notified group call reference |
| 6 | MS | | MMI action to join the VGCS/VBS call |
| 7 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |
| 8 | SS -> MS | CHANNEL RELEASE | UI format, return to the idle updated state |
| 9 | SS | | wait 5s. |
| 10 | SS -> MS | PAGING REQUEST TYPE 1 | with a VGCS/VBS call reference active in the MS but no VGCS/VBS channel description |
| 11 | MS | | check that the MS gives an indication containing the notified group call reference |
| A12 | MS | | For k = 1, MMI action to join the VGCS/VBS call |
| A13 | MS -> SS | CHANNEL REQUEST | |
| A14 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| A15 | MS -> SS | NOTIFICATION RESPONSE | L2: SABM / UA |
| A16 | SS -> MS | CHANNEL RELEASE | release the dedicated channel. The MS releases L2 multiple frame link L2:DISC/UA. |
| A17 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |
| B12 | SS | | For k = 2, MMI action to reject the new VGCS/VBS call |
| 18 | SS -> MS | CHANNEL RELEASE | UI format, to return to idle updated state |
| 19 | | | wait 5s. |

Specific Message Contents

## 26.14.3 VGCS-VBS / RR Procedures

### 26.14.3.1 VGCS-VBS / RR Procedures / frequency redefinition

#### 26.14.3.1.1 Conformance requirements

The MS, after receiving a FREQUENCY REDEFINITION message in group transmit mode, shall start using the new frequencies and hopping sequence in the correct time slot.

References

GSM 04.08 clauses 3.4.5.

#### 26.14.3.1.2 Test purpose

To verify that after receiving a FREQUENCY REDEFINITION message in group transmit mode, the MS starts using the new frequencies and hopping sequence at the time indicated in the message.

#### 26.14.3.1.3 Method of test

Initial Conditions

System Simulator:

1 cell, CCCH_CONF set to 1 basic physical channel used for CCCH, not combined with SDCCHs. The cell allocation is set to $CA_{450}(1)$, $CA_{480}(1)$, $CA_{PGSM}(1)$, $CA_{DCS}(1)$, $CA_{PCS}(1)$, $CA_{700}(1)$ or $CA_{850}(1)$, depending on the band of operation of the Mobile Station (See PICS/PIXIT), before each execution of this test.

Mobile Station:

The MS is in group transmit mode.

Related PICS/PIXIT Statements

Type of MS (GSM 450 or GSM 480 or GSM 700 or GSM 850 or P-GSM 900 or EGSM or DCS 1 800 or PCS 1900).

Support VGCS talking.

Support VBS originating.

Way to configure VGCS or VBS.

Way to accept a VGCS or VBS.

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

Test parameters:

**GSM450:**

$Ca_{450}(1)$ is set to 32.

An arbitrary subset $CA_{450}(1)$ of the set {259,...,293} containing $ca_{450}(1)$ elements is drawn.

An element B of the set $CA_{450}(1)$ is arbitrarily chosen.

An arbitrary value $ca_{450}(2)$ in the range 17,...,31 is chosen.

An arbitrary subset $CA_{450}(2)$ of the set {259,...,293} with $ca_{450}(2)$ elements and containing B is chosen.

For j = 1,2, values $ma_{450}(j)$ in the range j,...,$ca_{450}(j)$-1 and values $MAIO_{450}(j)$ in the range 0,...,$ma_{450}(j)$-1 are arbitrarily chosen.

Subsets $MA_{450}(j)$ of $CA_{450}(j)$ not containing B and having ma(j) elements are arbitrarily chosen.

**GSM480:**

$Ca_{480}(1)$ is set to 32.

An arbitrary subset $CA_{480}(1)$ of the set {306,...,340} containing $ca_{480}(1)$ elements is drawn.

An element B of the set $CA_{480}(1)$ is arbitrarily chosen.

An arbitrary value $ca_{480}(2)$ in the range 17,...,31 is chosen.

An arbitrary subset $CA_{480}(2)$ of the set {306,...,340} with $ca_{480}(2)$ elements and containing B is chosen.

For j = 1,2, values $ma_{480}(j)$ in the range j,...,$ca_{480}(j)$-1 and values $MAIO_{480}(j)$ in the range 0,...,$ma_{480}(j)$-1 are arbitrarily chosen.

Subsets $MA_{480}(j)$ of $CA_{480}(j)$ not containing B and having ma(j) elements are arbitrarily chosen.

**GSM900:**

$ca_{PGSM}(1)$ is set to 64.

An arbitrary subset $CA_{PGSM}(1)$ of the set {1,...,124} containing $ca_{PGSM}(1)$ elements is drawn.

An element B of the set $CA_{PGSM}(1)$ is arbitrarily chosen.

An arbitrary value $ca_{PGSM}(2)$ in the range 20,...,63 is chosen.

An arbitrary subset $CA_{PGSM}(2)$ of the set {1,...,124} with $ca_{PGSM}(2)$ elements and containing B is chosen.

For j = 1,2, values $ma_{PGSM}(j)$ in the range j,...,$ca_{PGSM}(j)$-1 and values $MAIO_{PGSM}(j)$ in the range 0,...,$ma_{PGSM}(j)$-1 are arbitrarily chosen.

Subsets $MA_{PGSM}(j)$ of $CA_{PGSM}(j)$ not containing B and having ma(j) elements are arbitrarily chosen.

**DCS1800:**

$ca_{DCS}(1)$ is set to 64.

An arbitrary subset $CA_{DCS}(1)$ of the set {700,...,812} containing $ca_{DCS}(1)$ elements is chosen.

An element B of the set $CA_{DCS}(1)$ is arbitrarily chosen. $CA_{DCS}(1)$ is then coded using the Variable Bit Map coding scheme.

An arbitrary value $ca_{DCS}(2)$ in the range 17,...,63 is chosen.

An arbitrary subset $CA_{DCS}(2)$ of the set {700,...,812} with $ca_{DCS}(2)$ elements and containing B is chosen. $CA_{DCS}(2)$ is then coded using the Variable Bit Map coding scheme.

For j = 1,2, values $ma_{DCS}(j)$ in the range j,...,$ca_{DCS}(j)$-1 and values $MAIO_{DCS}(j)$ in the range 0,...,$ma_{DCS}(j)$-1 are arbitrarily chosen.

Subsets $MA_{DCS}(j)$ of $CA_{DCS}(j)$ not containing B and having $ma_{DCS}(j)$ elements are arbitrarily chosen.

**PCS 1900:**

$ca_{PCS}(1)$ is set to 64.

An arbitrary subset $CA_{PCS}(1)$ of the set {700,...,812} containing $ca_{PCS}(1)$ elements is chosen.

An element B of the set $CA_{PCS}(1)$ is arbitrarily chosen. $CA_{PCS}(1)$ is then coded using the Variable Bit Map coding scheme.

An arbitrary value $ca_{PCS}(2)$ in the range 17,...,63 is chosen.

An arbitrary subset $CA_{PCS}(2)$ of the set {700,...,812} with $ca_{PCS}(2)$ elements and containing B is chosen. $CA_{PCS}(2)$ is then coded using the Variable Bit Map coding scheme.

For j = 1,2, values $ma_{PCS}(j)$ in the range j,...,$ca_{PCS}(j)$-1 and values $MAIO_{PCS}(j)$ in the range 0,...,$ma_{PCS}(j)$-1 are arbitrarily chosen.

Subsets $MA_{PCS}(j)$ of $CA_{PCS}(j)$ not containing B and having $ma_{PCS}(j)$ elements are arbitrarily chosen.

**GSM700:**

$ca_{700}(1)$ is set to 64.

An arbitrary subset $CA_{700}(1)$ of the set {438,...,511} containing $ca_{700}(1)$ elements is drawn.

An element B of the set $CA_{700}(1)$ is arbitrarily chosen.

An arbitrary value $ca_{700}(2)$ in the range 457,...,500 is chosen.

An arbitrary subset $CA_{700}(2)$ of the set {438,...,511} with $ca_{700}(2)$ elements and containing B is chosen.

For j = 1,2, values $ma_{700}(j)$ in the range j,...,$ca_{700}(j)$-1 and values $MAIO_{700}(j)$ in the range 0,...,$ma_{PGSM}(j)$-1 are arbitrarily chosen.

Subsets $MA_{700}(j)$ of $CA_{700}(j)$ not containing B and having ma(j) elements are arbitrarily chosen.

**GSM850:**

$ca_{850}(1)$ is set to 64.

An arbitrary subset $CA_{850}(1)$ of the set {128,...,251} containing $ca_{850}(1)$ elements is drawn.

An element B of the set $CA_{850}(1)$ is arbitrarily chosen.

An arbitrary value $ca_{850}(2)$ in the range 147,...,200 is chosen.

An arbitrary subset $CA_{850}(2)$ of the set {128,...,251} with $ca_{850}(2)$ elements and containing B is chosen.

For j = 1,2, values $ma_{850}(j)$ in the range j,...,$ca_{850}(j)$-1 and values $MAIO_{850}(j)$ in the range 0,...,$ma_{850}(j)$-1 are arbitrarily chosen.

Subsets $MA_{850}(j)$ of $CA_{850}(j)$ not containing B and having ma(j) elements are arbitrarily chosen.

**DCS1800, GSM900, GSM 450, GSM 480, PCS 1900, GSM 700 and GSM 850**

An arbitrary value T in the range 92,...,29999 is chosen.

The MS is brought into group transmit mode. The SS sends a FREQUENCY REDEFINITION message. It is checked that the MS uses the new frequencies/hopping sequence at the TDMA frame defined by the contents of the "Starting Time" information element. (The range for T ensures that the MS does not start transmission on the new frequencies until the designated frame.)

The check is performed at the RF burst level. The SS checks the received pattern with the expected pattern, and the SS checks for each burst whether the burst is transmitted at the right frequency.

Maximum Duration of Test

T + 7

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | the MS is in group transmit mode using full rate on an RF hopping channel |
| 9 | SS -> MS | FREQUENCY REDEFINITION | see description 1 below. |
| 10 | MS | | check that the MS uses the new frequencies in the correct frame. |
| 11 | SS -> MS | FREQUENCY REDEFINITION | see description 2 below. |
| 12 | MS | | check that the MS uses the new frequencies in the correct frame. |
| 13 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |

Specific Message Contents

**GSM 450:**

FREQUENCY REDEFINITION (Description 1)

| Information Element | value/remark |
|---|---|
| as default except: | |
| Channel Description | |
| - Channel type and TDMA offset | TCH/FS |
| - Timeslot number | not changed |
| - TSC | not changed |
| - Hopping channel | RF hopping channel |
| - MAIO | MAIO450(1) |
| - HSN | 0 |
| Mobile Allocation | corresponds to set MA450(1) |
| Starting Time | The last burst of the first L2 frame containing the beginning of this message is transmitted in frame number X. The starting time is set to frame number (X plus T modulo 42 432). |
| Cell Channel Description | |
| - Information element identifier | 62H |
| - contents | corresponds to set CA450(1) with "Format ID" set to "Range 128". |

FREQUENCY REDEFINITION (Description 2)

| Information Element | value/remark |
|---|---|
| as default except: | |
| Channel Description | |
| - Channel type and TDMA offset | TCH/FS |
| - Timeslot number | not changed |
| - TSC | not changed |
| - Hopping channel | RF hopping channel |
| - MAIO | MAIO450(2) |
| - HSN | 0 |
| Mobile Allocation | corresponds to set MA450(2) |
| Starting Time | The last burst of the first L2 frame containing the beginning of this message is transmitted in frame number X. The starting time is set to frame number (X plus T modulo 42 432). |
| Cell Channel Description | |
| - Information element identifier | 62H |
| - contents | corresponds to set CA450(2) with "Format ID" set to "Range 128". |

**GSM 480:**

FREQUENCY REDEFINITION (Description 1)

| Information Element | value/remark |
|---|---|
| as default except: | |
| Channel Description | |
| - Channel type and TDMA offset | TCH/FS |
| - Timeslot number | not changed |
| - TSC | not changed |
| - Hopping channel | RF hopping channel |
| - MAIO | MAIO480(1) |
| - HSN | 0 |
| Mobile Allocation | corresponds to set MA480(1) |
| Starting Time | The last burst of the first L2 frame containing the beginning of this message is transmitted in frame number X. The starting time is set to frame number (X plus T modulo 42 432). |
| Cell Channel Description | |
| - Information element identifier | 62H |
| - contents | corresponds to set CA480(1) with "Format ID" set to "Range 128". |

FREQUENCY REDEFINITION (Description 2)

| Information Element | value/remark |
|---|---|
| as default except: | |
| Channel Description | |
| - Channel type and TDMA offset | TCH/FS |
| - Timeslot number | not changed |
| - TSC | not changed |
| - Hopping channel | RF hopping channel |
| - MAIO | MAIO480(2) |
| - HSN | 0 |
| Mobile Allocation | corresponds to set MA480(2) |
| Starting Time | The last burst of the first L2 frame containing the beginning of this message is transmitted in frame number X. The starting time is set to frame number (X plus T modulo 42 432). |
| Cell Channel Description | |
| - Information element identifier | 62H |
| - contents | corresponds to set CA480(2) with "Format ID" set to "Range 128". |

**GSM 900:**

FREQUENCY REDEFINITION (Description 1)

| Information Element | value/remark |
|---|---|
| as default except: | |
| Channel Description | |
| - Channel type and TDMA offset | TCH/FS |
| - Timeslot number | not changed |
| - TSC | not changed |
| - Hopping channel | RF hopping channel |
| - MAIO | MAIOPGSM(1) |
| - HSN | 0 |
| Mobile Allocation | corresponds to set MAPGSM(1) |
| Starting Time | The last burst of the first L2 frame containing the beginning of this message is transmitted in frame number X. The starting time is set to frame number (X plus T modulo 42 432). |
| Cell Channel Description | |
| - Information element identifier | 62H |
| - contents | corresponds to set CAPGSM(1) with "Format ID" set to "bit map 0". |

FREQUENCY REDEFINITION (Description 2)

| Information Element | value/remark |
|---|---|
| as default except: | |
| Channel Description | |
| - Channel type and TDMA offset | TCH/FS |
| - Timeslot number | not changed |
| - TSC | not changed |
| - Hopping channel | RF hopping channel |
| - MAIO | MAIOPGSM(2) |
| - HSN | 0 |
| Mobile Allocation | corresponds to set MAPGSM(2) |
| Starting Time | The last burst of the first L2 frame containing the beginning of this message is transmitted in frame number X. The starting time is set to frame number (X plus T modulo 42 432). |
| Cell Channel Description | |
| - Information element identifier | 62H |
| - contents | corresponds to set CAPGSM(2) with "Format ID" set to "bit map 0". |

**DCS 1 800:**

FREQUENCY REDEFINITION (Description 1)

| Information Element | value/remark |
|---|---|
| as default except: | |
| Channel Description | |
| - Channel type and TDMA offset | TCH/FS |
| - Timeslot number | not changed |
| - TSC | not changed |

| Starting Time | The last burst of the first L2 frame containing the beginning of this message is transmitted in frame number X. The starting time is set to frame number (X plus T modulo 42 432). |
| Cell Channel Description | |
| - Information element identifier | 62H |
| - contents | Corresponds to set CA850(2) with "Format ID" set to "128 range". |

## 26.14.3.2 VGCS-VBS / RR Procedures / assignment

### 26.14.3.2.1 Conformance requirements

1. Upon receipt of the ASSIGNMENT COMMAND message in group transmit mode, the mobile station shall initiate a local end release of link layer connections, disconnect the physical channels, command the switching to the assigned channels and initiate the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the main signalling links).

2. MM-messages and CM-messages using SAPI=0 sent from the mobile station to the network shall be duplicated by the data link layer in the following case:

   a channel change of dedicated channels is required (assignment or handover procedure) and the last layer 2 frame has not been acknowledged by the peer data link layer before the mobile station leaves the old channel.

   In this case, the mobile station does not know whether the network has received the message correctly. Therefore, the mobile station shall send the message again after the new dedicated channel is established.

3. An ASSIGNMENT COMMAND message may indicate a frequency change in progress, with a starting time and possibly alternative channel descriptions.

   In the case of the reception of an ASSIGNMENT COMMAND message which contains only the description of a channel to be used after the starting time, and if the starting time has not already elapsed, the mobile station shall wait up to the starting time before accessing the channel.

4. The MS shall apply the hopping frequencies specified in ASSIGNMENT COMMAND message in the Mobile Allocation IE or the Frequency List IE at the time of accessing the new channel using the last received Cell Allocation.

5. After receipt of the ASSIGNMENT COMMAND the MS shall perform the assignment and return an ASSIGNMENT COMPLETE without undue delay.

6. On the mobile station side, if a lower layer failure happens on the new channel before the ASSIGNMENT COMPLETE message has been sent, the mobile station deactivates the new channels, reactivates the old channels, reconnects the TCHs if any and triggers the establishment of the main signalling link. It then sends a ASSIGNMENT FAILURE message, cause "protocol error unspecified" on the main DCCH and resumes the normal operation, as if no assignment attempt had occurred. The operational parameters (e.g. ciphering mode) when returning on the old channel are those applied before the procedure.

GSM 04.13 clause 5.2.4.

### 26.14.3.2.2 Test purpose

1. To verify that upon receipt of an ASSIGNMENT COMMAND in group transmit mode, the MS switches to the channel defined in the ASSIGNMENT COMMAND, establishes the link and sends an ASSIGNMENT COMPLETE message.

   1.1 from non-hopping TCH/F to hopping TCH/F using a different timeslot;

   1.2 from hopping TCH/F to non-hopping TCH/F using a different timeslot;

2. To verify that the MS, supporting TCH, having sent an MM- or CM message which was not acknowledged on L2 before the channel assignment procedure was initiated and before the MS has left the old channel, repeats that message after completion of the assignment procedure without incrementing N(SD). This is tested in the special case of MM message AUTHENTICATION RESPONSE.

3. To verify that, if the MS has received an ASSIGNMENT COMMAND message which contains only the description of a channel to be used after the starting time, and if the starting time has not already elapsed, the mobile station waits up to the starting time before accessing the channel.

4. To verify that the MS having received an ASSIGNMENT COMMAND, correctly decodes the Mobile Allocation and Frequency List IEs for frequency hopping and applies the specified frequencies using the correct Cell Allocation.

5. To verify that after receipt of the ASSIGNMENT COMMAND the MS returns an ASSIGNMENT COMPLETE without undue delay.

6. To test that, when the MS fails to seize the new channel, the MS reactivates the old channel.

### 26.14.3.2.3 Method of test

Initial Conditions

System Simulator:

1 cell, default parameters except:

GSM 450:

BCCH ARFCN =263.

Throughout the test, the CA broadcast in System Information 1 is (259, 261, 263, 265, 267, 269, 271, 273, 275, 277).

Note that the actual CA of the cell contains other frequencies.

GSM 480:

BCCH ARFCN =310.

Throughout the test, the CA broadcast in System Information 1 is (306, 308, 310, 312, 314, 316, 318, 320, 322, 324).

Note that the actual CA of the cell contains other frequencies.

GSM 900:

BCCH ARFCN =20.

Throughout the test, the CA broadcast in System Information 1 is (10, 17, 20, 26, 34, 42, 45, 46, 52, 59).

Note that the actual CA of the cell contains other frequencies.

DCS 1 800:

BCCH ARFCN =747.

Throughout the test, the CA broadcast in System Information 1 is (734, 741, 747, 754, 759, 766, 773, 775, 779, 782).

Note that the actual CA of the cell contains other frequencies.

PCS 1900:

BCCH ARFCN =647.

Throughout the test, the CA broadcast in System Information 1 is ((634, 641, 647, 654, 659, 666, 673, 675, 679, 682).

Note that the actual CA of the cell contains other frequencies.

GSM 700:

BCCH ARFCN = 457.

Throughout the test, the CA broadcast in System Information 1 is (447, 454, 457, 463, 471, 479, 482, 483, 489, 496).

Note that the actual CA of the cell contains other frequencies.

GSM 850:

BCCH ARFCN =147.

Throughout the test, the CA broadcast in System Information 1 is (137, 144, 147, 153, 161, 169, 172, 173, 179, 186).

Note that the actual CA of the cell contains other frequencies.

Mobile Station:

The MS is in group transmit mode.

"Idle, updated", with TMSI allocated.

### Test Procedure

The MS is brought into group transmit mode. A hopping channel is assigned with ASSIGNMENT COMMAND, which includes a Starting Time IE. It is checked that the MS switches to the assigned channel at the time specified in Starting Time IE, establishes the link and sends an ASSIGNMENT COMPLETE message.

Then the SS sends a AUTHENTICATION REQUEST message. The MS shall answer with an AUTHENTICATION RESPONSE message, which is not acknowledged on L2 by the SS. Immediately after the AUTHENTICATION RESPONSE message is received, the SS sends an ASSIGNMENT COMMAND. It is checked that the MS switches to the assigned channel, establishes the link with the commanded power level, sends as ASSIGNMENT COMPLETE message and then MS repeats the AUTHENTICATION RESPONSE message, with the same N(SD) value.

Then the SS sends an ASSIGNMENT COMMAND, but the SS does not activate the specified new channel. It is checked that the MS re-establishes the old channel and sends ASSIGNMENT FALIURE message on the old channel.

### Maximum Duration of Test

30 s.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | the MS is in group transmit mode. |
| 2 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 3 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 2. |
| 4 | SS | | The SS checks that the MS reports the requested power level in the layer 1 header of the SACCH message that is sent in the first SACCH multiframe following the SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | This message is not L2 acknowledged by the SS. |
| 7 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents. |
| 8 | MS -> SS | ASSIGNMENT COMPLETE | Sent on the correct channel after establishment of the main signalling link. This message shall be ready to be transmitted before 600 ms after the completion of step 7. |
| 9 | MS -> SS | AUTHENTICATION RESPONSE | N(SD) shall be the same as in step 6. |
| 10 | SS -> MS | ASSIGNMENT COMMAND | See specific message contents, the SS does not activate the new channel. The MS attempts (and fails) to establish a signalling link on the new channel. |
| 11 | MS | | The MS re-establishes the signalling link on the old channel. |
| 12 | MS -> SS | ASSIGNMENT FAILURE | RR cause value = “protocol error unspecified". |
| 13 | SS -> MS | UPLINK RELEASE | |
| 14 | SS -> MS | CHANNEL RELEASE | UI format, the main signalling link is released. |

Specific Message Contents

ASSIGNMENT COMMAND **- step 2**

| | |
|---|---|
| Channel Description | |
| - Channel Type and TDMA offset | TCH/F |
| - Timeslot Number | (N+1) mod 8 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | RF hopping channel |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1) where N is the number of frequencies in the Mobile Allocation IE. |
| - HSN | Chosen arbitrarily from the set (1 to 63) |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Frequency list IE | Not included |
| Channel Mode | |
| - Mode | A speech mode arbitrarily chosen from the full rate capabilities declared for the MS |
| Mobile Allocation | Indicates all of the CA (broadcast on the BCCH) except for the BCCH carrier. |
| Starting Time | indicates (current frame number + 100 frames) mod 42432 |
| VGCS target mode Indication | |
| - Target mode | group transmit mode |
| - Group cipher key number | no ciphering |

ASSIGNMENT COMMAND **- step 7**

| | |
|---|---|
| Channel Description | |
| - Channel Type and TDMA offset | TCH/F |
| - Timeslot Number | (N+3) mod 8 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | the ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | A speech mode arbitrarily chosen from the full rate capabilities declared for the MS |
| Frequency list IE | Not Included |
| Cell Channel Description | GSM 450: range 128 encoding (271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291)<br>GSM 480: range 128 encoding (318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338)<br>GSM 900: bit map zero encoding (45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)<br>DCS 1800: range 128 encoding (773, 775, 779, 782, 791, 798, 829, 832, 844)<br>PCS 1900: range 128 encoding (673, 675, 679, 682, 691, 698, 729, 732, 744)<br>GSM 700: 128 range encoding (482, 483, 489, 496, 498, 500, 501, 502, 503, 506, 508)<br>GSM 850: 128 range encoding (172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241) |
| Mobile Allocation | Not included |
| Starting Time | Not included |
| VGCS target mode Indication | Not included |

ASSIGNMENT COMMAND **- step 10**

| | |
|---|---|
| Channel Description | |
| - Channel Type and TDMA offset | TCH/F |
| - Timeslot Number | (N+2) mod 8 |
| - Training Sequence Code | Chosen arbitrarily |
| - Hopping | Single RF Channel |
| - ARFCN | The ARFCN of the BCCH carrier |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | A speech mode arbitrarily chosen from the full rate capabilities declared for the MS |
| Frequency list IE | Not included |
| Cell Channel Description | Not included |
| Mobile Allocation | Not included |
| Starting Time | Not included |
| VGCS target mode Indication | |
| - Target mode | group transmit mode |
| - Group cipher key number | no ciphering |

## 26.14.3.3 VGCS-VBS / RR Procedures / handover / successful in group transmit mode

This clause deals with signalling tests in non-synchronised handover in successful case.

Table 26.14.3.3.1 contains a summary of the different combinations of parameters which have to be tested. For execution counter=3, the target channel is dedicated mode.

**Table 26.14.3.3.1**

| From | To | Timing Adv. | Start Time | Sync ? | State of call | Exec Counter |
|---|---|---|---|---|---|---|
| TCH/F, no FH | TCH/F, no FH | 20 | 1,1s | no | group trans. mode | 1 |
| TCH/F, no FH | TCH/F, FH | arbitrary | none | no | group trans. mode | 2 |
| TCH/F, FH | TCH/F, no FH | 20 | none | no | group trans. mode | 3 |

### 26.14.3.3.1 Conformance requirements

The MS shall correctly apply the handover procedure in the non-synchronised case when in group call transmit mode and when handover is performed from a traffic channel with/without frequency hopping towards a traffic channel with/without frequency hopping.

#### References

GSM 04.08 clauses 3.4.4.

### 26.14.3.3.2 Test purpose

To verify that:

1. When the MS is ordered to make a non-synchronised handover it continuously sends access bursts on the main DCCH until it receives a PHYSICAL INFORMATION message from the SS.
2. The MS correctly handles the values of any Starting Time IE in the HANDOVER COMMAND message in the case when none of the information elements referring to before the starting time are present.
3. The MS correctly handles the Timing Advance IE in the PHYSICAL INFORMATION message.
4. The MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay.

### 26.14.3.3.3 Method of test

#### Initial Conditions

System Simulator:

2 cells, A and B with same LAI, default parameters except:

**GSM 450:**

Cell A has:

BCCH ARFCN = 263

Cell Allocation = (259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291)

Cell B has:

BCCH ARFCN = 274

Cell Allocation = (260, 262, 264, 266, 268, 270, 272, 274, 276, 279, 281, 283, 285, 287, 289, 291)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

**GSM 480:**

Cell A has:

BCCH ARFCN = 310

Cell Allocation = (306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338)

Cell B has:

BCCH ARFCN = 321

Cell Allocation = (307, 309, 311, 313, 315, 317, 319, 321, 323, 326, 328, 330, 332, 334, 336, 338)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

**GSM 900:**

Cell A has:

BCCH ARFCN = 20

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

Cell B has:

BCCH ARFCN = 40

Cell Allocation = (14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

**DCS 1 800:**

Cell A has:

BCCH ARFCN = 747

Cell Allocation = (734, 741, 747, 754, 759, 762, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844)

Cell B has:

BCCH ARFCN = 764

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The Cell Allocation of both Cell A and Cell B shall be coded using range 256 format.

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

**PCS 1900:**

Cell A has:

BCCH ARFCN = 647

Cell Allocation = (634, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744)

Cell B has:

BCCH ARFCN = 664

Cell Allocation = (639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744)

The Cell Allocation of both Cell A and Cell B shall be coded using range 256 format.

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

**GSM 700:**

Cell A has:

BCCH ARFCN = 457.

Cell Allocation = (447, 454, 457, 463, 471, 479, 482 ,483 ,489, 496, 498, 500, 501, 502, 503, 506, 508).

Cell B has:

BCCH ARFCN = 477.

Cell Allocation = (451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508).

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

**GSM 850:**

Cell A has:

BCCH ARFCN = 147.

Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241).

Cell B has:

BCCH ARFCN = 167.

Cell Allocation = (141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241).

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

Mobile Station:

The MS is in group transmit mode on cell A.

### Related PICS/PIXIT Statements

Type of Mobile Station (GSM 450 or GSM 480 or GSM 700 or GSM 850 or P-GSM 900 or EGSM or DCS 1 800 or PCS 1900).

Support VGCS talking.

Support VBS originating.

Way to configure VGCS or VBS.

Way to request uplink.

Way to initiate VBS call.

### Foreseen Final State of the MS

idle mode on cell B.

### Test Procedure

This procedure is repeated for execution counter M = 1 to 3.

The MS is in group transmit mode. The SS sends a HANDOVER COMMAND. The MS (at the time defined by the Starting Time information element, if included in the message) begins to send access bursts on the new DCCH of the target cell. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between 10 - 20) access bursts, the SS sends one PHYSICAL INFORMATION message with an arbitrary Timing Advance. It is checked that the MS activates the new channel in sending and receiving mode, and it is checked that the MS is ready to transmit a HANDOVER COMPLETE message, before "**x**" MS after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS.

The term "ready to transmit" is defined in GSM 04.13. The value of "**x**" depends upon the target channel and is specified in the specific message contents clause.

### Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

### Expected Sequence

This sequence is performed for execution counter M = 1, 2, 3.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in group transmit mode. |
| 1 | SS -> MS | HANDOVER COMMAND | See Specific message contents. |
| 2 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. If the HANDOVER COMMAND includes a starting time IE then the first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used). |
| 3 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS messages. See specific message contents. |
| 4 | MS -> SS | SABM | Sent without information field. |
| 5 | SS -> MS | UA | |
| 6 | MS -> SS | HANDOVER COMPLETE | The message shall be ready to be transmitted before "x" ms after the completion of step 3. |
| A7 | MS | | for M=1, 2, check that the TCH specified is through connected. |
| B7 | | | for M=3, check that the TCH specified is through connected. |
| B8 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |

## 26.14.3.4 VGCS-VBS / RR Procedures / handover / successful at group call establishment

This clause deals with signalling in the Handover/successful/group call establishment/non synchronised case. This clause is aligned with clause 26.6.5.2 (m=1 and M=8).

Table 26.14.3.4.1 contains a summary of the different combinations of parameters which have to be tested. If a test uses a channel rate which the MS under test does not support, the test shall be skipped.

**Table 26.14.3.4.1**

| From | To | Timing Adv. | Start Time | Sync | State of call | Exec Counter |
|---|---|---|---|---|---|---|
| SDCCH/4, no FH | TCH/F, FH | 20 | none | no | group or broadcast call establishment | 1 |
| SDCCH/8, FH | TCH/F, no FH | 20 | 1,1s | no | group or broadcast call establishment | 2 |

**Table 26.14.3.4.2**

| | TCH/FS | SDCCH |
|---|---|---|
| n | 10-20 | 2-5 |

n: number of access bursts.

### 26.14.3.4.1 Conformance requirements

In dedicated mode or group transmit mode, an intercell or intracell change of channel(s) can be requested by the network RR sublayer. This changed may be performed through the handover procedure.

The purpose of the handover procedure is to completely modify the channels allocated to the mobile station e.g. when the cell is changed. A change in the channel configuration nature is possible. This procedure is used only while in dedicated mode or group transmit mode.

References

GSM 04.08, clauses 3.4.4 and 9.1.15
GSM 04.13, clause 5.2.6.2

### 26.14.3.4.2 Test purpose

To verify that:

1. The MS correctly applies the handover procedure from non frequency hopping SDCCH/4 to TCH/F with frequency hopping in the non-synchronized case during group or broadcast call establishment.

2. The mobile correctly applies the handover procedures from SDCCH/8with frequency hopping to TCH/F without frequency hopping in the non-synchronized case during group or broadcast call establishment.

3. If during call establishment a Layer 3 MM or CC message just sent by the MS is not Layer 2 acknowledged before the channel change caused by the HANDOVER COMMAND message, the MS sends the Layer 3 message to the new cell, using the same value in the N(SD) field, after the handover procedure.

### 26.14.3.4.3 Method of test

Initial Conditions

System Simulator:

2 cells A and B with same LAI, default parameters, except:

**GSM450**:

Cell A has: BCCH ARFCN = 263
Cell Allocation = (259, 261, 263, 265, 267, 269, 271, 273, 275, 277, 279, 281, 283, 285, 287, 289, 291)
PLMN colour code, NCC = as defaults.
BS colour code, BCC = as defaults.

Cell B has: BCCH ARFCN = 274
Cell Allocation = (260, 262, 264, 266, 268, 270, 272, 274, 276, 279, 281, 283, 285, 287, 289, 291)
PLMN colour code, NCC = 3.
BS colour code, BCC = 0.

Both cells send SI 1 messages containing the complete Cell Allocation of the cell, using Range 128 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter M = 1 a combined CCH/SDCCH is used.

For execution counter M = 2 a non combined SDCCH is used.

**GSM480**:

Cell A has: BCCH ARFCN = 310
Cell Allocation = (306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338)
PLMN colour code, NCC = as defaults.
BS colour code, BCC = as defaults.

Cell B has: BCCH ARFCN = 321
Cell Allocation = (307, 309, 311, 313, 315, 317, 319, 321, 323, 326, 328, 330, 332, 334, 336, 338)
PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SI 1 messages containing the complete Cell Allocation of the cell, using Range 128 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter M = 1 a combined CCH/SDCCH is used.

For execution counter M = 2 a non combined SDCCH is used.

**GSM900:**

Cell A has: BCCH ARFCN = 20
Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)
PLMN colour code, NCC = as defaults.
BS colour code, BCC = as defaults.

Cell B has: BCCH ARFCN = 40
Cell Allocation = (14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114)
PLMN colour code, NCC = 3.
BS colour code, BCC = 0.

Both cells send SI 1 messages containing the complete Cell Allocation of the cell, using bit map 0 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter M = 1 a combined CCH/SDCCH is used.

For execution counter M = 2 a non combined SDCCH is used.

**DCS1800:**

Cell A has: BCCH ARFCN = 747
Cell Allocation = (734, 741, 747, 754, 759, 762, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844)
PLMN colour code, NCC = as defaults.
BS colour code, BCC = as defaults.

Cell B has: BCCH ARFCN = 764
Cell Allocation = ( 739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)
PLMN colour code, NCC = 3.
BS colour code, BCC = 0.

Both cells send SI 1 messages containing the complete Cell Allocation of the cell, using Range 512 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter M = 1 a combined CCH/SDCCH is used.

For execution counter M = 2 a non combined SDCCH is used.

**PCS 1900:**

Cell A has: BCCH ARFCN = 647
Cell Allocation = (634, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744)
PLMN colour code, NCC = as defaults.
BS colour code, BCC = as defaults.

Cell B has: BCCH ARFCN = 664
Cell Allocation = (639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744)
PLMN colour code, NCC = 3.
BS colour code, BCC = 0.

Both cells send SI 1 messages containing the complete Cell Allocation of the cell, using Range 512 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter M = 1 a combined CCH/SDCCH is used.

For execution counter M = 2 a non combined SDCCH is used.

**GSM700:**

Cell A has: BCCH ARFCN = 457.
Cell Allocation = (447, 454, 457, 463, 471, 479, 482 ,483 ,489, 496, 498, 500, 501, 502, 503, 506, 508).
PLMN colour code, NCC = as defaults.
BS colour code, BCC = as defaults.

Cell B has: BCCH ARFCN = 477.
Cell Allocation = (451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508).
PLMN colour code, NCC = 3.
BS colour code, BCC = 0.

Both cells send SI 1 messages containing the complete Cell Allocation of the cell, using 128 range format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter M = 1 a combined CCH/SDCCH is used.

For execution counter M = 2 a non combined SDCCH is used.

**GSM850:**

Cell A has: BCCH ARFCN = 147.
Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241).
PLMN colour code, NCC = as defaults.
BS colour code, BCC = as defaults.

Cell B has: BCCH ARFCN = 167.
Cell Allocation = (141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241).
PLMN colour code, NCC = 3.
BS colour code, BCC = 0.

Both cells send SI 1 messages containing the complete Cell Allocation of the cell, using 128 range format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

For execution counter M = 1 a combined CCH/SDCCH is used.

For execution counter M = 2 a non combined SDCCH is used.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated and camped on cell A.

Related PICS/PIXIT Statements

Type of MS (GSM 450 or GSM 480 or GSM 700 or GSM 850 or P-GSM900 or EGSM or DCS1800 or PCS 1900).

Support VGCS originating.

Support VBS originating.

Way to initiate VGCS call.

Way to initiate VBS call.

### Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

### Test Procedure

This procedure is repeated for execution counter M = 1 and 2 ( See Table 26.14.3.4.1 )

A VBS call is initiated on cell A by setup procedure if the MS supports VBS only, otherwise a VGCS call is initiated by setup procedure on cell A. After the MS has sent the SETUP message (and before the last L2 frame carrying the SETUP message is acknowledged by the SS) the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH to cell B. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between values according to table 26.14.3.4.2) access bursts, the SS sends one PHYSICAL INFORMATION message with a Timing Advance as specified in table 26.14.3.4.1. It is checked that the MS activates the new channel and the MS is ready to transmit a HANDOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. It is also checked that the MS sends again the SETUP message with the same value in the N(SD) field.

The term 'ready to transmit' is defined in TS GSM 04.13. The value of '**x**' depends upon the target channel and is specified in the specific message contents clause.

### Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

### Expected Sequence

The sequence is performed for execution counter M = 1 and 2.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | MMI action, a VBS or a VGCS call is initiated on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 5 | MS -> SS | SETUP | Last L2 frame not acknowledged by the SS. |
| 6 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| 7 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND |
| 8 | SS -> MS | PHYSICAL INFO | Sent after reception of n HANDOVER ACCESS message. Timing Advance as specified in table 26.14.3.4.1. |
| 9 | MS -> SS | SABM | Sent without information field |
| 10 | SS -> MS | UA | |
| 11 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before 'x' ms after the completion of step 8. |
| 12 | MS -> SS | SETUP | Same N(SD) as in step 5. |
| 13 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |

## 26.14.3.5 VGCS-VBS / RR Procedures / handover / failure

### 26.14.3.5.1 Conformance requirements

After a HANDOVER COMMAND message and subsequent handover failure in group transmit mode, the MS shall return to the old channel.

#### References

GSM 04.08 clauses 3.4.4.4.

### 26.14.3.5.2 Test purpose

To verify that after a HANDOVER COMMAND message and subsequent handover failure in group transmit mode, the MS returns to the old channel.

### 26.14.3.5.3 Method of test

#### Initial Conditions

System Simulator:

2 cells with same LAI, default parameters.

Mobile Station:

The MS is in group transmit mode on cell A.

#### Related PICS/PIXIT Statements

Type of MS (GSM 450 or GSM 480 or GSM 700 or GSM 850 or P-GSM 900 or EGSM or DCS 1 800 or PCS 1900).

Support VGCS talking.

Support VBS originating.

Way to configure VGCS or VBS.

Way to request uplink.

Way to initiate VBS call.

#### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

#### Test Procedure

The MS is brought to group transmit mode, then the SS sends a HANDOVER COMMAND message with Power Command set to 8. The MS begins to send access bursts at the commanded power level on the new DCCH. The SS activates the SACCH, but does not send PHYSICAL INFORMATION (thus causing a time-out of T3124). It is checked that the MS re-establishes the old link and sends a HANDOVER FAILURE within 3 s from the transmission of HANDOVER COMMAND, using the old power level.

#### Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | the MS is in group transmit mode |
| 2 | SS -> MS | HANDOVER COMMAND | Channel description: non-hopping, full rate Power Command: 8. Synchronisation Indication: non synchronised. |
| 3 | MS -> SS | HANDOVER ACCESS | Several messages are sent, all with correct Handover References. |
| 4 | MS -> SS | HANDOVER FAILURE | Sent on old channel, RR cause value = “Abnormal release, unspecified", "Abnormal release, channel unacceptable", "Abnormal release, timer expired", "Abnormal release, no activity on the radio path" or "Protocol error unspecified". Shall be sent within 3 s from the transmission of HANDOVER COMMAND. |
| 5 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |

## 26.14.3.6 VGCS-VBS / RR / Measurement Report

This sub-clause tests measurement report of the MS in group transmit mode,

### 26.14.3.6.1 Measurement / all neighbours present

#### 26.14.3.6.1.1 Conformance requirements

In group transmit mode the MS shall continuously send MEASUREMENT REPORT messages on every SACCH blocks and the measurement valid indication shall be set to valid (0) within the second block at the latest.

After 20 s the values in the MEASUREMENT REPORT message shall contain measurement results for the 6 strongest BCCH carriers with known and allowed NCC part of BSIC when the SS gives information of more that 6 neighbouring cells .

References

GSM 04.08 clause 3.4.1.2,

GSM 05.08 clause 8.4.

#### 26.14.3.6.1.2 Test purpose

To verify that, when the SS gives information of more than 6 neighbouring cells, the MS in group transmit mode reports measurement results for the 6 strongest BCCH carriers with known and allowed NCC part of BSIC.

#### 26.14.3.6.1.3 Method of test

Initial Conditions

System Simulator:

For GSM 450 or GSM 480: 8 cells with the following settings:

| Transmitter | Level | NCC | BSCC | ARFCN (GSM450) | ARFCN (GSM480) | Cell Identity |
|---|---|---|---|---|---|---|
| Serving, S1 | -60 | 1 | 3 | 260 | 307 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 264 | 311 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 268 | 315 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 272 | 319 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 276 | 323 | 0005H |
| Neighbour, N5 | -50 | 1 | 5 | 280 | 327 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 284 | 331 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 288 | 335 | 0008H |

For GSM 900 or DCS 1800: 8 cells with the following settings:

| Transmitter | Level | NCC | BSCC | ARFCN (GSM900) | ARFCN (DCS1800) | ARFCN (PCS 1900) | Cell Identity |
|---|---|---|---|---|---|---|---|
| Serving, S1 | -60 | 1 | 3 | 002 | 514 | 514 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 008 | 530 | 530 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 014 | 602 | 602 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 020 | 665 | 665 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 026 | 762 | 762 | 0005H |
| Neighbour, N5 | -50 | 1 | 5 | 032 | 686 | 686 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 038 | 549 | 549 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 044 | 810 | 810 | 0008H |

For GSM 700 or GSM 850: 8 cells with the following settings:

| Transmitter | Level | NCC | BSCC | ARFCN (GSM700) | ARFCN GSM850) | Cell Identity |
|---|---|---|---|---|---|---|
| Serving, S1 | -60 | 1 | 3 | 439 | 129 | 0001H |
| Neighbour, N1 | -85 | 1 | 5 | 445 | 135 | 0002H |
| Neighbour, N2 | -80 | 1 | 7 | 451 | 141 | 0003H |
| Neighbour, N3 | -75 | 1 | 1 | 457 | 147 | 0004H |
| Neighbour, N4 | -55 | 1 | 3 | 463 | 153 | 0005H |
| Neighbour, N5 | -50 | 1 | 5 | 469 | 159 | 0006H |
| Neighbour, N6 | -45 | 1 | 7 | 475 | 165 | 0007H |
| Neighbour, N7 | -40 | 1 | 1 | 481 | 171 | 0008H |

With the exception of the Cell Allocation, the rest of the parameters for all eight cells are the same as the default settings and default SI 1 to 4 message contents for cell A. The Cell Allocation for the serving cell is the same as the default setting for cell A. The Cell Allocations for the neighbour cells need have only one entry, consisting of the ARFCN of that cell's BCCH.

Mobile Station:

The MS is in group transmit mode.

## Related PICS/PIXIT Statements

Type of MS (GSM 450 or GSM 480 or GSM 700 or GSM 850 or P-GSM 900 or EGSM or DCS 1 800 or PCS 1900).

Support VGCS talking.

Support VBS originating.

Way to initiate VBS call.

## Foreseen Final State of the MS

group transmit mode

## Test Procedure

This test procedure is performed twice.

The MS is in group transmit mode. The SS sends SI 5 & 6 (on the second iteration of the test the SS also sends SI 5bis) on the SACCH. All 8 of the BCCHs are indicated in the BA. It is checked that the MS sends MEASUREMENT REPORTs containing measurement results for the 6 strongest carriers.

### Maximum Duration of Test

5 minutes, including 1 minute for any necessary operator actions.

### Expected Sequence

This sequence is performed for execution counter, k = 1, 2.

Since when k = 1, SI 5, SI 6 and MEASUREMENT REPORT (and when k = 2 an additional SI 5bis is included) are sent continuously, a table is not applicable in this test. The interval between 2 successive Layer 2 frames containing MEASUREMENT REPORTs shall not exceed one Layer 2 frame.

### Specific Message Contents

GSM450 begin:

SYSTEM INFORMATION TYPE 5:

| Information Element | value/remark |
|---|---|
| Neighbour Cells Description | |
| Format Identifier | Range 128 |
| BCCH Allocation Sequence | 1 |
| BCCH Allocation ARFCN | The channel numbers 259, 260, 261, 262, 263, 264, 265, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291and 292 belong to the BCCH allocation. |
| - EXT IND | k = 1. Information Element carries complete BA.<br>k = 2. Information Element carries only a part of the BA. |

SYSTEM INFORMATION TYPE 5bis (Sent only when k = 2):

| Information Element | value/remark |
|---|---|
| Protocol Discriminator | RR Management |
| Message Type | Sys Info 5bis. |
| Neighbour Cells Description | |
| - Format | 1024 range |
| - EXT IND | k = 2. Information Element carries only a part of the BA. |
| - W(i) | Channel 0 and 800 belong to the BCCH allocation. |

MEASUREMENT REPORT:

## 26.14.4 VGCS-VBS / Uplink Access and Uplink Reply Procedures

This clause is applied to the MS supporting VGCS talking.

### 26.14.4.1 VGCS-VBS / Uplink Access / uplink investigation

#### 26.14.4.1.1 Conformance requirement

1. On receipt of a request from the upper layer to access the uplink and the uplink is free the MS shall start the uplink access procedure.

2. The uplink is not free when receipt of request from the upper layer to access the uplink, and before the Timer T3128 expiring the uplink is still not free, the MS shall remain in group receive mode and indicate a reject of the uplink request to the upper layer.

#### Reference(s)

GSM 04.08 clause 3.3.1.2.1.1.

### 26.14.4.1.2 Test purpose

To verify that:

1. The MS starts the uplink access procedure on receipt of a request from the user to access the uplink and the uplink is free.
2. The MS remains in group receive mode and indicates a reject of the uplink request to the user till Timer T3128 expiring.

### 26.14.4.1.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in group receive mode.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS talking.

Way to configure VGCS.

Way to indicate uplink granted/rejected.

Way to accept a VGCS.

Way to request uplink.

#### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

#### Test Procedure

The MS is brought into group receive mode. The SS indicates uplink free to the MS. The MS is requested to access uplink by MMI action. It is checked that the MS initiates the uplink access procedure. The request is not granted (a VGCS UPLINK GRANT to irrelevant request reference and an UPLINK BUSY message). It is checked that the MS remains in group receive mode. The MS is requested to access uplink by MMI action. It is checked that the MS does not send UPLINK ACCESS message and indicates uplink access rejected.

#### Maximum Duration of Test

5 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is in group receive mode. |
| 1 | SS -> MS | UPLINK FREE | Uplink access request set to 'L'. |
| 2 | MS | | MMI action to request uplink access. |
| 3 | MS -> SS | UPLINK ACCESS | |
| 4 | MS -> SS | UPLINK ACCESS | |
| 5 | SS -> MS | UPLINK BUSY | |
| 6 | SS -> MS | VGCS UPLINK GRANT | request reference different from those in step 3 and 4. |
| 7 | MS | | check that the MS indicates rejection of uplink request and check that the TCH in downlink is still through connected and there is no uplink transmission on that channel for 10 s. |
| 10 | MS | | MMI action to request uplink access. |
| 11 | SS | | check that there is no UPLINK ACCESS messages for 2 s. |
| 12 | MS | | check that the MS indicates the access rejection to the user. |
| 13 | SS -> MS | CHANNEL RELEASE | UI format |

## 26.14.4.2 Uplink Access / uplink access procedure

### 26.14.4.2.1 Conformance requirement

1. The mobile station shall send UPLINK ACCESS messages on the voice group call channel with the appropriate establishment cause. The first UPLINK ACCESS message shall be transmitted by the mobile station with a random delay between 0 and 20ms. The UPLINK ACCESS messages shall be repeated after a further period of 100ms plus a random delay between 0 and 20ms.

2. At expiration of timer T3130, the mobile station shall repeat the uplink access procedure if the uplink is free. A maximum of three attempts is allowed and after that a rejection of the uplink request is indicated to the upper layers.

3. When receiving a UPLINK BUSY or a VGCS UPLINK GRANT message aimed to another mobile station (i.e., not corresponding to one of its UPLINK ACCESS messages), the mobile station shall stop sending UPLINK ACCESS message and remain in group receive mode and shall indicate a rejection of the uplink request to the upper layers.

4. On receipt of an VGCS UPLINK GRANT message corresponding to one of its UPLINK ACCESS messages, the mobile station stops T3130, stops sending UPLINK ACCESS messages, and establishes the main signalling link with an SABM containing the TALKER INDICATION message in the information field. Controlled early classmark sending shall be performed. If a UA is received containing the message sent, the mobile station enters group transmit mode and indicates the successful seizure of the uplink to the upper layer.

5. If an uplink identity code (UIC) of the current cell has been provided by the network in the UPLINK FREE message, the mobile station shall use this UIC IE for the coding of the UPLINK ACCESS messages . If no UIC is provided, the mobile station shall use the BSIC received from the current cell, for instance from the initial synchronisation.

Reference(s)

GSM 04.08 clause 3.3.1.2.1.2

GSM 03.68 clause 11.3.7.

GSM 05.03 clause 4.6.

#### 26.14.4.2.2 Test purpose

To verify that:

1. When a request to talk is made by the user and the uplink has been free the MS in group receive mode sends UPLINK ACCESS messages on the voice group call channel with the appropriate establishment cause.

2. The first UPLINK ACCESS message is transmitted by the MS with a random delay between 0 and 20ms. The UPLINK ACCESS messages is repeated after a further period of 100ms plus a random delay between 0 and 20ms.

3. At expiration of timer T3130, the MS repeats the uplink access procedure if the uplink is free and maximum of attempts is three. After three failed attempts a rejection of the uplink request is indicated.

4. The MS stops sending UPLINK ACCESS message and remains in group receive mode and indicates a rejection of the uplink request when receiving a UPLINK BUSY or a VGCS UPLINK GRANT message aimed to another mobile station (i.e., not corresponding to one of its UPLINK ACCESS messages).

5. On receipt of an VGCS UPLINK GRANT message corresponding to one of its UPLINK ACCESS messages, the MS stops T3130, stops sending UPLINK ACCESS messages, and establishes the main signalling link with an SABM containing the TALKER INDICATION message in the information field. Controlled early classmark sending is performed. If a UA is received containing the message sent, the MS enters group transmit mode and indicates the successful uplink seizure.

6. If an uplink identity code (UIC) of the current cell has been provided by the network in the UPLINK FREE message, the mobile station shall use this UIC IE for the coding of the UPLINK ACCESS messages . If no UIC is provided, the mobile station shall use the BSIC received from the current cell, for instance from the initial synchronisation.

#### 26.14.4.2.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in group receive mode.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS talking.

Way to configure VGCS.

Way to indicate uplink granted/rejected.

Way to accept a VGCS.

Way to request uplink.

##### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

### Test Procedure

The MS is brought into group receive mode. The SS sends UPLINK FREE without UIC. The MS is made to access uplink. It is checked that the MS initiates uplink access procedure with correct establishment cause and with random delay for transmissions and retransmissions and that the access bursts are coded with BSIC. The SS does not respond to the access request. It is checked that the MS repeats the same procedure three times, after three attempts it indicates access rejection and remains in group receive mode.

The SS sends UPLINK FREE with UIC. The MS is made to access uplink. It is checked that the access bursts are coded with UIC. After the second UPLINK ACCESS message, the SS responds with VGCS UPLINK GRANT aimed to another MS and UPLINK BUSY messages. It is checked that the MS stops sending UPLINK ACCESS, remains in group receive mode and indicates uplink access rejection. The SS sends UPLINK FREE. The MS is made to access uplink. The SS sends a message on the downlink SACCH. It is checked that the MS stops sending UPLINK ACCESS for 10 s, then the SS sends another SACCH message. It is checked that the MS is back to group receive mode and indicates access rejection. The MS is made to access uplink. The SS accepts the request. It is checked that the MS establishes the main signalling link correctly, enters group transmit mode and indicates the successful seizure of uplink.

### Maximum Duration of Test

5 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in group receive mode. |
| 1 | SS -> MS | UPLINK FREE | Uplink access request set to 'L'. UIC indication set to 'L'. |
| 2 | MS | | MMI action to request uplink access. |
| 3 | MS -> SS | UPLINK ACCESS | check that establishment cause is "Subsequent talker uplink request" and this access burst is coded with BSIC. |
| 4 | MS -> SS | UPLINK ACCESS | check that the interval between this burst and the one in step 3 is 100ms plus a value between 0 and 20ms. |
| 5 | MS -> SS | UPLINK ACCESS | check that the interval between this burst and the one in step 3 is 5s plus a value between 0 and 20ms. |
| 6 | MS -> SS | UPLINK ACCESS | check that the interval between this burst and the one in step 5 is 100ms plus a value between 0 and 20ms, and the interval is different from the interval in step 4. |
| 7 | MS -> SS | UPLINK ACCESS | check that the interval between this burst and the one in step 5 is 5s plus a value between 0 and 20ms, and the interval is different from the interval in step 5. |
| 8 | MS -> SS | UPLINK ACCESS | check that the interval between this burst and the one in step 7 is 100ms plus a value between 0 and 20ms, and the interval is different from the intervals in step 4 and step 6. |
| 9 | MS | | check that there is no more UPLINK ACCESS, and that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. The MS indicates also a rejection of the uplink request. |
| 10 | SS -> MS | UPLINK FREE | containing UIC. |
| 11 | MS | | MMI action to request uplink access. |
| 12 | MS -> SS | UPLINK ACCESS | |
| 13 | MS -> SS | UPLINK ACCESS | |
| 14 | SS -> MS | VGCS UPLINK GRANT | request reference different from step 12 and 13 |
| 15 | SS | | check that within 1 second the MS does not send further UPLINK ACCESS. |
| 16 | SS -> MS | UPLINK BUSY | this message sent 0.9 s. after step 14. |
| 17 | MS | | check that the MS indicates a rejection of the uplink request and that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s.. |
| 18 | SS -> MS | UPLINK FREE | |
| 19 | MS | | MMI action to request uplink access. |
| 20 | MS -> SS | UPLINK ACCESS | |
| 21 | MS -> SS | UPLINK ACCESS | |
| 22 | SS -> MS | UPLINK BUSY | |
| 23 | SS | | check that there is no more UPLINK ACCESS, and that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. The MS indicates also a rejection of the uplink request. |
| 24 | SS -> MS | UPLINK FREE | |
| 26 | MS | | MMI action to request uplink access. |
| 27 | MS -> SS | UPLINK ACCESS | |
| 28 | MS -> SS | UPLINK ACCESS | |
| 29 | SS -> MS | UPLINK BUSY | |
| 30 | SS -> MS | VGCS UPLINK GRANT | Reference to step 27 |
| 31 | MS -> SS | TALKER INDICATION | L2: SABM / UA |
| 32 | SS -> MS | AUTHENTICATION REQUEST | |
| 33 | MS -> SS | AUTHENTICATION RESPONSE | |
| 34 | SS -> MS | CIPHERING MODE COMMAND | no ciphering |
| 35 | MS -> SS | CIPHERING MODE COMPLETE | |
| 36 | MS | | Check that the TCH is through connected and the MS gives indication to the user. |
| 37 | SS -> MS | CHANNEL RELEASE | The MS may send a DISC (step 38) without performing a layer 2 acknowledgement of the CHANNEL RELEASE message. |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 38 | MS -> SS | DISC | The MS shall send at least 2 L2 DISC frames, to which the SS does not respond. After a period of 2 seconds, the SS verifies for 3 seconds that the MS does not produce any further Layer 2 messages. |

## 26.14.4.3 VGCS-VBS / Uplink Reply in VGCS receive mode

This test is applicable to the MS supporting VGCS talking.

### 26.14.4.3.1 Conformance requirement

1. On receipt of an UPLINK FREE message with an uplink access request indication from the network on the voice group call channel downlink, the mobile station shall send two UPLINK ACCESS messages on the voice group call channel with the appropriate establishment cause and then stop immediately transmitting on the uplink.

2. The first UPLINK ACCESS message shall be transmitted by the mobile station with a random delay between 0 and 20 ms. The second UPLINK ACCESS messages shall be repeated after a further period of 100 ms plus a random delay between 0 and 20 ms.

3. If an uplink identity code (UIC) of the current cell has been provided by the network in the UPLINK FREE message, the mobile station shall use this UIC for the coding of the UPLINK ACCESS messages. If no UIC is provided, the mobile station shall use the BSIC received of the serving cell, for instance as received from the initial synchronisation.

#### Reference(s)

GSM 04.08 clause 3.4.15.1.3.

### 26.14.4.3.2 Test purpose

To verify that when the MS is in group receive mode:

1. On receipt of an UPLINK FREE message with an uplink access request indication from the network on the voice group call channel downlink, the MS sends two UPLINK ACCESS messages on the voice group call channel with the appropriate establishment cause and then stops immediately transmitting on the uplink.

2. The first UPLINK ACCESS message is transmitted by the MS with a random delay between 0 and 20 ms. The second UPLINK ACCESS messages is repeated after a further period of 100 ms plus a random delay between 0 and 20 ms.

3. If an uplink identity code (UIC) of the current cell has been provided by the network in the UPLINK FREE message, the MS uses this UIC for the coding of the UPLINK ACCESS messages. If no UIC is provided, the MS uses the BSIC received of the serving cell, for instance as received from the initial synchronisation.

### 26.14.4.3.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in group receive mode.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS talking.

Way to configure VGCS.

Way to indicate uplink granted/rejected.

Way to accept a VGCS call.

Way to request uplink.

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is in (VGCS) group receive mode. The SS sends UPLINK FREE message with Uplink Access Request Indication Information Element but without UIC Information Element. It is checked that the MS sends two UPLINK ACCESS messages in correct scheduling and the L1 coding of the messages is with BSIC. The SS sends UPLINK FREE containing Uplink Access Request Indication Information Element and UIC Information Element. It is checked that the MS sends two UPLINK ACCESS messages in correct scheduling and the L1 coding of the messages is with UIC.

Maximum Duration of Test

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in group receive mode. |
| 1 | SS -> MS | UPLINK FREE | Uplink access request set to 'H'. UIC indication set to 'L'. |
| 2 | MS -> SS | UPLINK ACCESS | check that the establishment cause is "Reply on uplink access request" and the L1 coding is with BSIC |
| 3 | MS -> SS | UPLINK ACCESS | check that the burst and the one in step 2 is 100ms plus a value between 0 and 20ms, and check that the L1 coding is with BSIC. |
| 4 | SS -> MS | UPLINK FREE | with "uplink access request indication" and UIC. |
| 5 | MS -> SS | UPLINK ACCESS | check that the establishment cause is "Reply on uplink access request" and the L1 coding is with UIC |
| 6 | MS -> SS | UPLINK ACCESS | check that the burst and the one in step 5 is 100ms plus a value between 0 and 20ms; the interval is different from the intervals in step 2 and step 3, and check that the L1 coding is with UIC. |
| 7 | SS -> MS | CHANNEL RELEASE | UI format. |

## 26.14.5 VGCS-VBS / Leaving Group Receive or Group Transmit Mode

### 26.14.5.1 VGCS-VBS / Leaving group receive mode

#### 26.14.5.1.1 Conformance requirement

In group receive mode:

1. The MS shall return to idle mode and give an indication to the upper layer when it received a CHANNEL RELEASE message of UI format.

2. In sub-state NO CHANNEL for VGCS or RECEIVE MODE ACTIVE for VBS, when $T_{no\ channel}$ expires, the GCC/BCC entity in the MS shall inform higher layers, ask lower sub-layers to abort resources and enter the idle state.

3. If the upper layer requests to abort group receive mode, the mobile station shall return to idle mode.

Reference(s)

GSM 04.08 clause 3.4.15.1.2.6, 3.4.15.1.4.1.

GSM 04.68 clause 6.1.2.1.10, 6.3.1.1.

GSM 04.69 clause 6.1.2.1.10, 6.3.3.

### 26.14.5.1.2 Test purpose

To verify that in group receive mode:

1. The MS enters idle mode when it received a CHANNEL RELEASE message of UI format.
2. On user's request to abort group receive mode, the MS returns to idle mode.
3. In sub-state NO CHANNEL for VGCS or RECEIVE MODE ACTIVE for VBS, when $T_{no\ channel}$ expires the MS aborts resources and enters the idle mode.

### 26.14.5.1.3 Method of test

Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing

Mobile Station:

The MS is in group receive mode.

Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Way to configure VGCS or VBS.

Way to indicate a call notification.

Way to accept a VGCS or VBS.

Way to verify the downlink speech path.

Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

Test Procedure

The MS is in group receive mode. The SS sends CHANNEL RELEASE. It is checked that the MS returns to idle mode by sending PAGING REQUEST. The MS is brought into group receive mode. The MS is requested to stop VGCS/VBS listening by MMI action. It is checked that the MS returns to idle mode. The MS is brought into group receive mode again. The SS stops downlink transmissions on VGCS/VBS downlink channel. It is checked that the MS returns to idle mode after $T_{no\ channel}$ times out (3 s after the SS stops downlink transmission).

Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is in group receive mode. |
| 1 | SS -> MS | CHANNEL RELEASE | UI format. |
| 2 | SS | | wait 5s. |
| 3 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile Identity" IE contains the TMSI allocated to the MS. |
| 4 | MS -> SS | CHANNEL REQUEST | "Establishment Cause" = Answer to paging. |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT REJECT | the first "request reference" corresponds to the CHANNEL REQUEST sent by the MS. |
| 6 | SS | | wait 5s. |
| 7 | SS -> MS | NOTIFICATION/NCH | with group call channel description and the call reference active in the MS. The call reference is different from that used in step 0. |
| 8 | MS | | MMI action to join the VGCS/VBS call. |
| 9 | MS | | MMI action to stop the VGCS/VBS listening. |
| 10 | SS | | wait 5s.. |
| 11 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile Identity" IE contains the TMSI allocated to the MS. |
| 12 | MS -> SS | CHANNEL REQUEST | "Establishment Cause" = Answer to paging. |
| 13 | SS -> MS | IMMEDIATE ASSIGNMENT REJECT | the first "request reference" corresponds to the CHANNEL REQUEST sent by the MS. |
| 14 | SS | | wait 5s. |
| 15 | SS -> MS | NOTIFICATION/NCH | with group call channel description and the call reference active in the MS. The call reference is different from that used in step 0 and 3. |
| 16 | MS | | MMI action to join the VGCS/VBS call. |
| 17 | SS | | stop the VGCS/VBS downlink transmissions and wait 4 s. |
| 18 | SS -> MS | PAGING REQUEST TYPE 1 | "Mobile Identity" IE contains the TMSI allocated to the MS. |
| 19 | MS -> SS | CHANNEL REQUEST | "Establishment Cause" = Answer to paging. |
| 20 | SS -> MS | IMMEDIATE ASSIGNMENT REJECT | the first "request reference" corresponds to the CHANNEL REQUEST sent by the MS. |

## 26.14.5.2 VGCS-VBS / Leaving group transmit mode

This test is applicable to the MS support VGCS talking.

### 26.14.5.2.1 Conformance requirement

In group transmit mode (VGCS):

1. If the uplink release is requested by the upper layer the mobile station shall send an UPLINK RELEASE message on the voice group call channel uplink, perform a release of the main signalling link and go back to group receive mode.

2. If the UPLINK RELEASE message is received from the network on the voice group call channel downlink, the MS shall perform a release of the main signalling link and go back to group receive mode.

3. The talking subscriber’s mobile station which has lost the contact with the network shall return immediately to group receive mode.

Reference(s)

GSM 04.08 clause 3.4.13.4, 3.4.13.5.1

GSM 03.68 clause 4.2.2.2.

### 26.14.5.2.2 Test purpose

To verify that in group transmit mode (VGCS):

1. When uplink release is requested by the user the mobile station sends an UPLINK RELEASE message on the voice group call channel uplink, performs a release of the main signalling link and goes back to group receive mode.

2. When the UPLINK RELEASE message is received from the network on the voice group call channel downlink, the MS performs a release of the main signalling link and goes back to group receive mode.

3. When a radio link failure is detected by the MS the MS shall return to idle mode and, when possible, to group receive mode.

#### 26.14.5.2.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in group transmit mode.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS talking.

Way to configure VGCS.

Way to initiate VGCS talking.

Way to verify the downlink speech path.

##### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

##### Test Procedure

The MS is in VGCS group transmit mode. The MS is requested to quit group transmit mode by MMI action. It is checked that the MS sends an UPLINK RELEASE message and goes to group receive mode. The MS is brought into group transmit mode. The SS sends UPLINK RELEASE message. It is checked that the MS returns to group receive mode. The MS is brought into group transmit mode again. The SS stops radio transmitting on SACCH. It is checked that the MS returns to group receive mode.

##### Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in group transmit mode. |
| 1 | MS | | MMI action to quit the VGCS transmit mode. |
| 2 | MS -> SS | UPLINK RELEASE | |
| 3 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |
| 8 | SS -> MS | UPLINK FREE | |
| 9 | MS | | MMI action to request access uplink. |
| 10 | MS -> SS | UPLINK ACCESS | |
| 11 | MS -> SS | UPLINK ACCESS | |
| 12 | SS -> MS | UPLINK BUSY | |
| 13 | SS -> MS | VGCS UPLINK GRANT | Reference to step 10 |
| 14 | MS -> SS | TALKER INDICATION | L2: SABM / UA |
| 15 | MS | | the MS is in group transmit mode for 5 s. |
| 16 | SS -> MS | UPLINK RELEASE | |
| 17 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |
| 20 | SS -> MS | UPLINK FREE | |
| 21 | MS | | MMI action to request access uplink. |
| 22 | MS -> SS | UPLINK ACCESS | |
| 23 | MS -> SS | UPLINK ACCESS | |
| 24 | SS -> MS | UPLINK BUSY | |
| 25 | SS -> MS | VGCS UPLINK GRANT | Reference to step 23 |
| 26 | MS -> SS | TALKER INDICATION | L2: SABM / UA |
| 27 | MS | | the MS is in group transmit mode for 5 s. |
| 28 | SS | | deactivate downlink SACCH transmissions, but keep TCH active, wait until there is no more uplink SACCH frames received |
| 29 | MS | | check that the TCH in downlink is through connected and there is no uplink transmission on that channel for 10 s. |
| 30 | SS -> MS | CHANNEL RELEASE | UI format |

## 26.14.6 VGCS-VBS / GCC-BCC Procedures

### 26.14.6.1 VGCS-VBS / GCC-BCC Procedures / MO call establishment

#### 26.14.6.1.1 Conformance requirement

1. The MS in idle updated mode shall initiate a VGCS/VBS call correctly using IMMEDIATE SETUP procedure if a priority level is requested by the user for which the user has the subscription and the fast call setup is enabled.

2. The MS in idle updated mode shall initiate a VGCS/VBS call correctly using SETUP procedure on request.

3. For VGCS call after establishment, the MS shall indicate to the user that an indication of the desire to speak should be made if he wants to speak. If this is not done within a certain time, the MS shall send an UPLINK RELEASE.

Reference(s)

GSM 04.68 clause 6.2.2.

GSM 04.69 clause 6.2.2.

GSM 03.68 clause 11.3.1.1.3.

#### 26.14.6.1.2 Test purpose

To verify that in idle updated mode:

1. The MS initiates a VGCS/VBS call correctly using IMMEDIATE SETUP procedure if a priority level is requested by the user for which the user has the subscription and the fast call setup is enabled.
2. The MS initiates a VGCS/VBS call correctly using SETUP procedure on request.
3. After establishment of VGCS call, the MS indicates that an user action is required if he wants to speak. If such user action is not made within a certain time, the MS sends an UPLINK RELEASE.

#### 26.14.6.1.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS originating.

Support VBS originating.

Way to configure VGCS or VBS.

Way to initiate a VGCS/VBS call.

Way to select the immediate set-up or the normal set-up

Way to verify the downlink speech path.

Way to indicate the desire of speaking.

The allowed duration between an indication of a required user action for speaking and an action performed by user.

##### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

##### Test Procedure

The MS is in MM-state “idle, updated”. The MS is requested to initiate a VGCS or VBS call using immediate setup procedure by selecting the subscribed priority '0' with the appropriate MMI action. The field $EF_{eMLPP}$ associates to the subscribed priority '0' the fast-call setup subscription. It is checked that the MS performs correctly the immediate setup procedure. The call is terminated. The MS is requested to initiate a VGCS or VBS call using setup procedure by selecting the priority '4' with the appropriate MMI action. It is checked that the MS performs correctly the setup procedure. The call is cleared.

##### Maximum Duration of Test

5 minutes.

Expected Sequence

Steps 0 to 18 are executed if MS supports eMLPP.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in idle updated state. |
| 1 | MS | | MMI action to select a priority level 0 and MMI action to initiate VGCS/VBS call with immediate setup. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH/F, single RF channel<br>GSM 450: 275,<br>GSM 480: 322,<br>GSM 900: 50,<br>DCS 1800: 750<br>PCS 1900: 650<br>GSM 700: 470<br>GSM 850: 177 |
| 4 | MS -> SS | IMMEDIATE SETUP | L2: SABM / UA |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | no ciphering |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS -> MS | CHANNEL MODE MODIFY | very early assignment |
| 10 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 11 | SS -> MS | CONNECT | verify that the TCH is through connected |
| 12 | SS -> MS | GET STATUS | |
| 13 | MS -> SS | STATUS | check that the MS is in state U2sr (for VGCS) or U2 (for VBS). |
| | | | for VGCS call |
| A14 | MS | | check that the MS indicates a user action needed for a desire of speaking. |
| A15 | MS | | user does not answer the indication. |
| A16 | MS -> SS | UPLINK RELEASE | |
| A17 | SS -> MS | UPLINK FREE | |
| A18 | SS -> MS | CHANNEL RELEASE | UI format |
| | | | for VBS call |
| B14 | SS -> MS | TERMINATION | terminate the call. |
| B15 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |
| 20 | MS | | MMI action to initiate VGCS/VBS call with setup by selecting the priority '4'. |
| 21 | MS -> SS | CHANNEL REQUEST | |
| 22 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH/F, single RF channel<br>GSM 450: 275,<br>GSM 480: 322,<br>GSM 900: 50,<br>DCS 1800: 750<br>PCS 1900: 650<br>GSM 700: 470<br>GSM 850: 177 |
| 23 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 24 | SS -> MS | AUTHENTICATION REQUEST | |
| 25 | MS -> SS | AUTHENTICATION RESPONSE | |
| 26 | SS -> MS | CIPHERING MODE COMMAND | no ciphering |
| 27 | MS -> SS | CIPHERING MODE COMPLETE | |
| 28 | MS -> SS | SETUP | |
| 29 | SS -> MS | CHANNEL MODE MODIFY | very early assignment |
| 30 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 31 | SS -> MS | CONNECT | verify that the TCH is through connected |
| | | | only for VGCS call |
| A32 | MS | | check that the MS indicates a user action needed for a desire of speaking. An user action for speaking. |
| 35 | SS -> MS | GET STATUS | |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 36 | MS -> SS | STATUS | check that the MS is in state U2sr (for VGCS) or U2 (for VBS). |
| 37 | SS -> MS | TERMINATION | terminate the call. |
| 38 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |

## 26.14.6.2 VGCS-VBS / GCC-BCC Procedures / Transaction Identifier

### 26.14.6.2.1 Conformance requirement

The originator of the GCC or BCC transaction shall choose the Transaction Identifier (TI).

When the MS (not originator) goes to group transmit mode, it may only send GCC or BCC messages when it has received a GCC or BCC message form network, it shall use the TI value which has been used in the messages from network.

#### Reference(s)

GSM 04.07 clause 11.2.3.1.3.

GSM 04.68 clause 5.

GSM 04.69 clause 5.

### 26.14.6.2.2 Test purpose

To verify that The originator of the GCC or BCC transaction chooses the Transaction Identifier (TI).

1. To verify that when the MS (not originator) goes to group transmit mode, if the MS sends GCC or BCC message to network to respond to messages from network, it uses the TI value which is used in the messages received from network.

### 26.14.6.2.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS talking.

Support VBS originating.

Way to configure VGCS or VBS.

Way to accept a group call.

Way to request uplink access.

Way to select the immediate set-up or the normal set-up

Way to initiate VBS call.

Foreseen Final State of the MS

MM idle updated state.

Test Procedure

If the MS supports only VBS, the MS is requested to initiate a VBS call using setup procedure by MMI action. In the BROADCAST CALL ACTIVE (U2) state, it is checked that the MS uses correct TI in the STATUS message to respond to the GET STATUS message.

If the MS supports VGCS, the MS is brought into group transmit mode. In the SEND and RECEIVE state (U2sr), it is checked that the MS uses correct TI in the STATUS message to respond to the GET STATUS message.

Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| | | | If the MS supports VBS originating, step 0 to step 13 are executed. |
| 0 | MS | | the MS is in idle mode |
| 1 | MS | | MMI action to initiate VBS call with setup procedure. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH/F, single RF channel<br>GSM 450: 275,<br>GSM 480: 322,<br>GSM 900: 50,<br>DCS 1800: 750<br>PCS 1900: 650<br>GSM 700: 470<br>GSM 850: 177 |
| 4 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | check that the flag of the TI is set to ‘0’B, and the value of the TI is within ‘000’B to ‘110’B. |
| 7 | SS -> MS | AUTHENTICATION REQUEST | |
| 8 | MS -> SS | AUTHENTICATION RESPONSE | |
| 9 | SS -> MS | CHANNEL MODE MODIFY | |
| 10 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 11 | SS -> MS | CONNECT | |
| 10 | SS -> MS | GET STATUS | TI= the TI in step 6 with the flag=’1’B. |
| 11 | MS -> SS | STATUS | TI value is the same as that in step 10 with flag=’0’B. |
| 12 | SS -> MS | TERMINATION | |
| 13 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |
| | | | If the MS supports VGCS talking, the following steps are performed. |
| 15 | MS | | the MS is in group transmit mode (VGCS), but is not the originator of the call. |
| 16 | SS -> MS | GET STATUS | TI=”0001”. |
| 17 | MS -> SS | STATUS | TI is set to “1001”. |
| 18 | SS -> MS | UPLINK RELEASE | |
| 19 | SS -> MS | CHANNEL RELEASE | UI format. |

## 26.14.6.3 VGCS-VBS / GCC-BCC Procedures / Call Termination / originator / group transmit mode

This test case is applicable to the MS supporting VGCS/VBS originating.

### 26.14.6.3.1 Conformance requirement

When in group transmit mode, on request of upper layer, the MS which is the originator of the VGCS/VBS call shall initiate the termination procedure by sending a TERMINATION REQUEST message to its peer entity in the network and setting timer $T_{term}$, entering state U5. The network accepts the termination or on $T_{term}$ expiration, the MS returns to idle state.

#### Reference(s)

GSM 04.68 clause 6.4.1.

GSM 04.69 clause 6.4.1.

### 26.14.6.3.2 Test purpose

To verify that when in group transmit mode, on request of the user, the MS which is the originator of the VGCS/VBS call initiates the termination procedure by sending a TERMINATION REQUEST message to its peer entity in the network and setting timer $T_{term}$, entering state U5. If the termination is accepted or on $T_{term}$ is expired, the MS returns to idle mode.

### 26.14.6.3.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS originating.

Support VBS originating.

Supported rates (full / half rate).

Way to configure VGCS or VBS.

Way to initiate VBS call.

Way to initiate VGCS call.

Way to select the immediate set-up or the normal set-up

Way to terminate VGCS/VBS call.

#### Foreseen Final State of the MS

MM idle, updated state.

### Test Procedure

A VGCS/VBS call is established and the MS, as the originator, is brought into group transmit mode. The MS is requested to terminate the VGCS/VBS call by MMI action. It is checked that the MS sends TERMINATION REQUEST message and enters state U5.

For execution counter k=1, before $T_{term}$ times out, the SS accepts the termination request, the call is terminated. For k=2, the SS does not respond to the termination request. It is checked that after $T_{term}$ times out, the MS clears the context related to the group call and returns to idle mode.

### Maximum Duration of Test

5 minutes.

### Expected Sequence

The test sequence is executed for k = 1, 2.

| Step | Direction | Message | Comments |
|---|---|---|---|

## 26.14.6.4 VGCS-VBS / GCC-BCC Procedures / Call Termination / originator in group receive mode

This test case is applicable to the MS supporting VGCS originating.

### 26.14.6.4.1 Conformance requirement

When in group receive mode, on request of upper layer, the MS which is the originator of the VGCS call shall enter sub-state U2ws and ask RR to enter group transmit mode. As soon as COMM = T, it shall send a TERMINATION REQUEST message to its peer entity in the network, set timer $T_{term}$, and enter state U5. The network accepts the termination or on $T_{term}$ expiration, the MS returns to idle mode.

#### Reference(s)

GSM 04.68 clause 6.4.1.

### 26.14.6.4.2 Test purpose

To verify that when in group receive mode, on request of the user, the MS which is the originator of the VGCS call enters sub-state U2ws and asks RR to enter group transmit mode. As soon as COMM = T, it sends a TERMINATION REQUEST message to its peer entity in the network, set timer $T_{term}$ , and enters state U5. The network accepts the termination or on $T_{term}$ expiration, the MS returns to idle mode.

### 26.14.6.4.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS originating.

Supported rates (full / half rate).

Way to configure VGCS.

Way to initiate a VGCS call.

Way to select the immediate set-up or the normal set-up

Way to terminate a VGCS call.

#### Foreseen Final State of the MS

MM idle, updated state.

#### Test Procedure

The MS originates a VGCS call and is brought into group receive mode. The MS is requested to terminate the VGCS call by MMI action. It is checked that the MS firstly enters group transmit mode and then sends TERMINATION REQUEST message, enters state U5.

For k = 1 , the SS accepts the request, the call is terminated. For k = 2, the SS does not respond to the request. It is checked that after $T_{term}$ timeout the MS aborts the call.

Maximum Duration of Test

5 minutes.

Expected Sequence

The test sequence is executed for k = 1, 2.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is in idle updated mode. |
| 1 | MS | | MMI action to initiate VGCS call using setup procedure. |

## 26.14.6.5 VGCS-VBS / GCC-BCC Procedures / Call Termination / not originator

### 26.14.6.5.1 Conformance requirement

If the MS is not the originator of the VGCS/VBS call, on request of upper layer, the MS shall not attempt to terminate the call.

Reference(s)

GSM 04.68, clause 6.4.1 (implicitly)

GSM 04.69, clause 6.4.1 (implicitly)

### 26.14.6.5.2 Test purpose

To verify that when the MS is not the originator of the VGCS/VBS call, on request of the user, the MS does not attempt to terminate the call.

### 26.14.6.5.3 Method of test

Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in group receive mode (not originator).

Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Way to configure VGCS or VBS.

Way to join a VGCS/VBS call.

Way to terminate a call.

Foreseen Final State of the MS

MM-state idle, updated.

Test Procedure

The MS is brought into group receive mode (not originator). The MS is requested to terminate the call by MMI action. It is checked that the MS does not attempt the termination.

Maximum Duration of Test

2 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is in group receive mode (not the originator). |
| 1 | MS | | MMI action to terminate the call. |
| 2 | SS | | check that there is no transmission from the MS for 10 s. |
| 3 | SS -> MS | CHANNEL RELEASE | UI format |

## 26.14.6.6 VGCS-VBS / GCC-BCC Procedures / GCC states

This test is performed if the MS supports VGCS talking.

### 26.14.6.6.1 Conformance requirement

1. The GCC entity of the MS performs transitions between (main) states. In main state GROUP CALL ACTIVE (U2) it performs transitions between sub-states. It has certain parameters and attributes, which it sets and changes based on interaction with higher layer and lower layers and on message exchanges with its peer entity. These states and parameters shall be consistent as defined.

2. The mobile station in group transmit mode shall mute the downlink speech if SET STATUS message is received with DA bit set to 1. The mobile station shall no longer mute the downlink after receipt of a downlink SET STATUS message with a reset DA bit.

#### Reference(s)

GSM 04.68, clause 6.1.2.1, 6.1.2.1.1 - 6.1.2.1.11, 6.5.1.1, 8.4, 9.5.7.

### 26.14.6.6.2 Test purpose

1. To verify that the GCC states and parameters of the MS are consistent as defined.

2. To verify that the MS in group transmit mode mutes the downlink speech if downlink SET STATUS message is received setting DA bit. The mobile station no longer mutes the downlink speech after a SET STATUS message is received.

### 26.14.6.6.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS originating.

Support VGCS talking.

Support VGCS listening.

Way to configure VGCS.

Way to check downlink is muted or not.

Way to accept VGCS call.

Way to initiate VGCS call.

#### Foreseen Final State of the MS

MM-state Idle, updated.

### Test Procedure

If the MS supports VGCS originating, it is requested to initiate a VGCS call. It is checked by getting status that the MS goes through different GCC states with correct parameters. If the MS supports VGCS talking but not VGCS originating, it is brought to group receive mode and then group transmit mode.

When MS is in group transmit mode the SS sends SET PARAMETER message The DA bit in state attributes is set to 0. It is checked that the downlink of the MS is muted. The SS sends SET PARAMETER message with DA bit set to 1. It is checked that the downlink of the MS is unmuted.

Similarly, it is checked that the MS goes through different GCC states with correct parameters.

### Maximum Duration of Test

5 minutes.

Expected Sequence

If the MS supports VGCS originating, the step 1 to step 40 are performed.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in idle mode. |
| 1 | MS | | MMI action to initiate VGCS call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH/F, single RF channel<br>GSM 450: 275,<br>GSM 480: 322,<br>GSM 900: 50,<br>DCS 1800: 750<br>PCS 1900: 650<br>GSM 700: 470<br>GSM 850: 177 |

## 26.14.7 VGCS-VBS / Error Handling

### 26.14.7.1 VGCS-VBS / Error Handling / short message length, unknown message type and TI

This test is applicable to the MS supporting VGCS/VBS originating.

#### 26.14.7.1.1 Conformance requirement

1. Whenever a message is received specifying a transaction identifier which is not recognised as relating to an active transaction, if COMM = T, the MS shall send a STATUS message with cause #81 "invalid transaction

identifier value" using the received transaction identifier value and including, if possible, as diagnostics the complete message received (this may not be possible, e.g., due to length restrictions). and remain idle.

2. If COMM = T, the MS shall answer to a message received with TI value "111" by sending a STATUS message with same TI value, cause "invalid transaction identifier value", and including, if possible, as diagnostics the complete message received (this may not be possible, e.g., due to length restrictions).

3. When a message is received that is too short to contain a complete message type information element, that message shall be ignored.

4. If the GCC or BCC in the MS receives a message with message type not defined for the PD or not implemented by the receiver, the MS shall ignore the message except for the fact that, if COMM = T, it shall return a STATUS message with cause “message type non-existent or not implemented” and including as diagnostics the message type of the message received.

5. If the GCC or BCC in the MS receives a message not compatible with the protocol state, the MS shall ignore the message except for the fact that , if COMM = T, it shall return a STATUS message with cause “ message type not compatible with protocol state” and including as diagnostic the message type of the message received.

6. When a message with semantically incorrect contents is received, the foreseen reaction of the procedural part are performed. If however no such reactions are specified, the MS shall ignore the message except for the fact that, if COMM = T, it returns a STATUS message with cause value “semantically incorrect message” and including, if possible, as diagnostics the complete message received (this may not be possible).

Reference(s)

GSM 04.68 clause 7.2, 7.3, 7.4, 7.8.

GSM 04.69 clause 7.2, 7.3, 7.4, 7.8.

26.14.7.1.2 Test purpose

To verify that:

1. Whenever a message is received specifying a transaction identifier which is not recognised as relating to an active transaction, if COMM = T, the MS sends a STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value and including, if possible, as diagnostics the complete message received (this may not be possible, e.g., due to length restrictions).

2. If COMM = T, the MS answers to a message received with TI value "111" by sending a STATUS message with same TI value, cause "invalid transaction identifier value", and including, if possible, as diagnostics the complete message received (this may not be possible, e.g., due to length restrictions).

3. When a message is received that is too short to contain a complete message type information element, that message is ignored.

4. If the GCC or BCC in the MS receives a message with message type not defined for the PD or not implemented by the receiver, the MS ignores the message. In addition, if COMM = T, it returns a STATUS message with cause “message type non-existent or not implemented” and including as diagnostics the message type of the message received.

5. If the GCC or BCC in the MS receives a message not compatible with the protocol state, the MS ignores the message. In addition, if COMM = T, it returns a STATUS message with cause “ message type not compatible with protocol state” and including as diagnostic the message type of the message received.

6. When a message containing semantically incorrect contents is received and no reactions are specified in the procedural part, the MS ignores the message. In addition, if COMM = T, the MS returns a STATUS message with cause value “semantically incorrect message” and as diagnostics, including the complete message received, if possible (this may not be possible).

26.14.7.1.3 Method of test

Initial Conditions

System Simulator

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS originating.

Support VGCS talking.

Support VBS originating.

Foreseen Final State of the MS

MM-state “Idle, updated".

Test Procedure

If the MS supports VGCS/VBS originating, the test starts from step 1, otherwise if the MS supports VGCS talking the test starts from step 30. If the MS supports VBS originating but no VGCS originating nor VGCS talking, the test stops on step 24.

The MS is requested to initiate a VGCS/VBS call with setup procedure. After the MS sends SETUP message, the SS sends incorrect CONNECT messages which contains incorrect TI flag or incorrect TI value or TI value set to ‘111’B. It is checked that the MS ignores these messages and responds with STATUS messages containing cause #81. The SS sends a message which is too short to contain a complete message. It is checked that the MS ignores this short message. Finally the SS sends a undefined message, a message not compatible with current protocol state and a message semantically incorrect. It is checked that the MS ignores these messages and returns STATUS messages containing cause #97, #98, #95 respectively. The following steps is applicable to the MS supporting VGCS talking. The MS is brought into group transmit mode. The SS sends GET STATUS message with TI=’1001’B, the MS responds with STATUS message containing state U2sr, then the SS sends GET STATUS messages containing TI= ‘1111’B or ‘1010’B. It is checked that the MS ignores these messages and responds with STATUS messages containing cause #81.

Maximum Duration of Test

5 minutes.

Expected Sequence

The step 30 -46 are performed if the MS supports VGCS.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in idle mode. |
| 1 | MS | | MMI action to initiate VGCS/VBS call using setup procedure. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | a TCH/FS |
| 4 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CONNECT | flag of TI set to ‘0’B, value of TI is the same as that of SETUP message in step 6. |
| 8 | MS -> SS | STATUS | cause #81, “invalid transaction id value”. |
| 9 | SS -> MS | CONNECT | flag of TI set to ‘1’B, value of TI is different from that of SETUP message in step 6. |
| 10 | MS -> SS | STATUS | cause #81, value of TI is that of step 9. |
| 11 | SS -> MS | CONNECT | value of TI set to ‘111’B. |
| 12 | MS -> SS | STATUS | cause #81, value of TI is ‘111’B |
| 13 | SS -> MS | CONNECT | too short message without Call Reference and Originator Indication. |
| 14 | SS -> MS | GET STATUS | |
| 15 | MS -> SS | STATUS | state U1 ORIG=T COMM=T D-ATT=F U-ATT=F. |
| 16 | SS -> MS | UNDEF MESSAGE TYPE | see specific message contents |
| 17 | MS -> SS | STATUS | cause #97, “message type non-existent or not implemented”. |
| 18 | SS -> MS | TERMINATION REJECT | |
| 19 | MS -> SS | STATUS | cause #98, “message type not compatible with the protocol state”. |
| 20 | SS -> MS | CONNECT | value of Originator Indication set to not originator |
| 21 | MS -> SS | STATUS | cause #95, “Semantically incorrect message”. |
| 22 | SS -> MS | TERMINATION | |
| 23 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |
| 30 | SS -> MS | NITIFICATION/NCH | with a description of VGCS channel and a VGCS call reference active in the MS |
| 31 | MS | | MMI action to join the call |
| 32 | SS -> MS | UPLINK FREE | |
| 33 | MS | | MMI action to request to access uplink |

| Group call reference | PICS/PIXIT |
| Originator indication | Originator |
| Spare half octet | |

## 26.14.7.2 VGCS-VBS / Error Handling / incorrect information elements

The test case is applicable to the MS supporting VGCS/VBS listening.

### 26.14.7.2.1 Conformance requirement

1. When on receipt of a message containing "imperative message part" error or "missing mandatory IE" error or syntactically incorrect mandatory IE's or unknown IE's encoded as "comprehension required" or out of sequence IE's encoded as "comprehension required", the MS shall ignore the message except for the fact that, if COMM = T, it shall return a STATUS message with cause "invalid mandatory information" and including, if possible, as diagnostics the complete message received.

2. The GCC or BCC in the MS shall ignore all unknown information elements not encoded as "comprehension required" in the non-imperative part.

3. The GCC or BCC in the MS shall ignore all out of sequence information elements not encoded as "comprehension required" in the non-imperative part.

4. The GCC or BCC in the MS shall ignore all syntactically incorrect optional information elements in the non-imperative part.

5. If an information element with format T, TV, or TLV is repeated in a message in which repetition of the information element is not specified, only the contents of the information element appearing first shall be handled and all subsequent repetitions of the information element shall be ignored. When repetition of information elements is specified, only the contents of specified repeated information elements shall be handled. If the limit on repetition of information elements is exceeded, the contents of information elements appearing first up to the limit of repetitions shall be handled and all subsequent repetitions of the information element shall be ignored.

Reference(s)

GSM 04.68 clause 7.5, 7.6, 7.7.

GSM 04.69 clause 7.5, 7.6, 7.7.

### 26.14.7.2.2 Test purpose

To verify that:

1. On receipt of a message containing "imperative message part" error or "missing mandatory IE" error or syntactically incorrect mandatory IE's or unknown IE's encoded as "comprehension required" or out of sequence IE's encoded as "comprehension required", the MS ignores the message. In addition, if COMM = T, the MS returns a STATUS message with cause "invalid mandatory information" and including, if possible, as diagnostics the complete message received.

2. The MS ignores unknown information elements not encoded as "comprehension required" in the non-imperative part.

3. The MS ignores out of sequence information elements not encoded as "comprehension required" in the non-imperative part.

4. The MS ignores syntactically incorrect optional information elements in the non-imperative part.

5. The MS ignores subsequent repetition of the information element for which repetition is not specified, only the contents of the information element appearing first are handled. For specified repeated information element, the MS ignores all subsequent repetitions of the information element beyond the limit on repetition, only the contents of information element appearing first up to the limit of repetitions are handled.

#### 26.14.7.2.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS originating.

Support VGCS talking.

Support VGCS listening.

Support VBS originating.

Support VBS listening.

##### Foreseen Final State of the MS

MM-state "Idle, updated".

##### Test Procedure

The MS is in idle updated mode. The SS sends NOTIFICATION/NCH messages with incorrect mandatory IE (skip=’0001’B) or with comprehension required IE. It is checked that the MS ignores these NOTIFICATION/NCH messages. The SS sends NOTIFICATION/NCH containing unknown IE not encoded as comprehension required in non-imperative part. It is checked that the MS ignores the unknown IE and accepts the NOTIFICATION/NCH message. If the MS supports VGCS/VBS listening only, the test stops here.

If the MS supports VGCS talking the test continues on step 7. The MS joins the call. The SS sends correct UPLINK BUSY message then sends UPLINK FREE message containing incorrect mandatory IE. It is checked that the UPLINK FREE message is ignored by the MS. The SS sends correct UPLINK FREE message and the MS is requested to access the uplink. During the uplink access procedure it is checked that the MS ignores the VGCS UPLINK GRANT message in which mandatory IE is missing. After the MS enters group transmit mode, it is brought back to idle updated mode. The test stops here if the MS supports VGCS talking but not VGCS originating.

If the MS supports VGCS/VBS originating the test proceeds on step 30. The MS is requested to originate a VGCS call. During the call establishment it is checked that the MS ignores the CONNECT messages that missing mandatory IE or containing unknown IE encoded as comprehension required, and that the MS ignores unknown IE which is in non-imperative part and is not encoded as comprehension required, it is also checked that the MS ignores subsequent repetition of the information element for which repetition is not specified.

##### Maximum Duration of Test

5 minutes.

Expected Sequence

The test steps 7 - 29 are performed if the MS supports VGCS talking. The test steps 30 - 56 are performed if the MS supports VGCS/VBS originating.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in Idle updated mode. |
| 1 | SS -> MS | NOTIFICATION/NCH | skip = '0001'B, with VGCS/VBS channel description and call reference active in the MS |
| 2 | MS | | check that the MS ignores the NOTIFICATION/NCH message in step 1. This is checked for 10 s. |
| 3 | SS -> MS | NOTIFICATION/NCH | containing comprehension required IE, see specific message contents |
| 4 | MS | | check that the MS ignores the NOTIFICATION/NCH message in step 3. This is checked for 10 s |
| 5 | SS -> MS | NOTIFICATION/NCH | unknown IE not encoded as comprehension required, see specific message contents |
| 6 | MS | | check that the MS indicates the notified call |
| 7 | MS | | MMI action to join the notified VGCS call |
| 8 | SS -> MS | UPLINK BUSY | |
| 9 | SS -> MS | UPLINK FREE | message type = '11010'B, the MS shall ignore this message |
| 10 | MS | | MMI action to request the uplink access |
| 11 | SS | | check that there is no UPLINK ACCESS for 6 s. |
| 12 | SS -> MS | UPLINK FREE | as default |
| 13 | MS | | MMI action to request the uplink access |
| 14 | MS -> SS | UPLINK ACCESS | |
| 15 | MS -> SS | UPLINK ACCESS | |
| 16 | SS -> MS | VGCS UPLINK GRANT | missing mandatory IE Timing Advance, request reference refers to step 14. |
| 17 | MS -> SS | UPLINK ACCESS | The MS ignores VGCS UPLINK GRANT. |
| 18 | MS -> SS | UPLINK ACCESS | |
| 19 | SS -> MS | VGCS UPLINK GRANT | request reference does not refer to steps 14, 15, 17, 18. |
| 20 | SS -> MS | UPLINK BUSY | |
| 21 | SS | | check that there is no UPLINK ACCESS for 6 s |
| 22 | SS -> MS | UPLINK FREE | |
| 23 | MS | | MMI action to request uplink access |
| 24 | MS -> SS | UPLINK ACCESS | |
| 25 | MS -> SS | UPLINK ACCESS | |
| 26 | SS -> MS | UPLINK BUSY | |
| 27 | SS -> MS | VGCS UPLINK GRANT | refer to the reference in step 25 |
| 28 | MS -> SS | TALKER INDICATION | L2: SABM / UA |
| 29 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |
| 30 | MS | | MMI action to originate a VGCS/VBS call with setup |
| 31 | MS -> SS | CHANNEL REQUEST | |
| 32 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH/F, single RF channel<br>GSM 450: 275,<br>GSM 480: 322,<br>GSM 900: 50,<br>DCS 1800: 750<br>PCS 1900: 650<br>GSM 700: 470<br>GSM 850: 177 |
| 33 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 34 | SS -> MS | CM SERVICE ACCEPT | |
| 36 | MS -> SS | SETUP | |
| 37 | SS -> MS | CHANNEL MODE MODIFY | |
| 38 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 39 | SS -> MS | CONNECT | missing mandatory IE: Group call reference |
| 40 | MS -> SS | STATUS | cause #96 |
| 41 | SS -> MS | CONNECT | unknown IE encoded as comprehension required, see specific message contents |
| 42 | MS -> SS | STATUS | cause #96 |
| 43 | SS -> MS | GET STATUS | unknown IE in non-imperative part, see specific message contents |
| 44 | MS -> SS | STATUS | state U1 |
| 45 | SS -> MS | CONNECT | |
| 46 | SS -> MS | GET STATUS | |
| | | | for VGCS test |
| A47 | MS -> SS | STATUS | state U2sr |
| A48 | MS | | check the MS asks to indicate the desire of speaking |
| A49 | MS | | wait for time-out. |
| A50 | MS -> SS | UPLINK RELEASE | |
| A51 | SS -> MS | GET STATUS | duplicated IE, see specific message contents |
| A52 | SS | | check that the MS does not respond |
| A53 | SS -> MS | GET STATUS | |
| A54 | MS -> SS | STATUS | state U2r |
| | | | for VBS test |
| B47 | MS -> SS | STATUS | state U2 |
| 55 | SS -> MS | TERMINATOIN | |
| 56 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |

## 26.14.7.3 VGCS-VBS / Messages not addressing VGCS receive mode

### 26.14.7.3.1 Conformance requirement

In group receive mode the MS shall ignore messages which are allowed in group receive mode but not sent in UI format on the VGCS or VBS channel downlink.

Mobile stations in group receive mode shall ignore all messages which are not sent in UI format or which are not related to the following procedures: channel mode modify, notification and paging information, uplink status messages, channel release message, information on channel restructuring.

Reference(s)

GSM 04.08 clause 3.4.15.1.2.

### 26.14.7.3.2 Test purpose

To verify that the MS in group receive mode ignores:

Messages which are applicable to group receive mode but not sent in UI format.

ASSIGNMENT COMMAND and HANDOVER COMMAND messages in which the target mode information element indicates "dedicated mode".

1. Messages which are not applicable to group receive mode.

#### 26.14.7.3.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Way to configure VGCS or VBS.

Way to indicate a call notification.

Way to accept a VGCS or VBS.

Way to verify the downlink speech path.

##### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

##### Test Procedure

The MS is brought into group receive mode. The SS sends, in UI format, the messages which are not applicable to group receive mode. It is checked that the MS ignores these messages. The SS sends, in L2 I format, messages which are applicable to group receive mode. It is checked that the MS ignores these messages.

##### Maximum Duration of Test

5 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in Idle updated mode. |
| 1 | SS -> MS | NOTIFICATION/NCH | |
| 2 | MS | | MMI action to join VGCS/VBS call. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | UI format. |
| 4 | MS | | check that the MS ignores the above message. |
| 5 | SS -> MS | IMMEDIATE ASSIGNMENT EXTENDED | UI format. |
| 6 | MS | | check that the MS ignores the above message. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | UI format. |
| 8 | MS | | check that the MS ignores the above message. |
| 9 | SS -> MS | ASSIGNMENT COMMAND | sent in the L2 I format. |
| 10 | MS | | check that the MS ignores the above message. |
| 11 | SS -> MS | HANDOVER COMMAND | sent in the L2 I format. |
| 12 | MS | | check that the MS ignores the above message. |
| 13 | SS -> MS | FREQUENCY REDEFINITION | sent in the L2 I format. |
| 14 | MS | | check that the MS ignores the above message. |
| 15 | SS -> MS | CHANNEL MODE MODIFY | sent in the L2 I format. |
| 16 | MS | | check that the MS ignores the above message. |
| 17 | SS -> MS | CHANNEL RELEASE | I format |
| 18 | MS | | check that the MS ignores the above message. |
| 19 | SS -> MS | CHANNEL RELEASE | UI format. |

## 26.14.8 VGCS-VBS / Structured Procedures

The objective of this test group is to verify that the MS in the ASCI context performs certain elementary procedures of the RR, MM, and GCC/BCC protocol correctly within a structured procedure, especially when some channels use R-GSM frequencies with ARFCNs between 955 - 974.

### 26.14.8.1 VGCS-VBS / Structured Procedures / Very early and early assignment

This test is applicable to the MS supporting VGCS/VBS originating.

#### 26.14.8.1.1 Conformance requirement

The mobile station initiates immediate assignment, service request, and contention resolution.

After sending the CIPHERING MODE COMPLETE message, the mobile station initiates call establishment by sending the SETUP message to the network.

The network allocates a traffic channel to the mobile station before it initiates call establishment in the fixed network.

The network assigns the traffic channel at the earliest possible moment, i.e. in the immediate assignment procedure. The mode of the traffic channel is changed from signalling only to the mode necessary for the call by means of the channel mode change procedure.

Reference(s)

GSM 04.08 clause 7.3.2.

#### 26.14.8.1.2 Test purposes

1. To verify that the MS initiates immediate assignment, service request using the IMMEDIATE ASSIGNMENT or CM SERVICE REQUEST message, and contention resolution.
2. To verify that the MS after sending the CIPHERING MODE COMPLETE message, initiates call establishment by sending the SETUP message to the network.
3. To check that the MS performs correctly the early assignment procedure.
4. To check that the MS performs correctly the very early assignment procedure.

#### 26.14.8.1.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS originating.

Support VBS originating.

Supported speech versions.

Way to configure a necessary radio channel rate.

Way to configure VGCS or VBS.

Way to select the immediate set-up or the normal set-up

Way to verify the downlink speech path.

##### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

##### Test Procedure

The MS is requested to initiate a VGCS/VBS call using immediate setup procedure. The authentication and ciphering mode setting (to no ciphering) procedures are applied. The call is established by using early assignment procedure. For an R-band MS a carrier with ARFCN in the rage of 955 - 974 is assigned for the traffic channel. The MS needs to be configured to use EFR codec for the test, if it supports EFR. The MS is requested to terminate the call

The MS is requested to initiate a VGCS/VBS call using setup procedure. The authentication and ciphering mode setting (to no ciphering) procedures are applied. The call is established by using assignment procedure. For an R-band MS a carrier with ARFCN in the rage of 955 - 974 is assigned for the traffic channel. The MS needs to be configured to use half rate codec for the test, if it supports dual rate. The call is terminated.

##### Maximum Duration of Test

5 minutes.

Expected Sequence

Steps 0 to 20 are executed if MS supports eMLPP.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in idle updated mode. |
| 1 | MS | | MMI action to select a priority level 0 and MMI action to initiate VGCS /VBS call using immediate setup procedure. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | IMMEDIATE SETUP | L2: SABM / UA |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | no ciphering |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS -> MS | ASSIGNMENT COMMAND | see specific message contents |
| 10 | MS -> SS | ASSIGNMENT COMPLETE | |
| 11 | SS -> MS | CONNECT | verify that the TCH is through connected |
| 12 | MS | | MMI action to terminate the call |
| 13 | MS -> SS | TERMINATION REQUEST | |
| 14 | SS -> MS | TERMINATION | cause = protocol error, unspecified |
| 15 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |
| 21 | MS | | MMI action to initiate VGCS/VBS call with setup procedure. |
| 22 | MS -> SS | CHANNEL REQUEST | TCH/F needed |
| 23 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 24 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 25 | SS -> MS | AUTHENTICATION REQUEST | |
| 26 | MS -> SS | AUTHENTICATION RESPONSE | |
| 27 | SS -> MS | CIPHERING MODE COMMAND | no ciphering |
| 28 | MS -> SS | CIPHERING MODE COMPLETE | |
| 29 | MS -> SS | SETUP | |
| 30 | SS -> MS | CHANNEL MODE MODIFY | |
| 31 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 32 | SS -> MS | CONNECT | verify that the TCH is through connected |
| 33 | SS -> MS | TERMINATION | |
| 34 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2:DISC/UA. |

Specific message contents:

Step 9

ASSIGNMENT COMMAND:

| | |
|---|---|
| Channel Description | |
| - Channel Type and TDMA offset | TCH/F |
| - Timeslot Number | 7 |
| - Training Sequence Code | 3 |
| - Hopping | Single RF Channel |
| - ARFCN | 957 if the MS supports R-GSM,<br>otherwise chosen arbitrarily, but not BCCH |
| Power Command | |
| - Power level | Chosen arbitrarily but with a changed value. |
| Channel Mode | speech full rate or half rate version 2 if the MS supports EFR<br>otherwise speech full rate or half rate version 1 |
| Other IEs | Not present |

Step 23

IMMEDIATE ASSIGNMENT:

| | |
|---|---|
| Channel Description<br>- Channel Type and TDMA offset<br><br>- Timeslot Number<br>- Training Sequence Code<br>- Hopping<br>- ARFCN | <br>TCH/H if the MS supports dual rate,<br>otherwise TCH/F<br>3<br>3<br>Single RF Channel<br>970, if the MS supporting R-band<br>otherwise:<br>GSM 450: 275,<br>GSM 480: 322,<br>GSM 900: 50<br>DCS 1800: 750<br>PCS 1900: 650<br>GSM 700: 470<br>GSM 850: 177 |

## 26.14.9 VGCS-VBS / Cell change

This sub-clause applies to mobile stations supporting VGCS/VBS listening.

### 26.14.9.1 VGCS-VBS / Cell Change / Same LA

#### 26.14.9.1.1 Conformance requirement

After cell change within the same LA:

1. if no NCH is present on the new cell the MS shall leave group receive mode and go to idle mode;
2. if NCH is present on the new cell but the MS does not receive any notification message for the current group or broadcast call the MS shall leave group receive mode and go to idle mode;
3. if the MS receives a notification message for the current group or broadcast call with the related channel position and if the channel is found, the MS shall change to it and stay in group receive mode;
4. if the MS receives a notification message for the current group or broadcast call without information on the related channel position, the MS shall leave group receive mode, go to idle mode in order to establish a dedicated connection with the network to become informed on the related channel position.

Reference(s)

GSM 03.22 clause 5.2.3.

#### 26.14.9.1.2 Test purpose

The MS was in group receive mode. After cell change within a same LA it is verified that:

1. if no NCH is present on the new cell the MS leaves group receive mode and enters idle mode;
2. if NCH is present on the new cell but there is no NOTIFICATION / NCH for the current group or broadcast call the MS leaves group receive mode and enters idle mode;
3. if the MS receives NOTIFICATION / NCH for the current group or broadcast call with the related channel position the MS changes onto the group channel and stays in group receive mode;
4. if the MS receives NOTIFICATION / NCH for the current group or broadcast call without information on the related channel position, the MS leaves group receive mode, enters idle mode and establishes a dedicated connection with the network to get the related channel position.

26.14.9.1.3 Method of test

26.14.9.1.3.1 Initial Conditions

Initial Conditions

System Simulator:

2 cells within a same LA: cell A and cell B, with default parameters for this clause except:

for k=1, no NCH on cell B;

for k=2, 3, 4, NCH present on cell B.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated. No automatic answering is configured.

Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Way to configure VGCS or VBS.

Way to verify the downlink speech path.

Foreseen Final State of the MS

"Idle, updated".

Test Procedure

The following test procedure is repeated for k=1, 2, 3, 4 and c=1, 2.

For c=1, the MS is brought into group receive mode on cell A. Start cell B without NCH (k=1), or with NCH but NOTIFICATON/NCH containing irrelevant group call references (k=2), or with NCH whilst NOTIFICATON/NCH containing the relevant group call reference and VGCS/VBS channel description (k=3), or with NCH whilst NOTIFICATON/NCH containing the relevant group call reference but no VGCS/VBS channel description (k=4). Lower the transmission levels of cell A so that C1 of cell A becomes less than zero. After the MS re-selects to the cell B it is checked that the MS returns to idle mode on cell B (for k=1, 2), or that the MS remains in group receive mode on cell B (for k=3, 4).

The same test procedure is repeated for c=2. Instead of lowering the power level of cell A, the SACCH transmission of cell A is stopped.

Maximum Duration of Test

10 min.

Expected Sequence

The test sequence is repeated for test counter k= 1, 2, 3, 4 and c=1, 2.

| Step | Direction | Message | Comments |
|---|---|---|---|

## 26.14.9.2 VGCS-VBS / Cell Change / Different LA

### 26.14.9.2.1 Conformance requirement

1. After a cell change the MS shall leave group receive mode and go to idle mode in order to establish a dedicated connection with the network to perform a location update if the cell belongs to a new LA.

2. If NCH is present on the new cell but the MS does not receive any notification message for the current group or broadcast call the MS shall leave group receive mode and go to idle mode;

3. If the MS receives a notification message for the current group or broadcast call with the related channel position and if the channel is found, the MS shall change to it and stay in group receive mode;

4. If the MS receives a notification message for the current group or broadcast call without information on the related channel position, the MS shall leave group receive mode, go to idle mode and in order to establish a dedicated connection with the network to become informed on the related channel position.

5. If a CHANNEL RELEASE is send to a mobile station which is in dedicated mode and which is involved in a voice group call or voice broadcast call, a group channel description may be included, describing the voice group call channel or voice broadcast channel to which the mobile station shall go after the channel release procedure.

Reference(s)

GSM 03.22 clause 5.2.3.

GSM 04.08 clause 9.1.7.1

### 26.14.9.2.2 Test purpose

In group receive mode it is verified that:

1. after a cell change to a different LA, the MS leaves group receive mode, enters idle mode and establishes a dedicated connection with the network to perform location updating;

2. after location updating, if NCH is present on the new cell but there is no NOTIFICATION / NCH for the current group or broadcast call the MS stays in idle mode;

3. after location updating, if the MS receives NOTIFICATION / NCH for the current group or broadcast call with the related channel position the MS changes to the group channel and stays in group receive mode;

4. after location updating, if the MS receives NOTIFICATION / NCH for the current group or broadcast call without information on the related channel position, the MS establishes a dedicated connection with the network to get the related channel position and then enters to group receive mode.

5 It is also tested, when a mobile, in dedicated mode and involved in a voice group or broadcast call, receives CHANNEL RELEASE including a group channel description channel the mobile station goes onto the channel after the channel release procedure.

### 26.14.9.2.3 Method of test

Initial Conditions

System Simulator:

2 cells with different LA within a same PLMN: cell A and cell B, with default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated on cell A. No automatic answering is configured.

### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Way to configure VGCS or VBS.

Way to verify the downlink speech path.

Mobile classmark supported

### Foreseen Final State of the MS

"Idle, updated".

### Test Procedure

The following test procedure is repeated for k = 1, 2, 3.

The MS is brought into group receive mode on cell A. Start cell B with NCH but NOTIFICATON/NCH containing irrelevant group call references (k=1), or with NOTIFICATON/NCH containing the relevant group call reference but no VGCS/VBS channel description (k=2), or with NOTIFICATON/NCH containing the relevant group call reference and VGCS/VBS channel description (k=3). Lower the transmission levels of cell A so that C1 of cell A becomes less than zero. The MS re-selects to the cell B. It is checked that the MS does location update on cell B. If it is succeeded the MS either remains in the idle mode (for k=1), or enters to group receive mode on cell B (for k=2, 3) without manual intervention.

Increase the power level of cell A to the default value and decrease the power level of cell B so that the MS re-selects the cell A. The MS attempts a location updating. The SS rejects it with cause #17 (network failure) to force the MS re-initiate location updating. The SS checks that the TCH in downlink is not connected before a location updated. The MS initiates again a new attempt for location updating, the SS accepts it, then the MS initiates a new group call and enters the group transmit mode, SS sends an UPLINK RELEASE message to bring MS to group receive mode. Then SS assigns a new group channel for it in the CHANNEL RELEASE message. It is checked that the MS enters group receive mode and the new TCH assigned in downlink is through connected.

### Maximum Duration of Test

10 min.

Expected Sequence

Repeat the test sequence for test counter k= 1, 2, 3.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is brought into group receive mode on cell A. |
| A1 | SS -> MS | NOTIFICATION/NCH | k=1, sent on cell B, containing an irrelevant group call reference. |

## 26.14.9.3 VGCS-VBS / Cell Change / Different PLMN

### 26.14.9.3.1 Conformance requirement

1. After a cell change to a different LA, if the selected cell belongs to an another PLMN the MS shall leave group receive mode and go to idle mode.

Reference(s)

GSM 03.22 clause 5.2.3.

#### 26.14.9.3.2 Test purpose

In group receive mode it is verified that after a cell change to a different LA of an another PLMN, the MS leaves group receive mode, enters idle mode.

#### 26.14.9.3.3 Method of test

##### Initial Conditions

System Simulator:

2 cells with different LA belonging to the different PLMN: cell A /PLMN1 and cell B / PLMN2, with default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated on cell A. No automatic answering is configured.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Way to configure VGCS or VBS.

Way to verify the downlink speech path.

##### Foreseen Final State of the MS

"Idle, updated".

##### Test Procedure

The following test procedure is repeated for k=1, 2.

The MS is brought into group receive mode on cell A. Start cell B with NOTIFICATON/NCH containing an another group call references (k=1), or with NOTIFICATON/NCH containing the same group call reference (k=2). Lower the transmission levels of cell A so that C1 of cell A becomes less than zero. The MS re-selects the cell B and enters idle mode. It is checked that the MS does location update on cell B. If it is succeeded the MS indicates a group/broadcast call with the reference and joins the VGCS/VBS call on MMI request.

Increase the power level of cell A to the default value and decrease the power level of cell B so that the MS re-selects the cell A. The MS does a new location updating and indicates a group/broadcast call.

##### Maximum Duration of Test

5 minutes.

Expected Sequence

Repeat the test sequence for test counter k= 1, 2.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is brought into group receive mode on cell A. |
| A1 | SS -> MS | NOTIFICATION/NCH | k=1, sent on cell B, with an another group call reference but with the same VGCS/VBS channel description as in test step 0. |
| B1 | SS -> MS | NOTIFICATION/NCH | k=2, sent on cell B, with the same group call reference and an another VGCS/VBS channel description as in step 0. |
| 2 | SS | | The RF level of cell A is lowered until the MS re-selects cell B.<br>The following messages are sent and received on cell B. |

# 26.14.11 VGCS-VBS / User-to-Dispatcher Information

## 26.14.11.1 VGCS-VBS / User-to-Dispatcher Information / BCC MO call

### 26.14.11.1.1 Conformance requirement

The request of the calling subscriber to set up a voice group call may specify information to be sent as user-to-dispatcher information to the network; in this case the user-to-dispatcher information is included in the signalling for call setup from the mobile station to the network. It is the responsibility of the input function to ensure that the user-to-dispatcher information has a correct format (in particular, an allowed length).

The initial signalling from the originating service subscriber informs the network that a voice group call is required and details the group ID; it may specify user-to-dispatcher information.

The User-to-dispatcher information element is included in the SETUP message.

References

GSM 03.69 clauses 4.2.1.1, 11.3.1.1.1

GSM 04.69 clause 8.5

#### 26.14.11.1.2 Test purpose

To verify that upon initiation of an outgoing broadcast call with User-to-Dispatcher information by the user, the MS includes a User-to-dispatcher information element in the SETUP message;

To verify correct establishment and clearing of the broadcast call.

#### 26.14.11.1.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM480, GSM 700, GSM 850, P-, E-, R-GSM 900 or DCS 1800 or PCS 1900).

Support VBS originating.

Support User-to-Dispatcher Information

Way to activate User-to-Dispatcher Information

Way to configure VBS.

Way to initiate VBS calls.

##### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

##### Test Procedure

By means of appropriate MMI function, the user enters a string, which shall be included in the User-to-Dispatcher Information.

Then MS is made to initiate a broadcast call. In the SETUP message, the User-to-dispatcher information element shall be present and shall include the requested string. Then, SS releases immediately the call with a TERMINATION message.

Then MS is made to initiate a second broadcast call with User-to-Dispatcher Information including a long string. In the SETUP message, the User-to-dispatcher information element shall be present with the requested string. Then it is checked that the call can be successfully established and cleared.

##### Maximum Duration of Test

2 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in idle mode. |
| 1 | MS | | MMI actions to initiate a VBS call with User-to-Dispatcher Information including the string ‘abcdef9’ |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH/FS |
| 4 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | User-to-dispatcher IE included. See specific message contents. |
| 7 | SS -> MS | TERMINATION | |
| 8 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link. L2: DISC/UA. |
| 9 | MS | | MMI actions to initiate a VBS call with User-to-Dispatcher Information with the string ‘abcdefghijklmnopqrstuvwxyz012345’ |
| 10 | MS -> SS | CHANNEL REQUEST | |
| 11 | SS -> MS | IMMEDIATE ASSIGNMENT | TCH/F, single RF channel<br>GSM 450: 275<br>GSM 480: 322<br>GSM 900: 50,<br>DCS 1800: 750<br>PCS 1900: 650<br>GSM 700: 470<br>GSM 850: 177 |
| 12 | MS -> SS | CM SERVICE REQUEST | L2: SABM / UA |
| 13 | SS -> MS | CM SERVICE ACCEPT | |
| 14 | MS -> SS | SETUP | User-to-dispatcher IE included. See specific message contents. |
| 15 | SS -> MS | CHANNEL MODE MODIFY | |
| 16 | MS -> SS | CHANNEL MODE MODIFY ACKNOWLEDGE | |
| 17 | SS -> MS | CONNECT | |
| 18 | SS -> MS | TERMINATION | |
| 19 | SS -> MS | CHANNEL RELEASE | The MS releases L2 multiple frame link L2: DISC/UA. |

Specific message contents:

SETUP

As default message contents as defined in section 26.14.10 except:

| Information Element | Value/remark |
|---|---|
| User-to-dispatcher | |
| - IEI | '7E'O |
| - length | 1+the entered string length |
| - PD | User specific protocol |
| - user-user | The string as entered coded in IA5 characters |

## 26.14.11.2 VGCS-VBS / User-to-Dispatcher information / GCC MO call

### 26.14.11.2.1 Conformance requirement

The request of the calling subscriber to set up a voice group call may specify information to be sent as user-to-dispatcher information to the network; in this case the user-to-dispatcher information is included in the signalling for call setup from the mobile station to the network. It is the responsibility of the input function to ensure that the user-to-dispatcher information has a correct format (in particular, an allowed length).

The initial signalling from the originating service subscriber informs the network that a voice group call is required and details the group ID; it may specify user-to-dispatcher information.

The User-to-dispatcher information element is included in the SETUP message.

## 26.14.11.3 VGCS-VBS / User-to-Dispatcher information / Compressed user information in VBS fast call set-up

### 26.14.11.3.1 Conformance requirement

The request of the calling subscriber to set up a voice group call may specify information to be sent as user-to-dispatcher information to the network; in this case the user-to-dispatcher information is included in the signalling for call setup from the mobile station to the network. It is the responsibility of the input function to ensure that the user-to-dispatcher information has a correct format (in particular, an allowed length).

User-to-dispatcher information can be compressed or uncompressed.

The message IMMEDIATE SETUP 2 is sent by the MS to the network in order to set-up a group call immediately, i.e. without previous establishment of an MM connection, and to include compressed user-to dispatcher information. The message shall be used if the MS has a valid TMSI.

#### References

GSM 04.69 clauses 4.2.1.1, 4.2.7, 11.3.1.1.1, 11.3.1.1.3

GSM 04.69 clause 6.2.2, 8

### 26.14.11.3.2 Test purpose

To verify that upon initiation of an outgoing VBS fast call with User-to-Dispatcher Information by the user, the MS includes a Compressed User-to-Dispatcher Information information element in the IMMEDIATE SETUP 2 message;

To verify that the VBS fast call can be successfully established and cleared.

### 26.14.11.3.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters for ASCI testing.

Mobile Station:

The MS is in MM-state "idle, updated" with a TMSI allocated.

#### Related PICS/PIXIT Statement(s)

# 26.15 SoLSA signalling

## 26.15.1 General considerations

This section applies only to mobile stations supporting SoLSA, as defined in GSM 02.43 and GSM 03.73.

Conformance requirements of section 26 fully apply to any SoLSA MS.

The purpose of this section is to test these extra functional requirements for a SoLSA mobile station.

Additional to the abbreviations and definitions in G3 TR 21.905 the definitions in 20.24 are used within this section.

### 26.15.1.1 Default message content

Default contents SYSTEM INFORMATION messages and default settings

For cell A and B For GSM°900 use 26.6.14.
For DCS°1800 use 26.6.15, for GSM°450 use 26.6.16, for GSM°480 use 26.6.17, for PCS 1900 use 26.6.18, for GSM 700 use 26.6.19 and for GSM 850 use 26.6.20.

The following parameters shall be coded into the system information messages. Parameters shall be coded according to GSM 04.18.

SYSTEM INFORMATION TYPE 2bis, SYSTEM INFORMATION TYPE 5bis messages are not used.

SYSTEM INFORMATION TYPE 3

Default except:

| Information Element | Value/remark |
|---|---|
| SI3 rest octets<br>Early Classmark Sending Control | <br>Early Sending is explicitly accepted |

**Default message contents for other messages**

| | |
|---|---|
| For section 26.15.2 | same as in 26.7.6 |
| For section 26.15.3 | same as in 26.7.6 |
| For section 26.15.4 | same as in 26.7.6 |
| For section 26.15.5 | same as in 26.9.9 |

### 26.15.1.2 General initial conditions for SIM card

1. Following LSA values shall be defined in the fields of the $EF_{SLL}$ (GSM 11.11, 10.4.1.2) and in the LSA descriptor files (GSM 11.11, 10.4.1.3) on the SIM card used for testing:

| | LSA ID | CI | LAC | LAC + CI | PLMN code | LSA Priority | Idle mode support | LSA indication for idle mode |
|---|---|---|---|---|---|---|---|---|
| **LSA1** | 54<br>66.001 | - | | | HPLMN | 0 | On | Off |
| **LSA3** | 9.000.000 | | | 2 + [250..254] | HPLMN | 8 | On | On |

2. List of values, that shall not be found in the SIM card, in order to be sure that the SoLSA MS is not subscribed to the LSA defined by the current carrier:

| | LSA ID | CI | LAC | LAC + CI |
|---|---|---|---|---|
| **LSA value** | [250..255] | [5000..5005] | 5 | 5 + [5000..5005] |

## 26.15.2 SoLSA signalling / RR

### 26.15.2.1 SoLSA signalling / RR / classmark interrogation

This procedure allows the network to request the MS to supply all its classmark information to the network.

Networks may systematically use this procedure (e.g. during location updating) and, it if is incorrectly implemented in the MS, the basic connection establishment procedure may systematically fail.

#### 26.15.2.1.1 Conformance requirements

On receipt of a CLASSMARK ENQUIRY message, the MS sends a CLASSMARK CHANGE message to the network containing the Mobile Station Classmark 2 information element and depending upon the contents of this information element, possibly the Mobile Station Classmark 3 information element.

References

GSM 04.18 sections 3.3.1.1.4.1, 3.4.11 and 9.1.11

GSM 04.13 section 5.2.9.

### 26.6.11.2.2 Test purpose

To verify that if the network requests the SoLSA MS to supply all its classmark information then this information is communicated on the DCCH to the network.

### 26.6.11.2.3 Method of test

#### Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

"Idle, updated", with TMSI allocated.

#### Related PICS/PIXIT Statements

- Support of SoLSA
- Contents of Mobile Station Classmark 2 information element.
- Existence of Mobile Station Classmark 3 information element: yes/no.
- Contents of Mobile Station Classmark 3 information element.
- Switch off button: yes/no.

#### Foreseen Final State of the MS

"Idle, updated", with TMSI allocated.

#### Test Procedure

The MS is switched off (or has its power removed).

The SS then sets the IMSI attach-detach flag in the SYSTEM INFORMATION messages so that the MS shall perform a location update when switched on.

The MS is switched on (or its power is re-applied). The MS then initiates a location update attempt. After the succesful completion of the location update procedure (with TMSI reallocation) the SS transmits a CLASSMARK ENQUIRY message. The MS shall be ready to transmit the CLASSMARK CHANGE message before 300 ms after the end of the CLASSMARK ENQUIRY message.

The term "ready to transmit" is defined in GSM 04.13.

Then the channel is released.

#### Maximum Duration of Test

2 minutes.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is switched off (or has its power removed). |
| 2 | SS | | IMSI attach-detach flag changed. |
| 3 | MS | | The MS is switched on (or its power is re-applied). |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = CKSN1, "location area identification" = a, "mobile station classmark 1" and "mobile station classmark 2" including settings for ES IND and SoLSA and "mobile identity" = TMSI1. |
| 5 | SS -> MS | UA(LOCATION UPDATING REQUEST) | |
| 6 | MS -> SS | CLASSMARK CHANGE | Shall be ready to transmit (see GSM 05.10 section 06.10) within 40 ms after the completion of step 4. Shall indicate the MS frequency and power capabilities<br>Note: In this case 'ready to transmit' shall result in the actual transmission of the Classmark Change 51 frames later (51 * 4.62ms = 235.62 ms). Therefore receipt of the Classmark Change within 250ms of step 4 is required.<br>"mobile station classmark 2" includes settings for ES IND and SoLSA |
| 7 | SS -> MS | LOCATION UPDATING ACCEPT | "Mobile identity" = new TMSI (=TMSI2). |
| 8 | MS -> SS | TMSI REALLOCATION COMPLETE | |
| 9 | SS -> MS | CLASSMARK ENQUIRY | |
| 10 | MS -> SS | CLASSMARK CHANGE | Contents as defined in step 6. This message shall be ready to be transmitted before 300 ms after the completion of step 9. |
| 11 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

LOCATION UPDATING REQUEST

| Information element | Value/remark |
|---|---|
| as default except: | |
| Mobile station Classmark 1 | |
| - ES IND | Controlled Early Classmark Sending option is implemented |
| Mobile station Classmark 2 | |
| - ES IND | Controlled Early Classmark Sending option is implemented |
| - SoLSA | SoLSA supported |

CLASSMARK CHANGE

| Information element | Value/remark |
|---|---|
| as default except: | |
| Mobile station Classmark 2 | |
| -ES IND | Controlled Early Classmark Sending is implemented. |
| -SoLSA | SoLSA supported |

## 26.15.3 SoLSA signalling / MM

### 26.15.3.1 SoLSA signalling / MM / location updating

This procedure is used to register the MS in the network. If it is not performed correctly, no call can be established.

#### 26.15.3.1.1 Location updating / accepted

To inform the network of the MSs additional SoLSA capability, the SoLSA MS has to send a CLASSMARK CHANGE as soon as possible during a normal location update procedure.

##### 26.15.3.1.1.1 Conformance requirement

If the network accepts a location updating from the Mobile where the ES IND bit is set to 1 in the Classmark 1 and the Classmark 2 information element, the SoLSA bit is set to 1 in the classmark 2 information element and the Early Classmark Sending Control bit is set to high in SI3 Rest Octets, then the MS shall send, on the first occasion, the CLASSMARK CHANGE message.

During a contention resolution procedure, if the last timeslot of the block containing a L2 UA frame occurs at time T, then the MS shall be ready to transmit the CLASSMARK CHANGE before T + 40 ms.

The Mobile Station shall, after receiving a Location updating Accept message, store the relevant received informations and answer correctly to a paging request from the network.

This test is applicable for any SoLSA MSs with an LSA SIM supporting the SoLSA operations.

Reference(s)

TS 24.008 section 4.4.4.6, 9.2.15, 10.5.1.5 and 10.5.1.6

GSM 04.18 sections 3.3.1.1.4.1, 9.1.11 and 10.5.2.34

##### 26.15.3.1.1.2 Test purpose

To verify that the SoLSA MS supports “early classmark sending procedure”, e.g. sending information to the network about SoLSA support during location update procedure.

##### 26.15.3.1.1.3 Method of test

Initial conditions:

System Simulator:

Two cells, A and B, belonging to different location areas with location area identification a and b of the same PLMN.

IMSI attach/detach is allowed in both cells.

The T3212 time-out value is 1/10 hour in both cells.

Mobile Station:

The MS has a valid TMSI (=TMSI1) and CKSN (=CKSN1). It is "idle updated" on cell A.

Related PICS/PIXIT statement(s)

- Support of SoLSA

Foreseen final state of the MS

The MS has no valid TMSI. It has valid CKSN and Kc. It is "idle, updated" on cell B.

Test Procedure

The MS is made to select cell B. A normal location updating with TMSI reallocation is performed in cell B. The channel is released. The SS checks, by paging, that the MS has stored the newly allocated TMSI. The channel is released. The MS is made to select cell A. A normal location updating is performed in cell A. The LOCATION UPDATING ACCEPT message contains neither IMSI nor TMSI. The SS checks, by paging, that the MS has kept the old TMSI. The channel is released. The MS is made to select cell B. A normal location updating is performed in cell B. The LOCATION UPDATING ACCEPT message contains an IMSI. The SS checks, by paging, that the MS has deleted its TMSI and responds to paging with IMSI.

Maximum duration of test

4 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS | | The RF level of cell A is lowered until the MS selects cell B. |
| 2 | MS -> SS | CHANNEL REQUEST | "Establishment cause": Location updating. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | LOCATION UPDATING REQUEST | "location updating type" = normal, "CKSN" = CKSN1, "location area identification" = a, "mobile station classmark 1" and "mobile station classmark 2" including settings for ES IND and SoLSA and "mobile identity" = TMSI1. |
| 5 | SS -> MS | UA(LOCATION UPDATING REQUEST) | |

## 26.15.3.2 SoLSA signalling / MM / MM information

### 26.15.3.2.1 General remark

1. The network has total control of the LSA indication in active mode.
2. Whatever the System Informations are, the LSA ID transmitted in the MM Information message has higher priority.
3. The indication of the current LSA in active mode is independent from the setting of the configurations parameters "LSA indication in idle mode" and "idle mode support" stored in the SIM in $EF_{SLL}$ (see GSM11.11, 10.4.1.2).

### 26.15.3.2.2 Definition and applicability

The SoLSA MS in active mode may inform the user whether or not the serving cell is an LSA cell. The information about a serving cell is indicated in the display of the SoLSA MS.

The change out of an LSA or into an LSA may be indicated by the SoLSA MS, e.g. using a beep.

### 26.15.3.2.3 Conformance requirement

1. It shall be possible to assign a subscriber defined identifier by the operator to each LSA (alphanumeric text up to 10 characters), which can be provided to the user in idle and active mode. As an MS manufacturer option the user may assign an icon or another form of indication to each LSA.

   It shall be possible to indicate a change of localised service area during idle and active mode.

   The indication is a network option (activated/deactivated by the network).

2. The network decides when to send a notification to the MS about a change of current LSA. The information will be sent from the MSC to the MS and will contain the LSA ID. This is done by adding the LSA ID of the current cell to the MM INFORMATION message. If no LSA ID is included in the MM Information message the MS shall assume that the current cell does not belong to any of the allowed LSAs for the subscriber.

   The indication towards the user is optional and can be heard as e.g. a beep in the receiver or by displaying the stored LSA name that corresponds to the received LSA ID.

3. The MM INFORMATION message support is optional in the network. The MM information procedure may be invoked by the network at any time during an RR connection.

   The MM information procedure consists only of the MM INFORMATION message sent from the network to the mobile station. During an RR connection, the network shall send none, one, or more MM INFORMATION messages to the mobile station. If more than one MM INFORMATION message is sent, the messages need not have the same content.

   NOTE: The network may be able to select particular instants where it can send the MM INFORMATION message without adding delay to, or interrupting, any CM layer transaction, e.g. immediately after the AUTHENTICATION REQUEST message.

   When the mobile station (supporting the MM INFORMATION message) receives an MM INFORMATION message, it shall accept the message and optionally use the contents to update appropriate information stored within the mobile station.

   If the mobile station does not support the MM INFORMATION message the mobile station shall ignore the contents of the message and return an MM STATUS message with cause #97.

4. This IE (LSA Identity IE) may be sent by the network. The contents of this IE indicate the LSA identity of the serving cell.

5. The form of display and indication are left to manufacturer's choice.

6. If the Length of the LSA Identifier content is equal to 0, then no LSA ID is included. This is used to indicate that the MS has moved to an area where there is no LSA available for that MS.

#### 26.15.3.2.4 Test Purpose

To verify that the SoLSA MS correctly handles the LSA information received in MM INFORMATION and performs indication accordingly.

#### 26.15.3.2.5 Method of test

##### 26.15.3.2.5.1 Initial Conditions

a) The SoLSA MS is in the active state of a call (U10).

b) The serving cell is cell 1 (carrier 1).

c) Parameters: same default values defined in Table 20.24.1, except for the following values:

| Parameter/condition | Carrier 1 |
|---|---|
| LSA ID<br>LAC<br>CI | 54, 9.000.000, 250<br>5<br>5000 |
| Matching LSA on SIM<br>Escape PLMN | LSA1, LSA3<br>No |

Run the following test procedure twice by using two different sets of initial conditions:

- with an LSA only SIM (see Definitions in chapter 20.24)

- with a normal LSA SIM (see Definitions in chapter 20.24)

##### 26.15.3.2.5.2 Test Procedure

a) A MM INFORMATION message including the LSA Identity IE is sent by the SS. The LSA Identity IE contains the LSA ID = 54 (LSA stored in the SIM).

b) A MM INFORMATION message including the LSA Identity IE is sent by the SS. The LSA Identity IE contains the LSA ID = 250 (LSA not stored in the SIM).

c) A MM INFORMATION message including the LSA Identity IE is sent by the SS. The LSA Identity IE contains the LSA ID = 54 (LSA stored in the SIM).

d) The SS sends an MM INFORMATION message without an LSA Identity IE.

e) A MM INFORMATION message including the LSA Identity IE is sent by the SS. The LSA Identity IE contains the LSA ID = 54 (LSA stored in the SIM).

f) The SS sends an MM INFORMATION message which contains an LSA Identity IE. The value of the Length of LSA Identifier (octet 2) is set to zero (i.e. there are no LSA IDs included).

g) A MM INFORMATION message including the LSA Identity IE is sent by the SS. The LSA Identity IE contains the LSA ID = 54 (LSA stored in the SIM).

h) A MM INFORMATION message including the LSA Identity IE is sent by the SS. The LSA Identity IE contains the LSA ID = 9.000.000 (LSA stored in the SIM).

#### 26.15.3.2.5.3 Related PICS/PIXIT statement(s)

- Support of SoLSA

- Interface to the human user (p1 = Y/N)

- Way to indicate the identity of the current LSA to the human user (only applicable if the SoLSA MS has an interface to the human user)

- Way to indicate the change of the current LSA to the human user (only applicable if the SoLSA MS has an interface to the human user)

#### 26.15.3.2.5.4 Test Requirements

1) After step a) the SoLSA MS indicates a change of LSA (a subscribed LSA is entered ).

2) After step b) the SoLSA MS indicates a change of LSA (a not subscribed LSA is entered ).

3) After step c) the SoLSA MS indicates a change of LSA (a subscribed LSA is entered ).

4) After step d) the SoLSA MS indicates a change of LSA (a not subscribed LSA is entered ).

5) After step e) the SoLSA MS indicates a change of LSA (a subscribed LSA is entered ).

6) After step f) the SoLSA MS indicates a change of LSA (a not subscribed LSA is entered ).

7) After step g) the SoLSA MS indicates a change of LSA (a subscribed LSA is entered ).

8) After step h) the SoLSA MS indicates a change of LSA (another subscribed LSA is entered ).

## 26.15.4 SoLSA signalling / CC

### 26.15.4.1 SoLSA signalling / CC / call re-establishment / call present

#### 26.15.4.1.1 Conformance requirement

1) If the call is in the "active" state or "mobile originating modify" state, the indication from MM that re-establishment is possible shall cause call control to request re-establishment from the MM-connection, suspend any further message to be sent and await the completion of the re-establishment procedure.

2) After the initial message the SoLSA MS shall send a CLASSMARK CHANGE message in the uplink block followed direct after the Layer 2 UA message sent from the network. The CLASSMARK CHANGE message shall contain information elements Mobile Station Classmark 2.

3) When the call control entity is notified that the MM-connection is re-established, it shall then resume the transmission of possibly suspended messages and resume user data exchange when an appropriate channel is available.

### 26.15.4.1.2 Test purpose

To verify that the SoLSA MS supports “early classmark sending procedure”, e.g. sending information to the network about SoLSA support during the re-establishment of an ongoing call.

### 26.15.4.1.3 Method of test

Related PICS/PIXIT statements

- Support of SoLSA .
- supported teleservices.

Initial conditions

System Simulator:

The SS simulates cells A and B. The LAC of cell A is different from the LAC of cell B. The PLMN identities of cell A and B are equal.

The call re-establishment parameter concerning cell A is set to an arbitrary value.

Cell B is not barred, the RACH control parameters information element sent in SYSTEM INFORMATION TYPE 1 to 4 messages of cell A and B specifies "call reestablishment allowed in the cell", the NCC of cell B is indicated as permitted in the PLMN permitted information element of SYSTEM INFORMATION TYPE 2 and 6 messages of cell A. Cell B is indicated as a neighbour cell of cell A in SYSTEM INFORMATION TYPE 2 and 5 messages of cell A. Cell reselect hysteresis parameter of cell A is set to zero.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN on cell A.

Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Maximum duration of test

1 minute.

Test procedure

The MS is brought to active state by using procedure 26.9.2, "structured procedures, MS originated call, early assignment". The RF level of cell A is lowered so that cell B is to be selected (when the MS performs re-establishment after radio link failure), while keeping the C1 and C2 of cell A greater than zero. SS waits for at least 5 seconds. Then the SS stops transmission on the TCH/SACCH. The MS shall re-establish the call on cell B using a CM RE-ESTABLISHMENT message. The SS performs ciphering mode setting and assignment procedures. The MS shall through-connect the appropriate bearer channel. Then, the call is cleared by the SS.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | | | Steps 1-21 of test case 26.15.3.1 are performed (the appropriate bearer channel is through connected in both directions in TCH) |
| 2 | SS | | The RF level of cell A is lowered. The SS waits at least 5 seconds. The SS stops transmission on the TCH/SACCH. |
| 3 | MS -> SS | CHANNEL REQUEST | this is sent on cell B. Establ. Cause shall be "call re-establishment; TCH/F was in use,..." |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM REESTABLISHMENT REQUEST | note specific message contents |
| 6 | SS -> MS | UA (CM REESTABLISHMENT REQUEST) | |
| 7 | MS -> SS | CLASSMARK CHANGE | Shall be ready to transmit (see GSM 05.10 section 06.10) within 40 ms after the completion of step 5. “mobile station classmark 2” includes settings for ES IND and SoLSA<br>Note: In this case ‘ready to transmit’ shall result in the actual transmission of the Classmark Change 51 frames later (51 * 4.62ms = 235.62 ms). Therefore receipt of the Classmark Change within 250ms of step 5 is required. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | ASSIGNMENT COMMAND | |
| 11 | MS -> SS | ASSIGNMENT COMPLETE | |
| 12 | MS | | The appropriate bearer channel is through connected in both directions. |
| 13 | SS -> MS | DISCONNECT | with cause value "Normal" |
| 14 | MS -> SS | RELEASE | |
| 15 | SS -> MS | RELEASE COMPLETE | |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific message contents:

CM RE-ESTABLISHMENT REQUEST

| Information element | Value/remark |
|---|---|
| Protocol discriminator | Mobility Management |
| Skip indicator | Encoded as zeroes |
| Message type | CM RE-ESTABLISHMENT REQUEST |
| Ciphering key sequence number | The CKSN which the MS was allocated in step 6 of the procedure of section 26.15.3.1 |
| Spare half octet | zero |
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - SoLSA | SoLSA supported |
| Mobile identity | The TMSI that the MS is having initially |
| Location area identification | Corresponding the LAI of cell A |

CLASSMARK CHANGE

| Information element | Value/remark |
|---|---|
| as default except: | |
| Mobile station Classmark 2 | |
| -ES IND | Controlled Early Classmark Sending is implemented. |
| -SoLSA | SoLSA supported |

## 26.15.5 SoLSA signalling / structured procedures

These tests applies only to SoLSA mobile stations.

### 26.15.5.1 SoLSA signalling / structured procedures / MS originated call / early assignment

#### 26.15.5.1.1 Conformance requirements

1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.

2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice that is supported by the MS, shall start to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.

3) After the initial message the SoLSA MS shall send a CLASSMARK CHANGE message in the uplink block followed direct after the Layer 2 UA message sent from the network. The CLASSMARK CHANGE message shall contain information elements Mobile Station Classmark 2.

4) Subsequently after establishment of an MM connection, the MS shall send a SETUP message with correct parameters.

5) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

   - attach the user connection to the radio path;

   - return a CONNECT ACKNOWLEDGE message.

6) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.

7) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

#### 26.15.5.1.2 Test purpose

To verify that the SoLSA MS supports “early classmark sending procedure”, e.g. sending information to the network about SoLSA support during a mobile originating call (MOC) with early assignment procedure.

26.15.5.1.3 Method of test

Related PICS/PIXIT Statements

- Support of SoLSA
- Supported rates (full rate/half rate)
- Supported speech versions (full rate version 1, full rate version 2, half rate version 1)
- Interface to the human user (p1 = Y/N)
- Way to display the called number (only applicable if the MS has an interface to the human user)
- Way to indicate alerting (only applicable if the MS supports the feature)
- SS version
- Supported teleservices
- Classmark

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen Final State of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is made to initiate a call on any frequency band supported by the MS. The call is established with early assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The "called number" is entered |
| 2 | MS | | If p1 = Y, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. Indicating early sending of CLASSMARK CHANGE and SoLSA support |
| 6 | SS -> MS | UA (CM SERVICE REQUEST) | |
| 7 | MS -> SS | CLASSMARK CHANGE | Shall be ready to transmit (see GSM 05.10 section 06.10) within 40 ms after the completion of step 5. “mobile station classmark 2” includes settings for ES IND and SoLSA<br>Note: In this case ‘ready to transmit’ shall result in the actual transmission of the Classmark Change 51 frames later (51 * 4.62ms = 235.62 ms). Therefore receipt of the Classmark Change within 250ms of step 5 is required. |
| 8 | SS -> MS | AUTHENTICATION REQUEST | |
| 9 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 10 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 11 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 12 | SS | | SS starts ciphering. |
| 13 | MS -> SS | SETUP | |
| 14 | SS -> MS | CALL PROCEEDING | |
| 15 | SS -> MS | ASSIGNMENT COMMAND | |
| 16 | MS -> SS | ASSIGNMENT COMPLETE | |
| 17 | SS -> MS | ALERTING | |
| 18 | MS | | Depending on the PICS, an alerting indication is given |
| 19 | SS -> MS | CONNECT | |
| 20 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 21 | MS | | The appropriate bearer channel is through connected in both directions. |
| 22 | SS -> MS | DISCONNECT | |
| 23 | MS -> SS | RELEASE | |
| 24 | SS -> MS | RELEASE COMPLETE | |
| 25 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

## 26.15.5.2 SoLSA signalling / structured procedures / MS originated call / late assignment

### 26.15.5.2.1 Conformance requirements

1) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call, if it provides a human interface, shall display the dialled number.

2) An MS in MM state "idle, updated" and in RR idle mode, when made to initiate a call for a selected teleservice that is supported by the MS, shall start to initiate the immediate assignment procedure by sending a CHANNEL REQUEST message with correct establishment cause.

3) After the initial message the SoLSA MS shall send a CLASSMARK CHANGE message in the uplink block followed direct after the Layer 2 UA message sent from the network. The CLASSMARK CHANGE message shall contain information element Mobile Station Classmark 2.

4) Upon receipt of the ASSIGNMENT COMMAND message, the Mobile Station initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the data links). After the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message, specifying cause "normal event", to the network on the main DCCH.

5, 6) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

- attach the user connection to the radio path;

- return a CONNECT ACKNOWLEDGE message.

7) Subsequently when the network initiates call clearing by sending a DISCONNECT message, the MS shall proceed to release the call by sending a RELEASE message.

8) On receipt of a CHANNEL RELEASE message, the MS shall disconnect the main signalling link.

### 26.15.5.2.2 Test purpose

To verify that the SoLSA MS supports “early classmark sending procedure”, e.g. sending information to the network about SoLSA support during a mobile originating call (MOC) with late assignment procedure.

26.15.5.2.3 Method of test

Related PICS/PIXIT Statements

- Support of SoLSA
- Supported rates (full rate/half rate)
- Supported speech versions (full rate version 1, full rate version 2, half rate version 1)
- Interface to the human user (p1 = Y/N)
- Way to display the called number (only applicable if the MS has an interface to the human user)
- Way to indicate alerting (only applicable if the MS supports the feature)
- SS version
- Supported teleservices
- Classmark

Initial Conditions

System Simulator:

1 cell, default parameters

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Foreseen Final State of the MS

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

Test procedure

The following test is performed for all rates (full rate/half rate) supported by the MS:

A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is made to initiate a call on any frequency band supported by the MS. The call is established with late assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The "called number" is entered |
| 2 | MS | | If p1 = Y, the MS must display the called number in the way defined in PICS/PIXIT. |
| 3 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. Indicating early sending of CLASSMARK CHANGE and SoLSA support |
| 6 | SS -> MS | UA (CM SERVICE REQUEST) | |
| 7 | MS -> SS | CLASSMARK CHANGE | Shall be ready to transmit (see GSM 05.10 section 06.10) within 40 ms after the completion of step 5. “mobile station classmark 2” includes settings for ES IND and SoLSA<br>Note: In this case ‘ready to transmit’ shall result in the actual transmission of the Classmark Change 51 frames later (51 * 4.62ms = 235.62 ms). Therefore receipt of the Classmark Change within 250ms of step 5 is required. |
| 8 | SS -> MS | AUTHENTICATION REQUEST | |
| 9 | MS -> SS | AUTHENTICATION RESP | SRES specifies correct value. |
| 10 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 11 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 12 | SS | | SS starts ciphering. |
| 13 | MS -> SS | SETUP | |
| 14 | SS -> MS | CALL PROCEEDING | |
| 15 | SS -> MS | ALERTING | |
| 16 | MS | | Depending on the PICS, an alerting indication is given |
| 17 | SS -> MS | ASSIGNMENT COMMAND | |
| 18 | MS -> SS | ASSIGNMENT COMPLETE | |
| 19 | SS -> MS | CONNECT | |
| 20 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 21 | MS | | The appropriate bearer channel is through connected in both directions. |
| 22 | SS -> MS | DISCONNECT | |
| 23 | MS -> SS | RELEASE | |
| 24 | SS -> MS | RELEASE COMPLETE | |
| 25 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

## 26.15.5.3 SoLSA signalling / structured procedures / MS terminated call / early assignment

### 26.15.5.3.1 Conformance requirement

1) After the initial message the SoLSA MS shall send a CLASSMARK CHANGE message in the uplink block followed direct after Layer 2 UA message sent from the network.

2) The MS shall acknowledge the SETUP message with a CALL CONFIRMED message, if compatibility checking was successful, the MS is not busy, and the user does not refuse the call.

3, 4) Upon receipt of the ASSIGNMENT COMMAND message the MS continues a mobile terminating call establishment with early establishment of the traffic channel

   a) by replying to the ASSIGNMENT COMMAND with an ASSIGNMENT COMPLETE message, and

   b) if the MS supports immediate connect, by continuing the call establishment by through-connecting the traffic channel in both directions, or if the MS does not support immediate connect, by sending an ALERTING message

5) An MS indicates acceptance of a MT call by sending CONNECT.

6) For speech calls:

   The mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

   For data calls:

   The mobile station shall attach the user connection when receiving the CONNECT ACKNOWLEDGE message from the network.

7) The MS initiates call clearing of an active call by sending a DISCONNECT message.

8) The MS in this phase of call release, upon receipt of a RELEASE message, shall return a RELEASE COMPLETE message.

9) Subsequently the MS, upon receipt of a CHANNEL RELEASE message, shall disconnect the main signalling link.

## 26.15.5.5 SoLSA signalling / structured procedures / emergency call / idle updated

### 26.15.5.5.1 Conformance requirements

1) The MS in the "idle, updated" state, as after a successful location update, after the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 700, GSM 850 and PCS 1900 MS in USA and Canada), or 08 (for GSM 700, GSM 850 and PCS 1900 MS in Mexico) has been entered by user, shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").

2) After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct CKSN and TMSI , with CM Service Type "emergency call establishment" and indicating early sending of classmark change and SoLSA support.

3) After the initial message the SoLSA MS shall send a CLASSMARK CHANGE message in the uplink block followed direct after the Layer 2 UA message sent from the network. The CLASSMARK CHANGE message shall contain information elements Mobile Station Classmark 2.

4) Authentication and cipher mode setting shall be performed successfully.

5) After cipher mode setting acceptance by the network, the MS shall send an EMERGENCY SETUP message.

6), 7) The emergency call shall be correctly established. The assignment procedure shall be correctly performed.

8) After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the TCH shall be through connected in both directions if an appropriate TCH is available.

9) The call shall be cleared correctly.

### 26.15.5.6.2 Test purpose

To verify that the SoLSA MS in the "idle, no IMSI" state (no SIM inserted), supports “early classmark sending procedure”, e.g. sending information to the network about SoLSA support during an Emergency Call.

26.15.5.6.3 Method of test

Related PICS/PIXIT Statements

- Support of SoLSA

- Speech supported

- Supported rate for speech: (p1 = F/H, F).

- Classmark.

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, no IMSI" no SIM inserted.

Foreseen Final State of the MS

The MS is in MM-state "idle, no IMSI" no SIM inserted.

Test procedure

The MS is made to initiate an emergency call. The call is established without authentication, without ciphering, with late assignment. Having reached the active state, the call is cleared by the SS.

Maximum Duration of Test

1 minute.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The appropriate emergency call number is entered. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates "emergency call establishment". The mobile identity IE specifies the IMEI of the MS. The cipher key sequence number IE indicates "no key is available". The classmark 2 IE indicates early sending of CLASSMARK CHANGE and SoLSA support |
| 5 | SS -> MS | UA (CM SERVICE REQUEST) | |
| 6 | MS -> SS | CLASSMARK CHANGE | Shall be ready to transmit (see GSM 05.10 section 06.10) within 40 ms after the completion of step 4. “mobile station classmark 2” includes settings for ES IND and SoLSA<br>Note: In this case ‘ready to transmit’ shall result in the actual transmission of the Classmark Change 51 frames later (51 * 4.62ms = 235.62 ms). Therefore receipt of the Classmark Change within 250ms of step 4 is required. |
| 7 | SS -> MS | CM SERVICE ACCEPT | |

| | | | |
|---|---|---|---|
| 8 | MS -> SS | EMERGENCY SETUP | If p1 = F/H, the message must contain one bearer capability IE indicating in the radio channel requirement field "dual rate/half rate preferred" or "dual rate/full rate preferred". If p1 = F, the message must either contain no bearer capability IE or contain one bearer capability IE indicating in the radio channel requirement field "full rate channel". |
| 9 | SS -> MS | CALL PROCEEDING | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | ASSIGNMENT COMMAND | The rate of the channel is that one indicated by the EMERGENCY SETUP message, if that message did not offer a choice, and the rate is the preferred one else. |
| 12 | MS -> SS | ASSIGNMENT COMPLETE | |
| 13 | SS -> MS | CONNECT | |
| 14 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 15 | MS | | The TCH is through connected in both directions. |
| 16 | SS -> MS | DISCONNECT | |
| 17 | MS -> SS | RELEASE | |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

CM SERVICE REQUEST

| Information element | Value/remark |
|---|---|
| as default except: | |
| CM Service type | Emergency call establishment |
| Mobile station Classmark 2 | |
| - ES IND | Shall indicate early autonomous sending of CLASSMARK CHANGE |
| - SoLSA | SoLSA supported |

CLASSMARK CHANGE

| Information element | Value/remark |
|---|---|
| as default except: | |
| Mobile station Classmark 2 | |
| -ES IND | Controlled Early Classmark Sending is implemented. |
| -SoLSA | SoLSA supported |

# 26.16 Adaptive Multi Rate Signalling

This section only applies to MS supporting the multi rate speech codec in the GSM 400, GSM 700, GSM 850, GSM 900, DCS 1800 and PCS 1900 band.

As the multi-rate mobile station necessarily supports the speech full rate version 1 or both speech full rate version 1 and speech half rate version 1, conformance requirements of section 26 fully apply to this mobile.

If the handset also supports the EFR speech codec this section does not alter the testing that is completed in section 26.12.

The purpose of this section is to test the different procedures, which may be impacted by the multi rate codec.

## 26.16.1 Inband Signalling, Downlink Codec Adaptation

### 26.16.1.1 Conformance Requirement

Ideal frequency hopping without DTX is activated, the MS shall produce Codec Mode Requests with the following accuracy

- When a carrier to interferer ratio 4 dB higher than a defined upper threshold is applied to the antenna connector, the MS shall request a higher mode with a probability exceeding 90%. This shall be measured immediately after a settling-time of 200 ms.
- When a carrier to interferer ratio 4 dB lower than a defined lower threshold is applied to the antenna connector, the MS shall request a lower mode with a probability exceeding 90%. This shall be measured immediately after a settling-time of 200 ms.

This test is not intended to verify these conformance requirements, but to verify the correctness of the involved layer 1 and layer 3 signalling.

References:

TS GSM 05.09 sub-clauses: 3.3, 3.4

### 26.16.1.2 Test Purpose

This test is concerned with the downlink link adaptation for AMR and the related inband signalling. The test shall verify that the MS can monitor the downlink quality of the dedicated channel and generate Codec Mode Requests according to the thresholds provided by the network at call setup, with an allowance for the statistical significance of the test.

NOTE 1: The test is performed under static conditions, since the power variation under TU50 during the measurement time of 200ms can be neglected.

NOTE 2: The inband signals are L1 signalling transmitted every speech frame, as defined in GSM 05.09: In uplink directions Codec Mode Requests and Codec Mode Indications are transmitted alternately, whereas downlink signalling contains of alternate Codec Mode Commands and Codec Mode Indications.

### 26.16.1.3 Method of Test

#### Initial Conditions

The MS is “idle updated”, with TMSI allocated.

#### Related PICS/PIXIT Statements

The MS supports the multi-rate speech codec.

#### Forseen Final State of MS

“Idle, updated”, with TMSI allocated.

#### Test Procedure

a) A mobile originated call is initiated, following the CHANNEL REQUEST received from the MS the SS sends an IMMEDIATE ASSIGNMENT to the MS commanding it to go to a SDCCH. The MS indicates to the SS that it supports the multi-rate speech codec. The SS allocates the MS a TCH/AFS and signals the allowed codec subset and adaptation thresholds as part of the ASSIGNMENT COMMAND. DTX shall not be activated. Hopping is activated. The hopping band is centred around an ARFCN in the Mid ARFCN range. The hopping frequencies are chosen from those defined in section 6.

   The following active codec mode subset shall apply:

| Codec Mode | TCH/AFS in kbit/s |
|---|---|
| CODEC_MODE_1 | 4,75 |
| CODEC_MODE_2 | 5,9 |
| CODEC_MODE_3 | 7,95 |
| CODEC_MODE_4 | 12,2 |

The following decision threshold and hysteresis values in terms of normalized carrier to interference ratio ($C/I_{norm}$), shall apply for Codec Mode Command / Request (MC', MR'):

| MC'/MR' | THR_MC_Dn(MC')/ THR_MR_Dn(MR') | THR_MC_Up(MC')/ THR_MR_Up(MR') |
|---|---|---|
| CODEC_MODE_4 | 16,5 dB | + ∞ |
| CODEC_MODE_3 | 11,5 dB | 18,5 dB |
| CODEC_MODE_2 | 6,5 dB | 13,5 dB |
| CODEC_MODE_1 | – ∞ | 8.5 dB |

b) In addition to the wanted signal, the SS produces an independent, uncorrelated interfering signal, Standard Test Signal I1 (unwanted signal).

The unwanted signal is continuous and has no fixed relationship with the bit transitions of the wanted signal. Its amplitude is 64 dB below that of the wanted signal.

c), d) The downlink radio environment is altered by changing the carrier to interference ratio. When the radio condition crosses an adaptation threshold the MS changes the Codec Mode Request to reflect the changed signal quality. The SS will change the downlink codec to the requested mode and change the downlink Codec Mode Indication accordingly..This is continued for all thresholds given for the Active Codec Set.

e) The SS sends a HANDOVER_COMMAND allocating the MS a TCH/AHS and signals the allowed codec subset and adaptation thresholds as part of the HANDOVER_COMMAND. DTX shall not be activated. Hopping is activated. The hopping band is centred around an ARFCN in the Mid ARFCN range. The hopping frequencies are chosen from those defined in section 6.

The following active codec mode subset shall apply:

| Codec Mode | TCH/AHS in kbit/s |
|---|---|
| CODEC_MODE_1 | 5.15 |
| | |
| CODEC_MODE_2 | 6.7 |
| CODEC_MODE_3 | 7.95 |

The following decision threshold and hysteresis values in terms of normalized carrier to interference ratio ($C/I_{norm}$), shall apply for Codec Mode Command / Request (MC', MR'):

| MC'/MR' | THR_MC_Dn(MC')/ THR_MR_Dn(MR') | THR_MC_Up(MC')/ THR_MR_Up(MR') |
|---|---|---|
| | | |
| CODEC_MODE_3 | 12,5 dB | +∞ |
| CODEC_MODE_2 | 11,0 dB | 15,0 dB |
| CODEC_MODE_1 | – ∞ | 13,0 dB |

f) step b) to d) are repeated for the settings given in step e)

Maximum Duration of Test

2 minutes

Expected Sequence in step c)

NOTE: Inband signalling is transmitted every frame, but are mentioned only where changes occur. If no new Codec Mode Indications or Codec Mode Commands are to be sent, previous indication respectively request is being repeated. If Active Codec Set contains less than 4 codecs, the steps corresponding to nonassigned codecs shall be ignored.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS->SS | Channel Request | |
| 2 | SS->MS | Immediate Assignment | |
| 3 | MS->SS | Set Up SDCCH | MS indicates which speech codecs it can support |
| 4 | SS->MS | Assignment Command SDCCH | Network allocates TCH/AFS / TCH/AHS and allowed codec subset and adaptation thresholds |
| 5 | MS->SS | Assignment Complete | SS simulates good radio conditions ($C/I_{norm}$ = 64dB) |
| A6 | SS->MS | | Lower radio conditions tobelow codec mode 4 threshold |
| A7 | MS->SS | Codec Mode Request changes | |
| A8 | SS->MS | Codec Mode Indication changes to requested mode | The downlink codec is changed so that first frame with requested codec is transmitted with the first changed Codec Mode Indication. |
| 9 | SS->MS | | Lower radio conditions to below codec mode 3 threshold |
| 10 | MS->SS | Codec Mode Request changes | |
| 11 | SS->MS | Codec Mode Indication changes to requested mode | The downlink codec is changed so that first frame with requested codec is transmitted with the first changed Codec Mode Indication. |
| 12 | SS->MS | | Lower radio conditions to below codec mode 2 threshold |
| 13 | MS->SS | Codec Mode Request changes | |
| 14 | SS->MS | Codec Mode Indication changes to requested mode | The downlink codec is changed so that first frame with requested codec is transmitted with the first changed Codec Mode Indication. |
| 15 | SS->MS | | Improve radio conditions to above codec mode 1 threshold |
| 16 | MS->SS | Codec Mode Request changes | |
| 17 | SS->MS | Codec Mode Indication changes to requested mode | The downlink codec is changed so that first frame with requested codec is transmitted with the first changed Codec Mode Indication. |
| 18 | SS->MS | | Improve radio conditions to above codec mode 2 threshold |
| 19 | MS->SS | Codec Mode Request changes | |
| 20 | SS->MS | Codec Mode Indication changes to requested mode | The downlink codec is changed so that first frame with requested codec is transmitted with the first changed Codec Mode Indication. |
| A21 | SS->MS | | Improve radio conditions to above codec mode 3 threshold |
| A22 | MS->SS | Codec Mode Request changes | |
| A23 | SS->MS | Codec Mode Indication changes to requested mode | The downlink codec is changed so that first frame with requested codec is transmitted with the first changed Codec Mode Indication. |
| 24 | SS->MS | CHANNEL RELEASE | |

In TCH/AHS the Active Codec Set contains only three of four possible codecs, thus steps prefixing A are not implemented in this case.

## 26.16.2 Inband Signalling, Uplink Codec Adaptation

### 26.16.2.1 Conformance Requirement

The MS shall after reception of a Codec Mode Command apply the corresponding codec mode in the uplink direction for the next possible speech frame and no more than three speech frames later.This test is not intended to verify these conformance requirements, but to verify the correctness of the involved layer 1 and layer 3 signalling.

References:

TS GSM 05.09 sub-clauses: 3.3, 3.4

### 26.16.2.2 Test Purpose

This test is concerned with the link adaptation for AMR uplink and the related inband signalling. The test shall verify that the MS in the uplink direction applies the codec mode indicated by the network transmitted Codec Mode Commands, and that the MS correctly signals the used codec as Codec Mode Indication in the uplink inband signalling.

NOTE: The inband signals are L1 signalling transmitted every speech frame, as defined in GSM 05.09: In uplink directions Codec Mode Requests and Codec mode indications are transmitted alternatelly, whereas downlink signalling contains of alternately Codec Mode Commands and Codec Mode Indications.

26.16.2.3 Method of Test

Initial Conditions

The MS is "idle updated", with TMSI allocated.

Related PICS/PIXIT Statements

The MS supports the multi-rate speech codec.

Forseen Final State of MS

"Idle, updated", with TMSI allocated.

Test Procedure

a) A mobile originated call is initiated, following the CHANNEL REQUEST received from the MS the SS sends an IMMEDIATE ASSIGNMENT to the MS commanding it to go to a SDCCH. The MS indicates to the SS that it supports the multi-rate speech codec. The SS allocates the MS a TCH/AFS and signals the allowed codec subset and adaptation thresholds as part of the ASSIGNMENT COMMAND. DTX shall not be activated. Hopping is activated. The hopping band is centred around an ARFCN in the Mid ARFCN range. The hopping frequencies are chosen from those defined in section 6.

The following active codec mode subset shall apply:

| Codec Mode | TCH/AFS in kbit/s |
|---|---|
| CODEC_MODE_1 | 4,75 |
| CODEC_MODE_2 | 5,9 |
| CODEC_MODE_3 | 7,95 |
| CODEC_MODE_4 | 12,2 |

The following decision threshold and hysteresis values in terms of normalized carrier to interference ratio ($C/I_{norm}$), shall apply for Codec Mode Command / Request (MC', MR'):

| MC'/MR' | THR_MC_Dn(MC')/ THR_MR_Dn(MR') | THR_MC_Up(MC')/ THR_MR_Up(MR') |
|---|---|---|
| CODEC_MODE_4 | 16,5 dB | + ∞ |
| CODEC_MODE_3 | 11,5 dB | 18,5 dB |
| CODEC_MODE_2 | 6,5 dB | 13,5 dB |
| CODEC_MODE_1 | – ∞ | 8.5 dB |

b) In addition to the wanted signal, the SS produces an independent, uncorrelated interfering signal, Standard Test Signal I1 (unwanted signal).

The unwanted signal is continuous and has no fixed relationship with the bit transitions of the wanted signal. Its amplitude is 64 dB below that of the wanted signal.

c) The SS signals that a new codec is wanted in uplink direction by changing the value of the Codec Mode Command. The MS shall apply the commanded mode in uplink by changing the mode and correspondingly the value of the Codec Mode Indication to match the used codec. This is repeated for all neighbouring mode transitions in the Active Codec Set.

d) The SS sends a HANDOVER_COMMAND allocating the MS a TCH/AHS and signals the allowed codec subset and adaptation thresholds as part of the HANDOVER_COMMAND. DTX shall not be activated. Hopping is activated. The hopping band is centred around an ARFCN in the Mid ARFCN range. The hopping frequencies are chosen from those defined in section 6.

The following active codec mode subset shall apply:

| Codec Mode | TCH/AHS in kbit/s |
|---|---|
| CODEC_MODE_1 | 5.15 |
| CODEC_MODE_2 | 6.7 |
| CODEC_MODE_3 | 7.95 |

The following decision threshold and hysteresis values in terms of normalized carrier to interference ratio ($C/I_{norm}$), shall apply for Codec Mode Command / Request (MC', MR'):

| MC'/MR' | THR_MC_Dn(MC')/ THR_MR_Dn(MR') | THR_MC_Up(MC')/ THR_MR_Up(MR') |
|---|---|---|
| CODEC_MODE_3 | 12,5 dB | + ∞ |
| CODEC_MODE_2 | 11,0 dB | 15,0 dB |
| CODEC_MODE_1 | – ∞ | 13,0 dB |

e) step b) to c) are repeated for the settings given in step d)

Maximum Duration of Test

2 minutes

Expected Sequence in step c)

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS->SS | Channel Request | |
| 2 | SS->MS | Immediate Assignment | |
| 3 | MS->SS | Set Up SDCCH | MS indicates which speech codecs it can support |
| 4 | SS->MS | Assignment Command SDCCH | Network allocates TCH/AFS / TCH/AHS and allowed codec subset and adaptation thresholds |
| 5 | MS->SS | Assignment Complete | SS simulates good radio conditions ($C/I_{norm}$ = 64dB) |
| A6 | SS->MS | Codec Mode Command change | Codec Mode 3 is commanded by inband signalling |
| A7 | MS->SS | Codec Mode Indication change | Codec Mode Indication shows current active mode in uplink, thus changed when mode changes |
| 8 | SS->MS | Codec Mode Command change | Codec Mode 2 is commanded by inband signalling |
| 9 | MS->SS | Codec Mode Indication change | Codec Mode 2 is indicated in inband signalling with first frame using Codec Mode 2 |
| 10 | SS->MS | Codec Mode Command change | Codec Mode 1 is commanded by changing inband signal |
| 11 | MS->SS | Codec Mode Indication change | Codec Mode 1 is indicated in inband signalling with first frame using Codec Mode 1. |
| 12 | SS->MS | Codec Mode Command change | Codec Mode 2 is commanded by changing inband signal |
| 13 | MS->SS | Codec Mode Indication change | Codec Mode 2 is indicated in inband signalling with first frame using Codec Mode 2. |
| 14 | SS->MS | Codec Mode Command change | Codec Mode 3 is commanded by changing inband signal |
| 15 | MS->SS | Codec Mode Indication change | Codec Mode 3 is indicated in inband signalling with first frame using Codec Mode 3. |
| A16 | SS->MS | Codec Mode Command change | Codec Mode 4 is commanded by changing inband signal |
| A17 | MS->SS | Codec Mode Indication change | Codec Mode 4 is indicated in inband signalling with first frame using Codec Mode 4 |
| 18 | SS->MS | CHANNEL RELEASE | |

In TCH/AHS the Active Codec Set contains only three of four possible codecs, thus steps prefixing A are not implemented in this case.

## 26.16.3 Structured procedures / MS terminated call / early assignment / no initial codec mode

This test applies to mobiles supporting the AMR speech codec.

Note: this test is derived from the one described in section 26.12 and entitled: “Structured procedures / MS terminated call / early assignment”

### 26.16.3.1 Conformance requirement

1) In acceptance to a SETUP message indicating speech, the MS shall indicate and include in the CALL CONFIRMED message all the speech versions that it supports.

2) Upon receipt of the ASSIGNMENT COMMAND message specifying using CHx-FR or CHx/HR the Mobile Station continues a mobile terminating call establishment with early assignment of traffic channel

   a) by replying to the ASSIGNMENT command with an ASSIGNMENT COMPLETE message and,

   b) by continuing the call establishment by through connecting TCH in both directions if it supports immediate connect or by sending an ALERTING message otherwise,

3) The ASSIGNMENT command will not specify which of the codec modes the MS should use, but allow the handset to select the default codec mode

4) For speech calls, the mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

CHx – identifies any of the Channel Codec mode

FR – full rate channel

HR – half rate channel

References:

GSM 04.08 sub-clauses: 9.12, 9.1.5

GSM 05.09 sub-clauses: 3.4

### 26.16.3.2 Test purpose

1) To verify that, in acceptance to a SETUP message indicating speech, the MS indicates and includes in the CALL CONFIRMED message all the speech versions that it supports.

2) To verify that upon receipt of the ASSIGNMENT COMMAND message specifying using CHx-FR or CHx/HR the Mobile Station continues a mobile terminating call establishment with early assignment of traffic channel

   a) by replying to the ASSIGNMENT command with an ASSIGNMENT COMPLETE message and ,

   b) by continuing the call establishment by through connecting TCH in both directions if it supports immediate connect or by sending an ALERTING message otherwise,

3) The ASSIGNMENT command will not specify which of the codec modes the MS should use, but allow the handset to select the default codec mode

4) To verify that for speech calls, the mobile station shall attach the user connection at latest when sending the connect message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

### 26.16.3.3 Method of Test

#### Initial Conditions

SS 1 cell, default parameters

MS in MM-state “idle, updated” with valid TMSI and CKSN

#### Related PICS/PIXIT Statements

Way to indicate alerting.

Way to make the MS accept an incoming call after alerting.

Speech supported for MR version 1 and full rate version1.

#### Foreseen Final State of MS

“Idle, updated”, with TMSI allocated.

#### Test Procedure

The following test is performed for both channel modes of the multi-rate codec, ie full rate and half rate:

A teleservice is selected that is supported by the MS; if the MS supports speech, the selected teleservice is speech. If necessary, the MS is configured for that teleservice.

The MS is paged and the resulting call is established. Having reached the active state, the MS is made to clear the call.

Maximum Duration of Test

3 minutes

Expected Sequence

This test is repeated for M=1,2,3,4 for an MS supporting different codec modes.

This test is repeated for HR and FR channel assignment.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS->MS | PAGING REQUEST TYPE 1 | Sent on the correct paging sub-channel |
| 2 | MS->SS | CHANNEL REQUEST | |
| 3 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | PAGING RESPONSE | Message is contained in the SABM |
| 5 | SS->MS | AUTHENTICATION REQUEST | |
| 6 | MS->SS | AUTHENTICATION RESPONSE | SRES specifies correct value |
| 7 | SS->MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message |
| 8 | MS->SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering |
| 10 | SS->MS | SETUP | |
| 11 | MS->SS | CALL CONFIRMED | |
| | | | If the MS supports an Immediate connection then branch A applies. If the MS doesn't support an immediate connection then branch B applies. |
| A12 | MS->SS | CONNECT | sent on the old channel |
| A13 | SS->MS | ASSIGNMENT COMMAND | SS allocates allowed subset codec modes, but does not identify a mode for immediate operation. |
| A14 | MS->SS | ASSIGNMENT COMPLETE | |
| B12 | SS->MS | ASSIGNMENT COMMAND | |
| B13 | MS->SS | ASSIGNMENT COMPLETE | Sent on the new channel. SS allocates allowed subset codec modes, but does not identify a mode for immediate operation. |
| B14 | MS->SS | ALERTING | |
| B15 | MS | | An alerting indication as defined in the PICS/PIXIT statement is given by the MS. |
| B16 | MS | | The MS is made to accept the call. |
| B17 | MS->SS | CONNECT | |
| 18 | MS | | The TCH shall be through connected by both directions in the dedicated mode, using the default codec mode specified. |
| 19 | SS->MS | CONNECT ACK | |
| 20 | MS | | The MS is made to release the call. |
| 21 | MS->SS | DISCONNECT | |
| 22 | SS->MS | RELEASE | |
| 23 | MS->SS | RELEASE COMPLETE | |
| 24 | SS->MS | CHANNEL RELEASE | The main signalling link is released. |

## 26.16.4 Structured procedures / MS originated call / late assignment / specified initial codec mode

This test applies to mobiles supporting the AMR speech codec.

Note: This test is derived from the one described in section 26.12 and entitled: “Structured procedures / MS terminated call / early assignment”

### 26.16.4.1 Conformance requirement

1) The MS shall indicate and include in the mobile originating SETUP for speech call all the speech versions that it supports.

2) Upon receipt of the ASSIGNMENT COMMAND message using full rate version 1,2 or 3 or half rate version1, the Mobile Station starts a normal channel assignment procedure. It means that the MS initiates a local end release of link layer connections, disconnects the physical channels, commands the switching to the assigned channels and initiates the establishment of lower layer connections (this includes the activation of the channels, their connection and the establishment of the data links). After the main signalling link is successfully established, the MS returns an ASSIGNMENT COMPLETE message, specifying cause 'normal event', to the network on the main DCCH.

3,4) The call control entity of the Mobile Station in the "call initiated" state, in the "mobile originating call proceeding" state or in the "call delivered" state, shall, upon receipt of a CONNECT message:

- attach the user connection to the radio path;
- return a CONNECT ACKNOWLEDGE message.

CHx – identifies any of the Channel Codec mode

FR – full rate channel

HR – half rate channel

References:

GSM 04.08 sub-clauses: 9.12, 9.1.5

GSM 05.09 sub-clauses: 3.4

### 26.16.4.2 Test purpose

1) To verify that the MS indicates and includes in the mobile originating SETUP for speech call all the speech versions that it supports.

2) To verify that subsequently after receipt of an IMMEDIATE ASSIGNMENT message allocating an SDCCH, after completion of establishment of the main signalling link, after having sent a CM SERVICE REQUEST

message, after having successfully performed authentication and cipher mode setting procedures, after having sent a SETUP message, after having received a CALL PROCEEDING message followed by an ALERTING message and an ASSIGNMENT COMMAND message allocating using speech full rate version1, 2 or 3 or speech half rate version 1, the MS sends an ASSIGNMENT COMPLETE message. The ASSIGNMENT COMMAND message will also identify which codec mode the MS is allowed to use for the call, the threshold values and the initial codec mode for immediate use.

3) To verify that subsequently, after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message returns a CONNECT ACKNOWLEDGE message.

4) To verify that after the suite of actions specified in test purposes 1 and 2, the MS after receiving a CONNECT message attaches the user connection to the radio path. (This is checked by verifying that there is a point in time after transmission of the first L2 frame containing the (complete) CONNECT message, where the MS is sending appropriate speech or data frames whenever it doesn't have to transmit or acknowledge an I frame on layer 2 of the FACCH.)

### 26.16.4.3 Method of Test

#### Initial Conditions

SS 1 cell, default parameters

MS in MM-state “idle, updated” with valid TMSI and CKSN

#### Related PICS/PIXIT Statements

Way to indicate alerting.

Way to make the MS accept an incoming call after alerting.

Speech supported for MR version 1 and full rate version1.

#### Foreseen Final State of MS

The MS has a MO call in state U10, “active”.

#### Test Procedure

The following test is performed for both channel modes of the multi-rate codec, ie full rate and half rate.

The MS is made to initiate a speech call. The call is established with a late assignment.

#### Maximum Duration of Test

3 minutes

#### Expected Sequence

This test is repeated for M=1,2,3,4 for an MS supporting different codec modes.

This test is repeated for HR and FR channel assignment.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The “called number” is entered |
| 2 | MS->SS | CHANNEL REQUEST | |
| 3 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | CM SERVICE REQUEST | Message is contained in SABM |
| 5 | SS->MS | AUTHENTICATION REQUEST | |
| 6 | MS->SS | AUTHENTICATION RESPONSE | SRES specifies correct value |
| 7 | SS->MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message |
| 8 | MS->SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering |
| 10 | SS->MS | SETUP | The MS indicates it supports the FR version 3 speech, and FR version 1, 2 speech and HR version 1 speech can be supported. |
| 11 | MS->SS | CALL CONFIRMED | |
| 12 | SS->MS | CALL PROCEEDING | |
| 13 | SS->MS | ALERTING | |
| 14 | MS | | An alerting indication as defined in the PICS/PIXIT statement is given by the MS. |
| 15 | SS->MS | ASSIGNMENT COMMAND | SS allocates allowed subset codec modes, but does identifies a mode for immediate operation. |
| 16 | MS->SS | ASSIGNMENT COMPLETE | |
| 17 | MS->SS | CONNECT | |
| 18 | MS | | The TCH shall be through connected by both directions in the dedicated mode, using the codec mode specified. |
| 19 | SS->MS | CONNECT ACK | |

Specific Message Content

M=1

Assignment Command

Use octet 4 only to define the one and only allowed codec mode

M=2

Assignment Command

Use octets 4,5 and 6 to define the 2 allowed codec modes and the threshold values

M=3

Assignment Command
Use octets 4,5,6 and 7 to define the 3 allowed codec modes and the threshold values

M=4

Assignment Command

Use octets 4,5,6,7 and 8 to define the 4 allowed codec modes and the threshold values

## 26.16.5 AMR signalling / Handover / active call / successful case

A number of different parameters have been identified that may affect the call handover, these are:

- GSM 700, GSM 850, GSM900 or GSM1800 or PCS 1900

- Frequency hopping on, frequency hopping off
- Channel mode: TCH/F or TCH/H
- DTX on or DTX off
- Codec mode (TCH/F: CH1 – CH8 and TCH/H: CH9 – CH14)

This test applies to mobiles supporting the AMR speech codec.

This test applies only to MS supporting the GSM 700, GSM 850, R-GSM, E-GSM, P-GSM 900, GSM 1800 or the PCS 1900 frequency band.

Note: This test is derived from 26.12.2 – EFR Signalling/Handover/active call/successful case.

References:

TS GSM 04.08 sub-clauses: 3.4.3.1, 3.4.6, 9.1.2, 9.1.5, 9.1.15

### 26.16.5.1 Conformance requirements

The MS shall correctly apply the handover procedure in the non-synchronised case when:

- a call is in progress and,
- handover is performed from a TCH/F with/without frequency hopping towards a TCH/F with/without frequency hopping
- handover is performed from a cell with DTX on/off to a cell with DTX on/off
- handover is performed from a cell where the dedicated channel is TCH/F or H to a cell where the dedicated channel will be TCH/F or H
- handover is performed where the codec mode is set to any valid mode (dependant on the channel allocation) to a cell where codec mode will become any valid mode (dependant on the channel allocation)

### 26.16.5.2 Test Purpose

To ensure that the terminal handovers correctly, when the cells have different parameter settings. The call shall be established before the handover is made and verified that it is still active after the handover.

The tests below indicate the cell parameter settings from the cell that has the call established to the new cell parameter settings that will maintain the call.

### 26.16.5.3 Method of Test

#### Initial Conditions

MS in call active state U10 on cell A.

SS 2 cells, A and B with same LAI, default parameters except:

GSM900:

Cell A has: BCCH ARFCN = 20
Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114)

Cell B has: BCCH ARFCN = 40
Cell Allocation = (14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114)

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM1800:

Cell A has: BCCH ARFCN = 747
Cell Allocation = (734, 741, 747, 754, 759, 762, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844)

Cell B has: BCCH ARFCN = 764
Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844)

The Cell Allocation of both Cell A and Cell B shall be coded using range 256 format.

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

PCS 1900:

Cell A has: BCCH ARFCN = 647
Cell Allocation = (634, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744)

Cell B has: BCCH ARFCN = 664
Cell Allocation = (639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744)

The Cell Allocation of both Cell A and Cell B shall be coded using range 256 format.

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM700:

Cell A has: BCCH ARFCN = 457.
Cell Allocation = (447, 454, 457, 463, 471, 479, 482 ,483 ,489, 496, 498, 500, 501, 502, 503, 506, 508).

Cell B has: BCCH ARFCN = 477.
Cell Allocation = (451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508).

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

GSM850:

Cell A has: BCCH ARFCN = 147.
Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241).

Cell B has: BCCH ARFCN = 167.
Cell Allocation = (141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241).

The frame numbers of cells A and B shall be different by 100.

The timebase of cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

Related PICS/PIXIT Statements

Speech supported for MR version 1 and full rate version1.

Support for state U10 of the Call Control protocol.

Support for the multi-rate speech version 1.

Type of Mobile Station (GSM 700, GSM 850, P-GSM or E-GSM or R-GSM or GSM1800 or PCS 1900).

### Foreseen Final State of MS

The MS has a MO call in state U10, “active”.

### Maximum Duration of Test

10 minutes

### Expected Sequence

The following test sequence shall be used for each of the test cases described below.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS -> SS | | The MS and SS are in the active state of a call on the channel described below. |
| 1 | SS -> MS | HANDOVER COMMAND | See Specific message contents |
| 2 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. If the HANDOVER COMMAND includes a starting time IE then the first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used) |
| 3 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS messages. See specific message contents. |
| 4 | MS -> SS | SABM | Sent without information field |
| 5 | SS -> MS | UA | |
| 6 | MS -> SS | HANDOVER COMPLETE | The message shall be ready to be transmitted before 'x' ms after the completion of step 3. |
| 7 | MS -> SS | | The MS and SS are in the active state of a call on the TCH described below. The SS checks that the TCH is through connected in the correct mode. |

### Test Cases

#### Test 26.16.5.3.1

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | ON |
| 900 or 1800 or 1900 | 900 | 900 |
| DTX | OFF | OFF |
| Traffic Channel | FR | FR |
| Speech Codec | AMR | AMR |

#### Test 26.16.5.3.2

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | OFF |
| 900 or 1800 or 1900 | 900 | 900 |
| DTX | ON | OFF |
| Traffic Channel | HR | FR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.3

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | ON |
| 900 or 1800 or 1900 | 900 | 1800 or 1900 |
| DTX | ON | ON |
| Traffic Channel | FR | HR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.4

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | OFF | ON |
| 900 or 1800 or 1900 | 900 | 1800 or 1900 |
| DTX | OFF | ON |
| Traffic Channel | HR | HR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.5

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | OFF | ON |
| 900 or 1800 or 1900 | 1800 or 1900 | 1800 or 1900 |
| DTX | ON | ON |
| Traffic Channel | FR | FR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.6

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | ON |
| 900 or 1800 or 1900 | 1800 or 1900 | 900 |
| DTX | ON | ON |
| Traffic Channel | FR | FR |
| Speech Codec | AMR | EFR |

Test 26.16.5.3.7

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | ON |
| 700 or 850 or 1900 | 700 | 700 |
| DTX | OFF | OFF |
| Traffic Channel | FR | FR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.8

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | OFF |
| 700 or 850 or 1900 | 700 | 700 |
| DTX | ON | OFF |
| Traffic Channel | HR | FR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.9

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | ON |
| 700 or 850 or 1900 | 850 | 850 |
| DTX | OFF | OFF |
| Traffic Channel | FR | FR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.10

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | OFF |
| 700 or 850 or 1900 | 850 | 850 |
| DTX | ON | OFF |
| Traffic Channel | HR | FR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.11

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | ON |
| 700 or 850 or 1900 | 850 | 1900 |
| DTX | ON | ON |
| Traffic Channel | FR | HR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.12

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | OFF | ON |
| 700 or 850 or 1900 | 850 | 1900 |
| DTX | OFF | ON |
| Traffic Channel | HR | HR |
| Speech Codec | AMR | AMR |

Test 26.16.5.3.13

| Cell Parameters | Cell A | Cell B |
|---|---|---|
| Frequency Hopping | ON | ON |
| 700 or 850 or 1900 | 1900 | 850 |
| DTX | ON | ON |
| Traffic Channel | FR | FR |
| Speech Codec | AMR | EFR |

Note:

FR – indicates Full Rate traffic channel assigned for AMR use

HR – indicates Half Rate traffic channel assigned for AMR use

## 26.16.6 Structured procedures / emergency call

This test applies to mobiles supporting the AMR speech codec.

Note: this test is derived from section 26.15.5 - Structured procedures / emergency call

### 26.16.6.1 Conformance requirement

1) The MS in the "idle, updated" state, after a successful location update, the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 700, GSM 850 and PCS 1900 MS in USA and Canada), or 08 (for GSM 700, GSM 850 and PCS 1900 MS in Mexico) has been entered by user, shall send a CHANNEL REQUEST message with correct establishment cause ("emergency call").

2) After assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct CKSN and TMSI , with CM Service Type "emergency call establishment".

3) Authentication and cipher mode setting shall be performed successfully.

4) After cipher mode setting acceptance by the network, the MS shall send an EMERGENCY SETUP message.

5) The AMR mobile station shall accept channel assignment to a TCH/F or TCH/H depending what the network signals to the mobile and also select the correct codec mode. The call shall be set up using the AMR codec.

6) After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the TCH shall be through connected in both directions if an appropriate TCH is available.

7) The call shall be cleared correctly.

References:

TS GSM 04.08 sub-clauses: 3.4.3.1, 3.4.6, 9.1.2, 9.1.5

### 26.16.6.2 Test purpose

1) To verify that an MS supporting speech in the MM state "idle, updated", when made to call the number 112 (for GSM 900 and 1800 MS), or 911 (for GSM 700, GSM 850 and PCS 1900 MS in USA and Canada), or 08 (for GSM 700, GSM 850 and PCS 1900 MS in Mexico), sends a CHANNEL REQUEST message with establishment cause "emergency call".

2) To verify that after assignment of a dedicated channel the first layer message sent by the MS on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment”.

3) To verify that authentication and cipher mode setting are performed successfully.

4) To verify that after cipher mode setting acceptance by the SS, the MS sends an EMERGENCY SETUP message.

5) To verify that the AMR mobile station shall both accept channel assignment to a TCH/F or TCH/H depending what the network signals to the mobile and also select the correct codec mode. The call shall be set up using the AMR codec.

6) To verify that subsequently the MS has through connected the TCH in both directions.

7) To verify the call is cleared correctly.

### 26.16.6.3 Method of Test

#### Initial Conditions

SS:1 cell default parameters

MS: The MS is in the MM-state “idle, updated” with valid TMSI and CKSN.

#### Foreseen Final State of the MS

The MS is in the MM-state “idle, updated” with valid TMSI and CKSN.

#### Related PICS/PIXIT Statements

Speech supported for MR version 1 and full rate version1.

#### Test Procedure

The MS is made to initiate and emergency call. The call is established with late assignment. Having reached the active state, the call is cleared by the SS. This procedure is repeated so that the assignment is made with all the channel rates and speech versions supported by the MS.

#### Maximum Duration of Test

3 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The appropriate emergency call number is entered |
| 2 | SS->MS | CHANNEL REQUEST | Establishment cause is emergency call establishment. |
| 3 | SS->MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS->SS | CM SERVICE REQUEST | Message is contained in SABM. The CM service type IE indicates “emergency call establishment”. |
| 5 | SS->MS | AUTHENTICATION REQUEST | |
| 6 | MS->SS | AUTHENTICATION RESPONSE | SRES specifies correct value |
| 7 | SS->MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message |
| 8 | MS->SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering |
| 10 | MS->SS | EMERGENCY SETUP | The MS indicates it which speech it supports. |
| 11 | SS->MS | CALL PROCEEDING | |
| 12 | SS->MS | ALERTING | |
| 13 | SS->MS | ASSIGNMENT COMMAND | See specific message contents. |
| 14 | MS->SS | ASSIGNMENT COMPLETE | |
| 15 | MS->SS | CONNECT | |
| 16 | SS->MS | CONNECT ACK | |
| 17 | MS | | The TCH shall be through connected by both directions in the dedicated mode, using the codec mode specified. |
| 18 | SS->MS | DISCONNECT | |
| 19 | MS->SS | RELEASE | |
| 20 | SS->MS | RELEASE COMPLETE | |
| 21 | SS->MS | CHANNEL RELEASE | |

Specific Message Contents:

ASSIGNMENT COMMAND

|---|---|
| Mode of the first channel<br>- Mode | <br>Multi rate version 1 |

## 26.16.7 AMR Signalling / Directed Retry / Mobile Originated Call

This test is applicable to all MS which support AMR speech.

This test applies only to MS supporting the GSM 700, GSM 850, R-GSM, E-GSM, P-GSM 900, GSM 1800 or PCS 1900 frequency band.

NOTE: This test is derived from the one defined in section 26.12.6 and entitled “EFR Signalling / Directed Retry / Mobile Originated Call “

### 26.16.7.1 Conformance requirements

The MS shall correctly apply the Directed Retry procedure from SDCCH/8 (no frequency hopping) to TCH/AMR with frequency hopping in the non-synchronized case during call establishment. The call control entity of the Mobile Station in the "mobile originating call proceeding" state shall, upon receipt of a CONNECT message, attach the AMR speech connection to the radio path and return a CONNECT ACKNOWLEDGE message to the SS.

References

GSM 04.08, sections 3.4.4, 5.2.1.6. and 9.1.15.

GSM 04.13, section 5.2.6.2.

### 26.16.7.2 Test purpose

To test that, when the MS is ordered to perform a non-synchronized handover after the CALL PROCEED message, it continuously sends access bursts on the main DCCH until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly takes the values of the Timing Advance information element in the PHYSICAL INFORMATION message into account. To test that the MS activates the new channel correctly and transmits the HANDOVER COMPLETE message without undue delay. To test that the call control entity of the Mobile Station in the "mobile originating call proceeding" state, upon receipt of a CONNECT message, attaches the AMR speech connection to the radio path and returns a CONNECT ACKNOWLEDGE message to the SS.

### 26.16.7.3 Method of test

#### Initial Conditions

System Simulator:

2 cells A and B with same LAI, default parameters, except:

GSM 900:

Cell A has:

BCCH ARFCN = 20.

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 40.

Cell Allocation = (14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using bit map 0 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

GSM 1 800:

Cell A has:

BCCH ARFCN = 747.

Cell Allocation = (734, 741, 747, 754, 759, 762, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 764.

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using Range 512 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non combined SDCCH is used.

PCS 1 900:

Cell A has:

BCCH ARFCN = 647.

Cell Allocation = (634, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 664.

Cell Allocation = (639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using Range 512 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non combined SDCCH is used.

GSM 700:

Cell A has:

BCCH ARFCN = 457.

Cell Allocation = (447, 454, 457, 463, 471, 479, 482 ,483 ,489, 496, 498, 500, 501, 502, 503, 506, 508).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 477.

Cell Allocation = (451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using 128 range format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

GSM 850:

Cell A has:

BCCH ARFCN = 147.

Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 167.

Cell Allocation = (141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using 128 range format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

### Related PICS/PIXIT Statements

Speech supported for MR version 1 and full rate version1.

Support for MO calls.

Way to indicate alerting (only applicable if the MS supports the feature).

Type of MS (GSM 700 or GSM 850 or P-GSM 900 or EGSM or RGSM or GSM 1 800 or PCS 1 900).

### Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

### Test Procedure

The MS is made to initiate a speech call on Cell A. After the SS has sent the CALL PROCEEDING message the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH to cell B. The SS observes the access bursts and after receiving n (n being arbitrarily

chosen between values according to table 26.6-2 of section 26.6.5) access bursts, the SS sends one PHYSICAL INFORMATION message with an arbitrarily chosen Timing Advance. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. After the successful handover procedure the SS sends the ALERTING message. The correct alerting indication shall be given to the user (only applicable if the MS supports this feature). The SS sends the CONNECT message indicating that the call has been answered. The AMR speech channel shall be through connected in both directions. The MS shall send then the CONNECT ACKNOWLEDGE message as the response on the CONNECT message. Having reached the active state, the call is cleared by the SS.

The term "ready to transmit" is defined in GSM 04.13. The value of "**x**" depends upon the target channel and is specified in the specific message contents section.

### Maximum Duration of Test

1 minute, including 30 seconds for any necessary operator actions.

### Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | -------- | -------- | A MO call is initiated on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "originating call and the network does not set the NECI bit to 1". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | CM SERVICE REQUEST | CM Service Type = Mobile Originating Call Establishment. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | MS -> SS | SETUP | AMR speech |
| 11 | SS -> MS | CALL PROCEEDING | |
| 12 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| 13 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. |
| 14 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| 15 | MS -> SS | SABM | Sent without information field. |
| 16 | SS -> MS | UA | |
| 17 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step 14. |
| 18 | SS -> MS | ALERTING | |
| 19 | MS | | Depending on the PICS, an alerting indication is given. |
| 20 | SS -> MS | CONNECT | |
| 21 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 22 | MS | | The AMR speech channel is through connected in both directions. |
| 23 | SS -> MS | DISCONNECT | |
| 24 | MS -> SS | RELEASE | |
| 25 | SS -> MS | RELEASE COMPLETE | |
| 26 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

For GSM 900:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|---|---|
| As default message contents except: | |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | As default message contents. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | Single RF Channel. |
| - ARFCN | Chosen arbitrarily from the Cell Allocation of Cell A. |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | 40 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Synchronization Indication IE is not included | |
| Frequency list after time | |
| - Frequency List | uses bit map 0 to allocate the following 15 frequencies (14, 18, 22, 24, 30, 31, 38, 60, 66, 73, 74, 75, 76, 108, 114). |
| Channel Mode IE | Speech (multi rate version 1). |

Step 17: "**x**" = 500.

GSM 1 800:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|---|---|
| As default message contents except: | |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | As default message contents. |

| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | 664 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency Short List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Synchronization Indication IE not included. | |
| Frequency Short List after time | |
| - Frequency Short List | Use Range 128 to encode the following 2 frequencies (646, 679). |
| Mode of First Channel | Speech (multi rate version 1). |

Step 17: "**x**" = 500.

For GSM 700:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|---|---|
| As default message contents except: | |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | As default message contents. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | Single RF Channel. |
| - ARFCN | Chosen arbitrarily from the Cell Allocation of Cell A. |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | 477 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Synchronization Indication IE is not included | |
| Frequency list after time | |
| - Frequency List | Uses 128 rangr to allocate the following 15 frequencies (451, 455, 459, 461, 467, 468, 475, 497, 498, 500, 501, 502, 503, 506, 508). |
| Channel Mode IE | Speech (multi rate version 1). |

Step 17: "**x**" = 500.

For GSM 850:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|---|---|
| As default message contents except: | |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | As default message contents. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | Single RF Channel. |
| - ARFCN | Chosen arbitrarily from the Cell Allocation of Cell A. |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | 167 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Zero (this gives cyclic hopping). |
| Synchronization Indication IE is not included | |
| Frequency list after time | |
| - Frequency List | Uses 128 range to allocate the following 15 frequencies (141, 145, 149, 151, 157, 158, 165, 187, 193, 200, 201, 202, 203, 235, 241). |
| Channel Mode IE | Speech (multi rate version 1). |

Step 17: "**x**" = 500.

## 26.16.8 AMR Signalling / Directed Retry / Mobile Terminated Call

This test is applicable to all MS which support AMR speech.

This test applies only to MS supporting the GSM 700, GSM 850, R-GSM, E-GSM, P-GSM 900, GSM 1800 or the PCS 1900 frequency band.

NOTE: This test is derived from the one defined in section 26.12.7 and entitled “EFR Signalling / Directed Retry / Mobile Terminated Call “

### 26.16.8.1 Conformance requirements

The MS shall correctly apply the Directed Retry procedure from SDCCH/8 with frequency hopping to TCH/AMR with frequency hopping and starting time in the non-synchronized case during call establishment. The call control entity of the Mobile Station in the "call delivered" state shall, if the MS supports immediate connect, continue the call establishment by through-connecting the AMR traffic channel in both directions, or if the MS does not support immediate connect, send an ALERTING message. The MS indicates acceptance of a MT call by sending CONNECT.

The mobile station shall attach the user connection at latest when sending the CONNECT message, except if there is no compatible radio resource available at this time. In this case the attachment shall be delayed until such a resource becomes available.

#### References

GSM 04.08, sections 3.4.4, 5.2.2.5, 5.2.2.6, 5.2.2.9 and 9.1.15.

GSM 04.13, section 5.2.6.2.

### 26.16.8.2 Test purpose

To test that when the MS is ordered to perform a non-synchronized handover after the CALL CONFIRM message, it continuously sends access bursts on the main DCCH until it receives a PHYSICAL INFORMATION message from the SS. To test that the MS correctly takes the values of the Timing Advance information element in the PHYSICAL INFORMATION message into account. To test that the MS activates the new channel correctly and transmits the

HANDOVER COMPLETE message without undue delay. To test that the call control entity of the Mobile Station in the "call delivered" state, if the MS supports immediate connect, continues the call establishment by through-connecting the AMR traffic channel in both directions, or if the MS does not support immediate connect, sends an ALERTING message. To test that the MS indicates acceptance of a MT call by sending CONNECT.

To test that the mobile station attaches the user connection at latest when sending the CONNECT message, except if there is no compatible radio resource available at this time. To test that in this case the attachment is delayed until such a resource becomes available.

### 26.16.8.3 Method of test

#### Initial Conditions

System Simulator:

2 cells A and B with same LAI, default parameters, except:

GSM 900:

Cell A has:

BCCH ARFCN = 20.

Cell Allocation = (10, 17, 20, 26, 34, 42, 45, 46, 52, 59, 66, 73, 74, 75, 76, 108, 114).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 40.

Cell Allocation = (14, 18, 22, 24, 30, 31, 38, 40, 60, 66, 73, 74, 75, 76, 108, 114).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using bit map 0 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

GSM 1 800:

Cell A has:

BCCH ARFCN = 747.

Cell Allocation = (734, 741, 747, 754, 759, 762, 766, 767, 773, 775, 779, 782, 791, 798, 829, 832, 844).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 764.

Cell Allocation = (739, 743, 746, 749, 756, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using Range 512 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non combined SDCCH is used. PCS 1900:

Cell A has:

BCCH ARFCN = 647.

Cell Allocation = (634, 641, 647, 654, 659, 662, 666, 667, 673, 675, 679, 682, 691, 698, 729, 732, 744).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 664.

Cell Allocation = (639, 643, 646, 649, 656, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using Range 512 format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non combined SDCCH is used.

GSM 700:

Cell A has:

BCCH ARFCN = 457.

Cell Allocation = (447, 454, 457, 463, 471, 479, 482 ,483 ,489, 496, 498, 500, 501, 502, 503, 506, 508).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 477.

Cell Allocation = (451, 455, 459, 461, 467, 468, 475, 477, 497, 498, 500, 501, 502, 503, 506, 508).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using 128 range format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

GSM 850:

Cell A has:

BCCH ARFCN = 147.

Cell Allocation = (137, 144, 147, 153, 161, 169, 172, 173, 179, 186, 193, 200, 201, 202, 203, 235, 241).

PLMN colour code, NCC = as defaults.

BS colour code, BCC = as defaults.

PLMN_PERM = 00001010.

Cell B has:

BCCH ARFCN = 167.

Cell Allocation = (141, 145, 149, 151, 157, 158, 165, 167, 187, 193, 200, 201, 202, 203, 235, 241).

PLMN colour code, NCC = 3.

BS colour code, BCC = 0.

Both cells send SYSTEM INFORMATION TYPE 1 messages containing the complete Cell Allocation of the cell, using 128 range format.

The timebase of Cells A and B shall be such that the edges of their timeslots are not coincident at the antenna connector.

A non-combined SDCCH is used.

Mobile Station:

The MS is in the "idle, updated" state, with a TMSI allocated and camped on cell A.

### Related PICS/PIXIT Statements

Speech supported for MR version 1 and full rate version1.

Support for MT calls.

Way to indicate alerting (only applicable if the MS supports the feature).

Way to make the MS accept an incoming call after alerting.

Immediate connect supported (Y/N).

Type of MS (GSM 700 or GSM 850 or P-GSM 900 or EGSM or RGSM or GSM 1 800 or PCS 1900).

### Foreseen Final State of the MS

"Idle, updated" with TMSI allocated and camped on cell B.

### Test Procedure

The MS is paged on Cell A. The MS responds to the PAGING REQUEST message and establishes a mobile terminated speech call on Cell A. If the MS supports immediate connect, it continues the call establishment by through-connecting the traffic channel in both directions, or if the MS does not support immediate connect, it sends an ALERTING message. The MS indicates acceptance of a MT call by sending CONNECT.

After the MS has sent the CALL CONFIRMED message (if the MS supports immediate connect then the MS sends the CONNECT message after the CALL CONFIRMED message on the old channel) the SS sends a HANDOVER COMMAND message, ordering the MS to switch to cell B. The MS shall then begin to send access bursts on the new DCCH to cell B. The SS observes the access bursts and after receiving n (n being arbitrarily chosen between values according to table 26.6-2 of section 26.6.5) access bursts, the SS sends one PHYSICAL INFORMATION message with an arbitrarily chosen Timing Advance. The MS shall activate the channel in sending and receiving mode. The MS shall establish a signalling link. The MS shall be ready to transmit a HANDOVER COMPLETE message before x ms after the end of the PHYSICAL INFORMATION message, but not before a UA frame has been sent by the SS. After the successful handover procedure the MS sends the ALERTING message (if the MS runs the immediate connect procedure then the MS does not send an ALERTING message). The correct alerting indication shall be given to the user (only applicable if the MS supports the feature or if the MS is not using the immediate connect procedure). After the MS sent the CONNECT message the AMR speech channel shall be through connected in both directions. The SS sends then the CONNECT ACKNOWLEDGE message as the response on the CONNECT message. Having reached the active state, the call is cleared by the SS.

The term "ready to transmit" is defined in GSM 04.13. The value of "**x**" depends upon the target channel and is specified in the specific message contents section.

### Maximum Duration of Test

1 minute, including 30 seconds for any necessary operator actions.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | Sent on the correct paging subchannel on cell A. |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | See specific message contents. |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SETUP | AMR speech. |
| 11 | MS -> SS | CALL CONFIRMED | If the MS supports immediate connect then branch A applies. If the MS does not support immediate connect then branch B applies |
| A12 | MS -> SS | CONNECT | sent on the old channel |
| A13 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| A14 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. The first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used). |
| A15 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| A16 | MS -> SS | SABM | Sent without information field. |
| A17 | SS -> MS | UA | |
| A18 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step A15. |
| B12 | SS -> MS | HANDOVER COMMAND | See specific message contents. |
| B13 | MS -> SS | HANDOVER ACCESS | Repeated on every burst of the uplink main DCCH until reception of PHYSICAL INFORMATION. Handover Reference as included in the HANDOVER COMMAND. The first HANDOVER ACCESS message shall be transmitted in the indicated frame (unless the indicated frame is not used by that channel, in which case the next frame used by that channel shall be used). |
| B14 | SS -> MS | PHYSICAL INFORMATION | Sent after reception of n HANDOVER ACCESS message. Timing Advance is arbitrarily chosen. |
| B15 | MS -> SS | SABM | Sent without information field. |
| B16 | SS -> MS | UA | |
| B17 | MS -> SS | HANDOVER COMPLETE | This message shall be ready to be transmitted before "x" ms after the completion of step B14. |
| B18 | MS -> SS | ALERTING | |
| B19 | MS | | Gives an alerting indication as defined in a PICS/PIXIT statement is given by the MS |
| B20 | MS | | The MS is made to accept the call in the way described in a PICS/PIXIT statement |
| B21 | MS -> SS | CONNECT | |
| 22 | MS | | The TCH/AMR channel shall be through connected in both directions. |
| 23 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 24 | SS -> MS | DISCONNECT | |
| 25 | MS -> SS | RELEASE | |
| 26 | SS -> MS | RELEASE COMPLETE | |
| 27 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents

For GSM 900:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|---|---|
| As default message contents except: | |
| L2 pseudo length | 14 octets (11 + contents of the MA). |
| Channel Description | |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | Arbitrary value, but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Mobile Allocation. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Mobile Allocation | |
| - Length | 3 octets. |
| - Contents | Indicates only three frequencies: (73, 74, 75). |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | 40 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily, but not Zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Frequency List after time | |
| - Frequency List | use bit map 0 to allocates the following 12 frequencies: (14, 18, 22, 24, 60, 66, 73, 74, 75, 76,108, 114). |
| Synchronization Indication | |
| - Report Observed Time Difference | Shall not be included. |
| - Synchronization Indication | "Non synchronized". |
| - Normal Cell Indication | Ignore out of range timing advance. |
| Mode of First Channel | Speech (multi rate version 1). |
| Starting Time | Indicates the frame number of cell B. that will occur approximately 1,1 seconds (238 frames have elapsed) after the HANDOVER COMMAND is sent by cell A. |

Step A18 / B17: "**x**" = 750.

GSM 1 800:

IMMEDIATE ASSIGNMENT

| Information Element | value/remark |
|---|---|
| As default message contents except: | |
| L2 pseudo length | 14 octets (11 + contents of the MA). |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | Arbitrary value but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Mobile Allocation. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Mobile Allocation | |
| - Length | 3octets. |
| - Contents | Indicates only three frequencies: (773, 775, 779). |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | 764 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not Zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Frequency List after time | |
| - Frequency List | Use Range 1024 to allocate the following 12 frequencies: (749, 758, 761, 764, 771, 779, 782, 791, 798, 829, 832, 844). |
| Synchronization Indication | |
| - Report Observed Time Difference | Shall not be included. |
| - Synchronization Indication | "Non synchronized". |
| - Normal Cell Indication | Ignore out of range timing advance. |
| Mode of First Channel | Speech (multi rate version 1) |
| Starting Time | Indicates the frame number of cell B that will occur approximately 1.1 seconds (238 frames have elapsed) after the HANDOVER COMMAND is sent by cell A.. |

Step A18 / B17: "**x**" = 750.

PCS 1900:

| Information Element | value/remark |
|---|---|
| As default message contents except: | |
| L2 pseudo length | 14 octets (11 + contents of the MA). |
| Channel Description | Channel Description. |
| - Channel Type | SDCCH/8 |
| - TDMA offset | As default message contents. |
| - Timeslot number | Arbitrary value but not zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Mobile Allocation. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Mobile Allocation | |
| - Length | 3octets. |
| - Contents | Indicates only three frequencies: (673, 675, 679). |

HANDOVER COMMAND

| Information Element | value/remarks |
|---|---|
| As default message contents, except: | |
| Cell Description | |
| - Network Colour Code | 3 |
| - Base Station Colour Code | 0 |
| - BCCH Carrier Number | 664 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily but not Zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Frequency List after time | |
| - Frequency List | Use Range 1024 to allocate the following 12 frequencies: (649, 658, 661, 664, 671, 679, 682, 691, 698, 729, 732, 744). |
| Synchronization Indication | |
| - Report Observed Time Difference | Shall not be included. |
| - Synchronization Indication | "Non synchronized". |
| - Normal Cell Indication | Ignore out of range timing advance. |

| - BCCH Carrier Number | 167 |
| Channel Description | |
| - Channel Type | TCH/F + ACCHs |
| - TDMA offset | Chosen arbitrarily. |
| - Timeslot number | Chosen arbitrarily, but not Zero. |
| - Training Sequence Code | Chosen arbitrarily. |
| - Hopping | RF hopping channel. |
| - MAIO | Chosen arbitrarily from the set (0, 1 to N-1), where N is the number of frequencies encoded in the Frequency List IE. |
| - HSN | Chosen arbitrarily from the set (1,2,..63). |
| Frequency List after time | |
| - Frequency List | Use 128 range to allocates the following 12 frequencies: (141, 145, 149, 151, 187, 193, 200, 201, 202, 203, 235, 241). |
| Synchronization Indication | |
| - Report Observed Time Difference | Shall not be included. |
| - Synchronization Indication | "Non synchronized". |
| - Normal Cell Indication | Ignore out of range timing advance. |
| Mode of First Channel | Speech (multi rate version 1). |
| Starting Time | Indicates the frame number of cell B. that will occur approximately 1,1 seconds (238 frames have elapsed) after the HANDOVER COMMAND is sent by cell A. |

Step A18 / B17: "**x**" = 750.

## 26.16.9 Default contents of layer 3 messages for AMR signalling tests

Same as section 26.6.14 for GSM900 MS, 26.6.15 for DCS1800 MS, 26.6.16 for GSM 450 MS, 26.6.17 for GSM 480, 26.6.18 for PCS 1900, 26.6.19 for GSM 700 and 26.6.20 for GSM 850.

# 27 Testing of the SIM/ME interface

The following sequence of tests confirms:

a) the correct interpretation of data read from the SIM (Subscriber Identification Module) by the ME;

b) the correct writing of data to the SIM by the ME;

c) the initiation of appropriate procedures by the ME;

d) low level protocols;

e) electrical characteristics;

f) physical characteristics.

All tests apply to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

NOTE 1: In the entire section 27, the term GSM defines the tests applicable for GSM 450, GSM 480 and GSM 900 MS. In addition the term PCS1900 defines the tests applicable for GSM 700, GSM 850 and PCS 1900 MS.

A SIM simulator will be required as part of the SS. Alternatively, to perform the logical tests, SIMs programmed with specific data may be used. The SIM data is not defined within the initial conditions of the tests unless it differs from the default values defined below.

### Definition of default values for SIM/ME interface testing

A SIM containing the following default values is used for all tests of this section unless otherwise stated.

For each data item, the logical default values and the coding within the elementary files (EF) of the SIM follow.

NOTE 1: Bx represents Byte x of the coding.

NOTE 2: Unless otherwise defined, the coding values are hexadecimal.

#### $EF_{IMSI}$ (IMSI)

Logically: 246813579

# 27.1 MS identification by short IMSI

## 27.1.1 MS identification by short IMSI - Normal case

### 27.1.1.1 Definition and applicability

The IMSI is used for unique identification of the MS by a GSM network. The IMSI is stored in the SIM and read during the SIM/ME initialization procedure.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

### 27.1.1.2 Conformance requirement

On the receipt of an IMMEDIATE ASSIGNMENT message the MS shall send PAGING RESPONSE containing the IMSI of the SIM.

GSM 11.11, clause 11.2.1 and 11.4.2, GSM 04.08, clause 10.5.1.4.

### 27.1.1.3 Test purpose

1) To verify that the ME uses the IMSI of the SIM.

2) To verify that the ME can handle an IMSI of less than the maximum length.

### 27.1.1.4 Method of test

#### 27.1.1.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):246/81/0001 for GSM and DCS 1 800
246/813/0001 for PCS 1900
Access control: unrestricted.

The default SIM is installed into the ME and the MS is powered on.

#### 27.1.1.4.2 Procedure

a) The SS sends PAGING REQUEST to the MS using the IMSI stored in the SIM.

b) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

c) After receipt of a PAGING RESPONSE from the MS, the SS sends CHANNEL RELEASE to the MS.

### 27.1.1.5 Test requirement

After step b) the MS shall send PAGING RESPONSE to the SS containing the IMSI stored in the SIM.

## 27.1.2 MS identification by short IMSI, Phase 1 DCS SIM

### 27.1.2.1 Definition and applicability

Different from Phase 2, the IMSI in a Phase 1 DCS SIM is stored in a directory $DF_{DCS1800}$ with the specific identifier "7F 21". To ensure backwards compatibility, if selection of the phase 2 identifier "7F 20" fails, the MS shall select "7F 21". Otherwise access to the IMSI and other data is impossible with a Phase 1 DCS SIM

This test applies to DCS 1 800 MEs.

#### 27.1.2.2 Conformance requirement

If selection of DFGSM by the identifier "7F 20" fails, the ME shall select $DF_{DCS1800}$ with "7F 21".

GSM 11.11, clause 10.4.

#### 27.1.2.3 Test purpose

To verify that the ME uses the identifier "7F 21" to select $DF_{DCS1800}$ in a Phase 1 DCS SIM.

#### 27.1.2.4 Method of test

##### 27.1.2.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):246/81/0001
Access control: unrestricted.

A phase 1 DCS SIM (identifier of $DF_{DCS1800}$ is "7F 21", $DF_{GSM}$ not existing) with default values is installed into the ME and the MS is powered on.

##### 27.1.2.4.2 Procedure

a) The SS sends PAGING REQUEST to the MS using the IMSI stored in the SIM.

b) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

c) After receipt of a PAGING RESPONSE from the MS, the SS sends CHANNEL RELEASE to the MS.

#### 27.1.2.5 Test requirement

After step b) the MS shall send PAGING RESPONSE to the SS containing the IMSI stored in the SIM.

## 27.2 MS identification by short TMSI

### 27.2.1 Definition and applicability

The TMSI is temporarily used for identification of the MS by a GSM network. It will have been previously assigned by the network. The TMSI is stored in the SIM by the ME and read during the SIM/ME initialization procedure.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

### 27.2.2 Conformance requirement

On the receipt of an IMMEDIATE ASSIGNMENT message the MS shall send PAGING RESPONSE containing the TMSI stored in the SIM.

GSM 11.11, clause 11.2.1 and 11.4.5, GSM 04.08, clause 10.5.1.4.

### 27.2.3 Test purpose

1) To verify that the ME uses the TMSI stored in the SIM.

2) To verify that the ME can handle a TMSI of less than maximum length.

### 27.2.4 Method of test

#### 27.2.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):246/81/0001
Access control: unrestricted.

The default SIM is used with the following exception:

GSM and DCS 1 800 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 246
LAI-MNC: 81
LAI-LAC: 0001
TMSI: "2143"

| Coding: | B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 00 | 00 | 21 | 43 | 42 | F6 | 18 | 00 | 01 | FF | 00 |

GSM and DCS 1 800 end

PCS 1900 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 246
LAI-MNC: 813
LAI-LAC: 0001
TMSI: "2143"

| Coding: | B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 00 | 00 | 21 | 43 | 42 | 36 | 18 | 00 | 01 | FF | 00 |

PCS 1900 end

The SIM is installed into the ME and the MS is powered on.

#### 27.2.4.2 Procedure

a) The SS sends PAGING REQUEST to the MS using the TMSI stored in the SIM.

b) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

c) After receipt of a PAGING RESPONSE from the MS, the SS sends CHANNEL RELEASE to the MS.

### 27.2.5 Test requirement

After step b) the MS shall send PAGING RESPONSE to the SS containing the TMSI stored in the SIM.

# 27.3 MS identification by long TMSI

## 27.3.1 Definition and applicability

The TMSI is temporarily used for identification of the MS by a GSM network. It will have been previously assigned by the network. The TMSI is stored in the SIM by the ME and read during the SIM/ME initialization procedure.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

## 27.3.2 Conformance requirement

On the receipt of an IMMEDIATE ASSIGNMENT message the MS shall send PAGING RESPONSE containing the correct TMSI stored in the SIM.

GSM 11.11, clause 11.2.1 and 11.4.5, GSM 04.08, clause 10.5.1.4.

## 27.3.3 Test purpose

1) To verify that the ME uses the TMSI stored in the SIM.

2) To verify that the ME can handle a TMSI of maximum length.

3) To verify that the ME does not respond to page requests containing a previous TMSI.

## 27.3.4 Method of test

### 27.3.4.1 Initial conditions

Prior to this test, the ME shall have been operated with a SIM containing TMSI "2143". This may be achieved by executing the previous test (27.2) prior to this test. Only under this condition will test purpose 3) be verified.

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):246/81/0001 for GSM and DCS 1 800
246/813/0001 for PCS 1900
Access control: unrestricted.

The default SIM is used with the following exception:

GSM and DCS 1 800 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 246
LAI-MNC: 81
LAI-LAC: 0001
TMSI: "21430000"

| Coding: | B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 21 | 43 | 00 | 00 | 42 | F6 | 18 | 00 | 01 | FF | 00 |

GSM and DCS 1 800 end

PCS 1900 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 246
LAI-MNC: 813
LAI-LAC: 0001
TMSI: "21430000"

| Coding: | B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | 21 | 43 | 00 | 00 | 42 | 36 | 18 | 00 | 01 | FF | 00 |

PCS 1900 end

The SIM is installed into the ME and the MS is powered on.

#### 27.3.4.2 Procedure

a) The SS sends PAGING REQUEST to the MS using the TMSI "2143".

b) The SS sends PAGING REQUEST to the MS using the TMSI stored in the SIM.

c) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

d) After receipt of a PAGING RESPONSE from the MS, the SS sends CHANNEL RELEASE to the MS.

### 27.3.5 Test requirement

1) After step a) the MS shall not respond to the PAGING REQUEST.

2) After step c) the MS shall send PAGING RESPONSE to the SS containing the TMSI stored in the SIM.

## 27.4 MS identification by long IMSI, TMSI updating and cipher key sequence number assignment

### 27.4.1 Definition and applicability

The IMSI and TMSI are used for identification of the MS by a GSM network. They are read from the SIM during the SIM/ME initialization procedure. Within the authentication procedure the network sends a cipher key sequence number to the MS. In addition the network may allocate a new TMSI to the MS. Cipher key sequence number and TMSI are stored in the SIM after call termination and/or at GSM session termination.

Test purpose 2) will only be verified if this test sequentially follows the previous test (27.3).

The test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

### 27.4.2 Conformance requirement

1. On the receipt of an IMMEDIATE ASSIGNMENT message the MS shall send PAGING RESPONSE containing the correct IMSI stored in the SIM.

   GSM 11.11, clauses 11.2.1 and 11.4.2, GSM 04.08, clause 10.5.1.4.

2. After call termination the SIM shall contain the cipher key sequence number and TMSI received by the MS during the authentication and TMSI reallocation procedures.

   GSM 11.11, clauses 11.2.2, 11.4.5 and 11.4.6, GSM 02.17, clause 6.1.

### 27.4.3 Test purpose

1) To verify that the ME uses the IMSI stored in the SIM.
2) To verify that the ME does not respond to page requests containing a previous IMSI.
3) To verify that the ME can handle an IMSI of maximum length.
4) To verify that the ME correctly updates the cipher key sequence number at call termination.
5) To verify that the ME correctly updates the TMSI at call termination.

### 27.4.4 Method of test

#### 27.4.4.1 Initial conditions

Prior to this test, the ME shall have been operated with a SIM containing IMSI "246813579". This may be achieved by executing the previous test (27.3) prior to this test. Only under this condition will test purpose 2) be verified.

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):246/81/0001 for GSM and DCS 1 800
246/813/0001 for PCS 1900
Access control: unrestricted.

The default SIM is used with the following exception:

GSM and DCS 1 800 begin

$EF_{IMSI}$ (IMSI)

Logically: 246811111111111

Coding: B1 B2 B3 B4 B5 B6 B7 B8 B9
08 29 64 18 11 11 11 11 11

GSM and DCS 1 800 end

PCS 1900 begin

$EF_{IMSI}$ (IMSI)

Logically: 246813111111111

Coding: B1 B2 B3 B4 B5 B6 B7 B8 B9
08 29 64 18 13 11 11 11 11

PCS 1900 end

The SIM is installed into the ME and the MS is powered on.

#### 27.4.4.2 Procedure

a) The SS sends PAGING REQUEST to the MS using the IMSI "246813579".
b) The SS sends PAGING REQUEST to the MS using the IMSI stored in the SIM.
c) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

d) After receipt of a PAGING RESPONSE from the MS, the SS sends AUTHENTICATION REQUEST to the MS containing cipher key sequence number set to binary 010.

e) After receipt of AUTHENTICATION RESPONSE from the MS, the SS sends TMSI REALLOCATION to the MS containing TMSI "32547698".

f) Within 5 seconds after receipt of TMSI REALLOCATION COMPLETE from the MS, the SS sends CHANNEL RELEASE to the MS.

g) To allow examination of the values in the SIM after call termination the MS shall not be soft powered down. If the test is performed with a SIM simulator, the simulation is stopped. If the test is performed with a SIM, the SIM is removed without soft powering down the MS. If this is not possible, the power supply of the ME is removed and then the SIM removed.

### 27.4.5 Test requirement

1) After step a) the MS shall not respond to the PAGING REQUEST.

2) After step c) the MS shall send PAGING RESPONSE to the SS containing the IMSI stored in the SIM.

3) After step e) the MS shall send TMSI REALLOCATION COMPLETE to the SS.

4) After step g) the SIM shall contain the following values:

GSM and DCS 1 800 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 246
LAI-MNC: 81
TMSI: "32547698"

| Coding: | B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 |

# 27.5 Forbidden PLMNs, location updating and undefined cipher key

## 27.5.1 Definition and applicability

A list of forbidden PLMNs stored in the SIM and providing storage for up to 4 entries is managed by the MS. In automatic PLMN selection mode the MS controls location updating attempts to appropriate networks with respect to this list of forbidden PLMNs. As a result of a location update reject with the cause "PLMN not allowed" the MS stores the PLMN which rejected the update request in the SIM.

After a location update, which is not followed by an authentication procedure, the cipher key sequence number indicates that the cipher key is undefined.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

## 27.5.2 Conformance requirement

1. In automatic PLMN selection mode the MS shall only attempt a LOCATION UPDATE if it receives a BCCH containing a LAI that is not indicated in the $EF_{FPLMN}$ in the SIM.

   GSM 02.11, clause 2.3, GSM 11.11, clauses 11.2.1 and 11.4.8.

2. After receipt of a LOCATION UPDATE REJECT message with the cause "PLMN not allowed" the ME shall update the $EF_{FPLMN}$ in the SIM.

   GSM 02.11, clause 2.3, GSM 11.11, clauses 11.2.1 and 11.4.8.

3. After call termination the SIM shall contain the correct cipher key sequence number.

   GSM 11.11, clauses 11.2.2, 11.4.5 and 11.4.6, GSM 02.17, clause 6.1.

4. After call termination the SIM shall contain the correct TMSI and location information received by the MS.

   GSM 11.11, clauses 11.2.2, 11.4.5 and 11.4.6, GSM 02.17, clause 6.1.

## 27.5.3 Test purpose

1) To verify that in automatic PLMN selection mode the MS does not attempt to access PLMNs stored in $EF_{FPLMN}$ on the SIM.

2) To verify that the $EF_{FPLMN}$ is correctly updated by the ME after receipt of a LOCATION UPDATE REJECT message with cause "PLMN not allowed".

3) To verify that the $EF_{Kc}$ has been correctly updated by the ME.

4) To verify that the $EF_{LOCI}$ has been correctly updated by the ME.

## 27.5.4 Method of test

### 27.5.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):234/02/0001 for GSM and DCS 1 800
234/023/0001 for PCS 1900
Access control: unrestricted.

The default SIM is used with the following exception:

GSM and DCS 1 800 begin

$EF_{IMSI}$ (IMSI)

Logically: 246811111111111

Coding: B1 B2 B3 B4 B5 B6 B7 B8 B9

The SIM is installed into the ME and the MS is set to automatic PLMN selection mode.

$EF_{Kc}$ (Ciphering Key Kc)

Logically: Key Kc: undefined
Sequence No: 2

Coding: B1 B2 B3 B4 B5 B6 B7 B8 B9
xx xx xx xx xx xx xx xx 02

### 27.5.4.2 Procedure

a) The MS is powered on.

b) The SS stops all RF output on the BCCH for a long enough period of time to cause a cell reselection procedure in the MS. The BCCH is changed to contain:

LAI (MCC/MNC): 234/03 for GSM and DCS 1 800
234/034 for PCS 1900

The SS then resumes RF output on the BCCH.

c) The SS stops all RF output on the BCCH for a long enough period of time to cause a cell reselection procedure in the MS. The BCCH is changed to contain:

LAI (MCC/MNC): 234/04 for GSM and DCS 1 800
234/045 for PCS 1900

The SS then resumes RF output on the BCCH.

d) The SS stops all RF output on the BCCH for a long enough period of time to cause a cell reselection procedure in the MS. The BCCH is changed to contain:

LAI (MCC/MNC): 234/05 for GSM and DCS 1 800
234/056 for PCS 1900

The SS then resumes RF output on the BCCH.

e) The SS stops all RF output on the BCCH for a long enough period of time to cause a cell reselection procedure in the MS. The BCCH is changed to contain:

LAI (MCC/MNC): 234/01 for GSM and DCS 1 800
234/012 for PCS 1900

The SS then resumes RF output on the BCCH.

f) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

g) After receipt of a LOCATION UPDATE REQUEST from the MS, the SS sends LOCATION UPDATE REJECT to the MS with cause "PLMN Not Allowed", followed by CHANNEL RELEASE.

The SS stops all RF output on the BCCH for a long enough period of time to cause a cell reselection procedure in the MS. The BCCH is changed to contain:

LAI (MCC/MNC): 234/06 for GSM and DCS 1 800
234/067 for PCS 1900

The SS then resumes RF output on the BCCH.

h) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

i) After receipt of a LOCATION UPDATE REQUEST from the MS, the SS sends LOCATION UPDATE ACCEPT with:

LAI (MCC/MNC): 234/06 for GSM and DCS 1 800
234/067 for PCS 1900
TMSI: "43658709"

to the MS.

j) After receipt of a TMSI REALLOCATION COMPLETE from the MS, the SS sends CHANNEL RELEASE to the MS.

k) The MS is soft powered down.

### 27.5.5 Test requirement

1) After each of the steps a) to d) the MS shall not attempt a LOCATION UPDATE.

2) After step f) the MS shall send LOCATION UPDATE REQUEST to the SS.

3) After step h) the MS shall send LOCATION UPDATE REQUEST to the SS.

4) After step i) the MS shall respond with TMSI REALLOCATION COMPLETE.

5) After step k) the SIM shall contain the following values:

GSM and DCS 1 800 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 234
LAI-MNC: 06
TMSI: "43658709"

# 27.6 MS updating forbidden PLMNs

## 27.6.1 Definition and applicability

A list of forbidden PLMNs stored in the SIM provides storage for up to 4 entries, and is managed by the MS. In automatic PLMN selection mode the MS controls location updating attempts to appropriate networks with respect to this list of forbidden PLMNs. As a result of a location update reject with the cause "PLMN not allowed" the MS stores the PLMN which rejected the update request in the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

## 27.6.2 Conformance requirement

After the receipt of a LOCATION UPDATE REJECT message with the cause "PLMN not allowed" the MS shall update the $EF_{FPLMN}$ in the SIM.

GSM 02.11, clause 3.2.2.4.

## 27.6.3 Test purpose

To verify that the MS correctly updates the $EF_{FPLMN}$, i.e. fill up existing gaps in the elementary file before overwriting any existing entries.

## 27.6.4 Method of test

### 27.6.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):234/03/0001 for GSM and DCS 1 800
234/034/0001 for PCS 1900
Access control: unrestricted.

The default SIM is used with the following exception:

GSM and DCS 1 800 begin

$EF_{FPLMN}$ (Forbidden PLMNs)

Logically: PLMN1: 234 02 (MCC MNC)
PLMN2: empty
PLMN3: 234 04
PLMN4: 234 05

| Coding: | B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 | B12 |

PCS 1900 end

The SIM is installed into the ME and the MS is set to automatic PLMN selection mode.

#### 27.6.4.2 Procedure

a) The MS is powered on.

b) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

c) After receipt of a LOCATION UPDATE REQUEST from the MS, the SS sends LOCATION UPDATE REJECT to the MS with the cause "PLMN not allowed", followed by CHANNEL RELEASE.

d) The MS is soft powered down.

### 27.6.5 Test requirement

1) After step b) the MS shall send LOCATION UPDATE REQUEST to the SS.

2) After step d) the SIM shall contain:

GSM and DCS 1 800 begin

$EF_{FPLMN}$ (Forbidden PLMNs)

# 27.7 MS deleting forbidden PLMNs

## 27.7.1 Definition and applicability

In manual PLMN selection mode the MS allows location update attempts to all available PLMNs, including forbidden PLMNs (as indicated by the forbidden PLMN list on the SIM). As a result of a successful location update procedure onto a PLMN which is in the forbidden PLMN list, the forbidden PLMN list is automatically updated by the MS.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

## 27.7.2 Conformance requirement

1. In manual PLMN selection mode the MS shall be able to perform a LOCATION UPDATE attempt to a PLMN which is in the forbidden PLMN list.

   GSM 02.11, clause 3.2.2.2.

2. After receipt of LOCATION UPDATE ACCEPT the MS shall delete the forbidden PLMN from the forbidden PLMN list.

   GSM 02.11, clause 3.2.2.4.

### 27.7.3 Test purpose

1) To verify that in automatic PLMN selection mode the MS does not attempt to access PLMNs stored in $EF_{FPLMN}$ on the SIM.

2) To verify that the MS is able to perform a LOCATION UPDATE on a forbidden PLMN in manual PLMN selection mode.

3) To verify that the MS after a successful LOCATION UPDATE deletes the PLMN in the $EF_{FPLMN}$ on the SIM.

### 27.7.4 Method of test

#### 27.7.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):234/01/0001 for GSM and DCS 1 800
234/012/0001 for PCS 1900
Access control: unrestricted.

The default SIM is used with the following exception:

GSM and DCS 1 800 begin

$EF_{FPLMN}$ (Forbidden PLMNs)

Logically: PLMN1: empty
PLMN2: empty
PLMN3: 234 01 (MCC MNC)
PLMN4: empty

| Coding: | B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 | B12 |

| | FF | FF | FF | FF | FF | FF | 32 | 24 | 10 | FF | FF | FF |

PCS 1900 end

The SIM is installed into the ME and the MS is set to automatic PLMN selection mode.

#### 27.7.4.2 Procedure

a) The MS is powered on.

b) PLMN with MCC/MNC of 234/01 (PCS 1900: 234/012) is manually selected.

c) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

d) After receipt of a LOCATION UPDATE REQUEST from the MS, the SS sends LOCATION UPDATE ACCEPT with:

LAI (MCC/MNC): 234/01 for GSM and DCS 1 800
234/012 for PCS 1900
TMSI: "12345678"

to the MS.

e) After receipt of TMSI REALLOCATION COMPLETE from the MS, the SS sends CHANNEL RELEASE.

f) The MS is soft powered down.

### 27.7.5 Test requirement

1) After step a) the MS shall not attempt a LOCATION UPDATE.

2) After step c) the MS shall send LOCATION UPDATE REQUEST to the SS.

3) After step d) the MS shall respond with TMSI REALLOCATION COMPLETE.

4) After step f) the SIM shall contain the following values:

GSM and DCS 1 800 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 234
LAI-MNC: 01
TMSI: "12345678"

# 27.8 MS updating the PLMN selector list

## 27.8.1 Definition and applicability

The PLMN selector list gives in priority order the preferred PLMNs on which the MS shall register. The list is stored on the SIM in the $EF_{PLMNsel}$. Update and deletion of PLMNs may be performed by the subscriber.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

## 27.8.2 Conformance requirement

The MS shall correctly replace the selected PLMN in the PLMN selector list.

GSM 11.11, clause 11.5.5.

## 27.8.3 Test purpose

To verify that the MS correctly updates the $EF_{PLMNsel}$.

## 27.8.4 Method of test

### 27.8.4.1 Initial conditions

No SS is required for this test.

The default SIM is used.

The SIM is installed into the ME and the MS is powered on.

### 27.8.4.2 Procedure

a) The user shall initiate an MMI dependent procedure to change the second PLMN in the PLMN selector list to MCC/MNC of 567/01 (PCS 1900: 567/018).

b) The MS is soft powered down.

## 27.8.5 Test requirement

After step b) the SIM shall contain the following values:

GSM and DCS 1 800 begin

$EF_{PLMNsel}$ (PLMN Selector)

Logically: 1st PLMN: 234 01 (MCC MNC)
2nd PLMN: 567 01
3rd PLMN: 234 03
4th PLMN: 234 04
5th PLMN: 234 05
6th PLMN: 234 06
7th PLMN: 246 81
8th PLMN: 246 82

| | | | | | | | | | | | | |

PCS 1900 end

# 27.9 MS recognizing the priority order of the PLMN selector list

## 27.9.1 Definition and applicability

The PLMN selector list gives in priority order the preferred PLMNs on which the MS shall register. The list is stored on the SIM in the $EF_{PLMNsel}$. Update and deletion of PLMNs may be performed by the subscriber by the use of the PIN.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

## 27.9.2 Conformance requirement

When registering onto a VPLMN the MS shall take into account the priority order of the PLMNs in the preferred list on the SIM.

GSM 02.11, clause 3.2.2.2.

## 27.9.3 Test purpose

To verify that the PLMN with the higher priority (defined by its position in $EF_{PLMNsel}$) takes precedence over the PLMN with the lower priority when the MS performs a network selection.

## 27.9.4 Method of test

### 27.9.4.1 Initial conditions

The SS transmits on two BCCHs, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):234/33/0001 for GSM and DCS 1 800
234/334/0001 for PCS 1900
Access control: unrestricted.

Attach/detach: disabled
LAI (MCC/MNC/LAC):234/34/0001 for GSM and DCS 1 800
234/345/0001 for PCS 1900
Access control: unrestricted.

The default SIM is used with the following exception:

GSM and DCS 1 800 begin

$EF_{PLMNsel}$ (PLMN Selector)

Logically: 1st PLMN: 234 01 (MCC MNC)
2nd PLMN: 234 02
..... .....
..... .....
32nd PLMN: 234 32
33rd PLMN: 234 34
34th PLMN: 234 33

32 34 23 32 54 43 32 44 33

PCS 1900 end

The SIM is installed into the ME and the MS is set to automatic PLMN selection mode.

27.9.4.2 Procedure

a) The MS is powered on.

b) After receipt of a CHANNEL REQUEST from the MS, the SS sends IMMEDIATE ASSIGNMENT to the MS.

c) After receipt of a LOCATION UPDATE REQUEST from the MS, the SS sends LOCATION UPDATE ACCEPT with:

LAI (MCC/MNC): 234/34 for GSM and DCS 1 800

234/345 for PCS 1900
TMSI: "34567890"

to the MS

d) After receipt of a TMSI REALLOCATION COMPLETE from the MS, the SS sends CHANNEL RELEASE to the MS.

e) The MS is soft powered down.

### 27.9.5 Test requirement

1) After step b) the MS shall send LOCATION UPDATE REQUEST containing an MCC/MNC of 234/34 (PCS 1900: 234/345) to the SS.

2) After step c) the MS shall respond with TMSI REALLOCATION COMPLETE.

3) After step e) the SIM shall contain the following values:

GSM and DCS 1 800 begin

$EF_{LOCI}$ (Location Information)

Logically: LAI-MCC: 234
LAI-MNC: 34
TMSI: "34567890"

PCS 1900 end

## 27.10 MS access control management

### 27.10.1 Definition and applicability

Access Control allows restriction of call access attempts. All mobile stations are assigned to a "low order class", and optionally (for priority uses) also to one or more "high order classes".

A "high order class" is only valid in the HPLMN or HPLMN country. Otherwise, the "low order class" is used.

The classes are programmed on the SIM. The network controls which classes at any time may be barred.

In addition, there is a separate mechanism for control of network access for emergency call attempts.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using ID-1 or Plug-in SIM.

### 27.10.2 Conformance requirement

1. The ME shall read the access control value as part of the SIM/ME initialization procedure, and subsequently adopt this value.

   GSM 11.11, clause 11.2.1.

2. If the MS is a member of at least one access class which corresponds to the permitted classes as signalled over the air interface, and the access class is applicable in the serving network, the MS may make call attempts. Otherwise call access attempts are not allowed.

   If access class 10 is barred, MS of classes 0 - 9 and ME without SIMs shall not make emergency call attempts.

   MS of classes 11 - 15 are not allowed to make emergency call attempts if access class 10 and the relevant access class(es) between 11 and 15 are barred. Otherwise, emergency call attempts are allowed irrespective of the conditions of access class 10.

   All options are shown in figure 27-1 and are referenced to the tests.

   GSM 02.11, clauses 4.3 and 4.4.

3. For PCS 1900: The test requirements 1 and 2 above are also tested for emergency call number 911.

### 27.10.3 Test purpose

1) To verify that the ME reads the access control value as part of the SIM/ME initialization procedure, and subsequently adopts this value.

2) To verify that the MS controls its network access in accordance with its access control class and the conditions imposed by the serving network.

3) For PCS 1900: To verify the requirements in 1 and 2 above by using the emergency call number 911.

The tests verify ME performance for the following:

Tests (a) and (b) No SIM in ME.

Tests (c) to (e) MS with access class 0 to 9.

Test (f) MS with access class 11 and 15 not in HPLMN, and
MS with access class 12,13 and 14 not in HPLMN country.

Test (g) and (h) MS with access class 11 and 15 in HPLMN, and
MS with access class 12,13 and 14 in HPLMN country.

Each of the above are tested against all relevant combinations of access control and emergency call bits signalled by the network, as shown in table 27-1.

### 27.10.4 Method of test

#### 27.10.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters:

Attach/detach: disabled
LAI (MCC/MNC/LAC):see table 27-1
Access control: see table 27-1
RACH: see table 27-1

A SIM is installed in the ME containing IMSI and access control values as given in table 27-1 and the MS is powered on.

NOTE: Depending on the initial value of the $EF_{LOCI}$, the MS may perform a location update. This will be accepted by the SS.

Coding details

SIM IMSI: Data Field 6F 07

| | Value 246813579 | Value 2468135x9 |
|---|---|---|
| byte 1 | 05H | 05H |
| byte 2 | 29H | 29H |
| byte 3 | 64H | 64H |
| byte 4 | 18H | 18H |
| byte 5 | 53H | 53H |

See GSM 11.11.

NETWORK (SS)

RACH: As defined in GSM 04.08 section 10.5.2.29.

octet 1 01111000
octet 2 00001000
octet 3 }
octet 4 } as table 27-1

### 27.10.4.2 Procedure

a) Using the MMI or EMMI a normal call set-up is attempted.

b) Using the MMI or EMMI an emergency call set-up is attempted.

c) The test is repeated for each set of values in table 27-1.

### 27.10.5 Test requirement

After steps a) and b) the MS shall access the network, or shall make no access attempt, in accordance with table 27-1.

NOTE: For type approval, to limit testing, in tests (c, (d) and (e) it is only necessary that one of the access classes is tested.

GSM and DCS 1 800 begin

# 27.11 Exchange protocol tests

## 27.11.1 Character transmission

### 27.11.1.1 Bit/character duration during the transmission from the ME to the SIM

#### 27.11.1.1.1 Definition and applicability

Data is transmitted serially across the SIM/ME interface. A character comprises:

- the start bit;
- eight data bits;
- the parity bit.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.11.1.1.2 Conformance requirement

The bit/character duration and the delay between two consecutive characters (between start leading edges) sent by the ME shall be in the range specified.

GSM 11.11, section 5.9.

#### 27.11.1.1.3 Test purpose

To verify the timing during the transmission from the ME to the SIM.

#### 27.11.1.1.4 Method of test

##### 27.11.1.1.4.1 Initial conditions

The ME is connected to the SIM simulator, and powered on.

##### 27.11.1.1.4.2 Procedure

A number of characters are transmitted from the ME to the SIM simulator. The SIM simulator shall measure the bit/character duration and the delay between two consecutive characters for all characters transmitted by the ME.

#### 27.11.1.1.5 Test requirement

The timing shall be in the range specified.

### 27.11.1.2 Bit/character duration during the transmission from the SIM simulator to the ME

#### 27.11.1.2.1 Definition and applicability

Data is transmitted serially across the SIM/ME interface. A character comprises:

- the start bit;
- eight data bits;
- the parity bit.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.11.1.2.2 Conformance requirement

Responses with maximum and minimum bit/character duration times shall be accepted by the ME.

GSM 11.11, clause 5.9.

#### 27.11.1.2.3 Test purpose

To verify the acceptance of maximum and minimum bit/character duration during the transmission from the SIM to the ME.

#### 27.11.1.2.4 Method of test

##### 27.11.1.2.4.1 Initial conditions

The ME is connected to the SIM simulator, and powered on.

##### 27.11.1.2.4.2 Procedure

The SIM simulator shall send responses with the maximum and minimum bit/character durations specified in GSM 11.11.

#### 27.11.1.2.5 Test requirement

The ME shall accept the response and act accordingly.

### 27.11.1.3 Inter-character delay

#### 27.11.1.3.1 Definition and applicability

The inter-character delay is defined as the time between the start edge of a character and the start edge of the previous character. It is given by:

- the length of a character plus an extra guard time of N etu during transmission from the ME to the SIM. N is indicated in ATR character TC1;
- the work waiting time during transmission from the SIM to the ME.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.11.1.3.2 Conformance requirement

1) If TC1 is 0 or 255 the ME shall work with the SIM.
2) If TC1 is not 0 or 255 the ME shall repeat the reset at least 2 times before it rejects the SIM.
3) The ME shall accept characters sent by the SIM with the work waiting time within the specified range.

GSM 11.11, clause 5.9.

#### 27.11.1.3.3 Test purpose

1) To verify the correct evaluation of the character TC1 indicated in the ATR.
2) To verify that the ME accepts the minimum and maximum work waiting time during the transmission from the SIM to the ME.

#### 27.11.1.3.4 Method of test

##### 27.11.1.3.4.1 Initial conditions

The ME is connected to the SIM simulator, and powered on.

#### 27.11.1.3.4.2 Procedure

a) Upon reception of a reset the SIM simulator transmits the ATR as follows:

a.1) N = 0;

| character name | content | meaning |
|---|---|---|
| TS | 3B | direct convention |
| T0 | 40 | TA1, TB1, TD1 not transmitted, TC1 transmitted, no historical characters |
| TA1 | 00 | N = 0 |

a.2) N = 255.

| character name | content | meaning |
|---|---|---|
| TS | 3B | direct convention |
| T0 | 40 | TA1, TB1, TD1 not transmitted, TC1 transmitted, no historical characters |
| TA1 | FF | N = 255 |

a.3) N = Value other than 0 and 255

| character name | content | meaning |
|---|---|---|
| TS | 3B | direct convention |
| T0 | 40 | TA1, TB1, TD1 not transmitted, TC1 transmitted, no historical characters |
| TA1 | 00 < XX < FF | 0 < N < 255 |

b) The SIM simulator transmits with a work-waiting-time of 12 etu.

c) The SIM simulator transmits with a work-waiting-time of 9 600 etu.

#### 27.11.1.3.5 Test requirement

In steps a.1) and a.2) the ME shall work with the SIM simulator.

In step a.3) the ME shall repeat the reset at least 2 times and then reject the SIM simulator.

In steps b) and c) the ME shall work with the SIM simulator.

### 27.11.1.4 Error handling during the transmission from the ME to the SIM

#### 27.11.1.4.1 Definition and applicability

Error checking is done for each character transmitted by making use of the parity bit. If the SIM detects a parity error, an error signal is sent to the ME, and the ME retransmits that character.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 of Plug-in SIM.

#### 27.11.1.4.2 Conformance requirement

Subsequent to Answer to Reset and the protocol type selection, the error detection and character repetition procedure specified in GSM 11.11 is mandatory for transmission on the basis of T = 0. On receipt of an error signal, the ME shall repeat the previously transmitted character.

GSM 11.11, clause 5.10.

#### 27.11.1.4.3 Test purpose

To verify the error handling during the transmission from the ME to the SIM.

#### 27.11.1.4.4 Method of test

##### 27.11.1.4.4.1 Initial conditions

The ME is connected to the SIM simulator, and powered on.

##### 27.11.1.4.4.2 Procedure

The SIM simulator shall transmit an error signal in response to a received character in accordance with ISO 7816-3, section 6.1.3.

#### 27.11.1.4.5 Test requirement

The ME shall repeat the character in accordance with ISO 7816-3, section 6.1.3.

### 27.11.1.5 Error handling during transmission from the SIM to the ME

#### 27.11.1.5.1 Definition and applicability

Error checking is done for each character transmitted by making use of the parity bit. If the ME detects a parity error, an error signal is sent to the SIM, and the SIM retransmits that character.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 of Plug-in SIM.

#### 27.11.1.5.2 Conformance requirement

Subsequent to Answer to Reset and the protocol type selection, the error detection and character repetition procedure specified in GSM 11.11 is mandatory for transmission on the basis of T = 0. On receipt of a response with a parity error, the ME shall send an error signal and expect the previously transmitted character to be repeated.

GSM 11.11, clause 5.10.

#### 27.11.1.5.3 Test purpose

To verify the error handling during the transmission from the SIM to the ME.

#### 27.11.1.5.4 Method of test

##### 27.11.1.5.4.1 Initial conditions

The ME is connected to the SIM simulator, and powered on.

##### 27.11.1.5.4.2 Procedure

The SIM simulator shall send a response with a parity error and check that the ME performs error handling in accordance with ISO/IEC 7816-3, section 6.3.3.

#### 27.11.1.5.5 Test requirement

The ME shall send an error signal in accordance with ISO/IEC 7816-3, section 6.3.3, and expect a repetition of the character. The ME shall correctly evaluate the character when repeated by the SIM simulator.

## 27.11.2 Answer to reset (RST)

### 27.11.2.1 Void

### 27.11.2.2 Acceptance of SIMs with active low RST

#### 27.11.2.2.1 Definition and applicability

Active low RST is one possible implementation of reset, and MEs must be able to accept SIMs with active low reset.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.11.2.2.2 Conformance requirement

The ME shall accept a SIM with active low reset by putting the RST contact to state H. The signal timing shall be in accordance with the specification.

GSM 11.11, clause 5.

ISO/IEC 7816-3: 1997, section 5.3.2.

#### 27.11.2.2.3 Test purpose

To verify that the ME accepts a SIM with active low reset. The timing of the RST signal shall be in accordance with the specification.

#### 27.11.2.2.4 Method of test

##### 27.11.2.2.4.1 Initial conditions

The SIM simulator is configured for active low reset. The ME is connected to the SIM simulator and powered on.

##### 27.11.2.2.4.2 Procedure

The SIM simulator measures the timing of the RST signal.

#### 27.11.2.2.5 Test requirement

The ME shall accept the SIM simulator with active low reset. The RST signal shall be put to state H after a minimum of (400/fi)s.

### 27.11.2.3 Characters of the answer to reset

#### 27.11.2.3.1 Definition and applicability

When the SIM is reset, it sends up to 33 characters to the ME, containing information which must be interpreted by the ME to ascertain the transmission protocol to be used.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.11.2.3.2 Conformance requirement

1. The ME shall adopt the data encoding convention and initial etu time defined in the initial character TS of the ATR.

   GSM 11.11, clause 5.8.

2. The ME shall be able to receive interface characters for other transmission protocols than T = 0, historical characters and a check byte, even if only T = 0 is used by the ME.

   GSM 11.11, clause 5.8.1.

#### 27.11.2.3.3 Test purpose

1. To verify that the ME adopts the appropriate data encoding convention and initial elementary time unit (etu) defined in the initial character TS of the Answer to Reset.

2. To verify that the ME accepts interface characters for transmission protocols other than T=0, historical characters and the check byte.

#### 27.11.2.3.4 Method of test

##### 27.11.2.3.4.1 Initial conditions

The ME is connected to the SIM (or SIM simulator).

##### 27.11.2.3.4.2 Procedure

a) The ME is powered on

b) The SIM (or SIM simulator) sends an ATR as follows:

| character name | content | meaning |
|---|---|---|
| TS | 3B | direct convention |
| T0 | 9F | TB1, TC1 not transmitted, TA1, TD1 transmitted, 15 historical characters |
| TA1 | 11 | default values F = 372, D = 1 |
| TD1 | 80 | TA2, TB2, TC2 not transmitted, TD2 transmitted, protocol T=0 offered |
| TD2 | 01 | TA2, TB2, TC2, TD2 not transmitted, protocol T=1 offered |
| Ti | 53 49 4D 20 53 55 42 47 52 4F 55 50 20 39 35 | historical characters |
| TCK | 4F | check byte |

c) The ME is made to send further commands to the SIM (or SIM simulator) (e.g. by entering the PIN).

d) The ME is switched off and on. This time the SIM (or SIM simulator) sends an ATR as follows:

| character name | content | meaning |
|---|---|---|
| TS | 3F | inverse convention |
| T0 | 9F | TB1, TC1 not transmitted, TA1, TD1 transmitted, 15 historical characters |
| TA1 | 11 | default values F = 372, D = 1 |
| TD1 | 80 | TA2, TB2, TC2 not transmitted, TD2 transmitted, protocol T=0 offered |
| TD2 | 01 | TA2, TB2, TC2, TD2 not transmitted, protocol T=1 offered |
| Ti | 53 49 4D 20 53 55 42 47 52 4F 55 50 20 39 35 | historical characters |
| TCK | 4F | check byte |

e) The ME is made to send further commands to the SIM (e.g. by entering the PIN).

#### 27.11.2.3.5 Test requirement

1. After step b), the ME shall work with the SIM (or SIM simulator).
2. After step d), the ME shall work with the SIM (or SIM simulator).

### 27.11.2.4 PTS procedure

#### 27.11.2.4.1 Definition and applicability

The PTS procedure is required to select the standard transmission protocol if the SIM does not use this as a default.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.11.2.4.2 Conformance requirement

If the ME receives an Answer to Reset where TA1 is not equal to "11", it shall initiate the PTS procedure as defined in GSM 11.11.

GSM 11.11, clause 5.8.2.

#### 27.11.2.4.3 Test purpose

To verify that ME uses the PTS procedure as specified in GSM 11.11.

#### 27.11.2.4.4 Method of test

##### 27.11.2.4.4.1 Initial conditions

The ME is connected to the SIM (or SIM simulator).

##### 27.11.2.4.4.2 Procedure

a) The ME is powered on.

b) The SIM (or the SIM simulator) sends an ATR as follows:

| character name | content | meaning |
|---|---|---|
| TS | 3B | direct convention |
| T0 | 10 | TB1, TC1, TD1 not transmitted, TA1 transmitted, no historical characters |
| TA1 | 77 | invalid values for F and D |

#### 27.11.2.4.5 Test requirement

After step b), the ME shall send to the SIM (or the SIM simulator) "FF00FF".

### 27.11.2.5 Reset repetition

#### 27.11.2.5.1 Definition and applicability

If transmission errors result in the ATR being unintelligible to the ME, the ME performs the reset again. The minimum number of reset attempts is three.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.11.2.5.2 Conformance requirement

Following receipt of a wrong ATR, the ME shall perform a reset. The ME shall not reject the SIM until at least three consecutive wrong ATRs are received.

GSM 11.11, clause 5.10.

#### 27.11.2.5.3 Test purpose

To verify that the ME repeats the reset procedure on receipt of a wrong ATR, and does not reject the SIM unless at least three consecutive wrong ATRs are received.

#### 27.11.2.5.4 Method of test

##### 27.11.2.5.4.1 Initial conditions

The ME is connected to the SIM simulator.

##### 27.11.2.5.4.2 Procedure

a) The ME is powered on.

b) The SIM simulator sends a non understandable answer to reset to the ME. (e.g. a wrong TS byte), at each reset initiated by the ME.

#### 27.11.2.5.5 Test requirement

After step b), the ME shall repeat the reset at least two times.

### 27.11.2.6 Speed Enhancement

#### 27.11.2.6.1 Definition and applicability

MEs that support speed enhancement use a specific PTS sequence to indicate the use of different transmission parameters F and D. If this PTS fails, the ME retries with standard parameters.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs supporting speed enhancement.

#### 27.11.2.6.2 Conformance requirement

1. If speed enhancement is implemented in the ME, it is mandatory to support F=512 and D=8 (in addition to the default values F=372 and D=1).

   GSM 11.11, clause 5.8.3.

2. If the SIM does not answer the PTS request within the initial waiting time, the ME shall reset the SIM. After two failed PTS attempts using F=512 and D=8 (i.e. no PTS response from the SIM) the ME shall initiate a PTS procedure using default values F=372 and D=1.

GSM 11.11, clause 5.8.3.

#### 27.11.2.6.3 Test purpose

1. To verify that the ME supports the transmission parameters F=512 and D=8
2. To verify that the ME resets the SIM if the SIM does not answer the PTS request within the initial waiting time and initiates a PTS procedure using default values F=372 and D=1 after the second failed PTS attempt.

#### 27.11.2.6.4 Method of test

##### 27.11.2.6.4.1 Initial conditions

The ME is connected to the SIM simulator.

##### 27.11.2.6.4.2 Procedure

a) The ME is powered on.

b) The SIM simulator sends an ATR as follows:

| character name | content | meaning |
|---|---|---|
| TS | 3B | direct convention |
| T0 | 10 | TB1, TC1, TD1 not transmitted, TA1 transmitted, no historical characters |
| TA1 | 94 | F=512, D=8 |

c) After receipt of the PTS Request, the SIM simulator answers with the PTS Response "FF 10 94 7B" using a work waiting time of 9600 etu (initial waiting time).

d) The SIM simulator transmits with enhanced speed (F=512, D=8).

e) The ME is switched off and on. The SIM simulator sends an ATR as in step b).

f) After receipt of the PTS Request, the SIM simulator does not answer.

#### 27.11.2.6.5 Test requirement

After step b) the ME shall send to the SIM simulator the PTS Request "FF 10 94 7B".

After step c) the ME shall work with the SIM simulator.

After step e) the ME shall send to the SIM simulator the PTS Request "FF 10 94 7B" and repeat that once. After that, the ME shall send to the SIM simulator the PTS Request "FF 00 FF".

## 27.11.3 Command processing, procedure bytes

### 27.11.3.1 Definition and applicability

The procedure bytes ACK, NULL, and SW1 are sent from the SIM to the ME, and give the ME an acknowledgement for the previous instruction, information concerning transfer of data and the card status at the end of the command.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

### 27.11.3.2 Conformance requirement

On the basis of protocol T = 0, the ME shall correctly use the different modes of data transmission defined in ISO/IEC 7816-3, section 8.2.2.

GSM 11.11, clause 5

ISO/IEC 7816: 1990, section 8.2.2.

#### 27.11.3.3 Test purpose

To verify that the ME uses correctly the different modes of data transmission.

#### 27.11.3.4 Method of test

##### 27.11.3.4.1 Initial conditions

The ME is connected to the SIM simulator and powered on.

##### 27.11.3.4.2 Procedure

a) The ME is made to initiate a VERIFY CHV command.

b) The SIM simulator answers the first 3 bytes with ACK=INS complemented.

c) The SIM simulator answers the next data byte with NULL (NULL="60").

d) The SIM simulator then sends ACK=INS. This byte is sent when the elapsed time since step b) is greater than the work waiting time.

e) The SIM simulator answers the transmission of the rest of the data with NULL.

f) The SIM simulator then sends SW1 and SW2, indicating correct execution of the command ("90" and "00" for SW1 and SW2 respectively). These bytes are sent when the elapsed time since step d) is greater than the work waiting time.

#### 27.11.3.5 Test requirement

The command shall be executed correctly.

# 27.12 Evaluation of directory characteristics

## 27.12.1 Operating speed in authentication procedure

#### 27.12.1.1 Definition and applicability

Authentication is performed by a GSM network on the SIM, by sending a random number to the SIM. The SIM then performs a calculation on the random number, and sends the result to the network for verification.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.12.1.2 Conformance requirement

If bit b2 of the file characteristics is set to 1, then the ME shall provide a clock frequency of at least 13/4 MHz to enable the SIM to run the authentication process in the required time.

GSM 11.11, clause 5.4.

#### 27.12.1.3 Test purpose

To verify that the authentication procedure is done with a frequency of at least 13/4 MHz if the bit b2 of the file characteristics (byte 1 of the directory characteristics) is set to 1.

#### 27.12.1.4 Method of test

##### 27.12.1.4.1 Initial conditions

System simulator:

1 cell, default parameters.

Mobile Equipment:

Connected to a SIM-simulator with bit b2 of the file characteristics set to 1.

ME is powered on.

##### 27.12.1.4.2 Procedure

An authentication is made in the same way as in test [26.7.2. Authentication]. The MS is paged. After the MS has responded with a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure, sending the MS the value RAND. During authentication, the SIM simulator checks the frequency of the clock supplied by the ME. Following the AUTHENTICATION RESPONSE from the MS, the SS sends CHANNEL RELEASE.

#### 27.12.1.5 Test requirement

The frequency of the clock shall be at least 13/4 MHz during the authentication procedure.

### 27.12.2 Clock stop

#### 27.12.2.1 Definition and applicability

The ME may switch off the clock signal to the SIM, but only if the SIM indicates that it supports this feature.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.12.2.2 Conformance requirement

1. The ME shall not stop the clock, unless the requirements indicated in byte 1 of the file characteristics are met.

   GSM 11.11, clauses 5.6 and 9.2.1.

2. The ME shall wait at least 1 860 clock cycles after having received the last character including the minimum guard time (2 etu) of the response before switching off the clock. The ME shall wait at least 744 clock cycles before it sends the first command after having restarted the clock.

   GSM 11.11, clause 5.6.

#### 27.12.2.3 Test purpose

1. To verify that the clock is only switched off if requirements are met as indicated in the file characteristics (byte 1 of the directory characteristics).
2. To verify that the timing of the clock switching is as specified.

#### 27.12.2.4 Method of test

##### 27.12.2.4.1 Initial conditions

The ME is connected to a SIM simulator. CHV 1 is enabled.

##### 27.12.2.4.2 Procedure

a) A SIM simulator is used with bits set as follows:

| Bit b1 | Bit b3 | Bit b4 |
|---|---|---|
| 0 | 0 | 0 |

b) The ME is powered on. When the ME is in mode PIN check, 10 seconds shall elapse before the PIN is entered.

c) The ME is powered off, and a SIM simulator is used with bits set as follows:

| Bit b1 | Bit b3 | Bit b4 |
|---|---|---|
| 0 | 1 | 0 |

d) The ME is powered on. When the ME is in mode PIN check, 10 seconds shall elapse before the PIN is entered.

e) The ME is powered off, and a SIM simulator is used with bits set as follows:

| Bit b1 | Bit b3 | Bit b4 |
|---|---|---|
| 0 | 0 | 1 |

f) The ME is powered on. When the ME is in mode PIN check, 10 seconds shall elapse before the PIN is entered.

g) The ME is powered off, and a SIM simulator is used with bits set as follows:

| Bit b1 | Bit b3 | Bit b4 |
|---|---|---|
| 1 | 0 | 0 |

h) The ME is powered on. When the ME is in mode PIN check, 10 seconds shall elapse before the PIN is entered.

#### 27.12.2.5 Test requirement

1. During step b), the ME shall not switch off the clock.
2. During step d), the ME shall not switch off the clock, unless at high level.
3. During step f), the ME shall not switch off the clock, unless at low level.
4. During steps d), f) and h), the ME shall not switch off the clock until at least 1 860 clock cycles after having received the last character of the response including the minimum guard time (2 etu).
5. During steps d), f) and h), the ME shall wait at least 744 clock cycles before it sends the first command after having restarted the clock.

## 27.13 Mechanical tests

### 27.13.1 Contact pressure

#### 27.13.1.1 Definition and applicability

The contacts of the card reader must exert a force to maintain a good electrical contact, but the force must not be excessive and damage the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.13.1.2 Conformance requirement

A contact force may not be greater than 0,5 N per contact.

GSM 11.11, clause 4.3.4.

#### 27.13.1.3 Test purpose

To verify that the contact pressure of each contacting element is not greater than 0,5 N when each of the following types of card is used:

i) Unembossed.

ii) Embossed on the contact side.

iii) Embossed on the opposite side to the contacts.

NOTE: Only type i) applies to the plug-in SIM.

#### 27.13.1.4 Method of test

##### 27.13.1.4.1 Initial conditions

The ME manufacturers shall provide a separate card reader (mechanical components) to make the measurement possible.

##### 27.13.1.4.2 Procedure

The pressure of each contacting element is measured.

#### 27.13.1.5 Test requirement

The contact pressure of each contacting element shall be not greater than 0,5 N.

### 27.13.2 Shape of contacts for IC card SIM card reader

#### 27.13.2.1 Definition and applicability

The shape of the contacts is important to maintain a good electrical contact, but must not damage the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.13.2.2 Conformance requirement

The radius of curvature of the contacting elements shall be greater than or equal to 0,8 mm in the contact area of both axes.

GSM 11.11, clause 4.3.4.

#### 27.13.2.3 Test purpose

To verify that the radius of curvature of the contacting elements is greater than or equal to 0,8 mm in the contact area on both axes.

#### 27.13.2.4 Method of test

##### 27.13.2.4.1 Initial conditions

The ME manufacturers shall provide a separate card reader (mechanical components) to make the measurement possible.

##### 27.13.2.4.2 Procedure

The radius of curvature of the contacting elements is measured on both axes.

#### 27.13.2.5 Test requirement

The radius of curvature of the contacting elements shall be greater than or equal to 0,8 mm in the contact area on both axes.

## 27.14 Secret code usage

### 27.14.1 Entry of PIN

#### 27.14.1.1 Definition and applicability

The PIN is a number used to authenticate the user to the SIM for security. Entry of the correct PIN allows PIN-protected data to be accessed over the SIM-ME interface.

This test applies to all ME.

#### 27.14.1.2 Conformance requirement

Following insertion of the SIM and switching on the MS, the ME shall check the state of the PIN. If the PIN is enabled, the ME asks the user for PIN verification.

The VERIFY CHV function verifies the PIN presented by the ME to the SIM.

Reference:

GSM 02.30, section 4.6.1; GSM 11.11, sections 8.9, 9.2.9 and 11.3.1.

#### 27.14.1.3 Test purpose

1. To verify that the PIN verification procedure is performed by the ME correctly.
2. To verify that the GSM basic public MMI string is supported.

#### 27.14.1.4 Method of test

##### 27.14.1.4.1 Initial conditions

The ME is connected to a SIM or SIM-simulator with the PIN enabled, and powered off.

The default SIM is used.

##### 27.14.1.4.2 Procedure

a) The ME is powered on.

b) When the MS is in mode "PIN check" enter "2468#".

#### 27.14.1.5 Test requirement

1) The ME shall send a VERIFY CHV command to the SIM, with CHV number = "01".

2) The MS shall give an indication "OK", following a successful execution of the command.

### 27.14.2 Change of PIN

#### 27.14.2.1 Definition and applicability

The PIN may be changed by the user, by entering the old and new PINs. The length of the PIN is between 4 and 8 digits.

This test applies to all MEs.

#### 27.14.2.2 Conformance requirement

The ME shall support the change of PIN procedure as defined in GSM 02.30 and GSM 11.11.

Reference:

GSM 02.30, section 4.6.2; GSM 11.11, sections 8.10, 9.2.10 and 11.3.2.

#### 27.14.2.3 Test purpose

1. To verify that the PIN substitution procedure is performed correctly by the ME.
2. To verify that the GSM basic public MMI string is supported.

#### 27.14.2.4 Method of test

##### 27.14.2.4.1 Initial conditions

The ME is connected to a SIM or SIM-simulator with the PIN enabled.

The default SIM is used.

The ME is powered-on, with the correct PIN entered.

##### 27.14.2.4.2 Procedure

a) Enter "**04*2468*01234567*01234567#".

b) The MS is switched off and on.

c) When the MS is in mode "PIN-check", the sequence "01234567#" is entered.

d) The MS is switched off and on.

e) When the MS is in mode "PIN check" enter "2468#".

#### 27.14.2.5 Test requirement

1) After step a), the ME shall send a CHANGE CHV command to the SIM, with CHV number set to "01".

2) Following the successful execution of the command, the MS shall give an indication that the new PIN is accepted.

3) After step c), the MS shall give an indication "OK".

4) After step e), the MS shall give an indication that the entered PIN is not accepted.

### 27.14.3 Disabling the PIN

#### 27.14.3.1 Definition and applicability

Entry of the PIN may be disabled by the user, depending on the service table of the SIM. It is the responsibility of the ME to check the SIM service table.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM that support a feature to disable the PIN.

#### 27.14.3.2 Conformance requirement

Disabling PIN is achieved through the DISABLE CHV command. If the PIN disable function in the SIM service table is not allocated or activated, then the ME shall not attempt to disable the PIN.

Reference:

GSM 11.11, sections 8.11, 9.2.11, 10.2.7, 11 and 11.3.3.

#### 27.14.3.3 Test purpose

To verify that the ME does not attempt to disable the PIN.

#### 27.14.3.4 Method of test

##### 27.14.3.4.1 Initial conditions

The ME is connected to the SIM simulator.

Elementary files in the SIM simulator shall be default, with the exception of:

$EF_{SST}$ (SIM Service Table)

Logically: CHV1 disable function not activated.
Abbreviated dialling numbers allocated and activated.
PLMN selector allocated and activated.
Fixed dialling numbers not activated.

Coding: B1 B2 B3 B4
xx0x110x 0011xxxx xxxxxxxx 0000xxxx (binary)

The coding of $EF_{SST}$ shall conform with the capabilities of the SIM simulator.

The ME is powered on and a correct PIN entered.

##### 27.14.3.4.2 Procedure

Using the ME's MMI procedure, an attempt is made to disable the PIN.

#### 27.14.3.5 Test requirement

The ME shall not send a DISABLE CHV command across the SIM/ME interface.

### 27.14.4 PUK entry

#### 27.14.4.1 Definition and applicability

After three consecutive wrong entries of the PIN, the PIN becomes blocked. The PUK is used to unblock the PIN. This function may be performed whether or not the PIN is blocked.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM.

#### 27.14.4.2 Conformance requirement

The ME shall support the procedure to unblock PIN using PUK, as defined in GSM 02.30 and GSM 11.11.

Reference:

GSM 02.30, section 4.6.3; GSM 11.11, sections 8.13, 9.2.13 and 11.3.5.

#### 27.14.4.3 Test purpose

1. To verify that the CHV unblocking procedure is performed correctly.
2. To verify that the GSM basic public MMI string is supported.

#### 27.14.4.4 Method of test

##### 27.14.4.4.1 Initial conditions

The ME is connected to the SIM simulator.

The default SIM is used.

##### 27.14.4.4.2 Procedure

a) The ME is powered on.

b) Enter "**05*13243546*1234*1234#"

c) The ME is powered off and on.

d) Enter the new PIN: "1234".

e) The ME is powered off and on.

f) Enter a wrong PIN three times.

g) Enter "**05*13243546*2468*2468#".

h) The ME is powered off and on.

i) Enter the new PIN: "2468".

#### 27.14.4.5 Test requirements

1. After step b), the ME shall send an UNBLOCK CHV command to the SIM, with CHV number = "00".
2. After step d), the ME shall indicate that the PIN has been accepted.
3. After step f), the ME shall indicate that the PIN has been blocked.
4. After step g), the ME shall send an UNBLOCK CHV command to the SIM, with CHV number = "00".
5. After step j), the ME shall indicate that the PIN has been accepted.

## 27.14.5 Entry of PIN2

#### 27.14.5.1 Definition and applicability

PIN2 is a number used to authenticate the user to the SIM for security. Entry of the correct PIN2 allows PIN2-protected data to be accessed over the SIM-ME interface.

This test applies to all ME that support a feature requiring entry of PIN2, such as AoC or FDN.

#### 27.14.5.2 Conformance requirement

Where entry of PIN2 is necessary for security access, the ME shall indicate that PIN2 is to be entered.

The VERIFY CHV function verifies the PIN presented by the ME to the SIM.

Reference:

GSM 02.30, section 4.6.1; GSM 11.11, sections 8.9, 9.2.9, and 11.3.1.

#### 27.14.5.3 Test purpose

To verify that entry of PIN2 is processed by the ME correctly.

#### 27.14.5.4 Method of test

##### 27.14.5.4.1 Initial conditions

The ME is connected to a SIM or SIM-simulator and powered on, with the correct PIN entered.

A default FDN SIM is used.

##### 27.14.5.4.2 Procedure

a) A feature is accessed which requires the entry of PIN2, e.g. resetting ACM for Advice of Charge, or changing a Fixed Dialling Number.

b) The MMI is used to enter PIN2: "3579".

#### 27.14.5.5 Test requirement

1) After step b), the ME shall send a VERIFY CHV command to the SIM, with CHV number = "02".

2) Following the successful execution of the command, the MS shall give an indication that PIN2 was accepted.

### 27.14.6 Change of PIN2

#### 27.14.6.1 Definition and applicability

The PIN2 may be changed by the user, by entering the old and new PIN2s. The length of the PIN is between 4 and 8 digits.

This test applies to all MEs that support PIN2.

#### 27.14.6.2 Conformance requirement

The ME shall support the change of PIN2 procedure as defined in GSM 02.30 and GSM 11.11.

Reference:

GSM 02.30, section 4.6.2; GSM 11.11, sections 8.10, 9.2.10 and 11.3.2.

#### 27.14.6.3 Test purpose

1. To verify that PIN2 substitution procedure is performed correctly by the ME.

2. To verify that the GSM basic public MMI string is supported.

#### 27.14.6.4 Method of test

##### 27.14.6.4.1 Initial conditions

The ME is connected to a SIM or SIM-simulator.

The default FDN SIM is used, with PIN enabled.

The ME is powered on, with the correct PIN entered.

##### 27.14.6.4.2 Procedure

a) Enter "**042*3579*12345678*12345678#".

b) The MS is switched off and on, and PIN entered: "2468".

c) Enter "**042*3579*12345678*12345678#".

d) Enter "**042*12345678*3579*3579#".

#### 27.14.6.5 Test requirement

1) After step a), the ME shall send a CHANGE CHV command to the SIM, with CHV number set to "02".

2) Following the successful execution of the command, the MS shall give an indication that the new PIN2 is accepted.

3) After step c), the MS shall give an indication that the new PIN2 is not accepted.

4) After step d), the MS shall give an indication that the new PIN2 is accepted.

## 27.14.7 PUK2 entry

#### 27.14.7.1 Definition and applicability

After three consecutive wrong entries of PIN2, it becomes blocked. PUK2 is used to unblock PIN2. This function may be performed whether or not PIN2 is blocked.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM, that support PIN2.

#### 27.14.7.2 Conformance requirement

The ME shall support the procedure to unblock PIN2 using PUK2, as defined in GSM 02.30 and GSM 11.11.

Reference:

GSM 02.30, section 4.6.3; GSM 11.11, sections 8.13, 9.2.13 and 11.3.5.

#### 27.14.7.3 Test purpose

1. To verify that the PUK2 unblock procedure is performed correctly by the ME.

2. To verify that the GSM basic public MMI string is supported.

#### 27.14.7.4 Method of test

##### 27.14.7.4.1 Initial conditions

The ME is connected to the SIM simulator.

The default FDN SIM is used, with PIN enabled.

##### 27.14.7.4.2 Procedure

a) The ME is powered on and a correct PIN entered.

b) Enter "**052*08978675*1234*1234#"

c) The MS is powered off and on, and PIN entered: "2468".

d) A feature is selected requiring the entry of PIN2, and the new PIN2 "1234" is entered.

e) A wrong PIN2 is entered three times.

f) Enter "**052*08978675*3579*3579#".

g) A feature is selected requiring the entry of PIN2, and the new PIN2 "3579" is entered.

#### 27.14.7.5 Test requirements

1. After step b), the ME shall send an UNBLOCK CHV command to the SIM, with CHV number = "02"
2. After step d), the ME shall send a VERIFY CHV command, with CHV number = "02". Following the successful execution of the command, the ME shall indicate that the PIN2 has been accepted.
3. After step e), the ME shall indicate that PIN2 has been blocked.
4. After step f), the ME shall send an UNBLOCK CHV command to the SIM, with CHV number = "02"
5. After step g), the ME shall indicate that PIN2 has been accepted.

## 27.15 Abbreviated Dialling Numbers (ADN)

### 27.15.1 Definition and applicability

Abbreviated Dialling Numbers contain subscriber number and supplementary service control strings. They may also contain alpha identifiers.

This test applies to both GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or plug-in SIMs, that support ADN.

### 27.15.2 Conformance requirement

The ME shall be able to manage the storage and retrieval of ADNs from the SIM, and set up calls to these numbers.

Reference:

GSM 02.07, annex B.3.1; GSM 02.30 section 4.6.4; GSM 11.11, section 11.5.1.

### 27.15.3 Test purpose

To verify that the ME manages the storage and retrieval of ADNs from the SIM.

### 27.15.4 Method of Test

#### 27.15.4.1 Initial conditions

Coding of elementary files in the SIM shall be as default, with the addition of:

$EF_{ADN}$ (Abbreviated Dialling Number)

Logically:

At least 101 records.

Record 1:

Length of alpha identifier: 32 characters

Alpha identifier: "ABCDEFGHIJKLMNOPQRSTUVWXYZABCDEF"

Length of BCD number: "03"

TON and NPI: Telephony and Unknown

Dialled number: 123

CCI: None

Ext1: None

Coding for record 1:

| B1 | B2 | B3 | ... | B32 | B33 | B34 | B35 | B36 | B37 | B38 | B39 | ... | B46 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 41 | 42 | 43 | ... | 46 | 03 | 81 | 21 | F3 | FF | FF | FF | ... | FF |

The ME is installed with the default SIM or SIM simulator, and switched on.

#### 27.15.4.2 Procedure

a) The code "+123456789012345" is stored (entered) in the MS as abbreviated dialling entry number 7 on the SIM.

b) The code "00112233" is stored (entered) in the MS as abbreviated dialling entry number 6 on the SIM.

c) The code "**21*44556677#" is stored (entered) in the MS as abbreviated dialling entry number 101 on the SIM.

d) Retrieve data from SIM entry number 7 using the procedure N(N)(N)#.

e) Retrieve data from SIM entry number 6 using the procedure N(N)(N)#.

f) Retrieve data from SIM entry number 101 using the procedure N(N)(N)#.

g) Retrieve data from SIM entry number 1 using the procedure N(N)(N)#, and display the alpha identifier.

### 27.15.5 Test requirements

1) After step d), the number "+123456789012345" shall be displayed.

2) After step e), the number "00112233" shall be displayed.

3) After step f), the number "**21*44556677#" (or an equivalent representation) shall be displayed.

4) After step g), the ME shall display at least part of the alpha identifier, and shall sustain normal operation.

## 27.16 MMI reaction to SIM status encoding

### 27.16.1 Definition and applicability

The SIM gives status information in response to instructions, as two-byte codes. Some of these codes give valuable information to the user, and appropriate indication by the ME is mandatory.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or plug-in SIMs.

### 27.16.2 Conformance requirement

It is mandatory to give the user an appropriate indication when any of the codes given below appear.

Reference:

GSM 02.30, section 4.6.5.

### 27.16.3 Test purpose

To verify that the ME gives an appropriate indication to the user in response to status information return codes from the SIM.

### 27.16.4 Method of test

#### 27.16.4.1 Initial conditions

The ME is connected to the SIM simulator. All elementary files are coded as default.

The ME is powered on.

27.16.4.2 Procedure.

The SIM simulator is used to send the following error codes as reaction on an instruction from the ME:

- 9240 Memory Problem
- 9804 Access security policy not fulfilled or secret code rejected
- 9840 Secret code locked
- 6FXX Technical problem with no diagnostic given as reaction on an instruction from the ME.

27.16.5 Test requirement

For each error code, the ME shall give an appropriate MMI indication.

# 27.17 Electrical tests

General test purpose

Testing of electrical characteristics of the SIM/ME interface.

Whilst non-conformance in this area would be unlikely to cause difficulties to other users or the network (type approval criteria), significant deviations from the specifications (GSM 11.11 and ISO 7816) may damage the SIM. If an attempt is then made to use the SIM in a different ME, then its failure may reflect badly on both that ME and the network.

This section lists the electrical tests to be performed.

They include:

i) tests during activation and deactivation phases; and

ii) tests to be performed on each contact in both static and dynamic states: e.g. voltages, currents and signal characteristics.

However, due to the likely difficulty of accessing the terminals of the SIM/ME interface for the purposes of measurements, the ME manufacturer shall provide a test interface in accordance with section 36.5 for the purpose of conformance testing.

These tests apply to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or plug-in SIMs with any one of the following types of SIM/ME interface:

a) 5V SIM interface: The interface only supports the 5V operation mode as specified in GSM 11.11 and ISO/IEC 7816-3. The following conformance requirements apply:

27.17.1.1.2

27.17.1.2.2 a)

27.17.1.3.2 a)

27.17.1.4.2 a)

27.17.2.1.1.2 a)

27.17.2.1.2.2 a)

27.17.2.2.2 a)

27.17.2.3.2 a-1,2,3,4)

27.17.2.5.2 a-1,2,3,4)

b) 3V SIM interface: The interface only supports the 3V operation mode as specified in GSM 11.12. The following conformance requirements apply:

27.17.1.1.2

27.17.1.2.2 b)

27.17.1.4.2 b)

27.17.1.5.1.2

27.17.1.5.2.2

27.17.2.1.1.2 b)

27.17.2.1.2.2 b)

27.17.2.2.2 b)

27.17.2.3.2 b-1,2,3,4)

27.17.2.5.2 b-1,2,3,4)

c) 3V/5V SIM interface: The interface supports both the 5V operation mode as specified in GSM 11.11 and ISO 7816-3 and the 3V operation mode as specified in GSM 11.12. It recognizes the type of SIM and switches the interface accordingly. The following conformance requirements apply:

27.17.1.1.2

27.17.1.2.2 c-1,2)

27.17.1.3.2 c)

27.17.1.4.2 c-1,2)

27.17.1.5.3.2

27.17.1.5.4.2

27.17.2.1.1.2 c-1,2)

27.17.2.1.2.2 c-1,2)

27.17.2.2.2 c-1,2)

27.17.2.3.2 c-1,2,3,4,5,6,7,8)

27.17.2.5.2 c-1,2,3,4,5,6,7,8)

d) 1,8V SIM interface: The interface only supports the 1.81,8V operation mode as specified in GSM 11.18. The following conformance requirements apply:

27.17.1.1.2

27.17.1.2.2 d)

27.17.1.4.2 d)

27.17.1.5.1.2

27.17.1.5.2.2

27.17.2.1.1.2 d)

27.17.2.1.2.2 d)

27.17.2.2.2 d)

27.17.2.3.2 d-1,2,3,4)

27.17.2.5.2 d-1,2,3,4)

e) 1,8V/3V SIM interface: The interface supports both the 3V operation mode as specified in GSM 11.12 and the 1,8V operation mode as specified in GSM 11.18. It recogniszes the type of SIM and switches the interface accordingly. The following conformance requirements apply:

27.17.1.1.2

27.17.1.2.2 e-1,2)

27.17.1.3.2 e)

27.17.1.4.2 e-1,2)

27.17.1.5.3.2

27.17.1.5.4.2

27.17.2.1.1.2 e-1,2)

27.17.2.1.2.2 e-1,2)

27.17.2.2.2 e-1,2)

27.17.2.3.2 e-1,2,3,4,5,6,7,8)

27.17.2.5.2 e-1,2,3,4,5,6,7,8)

General measurement conventions

For the 5V interface operation mode, the measurement conventions are specified in ISO/IEC 7816-3 section 4.2.1.

For the 3Vand 1,8V interface operation mode these conditions apply in an analogous way.

## 27.17.1 Test of the power transition phases

### 27.17.1.1 Phase preceding ME power on

#### 27.17.1.1.1 Definition and applicability

When the mobile equipment is switched off, the contacts of the SIM/ME interface remain in an inactive state in order to prevent any damage to the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs.

#### 27.17.1.1.2 Conformance requirement

The residual voltage across the contacts of the SIM/ME interface (C1, C2, C3, C6, C7) shall not exceed +/- 0,4 Volts referenced to GND.

Reference:

GSM 11.11, section 4.3.3

#### 27.17.1.1.3 Test purpose

To verify that the residual voltage across the contacts of the SIM/ME interface (C1, C2, C3, C6, C7) is not greater than +/- 0,4 Volts referenced to GND.

#### 27.17.1.1.4 Method of test

##### 27.17.1.1.4.1 Initial condition

The ME is connected to a SIM Simulator.

The contact C1 (Vcc) of the SIM/ME interface is loaded with an impedance of 10 kOhm.

The other contacts (C2, C3, C6, C7) are loaded with an impedance of 50 kOhm.

#### 27.17.1.1.4.2 Procedure

The residual voltage on each contact is measured.

#### 27.17.1.1.5 Test requirement

The residual voltage on each contact shall not exceed +/- 0,4 Volts referenced to GND.

### 27.17.1.2 Phase during SIM power on

#### 27.17.1.2.1 Definition and applicability

When the mobile station is switched on or when the SIM/ME interface is being activated after 3V/5V or 1,8V/3V switching, the contacts shall be activated in a defined sequence in order to prevent any damage to the SIM.

The timing of this sequence is not defined, a measurement resolution better than or equivalent to 100 ns is assumed.

An ME supporting both 5V and 3V interface operation mode may switch from 3V to 5V after it has read the SIM type identification in the SIM status information by deactivating the SIM and activating it at the new supply voltage.

An ME supporting both 3V and 1,8V interface operation mode may switch from 1,8V to 3V after it has read the SIM type identification in the SIM status information by deactivating the SIM and activating it at the new supply voltage.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) 3V SIM interface

c) 3V/5V SIM interface

d) 1,8V SIM interface

e) 1,8V/3V SIM interface

#### 27.17.1.2.2 Conformance requirement

a) When the MS is soft powered on, the contacts of the SIM/ME interface shall be activated in the following order:

   1 - RST in state L,

   2 - Vcc powered,

   3 - I/O (ME) in reception mode,

   4 - Clock signal provided with a suitable and stable clock.

   When Vpp is connected to Vcc, as allowed by GSM 11.11 (clause 4.3.2 and 5.3), then Vpp is activated together with Vcc, at the time of Vcc (step 2 in the sequence above).

b) When the MS is soft powered on, the contacts of the SIM/ME interface shall be activated in the following order:

   1 - RST in state L,

   2 - Vcc powered,

   3 - I/O (ME) in reception mode,

   4 - Clock signal provided with a suitable and stable clock.

c-1) When the MS is soft powered on, the contacts of the SIM/ME interface shall be activated to 3V mode in the following order:

1 - RST in state L,

2 - Vcc powered,

3 - I/O (ME) in reception mode,

4 - Clock signal provided with a suitable and stable clock.

c-2) When the SIM/ME interface is being activated after the 3V/5V switching the contacts shall be activated to 5V mode in the order given in c-1).

d) When the MS is soft powered on, the contacts of the SIM/ME interface shall be activated in the following order:

1 - RST in state L,

2 - Vcc powered,

3 - I/O (ME) in reception mode,

4 - Clock signal provided with a suitable and stable clock.

e-1) When the MS is soft powered on, the contacts of the SIM/ME interface shall be activated to 1.81,8V mode in the following order:

1 - RST in state L,

2 - Vcc powered,

3 - I/O (ME) in reception mode,

4 - Clock signal provided with a suitable and stable clock.

e-2) When the SIM/ME interface is being activated after the 1.81,8V/3V switching the contacts shall be activated to 3V mode in the order given in ce-1).

Reference:

a): GSM 11.11, section 4.3.2

b), c-1), c-2): GSM 11.12, section 4.4 and section 4.5

d), e-1), e-2): GSM 11.18, section 4.4 and section 4.5

#### 27.17.1.2.3 Test purpose

To verify that the contacts of the SIM/ME interface are activated in the correct order, as described in the conformance requirement.

#### 27.17.1.2.4 Method of test

##### 27.17.1.2.4.1 Initial condition

The ME is connected to a SIM Simulator.

##### 27.17.1.2.4.2 Procedure

To test the requirements a), b), c-1), d) and e-1) the MS is soft powered on.

To test the requirement c-2) and e-2), the ME is caused to switch the voltage on the SIM/ME interface.

The verification of each activation procedure starts with the first contact leaving the inactive state. The SIM/ME interface is monitored until it is fully activated.

#### 27.17.1.2.5 Test requirement

The contacts of the SIM/ME interface shall be activated in the correct order, as described in the conformance requirement.

### 27.17.1.3 Phase during ME power off with clock stop forbidden

#### 27.17.1.3.1 Definition and applicability

When the mobile station is soft powered off, the contacts shall be deactivated in a defined sequence in order to prevent any damage to the SIM.

The timing of this sequence is not defined, a measurement resolution better than or equivalent to 100 ns is assumed.

NOTE 1: If during MS operation the SIM is physically removed it is impractical to ensure correct sequencing of deactivation and the possible damage to the SIM cannot be safeguarded by a type approval test. Furthermore, in this situation the integrity of SIM data is not guaranteed (see GSM 02.17).

NOTE 2: Since 3V technology SIMs and 1,8V technology SIMs shall not indicate that clock stop is forbidden, this test applies only to MEs with a 5V interface and MEs with a 3V/5V interface when powered down from 5V mode.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) [not applicable for 3V SIM interface or 1,8V SIM interface]

c) 3V/5V SIM interface

#### 27.17.1.3.2 Conformance requirement

a) When the ME is soft powered down, the contacts of the SIM/ME interface shall be deactivated in the following order:

   1 - RST at low state,

   2 - Clock stopped at low state,

   3 - Vpp inactive (only if Vpp is provided independent of Vcc, see GSM 11.11 clause 5.3),

   4 - I/O at state A,

   5 - Vcc inactive.

   When Vpp is connected to Vcc, as allowed by GSM 11.11 (clause 5.3), then Vpp is deactivated together with Vcc, at the time of Vcc (step 5 in the sequence above).

c) When the ME is soft powered down from 5V mode, the contacts of the SIM/ME interface shall be deactivated in the following order:

   1 - RST at low state,

   2 - Clock stopped at low state,

   3 - I/O at status A,

   4 - Vcc inactive.

Reference:

a): GSM 11.11, section 4.3.2

c): GSM 11.12, section 4.5

#### 27.17.1.3.3 Test purpose

To verify that the contacts of the SIM/ME interface become deactivated in the correct order, as given in the conformance requirement.

#### 27.17.1.3.4 Method of test

##### 27.17.1.3.4.1 Initial condition

The ME is connected to a SIM Simulator.

The file characteristics of the directories (byte 14 of STATUS information) shall indicate a 5V SIM with clock stop forbidden.

##### 27.17.1.3.4.2 Procedure

The MS is soft powered off.

The SIM/ME interface is monitored until it is fully deactivated.

#### 27.17.1.3.5 Test requirement

The contacts of the SIM/ME interface shall be deactivated in the correct order, as given in the conformance requirement.

### 27.17.1.4 Phase during ME power off with clock stop allowed

#### 27.17.1.4.1 Definition and applicability

When the mobile station is soft powered off or when the SIM/ME interface is being deactivated for 3V/5V or 1,8V/3V switching, the contacts shall be deactivated in a defined sequence in order to prevent any damage to the SIM.

The timing of this sequence is not defined, a measurement resolution better than or equivalent to 100 ns is assumed.

NOTE: If during MS operation the SIM is physically removed it is impractical to ensure correct sequencing of deactivation and the possible damage to the SIM cannot be safeguarded by a type approval test. Furthermore, in this situation the integrity of the SIM data is not guaranteed (see GSM 02.17).

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) 3V SIM interface

c) 3V/5V SIM interface

d) 1,8V SIM interface

e) 1,8V/3V SIM interface

#### 27.17.1.4.2 Conformance requirement

a) Depending on the state of the clock at the time of deactivation, the contacts of the SIM/ME shall be deactivated in one of two ways.

   If the clock is running, the contacts of the SIM/ME interface shall be deactivated in the following order:

   1 - RST at low level,

   2 - Clock stopped at low level,

   3 - Vpp inactive (only if Vpp is provided independent of Vcc, see GSM 11.11 clause 5.3),

   4 - I/O at status A,

5 - Vcc inactive.

When Vpp is connected to Vcc, as allowed by GSM 11.11 (clause 5.3), then Vpp is deactivated together with Vcc, at the time of Vcc (step 5 in the sequence above).

If the clock is stopped and is not restarted, the ME is allowed to deactivate all the contacts in any order, provided that all signals reach low level before Vcc leaves high level.

b) Depending on the state of the clock at the time of deactivation, the contacts of the SIM/ME shall be deactivated in one of two ways.

If the clock is running, the contacts of the SIM/ME interface shall be deactivated in the following order:

1 - RST at low level,

2 - Clock stopped at low level,

3. I/O at status A,

4.- Vcc inactive.

If the clock is stopped and is not restarted, the ME is allowed to deactivate all the contacts in any order, provided that all signals reach low level before Vcc leaves high level.

c-1) Depending on the state of the clock at the time of deactivation, the contacts of the SIM/ME interface shall be deactivated in one of two ways.

If the clock is running, the contacts of the SIM/ME interface shall be deactivated in the following order:

1 - RST at low level,

2 - Clock stopped at low level,

3. I/O at status A,

4.- Vcc inactive.

If the clock is stopped and is not restarted, the ME is allowed to deactivate all the contacts in any order, provided that all signals reach low level before Vcc leaves high level.

c-2) When the SIM/ME interface is deactivated for 3V/5V switching, the contacts shall be deactivated as given in c-1).

d) Depending on the state of the clock at the time of deactivation, the contacts of the SIM/ME shall be deactivated in one of two ways.

If the clock is running, the contacts of the SIM/ME interface shall be deactivated in the following order:

1 - RST at low level,

2 - Clock stopped at low level,

3. I/O at status A,

4.- Vcc inactive.

If the clock is stopped and is not restarted, the ME is allowed to deactivate all the contacts in any order, provided that all signals reach low level before Vcc leaves high level.

e-1) Depending on the state of the clock at the time of deactivation, the contacts of the SIM/ME interface shall be deactivated in one of two ways.

If the clock is running, the contacts of the SIM/ME interface shall be deactivated in the following order:

1 - RST at low level,

2 - Clock stopped at low level,

3. I/O at status A,

4.- Vcc inactive.

If the clock is stopped and is not restarted, the ME is allowed to deactivate all the contacts in any order, provided that all signals reach low level before Vcc leaves high level.

e-2) When the SIM/ME interface is deactivated for 1,8V/3V switching, the contacts shall be deactivated as given in e-1).

Reference:

a): GSM 11.11, section 4.3.2

b), c-1), c-2): GSM 11.12, section 4.5

d), e-1), e-2): GSM 11.18, section 4.5

#### 27.17.1.4.3 Test purpose

To verify that, depending on the state of the clock (running or stopped), the contacts of the SIM/ME interface become deactivated in the correct order, as given in the conformance requirement.

#### 27.17.1.4.4 Method of test

##### 27.17.1.4.4.1 Initial condition

The ME is connected to a SIM Simulator.

The file characteristics of the directories (byte 14 of STATUS information) shall indicate that clock stop is allowed.

##### 27.17.1.4.4.2 Procedure

To test the requirements a), b), c-1), d) and e-1), the MS is soft powered off.

To test the requirement c-2) and e-2), the ME is caused to switch the voltage on the SIM/ME interface.

The SIM/ME interface is monitored until it is fully deactivated.

#### 27.17.1.4.5 Test requirement

The contacts of the SIM/ME interface shall be deactivated in the correct order, as given in the conformance requirements.

### 27.17.1.5 SIM Type Recognition and Voltage Switching

#### 27.17.1.5.1 Reaction of 3V only MEs on SIM type recognition failure

##### 27.17.1.5.1.1 Definition and applicability

When a 3V only ME detects a failure during the SIM type recognition procedure, the ME shall reject the SIM in order to prevent any damage to the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with a 3V SIM interface.

##### 27.17.1.5.1.2 Conformance requirement

1) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR and before issuing any other command. The procedure shall consist of the two commands “SELECT GSM” and “STATUS/GET RESPONSE”.

2) If a 3V only ME cannot complete the SIM type recognition procedure the ME shall deactivate the SIM/ME interface and reject the SIM immediately without issuing any further command.

   This procedure shall be finished within 5 seconds after the “STATUS/GET RESPONSE” command.

Reference:

GSM 11.12 section 4.3 and 4.5

#### 27.17.1.5.1.3 Test purpose

1) To verify that a 3V only ME correctly performs the SIM type recognition procedure.

2) To verify that a 3V only ME deactivates the SIM/ME interface and rejects the SIM in case that the SIM does not respond to the “STATUS/GET RESPONSE” command.

#### 27.17.1.5.1.4 Method of test

##### 27.17.1.5.1.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 3V technology SIM with nominal test conditions according to table 27.2-2. All elementary files are coded as default.

The ME is powered on.

##### 27.17.1.5.1.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of the commands “SELECT GSM” and “STATUS/GET RESPONSE” as the first and only commands of the GSM card session.

The SIM simulator does not respond to the “STATUS/GET RESPONSE” command.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.17.1.5.1.5 Test requirement

1) Immediately after the ATR only the two commands “SELECT GSM” and “STATUS/GET RESPONSE” shall be sent by the ME.

2) The 3V only ME shall deactivate the SIM/ME interface within 5 seconds and reject the SIM (i.e. not activate the SIM/ME interface within the test procedure).

### 27.17.1.5.2 Reaction of 3V only MEs on type recognition of 5V only SIMs

#### 27.17.1.5.2.1 Definition and applicability

When a 3V only ME detects a 5V only SIM during the SIM type recognition procedure, the ME shall reject the SIM in order to prevent any damage to the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with 3V SIM interface.

#### 27.17.1.5.2.2 Conformance requirement

1) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR and before issuing any other command. The procedure shall consist of the two commands “SELECT GSM” and “STATUS/GET RESPONSE”

2) If a 3V only ME identifies a 5V only SIM during the SIM type recognition procedure the ME shall deactivate the SIM/ME interface and reject the SIM immediately without issuing any further command.

Reference:

GSM 11.12 section 4.3 and 4.5.

#### 27.17.1.5.2.3 Test purpose

1) To verify that a 3V only ME correctly performs the SIM type recognition procedure.

2) To verify that a 3V only ME deactivates the SIM/ME interface and rejects the SIM if a 5V only SIM is applied.

#### 27.17.1.5.2.4 Method of test

##### 27.17.1.5.2.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 3V technology SIM (to ensure that the ME can perform the SIM type recognition procedure) with nominal test conditions according to table 27.2-2. All elementary files are coded as default. Bit 5 in byte 14 of the status information is set to "0" (i.e. 5V only SIM).

The ME is powered on.

##### 27.17.1.5.2.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of the commands "SELECT GSM" and "STATUS/GET RESPONSE" as the first and only commands of the GSM card session.

The SIM simulator responds to the "STATUS/GET RESPONSE" command with a status information indicating a 5V only SIM.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.17.1.5.2.5 Test requirement

1) Immediately after the ATR only the two command "SELECT GSM" and "STATUS/GET RESPONSE" shall be sent by the ME.

2) The 3V only ME shall deactivate the SIM/ME interface immediately after receipt of the status information from the SIM (but not later than 5 seconds after the "STATUS/GET RESPONSE command) and reject the SIM (i.e. not activate the SIM/ME interface again within the test procedure).

### 27.17.1.5.3 Reaction of 3V technology MEs on type recognition of 5V only SIMs

#### 27.17.1.5.3.1 Definition and applicability

When a 3V technology ME detects a 5V only SIM during the SIM type recognition procedure, the ME shall switch to 5V operation.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with the 3V/5V SIM interface.

#### 27.17.1.5.3.2 Conformance requirement

1) A 3V technology ME shall initially activate the SIM at 3V (i.e. the first activation of a GSM card session.

2) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR procedure and before issuing any other command. The procedure shall consist of the two commands "SELECT GSM" and "STATUS/GET RESPONSE".

3) If a 3V technology ME identifies a 5V only SIM during the SIM type recognition procedure, the ME shall switch to 5V operation mode. Switching from 3V to 5V shall only be performed by deactivating the SIM and activating it with 5V supply voltage immediately after the SIM type recognition procedure without issuing any further command.

Reference:

GSM 11.12 section 4.3 and 4.4.

#### 27.17.1.5.3.3 Test purpose

1) To verify that a 3V technology ME initially activates the SIM with 3V.

2) To verify that a 3V technology ME correctly performs the SIM type recognition procedure.

3) To verify that a 3V technology ME deactivates the SIM/ME interface immediately after the SIM type recognition procedure (in order to switch the supply voltage) without issuing any further command.

#### 27.17.1.5.3.4 Method of test

##### 27.17.1.5.3.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 5V only SIM with nominal test conditions according to table 27.2-1. All elementary files are coded as default. Bit 5 in byte 14 of the status information is set to "0" (i.e. 5V only SIM).

The ME is powered on.

##### 27.17.1.5.3.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of the commands "SELECT GSM" and "STATUS/GET RESPONSE" as the first and only commands of the GSM card session.

The SIM simulator responds to the "STATUS/GET RESPONSE" command with a status information indicating a 5V only SIM.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.17.1.5.3.5 Test requirement

1) The initial activation of the SIM/ME interface shall be performed with 3V supply voltage.

2) Immediately after the ATR the two commands "SELECT GSM" and "STATUS/GET RESPONSE" shall be sent by the ME before issuing further commands.

3) The 3V technology ME shall deactivate the SIM/ME interface immediately after receipt of the status information from the SIM.

### 27.17.1.5.4 Reaction of 3V technology MEs on type recognition of 3V technology SIMs

#### 27.17.1.5.4.1 Definition and applicability

When a 3V technology ME detects a 3V technology SIM during the SIM type recognition procedure the ME may either switch to 5V operation or stay in 3V operation.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with 3V/5V SIM interface.

#### 27.17.1.5.4.2 Conformance requirement

1) A 3V technology ME shall initially activate the SIM with a 3V (i.e. the first activation of a GSM card session).

2) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR and before issuing any other command. the procedure shall consist of the two commands "SELECT GSM" and "STATUS/GET RESPONSE".

3) If a 3V technology ME identifies a 3V technology SIM during the SIM type recognition the ME may switch to 5V operation. Switching from 3V to 5V shall only be performed by deactivating the SIM and activating it with 5V supply voltage immediately after the SIM type recognition procedure without issuing any further commands.

Reference:

GSM 11.12, section 4.3, 4.4 and 4.7.

#### 27.17.1.5.4.3 Test purpose

1) To verify that a 3V technology ME initially activates the SIM with 3V.

2) To verify that a 3V technology ME correctly performs the SIM type recognition procedure.

3) To verify that a 3V technology ME deactivates the SIM/ME interface immediately after the recognition of a 3V technology SIM (in order to switch the supply voltage) or proceeds with the 3V operation during the whole GSM card session without switching to 5V supply voltage.

#### 27.17.1.5.4.4 Method of test

##### 27.17.1.5.4.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 3V technology SIM with nominal test conditions according to table 27.2-2. All elementary files are coded as default. Bit 5 in byte 14 of the status information is set to “1” (i.e. 3V technology SIM.)

The ME is powered on.

##### 27.17.1.5.4.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of commands “SELECT GSM” and “STATUS/GET RESPONSE” as the first and only commands of the GSM card session.

The SIM simulator responds to the "STATUS/GET RESPONSE" command with a status information indicating a 3V technology SIM.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.27.1.5.4.5 Test requirement

1) The initial activation of the SIM/ME interface shall be performed with 3V supply voltage.

2) Immediately after the ATR the two commands “SELECT GSM” and “STATUS/GET RESPONSE: shall be sent by the ME.

3) The ME shall react in one of the following ways:

   a) The ME deactivates the SIM/ME interface immediately after the receipt of the status information from the SIM.

   b) the ME proceeds with the GSM card session without switching to another supply voltage.

### 27.17.1.5.5 Reaction of 1,8V only MEs on SIM type recognition failure

#### 27.17.1.5.5.1 Definition and applicability

When a 1,8V only ME detects a failure during the SIM type recognition procedure, the ME shall reject the SIM in order to prevent any damage to the SIM.

This test applies to MEs with a 1,8V only SIM interface.

#### 27.17.1.5.5.2 Conformance requirement

1) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR and before issuing any other command. The procedure shall consist of the two commands “SELECT GSM” and “STATUS/GET RESPONSE”.

2) If a 1,8V only ME cannot complete the SIM type recognition procedure the ME shall deactivate the SIM/ME interface and reject the SIM immediately without issuing any further command.

   This procedure shall be finished within 5 seconds after the “STATUS/GET RESPONSE” command.

Reference:

GSM 11.18 section 4.3 and 4.5

#### 27.17.1.5.5.3 Test purpose

1) To verify that a 1,8V only ME correctly performs the SIM type recognition procedure.

2) To verify that a 1,8V only ME deactivates the SIM/ME interface and rejects the SIM in case that the SIM does not respond to the “STATUS/GET RESPONSE” command.

#### 27.17.1.5.5.4 Method of test

##### 27.17.1.5.5.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 1,8V technology SIM with nominal test conditions according to table 27.2-3. All elementary files are coded as default.

The ME is powered on.

##### 27.17.1.5.5.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of the commands “SELECT GSM” and “STATUS/GET RESPONSE” as the first and only commands of the GSM card session.

The SIM simulator does not respond to the “STATUS/GET RESPONSE” command.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.17.1.5.5.5 Test requirement

1) Immediately after the ATR only the two commands “SELECT GSM” and “STATUS/GET RESPONSE” shall be sent by the ME.

2) The 1,8V only ME shall deactivate the SIM/ME interface within 5 seconds and reject the SIM (i.e. not activate the SIM/ME interface within the test procedure).

### 27.17.1.5.6 Reaction of 1,8V only MEs on type recognition of 3V SIMs

#### 27.17.1.5.6.1 Definition and applicability

When a 1,8V only ME detects a 3V technology SIM during the SIM type recognition procedure, the ME shall reject the SIM in order to prevent any damage to the SIM.

This test applies to MEs with a 1,8V only SIM interface.

#### 27.17.1.5.6.2 Conformance requirement

1) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR and before issuing any other command. The procedure shall consist of the two commands “SELECT GSM” and “STATUS/GET RESPONSE”

2) If a 1,8V only ME identifies a 3V technology SIM during the SIM type recognition procedure the ME shall deactivate the SIM/ME interface and reject the SIM immediately without issuing any further command.

Reference:

GSM 11.18 section 4.3 and 4.5.

#### 27.17.1.5.6.3 Test purpose

1) To verify that a 1,8V only ME correctly performs the SIM type recognition procedure.

2) To verify that a 1,8V only ME deactivates the SIM/ME interface and rejects the SIM if a 3V technology SIM is applied.

#### 27.17.1.5.6.4 Method of test

##### 27.17.1.5.6.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 1,8V technology SIM (to ensure that the ME can perform the SIM type recognition procedure) with nominal test conditions according to table 27.2-3. All elementary files are coded as default. Bits 6 and 5 in byte 14 of the status information are set to “01” (i.e. 3V technology SIM).

The ME is powered on.

##### 27.17.1.5.6.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of the commands “SELECT GSM” and “STATUS/GET RESPONSE” as the first and only commands of the GSM card session.

The SIM simulator responds to the “STATUS/GET RESPONSE” command with a status information indicating a 3V technology SIM.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.17.1.5.6.5 Test requirement

1) Immediately after the ATR only the two command “SELECT GSM” and “STATUS/GET RESPONSE” shall be sent by the ME.

2) The 1,8V only ME shall deactivate the SIM/ME interface immediately after receipt of the status information from the SIM (but not later than 5 seconds after the “STATUS/GET RESPONSE command) and reject the SIM (i.e. not activate the SIM/ME interface again within the test procedure).

### 27.17.1.5.7 Reaction of 1,8V technology MEs on type recognition of 3V technology SIMs

#### 27.17.1.5.7.1 Definition and applicability

When a 1,8V technology ME detects a 3V technology SIM during the SIM type recognition procedure, the ME shall switch to 3V operation.

This test applies to MEs with the 1,8V/3V SIM interface.

#### 27.17.1.5.7.2 Conformance requirement

1) A 1,8V technology ME shall initially activate the SIM at 1,8V (i.e. the first activation of a GSM card session.

2) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR procedure and before issuing any other command. The procedure shall consist of the two commands “SELECT GSM” and “STATUS/GET RESPONSE”.

3) If a 1,8V technology ME identifies a 3V technology SIM during the SIM type recognition procedure, the ME shall switch to 3V operation mode. Switching from 1,8V to 3V shall only be performed by deactivating the SIM and activating it with 3V supply voltage immediately after the SIM type recognition procedure without issuing any further command.

Reference:

GSM 11.18 section 4.3 and 4.4.

#### 27.17.1.5.7.3 Test purpose

1) To verify that a 1,8V technology ME initially activates the SIM with 1,8V.

2) To verify that a 1,8V technology ME correctly performs the SIM type recognition procedure.

3) To verify that a 1,8V technology ME deactivates the SIM/ME interface immediately after the SIM type recognition procedure (in order to switch the supply voltage) without issuing any further command.

#### 27.17.1.5.7.4 Method of test

##### 27.17.1.5.7.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 3V technology SIM with nominal test conditions according to table 27.2-2. All elementary files are coded as default. Bits 6 and 5 in byte 14 of the status information are set to “01” (i.e. 3V technology SIM).

The ME is powered on.

##### 27.17.1.5.7.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of the commands “SELECT GSM” and “STATUS/GET RESPONSE” as the first and only commands of the GSM card session.

The SIM simulator responds to the “STATUS/GET RESPONSE” command with a status information indicating a 3V technology SIM.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.17.1.5.7.5 Test requirement

1) The initial activation of the SIM/ME interface shall be performed with 1,8V supply voltage.

2) Immediately after the ATR the two commands “SELECT GSM” and “STATUS/GET RESPONSE” shall be sent by the ME before issuing further commands.

3) The 1,8V technology ME shall deactivate the SIM/ME interface immediately after receipt of the status information from the SIM.

### 27.17.1.5.8 Reaction of 1,8V technology MEs on type recognition of 1,8V technology SIMs

#### 27.17.1.5.8.1 Definition and applicability

When a 1,8V technology ME detects a 1,8V technology SIM during the SIM type recognition procedure the ME may either switch to 3V operation or stay in 1,8V operation.

This test applies to MEs with 1,8V/3V SIM interface.

#### 27.17.1.5.8.2 Conformance requirement

1) A 1,8V technology ME shall initially activate the SIM with a 1,8V (i.e. the first activation of a GSM card session).

2) The procedure for deriving the identification bit (SIM type recognition procedure) shall be performed by the ME immediately after the ATR and before issuing any other command. the procedure shall consist of the two commands “SELECT GSM” and “STATUS/GET RESPONSE”.

3) If a 1,8V technology ME identifies a 1,8V technology SIM during the SIM type recognition the ME may switch to 3V operation. Switching from 1,8V to 3V shall only be performed by deactivating the SIM and activating it

with 3V supply voltage immediately after the SIM type recognition procedure without issuing any further commands.

Reference:

GSM 11.18, section 4.3, 4.4 and 4.7.

#### 27.17.1.5.8.3 Test purpose

1) To verify that a 1,8V technology ME initially activates the SIM with 1,8V.

2) To verify that a 1,8V technology ME correctly performs the SIM type recognition procedure.

3) To verify that a 1,8V technology ME deactivates the SIM/ME interface immediately after the recognition of a 1,8V technology SIM (in order to switch the supply voltage) or proceeds with the 1,8V operation during the whole GSM card session without switching to 3V supply voltage.

#### 27.17.1.5.8.4 Method of test

##### 27.17.1.5.8.4.1 Initial condition

The ME is connected to a SIM Simulator simulating a 1,8V technology SIM with nominal test conditions according to table 27.2-3. All elementary files are coded as default. Bits 6 and 5 in byte 14 of the status information are set to “11” (i.e. 1,8V technology SIM.)

The ME is powered on.

##### 27.17.1.5.8.4.2 Procedure

After sending the ATR the SIM simulator checks the presence of commands “SELECT GSM” and “STATUS/GET RESPONSE” as the first and only commands of the GSM card session.

The SIM simulator responds to the "STATUS/GET RESPONSE" command with a status information indicating a 1,8V technology SIM.

The SIM/ME interface is monitored for at least 1 minute until the MS is switched off.

#### 27.17.1.5.8.5 Test requirement

1) The initial activation of the SIM/ME interface shall be performed with 1,8V supply voltage.

2) Immediately after the ATR the two commands “SELECT GSM” and “STATUS/GET RESPONSE: shall be sent by the ME.

3) The ME shall react in one of the following ways:

   a) The ME deactivates the SIM/ME interface immediately after the receipt of the status information from the SIM.

   b) the ME proceeds with the GSM card session without switching to another supply voltage.

## 27.17.2 Electrical tests on each ME contact

The following tables give the electrical conditions that must be applied by the SIM simulator to all contacts during a test if not stated otherwise.

**Table 27.2-1: Nominal test conditions on 5V SIM/ME interface**

| Contacts | Low level | High level | Max. capacitive load |
|---|---|---|---|
| C1 (Vcc) | --- | I = 10 mA | |
| C2 (RST) | I = -200 µA | I = +20 µA | 30 pF |
| C3 (CLK) | I = -200 µA | I = +20 µA | 30 pF |
| C5 (GND) | --- | --- | |
| C6 ((Vpp) | --- | I = 0 mA | |
| C7 (I/O)<br>ME input<br>ME output | <br>V = 0 V<br>I = -1 mA | <br>I = +20 µA<br>I = +20 µA | 30 pF |

**Table 27.2-2: Nominal test conditions on 3V SIM/ME interface**

| Contacts | Low level | High level | Max. capacitive load |
|---|---|---|---|
| C1 (Vcc) | --- | I = 6 mA | |
| C2 (RST) | I = -200 µA | I = +200 µA | 30 pF |
| C3 (CLK) | I = -20 µA | I = +20 µA | 30 pF |
| C5 (GND) | --- | --- | |
| C6 ((Vpp) | --- | --- | |
| C7 (I/O)<br>ME input<br>ME output | <br>V = 0 V<br>I = -1 mA | <br>I = +20 µA<br>I = +20 µA | 30 pF |

**Table 27.2-3: Nominal test conditions on 1,8V SIM/ME interface**

| Contacts | Low level | High level | Max. capacitive load |
|---|---|---|---|
| C1 (Vcc) | --- | I = 4 mA | |
| C2 (RST) | I = -200 µA | I = +200 µA | 30 pF |
| C3 (CLK) | I = -20 µA | I = +20 µA | 30 pF |
| C5 (GND) | --- | --- | |
| C6 ((Vpp) | --- | --- | |
| C7 (I/O)<br>ME input<br>ME output | <br>V = 0 V<br>I = -1 mA | <br>I = +20 µA<br>I = +20 µA | 30 pF |

NOTE 1: Measurements of contacts voltage levels can be done at any time since the beginning of activation of the SIM and the end of deactivation of the SIM (ISO/IEC 7816-3 section 5.1).

NOTE 2: The reference point of all measurements is the contact C5 (Ground).

NOTE 3: Currents flowing into the SIM are considered positive.

## 27.17.2.1 Electrical tests on contact C1

C1 = Card power supply (Vcc)

### 27.17.2.1.1 Test 1

#### 27.17.2.1.1.1 Definition and applicability

When the mobile station is activated, the supply voltage on the SIM/ME interface shall remain in the specified range in order to ensure correct operation and to prevent any damage to the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) 3V SIM interface

c) 3V/5V SIM interface

d) 1,8V SIM interface

e) 1,8V/3V SIM interface

#### 27.17.2.1.1.2 Conformance requirement

a) The voltage on contact C1 of the SIM/ME interface shall be 5V +/- 10 % for Icc up to 10 mA.

b) The voltage on contact C1 of the SIM/ME interface shall be 3V +/- 10 % for Icc up to 6 mA.

c-1) The voltage on contact C1 of the SIM/ME interface shall be 5V +/- 10 % for Icc up to 10 mA when the interface is in 5V operation mode.

c-2) The voltage on contact C1 of the SIM/ME interface shall be 3V +/- 10 % for Icc up to 6 mA when the interface is in 3V operation mode.

d) The voltage on contact C1 of the SIM/ME interface shall be 1,8V +/- 10 % for Icc up to 4 mA.

e-1) The voltage on contact C1 of the SIM/ME interface shall be 3V +/- 10 % for Icc up to 6 mA when the interface is in 3V operation mode.

e-2) The voltage on contact C1 of the SIM/ME interface shall be 1,8V +/- 10 % for Icc up to 4 mA when the interface is in 1,8V operation mode.

Reference:

a), c-1): GSM 11.11, section 5.1.

b), c-2), e-1): GSM 11.12, section 5.

d), e-2): GSM 11.18, section 5.

#### 27.17.2.1.1.3 Test purpose

To verify that the ME keeps the voltage on contact C1 of the SIM/ME interface within the ranges specified in the conformance requirements.

#### 27.17.2.1.1.4 Method of test

Initial condition

The ME is connected to a SIM Simulator.

The MS is activated.

The remaining contacts of the SIM/ME interface are in nominal test conditions (See GSM 11.10 section 27.17.2).

Test Procedure

The voltage of contact C1 (Vcc) of the SIM/ME interface is measured.

#### 27.17.2.1.1.5 Test requirement

The voltage on contact C1 of the SIM/ME interface shall be within the ranges specified in the conformance requirements.

### 27.17.2.1.2 Test 2

#### 27.17.2.1.2.1 Definition and applicability

When the mobile station is activated, the supply voltage on the SIM/ME interface shall be able to counteract spikes in the current consumption of the SIM up to the limits given in the conformance requirement, ensuring that the supply voltage stays in the specified range.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) 3V SIM interface

c) 3V/5V SIM interface

d) 1,8V SIM interface

e) 1,8V/3V SIM interface

#### 27.17.2.1.2.2 Conformance requirement

a) The voltage on contact C1 of the SIM/ME interface shall be 5V +/- 10 % for spikes in the current consumption with a maximum charge of 40 nAs with no more than 400 ns duration and an amplitude of at most 200 mA.

b) The voltage on contact C1 of the SIM/ME interface shall be 3V +/- 10 % for spikes in the current consumption with a maximum charge of 12 nAs with no more than 400 ns duration and an amplitude of at most 60 mA.

c-1) The voltage on contact C1 of the SIM/ME interface shall be 5V +/- 10 % for spikes in the current consumption with a maximum charge of 40 nAs with no more than 400 ns duration and an amplitude of at most 200 mA when the interface is in 5V operation mode.

c-2) The voltage on contact C1 of the SIM/ME interface shall be 3V +/- 10 % for spikes in the current consumption with a maximum charge of 12 nAs with no more than 400 ns duration and an amplitude of at most 60 mA when the interface is in 3V operation mode.

d) The voltage on contact C1 of the SIM/ME interface shall be 1,8V +/- 10 % for spikes in the current consumption with a maximum charge of 12 nAs with no more than 400 ns duration and an amplitude of at most 60 mA.

e-1) The voltage on contact C1 of the SIM/ME interface shall be 3V +/- 10 % for spikes in the current consumption with a maximum charge of 12 nAs with no more than 400 ns duration and an amplitude of at most 60 mA when the interface is in 3V operation mode.

e-2) The voltage on contact C1 of the SIM/ME interface shall be 1,8V +/- 10 % for spikes in the current consumption with a maximum charge of 12 nAs with no more than 400 ns duration and an amplitude of at most 60 mA when the interface is in 1,8V operation mode.

Reference:

a), c-1): GSM 11.11, section 5.2.

b), c-2), e-1): GSM 11.12, section 5

d), e-2): GSM 11.18, section 5

#### 27.17.2.1.2.3 Test purpose

To verify that the ME keeps the voltage on contact C1 of the SIM/ME interface within the specified range for the conditions given in the conformance requirement.

27.17.2.1.2.4 Method of test

Initial condition

The ME is connected to a SIM Simulator.

The MS is activated.

The remaining contacts of the SIM/ME interface are held in nominal test condition (See GSM 11.10 section 27.17.2).

Procedure

To test the requirements a) and c-1), the voltage on contact C1 of the SIM/ME interface is monitored and the following current spikes are applied:

1) continuous spikes:

   current amplitude 20 mA

   current offset 0 mA

   Duration 100 ns

   Pause 100 ns

2) continuous spikes:

   current 20 mA

   current offset 0 mA

   Duration 400 ns

   Pause 400 ns

3) continuous spikes:

   current amplitude 15 mA

   current offset 5 mA

   (i.e. maximum amplitude = 5 mA + 15 mA = 20 mA

   Duration 150 ns

   Pause 300 ns

4) random spikes:

   current amplitude 200 mA

   current offset 0 mA

   Duration 200 ns

   Pause between 0,1 ms and 500 ms, randomly varied

5) random spikes:

   current amplitude 100 mA

   current offset 0 mA

   Duration 400 ns

   Pause between 0,1 ms and 500 ms, randomly varied

6) random spikes

current amplitude 195 mA

current offset 5mA

(i.e. maximum amplitude = 5 mA + 195 mA = 200 mA

Duration 200 ns

Pause between 0,1 ms and 500 ms, randomly varied

To test the requirements b), c-2), d), e-1) and e-2) the voltage on contact C1 of the SIM/ME interface is monitored and the following current spikes are applied:

1) continuous spikes:

   current amplitude 12 mA

   current offset 0 mA

   Duration 100 ns

   Pause 100 ns

2) continuous spikes:

   current 12 mA

   current offset 0 mA

   Duration 400 ns

   Pause 400 ns

3) continuous spikes:

   current amplitude 9 mA

   current offset 3 mA

   (i.e. maximum amplitude = 3 mA + 9 mA = 12 mA

   Duration 150 ns

   Pause 300 ns

4) random spikes:

   current amplitude 60 mA

   current offset 0 mA

   Duration 200 ns

   Pause between 0,1 ms and 500 ms, randomly varied

5) random spikes:

   current amplitude 30 mA

   current offset 0 mA

   Duration 400 ns

   Pause between 0,1 ms and 500 ms, randomly varied

6) random spikes

current amplitude 57 mA

current offset 3 mA

(i.e. maximum amplitude = 3 mA + 57 mA = 60 mA

Duration 200 ns

Pause between 0,1 ms and 500 ms, randomly varied

NOTE: The specified spike durations are measured at 50 % of the spike amplitude.

#### 27.17.2.1.2.5 Test requirement

The voltage on contact C1 of the SIM/ME interface shall be within the ranges specified in the conformance requirements.

### 27.17.2.2 Electrical tests on contact C2

C2 = Reset (RST)

#### 27.17.2.2.1 Definition and applicability

When the mobile station is activated, the voltage on contact C2 of the SIM/ME interface shall remain in the specified range in order to ensure correct operation and to prevent any damage to the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) 3V SIM interface

c) 3V/5V SIM interface

d) 1,8V SIM interface

e) 1,8V/3V SIM interface

#### 27.17.2.2.2 Conformance requirement

a) The voltage on contact C2 (RST) of the SIM/ME interface shall be between -0,3V and +0,6V for a current of -200 µA in low state and between 3,8V and Vcc + 0,3V for a current of +20 µA in high state.

b) The voltage on contact C2 (RST) of the SIM/ME interface shall be between -0,3V and +0,7V for a current of -200 µA in low state and between 2,15 V and Vcc + 0,3V for a current of +200 µA in high state.

c-1) The voltage on contact C2 (RST) of the SIM/ME interface shall be between -0,3V and +0,6V for a current of -200 µA in low state and between 3,8V and Vcc + 0,3V for a current of +20 µA in high state when the interface is in 5V operation mode.

c-2) The voltage on contact C2 (RST) of the SIM/ME interface shall be between -0,3V and +0,7V for a current of -200 µA in low state and between 2,15 V and Vcc + 0,3V for a current of +200 µA in high state when the interface is in 3V operation mode.

d) The voltage on contact C2 (RST) of the SIM/ME interface shall be between -0,3V and +0,47V for a current of -200 µA in low state and between 1,3 V and Vcc + 0,3V for a current of +200 µA in high state.

e-1) The voltage on contact C2 (RST) of the SIM/ME interface shall be between -0,3V and +0,7V for a current of -200 µA in low state and between 2,15 V and Vcc + 0,3V for a current of +200 µA in high state when the interface is in 3V operation mode.

e-2) The voltage on contact C2 (RST) of the SIM/ME interface shall be between -0,3V and +0,47V for a current of -200 μA in low state and between 1,3 V and Vcc + 0,3V for a current of +200 μA in high state when the interface is in 1,8V operation mode.

Reference:

a), c-1): GSM 11.11, section 5.

b), c-2), e-1): GSM 11.12, section 5.

d), e-2): GSM 11.18, section 5.

#### 27.17.2.2.3 Test purpose

To verify that the ME keeps the voltage on contact C2 (RST) of the SIM/ME interface within the specified range, as given in the conformance requirement.

#### 27.17.2.2.4 Method of test

##### 27.17.2.2.4.1 Initial condition

The ME is connected to a SIM Simulator.

The MS is activated.

The remaining contacts of the SIM/ME interface are held in nominal test conditions (See GSM 11.10 section 27.17.2).

##### 27.17.2.2.4.2 Procedure

The voltage on contact C2 (RST) of the SIM/ME interface is measured.

#### 27.17.2.2.5 Test requirement

The voltage on contact C2 (RST) of the SIM/ME interface shall be within the range specified in the conformance requirement.

### 27.17.2.3 Electrical tests on contact C3

C3 = Clock (CLK)

#### 27.17.2.3.1 Definition and applicability

When the mobile station is activated, the voltage, the rise/fall time of the signal, the clock cycle ratio and the frequency on contact C3 of the SIM/ME interface shall remain in the specified range in order to ensure correct operation and to prevent any damage to the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) 3V SIM interface

c) 3V/5V SIM interface

d) 1,8V SIM interface

e) 1,8V/3V SIM intetrface

#### 27.17.2.3.2 Conformance requirement

a-1) The voltage on contact C3 (CLK) of the SIM/ME interface shall be between -0,3V and +0,5V for a current of -200 μA in low state and between 3,15V and Vcc +0,3V for a current of +20 μA in high state.

a-2) The rise and the fall time of the clock signal shall not exceed 9 % of the clock period .

a-3) The cycle ratio of the clock signal shall be between 40 % and 60 % of the period, in steady state.

a-4) The frequency of the clock signal shall be between 1 MHz and 5 MHz.

b-1) The voltage on contact C3 (CLK) of the SIM/ME interface shall be between -0,3V and +0,6V for a current of -20 µA in low state and between 1,9V and Vcc +0,3V for a current of +20 µA in high state.

b-2) The rise and the fall time of the clock signal shall not exceed 50 ns.

b-3) The cycle ratio of the clock signal shall be between 40 % and 60 % of the period, in steady state.

b-4) The frequency of the clock signal shall be between 1 MHz and 4 MHz.

c-1) The voltage on contact C3 (CLK) of the SIM/ME interface shall be between -0,3V and +0,5V for a current of -200 µA in low state and between 3,15V and Vcc +0,3V for a current of +20 µA in high state when the interface is in 5V operation mode.

c-2) The rise and the fall time of the clock signal shall not exceed 9 % of the clock period when the interface is in 5V operation mode.

c-3) The cycle ratio of the clock signal shall be between 40 % and 60 % of the period, in steady state when the interface is in 5V operation mode.

c-4) The frequency of the clock signal shall be between 1 MHz and 5 MHz when the interface is in 5V operation mode.

c-5) The voltage on contact C3 (CLK) of the SIM/ME interface shall be between -0,3V and +0,6V for a current of -20 µA in low state and between 1,9V and Vcc +0,3V for a current of +20 µA in high state when the interface is in 3V operation mode.

c-6) The rise and the fall time of the clock signal shall not exceed 50 ns when the interface is in 3V operation mode.

c-7) The cycle ratio of the clock signal shall be between 40 % and 60 % of the period, in steady state when the interface is in 3V operation mode.

c-8) The frequency of the clock signal shall be between 1 MHz and 4 MHz when the interface is in 3V operation mode.

d-1) The voltage on contact C3 (CLK) of the SIM/ME interface shall be between -0,3V and +0,47V for a current of -20 µA in low state and between 1,21V and Vcc +0,3V for a current of +20 µA in high state.

d-2) The rise and the fall time of the clock signal shall not exceed 50 ns.

d-3) The cycle ratio of the clock signal shall be between 40 % and 60 % of the period, in steady state.

d-4) The frequency of the clock signal shall be between 1 MHz and 4 MHz.

e-1) The voltage on contact C3 (CLK) of the SIM/ME interface shall be between -0,3V and +0,47V for a current of -20 µA in low state and between 1,21V and Vcc +0,3V for a current of +20 µA in high state when the interface is in 1,8V operation mode.

e-2) The rise and the fall time of the clock signal shall not exceed 50 ns when the interface is in 1,8V operation mode.

e-3) The cycle ratio of the clock signal shall be between 40 % and 60 % of the period, in steady state when the interface is in 1,8V operation mode.

e-4) The frequency of the clock signal shall be between 1 MHz and 4 MHz when the interface is in 1,8V operation mode.

e-5) The voltage on contact C3 (CLK) of the SIM/ME interface shall be between -0,3V and +0,6V for a current of -20 µA in low state and between 1,9V and Vcc +0,3V for a current of +20 µA in high state when the interface is in 3V operation mode.

e-6) The rise and the fall time of the clock signal shall not exceed 50 ns when the interface is in 3V operation mode.

e-7) The cycle ratio of the clock signal shall be between 40 % and 60 % of the period, in steady state when the interface is in 3V operation mode.

e-8) The frequency of the clock signal shall be between 1 MHz and 4 MHz when the interface is in 3V operation mode.

Reference:

a), c-1,2,3,4) GSM 11.11, section 5 and section 5.4.

b), c-5,6,7,8), e-1,2,3,4) GSM 11.12, section 4.2 and section 5.

d), e-5,6,7,8) GSM 11.18, section 4.2 and section 5.

#### 27.17.2.3.3 Test purpose

To verify that the ME keeps the voltage, the rise and fall time, the cycle ratio and the frequency on contact C3 (CLK) of the SIM/ME interface within the ranges specified in the conformance requirements.

#### 27.17.2.3.4 Method of test

##### 27.17.2.3.4.1 Initial condition

The ME is connected to a SIM Simulator.

The MS is activated.

The remaining contacts of the SIM/ME interface are held in nominal test conditions (See GSM 11.10 section 27.17.2).

##### 27.17.2.3.4.2 Procedure

The voltage, the rise/fall time, the clock cycle ratio and the frequency on contact C3 (CLK) of the SIM/ME interface are measured.

#### 27.17.2.3.5 Test requirement

The voltage, the rise and fall time, the cycle ratio and the frequency on contact C3 (CLK) of the SIM/ME interface shall be within the ranges specified in the conformance requirements.

### 27.17.2.4 [Not used]

### 27.17.2.5 Electrical tests on contact C7

C7 = Input - output (I/O)

#### 27.17.2.5.1 Definition and applicability

When the mobile station is activated, the ME shall keep the voltage, the current and the rise/fall time of the signal on contact C7 of the SIM/ME interface within the specified range in order to ensure correct operation and to prevent any damage to the SIM.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs with:

a) 5V SIM interface

b) 3V SIM interface

c) 3V/5V SIM interface

d) 1,8V SIM interface

e) 1,8V/3V SIM interface

27.17.2.5.2 Conformance requirement

a-1) ME receiving state A (low state):

With an imposed voltage of 0V the current flowing out of the ME shall not exceed 1 mA.

a-2) ME transmitting state A (low state):

The voltage shall be between -0,3V and 0,4V when a current of 1 mA flowing into the ME is applied.

a-3) ME transmitting or receiving state Z (high state):

The voltage shall be between +3,8V and Vcc + 0,3V when a current of 20 µA flowing out of the ME is applied.

a-4) The rise time and the fall time of the I/O signal shall not exceed 1 µs.

b-1) ME receiving state A (low state):

With an imposed voltage of 0V the current flowing out of the ME shall not exceed 1 mA.

b-2) ME transmitting state A (low state):

The voltage shall be between -0,3V and 0,4V when a current of 1 mA flowing into the ME is applied.

b-3) ME transmitting or receiving state Z (high state):

The voltage shall be between 0,7*Vcc and Vcc + 0,3V when a current of 20 µA flowing out of the ME is applied.

b-4) The rise time and the fall time of the I/O signal shall not exceed 1 µs.

c-1) ME receiving state A (low state):

With an imposed voltage of 0V the current flowing out of the ME shall not exceed 1 mA when the ME is in 5V operation mode.

c-2) ME transmitting state A (low state):

The voltage shall be between -0,3V and 0,4V when a current of 1 mA flowing into the ME is applied when the ME is in 5V operation mode.

c-3) ME transmitting or receiving state Z (high state):

The voltage shall be between +3,8V and Vcc + 0,3V when a current of 20 µA flowing out of the ME is applied when the ME is in 5V operation mode.

c-4) The rise time and the fall time of the I/O signal shall not exceed 1 µs when the ME is in 5V operation mode.

c-5) ME receiving state A (low state):

With an imposed voltage of 0V the current flowing out of the ME shall not exceed 1 mA when the ME is in 3V operation mode.

c-6) ME transmitting state A (low state):

The voltage shall be between -0,3V and 0,4V when a current of 1 mA flowing into the ME is applied when the ME is in 3V operation mode.

c-7) ME transmitting or receiving state Z (high state):

The voltage shall be between 0,7*Vcc and Vcc + 0,3V when a current of 20 µA flowing out of the ME is applied when the ME is in 3V operation mode.

c-8) The rise time and the fall time of the I/O signal shall not exceed 1 µs when the ME is in 3V operation mode.

d-1) ME receiving state A (low state):

With an imposed voltage of 0V the current flowing out of the ME shall not exceed 1 mA.

d-2) ME transmitting state A (low state):

The voltage shall be between -0,3V and 0,3V when a current of 1 mA flowing into the ME is applied.

d-3) ME transmitting or receiving state Z (high state):

The voltage shall be between 0,7*Vcc and Vcc + 0,3V when a current of 20 µA flowing out of the ME is applied.

d-4) The rise time and the fall time of the I/O signal shall not exceed 1 µs.

e-1) ME receiving state A (low state):

With an imposed voltage of 0V the current flowing out of the ME shall not exceed 1 mA when the ME is in 3V operation mode.

e-2) ME transmitting state A (low state):

The voltage shall be between -0,3V and 0,4V when a current of 1 mA flowing into the ME is applied when the ME is in 3V operation mode.

e-3) ME transmitting or receiving state Z (high state):

The voltage shall be between 0,7*Vcc and Vcc + 0,3V when a current of 20 µA flowing out of the ME is applied when the ME is in 3V operation mode.

e-4) The rise time and the fall time of the I/O signal shall not exceed 1 µs when the ME is in 3V operation mode.

e-5) ME receiving state A (low state):

With an imposed voltage of 0V the current flowing out of the ME shall not exceed 1 mA when the ME is in 1,8V operation mode.

e-6) ME transmitting state A (low state):

The voltage shall be between -0,3V and 0,3V when a current of 1 mA flowing into the ME is applied when the ME is in 1,8V operation mode.

e-7) ME transmitting or receiving state Z (high state):

The voltage shall be between 0,7*Vcc and Vcc + 0,3V when a current of 20 µA flowing out of the ME is applied when the ME is in 1,8V operation mode.

e-8) The rise time and the fall time of the I/O signal shall not exceed 1 µs when the ME is in 3V operation mode.

Reference:

a), c-1,2,3,4) GSM 11.11, section 5.

b), c-5,6,7,8), e-1,2,3,4) GSM 11.12, section 5.

d), e-5,6,7,8) GSM 11.18, section 5

### 27.17.2.5.3 Test purpose

To verify that the ME keeps the voltage, the current and the rise and fall times of the signal on contact C7 (I/O) of the SIM/ME interface within the ranges specified in the conformance requirements.

#### 27.17.2.5.4 Method of test

##### 27.17.2.5.4.1 Initial condition

The ME is connected to a SIM Simulator.

The MS is activated.

The remaining contacts of the SIM/ME interface are held in nominal test conditions (See GSM 11.10 section 27.17.2).

##### 27.17.2.5.4.2 Procedure

The voltage, the current and the rise/fall time on contact C7 (I/O) of the SIM/ME interface are measured.

#### 27.17.2.5.5 Test requirement

The voltage, the current and the rise and fall times of the signal on contact C7 (I/O) of the SIM/ME interface shall be within the ranges specified in the conformance requirements.

# 27.18 Fixed Number Dialling (FND)

## 27.18.1 ME and SIM with FND activated

### 27.18.1.1 $EF_{ADN}$ invalidated and not readable or updatable

#### 27.18.1.1.1 Definition and applicability

Fixed Number Dialling (FDN) is a service defined for the SIM. An activated FDN service results in call restrictions for the MS. The call restrictions are controlled by the ME. To ascertain the type of SIM and state of FDN the MS runs the FDN capability request procedure during SIM/ME initialization.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM and supporting the FDN service.

#### 27.18.1.1.2 Conformance requirement

1. Recognizing the state of the SIM (FDN enabled) the MS shall perform the SIM initialization procedure as specified.
2. The MS allows call set-up to a directory number as stored in $EF_{FDN}$.
3. The MS allows call set-up to a directory number as stored in $EF_{FDN}$ and extended by digits in the end.
4. The MS does not allow call set-up to a directory number stored in $EF_{FDN}$ but with missing digits at the end.
5. The MS does not allow call set-up to a directory number having no reference in $EF_{FDN}$.
6. The MS allows call set-up of an emergency call.
7. For PCS 1900: To verify the requirement 6 above by using the emergency call number 911.

Reference:

GSM 11.11, clauses 9.3, 10.2.7, 10.3.2, 11.2.1 and 11.5.1, GSM 02.07, clause 3.2.

#### 27.18.1.1.3 Test purpose

1. To verify that the ME as a result of the state of the SIM rehabilitates $EF_{IMSI}$ and $EF_{LOCI}$ during SIM/ME initialization procedure.
2. To verify that the ME allows call set-up to a FDN number.

3. To verify that the ME allows call set-up to a FDN number extended by some digits in the end.
4. To verify that the ME rejects call set-up to a FDN number not completely corresponding to an entry in $EF_{FDN}$ .
5. To verify that the ME rejects call set-up to number having no reference in $EF_{FDN}$.
6. To verify that the ME allows emergency call set-up.
7. For PCS 1900: To verify the requirement 6 above by using the emergency call number 911.

#### 27.18.1.1.4 Method of test

##### 27.18.1.1.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters

Attach/detach: disabled

LAI (MCC/MNC/LAC):246/81/0001 for GSM and DCS 1 800

246/813/0001 for PCS 1900

Access control: unrestricted

The default FDN-SIM with FDN service enabled and $EF_{ADN}$ invalidated and neither readable nor updatable is installed into the ME.

##### 27.18.1.1.4.2 Procedure

a) The MS is powered on and PIN1 is entered.

b) Using the MMI a call set-up to the fixed dialling number 1 is attempted.

c) Using the MMI a call set-up to the fixed dialling number 2 extended by "123" in the end is attempted.

d) Using the MMI a call set-up to a number which is equal to the fixed dialling number 3 without the last digit is attempted, e.g. by recalling the fixed dialling number 3 and deleting the last digit (only in display).

e) Using the MMI a call set-up to the number "1234567" is attempted.

f) Using the MMI an emergency call set-up is attempted.

#### 27.18.1.1.5 Test requirement

1) After step a) the MS is registered and in idle state.

2) After steps b) and c) the MS shall allow call set-up and send the requested number across the air interface.

3) After steps d) and e) the MS shall prevent call set-up.

4) After step f) the MS shall allow emergency call set-up and send the requested number across the air interface.

### 27.18.1.2 $EF_{ADN}$ invalidated but readable and updatable

#### 27.18.1.2.1 Definition and applicability

Fixed Number Dialling (FDN) is a service defined for the SIM. An activated FDN service results in call restrictions for the MS. The call restrictions are controlled by the ME.

This test applies to GSM, DCS 1800 and PCS 1900 MEs using either ID-1 or Plug-in SIM, which allow for invalidated EF to be read and updated, and supporting the FDN service.

#### 27.18.1.2.2 Conformance requirement

The MS allows call set-up to a directory number as stored in $EF_{FDN}$ and extended by digits added from an $EF_{ADN}$.

Reference:

GSM 11.11, clauses 9.3, 10.2.7, 10.3.2, 11.2.1 and 11.5.1, GSM 02.07, clause 3.2.

#### 27.18.1.2.3 Test purpose

To verify that the ME allows call set-up to a FDN number extended by digits from an $EF_{ADN}$.

#### 27.18.1.2.4 Method of test

##### 27.18.1.2.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters

Attach/detach: disabled

LAI (MCC/MNC/LAC):246/81/0001 for GSM and DCS 1 800
246/813/0001 for PCS 1900

Access control: unrestricted

The default FDN-SIM with FDN service enabled and $EF_{ADN}$ invalidated but readable and updatable is installed into the ME.

##### 27.18.1.2.4.2 Procedure

a) The MS is powered on and PIN1 is entered.

b) Using the MMI a call set-up to the fixed dialling number 1 extended by the abbreviated dialling number 1 in the end is attempted.

#### 27.18.1.2.5 Test requirement

1) After step a) the MS is registered and in idle state.

2) After steps b) the MS shall allow call set-up and send the requested number across the air interface.

## 27.18.2 ME and SIM with FND deactivated

#### 27.18.2.1 Definition and applicability

Fixed Number Dialling (FDN) is a service defined for the SIM. An activated FDN service results in call restrictions for the MS. Only directory numbers which are stored in the $EF_{FDN}$ may be dialled by the MS. The call restrictions are controlled by the ME. To ascertain the type of SIM and state of FDN the MS runs the FDN capability request procedure during SIM/ME initialization. Deactivation of the service by the subscriber is possible under the control of PIN2 and switches the SIM into a "normal", non restrictive SIM.

This test apply to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM and supporting the FDN service.

#### 27.18.2.2 Conformance requirement

1. Recognizing the state of the SIM (FDN disabled) the MS correctly performs the SIM initialization procedure.

2. The MS allows call set-up to a directory number as stored in $EF_{FDN}$.

3. The MS allows call set-up to a directory number as stored in $EF_{ADN}$.

4. The MS allows call set-up to a directory number given in manually.

Reference:

GSM 11.11, clauses 10.2.7, 10.3.2, 11.2.1 and 11.5.1, GSM 02.07, clause 3.2.

#### 27.18.2.3 Test purpose

1. To verify that the ME as a result of the state of the SIM correctly performs the SIM/ME initialization procedure.
2. To verify that the ME allows call set-up to a FDN number.
3. To verify that the ME allows call set-up to a ADN number.
4. To verify that the ME allows call set-up to manually given number.

#### 27.18.2.4 Method of test

##### 27.18.2.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters

Attach/detach: disabled

LAI (MCC/MNC/LAC):246/81/0001 for GSM and DCS 1 800
246/813/0001 for PCS 1900

Access control: unrestricted

The default FDN SIM with FDN service disabled is installed into the ME and the MS is powered on.

##### 27.18.2.4.2 Procedure

a) Using the MMI a call set-up to the fixed dialling number 1 is attempted.

b) Using the MMI a call set-up to the abbreviated dialling number 1 is attempted.

c) Using the MMI a call set-up to the number "1234567" is attempted.

#### 27.18.2.5 Test requirement

After steps a), b) and c) the MS shall allow call set-up and send the requested number across the air interface.

## 27.18.3 Enabling, disabling and updating of FND

#### 27.18.3.1 Definition and applicability

FDN may be enabled and disabled by the subscriber under control of PIN2. Fixed dialling numbers are read with PIN and updated under control of PIN2.

This test apply to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or Plug-in SIM and supporting the FDN service.

#### 27.18.3.2 Conformance requirement

1. Recognizing the state of the SIM (FDN enabled) the MS shall perform the SIM initialization procedure as specified.
2. The MS shall allow updating of $EF_{FDN}$ by the use of PIN2.
3. The MS provides means to disable the FDN service by the use of PIN2.
4. The MS shall allow the use of $EF_{ADN}$ after disabling of FDN.

Reference:

GSM 11.11, clauses 10.2.7, 10.3.2, 11.2.1 and 11.5.1, GSM 02.07, clause 3.2.

### 27.18.3.3 Test purpose

1. To verify that the ME as a result of the state of the SIM rehabilitates $EF_{IMSI}$ and $EF_{LOCI}$ during SIM/ME initialization procedure.
2. To verify that the ME correctly performs the update of a number in $EF_{FDN}$.
3. To verify that the ME correctly disables FDN service.
4. To verify that the ME recognizes disabling of FDN and allows access to $EF_{ADN}$.

### 27.18.3.4 Method of test

#### 27.18.3.4.1 Initial conditions

The SS transmits on the BCCH, with the following network parameters

Attach/detach: disabled

LAI (MCC/MNC/LAC):246/81/0001 for GSM and DCS 1 800
246/813/0001 for PCS 1900

Access control: unrestricted

The default FDN SIM with FDN service enabled is installed into the ME and the MS is powered on.

#### 27.18.3.4.2 Procedure

a) The MS is powered on and PIN 1 is entered.

b) Using the MMI the directory number "+876543210" is stored in $EF_{FDN}$ as fixed dialling number 1 (The alpha identifier is not changed).

c) Using the MMI the FDN disabling procedure is performed. On request of the MS PIN2 is entered.

d) Using the MMI a call set-up to the abbreviated dialling number 1 is attempted.

e) The MS is soft-powered down.

### 27.18.3.5 Test requirement

1) After step a) the MS is registered and in idle state.

2) After step c) the MS shall indicate that the FDN disabling procedure has been successful.

3) After step d) the MS shall allow call set-up and send the requested number across the air interface.

4) After step e) the value of bit 1 of byte 12 in the response data of $EF_{ADN}$ in the SIM shall be "1" and record 1 in $EF_{FDN}$ , shall contain the following values:

| B1 | B2 | B3 | B4 | B5 | B6 | B7 | B8 | B9 | B10 | B11 | B12 | B13 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 46 | 44 | 4E | 31 | 31 | 31 | 06 | 91 | 78 | 56 | 34 | 12 | F0 |

| B14 | B15 | B16 | B17 | B18 | B19 | B20 |
|---|---|---|---|---|---|---|
| FF | FF | FF | FF | FF | FF | FF |

# 27.19 Phase identification

## 27.19.1 Definition and applicability

The phase of the SIM is indicated in the Elementary File $EF_{PHASE}$. This allows the ME to identify the phase of the SIM and adapt its functionality accordingly.

This test applies to GSM, DCS 1 800 and PCS 1900 MEs using either ID-1 or plug-in SIMs.

## 27.19.2 Conformance requirement

The phase of the card shall be determined as part of the initialization procedure.

Reference:

GSM 11.11, sections 10.2.16 and 11.2.1.

## 27.19.3 Test purpose

To verify that the ME requests the SIM phase as part of the initialization procedure.

## 27.19.4 Method of test

### 27.19.4.1 Initial conditions

The ME is connected to the SIM simulator, and powered off.

The default values are used.

### 27.19.4.2 Procedure

a) The mobile is powered on.

b) The SIM simulator monitors the SIM initialization procedure.

## 27.19.5 Test requirement

The ME shall request the phase of the SIM as part of the initialization procedure.

# 27.20 SIM presence detection

## 27.20.1 Definition and applicability

The presence of the SIM is an essential requirement for setting up and maintaining a call. The ME detects the presence of the SIM electronically.

## 27.20.2 Conformance requirement

To ensure that the SIM has not been removed during a card session, the ME shall send STATUS commands at frequent intervals of no longer than 30 seconds during a call. If the ME detects that the SIM has been removed, a possibly ongoing call shall be terminated by the ME within 5 seconds at the latest after having detected the SIM removal.

Reference:

GSM 11.11, section 11.2.7.

## 27.20.3 Test purpose

1. To verify that the ME sends STATUS messages at frequent intervals of no longer than 30s during a call.

2. To verify that the ME terminates a call within 5 seconds at the latest after having received a wrong response to the STATUS command.

#### 27.20.4 Method of test

##### 27.20.4.1 Initial conditions

The ME is connected to the SIM-simulator.

All elementary files are coded as default.

##### 27.20.4.2 Procedure

a) A call is set up using the generic call setup.

b) The SIM simulator monitors the time interval between STATUS commands sent by the ME.

c) After 3 minutes, the call is cleared.

d) A call is set up using the generic call setup.

e) After one minute after the call was successfully set up, the SIM simulator responds to a STATUS command with the response data of the MF.

#### 27.20.5 Test requirements

1. During step b), the time interval between STATUS commands shall not be longer than 30 seconds.

2. After step e), the ME shall terminate the call within 5 seconds at the latest after having received the wrong response to the STATUS command.

# 27.21 Advice of Charge (AoC)

## 27.21.1 AoC not supported by SIM

#### 27.21.1.1 Definition and applicability

If the ME under test supports Advice of Charge Charging, it shall still look at the capability of the SIM, before responding to any AoCC information from the network.

This test is applicable to all MEs supporting AoCC.

#### 27.21.1.2 Conformance requirement

1. An MS not supporting AoCC and in the outgoing call / U4 call delivered state, on receipt of a CONNECT message containing AoCC information shall acknowledge the CONNECT message but ignore and not acknowledge the AoCC information sent within the CONNECT.

2. An MS not supporting AoCC and in the outgoing call / U4 call delivered state, on receipt of a FACILITY message containing AoCC information shall ignore and not acknowledge the AoCC information sent within the FACILITY.

3. An MS not supporting AoCC and in the incoming call / U9 call confirmed state, on receipt of a FACILITY message containing AoCC information shall ignore and not acknowledge the AoCC information sent within the FACILITY.

4. An MS not supporting AoCC and in the U10 call active state, on receipt of a FACILITY message containing AoCC information, shall ignore and not acknowledge the AoCC information sent within the FACILITY.

References:

GSM 03.86, sections 1.2, 1.3, 2.2, 2.3; GSM 04.86, section 2.

#### 27.21.1.3 Test purpose

1. To verify that an MS not supporting AoCC (where the ME does support AoCC but the SIM does not) and in the outgoing call / U4 call delivered state, on receipt of a CONNECT message containing AoCC information shall acknowledge the CONNECT message but ignore and not acknowledge the AoCC information sent within the CONNECT.

2. To verify that an MS not supporting AoCC (where the ME does support AoCC but the SIM does not) and in the outgoing call / U4 call delivered state, on receipt of a FACILITY message containing AoCC information shall ignore and not acknowledge the AoCC information sent within the FACILITY.

3. To verify that an MS not supporting AoCC (where the ME does support AoCC but the SIM does not) and in the incoming call / U9 call confirmed state, on receipt of a FACILITY message containing AoCC information shall ignore and not acknowledge the AoCC information sent within the FACILITY.

4. To verify that an MS not supporting AoCC (where the ME does support AoCC but the SIM does not) and in the U10 call active state, on receipt of a FACILITY message containing AoCC information, shall ignore and not acknowledge the AoCC information sent within the FACILITY.

#### 27.21.1.4 Method of test

##### 27.21.1.4.1 Initial conditions

The ME shall be installed with a SIM or SIM simulator, with all elementary files coded as for the default SIM, with the exception of:

$EF_{SST}$ (SIM Service Table)

Logically: CHV1 disable function allocated and activated.
Abbreviated dialling numbers allocated and activated.
PLMN selector allocated and activated.
Fixed dialling numbers not activated.
AoC not activated.

Coding: B1 B2 B3 B4
xx0x1111 0011xx0x xxxxxxxx 0000xxxx (binary)

The coding of $EF_{SST}$ shall conform with the capabilities of the SIM used.

The generic call set up procedures are followed up to and including the reception, or transmission of the ALERTING message by the MS.

##### 27.21.1.4.2 Procedure

a) For an MO call in the U4 state the SS transmits CONNECT containing AoCC information.

b) For an MO call in the U4 state the SS transmits FACILITY containing AoCC information.

c) For an MTcall in the U9 state the SS transmits FACILITY containing AoCC information.

d) For an MO call in the U10 state the SS transmits FACILITY containing AoCC information.

#### 27.21.1.5 Test requirement

In all cases, the MS shall ignore the AoCC information sent to it in the Facility information elements as part of the CONNECT/FACILITY messages and not send any AoCC information acknowledgement. It shall be checked for 15 seconds that the MS does not transmit any AoCC information acknowledgement after the receipt of AoCC information.

## 27.21.2 Maximum frequency of ACM updating

### 27.21.2.1 Definition and applicability

The ACM shall be updated at the end of every interval, where the interval length is given by parameter e2. The ME shall update the ACM not more frequently than once every 5 seconds, even if the interval is less than 5 seconds. More frequent updating may affect the SIM's read/write cycles.

This test applies to all ME supporting AoC.

### 27.21.2.2 Conformance requirement

The ACM shall be incremented when the CCM is incremented or once every 5 seconds, whichever is the longer period.

Reference:

GSM 02.24, section 4.3, part h.

### 27.21.2.3 Test purpose

To verify that the interval between increments is 5 seconds.

### 27.21.2.4 Method of test

#### 27.21.2.4.1 Initial conditions

The ME shall be connected to the SIM simulator, with all elementary files coded as default with the exception of:

$EF_{SST}$ (SIM Service Table)

Logically: CHV1 disable function allocated and activated.
Abbreviated dialling numbers allocated and activated.
PLMN selector allocated and activated.
Fixed dialling numbers not activated.
AoC allocated and activated.

Coding: B1 B2 B3 B4
xx0x1111 0011xx11 xxxxxxxx 0000xxxx (binary)

The coding of $EF_{SST}$ shall conform with the capabilities of the SIM used.

$EF_{ACM}$ (Accumulated call meter)

Logically: 50 units

$EF_{ACMmax}$ (Accumulated call meter maximum)

Logically: 150 units

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

27.21.2.4.2 Procedure

a) The MS is made to initiate a call. The call is established with AoCC e-parameters sent in a Facility IE in the CONNECT message, as given below. The MS returns the AoCC acknowledgement within 1 second of the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent by the MS before or after the CONNECT ACKNOWLEDGE.

b) The call is maintained for 90 seconds, then terminated by the SS. During the call, the SIM-simulator monitors the time intervals between successive INCREMENT commands.

Maximum Duration of Test:

2 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | call duration 90 seconds after CAI information sent by SS, |
| 15 | SS -> MS | DISCONNECT | |
| 16 | MS -> SS | RELEASE | |
| 17 | SS -> MS | RELEASE COMPLETE | |
| 18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

**i) FACILITY Information Element** with **Invoke = ForwardChargeInformation** component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.1.3.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as below:

| | e-parameters | | | | | | |
|---|---|---|---|---|---|---|---|
| parameter | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| value | 1 | 1 | 1 | 0 | 0 | 0 | 0 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

**ii) FACILITY Information Element** with **Return Result** component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.1.3.

#### 27.21.2.5 Test requirement

The MS shall send INCREMENT commands to the SIM every 5 seconds.

## 27.21.3 Call terminated when ACM greater than ACMmax

#### 27.21.3.1 Definition and applicability

ACMmax gives the maximum value of ACM, at which the current calls shall be terminated and no further outgoing calls and charged incoming calls may be made (except emergency calls).

This test applies to all ME supporting AoCC.

#### 27.21.3.2 Conformance requirement

ACM shall be incremented by the value of CCM.

If the ACMmax is valid, and the ACM becomes equal to or exceeds the value of the ACMmax, then all calls in progress, chargeable to the user, shall be terminated by the MS with cause value #68, once the chargeable interval determined by the CAI has elapsed, (except emergency calls).

Reference:

GSM 02.24, section 4.3 part h and section 4.2.2.
GSM 04.86, section 2.3

#### 27.21.3.3 Test purpose

1. To verify that the ME increments the ACM by the correct number of units, even though this may take ACM above ACMmax.

2. To verify that the ME terminates the call with cause value #68.

#### 27.21.3.4 Method of test

##### 27.21.3.4.1 Initial conditions

The ME shall be connected to a SIM or the SIM simulator, with all elementary files coded as default with the exception of:

$EF_{SST}$ (SIM Service Table)

Logically: CHV1 disable function allocated and activated.
Abbreviated dialling numbers allocated and activated.
PLMN selector allocated and activated.
Fixed dialling numbers not activated.
AoC allocated and activated.

Coding: B1 B2 B3 B4
xx0x1111 0011xx11 xxxxxxxx 0000xxxx (binary)

The coding of $EF_{SST}$ shall conform with the capabilities of the SIM used.

$EF_{ACM}$ (Accumulated call meter)

Logically: 80 units

$EF_{ACMmax}$ (Accumulated call meter maximum)

Logically: 94 units

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

27.21.3.4.2 Procedure

a) The MS is made to initiate a call. The call is established with AoCC e-parameters sent in a Facility IE in the CONNECT message, as given below. The MS returns the AoCC acknowledgement within 1 second of the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent by the MS before or after the CONNECT ACKNOWLEDGE.

b) The call is maintained until cleared by the MS (after 30 seconds) with cause value #68.

c) The contents of ACM are checked.

Maximum Duration of Test:

2 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND to a supported channel type | |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | call duration 30 seconds after CAI information sent by SS |
| 15 | MS -> SS | DISCONNECT | Cause value #68 |
| 16 | SS -> MS | RELEASE | |
| 17 | MS -> SS | RELEASE COMPLETE | |
| 18 | MS -> SS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

**i) FACILITY Information Element** with **Invoke = ForwardChargeInformation** component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.1.3.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as below:

| | e-parameters | | | | | | |
|---|---|---|---|---|---|---|---|
| parameter | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| value | 10 | 10 | 1 | 0 | 0 | 0 | 0 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

**ii) FACILITY Information Element** with **Return Result** component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.1.3.

#### 27.21.3.5 Test requirement

1) The MS shall terminate the call correctly 30 seconds after CAI was sent.

2) The value of ACM shall be 100 units.

## 27.21.4 Response codes of increase command

#### 27.21.4.1 Definition and applicability

ACM has a maximum value in terms of coding, and an attempt by the ME to exceed that value by sending an INCREASE command shall result in an error message from the SIM.

This test applies to all MEs supporting AoCC.

#### 27.21.4.2 Conformance requirement

The ME shall perform the increasing procedure, sending the amount to be increased.

The running accumulated charge shall be stored in the ACM of the SIM.

Where this charge cannot be stored in the MS, use of the telecommunications service shall be prevented.

References:

GSM 11.11, section 11.5.3; GSM 02.86, sections 2.2.1 and 2.1.

#### 27.21.4.3 Test purpose

To verify that the ME clears a charged call if the SIM indicates that the ACM cannot be increased.

#### 27.21.4.4 Method of test

##### 27.21.4.4.1 Initial conditions

The ME shall be connected to the SIM simulator, with all elementary files coded as default with the exception of:

$EF_{SST}$ (SIM Service Table)

Logically: CHV1 disable function allocated and activated.
Abbreviated dialling numbers allocated and activated.
PLMN selector allocated and activated.
Fixed dialling numbers not activated.
AoC allocated and activated.

Coding: B1 B2 B3 B4
xx0x1111 0011xx11 xxxxxxxx 0000xxxx (binary)

The coding of $EF_{SST}$ shall conform with the capabilities of the SIM used.

$EF_{ACM}$ (Accumulated call meter)

Logically: (Maximum-10) units

$EF_{ACMmax}$ (Accumulated call meter maximum)

Logically: (Maximum-2) units

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

27.21.4.4.2 Procedure

a) The MS is made to initiate a call. The call is established with AoCC e-parameters sent in a Facility IE in the CONNECT message, as given below. The MS returns the AoCC acknowledgement within 1 second of the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent by the MS before or after the CONNECT ACKNOWLEDGE.

b) After an interval has elapsed, the ME increments the ACM. When an INCREASE command is received, the SIM-sim sends back the error "98 50".

c) Conditions are reset to those described in the initial conditions. Steps a) and b) of the test are repeated, except that the error code sent by the SIM simulator at step b) is now "6F xx".

d) Conditions are reset to those described in the initial conditions. Steps a) and b) of the test are repeated, except that the error code sent by the SIM simulator at step b) is now "92 40".

Maximum Duration of Test:

3 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND to a supported channel type | |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | call duration approx 10s after CAI information sent by SS |
| 15 | MS -> SS | DISCONNECT | |
| 16 | SS -> MS | RELEASE | |
| 17 | MS -> SS | RELEASE COMPLETE | |
| 18 | MS -> SS | CHANNEL RELEASE | The main signalling link is released. |

Specific Message Contents:

**i) FACILITY Information Element** with **Invoke = ForwardChargeInformation** component type as defined in GSM 04.80 section 3.6.1 table 3.3.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as below:

| | e-parameters | | | | | | |
|---|---|---|---|---|---|---|---|
| parameter | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| value | 20 | 10 | 1 | 0 | 0 | 0 | 0 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

**ii) FACILITY Information Element** with **Return Result** component type as defined in GSM 04.80 section 3.6.1 table 3.4.

### 27.21.4.5 Test requirement

In each of the three cases, as described in steps b), c) and d) of the procedure, the MS shall terminate the call correctly when it receives an indication from the SIM that the ACM cannot be incremented.

# 28 Test of autocalling restrictions

## 28.1 General

It is essential that all autocalling apparatus is prevented from continuously dialling a given number, to avoid machines repeatedly disturbing PSTN subscribers in error, or numerous repeat attempts to unobtainable numbers which cause waste of valuable network resources. Therefore autocalling restrictions are defined by GSM 02.07.

The tests shall be performed using all of the call methods specified by the supplier in the PIXIT statement (annex 3). The supplier shall state any autocalling procedures implemented and how many times they can be repeated to a single number and the minimum re-attempt interval(s), i.e. the complete re-try schedule or algorithm with parameter values. The supplier shall further describe any automatic methods for making repeated calls to a single number. The supplier shall also state in the PIXIT statement (annex 3) the number of B-party numbers that can be stored on the list of blacklisted numbers as described in GSM 02.07, annex A.

For an external R-interface the supplier shall state in the PIXIT statement (annex 3) the procedure for autocalling restrictions for that interface and the possible parameter settings for the number of times the LTE can make a re-attempt and the minimum accepted time between re-attempts accepted by the MS. The conditions for clearing the autocalling constraints shall be stated in the PIXIT statement (annex 3).

For external interfaces the LTE must be programmed so that it clearly attempts to violate the autocalling constraints.

## 28.2 Constraining the access to a single number (GSM 02.07 category 3)

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

### 28.2.1 Conformance requirement

A repeat call attempt may be made when a call attempt is unsuccessful for the reasons listed below (as defined in GSM 04.08).

These reasons are classified in three major categories:

1. "Busy destination".

2. "Unobtainable destination - temporary".

3. "Unobtainable destination - permanent/long term".

NOTE: Cause values for each category are defined in GSM 02.07, annex A.

The table below describes a repeat call restriction pattern to any B number. This pattern defines a maximum number (n) of call repeat attempts; when this number n is reached, the associated B number shall be blacklisted by the MT until a manual re-set at the MT is performed in respect of that B number. When a repeat attempt to anyone B number fails, or is blacklisted, this does not prevent calls being made to other B numbers.

For the categories 1 and 2 above, n shall be 10; for category 3, n shall be 1.

| Call attempt | Minimum duration between call attempts |
|---|---|
| Initial call attempt | - |
| 1st repeat attempt | 5 sec |
| 2nd repeat attempt | 1 min |
| 3rd repeat attempt | 1 min |
| 4th repeat attempt | 1 min |
| 5th repeat attempt | 3 min |
| . | |
| . | |
| nth repeat attempt | 3 min |

Reference:

GSM 02.07, annex A.

Purpose of the test

28.2.2 Test purpose

To ensure the correct behaviour of the MS to GSM 02.07 Category 3.

28.2.3 Method of test

Initial condition.

There shall be no numbers in the list of blacklisted numbers in the MS. The time set between the first re-attempt and the next re-attempt is set to the minimum value possible. The number of re-attempts is set to the lowest possible number, greater than 1, that is supported by the MS. The autocalling function is invoked for the B-party number to be used during the test.

Related PICS/PIXIT Statement(s)

PICS: Cause number 27 implemented in:

-category 2 (preferred);

-category 3.

PIXIT:Description of auto calling management:

-selection of the auto calling;

-indication that the call failed and a re-try is attempted;

-indication that a call finally failed;

-number of B-party numbers that can be stored in the list of blacklisted numbers.

Non standard keystroke sequences to be used on the EMMI (in line with GSM 11.10, sect. 36):

Foreseen Final State of the MS

The MS has a valid TMSI. It is "idle updated".

Test Procedure

A MS initiated generic call setup is performed upto and including CIPERING MODE COMPLETE. The SS then releases the establishment with a cause value from Category 3 GSM 02.07 annex A.

The MS will make one futher generic call setup attempt invoked by the auto calling function after a channel release is sent out by the SS.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | "called number" entered |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "originating call". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS | | SS starts ciphering. |
| 10 | MS -> SS | SETUP | |
| 11 | SS -> MS | CIPHERING MODE COMMAND | |
| 12 | MS -> SS | CIPHERING MODE COMPLETE | |
| 13 | SS | | SS stops ciphering |
| 14 | SS -> MS | RELEASE COMPLETE | Cause value from category 3 of GSM 02.07, annex A. |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |
| 16 | | | The MS is invoking the auto calling function. The time between step 15 and 17 must be minimum 5 sec. |
| 17 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "originating call". |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 19 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 20 | SS -> MS | AUTHENTICATION REQUEST | |
| 21 | MS -> SS | AUTHENTICATION RESPONSE | |
| 22 | SS -> MS | CIPHERING MODE COMMAND | |
| 23 | MS -> SS | CIPHERING MODE COMPLETE | |
| 24 | SS | | SS starts ciphering. |
| 25 | MS -> SS | SETUP | |
| 26 | SS -> MS | CIPHERING MODE COMMAND | |
| 27 | MS -> SS | CIPHERING MODE COMPLETE | |
| 28 | SS | | SS stops ciphering |
| 29 | SS -> MS | RELEASE COMPLETE | Cause value from category 3 of GSM 02.07, annex A. |
| 30 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |
| 31 | MS | | Clear the auto calling constraint by manual intervention after a minimum of 2 minutes from step 30. |

## 28.3 Constraining the access to a single number (GSM 02.07 categories 1 and 2)

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

### 28.3.1 Conformance requirement

The MS must fulfil the requirements for category 1 and 2, see sect. 28.2.1

Reference:

GSM 02.07, annex A.

### 28.3.2 Test purpose

To ensure the correct behaviour of the MS to GSM 02.07 Categories 1 and 2.

### 28.3.3 Method of test

#### Initial condition.

There shall be no numbers in the list of blacklisted numbers in the MS. The re-try scheme is set to give the shortest possible intervals between re-tries. The number of re-attempts is set to the maximum possible number (N), that is supported by the MS. The autocalling function is invoked for the B-party number to be used during the test.

#### Related PICS/PIXIT Statement(s)

PICS: Cause number 27 implemented in:

-category 2 (preferred);

-category 3.

PIXIT:Description of auto calling management:

-selection of the auto calling;

-indication that the call failed and a re-try is attempted;

-indication that a call finally failed;

-number of B-party numbers that can be stored in the list of blacklisted numbers.

Non standard keystroke sequences to be used on the EMMI (in line with GSM 11.10, sect. 36):

#### Foreseen Final State of the MS

The MS has a valid TMSI. It is "idle updated".

#### Test Procedure

A, MS initiated, generic call setup is performed up to and including CIPHERING MODE COMPLETE. The SS then releases the establishment with a cause value from category 1 or 2 ( GSM 02.07, annex A).

The MS is continuously making new generic call setup attempts invoked by the auto calling function after each CHANNEL RELEASE from the SS.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | "called number" entered |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "originating call". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS | | SS starts ciphering. |
| 10 | MS -> SS | SETUP | |
| 11 | SS -> MS | CIPHERING MODE COMMAND | |
| 12 | MS -> SS | CIPHERING MODE COMPLETE | |
| 13 | SS | | SS stops ciphering |
| 14 | SS -> MS | RELEASE COMPLETE | Cause value from category 1 or 2 of GSM 02.07, annex A. This shall be chosen randomly, from both categories. Cause no. 27 shall be excluded if the MS has implemented in category 3 of GSM 02.07, as declared in PIXIT statement |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |
| 16 | | | The MS is invoking the auto calling function. 1: At the first re-attempt the time between step 15 and 17 must be minimum 5 sec. 2: At the 2nd, 3rd and 4th re-attempt the time between step 15 and 17 must be minimum 1 min. 3: At the 5th to 10th re-attempt the time between step 15 and 17 must be minimum 3 min. |
| 17 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "originating call". |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 19 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 20 | SS -> MS | AUTHENTICATION REQUEST | |
| 21 | MS -> SS | AUTHENTICATION RESPONSE | |
| 22 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 23 | MS -> SS | CIPHERING MODE COMPLETE | |
| 24 | SS | | SS starts ciphering. |
| 25 | MS -> SS | SETUP | |
| 26 | SS -> MS | CIPHERING MODE COMMAND | |
| 27 | MS -> SS | CIPHERING MODE COMPLETE | |
| 28 | SS | | SS stops ciphering |
| 29 | SS -> MS | RELEASE COMPLETE | Cause value from category 1 or 2 of GSM 02.07, annex A. This shall be chosen randomly, from both categories. Cause no. 27 shall be excluded if the MS has implemented in category 3 of GSM 02.07, as declared in PIXIT statement |
| 30 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 31 | | | The auto calling function shall repeat step 16 to 30 (N-1) times. The MS shall not make more than maximum 10 re-attempts. |
| 32 | MS | | Clear the auto calling constraint by manual intervention after a minimum of 4 minutes from step 31. Following the final completion of step 31 the MS initiate a call prior to manual intervention. |

## 28.4 Behaviour of the MS when its list of blacklisted numbers is full

The number of B-party numbers that can be stored in the list of blacklisted numbers, as stated in the PIXIT statement (annex 3), is M.

This test shall only apply to MS that are capable of autocalling more than M B-party numbers.

### 28.4.1 Conformance requirement

The number of B numbers that can be held in the blacklist is at the manufacturers discretion but there shall be at least 8. However, when the blacklist is full the MT shall prohibit further automatic call attempts to any one number until the blacklist is manually cleared at the MT in respect of one or more B numbers.

Reference:

GSM 02.07, annex A.

### 28.4.2 Test purpose

To ensure the correct behaviour of the MS when its list of blacklisted numbers is full.

### 28.4.3 Method of test

Initial condition.

The list of blacklisted numbers, in the MS, shall be full. This may be achieved as described in the procedure in 28.2, applied to M B-party numbers.

Related PICS/PIXIT Statement(s)

PICS: Cause number 27 implemented in:

-category 2 (preferred),

-category 3.

PIXIT:Description of auto calling management:

-selection of the auto calling,

-indication that the call failed and a re-try is attempted,

-indication that a call finally failed;

-number of B-party numbers that can be stored in the list of blacklisted numbers.

Non standard keystroke sequences to be used on the EMMI (in line with GSM 11.10, sect. 36):

Foreseen Final State of the MS

The MS has a valid TMSI. It is "idle updated".

Test Procedure

The autocalling function is invoked for a B-party number that is not in the list of blacklisted numbers.

Clear the autocalling constraint by manual intervention after a minimum of 2 minutes.

### 28.4.4 Test requirements

The MS must not initiate a call.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | "called number" entered |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "originating call". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS | | SS starts ciphering. |
| 10 | MS -> SS | SETUP | |
| 11 | SS -> MS | CIPHERING MODE COMMAND | SS stops deciphering after sending the message. |
| 12 | MS -> SS | CIPHERING MODE COMPLETE | |
| 13 | SS | | SS stops ciphering. |
| 14 | SS -> MS | RELEASE COMPLETE | Cause value from category 3 of GSM 02.07, annex A. This shall be chosen randomly. Cause no. 27 shall be excluded if the MS has implemented in category 2 of GSM 02.07, as declared in PIXIT statement |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |
| 16 | | | The MS is invoking the auto calling function. The time between step 15 and 17 must be minimum 5 sec. |
| 17 | MS -> SS | CHANNEL REQUEST | Establishment cause indicates "originating call". |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 19 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 20 | SS -> MS | AUTHENTICATION REQUEST | |
| 21 | MS -> SS | AUTHENTICATION RESPONSE | |
| 22 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| | MS -> SS | CIPHERING MODE COMPLETE | |
| 23 | SS | | SS starts ciphering. |
| 24 | MS -> SS | SETUP | |
| 25 | SS -> MS | CIPHERING MODE COMMAND | SS stops deciphering after sending the message. |
| 26 | MS -> SS | CIPHERING MODE COMPLETE | |
| 27 | SS | | SS stops ciphering. |
| 28 | SS -> MS | RELEASE COMPLETE | Cause value from category 3 of GSM 02.07, annex A. This shall be chosen randomly. Cause no. 27 shall be excluded if the MS has implemented in category 2 of GSM 02.07, as declared in PIXIT statement |
| 29 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 30 | | | The test shall be repeated from steps 1 to 29 using a different B party number each time until the blacklist is full as declared in PIXIT statement. The MS shall not make more than a maximum of 1 re-attempt on each number. |
| 31 | | | The test shall be repeated from steps 1 to 29 using a non-blacklisted B party number |
| 32 | MS | | Clear the auto calling constraint by manual intervention after a minimum of 2 minutes from step 29. |

# 29 Testing of bearer services

## 29.1 General

In GSM 07.01, section 2 the reference configurations for access to the data services of a GSM PLMN are described. For testing purposes only the following classifications are used:

- MT2 configuration (Um- and R-interface available for testing)
- Configurations (only Um-interface available for testing) where it is possible to enable the MS to issue or accept a data call and send data over the Um-interface. An MT1 connected to an ISDN TE belongs to this type.

  For efficient testing it is essential that such configurations have some means to specifically activate every function towards the Um-interface the MS will perform during operation.

  The correctness of the data bits transferred to the Um-interface will not be tested in these configurations. However the correctness of the GSM 04.21 frames sent by the MS will be tested.

Testing the S-interface for the MT1 configuration is for further study.

For some tests it is of no importance whether the call is MO or MT. However, there might be configurations allowing the call to be established only from one side. In this case the appropriate actions shall be taken to establish the call.

In all other cases the data call shall be set up by the SS (i.e. MT) with an appropriate BC-IE which is supported by the MS.

At the beginning of all tests the MS shall be in the idle updated state.

## 29.2 Testing of transparent data services

During all the tests the GSM 04.21 frames received as output of the channel coder in the SS shall be checked for correctness against GSM 04.21; this means checking that:

- S bits are coded as zeroes unless otherwise specified;
- the E bits have the correct value (for the synchronous services);
- the data bits correctly include the start and stop bits (for the asynchronous services).

### 29.2.1 Verification of synchronization

#### 29.2.1.1 Definition and applicability

This test applies to Mobile Stations supporting data services in transparent mode.

#### 29.2.1.2 Conformance requirement

A Mobile Stations in MT2 configuration has to comply with all requirements whilst for other configurations some of the requirements are not relevant. These restrictions are explicitly indicated in subclause 29.2.1.5.

#### 29.2.1.3 Test purpose

This test verifies the correct synchronization procedure of user data and status information which are mapped on modified CCITT V.110 frames (as per GSM 04.21).

As V-series interfaces are supported in full duplex mode, it will test the capability to synchronize these frames in the direction from the TAF to the IWF and vice versa.

#### 29.2.1.4 Method of test

The test shall be carried out under ideal radio conditions for all bearer services and user rates in transparent mode that are supported by the MS in case of mobile originated and terminated calls and in-call modification. The setting of Bearer Capability Information Elements in signalling messages sent to the MS by the SS must be supported by the MS for the bearer service(s) to be tested.

NOTE 1: Since "steady state" is implementation dependent, there is no means to define a test "steady state detected". However, the whole testing procedure is limited to 1s. This includes an implicit upper time limit for the MS to detect a steady state. A MS failing this test is highly estimated to never detect a steady state under real radio conditions.

NOTE 2: ti, as used in the description of the test procedures, are points of time, not timers.

##### 29.2.1.4.1 Procedure for Mobile Originated Calls

a) The MS is connected to the System Simulator at the Um interface and to the LTE using the appropriate R interface in case of MT2 only.

b) The MS is configured for data transmission. In the case of MT2 configurations, the LTE shall set the signalling lines of the R interface Ct 105, Ct 108.2 for V-series interface to ON.

c) A mobile originated call shall be set up.

d) At the reception of the SETUP message sent by the MS the SS shall send a CONNECT message and starts sending "1/OFF". t1 is at the completion of the CONNECT message.

e) The reception of "1/OFF" at the SS side (see table 29-1) defines t2. t2 will be reset at the reception of again "1/OFF" after an interruption of continuous "1/OFF" pattern.

f) The SS checks bits S1, S3, S6 and S8 of the modified CCITT V.110 frames (as described in GSM 04.21). Let t3 be the time when all four bits change from OFF to ON (i.e. if t<t3, (S1,S3,S6,S8) <> (0,0,0,0) and t>=t3,(S1,S3,S6,S8) = (0,0,0,0)).

##### 29.2.1.4.2 Procedure for Mobile Terminated Calls

a) The MS is connected to the System Simulator at the Um interface and to the LTE using the appropriate R interface in case of MT2 only.

b) The MS is configured for data transmission. In the case of MT2 configurations, The LTE shall set the signalling lines of the R interface Ct. 105, Ct 108.2 for V-series interface to ON.

c) A mobile terminated call shall be set up.

d) At the reception of CONNECT the SS sends CONNECT ACKNOWLEDGE. t1 is at the completion of the CONNECT ACKNOWLEDGE message.

e) The reception of "1/OFF" at the SS side (see table 29-1) defines t2. t2 will be reset at the reception of again "1/OFF" after an interruption of continuous "1/OFF" pattern.

f) The SS checks bits S1, S3, S6 and S8 of the modified CCITT V.110 frames (as described in GSM 04.21). Let t3 be the time when all four bits change from OFF to ON (i.e. if t<t3, (S1,S3,S6,S8) <> (0,0,0,0) and t>=t3,(S1,S3,S6,S8) = (0,0,0,0)).

##### 29.2.1.4.3 Procedure for In Call Modification

a) The MS is connected to the System Simulator at the Um interface and to the LTE using the appropriate R interface in case of MT2 only.

b) The MS is configured for data transmission. In the case of MT2 configurations, the LTE shall set the signalling lines of the R interface Ct. 105, Ct 108.2 for V-series interface to ON.

c) A speech call shall be established with a SETUP message containing two bearer capabilities for speech and the bearer service to be tested.

d) The MS shall start the ICM procedure with a bearer capability information element supporting the bearer service to be tested.

e) At the reception of the MODIFY message sent by the MS the SS shall send a CHANNEL MODE MODIFY message.

f) At the reception of the CHANNEL MODE MODIFY ACKNOWLEDGE message the SS shall send a MODIFY COMPLETE message. t1 is at the completion of the MODIFY COMPLETE message.

g) The reception of "1/OFF" (see table 29-1) defines t2. t2 will be reset at the reception of again "1/OFF" after an interruption of continuous "1/OFF" pattern.

h) The SS checks bits S1, S3, S6 and S8 of the modified CCITT V.110 frames (as described in GSM 04.21). Let t3 be the time when all four bits change from OFF to ON (i.e. if t<t3, (S1,S3,S6,S8) <> (0,0,0,0) and t>=t3,(S1,S3,S6,S8) = (0,0,0,0)).

### 29.2.1.5 Test requirements

#### 29.2.1.5.1 Test requirements for Mobile Originated Calls

1) After step b) Cts 106, 107, 109 must be in the "OFF" condition, dataline 104 shall be set to "1".

2) At t1 + 500 ms Ct 107 must still be in the "OFF" condition.

3) Between t1 + 500ms and t1 + 1000ms Ct 107 must switch to the "ON" condition. This indicates successful synchronization of TAF towards IFE.

4) Between t2 and t3 the SS must receive continuous "1/OFF" frames.

5) The time between t2 and t3 must be more than 450ms.

6) At t1 +1000ms the SS must check GSM 04.21 frames sent by the MS with SA and SB bits (i.e. bits S1, S3, S4, S6, S8 and S9) set to "ON". This indicates successful synchronization of IFE towards TAF. At this point of time the whole synchronization procedure has been completed successfully.

NOTE 3: If the MS is not MT2, only requirements 4 to 6 apply.

#### 29.2.1.5.2 Test requirements for Mobile Terminated Calls

1) After step b) Cts 106, 107, 109 must be in the "OFF" condition, dataline 104 shall be set to "1".

2) At t1 + 500 ms Ct 107 must still be in the "OFF" condition.

3) Between t1 + 500 ms and t1 + 1000 ms Ct 107 must switch to the "ON" condition. This indicates successful synchronization of TAF towards IFE.

4) Between t2 and t3 the SS must receive continuous "1/OFF" frames.

5) The time between t2 and t3 must be more than 450 ms.

6) At t1 +1000 ms the SS must check GSM 04.21 frames sent by the MS with SA and SB bits (i.e. bits S1, S3, S4, S6, S8 and S9) set to "ON". This indicates successful synchronization of IFE towards TAF. At this point of time the whole synchronization procedure has been completed successfully.

NOTE 4: If the MS is not MT2, only requirements 4 to 6 apply.

#### 29.2.1.5.3 Test requirements for In Call Modification

1) After step b) Cts 106, 107, 109 must be in the "OFF" condition, dataline 104 shall be set to "1".

2) At t1 + 500 ms Ct 107 must still be in the "OFF" condition.

3) Between t1 + 500 ms and t1 + 1 000 ms Ct 107 must switch to the "ON" condition. This indicates successful synchronization of TAF towards IFE.

4) Between t2 and t3 the SS must receive continuous "1/OFF" frames.

5) The time between t2 and t3 must be more than 450 ms.

6) At t1 +1 000 ms the SS must check GSM 04.21 frames sent by the MS with SA and SB bits (i.e. bits S1, S3, S4, S6, S8 and S9) set to "ON". This indicates successful synchronization of IFE towards TAF. At this point of time the whole synchronization procedure has been completed successfully.

NOTE 5: If the MS is not MT2, only requirements 4 to 6 apply.

**Table 29-1: Definition of synchronization pattern "1/OFF"**

| Synch-Frame | | | | | | | Data-Frame | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | D1 | D2 | D3 | D4 | D5 | D6 | S1 |

## 29.2.2 Filtering of channel control information for transparent BCs

### 29.2.2.1 Definition and applicability

This test is only applicable to the MT2 configuration.

### 29.2.2.2 Conformance requirement

An MS supporting data services shall decode and filter channel control information received over the Um-interface.

1 GSM 04.21, section 7;

2 GSM 07.01, section 8.2.2;

3 GSM 07.02, section 3.2.1 (for asynchronous bearer services only);

4 GSM 07.03, sections 4.2.1 and 4.2.2 (for synchronous bearer services only).

### 29.2.2.3 Test purpose

The purpose of this test is to verify the correct decoding and filtering of channel control information from the GSM 04.21 frames to the V.24/X.21 interface circuits. The tests apply after synchronization has been completed.

### 29.2.2.4 Method of test

The Test shall be carried out for all user data rates supported by the MS (see below) and the circuits CT106 (V.24) (interface circuit bit X) and CT109 (V.24) (interface circuit bit SB) and I (X.21) (S-bits). The test shall be carried out only for those frame formats and circuits which are supported by the MS. The test is to be repeated for all circuits.

Let T(ON-OFF) and T(OFF-ON) be the timers to integrate the ON-OFF and the OFF-ON transition respectably for the circuit to be tested as stated in GSM 07.01, section 8.2.2.

Procedure:

a) A data call shall be set up between the SS and the MS with a combination of BCIEs (see below) supported by the MS. The interface circuit bit(s) in the GSM 04.21 frame shall be set to OFF. The next step shall be entered 6 s after CT107 has been set to ON by the MS.

b) The SS shall set the interface circuit bit(s) to continuously ON, wait half of T(OFF-ON) and then set the interface circuit bit(s) again to continuously OFF. The SS shall wait 6 s before entering the next step.

c) The SS shall set the interface circuit bit(s) to continuously ON, wait twice T(OFF-ON) and then set the interface circuit bit(s) again to continuously OFF. The SS shall wait 6 s before entering the next step.

d) The SS shall set interface circuit bit(s) to continuously ON and wait 6 s before entering the next step

e) The SS shall set the interface circuit bit(s) to continuously OFF, wait half of T(ON-OFF) and then set the interface circuit bit(s) again to continuously ON. The SS shall wait 6 s before entering the next step.

f) The SS shall set the interface circuit bit(s) to continuously OFF, wait twice T(ON-OFF) and then set the interface circuit bit(s) again to continuously ON. The SS shall wait 6 s before entering the next step.

#### 29.2.2.5 Test requirements

1) After step a) the interface circuit at the R-interface shall be OFF.

2) During step b) the interface circuit at the R-interface shall not change.

3) During step c) the interface circuit at the R-interface shall change to ON and then again to OFF.

4) After step d) the interface circuit at the R-interface shall be ON.

5) During step e) the interface circuit at the R-interface shall not change.

6) During step f) the interface circuit at the R-interface shall change to OFF and then again to ON.

#### 29.2.2.6 BCIE

The following combinations shall be considered (ref. GSM 07.01, annex 2):

a) User Rate = 9,6 kbit/s;

b) User Rate = 4,8 kbit/s;

c) User Rate = 2,4 kbit/s;

d) User Rate = 1,2 kbit/s;

e) User Rate = 1 200/75 bit/s (only with asynchronous Bearer Services);

f) User Rate = 300 bit/s (only with asynchronous Bearer Services).

The remaining parameters of the BCIE and the channel type (FR/HR) shall be set to a value supported by the MS.

## 29.2.3 Correct Terminal Compatibility Decision

### 29.2.3.1 Negotiation of Radio Channel Requirement (RCR)

#### 29.2.3.1.1 Test purpose

To verify that the MS ignores the RCR field in a mobile terminating setup and negotiates according to its capabilities and to the service requested. A Dual Rate support MS shall accept the channel rate chosen be the network in the ASSIGNMENT COMMAND message.

#### 29.2.3.1.2 Initial conditions

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully receive the call for the service in question. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an incoming call can be accepted.

#### 29.2.3.1.3 Test method

a) The SS transmits a SETUP message containing a BC-IE among those declared as supported by the MS and with the RCR field set to "01".

b) The SS sends a ASSIGNMENT COMMAND message with a channel type set to "Full Rate" unless the CALL CONFIRM message indicates "dual rate mobile station/full rate preferred". In that case, the channel type is set to "Half Rate".

c) The call is released and steps a) and b) are repeated with RCR field set to "00".

d) The call is released and steps a) and b) are repeated with RCR field set to "10".

e) The call is released and steps a) and b) are repeated with RCR field set to "11".

#### 29.2.3.1.4 Test requirements

1) After step a), the MS shall send a CALL CONFIRM message. If present, the BC-IE shall be coded according to GSM 07.01. If any other parameters than those listed below have different values than those of the BC-IE included in the SETUP, then the test shall be failed:

   - Number of stop bits, number of data bits, parity;
   - Connection Element, Structure, Intermediate rate, User Information Layer 2 Protocol, Modem Type, NIRR;
   - Radio Channel Requirement.

2) After step b), the MS shall answer to the ASSIGNMENT COMMAND message with an ASSIGNMENT COMPLETE message.

### 29.2.3.2 Negotiation of Connection Element (CE)

#### 29.2.3.2.1 Test purpose

To verify that the MS accepts a CE equal to "Both, Transparent Preferred" or "Both Non Transparent Preferred" and indicates its choice in the CALL CONFIRM message.

#### 29.2.3.2.2 Initial condition

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully receive the call for the service in question. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an incoming call can be accepted.

#### 29.2.3.2.3 Test method

a) The SS transmits a SETUP message containing a BC-IE among those declared as supported by the MS and with the CE field set to "Both Transparent Preferred". The RCR parameter shall be set to "Full Rate". The UIL2P is not included (i.e. octet 7 is absent). The NIRR is set to "no meaning" (i.e. 0). The IR is set to "16 kbit/s". The modem type is any according to declared capabilities. The user rate is any according to declared capabilities and modem type.

b) The call is released and step a) is repeated with CE field set to "Both Non Transparent Preferred".

#### 29.2.3.2.4 Test requirements

After step a), the MS shall send a CALL CONFIRM message. The BC-IE shall be present and shall be coded according to GSM 07.01 and shall correspond to a Bearer Service or Teleservice supported by the MS. The CE shall be set to

either "Transparent" or "Non Transparent" If any other parameters than those listed bellow have different values than those of the BC-IE included in the SETUP, then the test shall be failed:

- number of stop bits, number of data bits, parity;
- Connection Element, Structure, Intermediate rate, User Information Layer 2 Protocol, Modem Type, NIRR;
- Radio Channel Requirement.

### 29.2.3.3 Negotiation of Number of Stop Bits, Number of Data bits, and Parity

#### 29.2.3.3.1 Test purpose

To verify that the MS accepts any value for the parameters Number of Stop Bits, Number of Data bits, and Parity in a mobile terminating Setup and negotiates according to its capabilities and to the service requested.

This test only applies to Mobile Stations supporting asynchronous services.

#### 29.2.3.3.2 Initial condition

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully receive the call for the service in question. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an incoming call can be accepted.

#### 29.2.3.3.3 Test method

a) The SS transmits a SETUP message containing a BC-IE among those declared as supported by the MS and corresponding to an asynchronous Bearer Service, and with the Number of Stop Bits (NSB) field set to "1 bit", the Number of Data Bits (NDB) field set to "8 bits", and the Parity field set to "none".

b) The call is released and step a) is repeated with the Number of Stop Bits (NSB) field set to "2 bit", the Number of Data Bits (NDB) field set to "7 bits", and the Parity field set to "odd".

#### 29.2.3.3.4 Test requirements

After steps a) and b), the MS shall send a CALL CONFIRMED message. If present, the BC-IE shall be coded according to GSM 07.01 and shall correspond to a Bearer Service supported by the MS. If any other parameters than those listed bellow have different values than those of the BC-IE included in the SETUP, then the test shall be failed:

- Number of stop bits, number of data bits, parity;
- Connection Element, Structure, Intermediate rate, User Information Layer 2 Protocol, Modem Type, NIRR;
- Radio Channel Requirement.

### 29.2.3.4 Negotiation of Modem Type

#### 29.2.3.4.1 Test purpose

To verify that the MS accepts the value "autobauding type 1" for the parameter Modem Type in a mobile terminating Setup and negotiates according to its capabilities and to the service requested.

This test only applies to Mobile Stations supporting non transparent services.

NOTE 6: It is not clear if the MS should also accept any possible value for the Modem Type field.

#### 29.2.3.4.2 Initial condition

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully receive the call for the service in question. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an incoming call can be accepted.

#### 29.2.3.4.3 Test method

a) The SS transmits a SETUP message containing a BC-IE among those declared as supported by the MS and corresponding to a non transparent Bearer Service (the Connection Element field is coded "Non transparent"), and with the Modem Type field set to "autobauding type 1".

b) The call is released and step a) is repeated with the same BC in the SETUP message, but with the Connection Element set to "both, non-transparent preferred".

#### 29.2.3.4.4 Test requirements

After steps a) and b), the MS shall send a CALL CONFIRMED message. If present, the BC-IE shall be coded according to GSM 07.01 and shall correspond to a Bearer Service or Teleservice supported by the MS. If any other parameters than those listed bellow have different values than those of the BC-IE included in the SETUP, then the test shall be failed:

- Number of stop bits, number of data bits, parity;
- Connection Element, Structure, Intermediate rate, User Information Layer 2 Protocol, Modem Type, NIRR;
- Radio Channel Requirement.

### 29.2.3.5 Negotiation of Intermediate Rate

#### 29.2.3.5.1 Test purpose

To verify that the MS responds correctly to a request for a negotiation of the Intermediate Rate parameter in a mobile terminating Setup and negotiates according to its capabilities and to the service requested.

This test only applies to Mobile Stations supporting non transparent services with a full rate channel at a user rate of 4,8 kbit/s or lower.

NOTE 7: The MS may support these services with a 6 Kbit/s or (non exclusive) 12 Kbit/s radio interface rate.

#### 29,2,3.5.2 Initial condition

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully receive the call for the service in question. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an incoming call can be accepted.

#### 29.2.3.5.3 Test method

a) The SS transmits a SETUP message containing a BC-IE among those declared as supported by the MS and corresponding to a non transparent Bearer Service (the Connection Element field is coded "Non transparent") with the user rate lower to or equal 4,8 kbit/s, and with the NIRR field set to "No meaning". The RCR field is set to "full rate", and the Intermediate Rate field is set to "16 kbit/s".

b) The call is released and step a) is repeated with the same BC in the SETUP message, but with the Connection Element set to "both, non-transparent preferred".

c) The call is released and steps a) and b) are repeated with the NIRR field of the SETUP message set to "6 kbit/s".

#### 29.2.3.5.4 Test requirements

1) After steps a), b) and c), the MS shall send a CALL CONFIRMED message. If present, the BC-IE shall be coded according to GSM 07.01 and shall correspond to a Bearer Service or Teleservice supported by the MS. If any other parameters than those listed bellow have different values than those of the BC-IE included in the SETUP, then the test shall be failed:

   - Number of stop bits, number of data bits, parity;
   - Connection Element, Structure, Intermediate rate, User Information Layer 2 Protocol, Modem Type, NIRR;

- Radio Channel Requirement.

2) If the BC-IE is present in the CALL CONFIRMED message after step c) and if the Connection Element field contains the value "non transparent", the Intermediate Rate field shall indicate:

   - 8 kbit/s if the NIRR field is set to "6 kbit/s";

   - 16 kbit/s if the NIRR field is set to "no meaning".

### 29.2.3.6 Negotiation of User Information Layer 2 Protocol

#### 29.2.3.6.1 Test purpose

To verify that the MS accepts any value (including the absence of) the UIL2P parameter in a mobile terminating Setup and negotiates according to its capabilities and to the service requested.

This test only applies to Mobile Stations supporting asynchronous bearer services in non transparent mode.

#### 29.2.3.6.2 Initial condition

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully receive the call for the service in question. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an incoming call can be accepted.

#### 29.2.3.6.3 Test method

a) The SS transmits a SETUP message containing a BC-IE among those declared as supported by the MS and corresponding to a non transparent Bearer Service (the Connection Element field is coded "Non transparent") and with no UIL2P parameter (i.e. octet 7 of the BC IE is absent).

b) The call is released and step a) is repeated with the same BC in the SETUP message, but with the value "ISO6429, codeset 0 (DC1/DC3)" in the UIL2P parameter.

c) The call is released and step b) is repeated with the same BC in the SETUP message, but with the value "COPnoFLCt" in the UIL2P parameter.

d) The call is released and steps a), b) and c) are repeated with the same BC in the SETUP message, but with the Connection Element set to "both, non-transparent preferred".

#### 29.2.3.6.4 Test requirements

1) After steps a), b) and c), the MS shall send a CALL CONFIRMED message. If present, the BC-IE shall be coded according to GSM 07.01 and shall correspond to a Bearer Service or Teleservice supported by the MS. If any other parameters than those listed bellow have different values than those of the BC-IE included in the SETUP, then the test shall be failed:

   - Number of stop bits, number of data bits, parity;

   - Connection Element, Structure, Intermediate rate, User Information Layer 2 Protocol, Modem Type, NIRR;

   - Radio Channel Requirement.

2) If the BC-IE is present in the CALL CONFIRMED message, and if the Connection Element is set to "transparent", octet 7 (containing the UIL2P parameter) shall be absent.

### 29.2.3.7 Negotiation between TS 61 and TS 62: Mobile Originated call

#### 29.2.3.7.1 Test purpose

To verify that the MS accepts a negotiation from TS 61 to TS 62.

This test only applies to Mobile Stations supporting TS 61.

#### 29.2.3.7.2 Initial condition

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully set up a call for TS 61. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an outgoing call can be set up.

#### 29.2.3.7.3 Test method

a) The MS is made to set up a call for TS 61. If the MS supports it, the first phase of the call is speech.

b) The SS responds to the SETUP message with a CALL PROCEEDING message containing a BC-IE coded according to GSM 07.01 and corresponding to TS 62.

c) The SS sends an ALERTING message followed by a CONNECT message.

d) If the MS supports it, steps a), b) and c) are repeated with a call setup for TS 61 with the first phase of the call being fax.

#### 29.2.3.7.4 Test requirements

1) After step b), the MS shall accept the call (i.e. it shall not reject the call with a DISCONNECT message).

2) After step c), the MS shall answer with a CONNECT ACKNOWLEDGE message.

### 29.2.3.8 Negotiation between TS 61 and TS 62: Mobile Terminated call

#### 29.2.3.8.1 Test purpose

To verify that an MS that does not support TS 61 accepts a Mobile Terminated call setup request for TS 61 and negotiates the demand to TS 62.

This test only applies to Mobile Stations supporting TS 62 and not supporting TS 61.

#### 29.2.3.8.2 Initial condition

For an MS with an external interface, the interface shall be setup in such a way that the MS is able to successfully receive the call for the service in question. The manufacturer shall state how this is done in a PIXIT statement. The same applies to features which must be activated by MMI before an incoming call can be accepted.

#### 29.2.3.8.3 Test method

a) The SS transmits a SETUP message containing two BC-IEs: the first BC shall indicate speech, the second BC shall indicate fax group 3.

b) The call is released, and the SS transmits a SETUP message containing two BC-IEs: the first BC shall indicate fax group 3, the second BC shall indicate speech.

#### 29.2.3.8.4 Test requirements

After steps a) and b), the MS shall send a CALL CONFIRMED message with one and only one BC-IE. The BC-IE shall be coded according to GSM 07.01 and shall correspond to TS 62.

## 29.2.4 Data Rate Adaptation for Synchronous Transparent Bearer Capabilities

#### 29.2.4.1 Definition and applicability

This test is applicable to the MT2 configuration and, in a restricted way, to other configurations where the MS is able to send data over the Um-interface.

#### 29.2.4.2 Conformance requirement

An MS supporting synchronous transparent bearer capabilities shall perform data rate adaptation and support the frames at the Um-interface according to the following specifications:

1 GSM 04.21, sections 5 and 7.

#### 29.2.4.3 Test purpose

The purpose of these tests is to verify

- that the format and the data bits of the GSM 04.21 frames sent by the MS are consistent with the data input and data rate at the R-interface and
- that the data bits output by the MS at the R-interface are consistent with the received GSM 04.21 frames.

#### 29.2.4.4 Method of test

The Test shall be carried out for all possible user data rates which are supported by the MS (see below). In case of an MT2 configuration, the interface circuits CT105 and CT108 shall be set to the ON condition from the start.

Procedure:

a) A data call shall be set up between the SS and the MS with a BCIE (see below) supported by the MS. The next step shall be entered immediately after TCH synchronization has been completed at the SS side.

b) The interface circuit bit(s) in the GSM 04.21 frame shall be set to ON and the SS shall start to transmit pseudo random data bits in the GSM 04.21 frames over the Um-interface to the MS.

c) MT2 configuration: The SS shall input pseudo random data over the R-interface of the MS.

MT0 configuration: the transmission of data from the MS over the Um-interface shall be stimulated (if it does not start automatically).

d) Approximately 5 s after the data have been received by the SS over the Um-interface the test shall be stopped.

#### 29.2.4.5 Test requirements

1) During the test no GSM 04.21 frame with incorrect format (i.e. format not compliant to GSM 04.21 (see conformance requirement) or not corresponding to the user data rate currently under test) shall have been received by the SS.

2) Only MT2 configuration: the user data stream input to the R-interface shall match bit-exactly the user data stream sent to the SS over the Um-interface and the user data stream output from the R-interface shall match bit-exactly the user data stream sent by the SS over the Um-interface.

#### 29.2.4.6 BCIE

The following combinations shall be considered (ref. GSM 07.01, annex 2):

a) User Rate = 9,6 kbit/s

b) User Rate = 4,8 kbit/s

c) User Rate = 2,4 kbit/s

d) User Rate = 1,2 kbit/s

The remaining parameters of the BCIE and the channel type (FR/HR) shall be set to a value supported by the MS.

### 29.2.5 Network Independent Clocking

For further study.

## 29.2.6 Asynchronous Transparent Bearer Capabilities

### 29.2.6.1 Data Rate Adaptation

#### 29.2.6.1.1 Definition and applicability

This test is applicable to the MT2 configuration and, in a restricted way, to the MT0 configuration where the MS is able to send data over the Um-interface and to use the Bearer Services for asynchronous data.

#### 29.2.6.1.2 Conformance requirement

An MS supporting asynchronous transparent bearer capabilities shall perform data rate adaptation and support the frames at the Um-interface according to the following specifications:

1 GSM 04.21, sections 4.1, 4.4, 5 and 7.

#### 29.2.6.1.3 Test purpose

The purpose of these tests is to verify the conversion between an asynchronous data stream at the R-interface and the GSM 04.21 frames at the Um-interface.

#### 29.2.6.1.4 Method of test

The Test shall be carried out for all possible user data rates which are supported by the MS in asynchronous mode (see below).

Procedure:

a) A data call shall be set up between the SS and the MS with a BCIE (see below) supported by the MS. The next step shall be entered immediately after TCH synchronization has been completed at the SS side.

b) The interface circuit bit(s) in the GSM 04.21 frame shall be set to ON and the SS shall start to transmit pseudo random characters as described below to the MS.

c) MT2 configuration: The SS shall input pseudo random characters as described below over the R-interface to the MS.

   MT0 configuration: the transmission of data from the MS over the Um-interface shall be stimulated (if it does not start automatically).

d) Approximately 5 s after the data have been received by the SS over the Um-interface the test shall be stopped.

#### 29.2.6.1.5 Test requirements

1) During the test no GSM 04.21 frame with incorrect format (i.e. format not compliant to GSM 04.21 (see conformance requirement) or not corresponding to the user data rate currently under test) shall have been received by the SS.

2) MT2 configuration only: the user data stream input to the R-interface shall match character by character the user data stream sent to the SS over the Um-interface and the user data streams output from the R-interface shall match character by character the user data stream sent by the SS over the Um-interface.

#### 29.2.6.1.6 Generation of the asynchronous pseudo random characters

Downlink direction:

The GSM 04.21 frames shall contain a bit stream which consists of repeating:

- a character which is generated pseudo randomly every time:

- n stop bits, where n is drawn pseudo randomly from the interval 1..15 every time.

Uplink direction:

The data stream at the R-interface consists of repeating:

- a character which is generated pseudo randomly every time;
- 1 stop bit;
- 1,13 +/- 1 % bit frames (i.e. 1/nominal data rate) of stop polarity.

#### 29.2.6.1.7 BCIE

Same as 29.2.3.

The Number of Data Bits per character (excl. parity) shall be 8. No parity bit shall be used. The Number of Stop Bits shall be 1. If the MS does not support these values different ones shall be chosen.

The remaining parameters of the BCIE shall and the channel type (FR/HR) be set to a value supported by the MS.

### 29.2.6.2 Passage of the Break Signal

#### 29.2.6.2.1 Definition and applicability

This test is applicable to the MT2 configuration only.

#### 29.2.6.2.2 Conformance requirement

An MS supporting asynchronous transparent bearer capabilities shall perform passage of the break signal in uplink and downlink direction according to:

1 GSM 04.21, sections 4.1, 4.2, 4.4, 5 and 7.

#### 29.2.6.2.3 Test purpose

The purpose of these tests is to verify the ability of the MS to transfer a Break Signal to the R-interface and vice versa.

#### 29.2.6.2.4 Method of test

The Test shall be carried out for all possible user data rates which are supported by the MS in asynchronous mode (see below).

Procedure:

a) A data call shall be set up between the SS and the MS with a BCIE (see below) supported by the MS. The next step shall be entered immediately after TCH synchronization has been completed at the SS side.

b) The interface circuit bit(s) in the GSM 04.21 frame shall be set to ON.

c) The SS shall send pseudo random characters with start and stop bit(s) (as selected by the BCIE) in the GSM 04.21 frames to the MS for approximately 5 s. Then it shall send the following bit sequence in the GSM 04.21 frames:

   - 2M+3 bits of start polarity;
   - 2M bits of stop polarity.

d) The SS shall send pseudo random characters with start and stop bit(s) (as selected by the BCIE) in the GSM 04.21 frames to the MS for approximately 2 s. Then it shall send the following bit sequence in the GSM 04.21 frames:

   - for 1 s bits of start polarity;
   - 2M bits of stop polarity,

where M is as defined in GSM 04.21, section 4.2, and then again pseudo random characters as above.

e) The SS shall input pseudo random characters with start and stop bit(s) (as selected by the BCIE) over the R-interface to the MS for approximately 2 s. Then it shall input the following bit sequence to the R-interface:

- M bits of start polarity;
- 2M bits of stop polarity.

f) The SS shall input pseudo random characters with start and stop bit(s) (as selected by the BCIE) over the R-interface to the MS for approximately 2 s. Then it shall input the following bit sequence to the R-interface:

- for 1 s bits of start polarity;
- 2M bits of stop polarity,

where M is as defined in GSM 04.21, section 4.2, and then again pseudo random characters as above.

g) the test shall be stopped 2 s later.

#### 29.2.6.2.5 Test requirements

1) During the test no GSM 04.21 frame with incorrect format (i.e. format not compliant to GSM 04.21 (see conformance requirement) or not corresponding to the user data rate currently under test) shall have been received by the SS.

2) The user data stream sent over the Um-interface by the SS shall match character by character the user data stream output at the R-interface.

3) The two Break Signals shall be detectable at the R-interface between the same characters as having been sent.

4) The user data stream received over the Um-interface by the SS shall match character by character the user data stream input at the R-interface.

5) The two Break Signals shall be detectable at the Um-interface between the same characters as having been input.

#### 29.2.6.2.6 BCIE

Same as 29.2.2.6.

### 29.2.6.3 Overspeed/Underspeed Handling (Local Terminal)

#### 29.2.6.3.1 Definition and applicability

This test is applicable to the MT2 configuration only.

#### 29.2.6.3.2 Conformance requirement

An MS supporting asynchronous transparent bearer capabilities shall handle overspeed and underspeed of the local terminal according to:

1 GSM 04.21, sections 4.1, 4.3, 4.4, 5 and 7.

#### 29.2.6.3.3 Test purpose

The purpose of these tests is to verify the ability of the MS to deal with plesiosynchronous bit clocks in the MS and the TE in case of asynchronous Bearer Capabilities.

#### 29.2.6.3.4 Method of test

The Test shall be carried out for all possible user data rates supported by the MS in asynchronous mode (see below).

Procedure:

a) A data call shall be set up between the SS and the MS with a BCIE (see below) supported by the MS. The next step shall be entered immediately after CT107 has been set to on by the MS.

b) The interface circuit bit(s) in the GSM 04.21 frame shall be set to ON.

c) The SS shall input continuously pseudo random characters with a bit clock of:

- nominal user data rate + 2,5 % bit/s in case of less than 600 bit/s user data rate;
- nominal user data rate + 1 % in the other cases.

(ref. GSM 04.21, section 4.3) to the R-interface of the MS for approximately 5 s.

d) The SS shall input continuously pseudo random characters with a bit clock of nominal user rate - 2,5 % (ref. CCITT V.14, section 3) to the R-interface of the MS for approximately 5 s.

e) The test shall be stopped.

#### 29.2.6.3.5 Test requirements

1) During the test no GSM 04.21 frame with incorrect format (i.e. format not compliant to GSM 04.21 (see conformance requirement) or not corresponding to the user data rate currently under test) shall have been received by the SS.

2) The user data stream input to the R-interface shall match character by character the user data stream sent to the SS over the Um-interface.

#### 29.2.6.3.6 BCIE

Same as 29.2.2.6.

The Number of Data Bits per character (excl. parity) shall be 8. No parity bit shall be used. The Number of Stop Bits shall be 1. If the MS does not support these values different ones shall be chosen.

The remaining parameters of the BCIE and the channel type (FR/HR) shall be set to a value supported by the MS.

### 29.2.6.4 Overspeed/Underspeed Handling (Remote Terminal)

#### 29.2.6.4.1 Definition and applicability

This test is applicable to the MT2 configuration only.

#### 29.2.6.4.2 Conformance requirement

An MS supporting asynchronous transparent bearer capabilities shall handle overspeed and underspeed of the remote terminal (which shows in the structure of the GSM 04.21 frames received over the Um-interface) according to:

1 GSM 04.21, sections 4.1, 4.3, 4.4, 5 and 7.

#### 29.2.6.4.3 Test purpose

The purpose of these tests is to verify the ability of the MS to deal with plesiosynchronous bit clocks in the MS and the remote Terminal in case of asynchronous Bearer Capabilities.

The case of underspeed is covered by 29.6.1. The case of overspeed shall be tested as follows.

#### 29.2.6.4.4 Method of test

The Test shall be carried out for all possible user data rates supported by the MS in asynchronous mode (see below).

Procedure:

a) A data call shall be set up between the SS and the MS with a BCIE (see below) supported by the MS. The next step shall be entered immediately after CT107 has been set to on by the MS.

b) The interface circuit bit(s) in the GSM 04.21 frame shall be set to ON.

c) The SS shall start sending pseudo random characters in the GSM 04.21 frames over the Um-interface with minimal number of stop bits between the characters and where one stop bit is omitted every 8th character.

e) The test shall be stopped 5 s later.

#### 29.2.6.4.5 Test requirements

1) During the test no GSM 04.21 frame with incorrect format (i.e. format not compliant to GSM 04.21 (see conformance requirement) or not corresponding to the user data rate currently under test) shall have been received by the SS.

2) The user data stream sent by the SS over the Um-interface shall match character by character the user data stream sent by the MS over the R-interface.

#### 29.2.6.4.6 BCIE

Same as 29.2.6.3.6.

## 29.2.7 Interchange circuit mapping for transparent bearer capabilities

### 29.2.7.1 Definition and applicability

This test is applicable to the MT2 configuration only. However, it cannot be applied fully to MSs which support e.g.:

- CT108/2 for releasing the call (e.g. support of CCITT V.25bis) and/or
- similar use of the circuit C for CCITT X.21.

Therefore the test shall be applied only for those interchange circuits which do not influence Layer 3 signalling.

In case of circuit C the X.21-byte timing circuit B shall not be used.

### 29.2.7.2 Conformance requirement

1) An MS supporting transparent bearer capabilities with a V-series R-interface shall map the interchange circuits CT105 and CT108/2 to the GSM 04.21 frames sent over the Um-interface according to:

   1.1 GSM 04.21, sections 4.1, 4.4, 5 and 7.

   1.2 GSM 07.02, section 3.2.1.

2) An MS supporting transparent bearer capabilities with an X-series R-interface shall map the interchange circuit C to the GSM 04.21 frames sent over the Um-interface according to:

   2.1 GSM 04.21, sections 4.1, 4.4, 5 and 7.

   2.2 GSM 07.03, sections 4.2.1 and 4.2.2.

### 29.2.7.3 Test purpose

The purpose of these tests is to verify the ability of the MS to correctly convey changes of the interface circuits at the R-interface to the GSM 04.21 frame sent over the Um-interface in case of Transparent Bearer Capabilities.

#### 29.2.7.4 Method of test

The Test shall be carried out for all user data rates supported by the MS (see below) and the circuits CT105 and CT108/2 (CCITT V.24) and C (CCITT X.21). The test shall be carried out only for those frame formats and circuits which are supported by the MS (exceptions see above).

Procedure:

a) A data call shall be set up between the SS and the MS with a BCIE (see below) supported by the MS. The next step shall be entered immediately after CT107 has been set to ON by the MS.

b) The interface circuit bit(s) in the GSM 04.21 frame shall be set to ON and the SS shall input continuously pseudo random data to the R-interface during the following steps. The SS shall wait for approximately 1 s before entering the next step.

c) The SS shall set the interchange circuit at the R-interface to OFF and wait for 2 s.

d) The SS shall again set the interchange circuit at the R-interface to ON.

e) After further 2 s the test shall be stopped.

#### 29.2.7.5 Test requirements

1) During the test no GSM 04.21 frame with incorrect format (i.e. format not compliant to GSM 04.21 (see conformance requirement) or not corresponding to the user data rate currently under test) shall have been received by the SS.

2) The change of the interchange circuit signal level shall be indicated in the GSM 04.21 frames as required by GSM 04.21 and CCITT V.110 (i.e. OFF state shall start and end in the correct GSM 04.21 frame).

#### 29.2.7.6 BCIE

Same as 29.2.2.5.

## 29.3 Testing of non transparent data services (RLP tests)

SS sends NULL (C/R=0, P/F=0) frames when it has nothing else to send in ADM mode.

SS does not use DTX if not explicitly indicated in the test and sends supervisory RR (C/R=0, P/F=0) frames when it has nothing else to send in ABM mode. N(R) is equal to N(R) of the previous frame. For the first frame N(R)=0.

The information field of the Supervisory frames sent by the SS is fully coded with "1".

The tolerance on timers or delays is +/- 10%.

The SS will check FSI (Frame Start Identifier) alignment in all received RLP frames. The information field of the Supervisory frames sent by the MS is never verified.

The SABM-UA exchange for RLP link establishment is initiated by the MS.

Immediately upon RLP link connection, the MS may send an I+S frame containing updated status bits SA, SB and X and the SS must send it.

### 29.3.1 Initialization

#### 29.3.1.1 Normal initialization done by the MS

##### 29.3.1.1.1 Test purpose

To test the normal establishment of multiple frame operation between the SS and the MS.

This test is performed twice for testing MO and MT data calls:

29.3.1.1.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

MO data call:

The MS is made to establish a MO non transparent data call, so that the initial conditions are that the MS is in call state U10 ("Call Active") after having sent a CONNECT ACKNOWLEDGE message.

MT data call:

The SS establishes a MT non transparent data call, so that the initial conditions are that the MS is in call state U10 ("Call Active") after having received a CONNECT ACKNOWLEDGE message from the SS.

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

Procedure

The MS shall send a SABM frame.

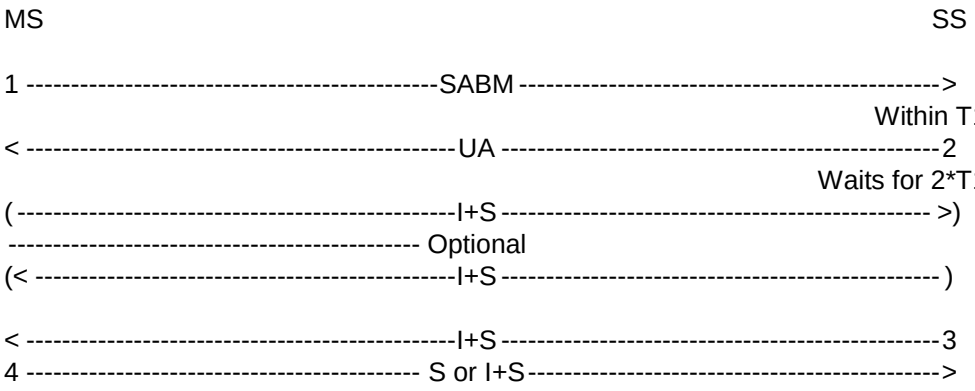
The SS responds with a correct UA frame (within T1).

The SS waits for 2*T1 after the UA to ensure the SABM frame is not repeated. This confirms that the UA has been received.

The MS shall be in ABM mode. After optional status bits exchange between the MS and the SS, this is verified by sending an I + S frame and waiting for the acknowledgement from the MS.

The MS is returned to the idle state by clearing the call.

Expected sequence



The frames from the SS will be:

2: One UA frame containing:

R=0, F=1.

3: One correct I+S frame in a RR frame with N(S)=0.

#### 29.3.1.1.3 Test requirements

The frames from the MS shall be:

1: One SABM frame containing:

C=1, P=1.

The SABM shall not be repeated.

4: One S or I+S frame with N(R)=1 acknowledging the I+S frame.

### 29.3.1.2 Initialization failure

#### 29.3.1.2.1 Loss of UA frame

##### 29.3.1.2.1.1 Test purpose

To test the MS response to the loss of an UA frame during initialization.

##### 29.3.1.2.1.2 Method of test

###### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.The MS is made to establish a MO non transparent data call so that the initial conditions are that the MS is in call state U10 ("Call Active") after having sent a CONNECT ACKNOWLEDGE message.

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

###### Procedure

The MS shall send an SABM frame.

The SS ignores the first SABM frame from the MS.

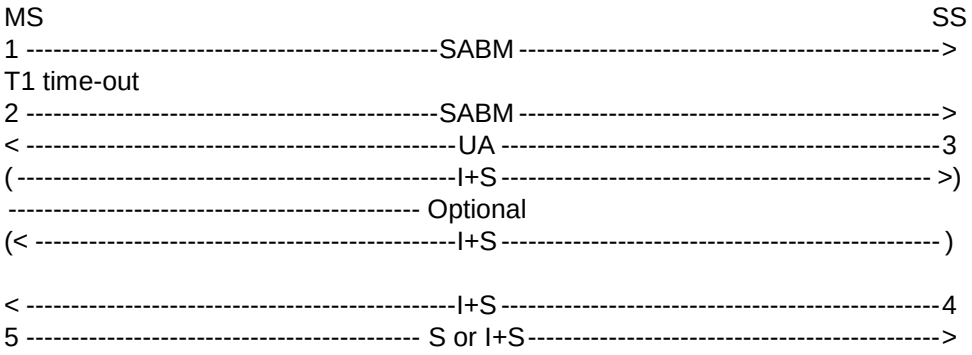
The MS shall wait for time-out of timer T1 and then send a second SABM frame.

The SS responds to the second SABM frame with an UA frame (within T1).

The MS enters in ABM mode. After optional status bits exchange between the MS and the SS, this is verified by sending an I+S frame and waiting for the acknowledgement from the MS.

The MS is returned to the idle state by clearing the call.

Expected sequence



The frames from the SS will be:

3: One UA frame containing:

R=0, F=1.

within T1 after the second SABM.

4: One correct I+S frame in a RR frame with N(S)=0.

#### 29.3.1.2.1.3 Test requirements

The frames from the MS shall be:

1, 2: One SABM frame containing:

C=1, P=1.

The second SABM frame shall follow the first SABM frame after time-out of timer T1.

5: One S or I+S frame with N(R)=1 acknowledging the I+S frame.

### 29.3.1.2.2 Total loss of UA frame

#### 29.3.1.2.2.1 Test purpose

To test the MS response to a total loss of UA frame during initialization.

#### 29.3.1.2.2.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

The MS is made to establish a MO non transparent data call so that the initial conditions are that the MS is in call state U10 ("Call Active") after having sent a CONNECT ACKNOWLEDGE message.

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

Procedure

The MS shall send an SABM frame.

The SS ignores the SABM frame from the MS.

The MS shall wait for time-out of timer T1 and then send a new SABM frame.

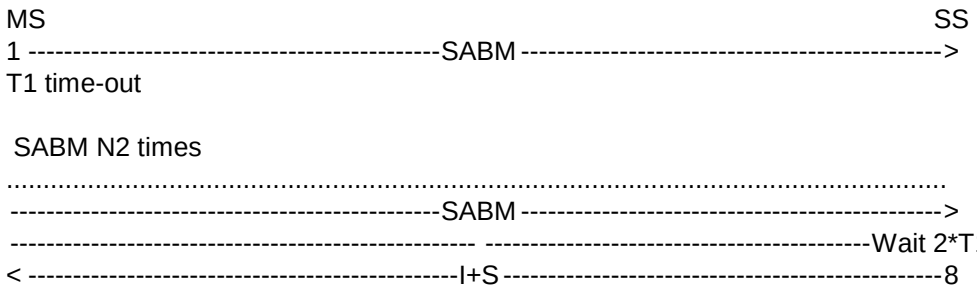
The SS ignores the SABM frame sent by the MS. These 2 last steps are repeated N2 times.

The SS waits for 2 * T1 to ensure the SABM frame is not repeated.

The MS shall not enter in ABM mode. This is verified by sending an I+S frame. The MS shall ignore this frame.

The MS is returned to the idle state by clearing the call.

Expected sequence:



The frames from the SS will be:

8: One correct I+S frame in a RR frame containing with N(S)=0.

29.3.1.2.2.3 Test requirements:

The frames from the MS shall be:

1, .... N2: One SABM frame containing:

C=1, P=1.

An SABM frame follows the previous one after time-out of timer T1.

## 29.3.2 Data transfer

### 29.3.2.1 Default conditions

The initial conditions are that the MS is in call state U10 ("Call Active") and in RLP ABM mode.

During the synchronization of the traffic channel, the MS and the SS have transmitted I+S frames. Unless, other indication in the test, each test of this section will begin in the following conditions:

- the MS has previously sent I+S frames numbered N(S)=0,...,$N_{MS}$-1 mod(62) and has previously sent a frame containing N(R) = $N_{SS}$ mod (62);
- the SS has previously sent I+S frames numbered N(S)=0,...,$N_{SS}$-1 mod(62) and has previously sent a frame containing N(R) = $N_{MS}$ mod (62).

The first I+S frame that an MS will send in a test will be numbered N(S)= NMS and the first I+S frame that the SS will send will be numbered NSS.

## 29.3.2.2 MS sends I+S frames

### 29.3.2.2.1 N(S) sequence number

#### 29.3.2.2.1.1 Test purpose

To test the correct handling of the N(S) sequence number.

#### 29.3.2.2.1.2 Method of test

##### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP default parameters except the window size from MS to IWF (SS), called KMI.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the window size from MS to IWF (SS), called KMI, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered. This test is performed twice with 2 different values of KMI, randomly chosen.

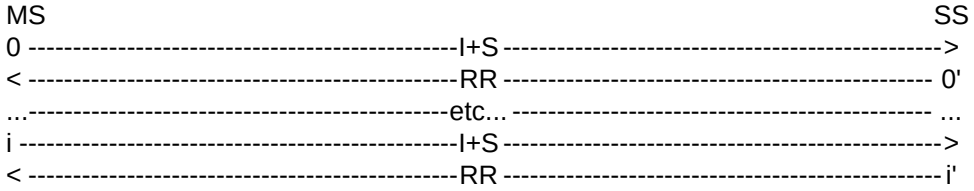
##### Procedure

After optional status bits exchange between the MS and the SS, the MS is made to send continuously I+S frames (more than 2*64 frames). The MS shall send I+S frames with N(S) incremented by 1 mod(62) in each frame.

The SS acknowledges the I+S frames in RR frame in sequence.

The MS is returned to the idle state by clearing the call.

##### Expected sequence



The frames from the SS will be:

0',...,i': One supervisory RR frame containing:

N(R) = NMS+1, ... , NMS+i+1 mod(62).

#### 29.3.2.2.1.3 Test requirements

The frames from the MS shall be:

0,...,i: One I+S frame containing:

N(S) = $N_{MS}$, ... , $N_{MS}$+i mod(62)

### 29.3.2.2.2 Transmission window

#### 29.3.2.2.2.1 Test purpose

To test the correct handling of the transmission window.

#### 29.3.2.2.2.2 Method of test

##### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP default parameters except the window size from MS to IWF (SS), called $K_{MI}$.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the window size from MS to IWF (SS), called $K_{MI}$, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered.

This test is performed twice with 2 different values of $K_{MI}$, randomly chosen.

##### Procedure

The MS is made to send continuously I+S frames with a delay inferior to T1 between each frame.

The SS does not acknowledge the first $K_{MI}$ frames.

The MS stops sending I+S frames after having sent $K_{MI}$ frames, due to the window size.

The SS waits for 0,5*T1 after the last frame of the sequence (N(S)=$N_{MS}$+$K_{MI}$-1) to acknowledge the first j frames, with j<$K_{MI}$.

The MS shall transmit j new I+S frames and stop sending I+S frames after having sent them, due to the window size.

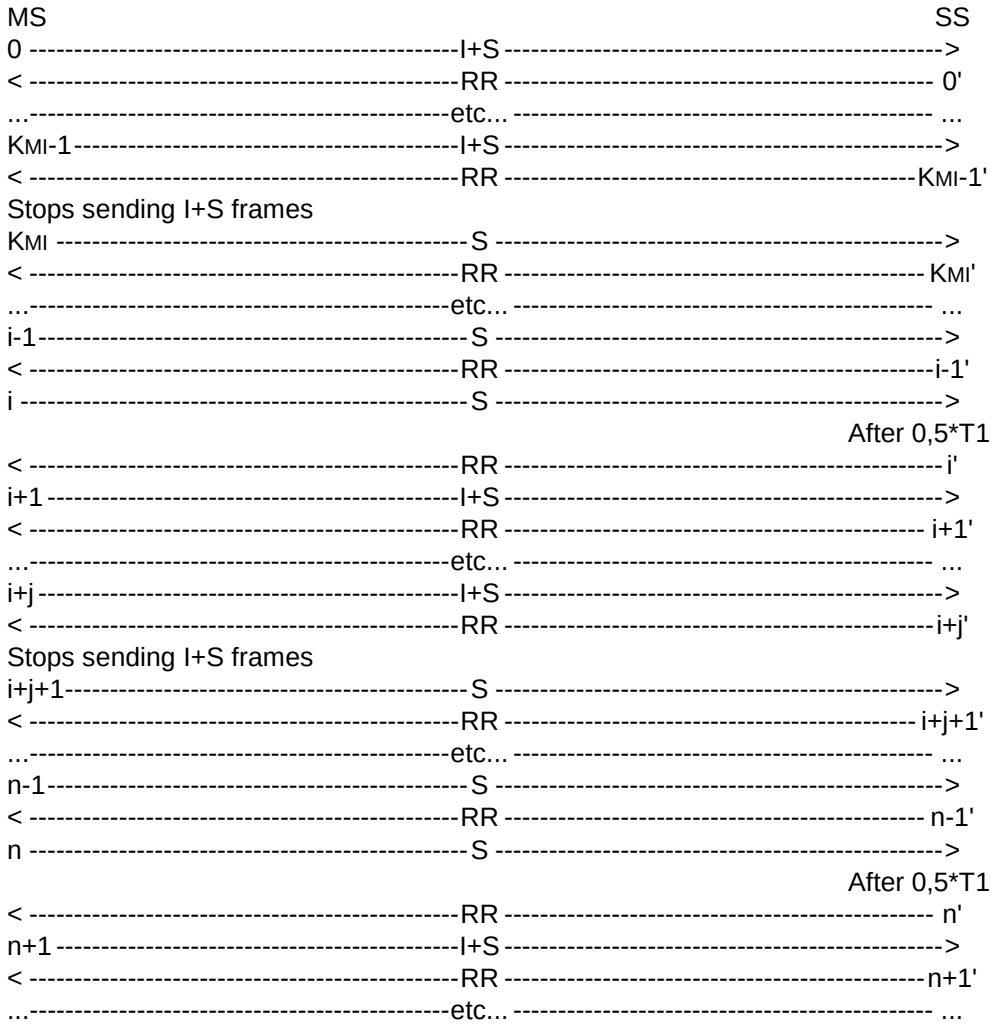
The SS waits for 0,5*T1 after the last frame of the sequence (N(S)=$N_{MS}$+$K_{MI}$-1+j mod (62)) to acknowledge all frames transmitted by the MS.

The MS shall transmit all the following I+S frames.

The SS acknowledges the I+S frames sequentially (i.e. 1 after 1).

The MS is returned to the idle state by clearing the call.

Expected sequence



The frames from the SS will be:

0',...,i-1': One RR frame containing:

N(R)=NMS mod(62).

i': One RR frame containing:

N(R)=NMS+j mod(62) with j <KMI,

after a delay of 0,5*T1 after the last received I+S frame.

i+1',...,n-1': One RR frame containing:

N(R)=NMS+j mod(62).

n': One RR frame containing:

N(R)=NMS+KMI+j mod(62),

after a delay of 0,5*T1 after the last received I+S frame.

n+1', n+2',...: One RR frame containing:

N(R) = NMS + KMI + j + 1 , NMS + KMI + j + 2 ,... mod(62).

#### 29.3.2.2.2.3 Test requirements

The frames from the MS shall be:

0,...,KMI-1: One I+S frame containing:

N(S) = NMS, ..., NMS + KMI - 1 mod(62).

MS stops sending I+S frames until reception of an acknowledgement of at least one I+S frame.

KMI,...,i: One S frame.

i+1,...,i+j: One I+S frame containing:

N(S)=NMS+KMI,...,NMS+KMI+j-1 mod(62).

MS stops sending I+S frames until reception of an acknowledgement of at least one I+S frame.

i+j+1,...,n: One S frame.

n+1,n+2...: One I+S frame containing:

N(S)=NMS+KMI+j,NMS+KMI+j+1,... mod(62).

### 29.3.2.2.3 Busy condition

#### 29.3.2.2.3.1 Test purpose

To test the correct handling of a RNR frame received.

#### 29.3.2.2.3.2 Method of test

##### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

The ABM will be entered.

##### Procedure

The MS is made to send continuously I+S frames.

The SS acknowledges the received I+S frames in supervisory RR frames. After 1 second it acknowledged the received I+S frames in supervisory RNR frames.

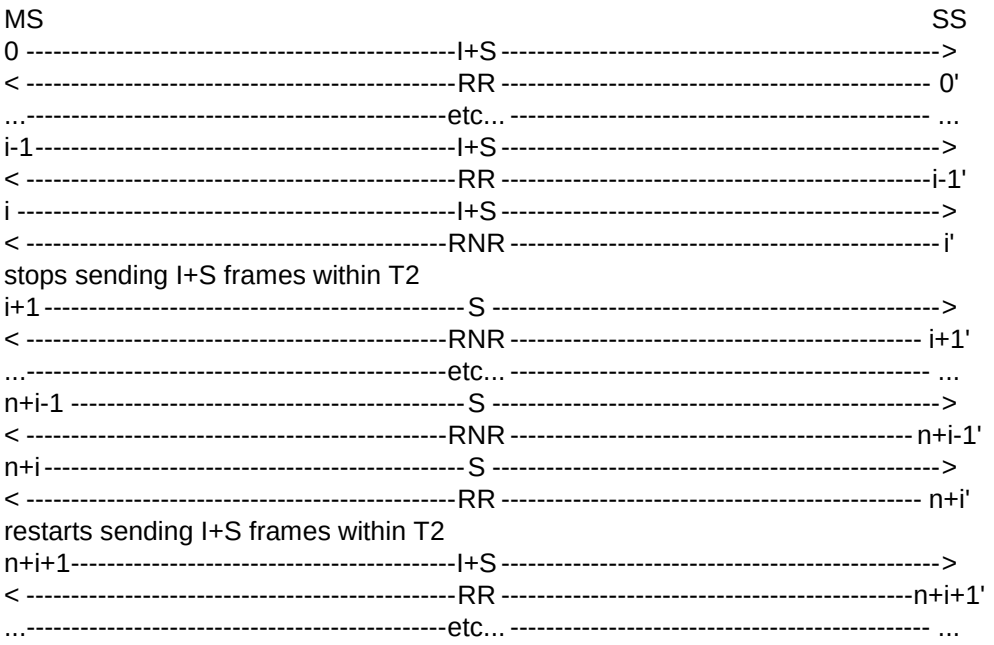
After the first RNR frame, the MS shall stop sending I+S frames and shall start sending supervisory frames within T2.

After 1 second receiving supervisory frames, the SS sends RR frames instead of RNR.

After the first RR frame, the MS will restart the transmission of I+S frames within T2.

The MS is returned to the idle state by clearing the call.

Expected sequence



The frames from the SS will be:

0',...,i-1': One RR frame containing:

N(R)=$N_{MS}$+1,...,$N_{MS}$+i mod(62).

i',...,n+i-1': One RNR frame containing:

N(R)=$N_{MS}$+i+1 mod(62).

n+i': One RR frame containing:

N(R)=$N_{MS}$+i+1 mod(62).

n+i+1',n+i+2',...: One RR frame containing:

N(R)=$N_{MS}$+i+2,$N_{MS}$+i+3,... mod(62).

### 29.3.2.2.3.3 Test requirements

The frames from the MS shall be:

0,...,i: One I+S frame containing:

N(S)=$N_{MS}$,...,$N_{MS}$+i mod(62).

MS stops sending I+S frames within T2 after the reception of the first RNR frame from the SS.

i+1,...,n+i: One S frame.

MS restarts sending I+S frames within T2 after the reception of the first RR frame from the SS.

n+i+1,n+i+2,...: One I+S frame containing:

N(S)=$N_{MS}$+i+1,$N_{MS}$+i+2,... mod(62).

## 29.3.2.3 SS sends I+S frames

### 29.3.2.3.1 N(R) sequence number

#### 29.3.2.3.1.1 Test purpose

To test the correct handling of the N(R) sequence number.

#### 29.3.2.3.1.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP default parameters except the window size from IWF (SS) to MS, called KIM.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the window size from IWF (SS) to MS, called KIM, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered.This test is performed twice with 2 different values of KIM, randomly chosen.

Procedure

The SS is made to send continuously I+S frames (more than 2*64 frames). The delay between two I+S frames shall be superior to T2 and inferior to T1.

The MS is made to send no data i.e. no I+S frame.

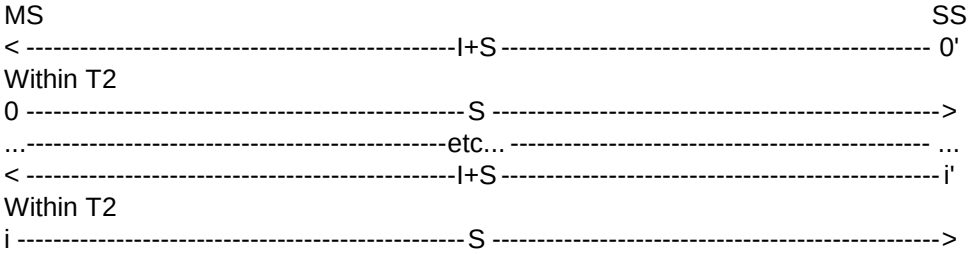
NOTE 8: The MS may have previously sent I+S frames.

The SS sends I+S frames in I+S RR frames.

The MS shall acknowledge the I+S frames in RR frame sequentially within T2.

The MS is returned to the idle state by clearing the call.

Expected sequence



The frames from the SS will be:

0,...,i': One I+S frame containing

N(S)=Nss,...,Nss+i mod(62).

#### 29.3.2.3.1.3 Test requirements

The frames from the MS shall be:

0,...,i: One S frame containing:

N(R)=NSS+1,...,NSS+i+1 mod (62).

The MS shall acknowledge the I+S frames sent by the SS within T2.

NOTE 9: If T2 parameter is equal to default T2 (<80 ms), the SS has to checked that the MS acknowledges an I+S frame within 80 ms.

### 29.3.2.3.2 Busy condition

#### 29.3.2.3.2.1 Test purpose

To test the correct handling of a RNR frame with information received.

#### 29.3.2.3.2.2 Method of test

##### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

The ABM will be entered.

##### Procedure

The SS is made to send continuously I+S frames. The delay between two consecutive I+S frames shall be inferior to T1.

The MS is made to send continuously I+S frames with a delay inferior to T1 between each frame.

The SS acknowledges the received I+S frames in I+S RR frames. After 1 second, it acknowledged the received I+S frames in supervisory RNR frames. The MS shall acknowledge the I+S frames in I+S RR frame sequentially.

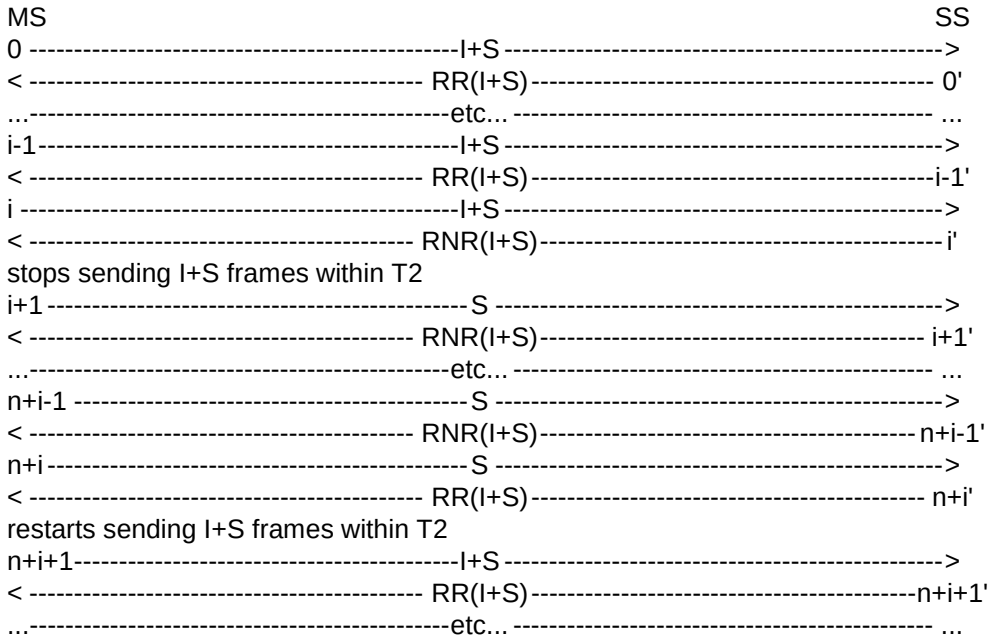
After the first RNR frame, the MS shall stop sending I+S frames and shall acknowledge the I+S received frame in supervisory frames within T2.

After 1 second receiving supervisory frames, the SS sends I+S RR frames instead of RNR.

After the first RR frame, the MS will restart the transmission of I+S frames, it shall acknowledge the I+S received frame in I+S frame within T2.

The MS is returned to the idle state by clearing the call.

Expected sequence



The frames from the SS will be:

0',...,i-1': One I+S RR frame containing:

N(S)=$N_{SS}$,...,$N_{SS}$+i-1 mod(62),

N(R)=$N_{MS}$+1,...,$N_{MS}$+i mod(62).

i',...,n+i-1': One I+S RNR frame containing:

N(S)=$N_{SS}$+i,...,$N_{SS}$+n+i-1 mod(62),

N(R)=$N_{MS}$+i+1 mod(62).

n+i',n+i+1',...: One I+S RR frame containing:

N(S)=$N_{SS}$+n+i,$N_{SS}$+n+i+1,... mod(62),

N(R)=$N_{MS}$+i+1,$N_{MS}$+i+2,... mod(62).

29.3.2.3.2.3 Test requirements

The frames from the MS shall be:

0,...,i: One I+S frame containing:

N(S)=$N_{MS}$,...,$N_{MS}$+i mod(62),

N(R)=$N_{SS}$,...,$N_{SS}$+i mod(62).

MS stops sending I+S frames within T2 after the reception of the first RNR frame from the SS.

i+1,...,n+i: One S frame containing:

N(R)=$N_{SS}$+i+1,...,$N_{SS}$+n+i mod(62).

MS restarts sending I+S frames within T2 after the reception of the first RR frame from the SS.

n+i+1,n+i+2,...: One I+S frame containing:

N(S)=$N_{MS}$+i+1,$N_{MS}$+i+2,... mod(62),

N(R)=$N_{SS}$+n+i+1,$N_{SS}$+n+i+1... mod(62).

## 29.3.2.4 SS rejects I+S frames

### 29.3.2.4.1 REJ frame

#### 29.3.2.4.1.1 Test purpose

To test the correct handling of a REJ frame received.

#### 29.3.2.4.1.2 Method of test

##### Initial Conditions

The window size from MS to IWF (SS) is called KMI.

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

The ABM will be entered.

##### Procedure

The MS is made to send continuously I+S frames with a delay inferior to T1 between each frame.

The SS acknowledges the i first I+S frames in supervisory RR frames.

The SS does not acknowledge the following I+S frames.

The SS rejects the 2 last I+S frames with a REJ and then send UI frames.

The MS shall retransmit the rejected I+S frames and the continue to send I+S frames.

The MS shall stop sending I+S frame when the transmission window is full.

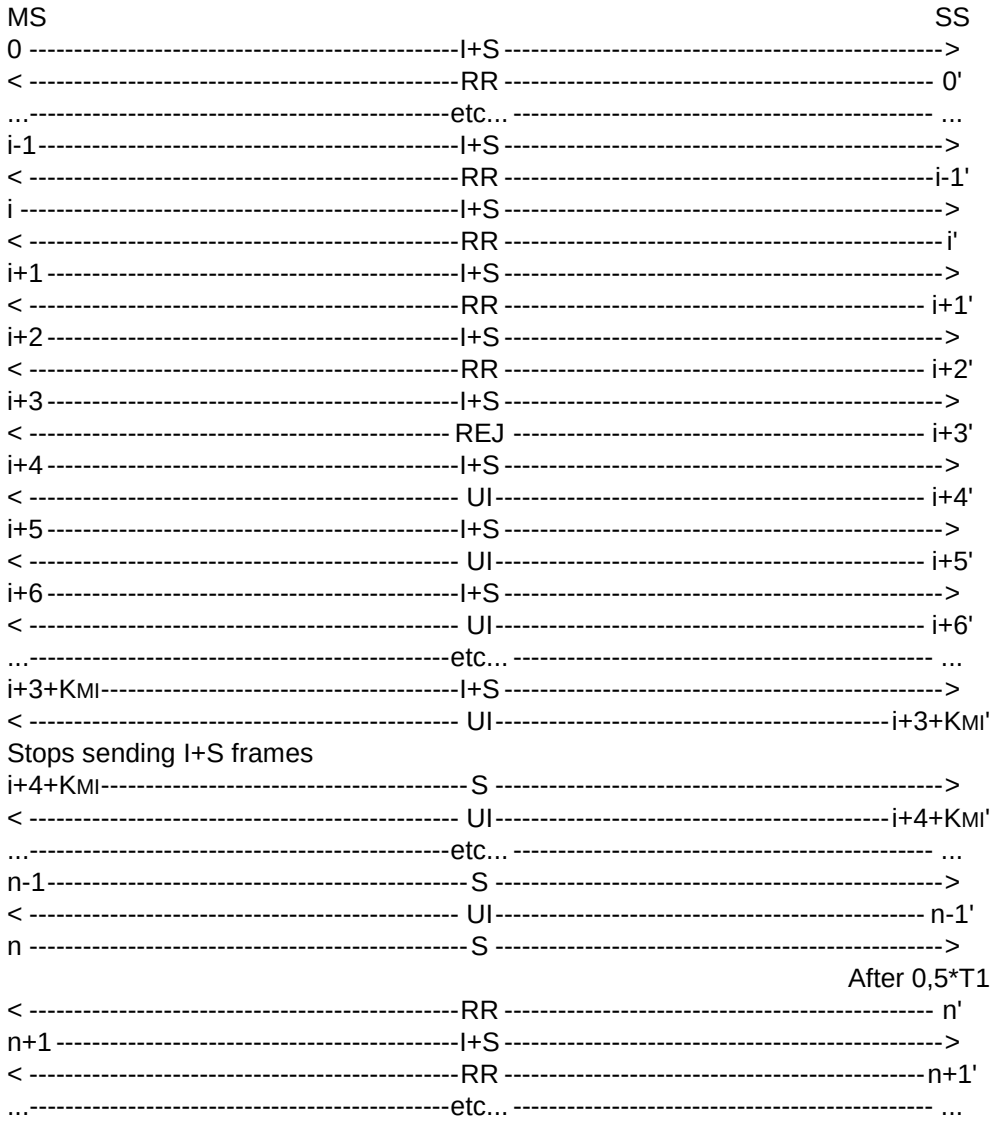
The SS acknowledges all the received I+S frames with a RR frame after a delay of 0,5*T1 after the last received I+S frame.

The MS restarts sending I+S frame.

The SS acknowledges the received I+S frames.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,i-1': One RR frame containing:

N(R)=NMS+1,...,NMS+i mod(62).

i',...,i+2': One RR frame containing:

N(R)=NMS+i mod(62).

i+3': One REJ frame containing:

N(R)=NMS+i+2 mod(62).

i+4',...,n-1': One UI frame.

n': One RR frame containing:

N(R)=NMS+i+2+KMI mod(62),

after a delay of 0,5*T1 after the last received I+S frame.

n+1',...: One RR frame containing

N(R)=NMS+i+3+KMI,... mod(62).

#### 29.3.2.4.1.3 Test requirements

The frames from the MS shall be:

0,...,i+3: One I+S frame containing

N(S)=$N_{MS}$,...,$N_{MS}$+i+3 mod(62).

i+4,i+5: One I+S frame containing

N(S)=$N_{MS}$+i+2,$N_{MS}$+i+3 mod(62).

i+6,...,i+3+$K_{MI}$: One I+S frame containing:

N(S)=$N_{MS}$+i+4...,$N_{MS}$+i+$K_{MI}$+1 mod(62).

i+4+$K_{MI}$,...,n: One S frame.

MS stops sending I+S frames until reception of an acknowledging of at least 1 I+S frame of the window (received N(R) from $N_{MS}$+i+3 to $N_{MS}$+i+2+$K_{MI}$ mod(62)).

n+1,...: One I+S frame containing:

N(S)=$N_{MS}$+i+$K_{MI}$,... mod(62).

### 29.3.2.4.2 SREJ frame

#### 29.3.2.4.2.1 Test purpose

To test the correct handling of a SREJ frame received.

#### 29.3.2.4.2.2 Method of test

##### Initial Conditions

The window size from MS to IWF (SS) is called $K_{MI}$.

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

Procedure

The MS is made to send continuously I+S frames with a delay inferior to T1 between each frame.

The SS acknowledges the i first I+S frames in supervisory RR frames.

The SS does not acknowledge the following I+S frames.

The SS rejects one I+S frame with a SREJ and then send UI frames.

The MS shall retransmit the rejected I+S frame and the continue to send I+S frames.

The MS shall stop sending I+S frame when the transmission window is full.

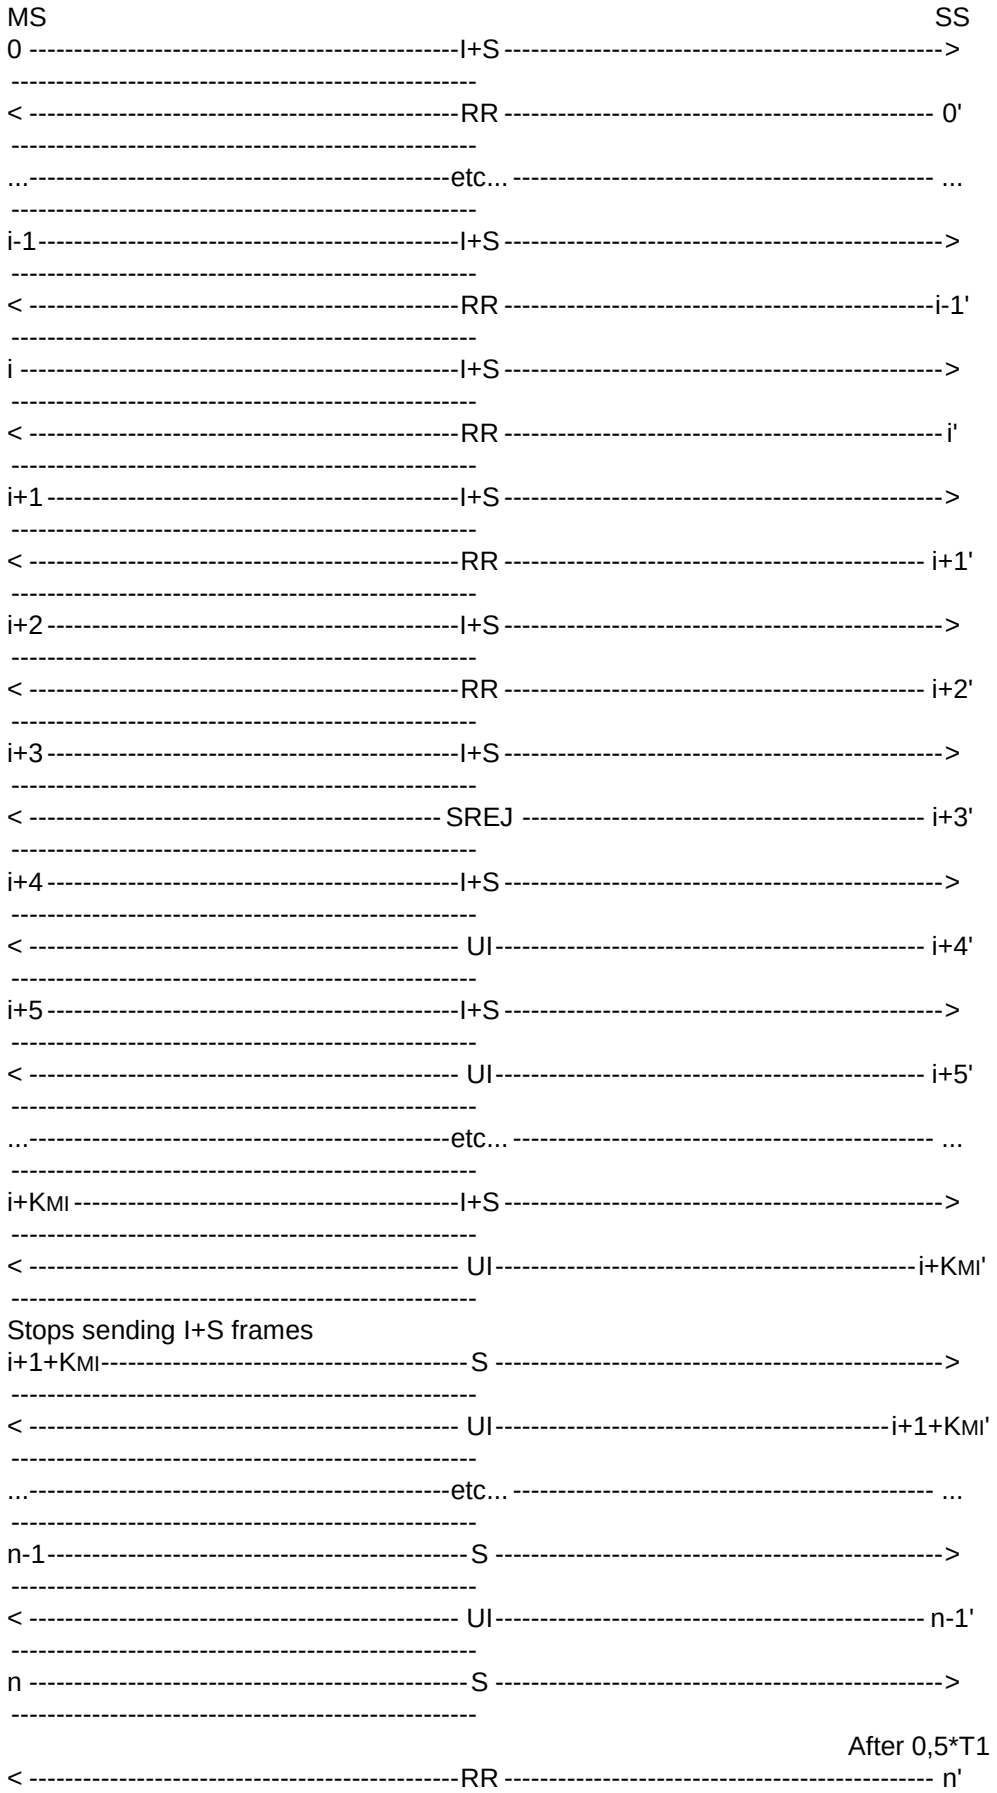
The SS acknowledges all the received I+S frames with a RR frame after a delay of 0,5*T1 after the last received I+S frame.

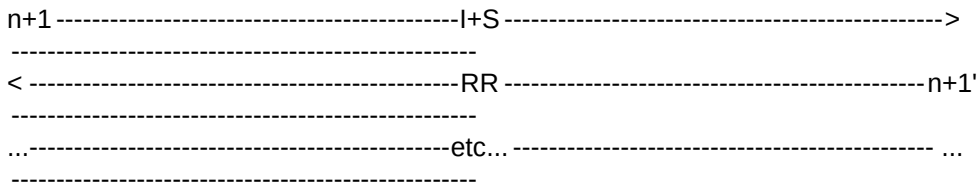
The MS restarts sending I+S frame.

The SS acknowledges the received I+S frames.

The MS is returned to the idle state by clearing of the call.

Expected sequence





The frames from the SS will be:

0',...,i-1': One RR frame containing:

N(R)=NMS+1,...,NMS+i mod(62).

i',...,i+2': One RR frame containing:

N(R)=NMS+i mod(62).

i+3': One SREJ frame containing:

N(R)=NMS+i+2 mod(62).

i+4',...,n-1': One UI frame.

n': One RR frame containing:

N(R)=NMS+i+KMI mod(62),

after a delay of 0,5*T1 after the last received I+S frame.

n+1',...: One RR frame containing:

N(R)=NMS+i+1+KMI mod(62).

#### 29.3.2.4.2.3 Test requirements

The frames from the MS shall be:

0,...,i+3: One I+S frame containing:

N(S)=NMS,...,NMS+i+3 mod(62).

i+4: One I+S frame containing:

N(S)=NMS+i+2 mod(62).

i+5,...,i+KMI: One I+S frame containing:

N(S)=NMS+i+4...,NMS+i+KMI-1 mod(62).

i+1+KMI,...,n: One S frame.

MS stops sending I+S frames until reception of an acknowledging of at least 1 I+S frame of the window (received N(R) from NMS+i+1 to NMS+i+KMI mod(62)).

n+1,...: One I+S frame containing:

N(S)=NMS+i+KMI,... mod(62).

### 29.3.2.4.3 I+S reject frame

#### 29.3.2.4.3.1 Test purpose

To test the correct handling of a I+S reject frame received.

29.3.2.4.3.2 Method of test

Initial Conditions

The window size from MS to IWF (SS) is called KMI.

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

Procedure

The MS is made to send continuously I+S frames with a delay inferior to T1 between each frame.

The SS acknowledges the i first I+S frames in supervisory RR frames.

The SS does not acknowledge the following I+S frames.

The SS rejects the 2 last I+S frames with a REJ.

The MS shall retransmit the 2 rejected I+S frames.

The SS acknowledges these 2 frames.

The MS shall continue sending I+S frames.

The SS does not acknowledge these frames.

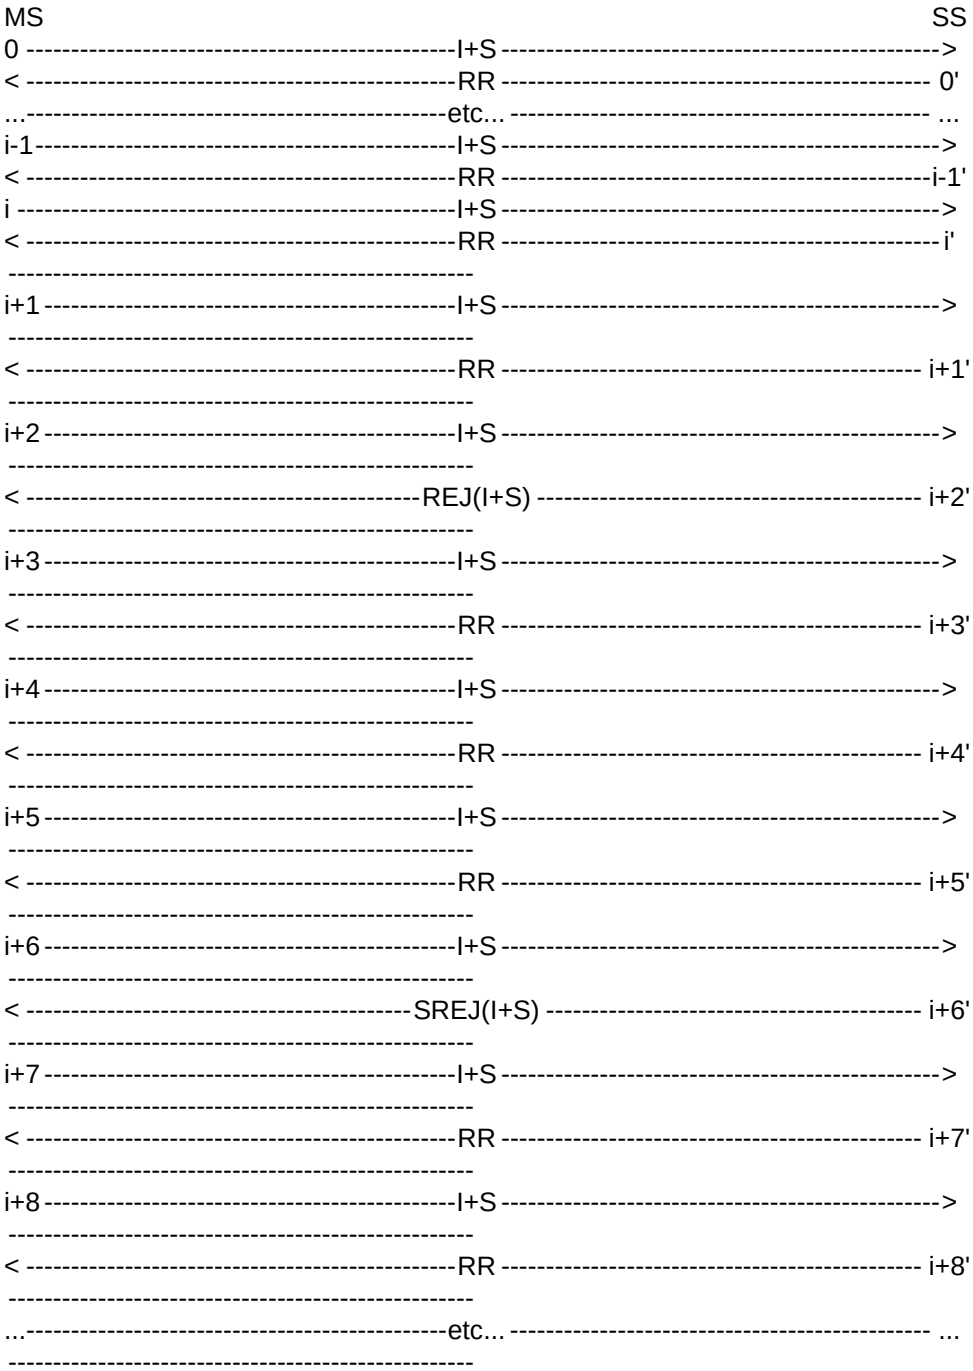
The SS rejects one I+S frame with a SREJ.

The MS shall retransmit the rejected I+S frame and continue sending I+S frames.

The SS acknowledges the received I+S frames.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,i-1': One RR frame containing:

N(R)=$N_{MS}$+1,...,$N_{MS}$+i mod(62).

i',i+1': One RR frame containing:

N(R)=$N_{MS}$+i mod(62).

i+2': One I+S REJ frame containing:

N(R)=$N_{MS}$+i+1 mod(62),

N(S)=$N_{SS}$ mod (62).

i+3',i+4': One RR frame containing:

N(R)=NMS+i+2,NMS+i+3 mod(62).

i+5': One RR frame containing:

N(R)=NMS+i+3 mod(62).

i+6': One I+S REJ frame containing:

N(R)=NMS+i+3 mod(62),

N(S)=NSS+1 mod (62).

i+7': One RR frame containing:

N(R)=NMS+i+3 mod(62).

i+8': One RR frame containing:

N(R)=NMS+i+6,... mod(62).

#### 29.3.2.4.3.3 Test requirements

The frames from the MS shall be:

0,...,i+2: One I+S frame containing:

N(S)=NMS,...,NMS+i+2 mod(62).

i+3,i+4: One I+S frame containing:

N(S)=NMS+i+1,NMS+i+2 mod(62).

i+5,i+6: One I+S frame containing:

N(S)=NMS+i+3,NMS+i+4 mod(62).

i+7: One I+S frame containing:

N(S)=NMS+i+3 mod(62).

i+8,...: One I+S frame containing:

N(S)=NMS+i+5,... mod(62).

The MS shall acknowledge the I+S frames sent by the SS within T2.

## 29.3.2.5 MS rejects I+S frames

### 29.3.2.5.1 Rejection with REJ or SREJ supervisory frames

#### 29.3.2.5.1.1 Conformance requirements

The MS shall be able to detect that an I+S frame is out of sequence, and to indicate to the network that some information needs to be retransmitted. This shall be done by using either a REJ or a SREJ RLP frame. The MS has the freedom to choose either one of these frames, but it shall correctly indicate which frames need to be retransmitted.

References

GSM 04.22 sections 5.2.3.4, 5.2.3.6 and 5.3.2.

29.3.2.5.1.2 Test purpose

To test that the MS is able to send correct REJ or SREJ supervisory frames to ask for the transmission of a sequence when an out of sequence information frame has been received.

29.3.2.5.1.3 Test method

Initial Conditions

The window size from IWF (SS) to MS is called KIM.

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

Foreseen final state of the MS

Idle.

Test procedure

The SS is made to send continuously I+S frames. The delay between two consecutive I+S frames shall be inferior to T1.

The MS is made to send no user data. It sends only supervisory frames.

The SS sends a I+S frame numbered NSS. The MS shall acknowledge this frame. Then the SS sends a I+S frame numbered Nss+2.

The MS shall ask for the retransmission of the missing frame numbered Nss+1. The MS may send a SREJ frame (see case a). If it cannot send SREJ, it shall send a REJ frame (see case b).

Case a: If the MS chooses to send a SREJ, it shall send a SREJ frame containing N(R)=Nss+1.

The SS sends a I+S frame numbered Nss+4.

The MS shall ask for the retransmission of the missing frame numbered Nss+3 The MS may send a SREJ frame (see case a/a If it cannot send SREJ, it shall send a REJ frame (see case a/b).

Case a/a: If the MS chooses to send a SREJ, it shall send a SREJ frame containing N(R)=Nss+3.

The SS sends a I+S frame numbered Nss+1 and the MS shall acknowledge this frame (N(R)=Nss+3).

The SS sends a I+S frame numbered Nss+3 and the MS shall acknowledge this frame (N(R)=Nss+5).

Case a/b: If the MS chooses to send a REJ, it shall send a REJ frame containing N(R)=Nss+1.

The SS sends I+S frames numbered Nss+1, ..., Nss+4 and the MS shall acknowledge these frames (N(R)=Nss+2, ... , Nss+5).

Case b: If the MS chooses to send a REJ, it shall send a REJ frame containing N(R)=Nss+1.

The SS sends I+S frames numbered Nss+1, Nss+2 and the MS shall acknowledge this frame (N(R)=Nss+2, Nss+3).

The SS sends a I+S frame numbered Nss+4.

The MS shall ask for the retransmission of the missing frame numbered Nss+3 The MS may send a SREJ frame (see case b/a If it cannot send SREJ, it shall send a REJ frame (see case b/b).

Case b/a: If the MS chooses to send a SREJ, it shall send a SREJ frame containing N(R)=Nss+3.

The SS sends a I+S frame numbered Nss+3 and the MS shall acknowledge this frame (N(R)=Nss+5).

Case b/b: If the MS chooses to send a REJ, it shall send a REJ frame containing N(R)=Nss+3.

The SS sends I+S frames numbered Nss+3, Nss+4 and the MS shall acknowledge these frames (N(R)=Nss+4, Nss+5).

The SS sends a I+S frame numbered Nss+5. The MS shall acknowledge this frame. Then the SS sends a I+S frame numbered Nss+5+KIM.

The MS shall ask for the retransmission of the missing frame numbered Nss+6 to Nss+4+KIM. The MS may send a SREJ frame (see sequence c with k=1). If it cannot send SREJ, it shall send a REJ frame (see sequence d with k=1).

Sequence c: If the MS chooses to send a SREJ, it shall send a SREJ frame containing N(R)=Nss+5+k.

The SS sends a I+S frame numbered Nss+5+k.

When using SREJ frames, the MS shall send RR frames to acknowledge the received I+S frames. The time when these RR frames are sent is not tested.

If k<KIM-1, the MS shall ask for the retransmission of the missing frames numbered Nss+5+k+1 to Nss+4+KIM. The MS may send a SREJ frame (see sequence c with k=k+1). If it cannot send SREJ, it shall send a REJ frame (see sequence d with k=k+1).

If k=KIM-1, the MS has no more frame to reject. It shall acknowledge the frame numbered Nss+5+KIM. with a frame containing N(R)=Nss+6+KIM.,. The SS sends I+S frames numbered Nss+6+KIM, etc... and the MS shall acknowledge these frames (N(R)=Nss+7+KIM, etc.

Sequence d: If the MS chooses to send a REJ, it shall send a REJ frame containing N(R)=Nss+5+k.

The SS sends a I+S frame numbered Nss+5+k and the MS shall acknowledge this frame (N(R)=Nss+5+k+1).

The SS sends a I+S frame numbered Nss+5+KIM.

If k<KIM-1, the MS shall ask for the retransmission of the missing frames numbered Nss+5+k+1 to Nss+4+KIM. The MS may send a SREJ frame (see sequence c with k=k+1). If it cannot send SREJ, it shall send a REJ frame (see sequence d with k=k+1).

If k=KIM-1, the MS has no more frame to reject. It shall acknowledge the frame numbered Nss+5+KIM. with a frame containing N(R)=Nss+6+KIM.,. The SS sends I+S frames numbered Nss+6+KIM, etc... and the MS shall acknowledge these frames (N(R)=Nss+7+KIM, etc.

The MS is returned to the idle state by clearing of the call.

Maximum duration of test

1 minute.

b/b - 2': One I+S frame containing N(S)=NSS+3 mod(62), N(R)=NMS+1 mod(62).

b/b - 3': One I+S frame containing N(S)=NSS+4 mod(62), N(R)=NMS+1 mod(62).

i': One I+S frame containing N(S)=NSS+5 mod(62), N(R)=NMS+1 mod(62).

i+1': One I+S frame containing N(S)=NSS+5+KIM mod(62), N(R)=NMS+1 mod(62).

Sequence c (with k=1 to KIM-1):

c/k - 0': One I+S frame containing N(S)=NSS+5+k mod(62), N(R)=NMS+1 mod(62).

Sequence d (with k=1 to KIM-1):

d/k - 0': One I+S frame containing N(S)=NSS+5+k mod(62), N(R)=NMS+1 mod(62).

d/k - 1': One I+S frame containing N(S)=NSS+5+KIM mod(62), N(R)=NMS+1 mod(62).

j',...: One I+S frame containing N(S)=NSS+KIM+6,... mod(62), N(R)=NMS+1 mod(62).

### Specific message content

The frames from the MS shall be:

0: One RR frame containing N(R)=NSS+1 mod(62).

1: The MS shall reject the missing I+S frame numbered NSS+1. It may send a SREJ frame (see case a). If it cannot send SREJ, it shall send a REJ frame (see case b).

Case a

a - 1: One supervisory SREJ frame containing N(R)=NSS+1 mod(62).

a - 2: The MS shall reject the missing I+S frame numbered NSS+3. It may send a SREJ frame (see case a). If it cannot send SREJ, it shall send a REJ frame (see case b).

Case a/a

a/a - 1: One supervisory SREJ frame containing N(R)=NSS+3 mod(62).

a/a - 2: One RR frame containing N(R)=NSS+3 mod(62).

a/a - 3: One RR frame containing N(R)=NSS+5 mod(62).

Case a/b

a/b - 1: One supervisory REJ frame containing N(R)=NSS+1 mod(62).

a/b - 2: One RR frame containing N(R)=NSS+2 mod(62).

a/b - 3: One RR frame containing N(R)=NSS+3 mod(62).

a/b - 4: One RR frame containing N(R)=NSS+4 mod(62).

a/b - 5: One RR frame containing N(R)=NSS+5 mod(62).

Case b

b - 1: One supervisory REJ frame containing N(R)=NSS+1 mod(62).

b - 2: One RR frame containing N(R)=Nss+2 mod(62).

b - 3: One RR frame containing N(R)=Nss+3 mod(62).

b - 4: The MS shall reject the missing I+S frame numbered Nss+2. It may send a SREJ frame (see case a). If it cannot send SREJ, it shall send a REJ frame (see case b).

Case b/a

b/a - 1: One supervisory SREJ frame containing N(R)=Nss+2 mod(62).

b/a - 2: One RR frame containing N(R)=Nss+5 mod(62).

Case b/b

b/b - 1: One supervisory REJ frame containing N(R)=Nss+2 mod(62).

b/b - 2: One RR frame containing N(R)=Nss+4 mod(62).

b/b - 3: One RR frame containing N(R)=Nss+5 mod(62).

i: One RR frame containing N(R)=Nss+6 mod(62).

i+1: The MS shall reject all missing I+S frames (i.e. KIM-1 frames). It may send a SREJ frame (see sequence c with k=1). If it cannot send SREJ, it shall send a REJ frame (see sequence d with k=1).

Sequence c (with k=1 to KIM-1):

c/k - 0: One SREJ frame containing N(R)=Nss+5+k mod(62).

c/k - 1: If k<KIM-1, the MS shall reject all missing I+S frames (i.e. KIM-1 frames). It may send a SREJ frame (see sequence c with k=k+1). If it cannot send SREJ, it shall send a REJ frame (see sequence d with k=k+1). If k=KIM-1, the MS has no more frame to reject (see frame numbered j).

Sequence d (with k=1 to KIM-1):

d/k - 0: One REJ frame containing N(R)=Nss+5+k mod(62).

d/k - 1: One RR frame containing N(R)=Nss+5+k+1 mod(62).

d/k - 2: If k<KIM-1, the MS shall reject all missing I+S frames (i.e. KIM-1 frames). It may send a SREJ frame (see sequence c with k=k+1). If it cannot send SREJ, it shall send a REJ frame (see sequence d with k=k+1). If k=KIM-1, the MS has no more frame to reject (see frame numbered j).

j,...: One RR frame containing N(R)=Nss+KIM+6,... mod(62).

### 29.3.2.5.2 Retransmission of REJ or SREJ frames

#### 29.3.2.5.2.1 Conformance requirements

The MS shall not retransmit a REJ frame upon time-out. It may repeat SREJ frames.

#### References

GSM 04.22 sections 5.2.3.4 and 5.2.3.6.

#### 29.3.2.5.2.2 Test purpose

To test that the MS is able to retransmit a SREJ supervisory frames, and does not retransmit a REJ frame.

#### 29.3.2.5.2.3 Test method

#### Initial Conditions

The window size from IWF (SS) to MS is called KIM.

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

### Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

### Foreseen final state of the MS

Idle.

### Test procedure

After optional status bits exchange between the MS and the SS, the SS is made to send continuously I+S frames. The delay between two consecutive I+S frames shall be inferior to T1.

The MS is made to send no user data. It sends only supervisory frames.

The SS sends a I+S frame numbered Nss. The MS shall acknowledge this frame. Then the SS sends a I+S frame numbered Nss+2.

The MS shall ask for the retransmission of the missing frame numbered Nss+1. The MS may send a SREJ frame (see case a). If it cannot send SREJ, it shall send a REJ frame (see case b).

Case a: If the MS chooses to send a SREJ, it shall send a SREJ frame containing N(R)=Nss+1.

The SS does not retransmit the rejected frame.

The MS may repeat (see case a1) or not (see case a2) the reject SREJ frame.

Case a1: If the MS chooses to retransmit the SREJ, it shall send a SREJ frame containing N(R)=Nss+1, at the expiry of T1.

The SS sends a I+S frame numbered Nss+1 and the MS shall acknowledge this frame (N(R)=Nss+3).

The SS sends a I+S frame numbered Nss+4.

The MS shall ask for the retransmission of the missing frame numbered Nss+3. The MS shall send a SREJ frame containing N(R)=Nss+3.

At expiry of T1, the MS shall send a new SREJ frame containing N(R)=Nss+3. This step is repeated N2 times.

The SS checks for 2*T1 that the SREJ frame is not repeated by the MS.

Case a2: If the MS chooses not to repeat the SREJ frame, The SS checks for 2*T1 that the SREJ frame is not repeated by the MS.

Case b: If the MS chooses to send a REJ, it shall send a REJ frame containing N(R)=Nss+1.

The SS does not retransmit the rejected frame.

The MS shall not repeat the reject REJ frame.

The SS checks for 2*T1 that the SREJ frame is not repeated by the MS.

The MS is returned to the idle state by clearing of the call.

### Maximum duration of test

1 minute.

Expected sequence

| | MS | | | | SS |

The frames from the SS will be:

0': One I+S frame containing N(S)=$N_{SS}$ mod(62), N(R)=$N_{MS}$+1 mod(62).

1': One I+S frame containing N(S)=$N_{SS}$+2 mod(62), N(R)=$N_{MS}$+1 mod(62).

Case a:

Case a1:

a1 - 1': One I+S frame containing N(S)=$N_{SS}$+1 mod(62), N(R)=$N_{MS}$+1 mod(62).

a1 - 2': One I+S frame containing N(S)=$N_{SS}$+4 mod(62), N(R)=$N_{MS}$+1 mod(62).

Specific message content

The frames from the MS shall be:

0: One RR frame containing N(R)=Nss+1 mod(62).

1: The MS shall reject the missing I+S frame numbered Nss+1. It may send a SREJ frame (see case a). If it cannot send SREJ, it shall send a REJ frame (see case b).

Case a

a - 1: One supervisory SREJ frame containing N(R)=Nss+1 mod(62).

a - 2: SREJ frame may be repeated, (see case a1) or not (see case a2).

Case a1

a1 - 1: On T1 Time-out, one supervisory SREJ frame containing N(R)=Nss+1 mod(62).

a1 - 2: One RR frame containing N(R)=Nss+3 mod(62).

a1 - 3,...,b2 - 3+N2: On T1 Time-out, one supervisory SREJ frame containing N(R)=Nss+3 mod(62).

Case b

b - 1: One supervisory REJ frame containing N(R)=Nss+1 mod(62).

### 29.3.2.5.3 I+S reject frame

#### 29.3.2.5.3.1 Conformance requirements

The MS shall be able to use I+S frames to carry a REJ or SREJ frame when it detects that one or more numbered information frame is received out of sequence.

References

GSM 04.22 sections 5.2.3.4, 5.2.3.6

#### 29.3.2.5.3.2 Test purpose

To test the MS is able to send SREJ or REJ frames in I+S frames when an out of sequence information frame has been received.

#### 29.3.2.5.3.3 Test method

Initial Conditions

The window size from IWF (SS) to MS is called KIM.

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

### Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

### Foreseen final state of the MS

Idle.

### Test procedure

The SS is made to send continuously I+S frames. The delay between two consecutive I+S frames shall be inferior to T1.

The SS acknowledges all the received I+S frames.

The MS is made to send continuously I+S frames.

The SS sends a I+S frame numbered Nss. The MS shall acknowledge this frame. Then the SS sends a I+S frame numbered Nss+2.

The MS shall ask for the retransmission of the missing frame numbered Nss+1. The MS may send a SREJ frame (see case a). If it cannot send SREJ, it shall send a REJ frame (see case b). The MS has user data to transmit, it shall use an I+S frame (instead of supervisory frame) to reject the missing frame.

Case a: If the MS chooses to send a SREJ, it shall send a I+S SREJ frame containing N(R)=Nss+1.

The SS sends a I+S frame numbered Nss+1 and the MS acknowledges this frame (N(R)=Nss+3).

The SS sends a I+S frame numbered Nss+3, etc... and the MS acknowledges these frames (N(R)=Nss+4, etc...).

Case b: If the MS chooses to send a REJ, it shall send a I+S REJ frame containing N(R)=Nss+1.

The SS sends I+S frames numbered Nss+1, Nss+2, etc... and the MS shall acknowledge this frame (N(R)=Nss+2, Nss+3, etc...).

The MS is returned to the idle state by clearing of the call.

### Maximum duration of test

1 minute.

Expected sequence

| MS | | | | SS |

| 0 | ------- | I+S | ------> | |
| | <------ | I+S | ------- | 1' |
| 1 | | SREJ(a) or REJ(b) ? | | |

Case a

| | | | | |
|---|---|---|---|---|
| a - 1 | ------- | SREJ(I+S) | ------> | |
| | <------ | I+S | ------- | a - 2' |
| a - 2 | ------- | I+S | ------> | |
| | <------ | I+S | ------- | a - 3' |
| a - 3 | ------- | I+S | ------> | |

Case b

| | | | | |
|---|---|---|---|---|
| b - 1 | ------- | REJ (I+S) | ------> | |
| | <------ | I+S | ------- | b - 2' |
| b - 2 | ------- | I+S | ------> | |
| | <------ | I+S | ------- | b - 3' |
| b - 3 | ------- | I+S | ------> | |
| | | | | |
| ... | | etc... | | ... |

The frames from the SS will be:

0': One I+S frame containing N(S)=$N_{SS}$ mod(62), N(R)=$N_{MS}$+1 mod(62).

1': One I+S frame containing N(S)=$N_{SS}$+2 mod(62), N(R)=$N_{MS}$+2 mod(62).

Case a:

a - 2': One I+S frame containing N(S)=$N_{SS}$+1 mod(62), N(R)=$N_{MS}$+3 mod(62).

a - 3': One I+S frame containing N(S)=$N_{SS}$+3 mod(62), N(R)=$N_{MS}$+4 mod(62).

Case b:

b - 2': One I+S frame containing N(S)=$N_{SS}$+1 mod(62), N(R)=$N_{MS}$+3 mod(62).

b - 3': One I+S frame containing N(S)=$N_{SS}$+2 mod(62), N(R)=$N_{MS}$+4 mod(62).

Specific message content

The frames from the MS shall be:

0: One I+S RR frame containing N(S)=$N_{MS}$+1, N(R)=$N_{SS}$+1 mod(62).

1: The MS shall reject the missing I+S frame numbered $N_{SS}$+1. It may send a I+S SREJ frame (see case a). If it cannot send SREJ, it shall send a I+S REJ frame (see case b).

Case a

a - 1: One I+S SREJ frame containing N(S)=$N_{MS}$+2, N(R)=$N_{SS}$+1 mod(62).

a - 2: One I+S RR frame containing N(S)=$N_{MS}$+3, N(R)=$N_{SS}$+3 mod(62).

a - 3: One I+S RR frame containing N(S)=$N_{MS}$+4, N(R)=$N_{SS}$+4 mod(62).

Case b

b - 1: One I+S REJ frame containing N(S)=$N_{MS}$+2, N(R)=$N_{SS}$+1 mod(62).

b - 2: One I+S RR frame containing N(S)=$N_{MS}$+3, N(R)=$N_{SS}$+2 mod(62).

b - 3: One I+S RR frame containing N(S)=$N_{MS}$+4, N(R)=$N_{SS}$+3 mod(62).

## 29.3.2.6 Checkpoint recovery

### 29.3.2.6.1 SS in checkpoint recovery mode

#### 29.3.2.6.1.1 Test purpose

To test the correct handling of received frame with P=1.

#### 29.3.2.6.1.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

Procedure

The MS is made to send continuously I+S frames with a delay inferior to T1 between each frame.

The SS is made to send continuously I+S frames with a delay superior to T2 and inferior to T1 between each frame.

The SS acknowledges the received I+S frames in its sending I+S frames.

The MS shall acknowledge the received I+S frames in its sending I+S frames.

After having sent i I+S frames, the SS sends a I+S frame with P bit set to 1.

The MS shall answer with a supervisory RR or RNR frame with F bit set to 1 and N(R) coded to the next frame waited by the MS.

The SS continue sending I+S frames and acknowledging the I+S frames received from the MS.

The MS shall continue sending I+S frames and acknowledging the I+S frames received from the SS.

The SS rejects 1 I+S frame in a supervisory SREJ frame with P bit set to 1.

The MS shall answer with a supervisory RR or RNR frame with F bit set to 1 and N(R) coded to the next frame waited by the MS.

Then the MS shall retransmit the rejected I+S frame.

The SS continue sending I+S frames and acknowledging the I+S frames received from the MS.

The MS shall continue sending I+S frames and acknowledging the I+S frames received from the SS.

After having sent j I+S frames, the SS sends a supervisory RR frame with P bit set to 1.

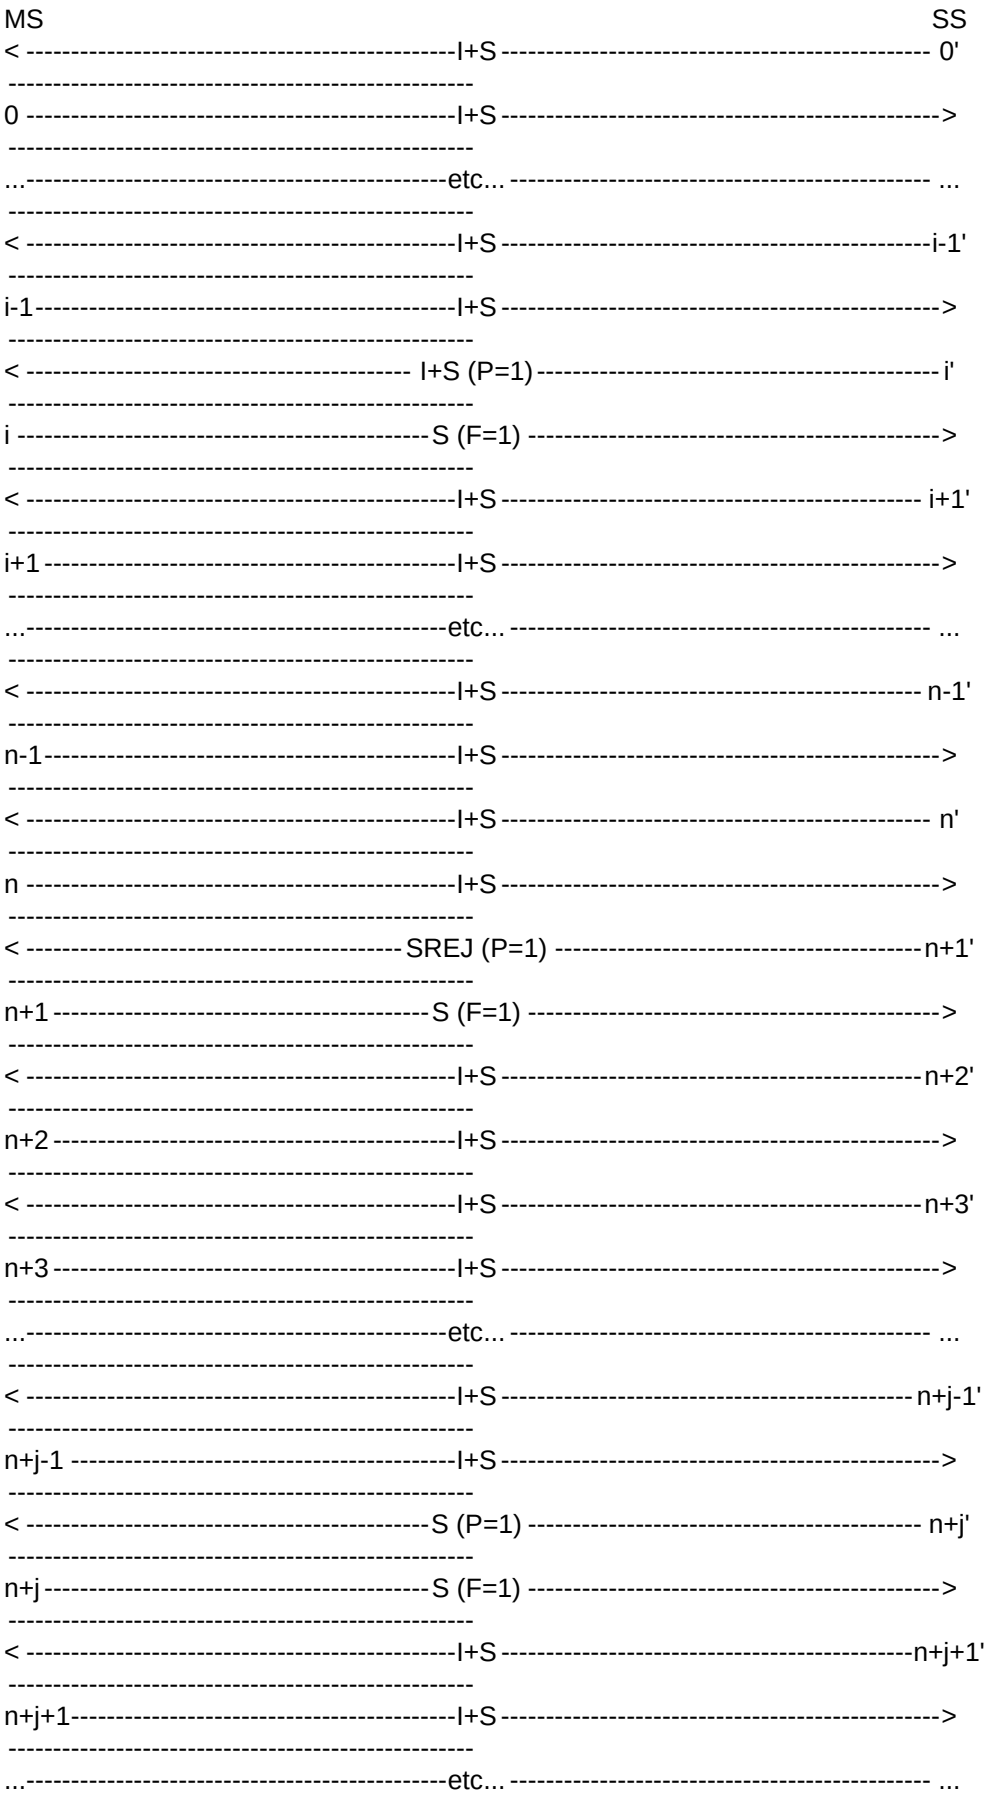
The MS shall answer with a supervisory RR or RNR frame with F bit set to 1 and N(R) coded to the next frame waited by the MS.

The SS continue sending I+S frames and acknowledging the I+S frames received from the MS.

The MS shall continue sending I+S frames and acknowledging the I+S frames received from the SS.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,i-1': One I+S RR frame containing:

N(S)=NSS,...,NSS+i-1 mod(62),

N(R)=NMS,...,NMS+i-1 mod(62).

i': One I+S RR frame containing:

C/R=1,

P/F=1,

N(S)=NSS+i mod(62),

N(R)=NMS+i mod(62).

i+1',...,n-1': One I+S RR frame containing:

N(S)=NSS+i+1,...,NSS+n-1 mod(62),

N(R)=NMS+i-1...,NMS+n-3 mod(62).

n: One I+S RR frame containing:

N(S)=NSS+n mod(62),

N(R)=NMS+n-3 mod(62).

n+1: One supervisory SREJ frame containing:

C/R=1,

P/F=1,

N(R)=NMS+n-2 mod(62).

n+2': One I+S RR frame containing:

N(S)=NSS+n+1 mod(62),

N(R)=NMS+n-2 mod(62).

n+3',...,n+j-1': One I+S RR frame containing:

N(S)=NSS+n+2,...,NSS+n+j mod(62),

N(R)=NMS+n,... ,NMS+n+j-3 mod(62).

n+j: One supervisory SREJ frame containing:

C/R=1,

P/F=1,

N(R)=NMS+n-2 mod(62).

n+j+1',...: One I+S RR frame containing:

N(S)=NSS+n+j+1,... mod(62),

N(R)=NMS+n+j-2,... mod(62).

#### 29.3.2.6.1.3 Test requirements

The frames from the MS shall be:

0,...,i-1: One I+S frame containing:

N(S)=$N_{MS}$,...,$N_{MS}$+i-1 mod(62),

N(R)=$N_{SS}$+1,...,$N_{SS}$+i mod(62).

i': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=$N_{SS}$+i+1 mod(62).

i+1,...,n: One I+S frame containing:

N(S)=$N_{MS}$+i,...,$N_{MS}$+n-1 mod(62),

N(R)=$N_{SS}$+i+2,...,$N_{SS}$+n+1 mod(62).

n+1: One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=$N_{SS}$+n+1 mod(62).

n+2: One I+S frame containing:

N(S)=$N_{MS}$+n-2 mod(62),

N(R)=$N_{SS}$+n+2 mod(62).

n+3,...,n+j-1: One I+S frame containing:

N(S)=$N_{MS}$+n,...,$N_{MS}$+n+j-3 mod(62),

N(R)=$N_{SS}$+n+3,...,$N_{SS}$+n+j+1 mod(62).

n+j: One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=$N_{SS}$+n+j+1 mod(62).

n+j+1,...: One I+S frame containing:

N(S)=$N_{MS}$+n+j-2 mod(62),

N(R)=$N_{SS}$+n+j+2,... mod(62).

### 29.3.2.6.2 End of the window

#### 29.3.2.6.2.1 Test purpose

To test the correct handling of checkpoint recovery at the end of the window.

29.3.2.6.2.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP default parameters except the window size from MS to IWF (SS), called KMI.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the window size from MS to IWF (SS), called KMI, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered. This test is repeated twice with 2 different values of KMI, randomly chosen.

**Procedure**

The MS is made to send continuously I+S frames with a delay inferior to T1 between each frame.

The SS does not acknowledge the received I+S frames in RR frames.

The MS stops sending I+S frames after having sent KMI frames without acknowledgement, due to the window size.

At the expiry of T1 after the last sending I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

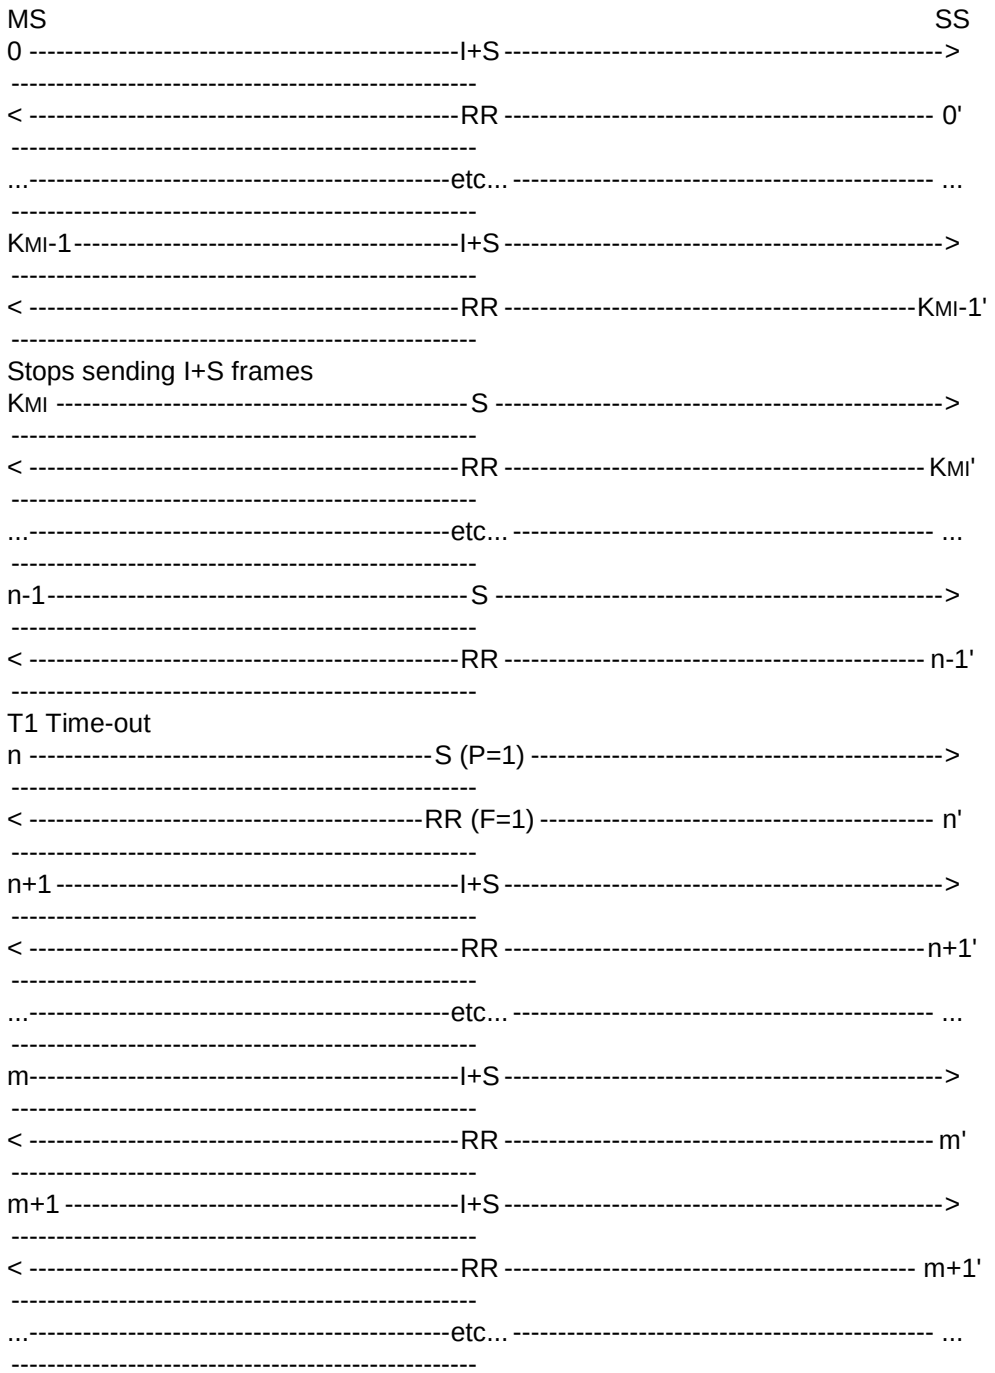
The SS answer in a RR response frame with F bit set to 1 and acknowledging j<KMI frames (j is randomly chosen).

The MS shall retransmit the KMI-j lost I+S frames and then shall continue to send I+S frames.

The SS acknowledges the received I+S frames in RR frames.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,n-1': One RR frame containing:

N(R)=$N_{MS}$ mod(62).

n': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=$N_{MS}$+i-1+j mod(62).

n+1',...: One supervisory RR frame containing:

N(R)=NMS+i+j mod(62).

#### 29.3.2.6.2.3 Test requirements

The frames from the MS shall be:

0,...,KMI-1: One I+S frame containing:

N(S)=NMS,...,NMS+KMI-1 mod(62).

KMI,...,n-1: The MS stops sending I+S frames. It sends S frames.

n: On T1 Time-out after the last sent I+S frame, the MS sends a S frame containing C/R=1 and P/F=1.

n+1,...,m: The MS retransmits the lost I+S frames, it send I+S frames containing N(S)=NMS-1+j,...,NMS+KMI-1 mod(62).

m+1,...: One I+S frames containing:

N(S)=NMS+KMI,... mod(62)

### 29.3.2.6.3 End of a sequence

#### 29.3.2.6.3.1 Test purpose

To test the correct handling of checkpoint recovery at the end of a sequence of frames

#### 29.3.2.6.3.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP default parameters except the window size from MS to IWF (SS), called KMI.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the window size from MS to IWF (SS), called KMI, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered.

**This test is repeated twice with 2 different values of KMI, randomly chosen.**

Procedure

The MS is made to send a sequence of i I+S frames (1<i<KIM) with a delay inferior to T1 between each frame.

The SS does not acknowledge the received I+S frames.

The MS sends S frames.

At the expiry of T1 after the last sending I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

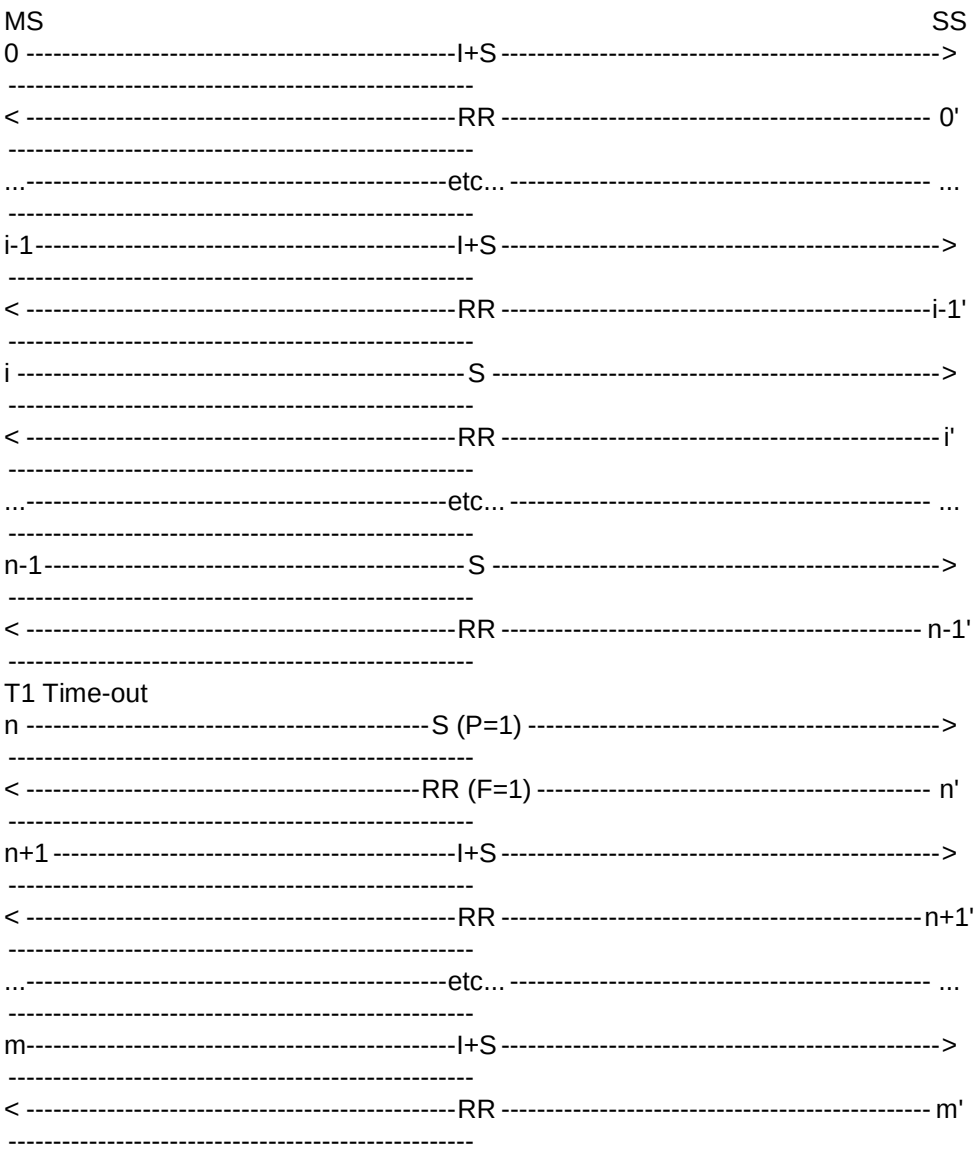
The SS answer in a RR response frame with F bit set to 1 and acknowledging j<i frames (j is randomly chosen).

The MS shall retransmit the i-j lost I+S frames.

The SS acknowledges the received I+S frames in RR frames.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,n-1': One RR frame containing:

N(R)=NMS mod(62).

n': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=NMS+j mod(62).

n+1',...: One supervisory RR frame containing:

N(R)=NMS+j mod(62).

#### 29.3.2.6.3.3 Test requirements

The frames from the MS shall be:

0,...,i-1: One I+S frame containing:

N(S)=$N_{MS}$,...,$N_{MS}$+i-1 mod(62).

i-1,...,n-1: The MS sends S frames.

n: On T1 Time-out after the last sent I+S frame, the MS sends a S frame containing C/R=1 and P/F=1.

n+1,...,m: The MS retransmits the lost I+S frames, it send I+S frames containing N(S)=$N_{MS}$+j,...,$N_{MS}$+i-1 mod(62).

### 29.3.2.6.4 Time-out of one frame

#### 29.3.2.6.4.1 Test purpose

To test the correct handling of checkpoint recovery when a frame is not acknowledge.

#### 29.3.2.6.4.2 Method of test

##### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

##### Procedure

The MS is made to send only one I+S frames.

The SS does not acknowledge the received I+S frame.

At the expiry of T1 after the sending of the I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

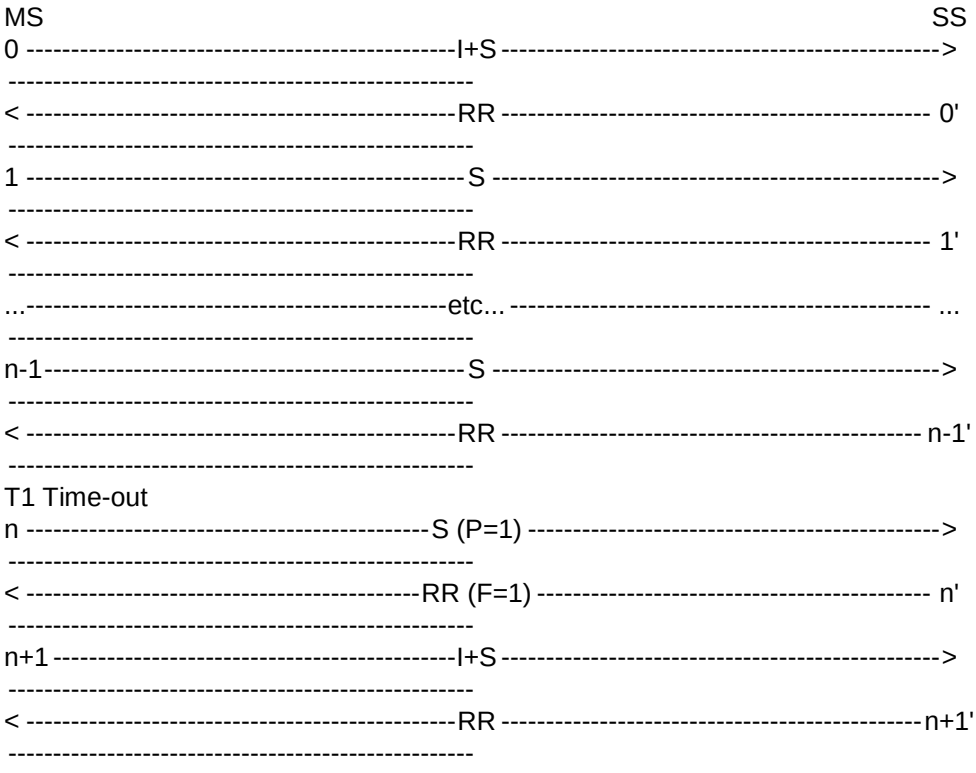
The SS answer in a RR response frame with F bit set to 1 and N(R) corresponding to the I+S frame sent by the MS.

The MS shall retransmit the I+S frame.

The SS acknowledges the received I+S frame in RR frame.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,n-1': One RR frame containing:

N(R)=N$_{MS}$ mod(62).

n': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=N$_{MS}$ mod(62).

n+1': One supervisory RR frame containing:

N(R)=N$_{MS}$+1 mod(62).

### 29.3.2.6.4.3 Test requirements

The frames from the MS shall be:

0,: One I+S frame containing:

N(S)=N$_{MS}$ mod(62).

1,...,n-1: The MS sends S frames.

n: On T1 Time-out after the I+S frame, the MS sends a S frame containing C/R=1 and P/F=1.

n+1: The MS retransmits the I+S frame containing N(S)=N$_{MS}$ mod(62).

### 29.3.2.6.5 No response to checkpointing

#### 29.3.2.6.5.1 Test purpose

To test the correct repetition of a frame with P=1 if SS does not answer to checkpointing.

#### 29.3.2.6.5.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

Procedure

The MS is made to send only one I+S frames.

The SS does not acknowledge the received I+S frame.

At the expiry of T1 after the sending of the I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

The SS answer in a RR response frame with F bit set to 0 and N(R) acknowledging the I+S frame sent by the MS.

At the expiry of T1 after the sending of the frame with P=1, the MS shall send a new supervisory command RR frame with P bit set to 1.

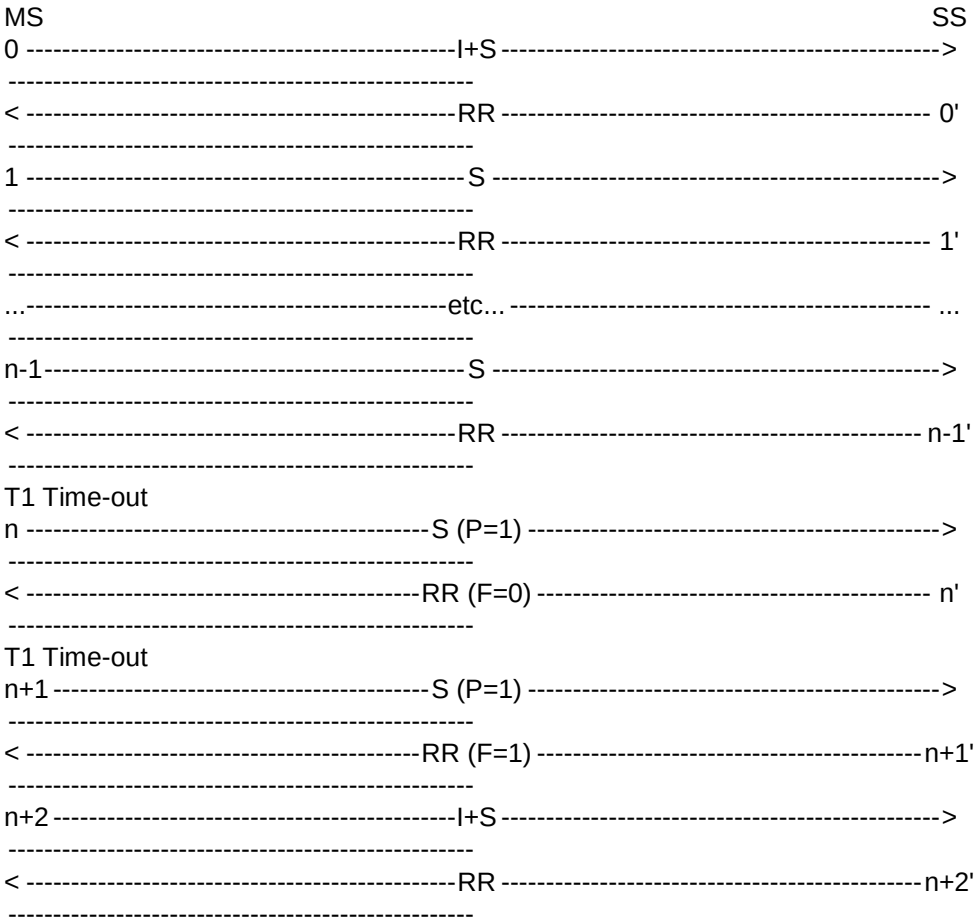
The SS answer in a RR response frame with F bit set to 1 and N(R) corresponding to the I+S frame sent by the MS.

The MS shall retransmit the I+S frame.

The SS acknowledges the received I+S frame in RR frame.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,n-1': One RR frame containing:

N(R)=$N_{MS}$ mod(62).

n': One supervisory RR frame containing:

C/R=0,

P/F=0,

N(R)=$N_{MS}$+1mod(62).

n+1': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=$N_{MS}$ mod(62).

n+2': One supervisory RR frame containing:

N(R)=$N_{MS}$+1 mod(62).

### 29.3.2.6.5.3 Test requirements

The frames from the MS shall be:

0,: One I+S frame containing:

N(S)=NMS mod(62).

1,...,n-1: The MS sends S frames.

n: On T1 Time-out after the I+S frame, the MS sends a S frame containing C/R=1 and P/F=1.

n+1: On T1 Time-out after the sending of the first frame with P=1, the MS sends a S frame containing C/R=1 and P/F=1.

n+2: The MS retransmits the I+S frame containing N(S)=NMS mod(62).

### 29.3.2.6.6 Incorrect response to checkpointing

#### 29.3.2.6.6.1 Test purpose

To test the correct repetition of a frame with P=1 if the answer to checkpointing is incorrect.

#### 29.3.2.6.6.2 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use default RLP parameters.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case). The SS shall accept and use the new RLP parameters till the end of the test.

**The ABM will be entered.**

Procedure

The MS is made to send only one I+S frames.

The SS does not acknowledge the received I+S frame.

The MS sends supervisory frame with P set to 0 when it has nothing else to send.

At the expiry of T1 after the sending of the I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

The SS answer in a supervisory SREJ response frame with F bit set to 1 and N(R) rejecting the I+S frame sent by the MS.

At the expiry of T1 after the sending of the frame with P=1, the MS shall send a new supervisory command RR frame with P bit set to 1.

The SS answer in a supervisory REJ response frame with F bit set to 1 and N(R) rejecting the I+S frame sent by the MS.

At the expiry of T1 after the sending of the frame with P=1, the MS shall send a new supervisory command RR frame with P bit set to 1.

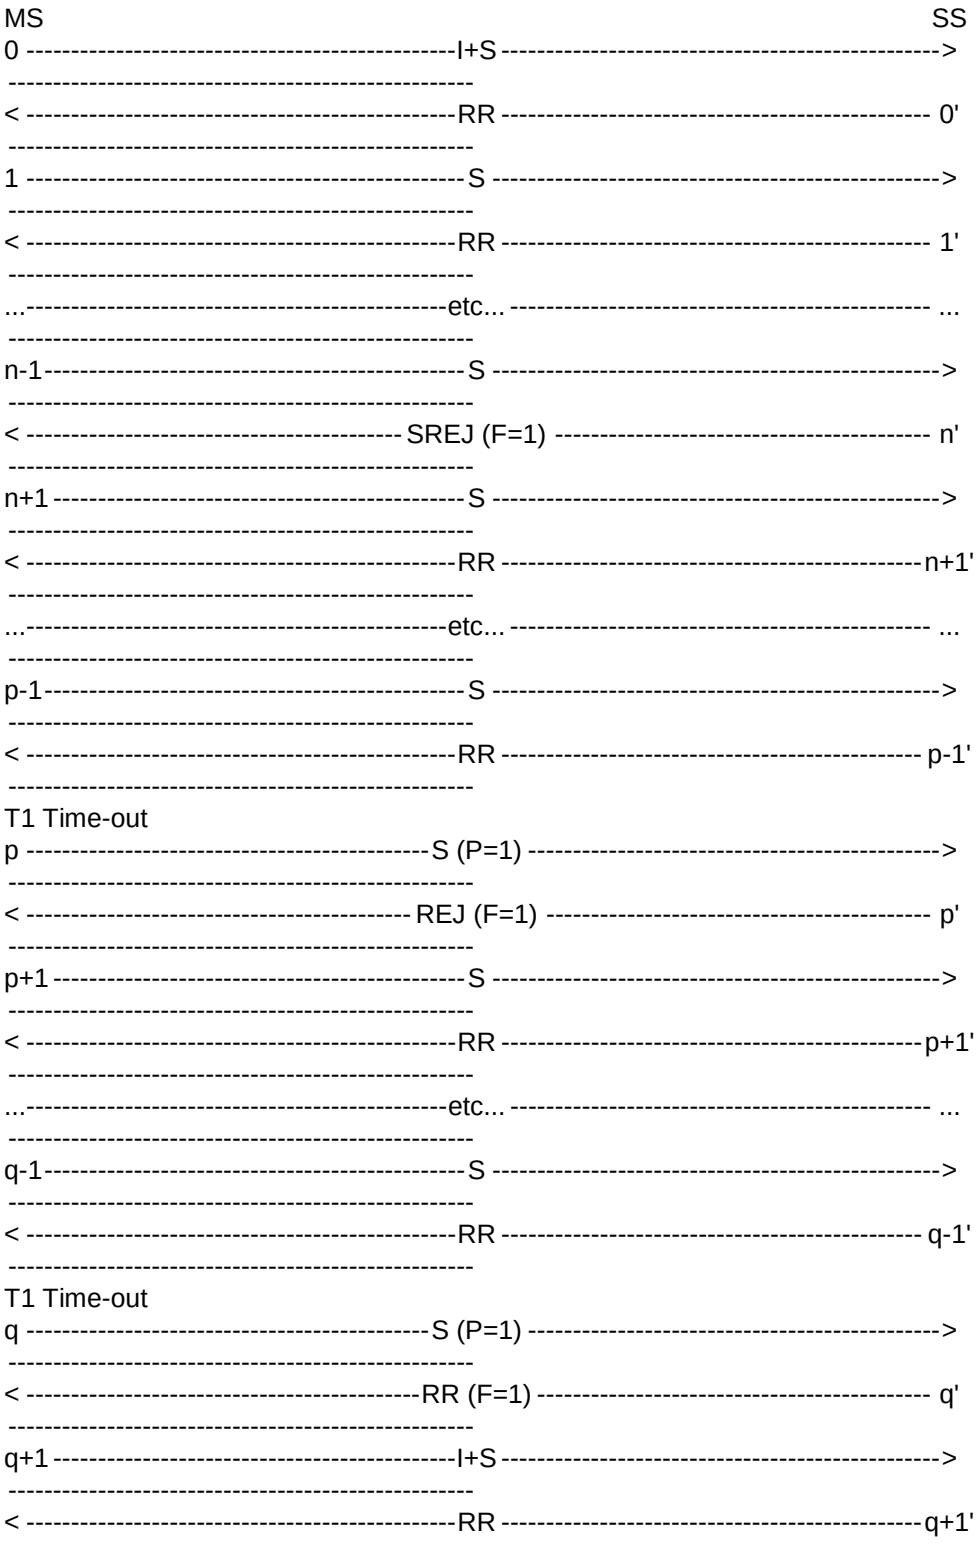
The SS answer in a RR response frame with F bit set to 1 and N(R) corresponding to the I+S frame sent by the MS.

The MS shall retransmit the I+S frame.

The SS acknowledges the received I+S frame in RR frame.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0',...,n-1': One RR frame containing:

N(R)=NMS mod(62).

n': One supervisory SREJ frame containing:

C/R=0,

P/F=1,

N(R)=NMSmod(62).

m+1',...,p-1': One RR frame containing:

N(R)=NMS mod(62).

p': One supervisory REJ frame containing:

C/R=0,

P/F=1,

N(R)=NMSmod(62).

p+1',...,q-1': One RR frame containing:

N(R)=NMS mod(62).

q': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=NMSmod(62).

q+1': One RR frame containing:

N(R)=NMS+1 mod(62).

#### 29.3.2.6.6.3 Test requirements

The frames from the MS shall be:

0,: One I+S frame containing:

N(S)=NMS mod(62).

1,...,n-1: The MS sends S frames.

n: On T1 Time-out after the I+S frame, the MS sends a S frame containing:

C/R=1,

P/F=1.

n+1,...,p-1: The MS sends S frames.

p: On T1 Time-out after the I+S frame, the MS sends a S frame containing:

C/R=1,

P/F=1.

p+1,...,q-1: The MS sends S frames.

q: On T1 Time-out after the I+S frame, the MS sends a S frame containing:

C/R=1,

P/F=1.

q+1: The MS retransmits the I+S frame containing:

N(S)=NMS mod(62).

### 29.3.2.6.7 Total loss of response to checkpointing

#### 29.3.2.6.7.1 Definition and applicability

The last frame of a sequence of numbered information frames is guarded by timer T1. Failure to receive an acknowledgement, or a reject, within a time T1, shall result in the RLP entity starting a checkpoint recovery procedure. If the RLP peer entity fails to respond to a checkpoint command, which is also guarded by timer T1, the checkpoint recovery procedure shall be repeated, up to N2 times.

#### 29.3.2.6.7.2 Conformance requirements

The MS shall start the checkpoint procedure after failure to receive acknowledgement of a numbered information frame within a time T1. GSM 04.22, 5.3.3., 5.3.3.2.

The MS shall repeat the checkpoint procedure, up to N2 times, if the peer RLP entity fails to respond to a checkpoint command within a time T1. GSM 04.22, 5.3.3.2

The MS shall disconnect or reset the RLP link after the checkpoint procedure has been performed N2+1 times, GSM 04.22, 5.3.3.2

References

GSM 04.22 section 5.3.3., 5.3.3.2.

#### 29.3.2.6.7.3 Test purpose

To test the correct handling of a total loss of response to checkpointing.

#### 29.3.2.6.7.4 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

If possible, the MS is configured to use RLP default parameters except the number of retransmission N2. If a MS cannot be configured to use a non default N2 value, the SS shall use XID negotiation to modify the value of N2 to be used during the test.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the number of retransmission N2, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered.

Once in ABM, the SS shall initiate the transmission of an I+S frame, which will transfer L2RCOP status information between peer L2RCOP entities (SS to MS). The MS may respond with an I+S frame containing L2RCOP status information. The SS shall be capable of initiating this sequence, or responding to an I+S L2RCOP status frame from the MS.

**This test is repeated twice with 2 different values of N2, randomly chosen.**

Test Procedure

The MS is made to send only one I+S frames.

The SS does not acknowledge the received I+S frame.

At the expiry of T1 after the sending of the I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

The SS answer in a RR response frame with F bit set to 0 and N(R) acknowledging the I+S frame sent by the MS.

At the expiry of T1 after the sending of the frame with P=1, the MS shall send a new supervisory command RR frame with P bit set to 1.

The SS answer in a RR response frame with F bit set to 0 and N(R) corresponding to the I+S frame sent by the MS.

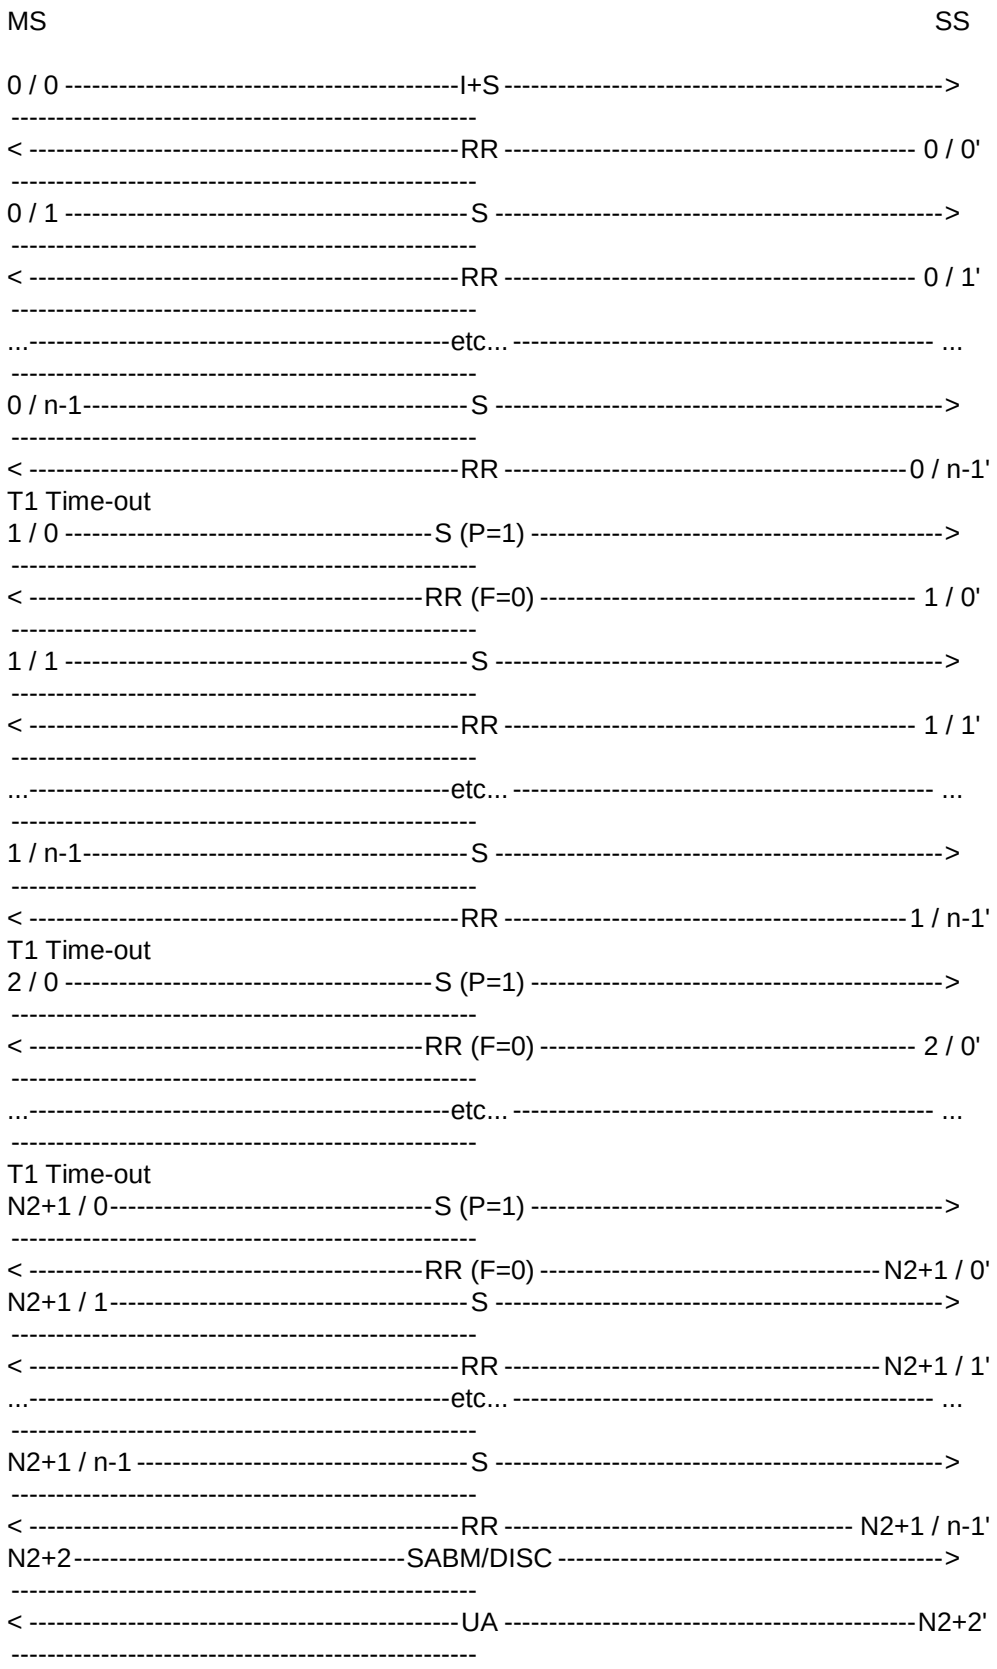
These 2 last steps are repeated N2 times.

At the expiry of T1 after the sending of the frame with P=1, the MS shall reset (SABM) or disconnect (DISC) the link.

The SS answer with an UA frame.

The MS is returned to the idle state by clearing of the call.

Expected sequence



The frames from the SS will be:

0 / i',...,0 / i': One RR frame containing:

P/F=0,

N(R)=NMS mod(62).

i = 0,...,n-1.

k / i',...,k / i': One RR frame containing:

P/F=0,

N(R)=NMS mod(62).

k = 1,..., N2+1, i = 0,...,n-1.

N2+2': One UA frame containing:

C/R=0,

P/F=P/F received in the DISC or SABM.

#### 29.3.2.6.7.5 Test requirements

The frames from the MS shall be:

0 / 0: One I+S frame containing:

N(S)=NMS mod(62).

0 / 1,..., 0/ n-1: The MS sends S frames.

k / 0: On T1 Time-out after the I+S frame, the MS sends a S frame containing:

C/R=1,

P/F=1.

k = 1,..., N2+1.

k / 1,..., k / n-1: The MS sends S frames.

N2+2: The MS sends a SABM (C/R=1, P/F=1) or a DISC(C/R=1) frame.

### 29.3.2.6.8 Retransmission of a sequence

#### 29.3.2.6.8.1 Test purpose

To test the correct repetition of a sequence of frame.

#### 29.3.2.6.8.2 Method of test

##### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP default parameters except the number of retransmission N2.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the number of retransmission N2, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered.

**This test is repeated twice with 2 different values of N2, randomly chosen. The window size fromMS to IWF (SS) is called $K_{MI}$.**

Procedure

The MS is made to send a sequence of i I+S frames (1<i<KIM) with a delay inferior to T1 between each frame.

The SS does not acknowledge the received I+S frames.

The MS starts sending supervisory frames after having sent i frames.

At the expiry of T1 after the last sending I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

The SS answers in a RR response frame with F bit set to 1 and acknowledging no frames.

The MS shall retransmit the all I+S frames. Then the MS shall sends supervisory frames.

At the expiry of T1 after the last sending I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

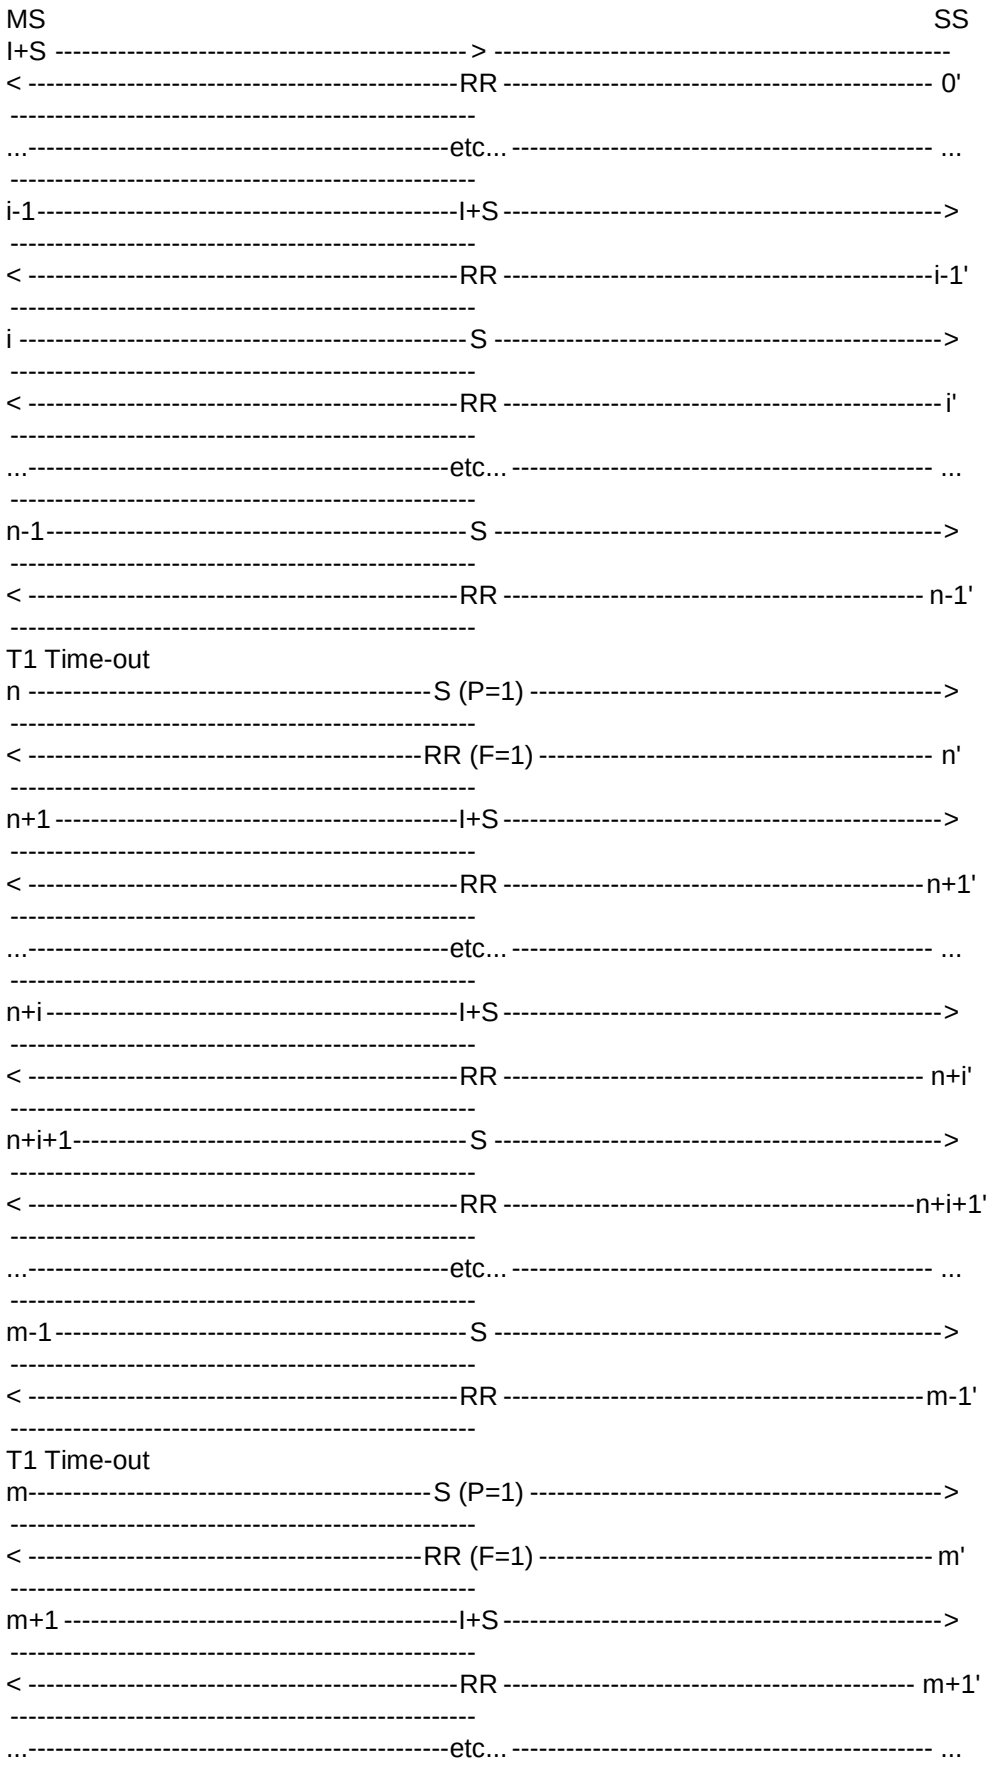
The SS answers in a RR response frame with F bit set to 1 and acknowledging j<i frames. (j randomly chosen).

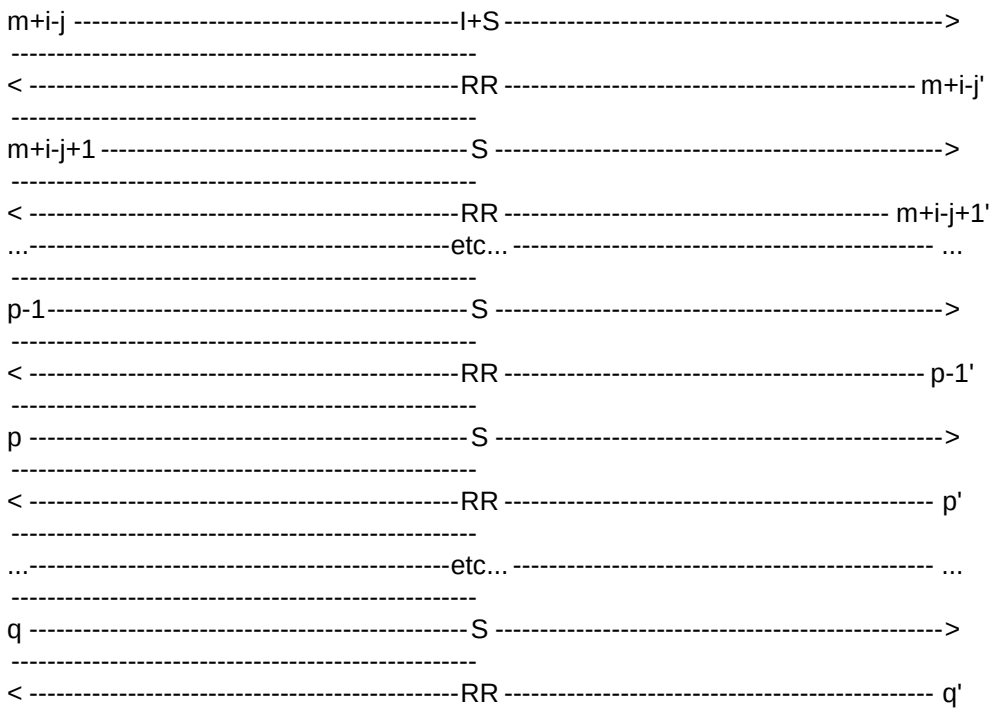
The MS shall retransmit the i-j lost I+S frames.

0,25*T1 after the last I+S frame of the sequence, the SS acknowledges all the received I+S frames in RR frame.

The MS is returned to the idle state by clearing of the call.

Expected sequence





The frames from the SS will be:

0',...,n-1': One RR frame containing:

N(R)=NMS mod(62).

n': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=NMS mod(62).

n+1',...,m-1': One supervisory RR frame containing:

N(R)=NMS mod(62).

m': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=NMS+j mod(62).

m+1,...,p-2': One supervisory RR frame containing:

N(R)=NMS+j mod(62).

p-1': 0,25*T1 after the last received I+S frame, the SS sends a supervisory RR frame containing:

N(R)=NMS+i mod(62).

p',...,q': during at least T1, the SS sends supervisory frames.

### 29.3.2.6.8.3 Test requirements

The frames from the MS shall be:

0,...,i-1: One I+S frame containing:

N(S)=NMS,...,NMS+i-1 mod(62).

i,...,n-1: The MS sends S frames with P bit set to 0.

n: On T1 Time-out after the I+S frame, the MS sends a S frame containing:

C/R=1,

P/F=1.

n+1,...,n+i: The MS retransmits the I+S frames containing:

N(S)=NMS,...,NMS+i-1 mod(62).

n+i+1,...,m-1: The MS sends S frames with P bit set to 0.

m: On T1 Time-out after the I+S frame, the MS sends a S frame containing:

C/R=1,

P/F=1.

m+1,...,m+i-j: The MS retransmits the I+S frames containing:

N(S)=NMS+j,...,NMS+i-1 mod(62).

m+i-j+1,...,q: The MS sends S frames with P bit set to 0.

### 29.3.2.6.9 N2 retransmission of a sequence

#### 29.3.2.6.9.1 Definition and applicability

The last frame of a sequence of numbered information frames is guarded by timer T1. Failure to receive an acknowledgement, or a reject, within a time T1, shall result in the RLP entity starting a checkpoint recovery procedure. If the peer RLP entity responds with a Supervisory frame with the F-bit set to “1”, the MS shall retransmit the numbered frames, if appropriate.

#### 29.3.2.6.9.2 Conformance requirements

The MS shall start the checkpoint procedure after failure to receive acknowledgement of a numbered information frame within a time T1. GSM 04.22, 5.3.3., 5.3.3.2.

The MS shall retransmit the I+S frame sequence starting at N(R), upon reception of a Supervisory frame with the F-bit set to “1” from the peer RLP entity. This shall constitute a retransmission of the original I+S sequence only if N(R) remains constant, GSM 04.22, 5.3.3.

The MS shall disconnect or reset the RLP link after the I+S sequence and checkpoint procedure has been performed N2+1 times, GSM 04.22, 5.3.3.2

References

GSM 04.22 section 5.3.3., 5.3.3.2.

#### 29.3.2.6.9.3 Test purpose

To test the correct repetition of a sequence of frame.

29.3.2.6.9.4 Method of test

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

If possible, the MS is configured to use RLP default parameters except the number of retransmission N2. If a MS cannot be configured to use a non default N2 value, the SS shall use XID negotiation to modify the value of N2 to be used during the test.

A non transparent data call will be established, so that the MS is in call state U10 ("Call Active").

Since some RLP parameters are different from the default parameters, a negotiation procedure will be initiated by the MS after the CONNECKT ACKNOWLEDGE message. The MS may negotiate the RLP default parameters within allowed ranges, defined in GSM 04.22, except the number of retransmission N2, which has to be a non default value.

The SS shall accept and use the new RLP parameters till the end of the test.

After the negotiation procedure the ABM will be entered.

Once in ABM, the SS shall initiate the transmission of an I+S frame, which will transfer L2RCOP status information between peer L2RCOP entities (SS to MS). The MS may respond with an I+S frame containing L2RCOP status information. The SS shall be capable of initiating this sequence, or responding to an I+S L2RCOP status frame from the MS.

This test is repeated twice with 2 different values of N2, randomly chosen.

The window size from MS to IWF (SS) is called $K_{MI}$.

Test Procedure

The MS is made to send a sequence of i I+S frames ($1<i<K_{MI}$, and $i>N2$) with a delay inferior to T1 between each frame.

The SS does not acknowledge the received I+S frames.

The MS shall send S frames after having sent the i I+S frames.

At the expiry of T1 after the last sending I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

The SS answer in a RR response frame with F bit set to 1 and acknowledging 1 frame.

The MS shall retransmit the i-1 lost I+S frames.

The SS does not acknowledge the received I+S frames.

The MS shall send S frames after having sent the i I+S frames.

The 5 last steps are repeated N2 times.

At the expiry of T1 after the last sending I+S frame, the MS shall send a supervisory command RR frame with P bit set to 1.

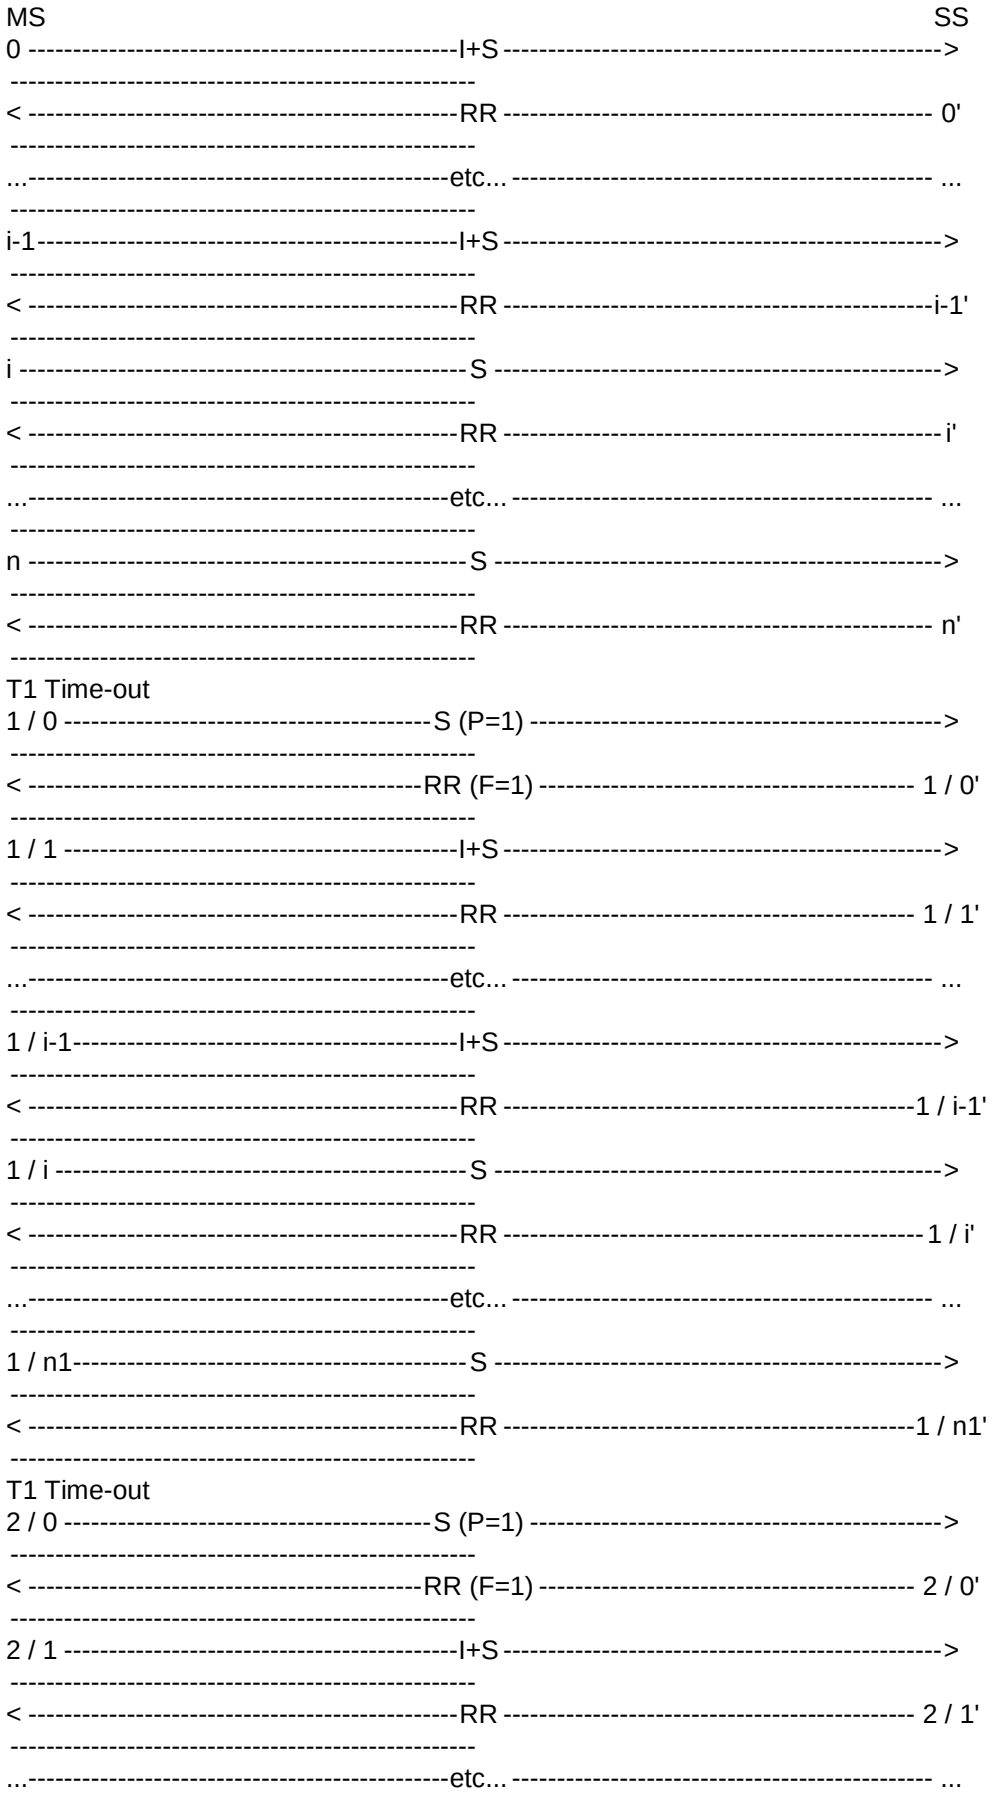
The SS answer in a RR response frame with F bit set to 1 and acknowledging 1 frame.

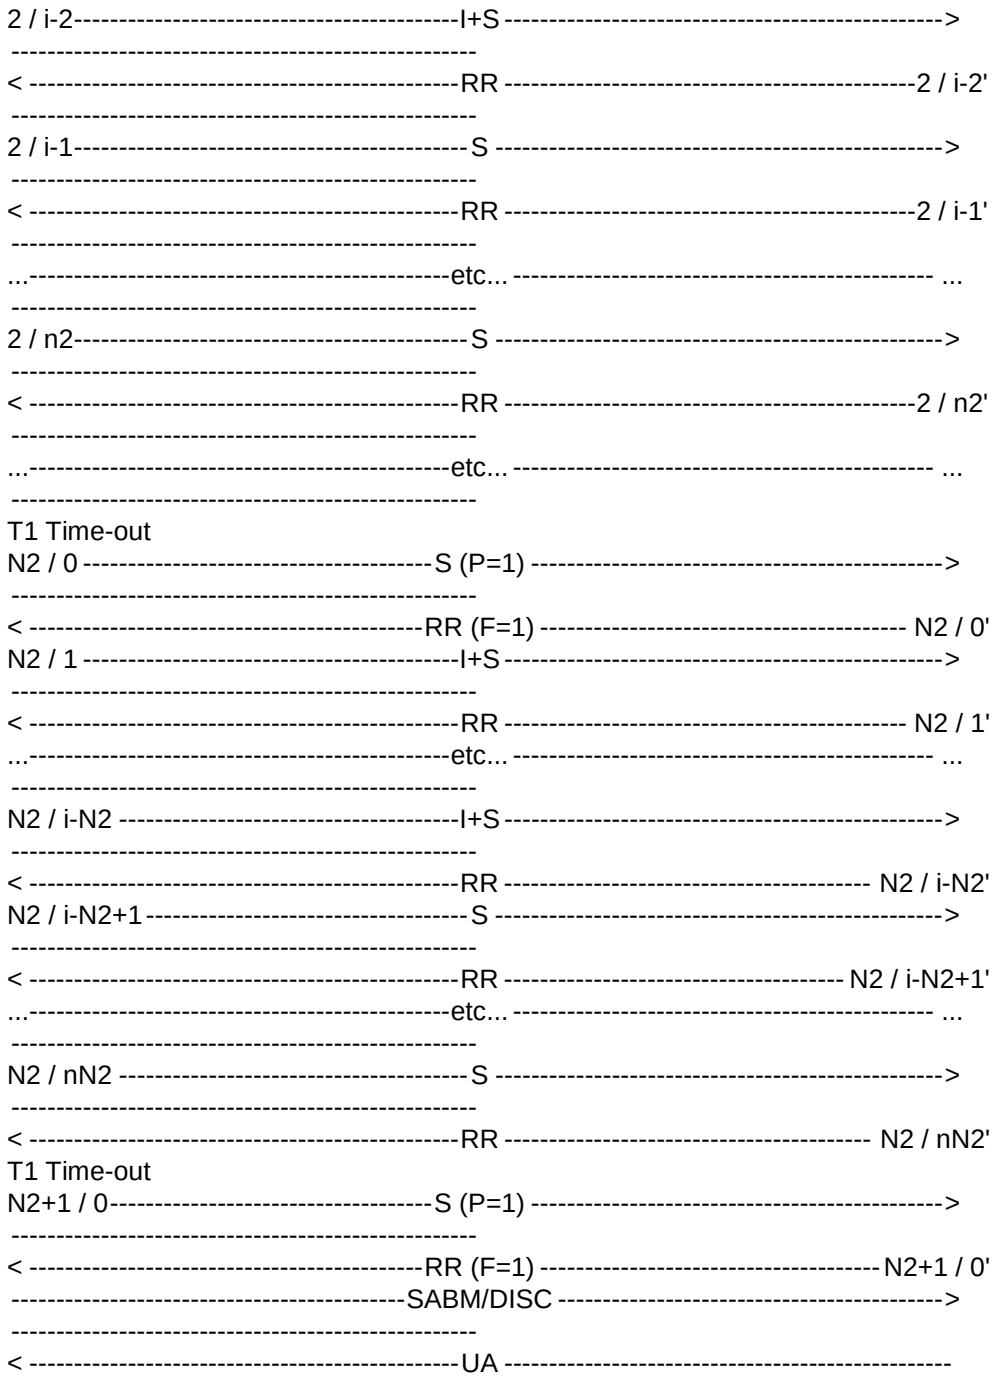
After the reception of the last RR response the MS shall reset or disconnect the RLP link by sending an SABM (C/R=1, P/F=1) or a DISC (C/R=1) frame.

The SS answer with an UA frame.

The MS is returned to the idle state by clearing of the call.

Expected sequence





The frames from the SS will be:

0',...,n': One RR frame containing:

N(R)=$N_{MS}$ mod(62).

k / 0': One supervisory RR frame containing:

C/R=0,

P/F=1,

N(R)=$N_{MS}$+k mod(62).

k = 1, ..., N2+1.

k / 1',...,k / nk': One RR frame containing:

N(R)=NMS+k mod(62).

k = 1, ..., N2.

One UA frame with P/F bit equal to the P/F received.

#### 29.3.2.6.9.5 Test requirements

The frames from the MS shall be:

0,...,i-1: One I+S frame containing:

N(S)=NMS,...,NMS+i-1 mod(62).

i,..., n: The MS sends S frames.

k / 0: The MS stops sending I+S frames. It sends S frames. On T1 Time-out after the last sent I+S frame, the MS sends a S frame containing:

C/R=1,

P/F=1.

k = 1, ..., N2+1.

k / 1,..., k / i-k: The MS retransmits the I+S frames containing:

N(S)=NMS+k,...,NMS+i-1 mod(62).

k = 1, ..., N2.

k / i-k+1,..., k / nk: The MS sends S frames. k= 1, ..., N2.

The MS shall reset to disconnect the RLP link. It shall send an SABM (C/R=1, P/F=1) or a DISC (C/R=1).

## 29.3.3 Negotiation of the RLP parameters

### 29.3.3.1 Negotiation initiated by the SS

#### 29.3.3.1.1 Conformance requirements

The MS shall be able to respond to a negotiation request from the network and to configure its RLP parameters accordingly. It shall do so in ABM mode as well as in ADM mode.

References

GSM 04.22 section 5.2.2.6.

#### 29.3.3.1.2 Test purpose

To test the correct handling of the MS to a received XID frame in ADM or ABM mode.

#### 29.3.3.1.3 Test method

Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP default parameters. The window size from IWF (SS) to MS is called KIM.

The MS is made to establish a MO non transparent data call. In initial conditions MS is in call state U10 ("Call Active") after having sent a CONN_ACK message.

Case a: No negotiation will be initiated by the MS.

Case b: The MS initiates negotiation of RLP default parameters.

NOTE: The MS is allowed to initiate the negotiation of the RLP default parameters, within allowed ranges, defined in GSM 04.22. The MS shall do this in the ADM, after having sent a CONNECT ACKNOWLEDGE message (MO-case) or after having received a CONNECT ACKNOWLEDGE message from the SS (MT-case.)

### Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

### Foreseen final state of the MS

Idle.

### Test procedure

Case 1: Testing of the correct handling of the MS to a received XID frame in ADM

Immediately after having received the "CONN_ACK", the SS sends a correct XID frame containing randomly chosen parameters different from the default parameters and supported by the MS.

If the MS initiates a negotiation procedure, before the SS is able to transmit the XID frame (timing conflict), the SS should accept this - XID frame from the MS and start his own negotiation afterwards.

The MS shall respond with a XID frame. If parameters sent in this frame are different from those chosen by the SS, the correct sense of negotiation is checked. The final parameters are noted (T1, T2, N2, $K_{IM}$ (window IWF (SS) -> MS), $K_{MI}$ (window MS -> IWF (SS))).

The MS sends a SABM and the SS answers with an UA. Note: the SABM frame may be sent by the MS before the XID response frame. In such a case, the SS waits for the XID response before sending the UA.

Case 2: Testing of the correct handling of the MS to a received XID frame in ABM

The MS sends a SABM and the SS answer with an UA.

The SS sends a correct XID frame containing parameters different from the default parameters and supported by the MS.

The MS shall respond with a XID frame. If parameters sent in this frame are different from those chosen by the SS, the correct sense of negotiation is checked. The final parameters are noted (T1, T2, N2, $K_{IM}$ (window IWF (SS) -> MS), $K_{MI}$ (window MS -> IWF (SS))).

The SS checks that the MS uses the new parameters determined during the negotiation procedure.

Verification of T2

After optional status bits exchange between the MS and the SS, the SS is configured to send I+S frames with a delay inferior to T1 between each frame. The MS is made to send no user data, it sends only supervisory frame.

The SS sends an I+S frame numbered N(S)=$N_{SS}$ mod(62), the MS shall acknowledge this frame within T2.

Verification of $K_{IM}$

The SS sends an I+S frame numbered $N_{SS}+K_{IM}+1$ mod(62). The MS shall ignore this frame (out of the window), it shall not acknowledge or reject it. This is checked during at least T2.

The SS sends an I+S frame numbered N(S)=$N_{SS}+1$ mod(62), the MS shall acknowledge this frame.

The SS sends an I+S frame numbered $N_{SS}+K_{IM}+1$ mod(62). The MS shall reject all the lost frames numbered $N_{SS}+2$ mod(62) to $N_{SS}+K_{IM}$ mod(62). It shall send a REJ or SREJ frame with $N(R)=N_{SS}+2$ mod(62).

If REJ frame is used by the MS, the SS restarts the transmission of I+S frames from frame numbered $N_{SS}+2$ mod(62). The MS shall acknowledge these frames. After having sent at least the frame numbered $N_{SS}+K_{IM}+2$ mod(62), the SS stops sending I+S frames.

If SREJ frame is used by the MS, the SS restarts the transmission of I+S frames from frame numbered $N_{SS}+2$ mod(62). It does send the frame numbered $N_{SS}+K_{IM}+1$ mod(62) a second time. The MS shall acknowledge these frames. After having sent at least the frame numbered $N_{SS}+K_{IM}+2$ mod(62), the SS stops sending I+S frames.

Verification of $K_{MI}$

The MS is now configured to send continuously I+S frames with a delay inferior to T1 between each frame.

The MS sends I+S frames, the SS does not acknowledge these frames.

After having sent $K_{MI}$ I+S frames, the MS shall stop sending I+S frames (end of the window).

Verification of T1

At the expiry of T1 after the last I+S frame, the MS shall enter in "checkpoint recovery" mode, it shall send a supervisory RR frame with C=1 and P=1.

The SS does not answer to checkpointing.

Verification of N2

At the expiry of T1 after the last RR (C=1, P=1) frame, the MS shall resend a supervisory RR frame with C=1 and P=1. The SS does not answer to checkpointing. This is repeated N2 times.

After N2 retransmissions of the same RR frame (C=1, P=1), The MS shall reset or disconnect the RLP link by sending a SABM (C=1,P=1) or a DISC (C=1) frame. The SS answers with an UA (R=0) frame with F bit set to P bit received in SABM or DISC frame.

The MS is returned to the idle state by clearing of the call.

The test is performed for case 1 and 2.

### Maximum duration of test

1 minute.

Expected sequence

| MS | | | | SS |

| | <------ | UA | ------- | j+KMI+N2+1' |

The frame from the SS will be:

Case 1:

0': One XID frame containing: C=1, P=1.

1': One UA frame containing: R=0, F=1. Note: If SABM is received before the reception of the XID response frame, the SS will wait for the XID before sending the UA frame.

Case 2:

0': One UA frame containing: R=0, F=1.

1': One XID frame containing: C=1, P=1.

2': One I+S frame containing N(S)=NSS mod(62), N(R)=NMS mod (62).

3': One I+S frame containing N(S)=NSS+KIM+1 mod(62), N(R)=NMS mod (62).

4': A delay D (T2<D<T1) after step 3', one I+S frame containing N(S)=NSS+1 mod(62), N(R)=NMS mod (62).

5': One I+S frame containing N(S)=NSS+KIM+1 mod(62), N(R)=NMS mod (62).

If REJ frame is used by the MS:

6',..., KIM+5': One I+S frame containing N(S)=NSS+2, .., NSS+KIM+1 mod(62), N(R)=NMS mod (62).

KIM+6',...,i-1': One I+S frame containing N(S)=NSS+KIM+2,...,k-1 mod(62), N(R)=NMS mod (62).

If SREJ frame is used by the MS:

6',..., KIM+4': One I+S frame containing N(S)=NSS+2, .., NSS+KIM mod(62), N(R)=NMS mod (62).

KIM+5',...,i-1': One I+S frame containing N(S)=NSS+KIM+2,...,k-1 mod(62), N(R)=NMS mod (62).

The SS stops sending I+S frames.

i',...,j-1': One RR frame containing, N(R)=NMS mod (62).

j',...,j+KMI-1': One RR frame containing N(R)=NMS mod (62).

j+KMI',...,j+KMI+N2': One RR (R=0, F=0) frame containing N(R)=NMS mod (62).

j+KMI+N2+1': One UA (R=0) frame with F bit set to P bit received in SABM or DISC frame.

Specific message content

The frame from the MS shall be:

Case 1:

0: One XID frame containing: R=0, F=1. The MS may changed the RLP parameters. In this case the SS verifies the correct sense of negotiation. The final parameters are noted (T1, T2, N2, KIM, KMI).

1: One SABM frame containing: C=1,P=1.

NOTE: The MS may send an SABM frame before the XID.

Case 2:

0: One SABM frame containing: C=1,P=1.

1: One XID frame containing: R=0, F=1. The MS may changed the RLP parameters. In this case the SS verifies the correct sense of negotiation. The final parameters are noted (T1, T2, N2, KIM, KMI).

2: One RR frame containing N(R)=NSS+1 mod (62) within T2.

3: One RR frame containing N(R)=NSS+1 mod (62).

4: One RR frame containing N(R)=NSS+2 mod (62).

5: One REJ or SREJ frame containing N(R)=NSS+2 mod (62).

If REJ frame is used by the MS:

6,..., KIM+5: One RR frame containing N(R)=NSS+3, .., NSS+KIM+2 mod(62).

KIM+6,...,i-1: One RR frame containing N(R)=NSS+KIM+3,...,k mod(62).

If SREJ frame is used by the MS:

6,..., KIM+3: One RR frame containing N(R)=NSS+3, ..., NSS+KIM mod(62).

KIM+4: One RR frame containing N(R)=NSS+KIM+2 mod(62).

KIM+5,...,i-1: One RR frame containing N(R)=NSS+KIM+3,...,k mod(62).

i,...,j-1: One RR frame containing, N(R)=k mod (62).

The MS starts sending data.

j,...,j+KMI-1: One I+S frame containing N(S)=NMS,...,NMS+KMI-1 mod(62), N(R)=k mod (62).

j+KMI: T1 after the last I+S frame sent, one supervisory RR (C=1, P=1) frame containing N(R)=k mod (62).

j+KMI+1,...,j+KMI+N2: At T1 expiry, one supervisory RR (C=1, P=1) frame containing N(R)=k mod (62).

j+KMI+N2+1: One SABM (C=1, P=1) or DISC (C=1) frame.

## 29.3.3.2 Negotiation initiated by the MS

### 29.3.3.2.1 Definition and applicability

The XID negotiation procedure allows RLP parameters to be negotiated between peer RLP entities.

This test is only applicable to those MS's which support non-default RLP parameters.

#### 29.3.3.2.2 Conformance requirements

The MS shall be able to initiate a negotiation with the network when its RLP parameters are set to non default values. It shall then configure its RLP parameters accordingly. It shall do so in ABM mode as well as in ADM mode. GSM 04.22, 5.2.2.6.

##### References

GSM 04.22 section 5.2.2.6.

#### 29.3.3.2.3 Test purpose

To test that the MS initiate the negotiation if RLP parameters are different from default parameters.

#### 29.3.3.2.4 Method of test

##### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP arbitrary chosen parameters different from the default parameters.

1 - The MS is made to establish a MO non transparent data call. In initial conditions MS is in call state U10 ("Call Active") after having sent a CONN_ACK message.

2 - The MS is made to establish a MT non transparent data call. In initial conditions MS is in call state U10 ("Call Active") after having received a CONN_ACK message.

This test is performed for initial conditions 1 and 2.

Once in ABM, the SS shall initiate the transmission of an I+S frame, which will transfer L2RCOP status information between peer L2RCOP entities (SS to MS). The MS may respond with an I+S frame containing L2RCOP status information. The SS shall be capable of initiating this sequence, or responding to an I+S L2RCOP status frame from the MS.

##### Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

##### Foreseen final state of the MS

Idle.

##### Test procedure

The MS shall send an XID (C=1, P=1) frame containing a set of RLP parameters different from the default set. The SS answers with XID (R=0, F=1) containing new parameters randomly chosen, the sense of negotiation is correct. Optionally, a renegotiation initiated by the MS should be possible, if the parameters, randomly chosen by the SS are not supported by the MS. In this case, the SS should accept the parameters renegotiated by the MS, if they are within the allowed range defined in GSM 04.22. The final parameters are noted (T1, T2, N2, KIM (window IWF (SS) -> MS), KMI (window MS -> IWF (SS))).

The MS established the ABM mode by sending a SABM (C=1, P=1) frame. The SS answers with a UA (R=0, F=1) frame. The SABM frame may be sent by the MS before the XID. In such a case, the SS answers to the XID after having established the ABM mode (i.e. after having sent the UA).

The SS checks that the MS uses the new parameters determined during the negotiation procedure.

Verification of T2

The SS is configured to send I+S frames with a delay inferior to T1 between each frame. The MS is made to send no user data, it sends only supervisory frame.

The SS sends an I+S frame numbered N(S)=Nss mod(62), the MS shall acknowledge this frame within T2.

Verification of KIM

The SS sends an I+S frame numbered Nss+KIM+1 mod(62). The MS shall ignore this frame (out of the window), it shall not acknowledge or reject it. This is checked during at least T2.

The SS sends an I+S frame numbered N(S)=Nss+1 mod(62), the MS shall acknowledge this frame.

The SS sends an I+S frame numbered Nss+KIM+1 mod(62). The MS shall reject all the lost frames numbered Nss+2 mod(62) to Nss+KIM mod(62). It shall send a REJ or SREJ frame with N(R)=Nss+2 mod(62)

If REJ frame is used by the MS, the SS restarts the transmission of I+S frames from frame numbered Nss+2 mod(62). The MS shall acknowledge these frames. After having sent at least the frame numbered Nss+KIM+2 mod(62), the SS stops sending I+S frames.

If SREJ frame is used by the MS, the SS restarts the transmission of I+S frames from frame numbered Nss+2 mod(62). It does send the frame numbered Nss+KIM+1 mod(62) a second time. The MS shall acknowledge these frames. After having sent at least the frame numbered Nss+KIM+2 mod(62), the SS stops sending I+S frames.

Verification of KMI

The MS is now configured to send continuously I+S frames with a delay inferior to T1 between each frame.

The MS sends I+S frames, the SS does not acknowledge these frames.

After having sent KMI I+S frames, the MS shall stop sending I+S frames (end of the window).

Verification of T1

At the expiry of T1 after the last I+S frame, the MS shall enter in "checkpoint recovery" mode, it shall send a supervisory RR frame with C=1 and P=1.

The SS does not answer to checkpointing.

Verification of N2

At the expiry of T1 after the last RR (C=1, P=1) frame, the MS shall resend a supervisory RR frame with C=1 and P=1. The SS does not answer to checkpointing. This is repeated N2 times.

After N2 retransmissions of the same RR frame (C=1, P=1), The MS shall reset or disconnect the RLP link by sending a SABM (C=1,P=1) or a DISC (C=1) frame. The SS answers with an UA (R=0) frame with F bit set to P bit received in SABM or DISC frame.

The MS is returned to the idle state by clearing of the call.

Expected sequence

| MS | | | | SS |
|---|---|---|---|---|
| 0 | ------- | XID | ------> | |
| | <------ | XID | ------- | 0 |

optional renegotiation:

| | <------ | RR | ------- | j-1' |
| j-1 | ------- | RR | ------> | |
| j | ------- | I+S | ------> | |
| | <------ | RR | ------- | j' |
| ... | | etc... | | ... |
| j+$K_{MI}$-1 | ------- | I+S | ------> | |
| | <------ | RR | ------- | j+$K_{MI}$-1' |
| j+$K_{MI}$ | ------- | RR | ------> | |
| | <------ | RR | ------- | j+$K_{MI}$' |

| | | | | |
|---|---|---|---|---|
| j+KMI+1 | ------- | RR | ------> | |
| | <------ | RR | ------- | j+KMI+1' |
| ... | | etc... | | ... |
| j+KMI+N2 | ------- | RR | ------> | |
| | <------ | RR | ------- | j+KMI+N2' |
| j+KMI+N2+1 | ------- | SABM / DISC | ------> | |
| | <------ | UA | ------- | j+KMI+N2+1' |

The frame from the SS will be:

0': One XID frame containing: R=0, F=1. The RLP parameters are changed by the SS, the sense of negotiation is correct. The final parameters are noted (T1, T2, N2, KIM, KMI).

1': One UA frame containing: R=0, F=1. Note: If SABM is received before the XID, the SS answers to the XID after having established the ABM mode (i.e. after having sent the UA).

2': One I+S frame containing N(S)=NSS mod(62), N(R)=NMS mod (62).

3': One I+S frame containing N(S)=NSS+KIM+1 mod(62), N(R)=NMS mod (62).

4': A delay D (T2<D<T1) after step 3', one I+S frame containing N(S)=NSS+1 mod(62), N(R)=NMS mod (62).

5': One I+S frame containing N(S)=NSS+KIM+1 mod(62), N(R)=NMS mod (62).

If REJ frame is used by the MS:

6',..., KIM+5': One I+S frame containing N(S)=NSS+2, .., NSS+KIM+1 mod(62), N(R)=NMS mod (62).

KIM+6',...,i-1': One I+S frame containing N(S)=NSS+KIM+2,...,k-1 mod(62), N(R)=NMS mod (62).

If SREJ frame is used by the MS:

6',..., KIM+4': One I+S frame containing N(S)=NSS+2, .., NSS+KIM mod(62), N(R)=NMS mod (62).

KIM+5',...,i-1': One I+S frame containing N(S)=NSS+KIM+2,...,k-1 mod(62), N(R)=NMS mod (62).

The SS stops sending I+S frames.

i',...,j-1': One RR frame containing, N(R)=NMS mod (62).

j',...,j+KMI-1': One RR frame containing N(R)=NMS mod (62).

j+KMI',...,j+KMI+N2': One RR (R=0, F=0) frame containing N(R)=NMS mod (62).

j+KMI+N2+1': One UA (R=0) frame with F bit set to P bit received in SABM or DISC frame.

#### 29.3.3.2.5 Test requirements

##### Specific message content

The frame from the MS shall be:

0: One XID frame containing: C=1, P=1.

1: One SABM frame containing: C=1,P=1.

NOTE: The MS may send the SABM frame before the XID.

2: One RR frame containing N(R)=NSS+1 mod (62) within T2.

3: One RR frame containing N(R)=NSS+1 mod (62).

4: One RR frame containing N(R)=NSS+2 mod (62).

5: One REJ or SREJ frame containing N(R)=NSS+2 mod (62).

If REJ frame is used by the MS:

6,..., KIM+5: One RR frame containing N(R)=NSS+3, .., NSS+KIM+2 mod(62).

KIM+6,...,i-1: One RR frame containing N(R)=NSS+KIM+3,...,k mod(62).

If SREJ frame is used by the MS:

6,..., KIM+3: One RR frame containing N(R)=NSS+3, ..., NSS+KIM mod(62).

KIM+4: One RR frame containing N(R)=NSS+KIM+2 mod(62).

KIM+5,...,i-1: One RR frame containing N(R)=NSS+KIM+3,...,k mod(62).

i,...,j-1: One RR frame containing, N(R)=k mod (62).

The MS starts sending data.

j,...,j+KMI-1: One I+S frame containing N(S)=NMS,...,NMS+KMI-1 mod(62), N(R)=k mod (62).

j+KMI: T1 after the last I+S frame sent, one supervisory RR (C=1, P=1) frame containing N(R)=k mod (62).

j+KMI+1,...,j+KMI+N2: At T1 expiry, one supervisory RR (C=1, P=1) frame containing N(R)=k mod (62).

j+KMI+N2+1: One SABM (C=1, P=1) or DISC (C=1) frame.

### 29.3.3.3 Collision of XID frames

#### 29.3.3.3.1 Definition and applicability

The XID negotiation procedure allows RLP parameters to be negotiated between peer RLP entities. If a collision of XID frames occurs, the MS shall ignore all XID frames and restart the parameter negotiation on expiry of timer T1.

This test is only applicable to those MS's which support non-default RLP parameters.

#### 29.3.3.3.2 Conformance requirements

The MS shall be able to ignore an XID frame from the network in the case where it has sent a XID frame asking for a negotiation to the network, and to restart the negotiation procedure after expiry of timer T1. GSM 04.22, 5.2.2.6.

#### References

GSM 04.22 section 5.2.2.6..

#### 29.3.3.3.3 Test purpose

To test that the correct reaction of the MS to a collision of XID frames.

#### 29.3.3.3.4 Method of test

#### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP parameters different from the default parameters and arbitrary chosen.

The MS is made to establish a MO non transparent data call. In initial conditions MS is in call state U10 ("Call Active") after having sent a CONN_ACK message.

Once in ABM, the SS shall initiate the transmission of an I+S frame, which will transfer L2RCOP status information between peer L2RCOP entities (SS to MS). The MS may respond with an I+S frame containing L2RCOP status information. The SS shall be capable of initiating this sequence, or responding to an I+S L2RCOP status frame from the MS.

### Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

### Foreseen final state of the MS

Idle.

### Test procedure

The MS shall send an XID (C=1, P=1) frame containing a set of RLP parameters different from the default set. The SS sends a XID (C=1, P=1) command frame containing new parameters. After a delay the MS shall resend the same XID that it has previously sent. The SS answers with XID (R=0, F=1) accepting the parameters chosen by the MS. These parameters are noted (T1, T2, N2, $K_{IM}$ (window IWF (SS) -> MS), $K_{MI}$ (window MS -> IWF (SS))).

The MS established the ABM mode by sending a SABM (C=1, P=1) frame. The SS answers with a UA (R=0, F=1) frame. The SABM frame may be sent by the MS at any instant (i.e. just after having received an XID, before having sent the response). In such a case, the SS answers to the XID after having established the ABM mode (i.e. after having sent the UA).

The SS checks that the MS uses the new parameters determined during the negotiation procedure.

Verification of T2

The SS is configured to send I+S frames with a delay inferior to T1 between each frame. The MS is made to send no user data, it sends only supervisory frame.

The SS sends an I+S frame numbered N(S)=$N_{SS}$ mod(62), the MS shall acknowledge this frame within T2.

Verification of $K_{IM}$

The SS sends an I+S frame numbered $N_{SS}+K_{IM}+1$ mod(62). The MS shall ignore this frame (out of the window), it shall not acknowledge or reject it. This is checked during at least T2.

The SS sends an I+S frame numbered N(S)=$N_{SS}+1$ mod(62), the MS shall acknowledge this frame.

The SS sends an I+S frame numbered $N_{SS}+K_{IM}+1$ mod(62). The MS shall reject all the lost frames numbered $N_{SS}+2$ mod(62) to $N_{SS}+K_{IM}$ mod(62). It shall send a REJ or SREJ frame with N(R)=$N_{SS}+2$ mod(62).

If REJ frame is used by the MS, the SS restarts the transmission of I+S frames from frame numbered $N_{SS}+2$ mod(62). The MS shall acknowledge these frames. After having sent at least the frame numbered $N_{SS}+K_{IM}+2$ mod(62), the SS stops sending I+S frames.

If SREJ frame is used by the MS, the SS restarts the transmission of I+S frames from frame numbered $N_{SS}+2$ mod(62). It does send the frame numbered $N_{SS}+K_{IM}+1$ mod(62) a second time. The MS shall acknowledge these frames. After having sent at least the frame numbered $N_{SS}+K_{IM}+2$ mod(62), the SS stops sending I+S frames.

Verification of $K_{MI}$

The MS is now configured to send continuously I+S frames with a delay inferior to T1 between each frame.

The MS sends I+S frames, the SS does not acknowledge these frames.

After having sent $K_{MI}$ I+S frames, the MS shall stop sending I+S frames (end of the window).

Verification of T1

At the expiry of T1 after the last I+S frame, the MS shall enter in "checkpoint recovery" mode, it shall send a supervisory RR frame with C=1 and P=1.

The SS does not answer to checkpointing.

Verification of N2

At the expiry of T1 after the last RR (C=1, P=1) frame, the MS shall resend a supervisory RR frame with C=1 and P=1. The SS does not answer to checkpointing. This is repeated N2 times.

After N2 retransmissions of the same RR frame (C=1, P=1), The MS shall reset or disconnect the RLP link by sending a SABM (C=1,P=1) or a DISC (C=1) frame. The SS answers with an UA (R=0) frame with F bit set to P bit received in SABM or DISC frame.

The MS is returned to the idle state by clearing of the call.

### Maximum duration of test

1 minute.

Expected sequence

| MS | | | | SS |
|---|---|---|---|---|
| 0 | ------- | XID | ------> | |
| | <------ | XID | ------- | 0' |

| j+$K_{MI}$+N2+1 | ------- | SABM / DISC | ------> | |
| | <------ | UA | ------- | j+$K_{MI}$+N2+1' |

The frame from the SS will be:

0': One XID frame containing: C=1, P=1.

1': One XID frame containing: R=0, F=1. The RLP parameters are changed by the SS, the sense of negotiation is correct. The final parameters are noted (T1, T2, N2, $K_{IM}$, $K_{MI}$).

2': One UA frame containing: R=0, F=1. Note: If SABM is received before one of the XID frames, the SS will answer to the XID after having established the ABM mode (i.e. after having sent the UA).

3': One I+S frame containing N(S)=$N_{SS}$ mod(62), N(R)=$N_{MS}$ mod (62).

4': One I+S frame containing N(S)=$N_{SS}$+$K_{IM}$+1 mod(62), N(R)=$N_{MS}$ mod (62).

5': A delay D (T2<D<T1) after step 3', one I+S frame containing N(S)=$N_{SS}$+1 mod(62), N(R)=$N_{MS}$ mod (62).

6': One I+S frame containing N(S)=$N_{SS}$+$K_{IM}$+1 mod(62), N(R)=$N_{MS}$ mod (62).

If REJ frame is used by the MS:

7',..., $K_{IM}$+6': One I+S frame containing N(S)=$N_{SS}$+2, .., $N_{SS}$+$K_{IM}$+1 mod(62), N(R)=$N_{MS}$ mod (62).

$K_{IM}$+7',...,i-1': One I+S frame containing N(S)=$N_{SS}$+$K_{IM}$+2,...,k-1 mod(62), N(R)=$N_{MS}$ mod (62).

If SREJ frame is used by the MS:

7',..., $K_{IM}$+5': One I+S frame containing N(S)=$N_{SS}$+2, .., $N_{SS}$+$K_{IM}$ mod(62), N(R)=$N_{MS}$ mod (62).

$K_{IM}$+6',...,i-1': One I+S frame containing N(S)=$N_{SS}$+$K_{IM}$+2,...,k-1 mod(62), N(R)=$N_{MS}$ mod (62).

The SS stops sending I+S frames.

i',...,j-1': One RR frame containing, N(R)=$N_{MS}$ mod (62).

j',...,j+$K_{MI}$-1': One RR frame containing N(R)=$N_{MS}$ mod (62).

j+$K_{MI}$',...,j+$K_{MI}$+N2': One RR (R=0, F=0) frame containing N(R)=$N_{MS}$ mod (62).

j+$K_{MI}$+N2+1': One UA (R=0) frame with F bit set to P bit received in SABM or DISC frame.

#### 29.3.3.3.5 Test requirements

##### Specific message content

The frame from the MS shall be:

0: One XID frame containing: C=1, P=1.

1: After T1(def) expiry, one XID frame containing: C=1, P=1.

NOTE: The MS may send an SABM frame before the 1st or the 2nd XID frame.

2: One SABM frame containing: C=1,P=1.

3: One RR frame containing N(R)=$N_{SS}$+1 mod (62) within T2.

4: One RR frame containing N(R)=$N_{SS}$+1 mod (62).

5: One RR frame containing N(R)=$N_{SS}$+2 mod (62).

6: One REJ or SREJ frame containing N(R)=$N_{SS}$+2 mod (62).

If REJ frame is used by the MS:

7,..., $K_{IM}$+6: One RR frame containing N(R)=$N_{SS}$+3, .., $N_{SS}$+$K_{IM}$+2 mod(62).

$K_{IM}$+7,...,i-1: One RR frame containing N(R)=$N_{SS}$+$K_{IM}$+3,...,k mod(62).

If SREJ frame is used by the MS:

7,..., $K_{IM}$+4: One RR frame containing N(R)=$N_{SS}$+3, ..., $N_{SS}$+$K_{IM}$ mod(62).

$K_{IM}$+5: One RR frame containing N(R)=$N_{SS}$+$K_{IM}$+2 mod(62).

$K_{IM}$+6,...,i-1: One RR frame containing N(R)=$N_{SS}$+$K_{IM}$+3,...,k mod(62).

i,...,j-1: One RR frame containing, N(R)=k mod (62).

The MS starts sending data.

j,...,j+$K_{MI}$-1: One I+S frame containing N(S)=$N_{MS}$,...,$N_{MS}$+$K_{MI}$-1 mod(62), N(R)=k mod (62).

j+$K_{MI}$: T1 after the last I+S frame sent, one supervisory RR (C=1, P=1) frame containing N(R)=k mod (62).

j+$K_{MI}$+1,...,j+$K_{MI}$+N2: At T1 expiry, one supervisory RR (C=1, P=1) frame containing N(R)=k mod (62).

j+$K_{MI}$+N2+1: One SABM (C=1, P=1) or DISC (C=1) frame.

## 29.3.3.4 Loss of XID frames

### 29.3.3.4.1 Conformance requirements

The MS shall repeat an XID frame upon expiry of RLP timer T1 if the network has not acknowledged it by a correct XID frame.

#### References

GSM 04.22 section 5.2.2.6.

### 29.3.3.4.2 Test purpose

To test that the MS repeats the XID frame if the SS does not answer correctly.

### 29.3.3.4.3 Test method

#### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP parameters different from the default parameters (T1 different from T1(def)).

The MS is made to establish a MO non transparent data call. In initial conditions MS is in call state U10 ("Call Active") after having sent a CONN_ACK message.

#### Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

#### Foreseen final state of the MS

Idle.

### Test procedure

The MS shall send an XID (C=1, P=1) frame containing a set of RLP parameters different from the default set. The SS sends a XID (R=0, F=0) command frame. The MS shall ignores this frame.

After a delay the MS shall resend the same XID that it has previously sent. The SS does not answer.

After a delay the MS shall resend the same XID that it has previously sent. The SS answers with XID (R=0, F=1) accepting the parameters chosen by the MS.

The MS established the ABM mode by sending a SABM (C=1, P=1) frame. The answer with a UA (R=0, F=1) frame. The SABM frame may be sent by the MS at any instant (i.e. just after having received an XID). In such a case, the SS answers to the XID after having established the ABM mode (i.e. after having sent the UA).

The MS is returned to the idle state by clearing of the call.

### Maximum duration of test

1 minute.

### Expected sequence

| MS | | | | SS |
|---|---|---|---|---|
| 0 | ------- | XID | ------> | |
| | <------ | XID | ------- | 0' |
| 1 | ------- | XID | ------> | |
| 2 | ------- | XID | ------> | |
| | <------ | XID | ------- | 2' |
| 3 | ------- | SABM | ------> | |
| | <------ | UA | ------- | 3' |

The frame from the SS will be:

0': One XID frame containing: R=0, F=0.

2': One XID frame containing: R=0, F=1. The RLP parameters are accepted by the SS.

3': One UA frame containing: R=0, F=1. Note: If SABM is received before the XID, the SS will answer to the XID after having established the ABM mode (i.e. after having sent the UA).

### Specific message content

The frame from the MS shall be:

0: One XID frame containing: C=1, P=1.

1: After T1(def) expiry, one XID frame containing: C=1, P=1.

2: After T1(def) expiry, one XID frame containing: C=1, P=1.

3: One SABM frame containing: C=1,P=1.

NOTE: The MS may send the SABM frame before XID(s), at any moment.

## 29.3.3.5 Total loss of XID frames

### 29.3.3.5.1 Definition and applicability

The XID negotiation procedure allows RLP parameters to be negotiated between peer RLP entities. An unsuccsessful XID exchange shall be repeated on expiry of T1. After N2 times of unsuccessful repetition, the RLP link shall be disconnected.

This test is only applicable to those MS's which support non-default RLP parameters.

### 29.3.3.5.2 Conformance requirements

The MS shall not repeat an unacknowledged XID frame more than N2 times. After N2 repetition it shall disconnect the RLP link if it had been connected earlier. GSM04.22, 5.2.2.6.

#### References

GSM 04.22 section 5.2.2.6.

### 29.3.3.5.3 Test purpose

To test that the MS repeats the XID frame no more than N2 times, if the SS does not answer correctly.

### 29.3.3.5.4 Method of test

#### Initial Conditions

System Simulator:

The SS is configured to use default RLP parameters.

Mobile Station:

The MS is configured to use RLP parameters different from the default parameters.

The MS is made to establish a MO non transparent data call. In initial conditions MS is in call state U10 ("Call Active") after having sent a CONN_ACK message.

#### Related PICS/PIXIT statements

Supported bearer services; characteristics of non-transparent services.

#### Foreseen final state of the MS

Idle.

#### Test procedure

Case a: The MS sends an XID (C=1, P=1) frame in ADM mode

Case b: The MS enters the ABM mode and sends an XID (C=1, P=1) frame after optional status bits exchange between the MS and the SS.

The SS does not answer.

After a delay T1 (def), the MS shall resend the same XID that it has previously sent. The SS does not answer. This step is repeated N2 (def) times.

Case a: After N2 (def) retransmissions the SS waits for 2 * T1 to ensure that the XID frame is not repeated any more.

Case b: After N2 (def) retransmissions the link shall be disconnected. The MS shall send a DISC (C=1) frame, and the SS answers with a UA (R=0, F equal to the P bit received in the DISC).

The MS is returned to the idle state by clearing of the call.

Maximum duration of test

1 minute.

Expected sequence

| MS | | | | SS |
|---|---|---|---|---|
| Case a: | | | | |
| 1 | ------- | XID | ------> | |
| 2 | ------- | XID | ------> | |
| ... | | etc... | | ... |
| N2(def) +1 | ------- | XID | ------> | |
| | | | Wait for 2*T1 | |
| Case b: | | | | |
| 0 | ------- | SABM | ------> | |
| | <------ | UA | ------- | 0' |
| | (------- | I+S | ------>) | Optional |
| | (<------ | S | -------) | |
| 1 | ------- | XID | ------> | |
| 2 | ------- | XID | ------> | |
| ... | | etc... | | ... |
| N2(def)+1 | ------- | XID | ------> | |
| N2(def)+2 | ------- | DISC | ------> | |
| | <------ | UA | ------> | N2+2' |

The frame from the SS will be:

0': One UA frame containing: R=0, F=1, if the MS sends a SABM.

N2+2': One UA frame containing: R=0, F equal to P bit received in DISC frame.

29.3.3.5.5 Test requirements

Specific message content

The frame from the MS shall be:

0: The MS may send a SABM frame containing: C=1,P=1. This frame may be sent at any instant. This is not verified.

1: One XID frame containing: C=1, P=1.

2,...,N2(def)+1: After T1 (def) expiry, one XID frame containing: C=1, P=1.

N2(def)+2: If the MS has previously established the ABM mode (SABM/UA exchange), it shall disconnect the link by sending a DISC (C=1) frame.

# 29.4 Facsimile tests for the transparent network support

## 29.4.1 General

According to CCITT T.30 a facsimile call can be divided into the following phases:

- Phase A - call establishment procedure;
- Phase B - pre-message procedure (identification and selection of required facilities);
- Phase C - message transmission according to CCITT T.4;
- Phase D - post-message procedure;
- Phase E - call release procedure.

For each phase a single test sequence was drafted, i.e. the verification of the basic procedures of a fax call will at least consist of 5 tests, in order to verify the above described phases.

In the IDLE state the fax adapter, originating or terminating, will send continuously SYNC frames containing the pattern specified in GSM 03.45 (CT105 (see note 2) and 109 (see note 2) are in OFF condition).

For the test of the facsimile data transmission, i.e. the phase C, test chart #2 according to CCITT T.21 should be used.

The T.4/30 messages marked with the '*' sign indicate that for the transmission across the radio interface in case of the BCS phase STATUS frames are used, and in case of the message phase the usage of DATA frames is implied.

Manufacturer-declared fax equipment should be connected to the MS, i.e. where possible a fax adapter and a fax machine Group 3. Measuring devices to monitor the T.4/T.30 protocol, the circuits and the SYNC, STATUS and DATA frames should be provided. Configurations, where no access to the interfaces to monitor the protocol and circuits is possible, might exist.

## 29.4.2 Mobile originated call

### 29.4.2.1 Call establishment procedure

#### 29.4.2.1.1 Alternate speech / facsimile

##### 29.4.2.1.1.1 Definition and applicability

This test is applicable to an MS supporting TS 61.

##### 29.4.2.1.1.2 Conformance requirement

An MS supporting transparent facsimile group 3 shall perform the ICM and shall support the frames and circuits at the Um-, R- and 2w-interface according to the specifications referred to in the section "Reference".

Reference

GSM 03.45, GSM 07.01, CCITT T.30.

##### 29.4.2.1.1.3 Test purpose

To verify the transition from speech to fax in case of an MS supporting TS 61 and that the circuit and tone handling of the MT and FA is correct.

##### 29.4.2.1.1.4 Method of test

Initial conditions

A TS 61 s/f call is set up. The speech phase is active.

Test procedure

The transition from speech to fax is initiated by manual intervention at both ends of the connection. The data call direction DCD is mobile originated. Upon connection to line the FA turns on CT108.2 (see note 2) as a basic requirement for the transition from speech to fax. Now, within the next 3 seconds the FA has to detect the DCD, which is in this case is mobile originated, i.e. CT105 is set to ON (see note 2) condition. The following ICM procedure via the MODIFY message is carried out by the MT 3 seconds after circuit CT108.2 was set to ON (see note 2) condition. On completion of the ICM procedure the synchronization of the TCH begins and after its completion the MT has to set CT107 to ON (see note 2) condition and the FA has to send the CED tone (see note 2) towards the connected fax. When CT106/109 are set to ON (see note 2) phase A is completed. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Connect to line (see note 1) | | Connect to line (see note 1) |
| | | FA: | CT108.2 ON (see note 2) | | |
| | | | Detect DCD | | |
| | | | CT105 ON (see note 2) | | |
| | | MT: | Send MODIFY message | ------> | Receive MODIFY message |
| | | | 3 seconds after CT108.2 ON (see note 2) | | |
| 2 | SS-->MS | | | <----- | Send MODIFY COMPLETE |
| 3 | MS<->SS | | TCH Synchronization | <----> | TCH Synchronization |
| | | MT: | CT107 ON (see note 2), when synchronized | | |
| | | FA: | Generate CED (see note 2) | | |
| | | Fax: | Detect CED (see note 2) | | |
| 4 | SS-->MS | | | <----- | Set X and SB bit in V.110 frame |
| | | MT: | CT106/109 ON (see note 2) | | |
| | | FA: | Enter BCS-TRA state | | Enter BCS-REC state |

#### 29.4.2.1.1.5 Test requirements

1. The condition of CT108.2 and CT105 is verified (see note 2); CT106, 107, 109 have to be in OFF (see note 2) condition. The MODIFY message has to be sent 3 seconds after circuit CT108.2 has gone to ON condition (see note 2).

2. To be verified that the MT begins the synchronization phase by sending the pattern 1/OFF after the reception of the MODIFY COMPLETE message, that CT107 is turned on (see note 2) by the MT after successful synchronization and that the CED tone (see note 2) is transmitted by the FA after CT107 has gone to ON condition (see note 2).

3. To be verified that CT106 and CT109 are turned on (see note 2), when in the modified V.110 frames received from the SS the X and SB bits are set. The state of the FA shall be verified (-> BCS-TRA).

### 29.4.2.1.2 Automatic facsimile

#### 29.4.2.1.2.1 Definition and applicability

This test is applicable to an MS supporting TS 62.

#### 29.4.2.1.2.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the call setup procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, GSM 07.01, CCITT T.30.

#### 29.4.2.1.2.3 Test purpose

To verify that the circuit and tone handling of the MT and FA is correct.

#### 29.4.2.1.2.4 Method of test

##### Initial conditions

The MS, configured for the TS 62 fax call, is updated. Then the call establishment phase A begins.

##### Test procedure

The FA sets CT108.2 to ON (see note 2) condition and passes the dialling information to the MT. A SETUP message is then sent by the MT towards the SS. When the TCH is available (indicated by the CONNECT message) the synchronization phase begins, i.e. both entities start sending the synchronization pattern 1/OFF. CT106, 107, 109 have to be in OFF condition (see note 2). Upon completion of the synchronization phase the MT sets CT107 to ON condition (see note 2) causing the FA to connect the fax to line. The SS sets CT106 and CT109 to ON at the MT by means of the V.110 X and SB bits. The FA then generates the CED tone (see note 2), which completes phase A. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

##### Expected sequence

| MS: Step | Direction | | | SS: |
|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Dial | |
| | FA: | Pass dialling info, CT108.2 ON (see note 2) | | |
| | MT: | Send SETUP message | ------> | Receive SETUP message |
| 2 | SS-->MS | | <----- | Send CONNECT message |
| 3 | MS<->SS | TCH Synchronization | <----> | TCH Synchronization |
| | MT: | CT107 ON (see note 2), when synchronized | | |
| 4 | SS-->MS | | <----- | Set X and SB bit in V.110 frame |
| | | MT: CT106/109 ON (see note 2) | | |
| | | FA: Generate CED (see note 2) | | |
| | | Fax: Detect CED (see note 2) | | |
| 5 | | FA: Enter BCS-TRA state (see note 3) | Enter BCS-REC state | |

#### 29.4.2.1.2.5 Test requirements

1. The condition of CT108.2 (see note 2) is verified and the SETUP message should contain the BC-IE for TS 62.
2. To be verified that at the MT CT106, 107, 109 are in OFF (see note 2) condition, that the MT begins the synchronization phase by sending the pattern 1/OFF and that CT107 (see note 2) is turned on by the MT after successful synchronization.
3. To be verified that CT106 and CT109 are turned on (see note 2), when in the V.110 frames received from the SS the X and SB bits are set and that the FA sends the CED (see note 2) tone towards the fax machine.
4. The state of the FA shall be verified (-> BCS-TRA).

### 29.4.2.2 Pre-message procedure

#### 29.4.2.2.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.2.2.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the pre-message procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, CCITT T.30.

29.4.2.2.3 Test purpose

To verify the correct handling of the T.30 DIS/DCS/TCF frames.

29.4.2.2.4 Method of test

Initial conditions

The activity progress of the fax call is brought to the beginning of Phase B.

Test procedure

After phase A the FA is in BCS-TRA state and sends SYNC frames. The SS being in BCS-REC state sends the T.30 DIS embedded in STATUS frames indicating its capabilities. The received DIS is checked, if necessary edited by the FA and sent to the fax. Then the FA returns to the idle state. The fax checks whether the indicated capabilities are in line with its own or not, and chooses the capabilities which are supported end-to-end by the connected fax machines by answering with the DCS frame preceded by the preamble. The FA enters the BCS-REC state and the BCS information is transmitted using the STATUS frames. Afterwards the FA returns to the idle state. Upon reception of the training sequence the FA enters the MSG-REC state without waiting for an acknowledge from the SS, i.e. the TCF is conveyed by means of the DATA frames. The FA enters the idle state and sends at least 5 SYNC frames to indicate that the message phase is over. Then the CFR frame is received, i.e. the FA enters the BCS-TRA state and receives the CFR in STATUS frames. Now, phase B is completed and the data transfer phase C begins. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | SS-->MS | | | <----- | Send preamble*,DIS* |
| | | FA: | BCS-TRA | | |
| | | | Monitor DIS | | |
| | | | Generate preamble,DIS | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive preamble,DIS | | |
| 2 | MS-->SS | Fax: | Send preamble,DCS | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | Monitor DCS | | |
| | | | Send preamble*,DCS* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*,DCS* |
| | | | IDLE | | |
| 3 | MS-->SS | Fax: | Send training,TCF | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | MSG-REC | | |
| | | | Send TCF* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive TCF* |
| 4 | SS<--MS | | | <----- | Send preamble*,CFR* |
| | | FA: | CT105 ON (see note 2) | | |
| | | | BCS-TRA | | |
| | | | Generate preamble, CFR | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive preamble, CFR | | |

#### 29.4.2.2.5 Test requirements

1. To be verified that SYNC frames are transmitted across the radio interface in BCS-TRA and in the IDLE state and that CT105 is set to OFF (see note 2). The correct generation of the T.30 BCS shall be verified (down-conversion to the BCS speed according to GSM 03.45).

2. The condition of CT109 shall be verified (see note 2); that the DCS is correctly inserted into the STATUS frames and that the IDENT octet contains the BCS-REC identifier. At CT109=OFF (see note 2), the FA returns to the idle state and sends SYNC frames (pattern according to GSM 03.45).

3. To be verified that the FA turns on CT109 (see note 2), enters the MSG-REC state and sends the TCF embedded in DATA frames without waiting for the confirmation that the SS has entered the MSG-TRA state. The ident octet has to be checked (-> MSG-REC). CT109 shall be in OFF condition (see note 2).

4. The condition of CT105 (see note 2) is to be verified. The correct generation of the T.30 BCS shall be checked. In IDLE state SYNC frames have to be sent.

### 29.4.2.3 Message procedure

#### 29.4.2.3.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.2.3.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the message procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

##### Reference

GSM 03.45, CCITT T.30, CCITT T.4, CCITT T.21.

#### 29.4.2.3.3 Test purpose

To verify the facsimile data transmission phase.

#### 29.4.2.3.4 Method of test

##### Initial conditions

The activity progress of the fax call is brought to the beginning of Phase C. The ECM shall not be used.

##### Test procedure

The FA is in IDLE state. The connected fax starts transmitting the fax message. Upon reception of the training sequence the FA enters the MSG-REC state and sends STATUS frames, which contain the ident octet set to MSG-REC, interleaved with SYNC frames to the SS. When the SS has entered the MSG-TRA state, which is indicated to the FA by means of the ident octet set to MSG-TRA, the FA starts sending the fax coded data (received from the connected fax) embedded in DATA frames. When the transmission is finished the FA is again in the idle state for at least 5 SYNC frames to indicate that the message phase is over and Phase D begins. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | SS: | |
|---|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Send training, fax message | | |
| | | FA: | CT109 ON (see note 2)<br>MSG-REC<br>Send STATUS frames (MSG-REC) interleaved with SYNC frames<br>Wait for MSG-TRA indication from SS | | |
| 2 | SS-->MS | | | <----- | Send STATUS frames with MSG-TRA identifier |
| 3 | MS-->SS | | Send fax message*<br>"<br>"<br>" | -----> | Receive fax message*<br>"<br>"<br>" |
| | | | CT109 OFF (see note 2)<br>IDLE | | |
| 4 | MS-->SS | FA: | Send at least 5 SYNC frames | -----> | Receive SYNC frames |

#### 29.4.2.3.5 Test requirements

1. To be verified that the FA enters the MSG-REC state and inserts the correct ident octet in the STATUS frames interleaved with SYNC frames.
2. To be verified that the FA sends the fax message after the SS has sent the STATUS frames containing the MSG-TRA identifier.
3. At the end of the document transmission the condition of CT109 (see note 2) shall be checked.
4. It shall be verified that at least 5 SYNC frames are sent in order to indicate the end of phase C.

### 29.4.2.4 Post-message procedure

#### 29.4.2.4.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.2.4.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the post-message procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, CCITT T.30.

#### 29.4.2.4.3 Test purpose

To verify phase D of the facsimile transmission.

#### 29.4.2.4.4 Method of test

##### Initial conditions

The activity progress of the fax call is brought to the beginning of Phase D. The ECM shall not be used.

##### Test procedure

The fax sends the preamble followed by the EOP frame. The FA then enters the BCS-REC state after having transmitted at least 5 SYNC frames since the last transition to the idle state and sends the EOP frame embedded in STATUS frames to the SS. The FA enters the idle state again. Upon detection of the BCS-REC identifier octet the BCS-TRA state is entered in order to receive the MCF frame issued by the SS. Then the preamble and the MCF frame are conveyed to the connected fax by the FA. The FA enters the idle state. Phase D of the fax transmission is completed. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

##### Expected sequence

| MS: | | | | | SS: |
|---|---|---|---|---|---|
| Step | Direction | | | | |
| 1 | MS-->SS | Fax: | Send preamble, EOP | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | Send preamble*, EOP* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*, EOP* |
| | | | IDLE | | |
| 2 | SS-->MS | | | <----- | Send preamble*, MCF* |
| | | FA: | CT105 ON (see note 2) | | |
| | | | BCS-TRA | | |
| | | | Transmit preamble, MCF | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive preamble, MCF | | |

#### 29.4.2.4.5 Test requirements

1. To be verified that the FA enters the BCS-REC state and inserts the correct ident octet in the STATUS frames. The up-conversion to the message speed has to be checked.. The condition of CT109 has to be verified (see note 2). The contents of the SYNC frames shall be checked.

2. To be verified that the FA enters the BCS-TRA state upon detection of the BCS-REC identifier and that the correct T.30 message is conveyed to the connected fax machine (down-conversion to the BCS speed). The condition of CT105 should be checked (see note 2).

### 29.4.2.5 Call release procedure

#### 29.4.2.5.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.2.5.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the call release procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

##### Reference

GSM 03.45, CCITT T.30.

#### 29.4.2.5.3 Test purpose

To verify phase E of the facsimile transmission.

#### 29.4.2.5.4 Method of test

##### Initial conditions

The activity progress of the fax call is brought to the beginning of Phase E.

##### Test procedure

The fax sends the preamble followed by the DCN frame. The FA then enters the BCS-REC state and sends the DCN frame embedded in STATUS frames to the SS. The FA enters the IDLE state again. CT108.2 will go OFF condition (see note 2) and after 200ms CT109 will go to OFF condition (see note 2) too. The MT then sends the DISC message and the call is cleared.

##### Expected sequence

| MS: | | | | | SS: |
|---|---|---|---|---|---|
| Step | Direction | | | | |
| 1 | MS-->SS | Fax: | Send preamble, DCN | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | CT108.2 OFF (see note 2) | | |
| | | | Transmit preamble*, DCN* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*, DCN* |
| | | | after 200 ms | | |
| | | | IDLE | | |
| | | MT: | Send DISC message | -----> | Receive DISC message |

#### 29.4.2.5.5 Test requirements

To be verified that CT108.2 is turned off (see note 2) and that CT109 is set to OFF (see note 2) 200ms after the DCN frame has been sent. The contents of the STATUS frames including the ident octet has to be checked (up-conversion to the message speed according to GSM 03.45). The MT shall send the DISC message.

### 29.4.2.6 CTC processing - 4th PPR for the same block

#### 29.4.2.6.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62. The FA and the facsimile device have to support the error correction mode.

#### 29.4.2.6.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the CTC processing procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

##### Reference

GSM 03.45, CCITT T.30.

#### 29.4.2.6.3 Test purpose

To verify phase D of the facsimile transmission in case of a 4th PPR for the same block.

29.4.2.6.4 Method of test

Initial conditions

The activity progress of the fax call is brought to the beginning of Phase C. The ECM shall be used. The fax transmission shall start a speed of 9,6 kBit/s.

Test procedure

The fax sends the preamble followed by the PPS-NULL(0,0) frame. The FA then enters the BCS-REC state and sends the PPS* frame embedded in STATUS frames to the SS. The SS responds with the PPR* frame requesting corrupted frames to be retransmitted. This test sequence is repeated 4 times causing the fax machine to send the CTC frame which indicates the fallback bit rate of 7 200 kBit/s The FA sends the CTC* after recognizing the new message speed to the SS. The SS responds with the CTR* frame and the fax machine retransmits the corrupted frames which are inserted into DATA frames by the FA. After every third DATA frame the FA has to insert a SYNC frame. After the retransmission, the fax machine sends the PPS-NULL(0,0) which is answered by the SS with the MCF* frame. Phase D of the fax transmission is completed. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | SS: | |
|---|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Send training, fax message | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | MSG-REC | | |
| | | | Send fax message* | -----> | Receive fax message* |
| | | | " | | " |
| | | | " | | " |
| | | | " | | " |
| | | | CT109 OFF (see note 2) | | |
| | | | IDLE | | |
| 2 | MS-->SS | FA: | Send at least 5 SYNC frames | -----> | Receive SYNC frames |
| 3 | MS-->SS | Fax: | Send preamble, PPS-NULL | | |
| | | FA: | CT109 ON (see note 2) | | |

| | | Fax: | Receive preamble, MCF | | |

#### 29.4.2.6.5 Test requirement

It shall be verified that the FA transmits 1 SYNC frame every 3 DATA frames.

### 29.4.2.7 Transition from Facsimile to Speech - Procedure interrupt generated by receiving station

#### 29.4.2.7.1 Definition and applicability

This test is applicable to an MS supporting TS 61.

#### 29.4.2.7.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the ICM procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

#### Reference

GSM 03.45, CCITT T.30.

#### 29.4.2.7.3 Test purpose

To verify the transition from fax to speech in case of an MS supporting TS 61.

29.4.2.7.4 Method of test

Initial conditions

The activity progress of the fax call is brought to phase C (message phase). The ECM shall not be used.

Test procedure

During the message phase a procedure interrupt is generated by the SS, which is executed as soon as phase D is entered. The SS then sends the PIP frame causing an alert at the mobile side. When the operator at the mobile side goes on line the PRI-Q frame is generated and results in an alarm at the SS side. The operator at this side going on line completes the PRI handshaking by causing the PIP frame to be sent. Upon completion of the PRI handshaking the MT executes the MODIFY procedure, which leads to the speech phase. Then the call is cleared by manual intervention at the MT or the facsimile phase maybe reselected.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | Message Procedure (as described above) | | | | Operator intervention requested |
| 2 | MS-->SS | Fax: | Send preamble, EOP | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | Send preamble*, EOP* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*, EOP* |
| | | | IDLE | | |
| 3 | SS-->MS | | | <----- | Send preamble*, PIP* |
| | | FA: | CT105 ON (see note 2) | | |
| | | | BCS-TRA | | |
| | | | Transmit preamble, PIP | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive preamble, PIP | | |
| | | | Alert operator | | |
| 4 | MS-->SS | Operator goes on line | | | |
| | | Fax: | Send preamble, PRI-EOP | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | Send preamble*, PRI-EOP* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*, PRI-EOP* |
| | | | IDLE | | Alert operator |
| | | MT: | CT106/109 OFF (see note 2) | | |
| 5 | SS-->MS | | | | Operator goes on line |
| | | | | <----- | Send preamble*, PIP* |
| | | FA: | CT105 ON (see note 2) | | |
| | | | BCS-TRA | | |
| | | | Transmit preamble, PIP | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive preamble, PIP | | |
| 6 | MS-->SS | FA: | CT108.2 OFF (see note 2) | | |
| | | MT: | Send MODIFY message | -----> | Receive MODIFY m. |
| | | | | <----- | Send MODIFY COMPLETE |
| | | | CT107 OFF (see note 2) | | |
| | | | SPEECH PHASE | | |

#### 29.4.2.7.5 Test requirements

1. To be verified that CT106/109 are in OFF (see note 2) condition.
2. To be verified that CT108.2 goes to OFF (see note 2) upon completion of the PRI handshaking, that this transition to OFF triggers the MODIFY message to be sent and that the reception of the MODIFY COMPLETE message causes CT107 to be set to OFF (see note 2) condition by the MT. In addition the availability of the speech channel shall be checked.

### 29.4.2.8 Transition from Facsimile to Speech - Procedure interrupt generated by transmitting station

#### 29.4.2.8.1 Definition and applicability

This test is applicable to an MS supporting TS 61.

#### 29.4.2.8.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the ICM procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

##### Reference

GSM 03.45, CCITT T.30.

#### 29.4.2.8.3 Test purpose

To verify the transition from fax to speech in case of an MS supporting TS 61.

#### 29.4.2.8.4 Method of test

##### Initial conditions

The activity progress of the fax call is brought to phase C (message phase). The ECM shall not be used.

##### Test procedure

During the message phase a procedure interrupt is generated at the MS side, which is executed as soon as phase D is entered. The fax then sends the PRI-EOP frame causing an alert at the SS side. When the operator at the SS side goes on line the PIP frame is generated and results in an alarm at the MS side. The operator at this side going on line completes the PRI handshaking by causing the PRI-EOP frame to be sent. Upon completion of the PRI handshaking the MT executes the MODIFY procedure, which leads to the speech phase. Then the call is cleared by manual intervention at the MT or the facsimile phase maybe reselected.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | Message Procedure (as described above)<br>Operator intervention requested | | | | |
| 2 | MS-->SS | Fax: | Send preamble, PRI-EOP | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | Send preamble*, PRI-EOP* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*, PRI-EOP* |
| | | | IDLE | | |
| 3 | SS-->MS | | | <----- | Send preamble*, PIP* |
| | | FA: | CT105 ON (see note 2) | | |
| | | | BCS-TRA | | |
| | | | Transmit preamble, PIP | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive preamble, PIP | | |
| | | | Alert operator | | |
| 4 | MS-->SS | Operator goes on line | | | |
| | | MT: | CT106/109 OFF (see note 2) | | |
| | | Fax: | Send preamble, PRI-EOP | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | Send preamble*, PRI-EOP* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*, PRI-EOP* |
| | | | IDLE | | |
| 5 | MS-->SS | FA: | CT108.2 OFF (see note 2) | | |
| | | MT: | Send MODIFY message | -----> | Receive MODIFY m. |
| | | | | <----- | Send MODIFY COMPLETE |
| | | | CT107 OFF (see note 2) | | |
| | | | SPEECH PHASE | | |

#### 29.4.2.8.5 Test requirements

1. To be verified that CT106/109 are in OFF (see note 2) condition.
2. To be verified that CT108.2 goes to OFF (see note 2) upon completion of the PRI handshaking, that this transition to OFF triggers the MODIFY message to be sent and that the reception of the MODIFY COMPLETE message causes CT107 to be set to OFF (see note 2) condition by the MT. In addition the availability of the speech channel shall be checked.

### 29.4.2.9 Quality check

#### 29.4.2.9.1 Definition and applicability

This test is applicable to all configurations supporting transparent facsimile group 3.

#### 29.4.2.9.2 Conformance requirement

The configuration supporting transparent facsimile group 3 shall decode the T.4 coding and shall generate a document.

Reference

GSM 03.45, CCITT T.21, CCITT T.4.

29.4.2.9.3 Test purpose

To verify the quality of the received document.

29.4.2.9.4 Method of test

Initial conditions

The document has been received at the called side.

Test procedure

The quality of the received document at the SS side shall be checked.

29.4.2.9.5 Test requirement

The contents of the transmitted and the received document shall be the same.

## 29.4.3 Mobile terminated call

### 29.4.3.1 Call Establishment Procedure

#### 29.4.3.1.1 Alternate Speech/Facsimile

29.4.3.1.1.1 DCD Mobile Terminated

29.4.3.1.1.1.1 Definition and applicability

This test is applicable to an MS supporting TS 61.

29.4.3.1.1.1.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the ICM procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, CCITT T.30

29.4.3.1.1.1.3 Test purpose

To verify the transition from speech to fax in case of an MS supporting TS 61 and that the circuit and tone handling of the MT and FA is correct in case of an MT DCD.

29.4.3.1.1.1.4 Method of test

Initial conditions

A TS 61 s/f call is set up. The speech phase is active.

Test procedure

The transition from speech to fax is initiated by manual intervention at both ends of the connection, i.e. the data call direction DCD is mobile terminated. Upon connection to line the FA turns on CT108.2 (see note 2) as a basic requirement for the transition from speech to fax. Now, within the next 3 seconds the FA has to detect the DCD, which is in this case mobile terminated, i.e. CT105 is set to OFF condition (see note 2). The following ICM procedure via the MODIFY message is carried out by the MT 3 seconds after circuit CT108.2 (see note 2) was set to ON condition. On completion of the ICM the synchronization of the TCH begins and after its completion the MT has to set CT107 to ON condition (see note 2). When CT106/109 are set to ON (see note 2) phase A is completed. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Connect to line (see note 1) | Connect to line (see note 1) | |
| | | FA: | CT108.2 ON (see note 2)<br>Detect DCD<br>CT105 OFF (see note 2) | | |
| | | MT: | Send MODIFY message<br>3 seconds after CT108.2 ON (see note 2) | ------> | Receive MODIFY message |
| 2 | SS-->MS | | | <----- | Send MODIFY COMPLETE |
| 3 | MS<->SS | | TCH Synchronization | <----> | TCH Synchronization |
| | | MT: | CT107 ON (see note 2), when synchronized | | |
| 4 | SS-->MS | | | <----- | Set X and SB bit in V.110 frame |
| | | MT: | CT106/109 ON (see note 2) | | |
| | | FA: | Enter BCS-REC state | | Enter BCS-TRA state |

29.4.3.1.1.5 Test requirements

1. The condition of CT108.2 and CT105 is verified (see note 2); CT106, 107, 109 have to be in OFF (see note 2) condition. The MODIFY message has to be sent 3 seconds +/- 10% after circuit CT108.2 has gone to ON (see note 2) condition.

2. The RCSD-IE shall not be included in the MODIFY message.

3. To be verified that the MT begins the synchronization phase by sending the pattern 1/OFF after the reception of the MODIFY COMPLETE message, that CT107 is turned on (see note 2) by the MT after successful synchronization.

4. To be verified that CT106 and CT109 are turned on (see note 2), when in the V.110 frames received from the SS the X and SB bits are set. The state of the FA shall be verified (->BCS-REC).

29.4.3.1.1.2 DCD mobile originated

29.4.3.1.1.2.1 Definition and applicability

This test is applicable to an MS supporting TS 61.

29.4.3.1.1.2.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the ICM procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, CCITT T.30.

29.4.3.1.1.2.3 Test purpose

To verify the transition from speech to fax in case of an MS supporting TS 61 and that the circuit and tone handling of the MT and FA is correct in case of an MO DCD.

29.4.3.1.1.2.4 Method of test

Initial conditions

A TS 61 s/f call is set up. The speech phase is active.

Test procedure

The transition from speech to fax is initiated by manual intervention at both ends of the connection, i.e. the data call direction DCD is mobile originated. Upon connection to line the FA turns on CT108.2 (see note 2) as a basic requirement for the transition from speech to fax. Now, within the next 3 seconds the FA has to detect the DCD, which is in this case mobile originated, i.e. CT105 is set to ON condition (see note 2), indicating that the MT has to include the RCSD-IE in the MODIFY message. The following ICM procedure via the MODIFY message is carried out by the MT 3 seconds after circuit CT108.2 (see note 2) was set to ON condition. On completion of the ICM the synchronization of the TCH begins and after its completion the MT has to set CT107 to ON condition (see note 2). When CT106/109 are set to ON (see note 2), phase A is completed. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Connect to line (see note 1) | | Connect to line (see note 1) |
| | | FA: | CT108.2 ON (see note 2)<br>Detect DCD<br>CT105 ON (see note 2) | | |
| | | MT: | Send MODIFY message with RCSD-IE 3 seconds after CT108.2 ON (see note 2) | ------> | Receive MODIFY message |
| 2 | SS-->MS | | | <----- | Send MODIFY COMPLETE with RCSD-IE |
| 3 | MS<->SS | | TCH Synchronization | <----> | TCH Synchronization |
| | | MT: | CT107 ON (see note 2), when synchronized | | |
| | | FA: | Generate CED (see note 2) | | |
| | | Fax: | Detect CED (see note 2) | | |
| 4 | SS-->MS | | | <----- | Set X and SB bit in modified V.110 frame |
| | | MT: | CT106/109 ON (see note 2) | | |
| | | FA: | Enter BCS-TRA state | | Enter BCS-REC state |

29.4.3.1.1.2.5 Test requirements

1. The condition of CT108.2 and CT105 is verified (see note 2); CT106, 107, 109 have to be in OFF (see note 2) condition.

2. The MODIFY message containing the RCSD-IE has to be sent 3 seconds +/- 10% after circuit CT108.2 has gone to ON (see note 2) condition.

3. To be verified that the MT begins the synchronization phase by sending the pattern 1/OFF after the reception of the MODIFY COMPLETE message, that CT107 is turned on (see note 2) by the MT after successful synchronization. The CED (see note 2) tone has to be transmitted by the FA.

4. To be verified that CT106 and CT109 are turned on (see note 2), when in the modified V.110 frames received from the SS the X and SB bits are set. The state of the FA shall be verified (-> BCS-TRA).

### 29.4.3.1.2 Automatic facsimile

#### 29.4.3.1.2.1 Definition and applicability

This test is applicable to an MS supporting TS 62.

#### 29.4.3.1.2.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the call setup procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, GSM 07.01, CCITT T.30.

#### 29.4.3.1.2.3 Test purpose

To verify that the circuit and tone handling of the MT and FA is correct.

#### 29.4.3.1.2.4 Method of test

Initial conditions

The MS, configured for the fax call, is updated. Then the call establishment phase begins.

Test procedure

The SS will send the SETUP message causing CT125 (see note 2) going to ON condition at the MT. The FA then sends ring current (see note 2) to the fax machine, which will connect to line. The FA sets CT108.2 (see note 2) to ON condition which causes the MT to send the CONNECT message towards the SS. When the TCH is available (indicated by the CONNECT ACK message) the synchronization phase begins, i.e. both entities start sending the synchronization pattern 1/OFF. CT106, 107, 109 have to be in OFF (see note 2) condition. Upon completion of the synchronization phase the MT sets CT107 (see note 2) to ON condition causing the FA to send the CNG tone (see note 2) while the SS turns on CT108.2 causing the CED tone to be sent. Then the SS sets CT106 and 109 to ON (see note 2) at the MT by means of the modified V.110 X and SB bits, which completes Phase A. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | SS-->MS | | | <----- | Send SETUP message |
| | | MT: | CT125 ON (see note 2) | | |
| | | FA: | Cause ring current to flow (see note 2) | | |
| 2 | MS-->SS | Fax: | Connect to line (see note 1) | | |
| | | FA: | CT108.2 ON (see note 2) | | |
| | | MT: | Send CONNECT message | ------> | Receive CONNECT message |
| 3 | SS-->MS | | | | Send CONN ACK message |
| 4 | MS<->SS | | TCH Synchronization | <----> | TCH Synchronization |
| | | MT: | CT107 ON (see note 2), when completed | | |
| | | FA: | Generate CNG (see note 2) | | |
| | | Fax: | Receive CNG (see note 2) | | |
| 5 | SS-->MS | | | <----- | Set X and SB bit in modified V.110 frame |
| | | MT: | CT106/109 ON (see note 2) | | |
| 6 | | FA: | Enter BCS-REC state | | Enter BCS-TRA state |

#### 29.4.3.1.2.5 Test requirements

1. The condition of CT125 (see note 2) shall be verified.
2. CT108.2 to be verified (see note 2) and the CONNECT message has to be sent by the MT.
3. To be verified that at the MT CT106, 107, 109 are in OFF (see note 2) condition, that the MT begins the synchronization phase by sending the pattern 1/OFF, that CT107 is turned on (see note 2) by the MT after successful synchronization and that the CNG tone (see note 2) is sent.
4. It shall be verified that CT106 and CT109 are turned on (see note 2), when in the modified V.110 frames received from the SS the X and SB bits are set.
5. The state of the FA shall be verified (-> BCS-REC).

### 29.4.3.2 Pre-message procedure

#### 29.4.3.2.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.3.2.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the pre-message procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

##### Reference

GSM 03.45, CCITT T.30.

#### 29.4.3.2.3 Test purpose

To verify the correct handling of the T.30 DIS/DCS/TCF frames.

#### 29.4.3.2.4 Method of test

##### Initial conditions

The activity progress of the fax call is brought to the beginning of Phase B. The fax transmission shall start using a speed of 9,6 kBit/s.

##### Test procedure

After phase A the FA being in BCS-REC state, sends the DIS* frame in order to indicate the capabilities of the connected fax and the FA and returns to the idle state. The SS's answer to the DIS is the DCS*. Upon detection of the BCS-REC identifier the FA enters the BCS-TRA state, receives the DCS* and transmits the DCS to the fax. After being for 75 ± 20 ms in IDLE state the FA autonomously enters the MSG-TRA state and begins transmitting the training sequence towards the fax without being triggered by the remote FA/SS. Meanwhile the SS sends the TCF*, which is buffered by the FA. When the training is done the FA transmits the buffered TCF towards the fax. Then the CFR* frame is transmitted to the SS. Now, phase B is completed and the data transfer phase C begins. Then the call is cleared by manual intervention at the MT or the call activity progress proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Send preamble,DIS | | |
| | | FA: | BCS-REC | | |
| | | | Filter DIS | | |
| | | | Send preamble*,DIS* | -----> | Receive preamble*,DIS* |
| | | | CT109 OFF (see note 2) | | |
| | | | IDLE | | |
| 2 | SS-->MS | | | <----- | Send preamble*,DCS* |
| | | FA: | CT105 ON (see note 2) | | |
| | | | BCS-TRA | | |
| | | | Monitor DCS | | |
| | | | Transmit preamble,DCS | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive preamble,DCS | | |
| 3 | SS-->MS | | | <----- | Send TCF* |
| | | FA: | CT105 ON (see note 2) | | |
| | | | MSG-TRA | | |
| | | | Initiate training after 75 ms +-20 ms in IDLE | | |
| | | | Transmit TCF | | |
| | | | CT105 OFF (see note 2) | | |
| | | | IDLE | | |
| | | Fax: | Receive training,TCF | | |
| 4 | MS-->SSFax: | | Send preamble, CFR | | |
| | | FA: | CT109 ON (see note 2) | | |
| | | | BCS-REC | | |
| | | | Send preamble*,CFR* | | |
| | | | CT109 OFF (see note 2) | -----> | Receive preamble*,CFR* |
| | | | IDLE | | |

#### 29.4.3.2.5 Test requirements

1. To be verified that the DIS is filtered and that the correct up-conversion to the message speed is applied. CT109 should go to OFF (see note 2).

2. The DCS shall indicate a message speed of 7 200 bit/s and the down-conversion to the BCS speed shall be verified.

3. The FA, after the reception of the DCS, sends SYNC frames for 75 ± 20 ms and changes to the MSG-TRA state without being triggered by the SS. When the training is over the TCF is transmitted to the fax.

4.The condition of CT109 (see note 2), the ident octet of the STATUS frames and the up-conversion to the message speed shall be verified.

### 29.4.3.3 Message procedure

#### 29.4.3.3.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.3.3.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the message procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, CCITT T.30, CCITT T.4, CCITT T.21.

#### 29.4.3.3.3 Test purpose

To verify the facsimile data transmission phase.

#### 29.4.3.3.4 Method of test

Initial conditions

The activity progress of the fax call is brought to the beginning of Phase C. The ECM shall not be used.

Test procedure

The FA is in idle state. Upon reception of the MSG-REC identifier the FA enters the MSG-TRA state, sends the MSG-TRA identifier and initiates the training. While the training is in progress data being received is buffered and conveyed to the connected fax upon end of training. When the transmission is finished the FA is again in the IDLE state and Phase D begins. Then the call is cleared by manual intervention at the MT or the activity progress of the call will proceed to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | SS-->MS | | | <----- | Transmit STATUS interleaved with SYNC frames |
| 2 | MS-->SS | FA: | CT105 ON (see note 2)<br>MSG-TRA<br>Initiate training<br>Send STATUS interleaved with SYNC frames | -----> | |
| 3 | SS-->MS | | | <----- | Send fax message* |
| | | FA: | Buffer received data during training<br>Receive fax message* | | |
| | | | " | | " |
| | | | " | | " |
| | | | " | | " |
| | | | CT105 OFF (see note 2)<br>IDLE | | |
| | | Fax: | Receive training, fax message | | |

#### 29.4.3.3.5 Test requirements

1. To be verified that the FA enters the MSG-TRA state and inserts the correct ident octet in the STATUS frames. Training has to be initiated (see note 2). STATUS frames have to be sent interleaved with SYNC frames.

2. The condition of CT105 (see note 2) shall be checked.

### 29.4.3.4 Post-message procedure

#### 29.4.3.4.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.3.4.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the post-message procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

##### Reference

GSM 03.45, CCITT T.30

#### 29.4.3.4.3 Test purpose

To verify phase D of the facsimile transmission.

#### 29.4.3.4.4 Method of test

##### Initial conditions

The activity progress of the fax call is brought to the beginning of Phase D. The ECM shall not be used.

##### Test procedure

The SS sends the EOP* frame. The FA then enters the BCS-TRA state and conveys the EOP frame to the fax machine. The fax answers the EOP with the MCF frame. The FA will enter the BCS-REC state, transmit the BCS-REC identifier and will convey the MCF* frame to the SS. Afterwards the FA enters the IDLE state. Phase D of the fax transmission is completed. Then the call is cleared by manual intervention at the MT or the activity progress of the call will proceed to the next phase.

##### Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | SS-->MS | | | <----- | Send preamble*, EOP* |
| | | FA: | CT105 ON (see note 2)<br>BCS-TRA<br>Transmit preamble, EOP<br>CT105 OFF (see note 2)<br>IDLE | | |
| | | Fax: | Receive preamble, EOP | | |
| 2 | MS-->SS | Fax: | Send preamble, MCF | | |
| | | FA: | CT109 ON (see note 2)<br>BCS-REC<br>Send preamble*, MCF*<br>CT109 OFF (see note 2)<br>IDLE | -----> | Receive preamble*, MCF* |

#### 29.4.3.4.5 Test requirements

1. To be verified that the FA enters the BCS-TRA state upon detection of the BCS-REC identifier and that the correct T.30 message (down conversion to the message speed) is conveyed to the connected fax.
2. To be verified that the FA enters the BCS-REC state and that the correct STATUS frames are sent (up-conversion to the message speed).

### 29.4.3.5 Call release procedure

#### 29.4.3.5.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.3.5.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the call release procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

##### Reference

GSM 03.45, CCITT T.30.

#### 29.4.3.5.3 Test purpose

To verify phase E of the facsimile transmission.

#### 29.4.3.5.4 Method of test

##### Initial conditions

The activity progress of the fax call is brought to the beginning of Phase E.

##### Test procedure

The SS sends the preamble followed by the DCN frame. The FA then enters the BCS-TRA state and sends the DCN frame to the fax terminal. The FA enters the idle state again. CT108.2 (see note 2) will go OFF condition. The MT then sends the DISC message and the call is cleared.

##### Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | SS-->MS | | | <----- | Send preamble*, DCN* |
| | | FA: | CT105 ON (see note 2)<br>BCS-TRA<br>CT108.2 OFF (see note 2)<br>Generate preamble, DCN<br>CT105 OFF (see note 2)<br>IDLE | | |
| | | Fax: | Receive preamble, DCN | | |
| | | MT: | Send DISC message | -----> | Receive DISC message |

#### 29.4.3.5.5 Test requirements

To be verified that CT108.2 is turned off (see note 2) and that the correct down-conversion to the BCS speed is applied. The MT shall send the DISC message.

### 29.4.3.6 Speed conversion factor

#### 29.4.3.6.1 Definition and applicability

This test is applicable to an MS supporting TS 61 and/or TS 62.

#### 29.4.3.6.2 Conformance requirement

The MS supporting transparent facsimile group 3 shall perform the up- and down-conversion procedure and shall support the frames and the circuits at the Um-,R- and 2w-interface according the specifications referred to in the section "Reference".

Reference

GSM 03.45, CCITT T.30.

29.4.3.6.3 Test purpose

To verify the correct speed conversion for the BCS phases.

29.4.3.6.4 Method of test

Initial conditions

The activity progress of the fax call is brought to the beginning of Phase B. The ECM shall not be used.

Test procedure

The following test sequence is repeated 5 times with 5 different DCS frames indicating a message speed of 9,6/7,2/4,8/2,4 and 9,6 kBit/s. This test is done to verify that the FA detects a change of the TCH access rate and due to this updates the speed conversion factor, which is used for the up-conversion of the BCS signalling to the message speed and vice versa. Then the call is cleared by manual intervention at the MT or the activity progress of the call proceeds to the next phase.

Expected sequence

| MS: Step | Direction | | | | SS: |
|---|---|---|---|---|---|
| 1 | MS-->SS | Fax: | Send preamble,DIS | | |
| | | FA: | BCS-REC | | |
| | | | Monitor DIS | | |
| | | | Send preamble*,DIS* | -----> | Receive preamble*,DIS* |

**) only if the requested rate in the DCS differs from the existing radio channel rate (when the radio channel rate equals 9 600 kbit/s and the DCS requests 7 200 kbit/s no CMM will be executed)

#### 29.4.3.6.5 Test requirements

1. The MT shall send the CMM ACK message.
2. For 7,2/9,6 kBit/s:

   The correct up- and down-conversion shall be verified (4 STATUS frames for 1 BCS octet)

   For 4,8 kBit/s:

   The correct up- and down-conversion shall be verified (2 STATUS frames for 1 BCS octet)

   For 2,4 kBit/s:

   The correct up- and down-conversion shall be verified (1 STATUS frame for 1 BCS octet)

   The IDENT octet shall be set to BCS-REC in case of the up-conversion.

### 29.4.3.7 Quality Check

#### 29.4.3.7.1 Definition and applicability

This test is applicable to all configurations supporting transparent facsimile group 3.

#### 29.4.3.7.2 Conformance requirement

The configuration supporting transparent facsimile group 3 shall decode the T.4 coding and shall generate a document.

Reference

GSM 03.45, CCITT T.21, CCITT T.4.

#### 29.4.3.7.3 Test purpose

To verify the quality of the received document.

#### 29.4.3.7.4 Method of test

Initial conditions

The document has been received at the called side.

Test procedure

The quality of the document at the receiving side shall be checked.

#### 29.4.3.7.5 Test requirements

The contents of the transmitted and the received document shall be the same.

## 29.4.4 Notes

The following notes apply throughout the clause 29.4.

NOTE 1: By pressing the START button on the facsimile apparatus or in case of PC fax by selecting the appropriate software menu point or automatically.

NOTE 2: Or equivalent function/means having the same result.

NOTE 3: Tested by monitoring the contents of the STATUS frame ident octet identifier.

NOTE 4: If no access is available to the 2w interface, this requirement cannot always be verified.

# 30 Speech teleservices

When an artificial ear is required, the ITU-T Recommendation P.57 [107] Type 1 artificial ear may be used for up to release 4 handsets. See below for details.

If requested by the terminal supplier, the ITU-T Recommendation P.57 [107] Type 3.2 artificial ear shall be used. In this case the following shall apply:

- Either the low leakage option or the high leakage option of Type 3.2 artificial ear may be adopted;
- The force against the ear shall be as specified in ITU-T Recommendation P.57 [107].
- Sound pressure measurements shall be referred to the ERP as specified in ITU-T Recommendation P.57 [107] or DRP according to the Terminal Supplier's request.
- No leakage correction shall be made in the calculation of RLR (i.e. $L_E$=0).

If requested by the terminal supplier, the ITU-T Recommendation P.57 [107] Type 3.4 artificial ear may be used for Release 96 MS or later. The positioning is defined in ITU-T Recommendation P.64.

If requested by the terminal supplier, the ITU-T Recommendation P.57 [107] Type 3.3 artificial ear may be used for Release 96 MS or later. The positioning is defined in ITU-T Recommendation P.64.

Note that for measurement of STMR in release 4 or later MS as specified in TS 26.132, the 3.2 ear with the low leakage option shall be used. For release 4 it is also possible to use the type 1 ear.

The manufacturer declares in the IXIT statement which type of artificial ear will be used for teleservices speech testings.

NOTE 1: An MS may be either a handset MS, a handsfree MS or a combined handset and handsfree MS. The test description for handsfree operation, however, at the moment only covers the stability margin as no test method could be defined for the other parameter.

NOTE 2: Frequency settings in the following tests are taken from ISO 3, R10 series or R40 series or from table 2 of ITU-T P.79. A departure from the nominal frequencies of +5 % below 240 Hz and + 2 % at 240 Hz and above is accepted. Any sub-multiple of the sampling frequency of 8 kHz shall be avoided. In the case of 4 kHz the departure is restricted to -2 %.

NOTE 3: The measurement accuracy for signal level is +/- 0,2 dB and for sound pressure +/-0,6 dB.

NOTE 4: The digital test signals shall be generated as 8 bit A-law companded PCM signals, which internally in the SS are expanded according to ITU-T Rec. G.721 (Law=1) to 13 bit linear before being applied to the MS via the DAI.

NOTE 5: When measuring signal levels on the DAI, a digital measuring instrument is connected to the 64 kbit/s output of the A-law compression equipment in the SS, which is in turn connected to the DAI in the MS.

NOTE 6: Measurements shall be possible with and without psophometric weighting according to Rec. ITU-T G.223, table 4.

## 30.1 Sending sensitivity/frequency response

### 30.1.1 Definition and applicability

The sending sensitivity frequency response is, as a function of the input test signal frequency, the ratio expressed in dB between the output level at the Digital Audio Interface (DAI) or at the audio output of the reference speech decoder of the SS and the input sound pressure in the artificial mouth required to obtain this.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

### 30.1.2 Conformance requirement

The sending sensitivity frequency response shall be within the mask given in GSM 03.50.

GSM 03.50; 3.8.1.1, table 1.

### 30.1.3 Test purpose

To verify that the sending sensitivity frequency response is within the mask given in GSM 03.50, 3.8.1.1, table 1.

### 30.1.4 Method of test

#### 30.1.4.1 Initial conditions

When measured at the DAI:

a) The handset is mounted in the LRGP (see annex A of ITU-T Recommendation P.76). The earpiece is sealed to the knife-edge of the artificial ear.

b) A pure tone with a sound pressure of -4,7 dBPa (in accordance with ITU-T Recommendation P.64) is applied at the mouth reference point (MRP) as described in ITU-T Recommendation P.64 using an artificial mouth conforming to ITU-T Recommendation P.51.

c) A digital measuring instrument, or high quality digital decoder followed by an analogue level measuring set, is connected to the Digital Audio Interface (DAI). The DAI is set to the operating mode "Test of acoustic devices and A/D & D/A ".

When measured at the output of the reference speech decoder of the SS:

a) The handset is mounted in the LRGP and the earpiece is sealed to the knife-edge of an artificial ear.

b) A full rate speech call is set up between the MS and the SS.

c) Artificial speech conforming to ITU-T Recommendation P.50, shall be applied to the MRP, at a wideband sound pressure level of -4,7 dBPa. This implementation could be a real time algorithm producing the artificial speech or a pre-recorded tape of the artificial speech.

d) The artificial speech shall comprise of a concatenation of three 10 s intervals of "male" and "female" voice. The first 10 s interval is not used for measurement purposes but allows any noise/echo cancelling devices in the MS to adapt. The second and third 10 s intervals consist of separately "male" and "female" artificial voice.

#### 30.1.4.2 Procedure

When measured at the DAI:

The SS measures the output level represented by the PCM bit stream at the DAI (pin 23) at one-twelfth-octave intervals as given by the R40 series of preferred numbers in ISO 3 for frequencies from 100 Hz to 4 000 Hz inclusive.

When measured at the output of the reference speech decoder of the SS:

The 1/3 octave filtered long-term average spectrum of the signal is measured at the analogue or digital output of the reference speech decoder of the SS and an average for the "male" and "female" voices is obtained. The sending sensitivity/frequency response is calculated as the difference between the 1/3 octave input power and the 1/3 octave output power.

### 30.1.5 Test requirement

The sending sensitivity/frequency response shall be within a mask given in table 30.1. The mask can be drawn with straight lines between the breaking points in the table on a logarithmic (frequency) vs linear (dB sensitivity) scale.

All sensitivity levels are dB on an arbitrary scale.

**Table 30.1**

| Frequency (Hz) | Upper Limit (dB) | Lower Limit (dB) |
|---|---|---|
| 100 | -12 | |
| 200 | 0 | |
| 300 | 0 | -12 |
| 1000 | 0 | -6 |
| 2000 | 4 | -6 |
| 3000 | 4 | -6 |
| 3400 | 4 | -9 |
| 4000 | 0 | |

## 30.2 Sending loudness rating

### 30.2.1 Definition and applicability

The Sending Loudness Rating (SLR) is a means of expressing the sending frequency response based on objective measurements in a way which relates to how a speech signal would be perceived by a listener.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

### 30.2.2 Conformance requirement

The Sending Loudness Rating (SLR) shall be 8 +/- 3 dB.

GSM 03.50; 3.1.1.

### 30.2.3 Test Purpose

To verify that the Sending Loudness Rating (SLR) is 8 +/- 3 dB.

### 30.2.4 Method of test

#### 30.2.4.1 Initial conditions

When measured at the DAI:

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

When measured at the output of the reference speech decoder of the SS:

A full rate speech call is set up between the MS and the SS.

#### 30.2.4.2 Procedure

When measured at the DAI:

a) The sending sensitivity is measured at each of the 14 frequencies given in table 2 of ITU-T P.79, bands 4 to 17.

b) The sensitivity is expressed in terms of dBV/Pa and the SLR is calculated according to ITU-T Recommendation P.79 formula 4.19 b of ITU-T P.79, over bands 4 to 17, using the sending weighting factors from ITU-T Recommendation P.79 table 2, adjusted according to table 3 of ITU-T Recommendation P.79.

When measured at the output of the reference speech decoder of the SS:

a) The sending sensitivity from the MRP to the analogue or digital output of the reference speech decoder of the SS is determined according to 30.1.4.1, 30.1.4.2.

b) The sensitivity is expressed in terms of dBV/Pa and the SLR shall be calculated according to ITU-T Recommendation P.79 formula 2.1, over bands 4 to 17, and using m = 0.175 and the sending weighting factors from ITU-T Recommendation P.79 table 1.

### 30.2.5 Test requirement

The SLR shall be 8 +/- 3 dB.

## 30.3 Receiving sensitivity/frequency response

### 30.3.1 Definition and applicability

The receiving sensitivity frequency response is, as a function of the input test signal frequency, the ratio expressed in dB between the output sound pressure in the artificial ear and the input level, represented by the PCM bit stream at the Digital Audio Interface (DAI) or the level at the SS audio input, required to obtain this.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

### 30.3.2 Conformance requirement

The receiving sensitivity frequency response shall be within the mask given in GSM 03.50.

GSM 03.50; 3.8.1.2, table 2.

### 30.3.3 Test purpose

To verify that the receiving sensitivity frequency response is within the mask given in GSM 03.50; 3.8.1.2, table 2.

### 30.3.4 Method of test

#### 30.3.4.1 Initial conditions

When measured from the DAI:

a) The handset is mounted in the LRGP and the earpiece is sealed to the knife-edge of the artificial ear.

b) A digital signal generator is connected at the digital interface delivering a signal equivalent to a pure tone level of -16 dBm0, see ITU-T Recommendation P.64.

c) The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

When measured from the input of the reference speech encoder of the SS:

a) The handset is mounted in the LRGP and the earpiece is sealed to the knife-edge of the artificial ear.

b) A full rate speech call is set up between the MS and the SS.

c) Artificial speech conforming to ITU-T Recommendation P.50, shall be applied to the analogue or digital input of the reference speech encoder of the SS, at a wideband level of -16 dBm0. This implementation could be a real time algorithm producing the artificial speech or a pre-recorded tape of the artificial speech.

d) The artificial speech shall comprise of a concatenation of three 10 s intervals of "male" and "female" voice. The first 10 s interval is not used for measurement purposes but allows any echo cancellation devices in the MS to adapt. The second and third 10 s intervals consist of separately "male" and "female" artificial voice.

#### 30.3.4.2 Procedure

When measured from the DAI:

Measurements are made at one twelfth-octave intervals as given in the R.40 series of preferred numbers in ISO 3 for frequencies from 100 Hz to 4 kHz inclusive. At each frequency, the sound pressure in the artificial ear is measured by connecting a suitable measuring set to the artificial ear.

When measured from the input of the reference speech encoder of the SS:

The 1/3 octave filtered long-term average spectrum of the signal is measured and an average for the "male" and "female" voices is obtained. The receiving sensitivity/frequency response is calculated as the difference between the 1/3 octave input power and the 1/3 octave output power.

### 30.3.5 Test requirement

The receiving sensitivity/frequency response shall be within the mask given by table 30.2. The mask can be drawn with straight lines between the breaking points in the following table on a logarithmic (frequency) vs linear (dB sensitivity) scale.

All sensitivity levels are dB on an arbitrary scale.

**Table 30.2**

| Frequency (Hz) | Upper Limit (dB) | Lower Limit (dB) |
|---|---|---|
| 100 | -12 | |
| 200 | 0 | |
| 300 | 2 | -7 |
| 500 | * | -5 |
| 1000 | 0 | -5 |
| 3000 | 2 | -5 |
| 3400 | 2 | -10 |
| 4000 | 2 | |

NOTE: * The limit at intermediate frequencies lies on a straight line drawn between the given values on a log (frequency) vs linear (dB) scale.

## 30.4 Receiving loudness rating

### 30.4.1 Definition and applicability

The Receiving Loudness Rating (RLR) is a means of expressing the receiving frequency response based on objective measurements in a way which relates to how a speech signal would be perceived by a listener.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

### 30.4.2 Conformance requirement

1) The nominal Receiving Loudness Rating (RLR) shall be 2 +/- 3 dB.

   If a user controlled receive volume control is provided the equipment shall meet this nominal value for at least one setting of the control.

   GSM 03.50; 3.1.1.

2) If a user controlled receive volume control is provided the Receive Loudness Rating (RLR) shall not be less than -13 dB when the control is set to maximum.

   GSM 03.50; 3.1.1.

### 30.4.3 Test purpose

1) To verify that the nominal Receiving Loudness Rating (RLR) is 2 +/- 3 dB.

2) To verify that if a user controlled receive volume control is provided the Receive Loudness Rating (RLR) is not less than -13 dB when the control is set to maximum.

#### 30.4.4 Method of test

##### 30.4.4.1 Initial conditions

When measured at the DAI:

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

When measured at the output of the reference speech decoder of the SS:

A full rate speech call is set up between the MS and the SS.

##### 30.4.4.2 Procedure

When measured at the DAI:

a) The receiving sensitivity is measured at each of the 14 frequencies listed in table 2 of ITU-T Recommendation P.79, bands 4 to 17.

b) The sensitivity is expressed in terms of dBPa/V and the RLR is calculated according to ITU-T Recommendation P.79 formula 4.19 c, over bands 4 to 17, using the receiving weighting factors from table 2 of ITU-T Recommendation P.79, adjusted according to table 3 of ITU-T Recommendation P.79.

c) The artificial ear sensitivity must be corrected according to the real ear correction of table 4 of ITU-T Recommendation P.79.

NOTE: The values of real ear correction in ITU-T Recommendation P.79 table 4 were derived for one type of handset conforming to the shape defined in ITU-T Recommendation P.35.

These values are used in this EN because there is no measurement method agreed for the real ear correction. If a method of measurement is agreed, it is intended to change this EN to use the values appropriate to each handset.

When measured from the input of the reference speech encoder of the SS:

a) The receiving sensitivity from the analogue or digital input of the reference speech encoder of the SS to the output of the artificial ear is determined according to 30.3.4.1, 30.3.4.2.

b) The sensitivity is expressed in terms of dBPa/V and the RLR shall be calculated according to ITU-T Recommendation P.79 formula 2.1, over bands 4 to 17, using m = 0,175 and the receiving weighting factors from table 1 of ITU-T Recommendation P.79.

#### 30.4.5 Test requirement

If no user controlled receive volume control is provided, the RLR shall be 2 +/- 3 dB.

If a user controlled receive volume control is provided, the RLR shall meet this nominal value for (at least) one setting of the receive volume control.

When the receive volume control is set to maximum the RLR shall not be less than (i.e. louder than) -13 dB.

## 30.5 Side tones

### 30.5.1 Side Tone Masking Rating (STMR)

#### 30.5.1.1 Definition and applicability

The sidetone loudness ratings are a means of expressing the path loss from the artificial mouth to the artificial ear based on objective single tone measurements in a way that relates to how a speaker will perceive his own voice when speaking (talker sidetone, expressed by the sidetone masking rating - STMR), or how a listener will perceive the background noise picked up by the microphone (listener sidetone rating - LSTR).

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

#### 30.5.1.2 Conformance requirement

The nominal value of the Side Tone Masking Rating (STMR) shall be 13 +/- 5 dB. Where a user controlled receiving volume control is provided the STMR shall meet the requirement at the setting where the RLR is equal to the nominal value.

GSM 03.50; 3.10.1.

#### 30.5.1.3 Test purpose

1) To verify that the Side Tone Masking Rating (STMR) is 13 +/- 5 dB.

2) To verify that is a user controlled receiving volume control is provided, the STMR is 13 +/- 5 dB at the setting where the RLR is equal to the nominal value.

#### 30.5.1.4 Method of test

##### 30.5.1.4.1 Initial conditions

a) The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

b) The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

##### 30.5.1.4.2 Procedure

a) The SS sends a PCM bit stream coded with the value No 1 over the DAI (pin 25). Or alternatively the activation of the A/D and D/A converters is performed via a call setup, in which case the DAI connection between the MS and SS, and the PCM bit stream are optional.

NOTE: The idle channel noise in the receiving direction is the acoustic sound pressure in the artificial ear when the digital input signal at the DAI is the PCM coded value No. 1.

b) The SS applies a pure tone with a sound pressure of -4,7 dBPa at the mouth reference point as described in ITU-T P.64 using an artificial mouth conforming to ITU-T P 51.

c) For each frequency given in table 2 of ITU-T P.79, bands 4 to 17, the sound pressure in the artificial ear is measured.

d) The sidetone path loss (LmeST) is expressed in dB and the STMR (in dB) is calculated from the formula 8.4 of ITU-T Recommendation P.79, using the weighting factors of column (3) in table 6 of ITU-T Recommendation P.79 (unsealed), and values of LE in accordance with table 4 of ITU-T Recommendation P.79.

#### 30.5.1.5 Test requirement

The STMR shall be 13 +/- 5 dB.

Where a user controlled receive volume control is provided, the STMR shall meet the requirement given above at the setting where the RLR is equal to the nominal value.

### 30.5.2 Listener Side Tone Rating (LSTR)

#### 30.5.2.1 Definition and applicability

The Listener Sidetone Rating (LSTR) is considered a major parameter affecting the user perception of the system.

The requirements and this test is applicable to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

#### 30.5.2.2 Conformance requirement

The value of the Listener Sidetone Rating (LSTR) shall not be less than 15 dB.

GSM 03.50, 3.10.1.

#### 30.5.2.3 Test purpose

To verify that the value of LSTR is not less than 15dB.

#### 30.5.2.4 Method of test

##### 30.5.2.4.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

The SS sends a PCM bit stream coded with the value No. 1 over the DAI (pin 25) to the MS.

##### 30.5.2.4.2 Procedure

a) The sound field is calibrated in the absence of any local obstacles. The averaged field shall be uniform to within +4 dB/-2 dB within a radius of 0,15 m of the MRP, when measured in one-third octave bands from 100 Hz to 8 kHz (bands 1 to 20).

b) A calibrated half-inch microphone is mounted at MRP. The sound field is measured in one-third octave bands. The spectrum shall be "Pink noise" as described in ITU-T recommendation P.64 annex B to within +/-1 dB and the level shall be adjusted to 70 dBA (-24 dBPa(A)). The tolerance on this level is +/-1 dB.

c) The artificial mouth and ear are placed in the correct position relative to MRP, the handset is mounted at LRGP and the earpiece is sealed to the knife-edge of the artificial ear.

d) Measurements are made in one-third octave bands for the 14 bands centred at 200 Hz to 4 kHz (bands 4 to 17). For each band the sound pressure in the artificial ear shall be measured by connecting a suitable measuring set to the artificial ear.

e) The listener sidetone path loss is expressed in dB and the LSTR shall be calculated from the ITU-T Recommendation P.79 formula 8-4, using the weighting factors in column (3) in table 6 of the Recommendation, and the values of LE; in accordance with table 4 of the Recommendation.

#### 30.5.2.5 Test requirement

The LSTR shall not be less than 15 dB.

## 30.6 Telephone Acoustic coupling Loss (TAL)

### 30.6.1 Echo Loss (EL)

#### 30.6.1.1 Definition and applicability

The echo loss is the path loss from the input of the reference speech encoder of the SS to the output of the reference speech decoder of the SS.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to relese 1999 handset MS supporting speech.

#### 30.6.1.2 Conformance requirement

The echo loss from the input to the output of the reference speech codec in the SS shall be at least 46 dB.

GSM 03.50; 3.4.3.2.

#### 30.6.1.3 Test purpose

To verify that the echo loss from the input to the output of the reference speech codec in the SS is at least 46 dB.

#### 30.6.1.4 Method of test

##### 30.6.1.4.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Normal operation".

The SS sets up a speech call according to the generic call set up procedure.

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

Where a user controlled volume control is provided it is set to maximum.

##### 30.6.1.4.2 Procedure

An implementation of the ITU-T P.50 artificial speech is connected to the analogue or digital input of the reference speech encoder of the SS. This implementation is either a real time algorithm producing the artificial speech or a pre-recorded tape of artificial speech. Both "male" and "female" artificial speech is required.

A ten second segment of the "male" artificial speech is applied to the analogue or digital input of the reference speech encoder of the SS. The third octave power of the input signal is measured. The echo loss signal is not measured at this stage as the first ten second segment is used to allow any acoustic echo cancellation devices within the MS to adapt to the echo path.

Immediately after a second ten second segment of the "male" artificial speech is applied to the analogue or digital input of the reference speech encoder of the SS. The third octave power of the echo signal is measured at the analogue or digital output of the reference speech decoder of the SS.

The difference between the third octave input power and the third octave output power is entered into the ITU-T G.122 TCL algorithm and the acoustic echo loss calculated.

The test is repeated with the "female" artificial speech and the results of both "male" and "female" averaged to give the final result.

#### 30.6.1.5 Test requirement

The echo loss from the input to the output of the reference speech codec in the SS shall be at least 46 dB.

### 30.6.2 Stability margin

#### 30.6.2.1 Definition and applicability

The receive-transmit stability margin is a measure of the gain that would have to be inserted between the go and return paths of the reference speech coder in the SS for oscillation to occur.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

#### 30.6.2.2 Conformance requirement

The stability margin shall be at least 6 dB.

GSM 03.50; 3.2.

#### 30.6.2.3 Test purpose

To verify that the stability margin is at least 6 dB.

#### 30.6.2.4 Method of test

##### 30.6.2.4.1 Initial conditions

For handset operation the handset is placed on a hard plane surface with the transducers facing the surface.

For handsfree operation the test setup is shown in ITU-T P.34 (Fig 3/ ITU-T P.34), but omitting the test table.

Where a user controlled volume control is provided it is set to maximum.

##### 30.6.2.4.2 Procedure

a) A gain equivalent to the minimum stability margin is inserted in the loop between the go and return paths of the reference speech coder in the SS and any acoustic echo control is enabled.

b) A test signal according to ITU-T O.131 is injected into the loop at the analogue or digital input of the reference speech codec of the SS and the stability is measured. The test signal has a level of -10 dBm0 and a duration of 1 s.

#### 30.6.2.5 Test requirement

The minimum stability margin shall be 6 dB and no audible oscillation shall be detected.

## 30.7 Distortion

### 30.7.1 Sending

#### 30.7.1.1 Definition and applicability

The transmit signal to total distortion ratio is a measure of the linearity of the transmitter equipment.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

#### 30.7.1.2 Conformance requirement

The ratio of signal to total distortion power in the sending direction measured with a psophometric filter at the DAI of the MS or at the output of the reference speech decoder of the SS shall be above the limits given in GSM 03.50; 3.9.1, table 3, unless the sound pressure at MRP exceeds +10 dBPa.

GSM 03.50; 3.9.1.

#### 30.7.1.3 Test purpose

To verify that the ratio of signal to total distortion power in the sending direction measured with psophometric filter is above the limits given in GSM 03.50; 3.9.1, table 3.

#### 30.7.1.4 Method of test

##### 30.7.1.4.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

When measured at the DAI:

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

When measured at the output of the reference speech decoder of the SS:

A full rate speech call is set up between the MS and the SS.

#### 30.7.1.4.2 Procedure

a) A sine-wave signal with a frequency in the range 1004 Hz to 1025 Hz is applied to the MRP. The level of this signal is adjusted until the level at the DAI output (pin 23) of the MS or at the analogue or digital output of the reference speech decoder of the SS corresponds to -10 dBm0. The level of the signal at the MRP is then the acoustic reference level (ARL).

b) The test signal is applied at the following levels: -35, -30, -25, -20, -15, -10, -5, 0, 5, 10 dB relative to the ARL.

c) The ratio of signal to total distortion power is measured at the DAI of the MS or at the analogue or digital output of the reference speech decoder of the SS with the psophometric noise weighting (see ITU-T G.714 and O.132) at each signal level.

NOTE: The measurement is not to be carried out at sound pressures exceeding +10 dBPa.

### 30.7.1.5 Test requirement

The ratio of signal to total distortion power measured with the psophometric noise weighting (see table 4/ ITU-T G.223) shall be above the limits given in table 30.3.

**Table 30.3**

| dB relative to ARL | Level ratio |
|---|---|
| -35 dB | 17,5 dB |
| -30 dB | 22,5 dB |
| -20 dB | 30,7 dB |
| -10 dB | 33,3 dB |
| 0 dB | 33,7 dB |
| 7 dB | 31,7 dB |
| 10 dB | 25,5 dB |

Limits for the signal to total distortion ratio (sending) when using the sine wave method.

Limits for intermediate levels are found by drawing a straight line between breaking points in a linear (dB signal level) vs linear (dB ratio) scale.

## 30.7.2 Receiving

### 30.7.2.1 Definition and applicability

The receive signal to total distortion ratio is a measure of the linearity in the receive equipment (excluding the speech decoder).

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 handset MS supporting speech except dual mode GSM/3GPP release 4 or later handsets.

### 30.7.2.2 Conformance requirement

The ratio of signal to total distortion power in the receiving direction measured at the ERP or DRP according to the Terminal Supplier's request with psophometric filter shall be above the limits given in GSM 03.50; 3.9.2, table 5.

GSM 03.50; 3.9.2.

### 30.7.2.3 Test purpose

To verify that the ratio of signal to total distortion power in the receiving direction measured at the ERP or DRP according to the Terminal Supplier's request with psophometric filter is above the limits given in GSM 03.50; 3.9.2, table 5.

#### 30.7.2.4 Method of test

##### 30.7.2.4.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

##### 30.7.2.4.2 Procedure

a) The SS sends, via the DAI (Pin 25), a PCM bit stream simulating a sine-wave signal with a frequency in the range 1 004 Hz to 1 025 Hz corresponding to ITU-T O.132 at the following levels: -45, -40, -35, -30, -25, -20, -15, -10, -5, 0 dBm0.

b) The ratio of signal to total distortion power is measured with the psophometric noise weighting in the artificial ear (see ITU-T G.714 and O.132) at each signal level.

c) The measurement is only carried out at sound pressures between -50 dBPa and +10 dBPa.

#### 30.7.2.5 Test requirement

The ratio of signal to total distortion power measured at the artificial ear with the psophometric noise weighting (see table 4/ ITU-T G.223) shall be above the limits given in table 30.4.

**Table 30.4**

| Level at the digital audio interface | Level ratio |
|---|---|
| -45 dBm0 | 17,5 dB |
| -40 dBm0 | 22,5 dB |
| -30 dBm0 | 30,5 dB |
| -20 dBm0 | 33,0 dB |
| -10 dBm0 | 33,5 dB |
| -3 dBm0 | 31,2 dB |
| 0 dBm0 | 25,5 dB |

Limits for the signal to total distortion ratio (receiving) when using the sine wave method.

Limits for intermediate levels are found by drawing a straight line between breaking points in a linear (dB signal level) vs linear (dB ratio) scale.

## 30.8 Sidetone distortion

### 30.8.1 Definition and applicability

The sidetone distortion expresses the linearity of the sidetone path in the handset.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 handset MS supporting speech except dual mode GSM/3GPP release 4 or later handsets.

### 30.8.2 Conformance requirement

The third harmonic distortion of the sidetone shall not be greater than 10 %.

GSM 03.50; 3.10.2.

### 30.8.3 Test purpose

To verify that the third harmonic distortion of the sidetone is not greater than 10 %.

#### 30.8.4 Method of test

##### 30.8.4.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

##### 30.8.4.2 Procedure

a) The SS sends the PCM bit stream coded with the value No 1 over the DAI (pin 25) to the MS.

b) An instrument capable of measuring the third harmonic distortion of signals with fundamental frequencies in the range 315 Hz to 1000 Hz is connected to the artificial ear.

c) A pure-tone signal of -4,7 dBPa is applied at the mouth reference point at frequencies of 315 Hz, 500 Hz, and 1 000 Hz. For each frequency the third harmonic distortion is measured in the artificial ear.

#### 30.8.5 Test requirement

The third harmonic distortion generated shall not be greater than 10 %.

## 30.9 Out-of-band signals

### 30.9.1 Sending

#### 30.9.1.1 Definition and applicability

The discrimination against out-of-band input signals in the sending direction is a requirement on the in-band image frequencies created by any out-of-band input signals.

The requirements and this test apply to all types of GSM 400, GSM700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

#### 30.9.1.2 Conformance requirement

With any sine wave signal above 4,6 kHz and up to 8 kHz applied at the MRP at a level of -4,7 dBPa, the level of any image frequency produced at the digital interface shall be below a reference level obtained at 1 kHz (-4,7 dBPa at MRP) by at least the amount (in dB) specified in GSM 03.50; 3.11.1, table 7.

GSM 03.50; 3.11.1.

#### 30.9.1.3 Test purpose

To verify that the conformance requirement is met for input signals with frequencies of 4,65, 5, 6, 6,5, 7 and 7,5 kHz.

#### 30.9.1.4 Method of test

##### 30.9.1.4.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

##### 30.9.1.4.2 Procedure

a) A pure tone with a sound pressure of -4,7 dBPa is applied at the mouth reference point as described in ITU-T P.64 using an artificial mouth conforming to ITU-T P 51.

b) For input signals at frequencies of 4,65, 5, 6, 6,5, 7, and 7,5 kHz, the level represented by the PCM bit stream at the DAI (Pin 23) of any image frequency is measured.

#### 30.9.1.5 Test requirement

The level of any image frequency shall be below a reference obtained at 1 kHz by at least the amount as specified in table 30.5.

**Table 30.5**

| Applied sine-wave frequency | Limit (minimum) |
|---|---|
| 4,6 kHz | 30 dB |
| 8 kHz | 40 dB |

Limits for the image frequency discrimination.

The limit at intermediate frequencies lies on a straight line drawn between the given values on a log(frequency) vs linear(dB) scale.

## 30.9.2 Receiving

#### 30.9.2.1 Definition and applicability

The discrimination against out-of-band signals in the receiving direction is a requirement on the out-of-band signals generated in the artificial ear from in-band input signals.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 up to release 1999 handset MS supporting speech.

#### 30.9.2.2 Conformance requirement

With a digitally simulated sine wave signal in the frequency range of 300 Hz to 3,4 kHz and at a level of 0 dBm applied at the digital interface, the level of spurious out-of-band image signals in the frequency range of 4,6 to 8 kHz measured selectively in the artificial ear shall be lower than the in-band acoustic level produced by a digital signal at 1 kHz set at the level specified in GSM 03.50; 3.11.2, table 8.

GSM 03.50; 3.11.2.

#### 30.9.2.3 Test purpose

To verify that the conformance requirement is met for input signals at the nominal frequencies 500, 1 000, 2 000, and 3 350 Hz.

#### 30.9.2.4 Method of test

##### 30.9.2.4.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

##### 30.9.2.4.2 Procedure

a) The SS sends over the DAI (pin 25) a PCM bit stream simulating a sine-wave signal with a level of 0 dBm0.

b) For input signals at the nominal frequencies 500, 1 000, 2 000, and 3 350 Hz (bearing in mind the restriction on sub-multiples of the sampling frequency) the level of any out-of-band signals at frequencies up to 8 kHz is measured in the artificial ear.

#### 30.9.2.5 Test requirement

The level of out-of-band signals shall be lower than the in-band acoustic level obtained by a digital signal at 1 kHz set at the level specified in table 30.6.

**Table 30.6**

| Image signal frequency | Equivalent input signal level |
|---|---|
| 4,6 kHz | -35 dBm0 |
| 8 kHz | -45 dBm0 |

Limits for the image frequency discrimination.

The limit at intermediate frequencies lies on a straight line drawn between the given values on a log(frequency) vs linear(dB) scale.

## 30.10 Idle channel noise

### 30.10.1 Sending

#### 30.10.1.1 Definition and applicability

The idle channel noise in the sending direction is the equivalent noise level produced at the DAI, when the mouth reference point is in a quiet environment.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 handset MS supporting speech except dual mode GSM/3GPP release 4 or later handsets.

#### 30.10.1.2 Conformance requirement

The idle noise in the sending direction shall not exceed - 64 dBm0p at the UPCMI under silent conditions.

GSM 03.50; 3.6.1.

#### 30.10.1.3 Test purpose

To verify that the idle noise in the sending direction does not exceed -64 dBm0p at the UPCMI under silent conditions.

#### 30.10.1.4 Method of test

##### 30.10.1.4.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51 in a quiet environment (ambient noise less than 30 dBA).

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

##### 30.10.1.4.2 Procedure

The noise level represented by the PCM bit stream output at the DAI (pin 23) is measured with psophometric weighting according to ITU-T G.223, table 4.

NOTE: The ambient noise criterion should be met if the ambient noise does not exceed NR20.

#### 30.10.1.5 Test requirement

The noise produced by the MS in the sending direction shall not exceed -64 dBm0p.

## 30.10.2 Receiving

### 30.10.2.1 Definition and applicability

The idle channel noise in the receiving direction is the acoustic sound pressure in the artificial ear when the digital input signal at the DAI, is the PCM coded value No 1.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 handset MS supporting speech except dual mode GSM/3GPP release 4 or later handsets.

### 30.10.2.2 Conformance requirement

1. If no user controlled receiving volume control is provided, or if it is provided, at the setting of the user controlled receiving volume at which the RLR is equal to the nominal value, the noise measured in the artificial ear contributed by the receiving equipment alone shall not exceed -57 dBPa (A) when driven by a PCM signal corresponding to the decoder output value No. 1.

   GSM 03.50; 3.6.2.

2. Where a volume control is provided, the measured noise shall not exceed -54 dBPa(A) at the maximum setting of the volume control.

   GSM 03.50; 3.6.2.

### 30.10.2.3 Test purpose

1. To verify that the idle noise in the receiving direction does not exceed -57 dBPa (A). If a user controlled receive volume control is provided it shall be set to the position where RLR is equal to the nominal value.

2. To verify that if a user controlled receive volume control is provided, the idle noise in the receiving direction does not exceed -54 dBPa(A) when the control is set to maximum.

### 30.10.2.4 Method of test

#### 30.10.2.4.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

#### 30.10.2.4.2 Procedure

a) The SS sends a PCM bit stream coded with the value No 1 over the DAI (Pin 25) to the MS.

b) The level of the noise is measured in the artificial ear with any volume control set at the position at which the RLR is equal to the nominal value.

c) Where a volume control is provided, the level of the noise is measured in the artificial ear with the volume control set to maximum.

### 30.10.2.5 Test requirement

In step b) the measured noise generated by the MS shall not exceed -57 dBPa (A).

In step c) the measured noise shall not exceed -54 dBPa (A).

# 30.11 Ambient Noise Rejection

## 30.11.1 Definition and Applicability

An MS that supports speech will typically be operated within an area of high ambient acoustic noise. A level of noise rejection will therefore be required.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM900, DCS1800 and PCS 1900 handset R96 – R99 MS supporting full rate speech.

## 30.11.2 Conformance Requirement

Compliance shall be checked by calculating the single figure DELSM (SFDELSM) according to the following formula, the SFDELSM shall be ≥0dB.

$$SFDELSM = -4/5 \times \sum_{n=1}^{14} Del_n \times 10^{(-0.0175 \times Wm)}$$

where :-

n = the third octave band centre frequencies from 160Hz to 3150Hz inclusive.

Deln = is the 1/3 octave band pressure level centered on the $n^{th}$ frequency.

Wm = is the SLR weighting for the nth 1/3 octave band centre frequency.

GSM 03.50; 3.14.1

## 30.11.3 Test Purpose

To verify that ambient noise calculated as SFDELSM shall be rejected, by verifying that SFDELSM ≥ 0dB.

## 30.11.4 Method of Test

### 30.11.4.1 Initial Conditions

A 1/2 inch pressure microphone is calibrated using a known sound source and mounted at the MRP, without the LRGP head present. A frequency analyser is calibrated to enable the sound pressure levels at the microphone to be determined in 1/3rd octave bands.

Flood the room in which the measurement is to be made with the selected noise file, and adjust the level such that the noise level at the MRP is 70dBA. A single noise file of real noise, covering the various noise environments that the MS could be subjected to, is used. This file is three minutes long and also commences with a three minute signal. Once this tone has been adjusted to a level of 70dBA, the average level of the noise will be 70dBA. The resulting sound spectrum is Prn dBPa, measured in 1/3rd octave bands.

To ensure that the sound field is diffuse enough, the following apply:-

The diffuse sound field is calibrated in the absence of any local obstacles. The averaged field shall be uniform to within +/- 3dB within a radius of 0,15 m of the MRP, when measured in one-third octave bands from 100Hz to 3,15 Khz.

Where more than one loudspeaker is used to produce the desired sound field, the loudspeakers may require to be fed with non-coherent signals to eliminate standing waves and other interference effects.

Position an LRGP in the correct relative position to the MRP and mount the MS under test. Recalibrate the $1/3^{rd}$ octave frequency analyser using a known voltage source to facilitate the analysis of the Voltage Vrn, where Vrn is the voltage at the audio output of the System Simulator (SS) due to the noise spectrum input.

#### 30.11.4.2 Procedure

Set up a full rate speech path between the MS and the SS.

The SS determines, as a function of frequency, using the frequency analyser, in 1/3rd octave bands, the electrical output Vrn, (expressed as dB rel 1V) at the audio output of the SS for the applied acoustic pressure Prn (expressed as dB rel 1Pa) at the MRP. Since, the MS sending sensitivity is not defined above 3,4kHz and below 300Hz the measurement shall be cut off at 3,4kHz and for the bands below 300Hz. The noise level shall be referenced to the speech level at 300Hz to yield the DELSM.

The room noise sensitivity is defined as :- $Smj_{rn}$ = Vrn (dBV) - Prn (dBPa).

The ambient noise send sensitivity has now been determined.

The MS speech send sensitivity is now required. The required sensitivity is defined as the electrical output from the MS, measured at the audio output of the SS, as a function of the free field sound pressure at the MRP of the artificial mouth.

The measurment is made using an artificial speech source at the MRP of the artificial mouth. The 1/2 inch pressure microphone is calibrated using a known sound source. The frequency analyser is calibrated to measure in 1/3$^{rd}$ octave bands. The artificial mouth output shall be in accordance with the ITU-T P.50 male artificial voice. Whilst maintaining the ITU-T P.50 'male' spectrum, the total signal level is adjusted to -4,7 dBPa. The resulting sound spectrum is $P_0$dBpa, measured in 1/3$^{rd}$ octave bands. The 1/3rd octave frequency analyser shall be re-calibrated, using a known voltage source, to facilitate the analysis of the voltage $V_j$. Where $V_j$ is the voltage at the audio output of the SS due to the speech spectrum input. A speech path is setup between the MS and the SS. The function of the frequency is determined using the frequency analyser, and in 1/3$^{rd}$ octave bands, the electrical output $V_j$, (expressed as dB rel. 1V), at the audio output of the SS for the applied acoustic pressure, $P_0$, (expressed as dB rel. 1Pa/V), at the MRP.

The sending sensitivity is expressed as : -

$$S_{mjs}(dB) = V_j(dBV) - P_o(dBPa) dBrel 1V / Pa$$

The $D_{SM}$ for the MS is determined as :-

$$D_{SM} = Smj_{rn} - S_{mjs}\ (dB).$$

#### 30.11.5 Test Requirement

The MS ambient noise rejection, calculated as a single figure DELSM (SFDELSM) shall be greater than or equal to 0dB.

## 30.12 Sending sensitivity/frequency response

#### 30.12.1 Definition and applicability

The sending sensitivity frequency response is, as a function of the input test signal frequency, the ratio expressed in dB between the output level at the Digital Audio Interface (DAI) or at the audio output of the reference speech decoder of the SS and the input sound pressure in the artificial mouth required to obtain this.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 or later handset MS supporting speech except dual mode GSM/3GPP handsets

#### 30.12.2 Conformance requirement

The sending sensitivity frequency response shall be within the mask given in 3GPP TS 26.131.

3GPP TS 26.131, 5.4.1, table 1

#### 30.12.3 Test purpose

To verify that the sending sensitivity frequency response is within the mask given in3GPP TS 26.131, 5.4.1, table 1.

### 30.12.4 Method of test

#### 30.12.4.1 Initial conditions

When measured at the DAI:

a) The handset is mounted in the LRGP (see annex A of ITU-T Recommendation P.76). The earpiece is sealed to the knife-edge of the artificial ear.

b) A pure tone with a sound pressure of -4,7 dBPa (in accordance with ITU-T Recommendation P.64) is applied at the mouth reference point (MRP) as described in ITU-T Recommendation P.64 using an artificial mouth conforming to ITU-T Recommendation P.51.

c) A digital measuring instrument, or high quality digital decoder followed by an analogue level measuring set, is connected to the Digital Audio Interface (DAI). The DAI is set to the operating mode "Test of acoustic devices and A/D & D/A ".

When measured at the output of the reference speech decoder of the SS:

a) The handset is mounted in the LRGP and the earpiece is sealed to the knife-edge of an artificial ear.

b) A full rate speech call is set up between the MS and the SS.

#### 30.12.4.2 Procedure

When measured at the DAI:

The SS measures the output level represented by the PCM bit stream at the DAI (pin 23) at one-twelfth-octave intervals as given by the R40 series of preferred numbers in ISO 3 for frequencies from 100 Hz to 4 000 Hz inclusive.

When measured at the output of the reference speech decoder of the SS:

The test shall be performed according to the test specification as described in 3GPP TS 26.132

### 30.12.5 Test requirement

The sending sensitivity/frequency response shall be within a mask given in table 30.1. The mask can be drawn with straight lines between the breaking points in the table on a logarithmic (frequency) vs linear (dB sensitivity) scale.

All sensitivity levels are dB on an arbitrary scale.

**Table 30.1**

| Frequency (Hz) | Upper Limit (dB) | Lower Limit (dB) |
|---|---|---|
| 100 | -12 | |
| 200 | 0 | |
| 300 | 0 | -12 |
| 1000 | 0 | -6 |
| 2000 | 4 | -6 |
| 3000 | 4 | -6 |
| 3400 | 4 | -9 |
| 4000 | 0 | |

## 30.13 Sending loudness rating

### 30.13.1 Definition and applicability

The Sending Loudness Rating (SLR) is a means of expressing the sending frequency response based on objective measurements in a way which relates to how a speech signal would be perceived by a listener.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 or later handset MS supporting speech except dual mode GSM/3GPP handsets

### 30.13.2 Conformance requirement

The Sending Loudness Rating (SLR) shall be 8 +/- 3 dB.

3GPP TS 26.131; 5.2.2

### 30.13.3 Test Purpose

To verify that the Sending Loudness Rating (SLR) is 8 +/- 3 dB.

### 30.13.4 Method of test

#### 30.13.4.1 Initial conditions

When measured at the DAI:

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

When measured at the output of the reference speech decoder of the SS:

A full rate speech call is set up between the MS and the SS.

#### 30.13.4.2 Procedure

When measured at the DAI:

a) The sending sensitivity is measured at each of the 14 frequencies given in table 2 of ITU-T P.79, bands 4 to 17.

b) The sensitivity is expressed in terms of dBV/Pa and the SLR is calculated according to ITU-T Recommendation P.79 formula 4.19 b of ITU-T P.79, over bands 4 to 17, using the sending weighting factors from ITU-T Recommendation P.79 table 2, adjusted according to table 3 of ITU-T Recommendation P.79.

When measured at the output of the reference speech decoder of the SS:

The test shall be performed according to the test specification as described in 3GPP TS 26.132

### 30.13.5 Test requirement

The SLR shall be 8 +/- 3 dB.

## 30.14 Receiving sensitivity/frequency response

### 30.14.1 Definition and applicability

The receiving sensitivity frequency response is, as a function of the input test signal frequency, the ratio expressed in dB between the output sound pressure in the artificial ear and the input level, represented by the PCM bit stream at the Digital Audio Interface (DAI) or the level at the SS audio input, required to obtain this.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 or later handset MS supporting speech. except dual mode GSM/3GPP handsets.

### 30.14.2 Conformance requirement

When measured with the type 1 artificial ear (only release 4 handsets) the receiving sensitivity frequency response shall be within the mask given in 3GPP TS 43.050

3GPP TS 43.050; 3.8.1.2, table 2.

When measured with 3.x artificial ear (release 4 and later handsets) the receiving sensitivity frequency response shall be within the mask given in 3GPP TS 26.131

3GPP TS 26.131; 5.4.2, table 2

### 30.14.3 Test purpose

To verify that the receiving sensitivity frequency response is within the mask given in 3GPP TS 43.050; 3.8.1.2, table 2 when measured with the type 1 artificial ear (release 4 hansets only) or within the mask given in 3GPP TS 26.131; 5.4.2, table 2 when measuredv with a type 3.x artificial ear.

### 30.14.4 Method of test

#### 30.14.4.1 Initial conditions

When measured from the DAI:

a) The handset is mounted in the LRGP and the earpiece is sealed to the knife-edge of the artificial ear.

b) A digital signal generator is connected at the digital interface delivering a signal equivalent to a pure tone level of -16 dBm0, see ITU-T Recommendation P.64.

c) The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

When measured from the input of the reference speech encoder of the SS:

a) The handset is mounted in the LRGP and the earpiece is sealed to the knife-edge of the artificial ear.

b) A full rate speech call is set up between the MS and the SS.

#### 30.14.4.2 Procedure

When measured from the DAI:

Measurements are made at one twelfth-octave intervals as given in the R.40 series of preferred numbers in ISO 3 for frequencies from 100 Hz to 4 kHz inclusive. At each frequency, the sound pressure in the artificial ear is measured by connecting a suitable measuring set to the artificial ear.

When measured from the input of the reference speech encoder of the SS:

The test shall be performed according to the test specification as described in 3GPP TS 26.132

### 30.14.5 Test requirement

when measured in the type 1 artificial ear (allowed for release 4 handsets only) the receiving sensitivity/frequency response shall be within the mask given by table 30.2. The mask can be drawn with straight lines between the breaking points in the following table on a logarithmic (frequency) vs linear (dB sensitivity) scale.

All sensitivity levels are dB on an arbitrary scale.

**Table 30.2**

| Frequency (Hz) | Upper Limit (dB) | Lower Limit (dB) |
|---|---|---|
| 100 | -12 | |
| 200 | 0 | |
| 300 | 2 | -7 |
| 500 | * | -5 |
| 1000 | 0 | -5 |
| 3000 | 2 | -5 |
| 3400 | 2 | -10 |
| 4000 | 2 | |

NOTE: * The limit at intermediate frequencies lies on a straight line drawn between the given values on a log (frequency) vs linear (dB) scale.

When measured in a type 3.x artificial ear, the receiving sensitivity/frequency response shall be within the mask given in 3GPP TS 26.131; 5.4.2, table 2.

# 30.15 Receiving loudness rating

## 30.15.1 Definition and applicability

The Receiving Loudness Rating (RLR) is a means of expressing the receiving frequency response based on objective measurements in a way which relates to how a speech signal would be perceived by a listener.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 or later handset MS supporting speech except dual mode GSM/3GPP handsets

## 30.15.2 Conformance requirement

1) The nominal Receiving Loudness Rating (RLR) shall be 2 +/- 3 dB.

   If a user controlled receive volume control is provided the equipment shall meet this nominal value for at least one setting of the control.

   3GPP TS 26.131; 5.2.2

2) If a user controlled receive volume control is provided the Receive Loudness Rating (RLR) shall not be less than -13 dB when the control is set to maximum.

   3GPP TS 26.131; 5.2.2.

## 30.15.3 Test purpose

1) To verify that the nominal Receiving Loudness Rating (RLR) is 2 +/- 3 dB.

2) To verify that if a user controlled receive volume control is provided the Receive Loudness Rating (RLR) is not less than -13 dB when the control is set to maximum.

## 30.15.4 Method of test

### 30.15.4.1 Initial conditions

When measured at the DAI:

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

When measured at the output of the reference speech decoder of the SS:

A full rate speech call is set up between the MS and the SS.

### 30.15.4.2 Procedure

When measured at the DAI:

a) The receiving sensitivity is measured at each of the 14 frequencies listed in table 2 of ITU-T Recommendation P.79, bands 4 to 17.

b) The sensitivity is expressed in terms of dBPa/V and the RLR is calculated according to ITU-T Recommendation P.79 formula 4.19 c, over bands 4 to 17, using the receiving weighting factors from table 2 of ITU-T Recommendation P.79, adjusted according to table 3 of ITU-T Recommendation P.79.

c) The artificial ear sensitivity must be corrected according to the real ear correction of table 4 of ITU-T Recommendation P.79.

NOTE: The values of real ear correction in ITU-T Recommendation P.79 table 4 were derived for one type of handset conforming to the shape defined in ITU-T Recommendation P.35.

These values are used in this EN because there is no measurement method agreed for the real ear correction. If a method of measurement is agreed, it is intended to change this EN to use the values appropriate to each handset.

When measured from the input of the reference speech encoder of the SS:

The test shall be performed according to the test specification as described in 3GPP TS 26,132

#### 30.15.5 Test requirement

If no user controlled receive volume control is provided, the RLR shall be 2 +/- 3 dB.

If a user controlled receive volume control is provided, the RLR shall meet this nominal value for (at least) one setting of the receive volume control.

When the receive volume control is set to maximum the RLR shall not be less than (i.e. louder than) -13 dB.

## 30.16 Side Tone Masking Rating (STMR)

#### 30.16.1 Definition and applicability

The sidetone loudness ratings are a means of expressing the path loss from the artificial mouth to the artificial ear based on objective single tone measurements in a way that relates to how a speaker will perceive his own voice when speaking (talker sidetone, expressed by the sidetone masking rating - STMR), or how a listener will perceive the background noise picked up by the microphone (listener sidetone rating - LSTR).

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 or later handset MS supporting speech except dual mode GSM/3GPP handsets.

#### 30.16.2 Conformance requirement

The conformance requirement is specified in 3GPP TS 26.131

#### 30.16.3 Test purpose

To verify that the requirement for STMR stated in TS 26.131 is met

#### 30.16.4 Method of test

The method of test shall be as specified in 3GPP TS 26.132

#### 30.16.5 Test requirement

The STMR shall be within the limits specified in 3GPP TS 26.131

## 30.17 Telephone Acoustic coupling Loss (TAL)

### 30.17.1 Echo Loss (EL)

#### 30.17.1.1 Definition and applicability

The echo loss is the path loss from the input of the reference speech encoder of the SS to the output of the reference speech decoder of the SS.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 ord later handset MS supporting speech except dual mode GSM/3GPP handsets.

#### 30.17.1.2 Conformance requirement

The echo loss from the input to the output of the reference speech codec in the SS shall be as specified in 3GPP TS 26.131

#### 30.17.1.3 Test purpose

To verify that the echo loss from the input to the output of the reference speech codec in the SS is as specified in 3GPP TS 26.131

#### 30.17.1.4 Method of test

The method of test shall be as specified in 3GPP TS 26.132

#### 30.17.1.5 Test requirement

The echo loss from the input to the output of the reference speech codec in the SS shall be as specified in 3GPP TS 26.131

### 30.17.2 Stability margin

#### 30.17.2.1 Definition and applicability

The receive-transmit stability margin is a measure of the gain that would have to be inserted between the go and return paths of the reference speech coder in the SS for oscillation to occur.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 or later handset MS supporting speech except dual mode GSM/3GPP handsets.

#### 30.17.2.2 Conformance requirement

The stability margin shall be as specified in 3GPP TS 26.131.

.

#### 30.17.2.3 Test purpose

To verify that the stability margin is as specified in 3GPP TS 26.131.

#### 30.17.2.4 Method of test

The method of test shall be as specified in 3GPP TS 26.132

#### 30.17.2.5 Test requirement

The minimum stability margin shall be as specified in 3GPP TS 26.131.

## 30.18 Sending Distortion

#### 30.18.1 Definition and applicability

The transmit signal to total distortion ratio is a measure of the linearity of the transmitter equipment.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 release 4 or later handset MS supporting speech except dual mode GSM/3GPP handsets.

### 30.18.2 Conformance requirement

The ratio of signal to total distortion power in the sending direction measured with a psophometric filter at the DAI of the MS or at the output of the reference speech decoder of the SS shall be above the limits given in GSM 03.50; 3.9.1, table 3, unless the sound pressure at MRP exceeds +10 dBPa.

GSM 03.50; 3.9.1.

### 30.18.3 Test purpose

To verify that the ratio of signal to total distortion power in the sending direction measured with psophometric filter is above the limits given in GSM 03.50; 3.9.1, table 3.

### 30.18.4 Method of test

#### 30.18.4.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of ITU-T P.76) and the earpiece is sealed to the knife-edge of the artificial ear conforming to ITU-T P.51.

When measured at the DAI:

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A ".

When measured at the output of the reference speech decoder of the SS:

A full rate speech call is set up between the MS and the SS.

#### 30.18.4.2 Procedure

When measured at the DAI

a) A sine-wave signal with a frequency in the range 1004 Hz to 1025 Hz is applied to the MRP. The level of this signal is adjusted until the level at the DAI output (pin 23) of the MS or at the analogue or digital output of the reference speech decoder of the SS corresponds to -10 dBm0. The level of the signal at the MRP is then the acoustic reference level (ARL).

b) The test signal is applied at the following levels: -35, -30, -25, -20, -15, -10, -5, 0, 5, 10 dB relative to the ARL.

c) The ratio of signal to total distortion power is measured at the DAI of the MS with the psophometric noise weighting (see ITU-T G.714 and O.132) at each signal level.

When measured at the output of the reference speech decoder of the SS:

The test shall be performed according to the test specification as described in 3GPP TS 26.132

NOTE: The measurement is not to be carried out at sound pressures exceeding +10 dBPa.

### 30.18.5 Test requirement

The ratio of signal to total distortion power measured with the psophometric noise weighting (see table 4/ITU-T G.223) shall be above the limits given in table 30.3.

**Table 30.3**

| dB relative to ARL | Level ratio |
|---|---|
| -35 dB | 17,5 dB |
| -30 dB | 22,5 dB |
| -20 dB | 30,7 dB |
| -10 dB | 33,3 dB |
| 0 dB | 33,7 dB |
| 7 dB | 31,7 dB |
| 10 dB | 25,5 dB |

Limits for the signal to total distortion ratio (sending) when using the sine wave method.

Limits for intermediate levels are found by drawing a straight line between breaking points in a linear (dB signal level) vs linear (dB ratio) scale.

# 30.19 Ambient Noise Rejection

## 30.19.1 Definition and Applicability

An MS that supports speech will typically be operated within an area of high ambient acoustic noise. A level of noise rejection will therefore be required.

The requirements and this test apply to all types of GSM 400, GSM 700, GSM 850, GSM900, DCS1800 and PCS 1900 release 4 or later handset supporting full rate speech except dual mode GSM/3GPP handsets.

## 30.19.2 Conformance Requirement

The conformance requirement shall be as specified in TS 26.131

## 30.19.3 Test Purpose

To verify that ambient noise rejection is conforming to the specification in 3GPP TS 26.131.

## 30.19.4 Method of Test

The test method shall be as specified in 3GPP TS 26.132

## 30.19.5 Test Requirement

The MS ambient noise rejection shall be as specified in 3GPP TS 26.132

# 31 Test of supplementary services

The general aspects of the specification of supplementary services at the layer 3 radio interface are given in GSM 04.10.

The formats and coding are given in GSM 04.80. If the value of a parameter of an uplink message (MS to network) is specified in a test, the implicit meaning is that it has to be checked; if the value is not specified, it is not to be checked unless otherwise stated.

Unless otherwise stated, the MS shall be in the idle updated state at the beginning of each test (including repetition of a test).

In each test, before the MS sends the first REGISTER message, a MM connection is established.

GSM 04.81 to GSM 04.88 give the procedures used at the radio interface for normal operation, registration, erasure, activation, deactivation, invocation and interrogation of supplementary services.

The supplementary services are described in GSM 02.04 and GSM 02.81 to GSM 02.88.

Whenever activation via the standard MMI is mentioned, if the MS does not support it but supports a different procedure, this different procedure is used. In the supplementary services tests, only the applicable (see GSM 02.8x series) MMI service code groups (GSM 02.30 annex 4), of the basic service code in GSM 09.02,which are supported by the MAP, will be used.

## 31.1 Number identification supplementary services

### 31.1.1 CLIP

#### 31.1.1.1 Normal operation

Conformance requirement:

GSM 04.81 subclause 1.1

Purpose:

To test that the MS presents to the user the calling number presented to it in an incoming SETUP message

Related PICS/PIXIT statements

- supported MT circuit switched basic services.
- description of display for CLIP
- support of displaying the calling party subaddress

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The SIM in the MS under test has CLIP enabled.

Foreseen final state of the MS

State U7

Maximum duration of test

30 s.

Procedure:

Set up an MT call to the MS under test. The SETUP message shall include a calling party BCD number information element and a calling party subaddress information element.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | SS sends paging |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | (SDCCH) |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | |
| 7 | SS -> MS | CIPHERING MODE COMMAND | |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | |
| 9 | SS -> MS | SETUP | Shall include a valid calling party BCD number and calling party subaddress |
| 10 | MS -> SS | CALL CONFIRMED | |
| 11 | MS -> SS | ALERTING | |
| 12 | MS | | Depending on the PICS, the MS shall display the calling party BCD number and calling party subaddress |

## 31.1.1.2 Interrogation

### 31.1.1.2.1 Interrogation accepted

Conformance requirement:

GSM 04.81 subclause 1.2

Applicability

MS supporting the CLIP supplementary service.

Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of successful interrogation

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of CLIP.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CLIP for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The SS transaction is released and the dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation of CLIP (all) with establishment cause "Other procedures which can be completed with an SDCCH" |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 - CLIP

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = CLIP

  Basic service code: no Bearer Service present, no teleservice present.

### 31.1.1.2.2 Interrogation rejected

Conformance requirement

GSM 04.81 subclause 1.2

Applicability

MS supporting the CLIP supplementary service.

Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of an error response and an invoke problem

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of CLIP.

### Foreseen final state of the MS

The MS is in CC state U10.

### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CLIP for all basic service groups.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of CLIP for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

### Maximum duration of test

3 min.

### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation for CLIP (all) |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate an interrogation of CLIP (all) |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Reject |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4, 11 - CLIP

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = CLIP

  Basic service code:no Bearer Service present, no teleservice present

step 5 - CLIP

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS not available

For the return error the invoke ID must be the same as in the invoke of the InterrogateSS operation.

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the InterrogateSS operation.

## 31.1.2 CLIR

### 31.1.2.1 Normal operation - requesting presentation of CLI

Conformance requirement:

GSM 04.81 subclause 2.2

Test Purpose

To test that when the CLIR presentation mode is temporary (presentation restricted), it is possible for the subscriber to present his CLI on a per call basis

Method of test

Related PICS/PIXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The SIM in the MS under test has CLIR enabled with CLIR presentation mode "temporary (presentation restricted)".

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U0.1 by using table 26.8.1.2/1.

Foreseen final state of the MS

U1, call initiated.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Using MMI commands, the MS is made to initiate an outgoing call with CLI presented. When the MS is requesting a MM-connection, the SS will indicate acceptance by sending a CM SERVICE ACCEPT message. The MS shall respond with SETUP. The SETUP message shall contain the CLIR suppression information element.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | CM SERVICE ACCEPT | |
| 2 | MS -> SS | SETUP | with CLIR suppression information element |

### 31.1.2.2 Normal operation - requesting restriction of CLI presentation

Conformance requirement:

GSM 04.81 subclause 2.3

Test Purpose

To test that when the CLIR presentation mode is temporary (presentation allowed), it is possible for the subscriber to present his CLI on a per call basis

Procedure

Using MMI commands, the MS is made to initiate an outgoing call with CLI restricted.

Requirements:

The SETUP message sent by the MS shall include the CLIR invocation information element.

Method of test

Related PICS/PIXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The SIM in the MS under test has CLIR enabled with CLIR presentation mode "temporary (presentation allowed)".

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U0.1 by using table 26.8.1.2/1.

Foreseen final state of the MS

U1, call initiated.

Maximum duration of test

30 s.

Test procedure

An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Using MMI commands, the MS is made to initiate an outgoing call with CLI restricted. When the MS is requesting a MM-connection, the SS will indicate acceptance by sending a CM SERVICE ACCEPT message. The MS shall respond with SETUP. The SETUP message sent by the MS shall include the CLIR invocation information element.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | CM SERVICE ACCEPT | |
| 2 | MS -> SS | SETUP | with CLIR invocation information element |

## 31.1.2.3 Interrogation

### 31.1.2.3.1 Interrogation accepted

Conformance requirement:

GSM 04.81 subclause 2.4

Applicability

MS supporting the CLIR supplementary service.

Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of successful interrogation

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of CLIR.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CLIR for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The SS transaction is released and the dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation of CLIR (all) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 - CLIR

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = CLIR

  Basic service code: no Bearer Service present, no teleservice present.

#### 31.1.2.3.2 Interrogation rejected

##### Conformance requirement

GSM 04.81 subclause 2.4

##### Applicability

MS supporting the CLIR supplementary service.

##### Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of an error response and an invoke problem

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

##### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of CLIR.

##### Foreseen final state of the MS

The MS is in CC state U10.

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CLIR for all basic service groups.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of CLIR for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

##### Maximum duration of test

3 min.

  Supplementary service code = CLIR

  Basic service code:no Bearer Service present, no teleservice present

step 5 - CLIR

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS not available

For the return error the invoke ID must be the same as in the invoke of the InterrogateSS operation.

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the InterrogateSS operation.

## 31.1.3 COLP

### 31.1.3.1 Normal operation

Conformance requirement:

GSM 04.81 subclause 3.1

Applicability

MS supporting the COLP supplementary service.

Purpose:

To test that the MS displays the connected number presented to it in an incoming CONNECT message

Method of test

Related PICS/PIXIT statements

- supported MO circuit switched basic services.
- description of display for COLP

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The SIM in the MS under test has COLP enabled.

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/4.

Foreseen final state of the MS

U10, call active.

Maximum duration of test

30 s.

Test procedure

1. An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends a CONNECT message to the MS containing a connected number information element and a connected party subaddress information element. The MS shall respond by sending a CONNECT ACKNOWLEDGE message. The MS shall correctly display the connected line information.

Expected sequence, procedure 1

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | CONNECT | See specific message contents |
| 2 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 3 | MS | | The MS shall correctly display the connected line information |

Specific message contents

CONNECT

| | |
|---|---|
| Connected number information element | |
| Presentation indicator | Presentation allowed |
| Screening indicator | User provided, not screened |
| Connected subaddress | Any valid subaddress |

## 31.1.3.2 Interrogation

### 31.1.3.2.1 Interrogation accepted

Conformance requirement:

GSM 04.81 subclause 3.2

Applicability

MS supporting the COLP supplementary service.

Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of successful interrogation

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of COLP.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of COLP for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The SS transaction is released and the dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation of COLP (all) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 - COLP

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = COLP

  Basic service code: no Bearer Service present, no teleservice present.

### 31.1.3.2.2 Interrogation rejected

Conformance requirement

GSM 04.81 subclause 3.2

Applicability

MS supporting the COLP supplementary service.

Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of an error response and an invoke problem

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of COLP.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of COLP for all basic service groups.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of COLP for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation for COLP (all) |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate an interrogation of COLP (all) |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Reject |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4, 11 - COLP

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

invoke = Interrogation

Supplementary service code = COLP

Basic service code:no Bearer Service present, no teleservice present

step 5 - COLP

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

return error code: SS not available

For the return error the invoke ID must be the same as in the invoke of the InterrogateSS operation.

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the InterrogateSS operation.

## 31.1.4 COLR

### 31.1.4.1 Interrogation

#### 31.1.4.1.1 Interrogation accepted

Conformance requirement:

GSM 04.81 subclause 4.2

Applicability

MS supporting the COLR supplementary service.

Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of successful interrogation

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of COLR.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of COLR for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The SS transaction is released and the dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation of COLR (all) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 - COLR

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

    Supplementary service code = COLR

    Basic service code: no Bearer Service present, no teleservice present.

### 31.1.4.1.2 Interrogation rejected

Conformance requirement

GSM 04.81 subclause 4.2

Applicability

MS supporting the COLR supplementary service.

### Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of an error response and an invoke problem

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of COLR.

### Foreseen final state of the MS

The MS is in CC state U10.

### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of COLR for all basic service groups.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of COLR for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

### Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation for COLR (all) |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate a interrogation of COLR (all) |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Reject |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4, 11 - COLR

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = COLR

  Basic service code:no Bearer Service present, no teleservice present

step 5 - COLR

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS not available

For the return error the invoke ID must be the same as in the invoke of the InterrogateSS operation.

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the InterrogateSS operation.

### 31.1.4.2 Normal operation

Conformance requirement:

GSM 04.81 subclause 3.1

Applicability

All MS.

Purpose:

To test that the MS is behaving correctly if the number is restricted in an incoming CONNECT message.

Method of test

Related PICS/PIXIT statements

- supported MO circuit switched basic services.

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The SIM in the MS under test has COLR enabled.

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

The MS is brought into the state U1 by using table 26.8.1.2/4.

Foreseen final state of the MS

U10, call active.

Maximum duration of test

30 s.

Test procedure

1. An MO circuit switched basic service is selected that is supported by the MS; if the MS supports MO telephony, the selected basic service is telephony. If necessary, the MS is configured for that basic service. Then, the MS is made to initiate a call. The CC entity of the MS is brought to the state U4. The SS sends a CONNECT message to the MS containing a connected number information element indicating "presentation restricted" with no number digits. The MS shall respond by sending a CONNECT ACKNOWLEDGE message and not display any connected line information.

2. Repeat procedure 1, except that the CONNECT message includes a connected number information element indicating "Number not available due to interworking".

Expected sequence, procedure 1

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | CONNECT | See specific message contents |
| 2 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 3 | MS | | The MS shall display no connected line information |

Specific message contents

CONNECT

| | |
|---|---|
| Connected number information element | |
| Presentation indicator | Presentation restricted |
| Screening indicator | User provided, not screened |
| Number digits 1..n | Not present |
| Connected subaddress | Not present |

Expected sequence, procedure 2

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | CONNECT | See specific message contents |
| 2 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 3 | MS | | The MS shall display no connected line information |

Specific message contents

CONNECT

| | |
|---|---|
| Connected number information element | |
| Presentation indicator | Number not available due to interworking |
| Screening indicator | User provided, not screened |
| Number digits 1..n | Not present |
| Connected subaddress | Not present |

## 31.2 Call offering supplementary services

The following abbreviations are used:

CFU: Call Forwarding Unconditional
CFB: Call Forwarding on mobile subscriber Busy
CFNRy: Call Forwarding on No Reply
CFNRc: Call Forwarding on mobile subscriber Not Reachable
CFC: Call Forwarding Conditional (common name for CFB, CFNRy and CFNRc)
CF: Call Forwarding (common name for CFU, CFB, CFNRy and CFNRc).

NOTE: These abbreviations are also used to represent the corresponding SS-Code; e.g. CFC is the SS-Code for all conditional forwarding services.

### 31.2.1 Call forwarding supplementary services

#### 31.2.1.1 Registration

##### 31.2.1.1.1 Registration accepted

###### 31.2.1.1.1.1 Conformance requirements

For registration of any type of call forwarding with any parameters, the MS shall transmit successively

1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user";

2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";

3) and then the REGISTER message containing a facility IE that includes an invoke of the RegisterSS operation with parameter values according to the user's request (MMI action);

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.82, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.2.1.1.1.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for registration of call forwarding in CHANNEL REQUEST message.

2) To check that the MS correctly requests a supplementary service transaction for registration of call forwarding in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the RegisterSS operation with the expected parameter values for registration of call forwarding.

4) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the MS provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFNRy, for basic service group speech.

b) CFU, for basic service group all facsimile.

#### 31.2.1.1.1.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests registration of CFNRy for Speech, to a number arbitrarily selected and with a no reply time value arbitrarily selected.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the RegisterSS operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests registration of CFU for all facsimile, to a number arbitrarily selected.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the RegisterSS operation.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of call forwarding service for CFNRy (Speech) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | CNFRySS operation Return_result |
| 8 | MS | | provide correct MMI user indication |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | The MS is made to initiate a registration of call forwarding service for CFU (all facsimile) |
| 11 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 15 | MS -> SS | REGISTER | |
| 16 | SS -> MS | RELEASE COMPLETE | RegisterSS operation Return result |
| 17 | MS | | provide correct MMI user indication |
| 18 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 - CFNRy

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Registration

  Supplementary service code = CFNRy

  Forwarded to number: as selected,

  No reply condition time: as selected,

  Basic service code: TeleService AllSpeechTransmissionServices, no Bearerservice present.

step 7 - CFU

- protocol discriminator: non call related SS message
- transaction identifier: same as at step 6
- message type: RELEASE COMPLETE
- facility

  Return Result = Registration

  Supplementary service code = CFNRy

  Forwarded to number

  No Reply condition time

  Basic service code: TeleService AllSpeechTransmissionServices, no Bearerservice present.

step 15 - CFU

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Registration

  Supplementary service code = CFU

  Forwarded to number: as selected,

  Basic service code: no bearer service present, teleservice (all facsimile).

step 16 - CFU

- protocol discriminator: non call related SS message
- transaction identifier: same as at step 15
- message type: RELEASE COMPLETE
- facility

  Return Result = Registration

  Supplementary service code = CFU

  Forwarded to number

  Basic service code: TeleService (all facsimile), no Bearerservice present.

#### 31.2.1.1.2 Registration rejected

##### 31.2.1.1.2.1 Conformance requirements

1) A transaction of any kind being already established, for registration of any type of call forwarding with any parameters, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation".

2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the RegisterSS operation with parameter values according to the user's request (MMI action).

3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.82, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.2.1.1.2.2 Test purpose

1) To check that the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of registration of call forwarding, sending a CM SERVICE REQUEST.

2) To check that the MS sends a REGISTER message containing the invoke of the RegisterSS operation with the expected parameter values for registration of call forwarding.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

These checks are performed with a call transaction already established for:

a) CFB, for all asynchronous services, the RELEASE COMPLETE message being sent with a facility IE containing a return_error(error) where error is "Bearer Service not provisioned".

b) CF, for all facsimile, the RELEASE COMPLETE message being sent with a facility IE containing a reject(invoke_problem) where invoke_problem is "resource limitation".

#### 31.2.1.1.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests registration of CFB for all asynchronous services, to a number arbitrarily selected.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: BearerService not provisioned) of the RegisterSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests registration of CF for all facsimile, to a number arbitrarily selected.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a reject(invoke_problem: resource limitation) of the RegisterSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of call forwarding service for CFB (all asynchronous services) |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | RegisterSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate a registration of call forwarding service for CF (all facsimile) |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | RegisterSS operation Reject |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4 - CFB

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Registration

  Supplementary service code = CFB

  Forwarded to number: as selected,

  Basic service code: Bearer Service (all asynchronous services), no teleservice present

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: BearerService not provisioned

For the return error the invoke ID must be the same as in the invoke of the RegisterSS operation.

step 11 - CF

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Registration

  Supplementary service code = CF

  Forwarded to number: as selected,

  Basic service code: no bearer service present, teleservice (all facsimile)).

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the Register SS operation.

## 31.2.1.2 Erasure by the subscriber

### 31.2.1.2.1 Erasure accepted

#### 31.2.1.2.1.1 Conformance requirements

For erasure of any type of call forwarding, the MS shall transmit successively

1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user";
2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";
3) and then the REGISTER message containing a facility that includes an invoke of the EraseSS operation with the expected parameter values according to the user request (MMI action).
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.82, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.2.1.2.1.2 Test purpose

1) To check that the MS correctly requests supplementary service transaction for erasure of call forwarding in CHANNEL REQUEST message.

2) To check that the MS correctly requests supplementary service transaction for erasure of call forwarding in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the EraseSS operation with the expected parameter values for erasure of call forwarding.

4) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the MS provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFC, for basic service group all facsimile.

b) CFNRc, for all basic service groups.

#### 31.2.1.2.1.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

##### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

##### Foreseen final state of the MS

The MS is "idle updated".

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests erasure of CFC for all facsimile.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the facility information element containing a return result of the EraseSS operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests erasure of CFNRc for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the EraseSS operation.

The dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate erasure of call forwarding for CFC (all facsimile) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | EraseSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | The MS is made to initiate a erasure of call forwarding service for CFNRc (all basic services) |
| 11 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 15 | MS -> SS | REGISTER | |
| 16 | SS -> MS | RELEASE COMPLETE | EraseSS operation Return result |
| 17 | MS | | provide correct MMI user indication |
| 18 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 - CFC

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Erasure

  Supplementary service code = CFC

  Basic service code: no Bearer Service, teleservice (all facsimile).

step 15 - CFNRc

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Erasure

  Supplementary service code = CFNRc

  Basic service code: no bearer service present, no teleservice present.

#### 31.2.1.2.2 Erasure rejected

##### 31.2.1.2.2.1 Conformance requirements

1) A transaction of any kind being already established, for erasure of any type of call forwarding with any parameters, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the EraseSS operation with parameter values according to the user's request (MMI action).

3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2, 9.1.9

2) GSM 04.08 sections 4.5.1.1, 9.2.9, 10.5.33

3) GSM 04.82, GSM 04.80 sections 2.3, 3.6

4) GSM 02.30 section 4.5

##### 31.2.1.2.2.2 Test purpose

1) To check that the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of erasure of call forwarding, sending a CM SERVICE REQUEST.

2) To check that the MS sends a REGISTER message containing the invoke of the EraseSS operation with the expected parameter values for erasure of call forwarding.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

These checks are performed with a call transaction already established for:

a) CFU, for Speech, the RELEASE COMPLETE message being sent with a facility IE containing a return_error(error) where error is "Teleservice not provisioned".

b) CFNRy, for all facsimile, the RELEASE COMPLETE message being sent with a facility IE containing a reject(invoke_problem) where invoke_problem is "resource limitation".

##### 31.2.1.2.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests erasure of CFU for Speech.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: TeleService not provisioned) of the EraseSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests erasure of CFNRy for all facsimile.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a reject(invoke_problem: resource limitation) of the EraseSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a erasure of call forwarding service for CFU (speech) |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | EraseSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate a erasure of call forwarding service for CFNRy (all facsimile) |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | EraseSS operation Reject |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4 - CFU

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Erasure

  Supplementary service code = CFU

  Basic service code: Tele Service AllSpeechTransmissionServices, no Bearerservice present

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: TeleService not provisioned

For the return error the invoke ID must be the same as in the invoke of the EraseSS operation.

step 11 - CFNRy

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Erasure

  Supplementary service code = CFNRy

  Basic service code: no bearer service present, teleservice (all facsimile)).

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the EraseSS operation.

### 31.2.1.3 Activation

#### 31.2.1.3.1 Conformance requirements

For activation of any type of call forwarding with any parameters, the MS shall transmit successively

1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user";
2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";
3) and then the REGISTER message containing a facility IE that includes an invoke of the ActivateSS operation with parameter values according to the user's request (MMI action).
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.
2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.
3) GSM 04.82, GSM 04.80 sections 2.3 and 3.6.
4) GSM 02.30 section 4.5.

#### 31.2.1.3.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for activation of call forwarding in CHANNEL REQUEST message.

2) To check that the MS correctly requests a supplementary service transaction for activation of call forwarding in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the ActivateSS operation with the expected parameter values for activation of call forwarding.

4) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the MS provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CF, for basic service group "all synchronous services".

b) CFU, for all basic service groups.

#### 31.2.1.3.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

##### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

##### Foreseen final state of the MS

The MS is "idle updated".

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests activation of CF for all synchronous services.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing the return result of the ActivateSS operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests activation of CFU for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the ActivateSS operation.

##### Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a activation of call forwarding service for CF (all synchronous services) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | The MS is made to initiate a activation of call forwarding service for CFU (all basic service groups) |
| 11 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 15 | MS -> SS | REGISTER | |
| 16 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return result |
| 17 | MS | | provide correct MMI user indication |
| 18 | SS -> MS | CHANNEL RELEASE | |

Specific message contents:

step 6 - CF

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Activation

  Supplementary service code = CF

  Basic service code: Bearer Service (all synchronous services), no teleservice present.

step 15 - CFU

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Activation

  Supplementary service code = CFU

  Basic service code: no bearer service present, no teleservice present.

## 31.2.1.4 Deactivation

### 31.2.1.4.1 Conformance requirements

For deactivation of any type of call forwarding with any parameters, the MS shall transmit successively.

1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user";
2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";

3) and then the REGISTER message containing a facility IE that includes an invoke of the DeactivateSS operation with parameter values according to the user's request (MMI action).

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.82, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.2.1.4.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for deactivation of call forwarding in CHANNEL REQUEST message.

2) To check that the MS correctly requests a supplementary service transaction for deactivation of call forwarding in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for deactivation of call forwarding.

4) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the MS provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFC, for basic service group speech.

b) CFNRc, for basic service group all facsimile.

#### 31.2.1.4.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests deactivation of CFC for speech.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests deactivation of CFNRc for all facsimile.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

The dedicated channel is released.

### Maximum duration of test

3 min.

### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a deactivation of call forwarding service for CFC (speech) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | DeactivateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | The MS is made to initiate a deactivation of call forwarding service for CFNRc (all facsimile) |
| 11 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 15 | MS -> SS | REGISTER | |
| 16 | SS -> MS | RELEASE COMPLETE | DeactivateSS operation Return result |
| 17 | MS | | provide correct MMI user indication |
| 18 | SS -> MS | CHANNEL RELEASE | |

### Specific message content

step 6 - CFC

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Deactivation

  Supplementary service code = CFC

  Basic service code: Bearer Service (speech), no teleservice present.

step 15 - CFNRc

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

invoke = Deactivation

Supplementary service code = CFNRc

Basic service code: no bearer service present, teleservice (all facsimile).

### 31.2.1.5 Invocation

Invocation is not applicable to the MS and causes no signalling on the radio path.

### 31.2.1.6 Interrogation

#### 31.2.1.6.1 Interrogation accepted

##### 31.2.1.6.1.1 Conformance requirements

For interrogation of any specific call forwarding service (not applicable to a group of services) with any parameters, the MS shall transmit successively:

1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user";
2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation";
3) and then the REGISTER message containing a facility IE that includes an invoke of the InterrogateSS operation with parameter values according to the user's request (MMI action).
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.
2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.
3) GSM 04.82, GSM 04.80 sections 2.3 and 3.6.
4) GSM 02.30 section 4.5.

##### 31.2.1.6.1.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for interrogation of a specific call forwarding in CHANNEL REQUEST message.
2) To check that the MS correctly requests a supplementary service transaction for interrogation of call forwarding in the subsequent CM SERVICE REQUEST.
3) To check that the MS sends a REGISTER message containing the invoke of the InterrogateSS operation with the expected parameter values for interrogation of call forwarding.
4) To check that upon receipt of the result of the operation (in a RELEASE COMPLETE message), the MS provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

a) CFB, for all basic service groups.
b) CFNRy, for basic service group speech.

#### 31.2.1.6.1.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

##### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

##### Foreseen final state of the MS

The MS is "idle updated".

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CFB for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of CFNRy for speech.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The dedicated channel is released.

##### Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of call forwarding service for CFB (all) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | The MS is made to initiate a registration of call forwarding service for CFNRy(speech) |
| 11 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 16 | MS -> SS | REGISTER | |
| 17 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return result |
| 18 | MS | | provide correct MMI user indication |
| 19 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 - CFB

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = CFB

  Basic service code: no Bearer Service present, no teleservice present.

step 15 - CFNRy

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = CFNRy

  Basic service code: no bearer service present, teleservice (speech).

### 31.2.1.6.2 Interrogation rejected

#### 31.2.1.6.2.1 Conformance requirements

1) A transaction of any kind being already established, for interrogation of any specific call forwarding service with any parameters, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation".

2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the InterrogateSS operation with parameter values according to the user's request (MMI action).

3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.82, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.2.1.6.2.2 Test purpose

1) To check that the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of interrogation of a specific call forwarding service, sending a CM SERVICE REQUEST.

2) To check that the MS sends a REGISTER message containing the invoke of the InterrogateSS operation with the expected parameter values for interrogation of call forwarding.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

These checks are performed with a call transaction already established for:

a) CFNRc, for all basic service group, the RELEASE COMPLETE message being sent with a facility IE containing a return_error(error) where error is "SS not available".

b) CFB, for all facsimile, the RELEASE COMPLETE message being sent with a facility IE containing a reject(invoke_problem) where invoke_problem is "resource limitation".

#### 31.2.1.6.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CFNRc for all basic service groups.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of CFB for all facsimile.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of call forwarding service for CFNRc (all) |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate a interrogation of call forwarding service for CFB (all facsimile) |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Reject |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4 - CFNRc

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

invoke = Interrogation

Supplementary service code = CFNRc

Basic service code:no Bearer Service present, no teleservice present

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

return error code: SS not available

For the return error the invoke ID must be the same as in the invoke of the InterrogateSS operation.

step 11 - CFB

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

invoke = Interrogation

Supplementary service code = CFB

Basic service code: no bearer service present, teleservice (all facsimile)).

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the InterrogateSS operation.

### 31.2.1.7 Normal operation

#### 31.2.1.7.1 Served mobile subscriber side

##### 31.2.1.7.1.1 Notification during an incoming call

This subscription option is only applicable to CFB and CFNRy.

#### 31.2.1.7.1.1.1 Conformance requirements

1) During a call transaction, call establishment or not, upon receipt of a FACILITY message notifying an incoming call, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

2) If a call transaction is being established or is already established when the notification of incoming call is received, the receipt of the notification has no effect on its state.

##### References

1) GSM 02.30 section 4.5.

2) GSM 04.82 section 1.

#### 31.2.1.7.1.1.2 Test purpose

1) To check that, in state U7 or U10, upon receipt of a FACILITY message notifying an incoming call, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

2) To check that when the notification of incoming call is received while the MS is in CC state U7 and U10 of another incoming call, it has no effect on its state.

These checks are performed in the case of CFB.

#### 31.2.1.7.1.1.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

##### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

##### Foreseen final state of the MS

The MS is "idle updated".

##### Test procedure

The MS is brought to the call state U7 of an incoming call.

The system simulator transmits a FACILITY message with the facility information element containing an invoke of the NotifySS operation for CFB.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U7.

The MS is brought into the call state U10 of an incoming call.

The system simulator transmits a FACILITY message with the facility information element containing an invoke of the NotifySS operation for CFB.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

The transaction and the channel are released by the SS.

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING | |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | SETUP | |
| 6 | MS -> SS | CALL CONFIRMED | |
| 7 | SS -> MS | ASSIGNMENT COMMAND | |
| 8 | MS -> SS | ASSIGNMENT COMPLETE | |
| 9 | MS -> SS | ALERTING | |
| 10 | SS -> MS | FACILITY | (invoke NotifySS) |
| 11 | SS -> MS | STATUS ENQUIRY | |
| 12 | MS -> SS | STATUS | (U7) |
| 13 | MS -> SS | CONNECT | MS off hook |
| 14 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 15 | SS -> MS | FACILITY | (invoke NotifySS) |
| 16 | SS -> MS | STATUS ENQUIRY | |
| 17 | MS -> SS | STATUS | (U10) |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

Steps 10 and 15

- protocol discriminator: CC
- transaction identifier: same as for the call transaction already established
- message type: FACILITY
- facility

  invoke = notification

  Supplementary service code = CFB

  SS notification = incoming call is forwarded

  (call is forwarded indication to B subscriber).

### 31.2.1.7.1.2 Notification during an outgoing call

#### 31.2.1.7.1.2.1 Conformance requirements

1) As an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification (for CFU or CFC), the MS shall correctly reach CC state U4.

2) As an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification (for CFU or CFC), the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

3) As an outgoing call is being established, if the CONNECT message is received with the facility information element containing an SS notification (for CFU or CFC), the MS shall normally send a CONNECT ACKNOWLEDGE message and enter CC state U10.

4) As an outgoing call is being established, if the CONNECT message is received with the facility information element containing an SS notification (for CFU or CFC), the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.82, GSM 04.80 section 3.6.

2) GSM 04.82, TBS. GSM 04.80 section 3.6.

#### 31.2.1.7.1.2.2 Test purpose

1) To check that when an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification, the MS correctly reaches CC state U4. This is tested for CFU.

2) As an outgoing call is being established, if the ALERTING message is received with the facility information element containing an SS notification, the MS provides the appropriate user indication (which is to be described by the manufacturer). This is tested for CFU.

3) As an outgoing call is being established, if the CONNECT message is received with the facility information element containing an SS notification, the MS normally sends a CONNECT ACKNOWLEDGE message and enter CC state U10. This is tested for CFC.

4) As an outgoing call is being established, if the CONNECT message is received with the facility information element containing an SS notification (for CFU or CFC), the MS provides the appropriate user indication (which is to be described by the manufacturer). This is tested for CFC.

#### 31.2.1.7.1.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

The MS is made to place an outgoing call.

After having received a SETUP message and sent a CALL PROCEEDING message and after a TCH has been allocated the system simulator transmits an ALERTING message with the facility information element containing a notification.

The system simulator send then a STATUS ENQUIRY message. On receipt of the STATUS ENQUIRY message the MS shall send a STATUS message with CC-state U4.

After that, the system simulator transmits a CONNECT with the facility information element containing a notification.

After reception of a CONNECT ACKNOWLEDGE message the system simulator sends a STATUS ENQUIRY message.

The MS shall respond with a STATUS message indicating CC-state U10.

The transaction and the channel are released by the SS.

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | CHANNEL REQUEST | |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 3 | MS -> SS | CM SERVICE REQUEST | "mobile originating call establishment" |
| 4 | SS -> MS | CM SERVICE ACCEPT | |
| 5 | MS -> SS | SETUP | |
| 6 | SS -> MS | CALL PROCEEDING | |
| 7 | SS -> MS | ASSIGNMENT COMMAND | |
| 8 | MS -> SS | ASSIGNMENT COMPLETE | |
| 9 | SS -> MS | ALERTING | containing facility IE |
| 10 | SS -> MS | STATUS ENQUIRY | |
| 11 | MS -> SS | STATUS | (U4) |
| 12 | SS -> MS | CONNECT | containing facility IE |
| 13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | (U10) |
| 16 | SS -> MS | RELEASE COMPLETE | |
| 17 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

At step 9 -

Facility invoke = notification

- SS-Code (CFU)
- SS-Status (indicating:

  Provisioned, registered and active).

At step 12 -

Facility invoke = notification

- SS-Code (CFC)
- SS-Status (indicating:

  Provisioned, registered and active).

### 31.2.1.7.2 Forwarded-to mobile subscriber side

#### 31.2.1.7.2.1 Conformance requirements

1) Upon receipt of the SETUP message containing a notification indication that the call is a forwarded one (with any SS code except CFC), the MS shall correctly continue call establishment and enter CC state U6.

2) Upon receipt of the SETUP message containing a notification indication that the call is a forwarded one, or after sending CALL CONFIRMED, or after sending ALERTING, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.82.

2) GSM O2.30 section 4.5.

#### 31.2.1.7.2.2 Test purpose

1) To check that, upon receipt of the SETUP message containing a notification indication that the call is a forwarded one, the MS correctly continues call establishment and enters CC state U6.

2) To check that upon receipt of the SETUP message containing a notification indication that the call is a forwarded one, or after sending CALL CONFIRMED, or after sending ALERTING, the MS provides the appropriate user indication (which is to be described by the manufacturer).

#### 31.2.1.7.2.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

##### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call forwarding.

##### Foreseen final state of the MS

The MS is "idle updated".

##### Test procedure

An incoming call is given to the MS with the SETUP message with the facility information element containing an invoke of the NotifySS operation with the indication that the call is forwarded.

After the MS was brought to CC state U7, the SS sends a STATUS ENQUIRY message. The MS responds indicating CC state U7 (implying that it has travelled through CC state U6).

The transaction and the channel are released by the SS.

##### Maximum duration of test

1 min.

##### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING | |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | SETUP | containing the notification that the call is a forwarded one |
| 6 | MS -> SS | CALL CONFIRMED | |
| 7 | SS -> MS | ASSIGNMENT COMMAND | |
| 8 | MS -> SS | ASSIGNMENT COMPLETE | |
| 9 | MS -> SS | ALERTING | Ringing and user indication that the incoming call is forwarded |
| 10 | SS -> MS | STATUS ENQUIRY | |
| 11 | MS -> SS | STATUS | (U7) |
| 12 | SS -> MS | RELEASE COMPLETE | |
| 13 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

at step 5 -

- protocol discriminator: CC
- transaction identifier:
- message type: SETUP
- facility

  invoke = notification

  - SS-Code (CFU, CFB, CFNRy, CFNRc or CF)
  - SS-Notification (indicating: call is forwarded i.e.

    Call is forwarded indication to C-subscriber).

## 31.2.2 Call transfer and mobile access hunting supplementary services

(Reserved).

# 31.3 Call completion supplementary services

NOTE: In this section, Subscriber B is the MS under test, and subscribers A, C and D are distant parties to the calls made during the tests.

## 31.3.1 Call Waiting

### 31.3.1.1 Waiting call indication and confirmation

Conformance requirement

GSM 04.83 subclause 1.1

Applicability

MS supporting the Call Waiting supplementary service.

Test purpose

With an active call, an MS receiving an MT call shall include Cause #17 "user busy" in the CALL CONFIRMED message sent to the SS, and indicate the waiting call to the subscriber.

Method of test

Related PICS/PIXIT statements

- supported MT circuit switched basic services.
- method of indicating a wating call to the user

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has a call ("Call A-B") of a basic service supported by the MS and applicable to Call Waiting as described in GSM 02.04 Table A.1 in the active state. The SIM in the MS under test has Call Waiting enabled.

Foreseen final state of the MS

Call A-B, state U10. Call C-B, state U7.

Maximum duration of test

30 s.

Procedure

The SS shall initiate Call C-B by sending a SETUP message to the MS. The MS shall respond with a CALL CONFIRMED message including cause #17 "user busy", followed by an ALERTING message.

The MS shall remain in state U10 in respect of the Call A-B, and enter state U7 "Call received" in respect of Call C-B. The MS shall indicate the existence of the waiting call to the user by a method defined by the manufacturer. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | SETUP | Transaction identifier different from that of Call A-B |
| 2 | MS -> SS | CALL CONFIRMED | cause #17 "user busy". |
| 3 | MS -> SS | ALERTING | |
| 4 | MS | | A waiting call indication as defined in a PICS/PIXIT statement is given by the MS. |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10 |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call C-B |
| 8 | MS -> SS | STATUS | Transaction identifier of Call C-B, state U7 |

### 31.3.1.2 Normal operation with successful outcome

#### 31.3.1.2.1 Waiting call accepted; existing call released

Conformance requirement

GSM 04.83 subclause 1.2.1

Applicability

MS supporting the Call Waiting supplementary service.

Test purpose

The MS shall release the active call using the call clearing procedures of GSM 04.08, and then accept the waiting call.

Method of test

Related PICS/PIXIT statements

- supported MT circuit switched basic services.
- method of clearing an active call and answering a waiting call

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has Call A-B of a basic service supported by the MS and applicable to Call Waiting as described in GSM 02.04 Table A.1 in the state U10 “Active” and Call C-B in the state U7 “Call Received”.

Foreseen final state of the MS

Call A-B, state U0. Call C-B, state U10.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall clear Call A-B, and then answer Call C-B.

The MS shall send a DISCONNECT message with the transaction identifier Call A-B, and then respond to a RELEASE message from the SS with a RELEASE COMPLETE message, and then enter state U0 “Null” in respect of this call.

The MS shall then send a CONNECT in respect of Call C-B, and enter state U10 “Active” on receipt of a CONNECT ACKNOWLEDGE message. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-B and a STATUS message indicating the appropriate call state for Call C-B.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Call A-B is cleared using MMI commands |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-B |
| 3 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 4 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 5 | MS | | Call C-B is answered using MMI commands |
| 6 | MS -> SS | CONNECT | Transaction identifier of Call C-B |
| 7 | SS -> MS | CONNECT ACKNOWLEDGE | Transaction identifier of Call C-B |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call C-B |
| 11 | MS -> SS | STATUS | Transaction identifier of Call C-B, state U10 |

### 31.3.1.2.2 Waiting call accepted; existing call on hold

#### 31.3.1.2.2.1 Waiting call accepted; existing call on hold, no additional calls

Conformance requirement

GSM 04.83 subclause 1.2.2

Applicability

MS supporting the Call Waiting supplementary service.

### Test purpose

With one active call and one waiting call, the MS shall place the active call on hold, and then accept the waiting call.

### Method of test

### Related PICS/PIXIT statements

- supported MT circuit switched basic services.
- method of placing an active call on hold and answering a waiting call

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has Call A-B of a basic service supported by the MS and applicable to Call Waiting as described in GSM 02.04 Table A.1 in the state U10 “Active” and Call C-B in the state U7 “Call Received”.

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state “Call held”. Call C-B, state U10.

### Maximum duration of test

30 s.

### Procedure

Using suitable MMI commands, the MS shall place Call A-B on hold, and then answer Call C-B.

The MS shall send a HOLD message to the SS using the transaction identifier of Call A-B and enter state U10 “Active” with auxiliary state “Call held”. On receipt of a HOLD ACKNOWLEDGE from the SS the MS shall enter state U10 “Active” with auxiliary state “Call held”.

The MS shall then send a CONNECT message to the SS, using the transaction identifier of Call C-B, and on receipt of a CONNECT ACKNOWLEDGE message, shall enter state U10 “Active”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Call A-B is placed on hold using MMI commands |
| 2 | MS -> SS | HOLD | Transaction identifier of Call A-B |
| 3 | SS -> MS | HOLD ACKNOWLEDGE | Transaction identifier of Call A-B |
| 4 | MS | | Call C-B is answered using MMI commands |
| 5 | MS -> SS | CONNECT | Transaction identifier of Call C-B |
| 6 | SS -> MS | CONNECT ACKNOWLEDGE | Transaction identifier of Call C-B |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 8 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call Held" |
| 9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call C-B |
| 10 | MS -> SS | STATUS | Transaction identifier of Call C-B, state U10 |

### 31.3.1.2.3 Existing call released by user A; waiting call accepted

#### Conformance requirement

GSM 04.83 subclause 1.2.3

#### Applicability

MS supporting the Call Waiting supplementary service.

#### Test purpose

The MS, on receipt of a DISCONNECT message from the active call, shall complete the clearance of the active call, and accept the waiting call.

#### Method of test

#### Related PICS/PIXIT statements

- supported MT circuit switched basic services.
- method of clearing an active call and answering a waiting call

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has Call A-B of a basic service supported by the MS and applicable to Call Waiting as described in GSM 02.04 Table A.1 in the state U10 “Active” and Call C-B in the state U7 “Call Received”.

#### Foreseen final state of the MS

Call A-B, state U0. Call C-B, state U10.

#### Maximum duration of test

30 s.

#### Procedure

On receipt of a DISCONNECT message using the transaction identifier of Call A-B, the MS shall respond with a RELEASE message. On receipt of a RELEASE COMPLETE message, the MS shall enter state U0 “Null”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

If necessary, MMI commands shall be entered to accept call C-B. The MS shall then send a CONNECT message using the transaction identifier of Call C-B, and on receipt of a CONNECT ACKNOWLEDGE message, shall enter state U10 “Active”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-B and a STATUS message indicating the appropriate call state for Call C-B.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | DISCONNECT | Transaction identifier of Call A-B |
| 2 | MS -> SS | RELEASE | Transaction identifier of Call A-B |
| 3 | SS -> MS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 4 | MS | | If necessary, call C-B is answered using MMI commands |
| 5 | MS -> SS | CONNECT | Transaction identifier of Call C-B |
| 6 | SS -> MS | CONNECT ACKNOWLEDGE | Transaction identifier of Call C-B |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 8 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call C-B |
| 10 | MS -> SS | STATUS | Transaction identifier of Call C-B, state U10 |

### 31.3.1.3 Normal operation with unsuccessful outcome

#### 31.3.1.3.1 Waiting call released by subscriber B

Conformance requirement

GSM 04.83 subclause 1.3.1

Applicability

MS supporting the Call Waiting supplementary service.

Test purpose

To test that, using MMI commands, the MS shall clear the waiting call.

Method of test

Related PICS/PIXIT statements

- supported MT circuit switched basic services.
- method of clearing a waiting call

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has Call A-B of a basic service supported by the MS and applicable to Call Waiting as described in GSM 02.04 Table A.1 in the state U10 “Active” and Call C-B in the state U7 “Call Received”.

Foreseen final state of the MS

Call A-B, state U10. Call C-B, state U0.

Maximum duration of test

30 s.

Procedure

Using appropriate MMI commands, the MS shall clear Call C-B.

The MS shall send a DISCONNECT message with the transaction identifier of Call B, and on receipt of a RELEASE message from the network, shall send a RELEASE COMPLETE and enter state U0 “Null”. The call states shall be verified by the SS sending a a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call C-B and STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call C-B and a STATUS message indicating the appropriate call state for Call A-B.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Call C-B is cleared using MMI commands |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call C-B |
| 3 | SS -> MS | RELEASE | Transaction identifier of Call C-B |
| 4 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call C-B |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10 |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call C-B |
| 8 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call C-B, with cause #81 "invalid transaction identifier value" |

### 31.3.1.3.2 Waiting call released by calling user C

#### Conformance requirement

GSM 04.83 subclause 1.3.2

#### Applicability

MS supporting the Call Waiting supplementary service.

#### Test purpose

To test that the MS responds correctly to the receipt of a clearing message from the waiting call.

#### Method of test

#### Related PICS/PIXIT statements

- supported MT circuit switched basic services.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has Call A-B of a basic service supported by the MS and applicable to Call Waiting as described in GSM 02.04 Table A.1 in the state U10 “Active” and Call C-B in the state U7 “Call Received”.

#### Foreseen final state of the MS

Call A-B, state U10. Call C-B, state U0.

#### Maximum duration of test

30 s.

Procedure

On receipt of a DISCONNECT message using the transaction identifier of Call C-B, the MS shall respond with a RELEASE message. On receipt of a RELEASE COMPLETE message, the MS shall enter state U0 “Null”. Call A-B shall remain in state U10. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call C-B and STATUS message indicating the appropriate call state for Call A-B.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | DISCONNECT | Transaction identifier of Call C-B |
| 2 | MS -> SS | RELEASE | Transaction identifier of Call C-B |
| 3 | SS -> MS | RELEASE COMPLETE | Transaction identifier of Call C-B |
| 4 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 5 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10 |
| 6 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call C-B |
| 7 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call C-B, with cause #81 "invalid transaction identifier value" |

### 31.3.1.4 Activation

Conformance requirement

GSM 04.83 subclause 1.4

Applicability

MS supporting the Call Waiting supplementary service.

Test purpose

To test the correct operation of the activation procedure, and correctly display of the response from the SS in the following cases.

1) Successful activation

2) Error response (reject)

3) Activation reject (Invoke problem)

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for activation of Call Waiting.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests activation of CW for a basic service group supported by the MS.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the ActivateSS operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests activation of CW for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the ActivateSS operation.

The SS transaction is released and the dedicated channel is released.

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests activation of CW for a basic service group supported by the MS.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Return Error component with Error code:SS not available.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests activation of CW for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Return Error component with Error code:SS not available.

The SS transaction is released and the dedicated channel is released.

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests activation of CW for a basic service group supported by the MS.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Reject component with Invoke problem (Resource limitation).

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests activation of CW for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing A Reject component with Invoke problem (Resource limitation).

Maximum duration of test

9 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a activation of call forwarding service for CW for the selected basic service group |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | The MS is made to initiate a activation of CW (all basic service groups) |
| 11 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 15 | MS -> SS | REGISTER | |
| 16 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return result |
| 17 | MS | | provide correct MMI user indication |
| 18 | SS -> MS | CHANNEL RELEASE | |
| 19 | MS | | The MS is made to initiate a activation of call forwarding service for CW for the selected basic service group |
| 20 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 21 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 22 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 23 | SS -> MS | CM SERVICE ACCEPT | |
| 24 | MS -> SS | REGISTER | |
| 25 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return Error |
| 26 | MS | | provide user MMI indication |
| 27 | SS -> MS | CHANNEL RELEASE | |
| 28 | MS | | The MS is made to initiate a activation of CW (all basic service groups) |
| 29 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 30 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 31 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 32 | SS -> MS | CM SERVICE ACCEPT | |
| 33 | MS -> SS | REGISTER | |
| 34 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return Error |
| 35 | MS | | provide correct MMI user indication |
| 36 | SS -> MS | CHANNEL RELEASE | |
| 37 | MS | | The MS is made to initiate a activation of call forwarding service for CW for the selected basic service group |
| 38 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 39 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 40 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 41 | SS -> MS | CM SERVICE ACCEPT | |
| 42 | MS -> SS | REGISTER | |
| 43 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Reject |
| 44 | MS | | provide user MMI indication |
| 45 | SS -> MS | CHANNEL RELEASE | |
| 46 | MS | | The MS is made to initiate a activation of CW (all basic service groups) |
| 47 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 48 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 49 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 50 | SS -> MS | CM SERVICE ACCEPT | |
| 51 | MS -> SS | REGISTER | |
| 52 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Reject |

| | | | |
|---|---|---|---|
| 53 | MS | | provide correct MMI user indication |

- message type: REGISTER
- facility

  invoke = Activation

  Supplementary service code = CW

  Basic service code: no bearer service present, no teleservice present.

### 31.3.1.5 Deactivation

#### Conformance requirement

GSM 04.83 subclause 1.5

#### Applicability

MS supporting the Call Waiting supplementary service.

#### Test purpose

To test the correct operation of the deactivation procedure, and correct display of the response from the SS in the following cases

1) Successful deactivation
2) Error response (reject)
3) Activation reject (Invoke problem)

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for deactivation of call waiting.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests deactivation of CW for a basic service group supported by the MS.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests deactivation of CW for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the DeactivateSS operation.

The SS transaction is released and the dedicated channel is released.

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests deactivation of CW for a basic service group supported by the MS.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Return Error component with Error code:SS not available.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests deactivation of CW for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing a Return Error component with Error code:SS not available.

The SS transaction is released and the dedicated channel is released.

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests deactivation of CW for a basic service group supported by the MS.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing A Reject component with Invoke problem (Resource limitation).

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests deactivation of CW for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing A Reject component with Invoke problem (Resource limitation).

Maximum duration of test

9 min.

Expected sequence

| Step | Direction | Message | Comments |

Specific message content

step 6, 24, 42 - CW

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Deactivation

  Supplementary service code = CW

  Basic service code: the selected basic service group.

step 15, 33, 51 - CW

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Deactivation

  Supplementary service code = CW

  Basic service code: no bearer service present

### 31.3.1.6 Interrogation

#### 31.3.1.6.1 Interrogation accepted

Conformance requirement

GSM 04.83 subclause 1.6

Applicability

MS supporting the Call Waiting supplementary service.

Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of successful interrogation

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for interrogation of call waiting.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CW for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS (BasicServiceCode(s)) operation.

The SS transaction is released and the dedicated channel is released.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of CW for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS (SS-Status) operation.

The dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation of CW (all) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | RELEASE COMPLETE | InterrogateSS (BasicServiceCode(s)) operation Return_result |
| 8 | MS | | provide user MMI indication |
| 9 | SS -> MS | CHANNEL RELEASE | |
| 10 | MS | | The MS is made to initiate an interrogation of CW (all) |
| 11 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 13 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 14 | SS -> MS | CM SERVICE ACCEPT | |
| 15 | MS -> SS | REGISTER | |
| 16 | SS -> MS | RELEASE COMPLETE | InterrogateSS (SS-Status) operation Return result |
| 17 | MS | | provide correct MMI user indication |
| 18 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6, 15 - CW

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = CW

  Basic service code: no Bearer Service present, no teleservice present.

#### 31.3.1.6.2 Interrogation rejected

##### Conformance requirement

GSM 04.83 subclause 1.6

##### Applicability

MS supporting the Call Waiting supplementary service.

##### Test purpose

To test the correct operation of the interrogation procedure, and correct display of the response from the SS in the case of an error response and an invoke problem

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

##### Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call waiting.

##### Foreseen final state of the MS

The MS is in CC state U10.

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of CW for all basic service groups.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions as defined by the basic public MMI described in GSM 02.30, the user requests interrogation of CW for all basic service groups.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate an interrogation of CW (all) |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate an interrogation of CW for (all) |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Reject |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4, 11 - CW

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = CW

  Basic service code:no Bearer Service present, no teleservice present

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS not available

For the return error the invoke ID must be the same as in the invoke of the InterrogateSS operation.

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message

- message type: RELEASE COMPLETE
- facility:

  reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the InterrogateSS operation.

## 31.3.2 Call Hold

### 31.3.2.1 Hold invocation

#### Conformance requirement

GSM 04.83 subclause 2.1.2

#### Applicability

MS supporting the Call Hold supplementary service.

#### Test purpose

To test the correct operation of the Hold procedure, and the MS reaction to the following messages sent in response to the HOLD message

1. HOLD REJECT
2. HOLD ACKNOWLEDGE

#### Method of test

#### Related PICS/PIXIT statements

- method of placeing a call on hold

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a call of a basic service supported by the MS and applicable to Call Hold as described in GSM 02.04 Table A.1 in state U10 “Active”

#### Foreseen final state of the MS

State U10, Auxiliary state "Call Held"

#### Maximum duration of test

30 s.

#### Procedure

Using suitable MMI commands, the MS shall request that the call is placed on hold. The MS shall send a HOLD message and enter auxiliary state “hold request”. On receipt of a HOLD REJECT message from the SS shall return to state U10 ”Active“. The call state shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of the call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Using suitable MMI commands, the MS shall again request that the call is placed on hold. The MS shall send a HOLD message and enter auxiliary state “hold request”. On receipt of a HOLD ACKNOWLEDGE message from the SS shall enter to state U10 ”Active “ with auxiliary state “Call held”. The call state shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, the MS places the call on hold |
| 2 | MS -> SS | HOLD | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | State U10, auxiliary state “Hold request” |
| 5 | SS -> MS | HOLD REJECT | |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | State U10, no auxiliary state |
| 8 | SS | | Check that the TCH is through-connected |
| 9 | MS | | Using MMI commands, the MS places the call on hold |
| 10 | MS -> SS | HOLD | |
| 11 | SS -> MS | STATUS ENQUIRY | |
| 12 | MS -> SS | STATUS | State U10, auxiliary state “Hold request” |
| 13 | SS -> MS | HOLD ACKNOWLEDGE | |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | State U10, auxiliary state "Call held" |

### 31.3.2.2 Retrieve procedure

Conformance requirement

GSM 04.83 subclause 2.1.3

Applicability

MS supporting the Call Hold supplementary service.

Test purpose

To test the correct operation of the retrieve procedure, and the MS reaction to the following messages sent in response to the RETRIEVE message

1) RETRIEVE REJECT

2) RETRIEVE ACKNOWLEDGE

Initial conditions

The MS shall have a call of a basic service supported by the MS and applicable to Call Hold as described in GSM 02.04 Table A.1 in state U10 “Active” with auxiliary state “Call held”.

Method of test

Related PICS/PIXIT statements

- method of retrieving a held call

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a call of a basic service supported by the MS and applicable to Call Hold as described in GSM 02.04 Table A.1 in state U10 “Active” with auxiliary state “Call held”.

Foreseen final state of the MS

State U10, no auxiliary state.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall request that the call is placed on RETRIEVE. The MS shall send a RETRIEVE message and enter auxiliary state “retrieve request”. On receipt of a RETRIEVE REJECT message from the SS, the MS shall return to state U10 ”Active“ with auxiliary state “Call held”. The call state shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Using suitable MMI commands, the MS shall again request that the call is placed on RETRIEVE. The MS shall send a RETRIEVE message and enter auxiliary state “retrieve request”. On receipt of a RETRIEVE ACKNOWLEDGE message from the SS, the MS shall enter state U10 ”Active“.The call state shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, the MS retrieves the held call |
| 2 | MS -> SS | RETRIEVE | |
| 3 | SS -> MS | STATUS ENQUIRY | |
| 4 | MS -> SS | STATUS | State U10, auxiliary state “Retrieve request” |
| 5 | SS -> MS | RETRIEVE REJECT | |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | State U10, auxiliary state "Call held" |
| 8 | MS | | Using MMI commands, the MS retrieves the held call |
| 9 | MS -> SS | RETRIEVE | |
| 10 | SS -> MS | STATUS ENQUIRY | |
| 11 | MS -> SS | STATUS | State U10, auxiliary state “Retrieve request” |
| 12 | SS -> MS | RETRIEVE ACKNOWLEDGE | |
| 13 | SS -> MS | STATUS ENQUIRY | |
| 14 | MS -> SS | STATUS | State U10, no auxiliary state |
| 15 | SS | | Check that the TCH is through-connected |

### 31.3.2.3 Alternate from one call to the other

Conformance requirement

GSM 04.83 subclause 2.1.4

Applicability

MS supporting the Call Hold supplementary service.

Test purpose

To test that the MS correctly alternates between one call and the other, by placing the active call on hold, and retrieving the previously held call.

To test that the MS correctly returns to the original call states in the event of receipt of a HOLD REJECT or RETRIEVE REJECT.

### Method of test

### Related PICS/PIXIT statements

- method of alternating between an active call and a held call

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active”, and Call C-B in state U10 “Active” with auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and applicable to Call Hold as described in GSM 02.04 Table A.1.

### Foreseen final state of the MS

Call A-B: State U10, Auxiliary State “Call Held”
Call C-B: State U10, No Auxiliary State

### Maximum duration of test

30 s.

### Procedure

Using suitable MMI commands, the MS shall alternate between Call A-B and Call C-B. The MS shall send a HOLD message with the transaction identifier for Call A-B and enter auxiliary state “hold request”, and send a RETRIEVE message with the transaction identifier for Call C-B and enter auxiliary state “retrieve request”. On receipt of a HOLD ACKNOWLEDGE and RETRIEVE ACKNOWLEDGE message, the MS shall have Call A-B in state U10 “Active” with auxiliary state “Call held”, and Call C-B in state U10 “Active”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Using suitable MMI commands, the MS shall alternate between Call A-B and Call C-B. The MS shall send a HOLD message with the transaction identifier for Call C-B and enter auxiliary state “hold request”, and send a RETRIEVE message with the transaction identifier for Call A-B and enter auxiliary state “retrieve request”. On receipt of a HOLD REJECT and RETRIEVE REJECT message, the MS shall have Call A-B remain in state U10 “Active” with auxiliary state “Call held”, and Call C-B in state U10 “Active”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state and auxiliary state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, the MS changes from call A-B to call C-B |
| 2 | MS -> SS | HOLD | Transaction identifier for call A-B |
| 3 | MS -> SS | RETRIEVE | Transaction identifier for call C-B |
| 4 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call A-B |
| 5 | MS -> SS | STATUS | Transaction identifier for call A-B, State U10, auxiliary state “Hold request” |
| 6 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call C-B |
| 7 | MS -> SS | STATUS | Transaction identifier for call C-B, State U10, auxiliary state “Retrieve request” |
| 8 | SS -> MS | HOLD ACKNOWLEDGE | Transaction identifier for call A-B |
| 9 | SS -> MS | RETRIEVE ACKNOWLEDGE | Transaction identifier for call C-B |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call A-B |
| 11 | MS -> SS | STATUS | Transaction identifier for call A-B, state U10, auxiliary state "Call Held" |
| 12 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call C-B |
| 13 | MS -> SS | STATUS | Transaction identifier for call C-B, state U10, no auxiliary state |
| 14 | SS | | Check that the TCH is through-connected |
| 15 | MS | | Using MMI commands, the MS changes from call C-B to call A-B |
| 16 | MS -> SS | HOLD | Transaction identifier for call C-B |
| 17 | MS -> SS | RETRIEVE | Transaction identifier for call A-B |
| 18 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call C-B |
| 19 | MS -> SS | STATUS | Transaction identifier for call C-B, State U10, auxiliary state “Hold request” |
| 20 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call A-B |
| 21 | MS -> SS | STATUS | Transaction identifier for call A-B, State U10, auxiliary state “Retrieve request” |
| 22 | SS -> MS | HOLD REJECT | Transaction identifier for call C-B |
| 23 | SS -> MS | RETRIEVE REJECT | Transaction identifier for call A-B |
| 24 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call C-B |
| 25 | MS -> SS | STATUS | Transaction identifier for call C-B, state U10, no auxiliary state |
| 26 | SS -> MS | STATUS ENQUIRY | Transaction identifier for call A-B |
| 27 | MS -> SS | STATUS | Transaction identifier for call A-B, state U10, auxiliary state "Call Held" |
| 28 | SS | | Check that the TCH is through-connected |

# 31.4 Multi-party supplementary services

NOTE: In this section, subscriber A is the MS under test, and subscribers B to G are distant parties in the calls used in the tests.

## 31.4.1 Beginning the MultiParty service

### 31.4.1.1 Beginning the MultiParty service, successful case

Conformance requirement

GSM 04.84 subclause 1.1

Applicability

MS supporting the MultiParty supplementary service.

### Test purpose

To test that the MS correctly starts the MultiParty service when it has an active call and a held call, and reacts correctly to a response from the SS indicating success.

### Method of test

### Related PICS/PIXIT statements

Method of joining two calls into a MultiParty call

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” and Call A-C in state U10 “Active” with Auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY".

### Maximum duration of test

30 s.

### Procedure

Using suitable MMI commands, the MS shall join the two calls in a MultiParty call. The MS shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for either Call A-B or Call A-C. Both calls shall enter auxiliary state “MPTY request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message including a Return Result component, the MS shall enter the state U10 “Active” with auxiliary state “Call in MPTY”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, join the two calls |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, BuildMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request, call held" |
| 7 | SS -> MS | FACILITY | Same TI as step 2, Return Result component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 12 | SS | | Check that the TCH is through-connected |

### 31.4.1.2 Beginning the MultiParty service, unsuccessful case

#### Conformance requirement

GSM 04.84 subclause 1.1

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly starts the MultiParty service when it has an active call and a held call, and reacts correctly to the following responses from the SS.

1) Return error

2) Reject

#### Method of test

#### Related PICS/PIXIT statements

- method of joining two calls into a MultiParty call

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” and Call A-C in state U10 “Active” with Auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

#### Foreseen final state of the MS

Call A-B, state U10, no auxiliary state. Call A-C, state U10, auxiliary state "Call Held".

Maximum duration of test

45 s.

Procedure

Using suitable MMI commands, the MS shall initiate a MultiParty call. The MS shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for either Call A-B or Call A-C. Both calls shall enter auxiliary state “MPTY request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message including a Return Error component, the MS shall return both calls to their original call states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable MMI commands, the MS shall initiate a MultiParty call. The MS shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for boeither Call A-B or Call A-C. Both calls shall enter auxiliary state “MPTY request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message including a Reject component, the MS shall return both calls to their original call states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, set up a MultiParty call |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, BuildMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request, call held" |
| 7 | SS -> MS | FACILITY | Same TI as step 2, Return Error component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call Held" |
| 12 | MS | | Using MMI commands, set up a MultiParty call |
| 13 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, BuildMPTY Invoke component |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request" |
| 16 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 17 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request, call held" |
| 18 | SS -> MS | FACILITY | Same TI as step 13, Reject component |
| 19 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 20 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| 21 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 22 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call Held" |

### 31.4.1.3 Beginning the MultiParty service, expiry of timer T(BuildMPTY)

#### Conformance requirement

GSM 04.84 subclause 1.1

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly starts the MultiParty service when it has an active call and a held call, and on expiry of timer T(BuildMPTY) returns both calls to their original states.

#### Method of test

#### Related PICS/PIXIT statements

- method of joining two calls into a MultiParty call

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” and Call A-C in state U10 “Active” with Auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

#### Foreseen final state of the MS

Branch A - Call A-B, state U10, no auxiliary state. Call A-C, state U10, auxiliary state "Call Held".

Branch B - Call A-B, state U10, auxiliary state "MPTY Request". Call A-C, state U10, auxiliary state "MPTY Request".

#### Maximum duration of test

45 s.

#### Procedure

Using suitable MMI commands, the MS shall initiate a MultiParty call. The MS shall send a FACILITY message containing an invoke component set to BuildMPTY, and with the transaction identifier for either Call A-B or Call A-C. Both calls shall enter auxiliary state “MPTY request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Not less than 5s and not more than 30s after sending the FACILITY message, one of the following shall have occurred.

- both calls shall be in their original call states and the MS shall have indicated the failure to the user, or
- the MS shall have sent another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, set up a MultiParty call |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, BuildMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request, call held" |
| 7 | SS | | Wait 30 s from receiving FACILITY message |
| | | | Take this branch if no message is received within 30 s |
| A8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| A10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call Held" |
| | | | Take this branch if a message is received within 30 s |
| B8 | MS -> SS | FACILITY | Same as Step 2. Message shall not be received less than 5 s after the first FACILITY message |
| B9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B10 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "MPTY request" |
| B11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B12 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "MPTY request, call held" |

## 31.4.2 Managing an active MultiParty call

### 31.4.2.1 Served mobile subscriber

#### 31.4.2.1.1 Put the MultiParty call on hold

##### 31.4.2.1.1.1 Put the MultiParty call on hold, successful case

Conformance requirement

GSM 04.84 subclause 1.2.1.1

Applicability

MS supporting the MultiParty supplementary service.

Test purpose

To test that the MS correctly places an active MultiParty call on hold, and reacts correctly to a response from the SS indicating success.

Method of test

Related PICS/PIXIT statements

- method of placing a MultiParty call on hold

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY, call held". Call A-C, state U10, auxiliary state "Call in MPTY, call held".

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall place the MultiParty call on hold. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component HoldMPTY. Both calls shall enter the auxiliary state “Call in MPTY, hold request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a return result component, the MS shall enter the state U10 ”Active” with auxiliary state “Call in MPTY, call held” for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, put the MultiParty call on hold |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, HoldMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |
| 7 | SS -> MS | FACILITY | Same TI as step 2, Return Result component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |

### 31.4.2.1.1.2 Put the MultiParty call on hold, unsuccessful case

Conformance requirement

GSM 04.84 subclause 1.2.1.1

Applicability

MS supporting the MultiParty supplementary service.

### Test purpose

To test that the MS correctly places an active MultiParty call on hold, and reacts correctly to a response from the SS indicating an error or a reject condition.

### Method of test

### Related PICS/PIXIT statements

- method of placing a MultiParty call on hold

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY".

### Maximum duration of test

45 s.

### Procedure

Using suitable MMI commands, the MS shall place the MultiParty call on hold. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component HoldMPTY. Both calls shall enter the auxiliary state “Call in MPTY, hold request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a return error component, the MS shall return to the original states for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable MMI commands, the MS shall place the MultiParty call on hold. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component HoldMPTY. Both calls shall enter the auxiliary state “Call in MPTY, hold request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a Reject component, the MS shall return to the original states for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, put the MultiParty call on hold |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, HoldMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |
| 7 | SS -> MS | FACILITY | Same TI as step 2, Return Error component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 12 | MS | | Using MMI commands, place the MultiParty call on hold |
| 13 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, HoldMPTY Invoke component |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| 16 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 17 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |
| 18 | SS -> MS | FACILITY | Same TI as step 13, Reject component |
| 19 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 20 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 21 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 22 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |

### 31.4.2.1.1.3 Put the MultiParty call on hold, expiry of timer T(HoldMPTY)

#### Conformance requirement

GSM 04.84 subclause 1.2.1.1

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly places an active MultiParty call on hold, and on expiry of T(HoldMPTY) returns the MultiParty call to the auxiliary state “Call in MPTY”.

#### Method of test

#### Related PICS/PIXIT statements

- method of placing a MultiParty call on hold

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

### Foreseen final state of the MS

Branch A, Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY".

Branch B, Call A-B, state U10, auxiliary state "Call in MPTY, hold request". Call A-C, state U10, auxiliary state "Call in MPTY, hold request".

### Maximum duration of test

45 s.

### Procedure

Using suitable MMI commands, the MS shall place the MultiParty call on hold. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component HoldMPTY. Both calls shall enter the auxiliary state “Call in MPTY, hold request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Not less than 5s and not more than 30s after sending the FACILITY message, one of the following shall have occurred

- both calls shall be in their original call states and the MS shall have indicated the failure to the user, or
- the MS shall have sent another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, put the MultiParty call on hold |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, HoldMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |
| 7 | SS | | Wait 30 s from receiving FACILITY message |
| | | | Take this branch if no message is received within 30 s |
| A8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state “Call in MPTY” |

| A11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY” |
| | | | Take this branch if a message is received within 30 s |
| B8 | MS -> SS | FACILITY | Same as Step 2. Message shall not be received less than 5 s after the first FACILITY message |
| B9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B10 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, hold request" |
| B11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B12 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, hold request" |

### 31.4.2.1.2 Create a private communication with one of the remote parties

#### 31.4.2.1.2.1 Create a private communication with one of the remote parties, successful case

##### Conformance requirement

GSM 04.84 subclause 1.2.1.2

##### Applicability

MS supporting the MultiParty supplementary service.

##### Test purpose

To test that the MS correctly splits an active MultiParty call, and reacts correctly to a response from the SS indicating success.

##### Method of test

##### Related PICS/PIXIT statements

- method of creating a private communication with one party of a MultiParty call.

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

##### Foreseen final state of the MS

Call A-B, state U10, no auxiliary state. Call A-C, state U10, auxiliary state "Call Held".

##### Maximum duration of test

30 s.

##### Procedure

Using suitable MMI commands, the MS shall request a private communication with Call A-B. The MS shall send a FACILITY message containing the transaction identifier for Call A-B and an invoke component SplitMPTY. Call A-B shall enter the auxiliary state "split request" and call A-C shall remain in state “Call in MPTY”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing the same transaction identifier and a return result component, Call A-B shall enter the state U10 “Active”, and Call A-C shall enter the state U10 “Active” with auxiliary state “Call held”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, request a private communication with Call A-B |
| 2 | MS -> SS | FACILITY | TI for Call A-B, SplitMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 7 | SS -> MS | FACILITY | Return Result component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, no auxiliary state |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call held" |
| 12 | SS | | Check that the TCH is through-connected |

### 31.4.2.1.2.2 Create a private communication with one of the remote parties, unsuccessful case

#### Conformance requirement

GSM 04.84 subclause 1.2.1.2

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly splits an active MultiParty call, and reacts correctly to a response from the SS indicating an error or reject condition.

#### Method of test

#### Related PICS/PIXIT statements

- method of creating a private communication with one party of a MultiParty call.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

#### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY".

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall request a private communication with Call A-B. The MS shall send a FACILITY message containing the transaction identifier for Call A-B and an invoke component SplitMPTY. Call A-B shall enter the auxiliary state “Split request“ and call A-C shall remain in state “Call in MPTY“. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing the same transaction identifier and a return error component, both calls shall return to their initial states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable MMI commands, the MS shall request a private communication with Call A-B. The MS shall send a FACILITY message containing the transaction identifier for Call A-B and an invoke component SplitMPTY. Call A-B shall enter the auxiliary state “Split request“ and call A-C shall remain in state “Call in MPTY“. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing the same transaction identifier and a Reject component, both calls shall return to their initial states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, create a private communication for Call A-B |
| 2 | MS -> SS | FACILITY | TI for Call A-B, SplitMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 7 | SS -> MS | FACILITY | Return Error component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 12 | MS | | Using MMI commands, create a private communication for Call A-B |
| 13 | MS -> SS | FACILITY | TI for Call A-B, SplitMPTY Invoke component |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| 16 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 17 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 18 | SS -> MS | FACILITY | Reject component |
| 19 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 20 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 21 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 22 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |

### 31.4.2.1.2.3 Create a private communication with one of the remote parties, expiry of timer T(SplitMPTY)

#### Conformance requirement

GSM 04.84 subclause 1.2.1.2

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly splits an active MultiParty call, and on expiry of T(SplitMPTY) returns the call to the auxiliary state “Call in MPTY”.

#### Method of test

#### Related PICS/PIXIT statements

- method of creating a private communication with one party of a MultiParty call.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

#### Foreseen final state of the MS

Branch A, Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY".

Branch B, Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY".

#### Maximum duration of test

30 s.

#### Procedure

Using suitable MMI commands, the MS shall request a private communication with Call A-B. The MS shall send a FACILITY message containing the transaction identifier for Call A-B and an invoke component SplitMPTY. Call A-B shall enter the auxiliary state “Split request“ and call A-C shall remain in state “Call in MPTY“. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

After not less than 5s and not more than 30s, the MS shall either:

- return both calls to their original states, or
- send another FACILITY message with the same contents

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, request a private communication with Call A-B |
| 2 | MS -> SS | FACILITY | TI for Call A-B, SplitMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 7 | SS | | Wait 30 s from receiving FACILITY message |
| | | | Take this branch if no message is received within 30 s |
| A8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| A10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| | | | Take this branch if a message is received within 30 s |
| B8 | MS -> SS | FACILITY | Same as Step 2. Message shall not be received less than 5 s after the first FACILITY message |
| B9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B10 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Split request" |
| B11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B12 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |

### 31.4.2.1.3 Terminate the entire MultiParty call

#### Conformance requirement

GSM 04.84 subclause 1.2.1.3

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly terminates an entire MultiParty call by implementing the call clearance procedure for each call in turn.

#### Method of test

#### Related PICS/PIXIT statements

- method of terminating a MultiParty call.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall initiate a clearance of the entire MultiParty call. The MS shall send a DISCONNECT message in respect of each of the transaction identifiers of the call. On receipt of a RELEASE message in respect of each transaction identifier, the MS shall respond with a RELEASE COMPLETE message, and enter state U0 “Null”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, terminate the entire MultiParty call |
| | | | Steps 2 and 3 may occur in any order |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-B |
| 3 | MS -> SS | DISCONNECT | Transaction identifier of Call A-C |
| 4 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 5 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | SS -> MS | RELEASE | Transaction identifier of Call A-C |
| 7 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |

### 31.4.2.1.4 Explicitly disconnect a remote party

Conformance requirement

GSM 04.84 subclause 1.2.1.4

Applicability

MS supporting the MultiParty supplementary service.

Test purpose

To test that the MS correctly disconnects a single remote party by implementing the call clearance procedure for that party.

Method of test

Related PICS/PIXIT statements

- method of disconnecting one party of a MultiParty call.

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U10, with auxiliary state “Call in MPTY”.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall initiate a clearance of the Call A-B. The MS shall send a DISCONNECT message containing the transaction identifier of Call A-B. On receipt of a RELEASE message the MS shall respond with a RELEASE COMPLETE message, and enter state U0 “Null” for Call A-B. Call A-C shall enter state U10 “Active” with, auxiliary state “Call in MPTY”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating state U10, with auxiliary state “Call in MPTY” for Call A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-B.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, clear call A-B |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-B |
| 3 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 4 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 6 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 8 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, with auxilliary state “Call in MPTY” |

## 31.4.2.2 Remote parties

### 31.4.2.2.1 Release from the MultiParty call

Conformance requirement

GSM 04.84 subclause 1.2.1.4

Applicability

MS supporting the MultiParty supplementary service.

Test purpose

To test that the MS responds correctly to a call clearance from one of the remote parties.

Method of test

Related PICS/PIXIT statements

None

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U10, with auxiliary state “Call in MPTY”.

Maximum duration of test

30 s.

Procedure

On receipt of a DISCONNECT message containing the transaction identifier of Call A-B, the MS shall send a RELEASE message. On receipt of a RELEASE COMPLETE message the MS shall enter state U0 “Null” for Call A-B. Call A-C shall enter state U10 “Active”, with auxiliary state “Call in MPTY”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating state U10, with auxiliary state “Call in MPTY”for Call A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-B.

.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | DISCONNECT | Transaction identifier of Call A-B |
| 2 | MS -> SS | RELEASE | Transaction identifier of Call A-B |
| 3 | SS -> MS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 4 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 5 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 6 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 7 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, with auxiliary state “Call in MPTY” |

## 31.4.3 Managing a held MultiParty call

### 31.4.3.1 Retrieve the held MultiParty call

#### 31.4.3.1.1 Retrieve the held MultiParty call, successful case

##### Conformance requirement

GSM 04.84 subclause 1.3.1.1

##### Applicability

MS supporting the MultiParty supplementary service.

##### Test purpose

To test that the MS correctly retrieves a held MultiParty call, and reacts correctly to a response from the SS indicating success.

##### Method of test

##### Related PICS/PIXIT statements

- method of retrieveing a held MultiParty call.

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 “Active” with auxiliary state “Call in MPTY, call held”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.1.

##### Foreseen final state of the MS

Call A-B, state U10, auxiliary state “Call in MPTY”. Call A-C, state U10, auxiliary state “Call in MPTY”.

##### Maximum duration of test

30 s.

##### Procedure

Using suitable MMI commands, the MS shall retrieve the MultiParty call. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component RetrieveMPTY. Both calls shall enter the auxiliary state “Call in MPTY, retrieve request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a return result component, the MS shall enter the state U10 ”Active” with auxiliary state “Call in MPTY” for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, retrieve the MultiParty call |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, RetrieveMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, Retrieve request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, Retrieve request" |
| 7 | SS -> MS | FACILITY | Same TI as step 2, Return Result component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 12 | SS | | Check that the TCH is through-connected |

### 31.4.3.1.2 Retrieve the held MultiParty call, unsuccessful case

#### Conformance requirement

GSM 04.84 subclause 1.3.1.1

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly retrieves a held MultiParty call, and reacts correctly to a response from the SS indicating an error or a reject condition.

#### Method of test

#### Related PICS/PIXIT statements

- method of retrieving a held MultiParty call.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 “Active” with auxiliary state “Call in MPTY, call held”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.1.

#### Foreseen final state of the MS

Call A-B, state U10, auxiliary state “Call in MPTY, call held”. Call A-C, state U10, auxiliary state “Call in MPTY, call held”.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall retrieve the MultiParty call. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component RetrieveMPTY. Both calls shall enter the auxiliary state “Call in MPTY, retrieve request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a return error component, the MS shall return to the original states for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable MMI commands, the MS shall retrieve the MultiParty call. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component RetrieveMPTY. Both calls shall enter the auxiliary state “Call in MPTY, retrieve request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message with the same transaction identifier and containing a reject component, the MS shall return to the original states for both transaction identifiers. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, retrieve the held MultiParty call |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, RetrieveMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 7 | SS -> MS | FACILITY | Same TI as step 2, Return Error component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| 12 | MS | | Using MMI commands, retrieve the held MultiParty call |
| 13 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, RetrieveMPTY Invoke component |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 16 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 17 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 18 | SS -> MS | FACILITY | Same TI as step 13, Reject component |
| 19 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 20 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 21 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 22 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |

### 31.4.3.1.3 Retrieve the held MultiParty call, expiry of timer T(RetrieveMPTY)

#### Conformance requirement

GSM 04.84 subclause 1.3.1.1

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly retrieves a MultiParty call on hold, and on expiry of T(RetrieveMPTY) returns the MultiParty call to the auxiliary state “Call in MPTY, call held”.

#### Method of test

#### Related PICS/PIXIT statements

- method of retrieveing a held MultiParty call.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 “Active” with auxiliary state “Call in MPTY, call held”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.1.

#### Foreseen final state of the MS

Branch A, Call A-B, state U10, auxiliary state “Call in MPTY, call held”. Call A-C, state U10, auxiliary state “Call in MPTY, call held”.

Branch B, Call A-B, state U10, auxiliary state “Call in MPTY, retrieve request”. Call A-C, state U10, auxiliary state “Call in MPTY, retrieve request”.

#### Maximum duration of test

45 s.

#### Procedure

Using suitable MMI commands, the MS shall retrieve the MultiParty call. The MS shall send a FACILITY message containing one of the transaction identifiers of the call, and containing an invoke component RetrieveMPTY. Both calls shall enter the auxiliary state “Call in MPTY, retrieve request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Not less than 5s and not more than 30s after sending the FACILITY message, one of the following shall have occurred

- both calls shall be in their original call states and the MS shall have indicated the failure to the user, or
- the MS shall have sent another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, retrieve the held MultiParty call |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, RetrieveMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, retrieve request" |
| 7 | SS | | Wait 30 s from receiving FACILITY message |
| | | | Take this branch if no message is received within 30 s |
| A8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| A10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| | | | Take this branch if a message is received within 30 s |
| B8 | MS -> SS | FACILITY | Same as Step 2. Message shall not be received less than 5 s after the first FACILITY message |
| B9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B10 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, retrieve request" |
| B11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B12 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, retrieve request" |

### 31.4.3.2 Initiate a new call

#### Conformance requirement

GSM 04.84 subclause 1.3.1.2

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS can set up a new outgoing call with a held MultiParty call.

#### Method of test

#### Related PICS/PIXIT statements

- method of making a new outgoing call

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 “Active” with auxiliary state “Call in MPTY, call held”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.1.

#### Foreseen final state of the MS

Call A-B, state U10, auxiliary state “Call in MPTY, call held”. Call A-C, state U10, auxiliary state “Call in MPTY, call held”. Call A-D State U10.

#### Maximum duration of test

30 s.

#### Procedure

Using suitable MMI commands, the MS shall initiate a new outgoing call A-D. The MS shall send a SETUP message with a new transaction identifier and enter state U1 “Call initiated”. On receipt of an ALERTING message followed by a CONNECT message, the MS shall send a CONNECT ACKNOWLEDGE message and enter state U10 “Active”. The call state of the MultiParty call shall not be affected. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

#### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, make a new call |
| 2 | MS -> SS | SETUP | TI different from Call A-B or Call A-C (new Call A-D) |
| 3 | SS -> MS | ALERTING | Transaction identifier of Call A-D |
| 4 | SS -> MS | CONNECT | Transaction identifier of Call A-D |
| 5 | MS -> SS | CONNECT ACKNOWLEDGE | Transaction identifier of Call A-D |
| 6 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 7 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, no auxiliary state. |

### 31.4.3.3 Process a call waiting request

#### Conformance requirement

GSM 04.84 subclause 1.3.1.3

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS can correctly process a Call Waiting request with a held MultiParty call.

#### Method of test

#### Related PICS/PIXIT statements

- method of answering a waiting call

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both calls states shall be U10 “Active” with auxiliary state “Call in MPTY”. The MS shall also have a Call A-D in state U7 “Call received”. The Multiparty call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

Foreseen final state of the MS

Call A-B, state U10, auxiliary state “Call in MPTY, call held”. Call A-C, state U10, auxiliary state “Call in MPTY, call held”. Call A-D State U10.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall place the MultiParty on hold, and answer Call A-D.

The MS shall send a FACILITY message to the SS using any one of the transaction identifiers of the MultiParty call and containing an invoke component HoldMPTY, and shall enter state U10 “Active”, with auxiliary state “call in MPTY, hold request” in respect of each of the transaction identifiers.

On receipt of a FACILITY message using the same transaction identifier and containing a return result component, the MS shall enter state U10 “Active” with auxiliary state “Call in MPTY, call held” for each of the transaction identifiers.

The MS shall then send a CONNECT message to the SS, using the transaction identifier of Call A-D, and on receipt of a CONNECT ACKNOWLEDGE message, shall enter state U10 “Active”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, place the multiparty call on hold and answer the waiting call |
| 2 | MS -> SS | FACILITY | Transaction identifier of Call A-B or A-C, HoldMPTY invoke component |
| 3 | SS -> MS | FACILITY | Same transaction identifier as step 2 |
| 4 | MS -> SS | CONNECT | Transaction identifier of Call A-D |
| 5 | SS -> MS | CONNECT ACKNOWLEDGE | Transaction identifier of Call A-D |
| 6 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 7 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, call held" |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, call held" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, no auxiliary state. |

### 31.4.3.4 Terminate the held MultiParty call

#### Conformance requirement

GSM 04.84 subclause 1.3.1.4

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly terminates a held MultiParty call by initiating call clearance for each party in turn.

#### Method of test

#### Related PICS/PIXIT statements

- method of terminating a held MultiParty call

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a held MultiParty call to two destinations (Call A-B and Call A-C). Both call states shall be U10 “Active” with auxiliary state “Call in MPTY, call held”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.1.

#### Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0.

#### Maximum duration of test

30 s.

#### Procedure

Using suitable MMI commands, the MS shall initiate a clearance of the entire held MultiParty call. The MS shall send a DISCONNECT message in respect of each of the transaction identifiers of the call. On receipt of a RELEASE message in respect of each transaction identifier, the MS shall respond with a RELEASE COMPLETE message, and enter state U0 “Null”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for each call.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, terminate the entire MultiParty call |
| | | | Steps 2 and 3 may occur in any order |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-B |
| 3 | MS -> SS | DISCONNECT | Transaction identifier of Call A-C |
| 4 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 5 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | SS -> MS | RELEASE | Transaction identifier of Call A-C |
| 7 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |

## 31.4.4 Managing a single call and a MultiParty call

### 31.4.4.1 Served mobile subscriber

#### 31.4.4.1.1 Disconnect the single call

##### 31.4.4.1.1.1 Disconnect active single call

Conformance requirement

GSM 04.84 subclause 1.4.1.1

Applicability

MS supporting the MultiParty supplementary service.

Test purpose

To test that the MS correctly clears the single call when the single call is active and the MultiParty call is held.

Initial conditions

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY, call held”. The MS shall have in addition a single call (A-D) in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.2.

Method of test

Related PICS/PIXIT statements

- method of clearing the single call.

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY, call held”. The MS shall have in addition a single call (A-D) in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.2.

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state “Call in MPTY, call held”. Call A-C, state U10, auxiliary state “Call in MPTY, call held”. Call A-D State U0.

### Maximum duration of test

30 s.

### Procedure

Using suitable MMI commands, the MS shall clear Call A-D. The MS shall send a DISCONNECT message with the transaction identifier for Call A-D. On receipt of a RELEASE message the SM shall send a RELEASE COMPLETE message and enter state U0 “Null” for Call A-D.

Within 5 seconds of sending the RELEASE COMPLETE message, the MS may send a FACILITY message to retrieve the Held Call. The SS must reject this request.The call state and auxiliary state for Call A-B and Call A-C shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state for Calls A-B and A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-D.

### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, clear call A-D |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-D |
| 3 | SS -> MS | RELEASE | Transaction identifier of Call A-D |
| 4 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-D |
| 5 | SS | | Wait 5 seconds from receiving a RELEASE COMPLETE |
| | | | Take this branch if no message is received within 5s |
| A1 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A2 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state “Call in MPTY, call held” |
| A3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A4 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state “Call in MPTY, call held” |
| A5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| A6 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |
| | | | Take this branch if a message is received within 5s |
| B1 | MS -> SS | FACILITY | TI for Call A-B, RetrieveMPTY Invoke component |
| B2 | SS -> MS | FACILITY | TI for Call A-B, Reject component |
| B3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state “Call in MPTY, call held” |
| B5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state “Call in MPTY, call held” |
| B7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| B8 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |

#### 31.4.4.1.1.2 Disconnect held single call

##### Conformance requirement

GSM 04.84 subclause 1.4.1.1

##### Applicability

MS supporting the MultiParty supplementary service.

##### Test purpose

To test that the MS correctly clears the single call when the single call is held and the MultiParty call is active.

##### Method of test

##### Related PICS/PIXIT statements

- method of clearing the held single call.

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY”. The MS shall have in addition a single call (A-D) in state U10 “Active” with auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

##### Foreseen final state of the MS

Call A-B, state U10, auxiliary state “Call in MPTY”. Call A-C, state U10, auxiliary state “Call in MPTY”. Call A-D State U0.

##### Maximum duration of test

30 s.

##### Procedure

Using suitable MMI commands, the MS shall clear Call A-D. The MS shall send a DISCONNECT message with the transaction identifier for Call A-D. On receipt of a RELEASE message the MS shall send a RELEASE COMPLETE message and enter state U0 “Null” for Call A-D. The call state and auxiliary state for Call A-B and Call A-C shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state for Calls A-B and A-C, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Call A-D.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, clear call A-D |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-D |
| 3 | SS -> MS | RELEASE | Transaction identifier of Call A-D |
| 4 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-D |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state “Call in MPTY” |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 8 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state “Call in MPTY” |
| 9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 10 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |

### 31.4.4.1.2 Disconnect the MultiParty call

#### 31.4.4.1.2.1 Void

#### 31.4.4.1.2.2 Void

#### 31.4.4.1.2.3 Clear all parties of held MultiParty call

##### Conformance requirement

GSM 04.84 subclause 1.4.1.2

##### Applicability

MS supporting the MultiParty supplementary service.

##### Test purpose

To test that the MS correctly clears the MultiParty call by clearing all remote parties to a held MultiParty call.

##### Initial conditions

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY, Call held”. The MS shall have in addition a single call (A-D) in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

NOTE: The MultiParty call may be set up using the procedures of section 31.4.2.1.1.2.

##### Method of test

##### Related PICS/PIXIT statements

- method of clearing a held MultiParty call..

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY, Call held”. The MS shall have in addition a single call (A-D) in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0. Call A-D State U10, no auxiliary state.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall clear the MultiParty call. The MS shall send DISCONNECT messages with the transaction identifier for Call A-B and A-C. On receipt of a RELEASE message to each DISCONNECT the MS shall send a RELEASE COMPLETE message and enter state U0 “Null. Call A-B and Call A-C shall enter state U0 “Null”. The call state and auxiliary state for Call A-D shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state for Call A-D, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Calls A-B and A-C.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, terminate the entire MultiParty call |
| | | | Steps 2 and and 3 may occur in any order |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-B |
| 3 | MS -> SS | DISCONNECT | Transaction identifier of Call A-C |
| 4 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 5 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | SS -> MS | RELEASE | Transaction identifier of Call A-C |
| 7 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| 12 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 13 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10 |

### 31.4.4.1.2.4 Clear all parties of active MultiParty call

Conformance requirement

GSM 04.84 subclause 1.4.1.2

Applicability

MS supporting the MultiParty supplementary service.

Test purpose

To test that the MS correctly clears the MultiParty call by clearing all remote parties to an active MultiParty call.

Method of test

Related PICS/PIXIT statements

- method of clearing an active MultiParty call..

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY”. The MS shall have in addition a single call (A-D) in state U10 “Active” with auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0. Call A-D State U10, auxiliary state "Call Held".

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall clear the MultiParty call. The MS shall send DISCONNECT messages with the transaction identifier for Call A-B and A-C. On receipt of a RELEASE message to each DISCONNECT the MS shall send a RELEASE COMPLETE message and enter state U0 “Null. Call A-B and Call A-C shall enter state U0 “Null”. Within 5 seconds of sending the RELEASE COMPLETE message, the MS may send a RETRIEVE message to retrieve the Held Call. The SS shall reject this request. The call state and auxiliary state for Call A-D shall not change. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state. for Call A-D, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for Calls A-B and A-C.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, terminate the entire MultiParty call |
| | | | Steps 2 and and 3 may occur in any order |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-B |
| 3 | MS -> SS | DISCONNECT | Transaction identifier of Call A-C |
| 4 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 5 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 6 | SS -> MS | RELEASE | Transaction identifier of Call A-C |
| 7 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 8 | SS | | Wait 5 seconds from receiving a RELEASE COMPLETE |
| | | | Take this branch if no message is received within 5s |
| A9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A10 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| A11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A12 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| A13 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| A14 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call Held" |
| | | | Take this branch if a message is received within 5s |
| B9 | MS -> SS | RETRIEVE | Transaction identifier of Call A-D |
| B10 | SS -> MS | RETRIEVE REJECT | |
| B11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B12 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| B13 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B14 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| B15 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| B16 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call Held" |

### 31.4.4.2 Disconnect all calls

#### Conformance requirement

GSM 04.84 subclause 1.4.1.3

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test the MS correctly clears all active calls, by clearing in turn each connected party.

#### Method of test

#### Related PICS/PIXIT statements

- method of clearing all active calls.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY”. The MS shall have in addition a single call (A-D) in state U10 “Active” with auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0. Call A-D state U0.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall clear all calls. The MS shall send DISCONNECT messages with the transaction identifier for Call A-B, Call A-C and Call A-D. On receipt of a RELEASE message to each DISCONNECT the MS shall send a RELEASE COMPLETE message and enter state U0 “Null”. Call A-B, Call A-C Call A-D shall enter state U0 “Null”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value" for each call.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, terminate the entire MultiParty call |
| | | | Steps 2, 3 and 4 may occur in any order. |
| 2 | MS -> SS | DISCONNECT | Transaction identifier of Call A-B |
| 3 | MS -> SS | DISCONNECT | Transaction identifier of Call A-C |
| 4 | MS -> SS | DISCONNECT | Transaction identifier of Call A-D |
| 5 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 6 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 7 | SS -> MS | RELEASE | Transaction identifier of Call A-C |
| 8 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 9 | SS -> MS | RELEASE | Transaction identifier of Call A-D |
| 10 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-D |
| 11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 12 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 13 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 14 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |
| 15 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 16 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-D, with cause #81 "invalid transaction identifier value" |

### 31.4.4.3 Add the single call to the MPTY

#### 31.4.4.3.1 Add the single call to the MPTY, successful case

Conformance requirement

GSM 04.84 subclause 1.4.1.4

Applicability

MS supporting the MultiParty supplementary service.

### Test purpose

To test that the MS correctly adds a single held call to an active MultiParty call, and reacts correctly to a response from the SS indicating success.

### Method of test

### Related PICS/PIXIT statements

- method of adding the single call to the MultiParty call.

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY”. The MS shall have in addition a single call (A-D) in state U10 “Active” with auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1.

NOTE: The MultiParty call may be set up using the procedures of section 31.4.1.1.

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY". Call A-D state U10, auxiliary state "Call in MPTY".

### Maximum duration of test

30 s.

### Procedure

Using suitable MMI commands, the MS shall add the single call to the MultiParty call. The MS shall send a FACILITY message containing one of the transaction identifiers A-B, A-C or A-D and containing a BuildMPTY invoke component. Calls A-B and A-C shall remain in state U10 “Active” with auxiliary state “Call in MPTY”. Call A-D shall enter state U10 “Active” with auxiliary state “MPTY request, call held”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing a return result component, all calls shall enter state U10 “Active” with auxiliary state “Call in MPTY”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, join the single call to the MultiParty call |
| 2 | MS -> SS | FACILITY | TI for Call A-B, Call A-C or call A-D, BuildMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 8 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "MPTY request, Call held" |
| 9 | SS -> MS | FACILITY | TI same as step 2, Return Result component |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 12 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 13 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call in MPTY" |
| 16 | SS | | Check that the TCH is through-connected |

### 31.4.4.3.2 Add the single call to the MPTY, maximum number of participants exceeded

#### Conformance requirement

GSM 04.84 subclause 1.4.1.4

#### Applicability

MS supporting the MultiParty supplementary service.

#### Test purpose

To test that the MS correctly adds a single held call to an active MultiParty call, and reacts correctly to a response from the SS indicating maximum number of participants exceeded.

#### Method of test

#### Related PICS/PIXIT statements

- method of adding the single call to the MultiParty call.

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to five destinations (A-B, A-C and A-D) all in state U10 “Active” with auxiliary state “Call in MPTY”. The MS shall have in addition a single call (A-E) in state U10 “Active” with auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY". Call A-D state U10, auxiliary state "Call in MPTY", Call A-E state U10, auxiliary state "Call Held".

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall add the single call to the MultiParty call. The MS shall send a FACILITY message containing any one of the transaction identifiers and containing a BuildMPTY invoke component. Calls A-B to A-D shall remain in state U10 “Active” with auxiliary state “Call in MPTY”. Call A-E shall enter state U10 “Active” with auxiliary state “MPTY request, call held”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message containing a return error component “MaxNumberOfMPTY-ParticipantsExceeded”, then all calls shall return to their original states. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, join the single call to the MultiParty call |
| 2 | MS -> SS | FACILITY | TI for Call A-B, Call A-C, Call A-D or Call A-E, BuildMPTY Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state " Call in MPTY" |
| 7 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 8 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state " Call in MPTY" |
| 9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-E |
| 10 | MS -> SS | STATUS | Transaction identifier of Call A-E, state U10, auxiliary state "MPTY request, Call held" |
| 11 | SS -> MS | FACILITY | Same TI as step 2, Return error component “MaxNumberOfMPTY-ParticipantsExceeded” |
| 12 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 13 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 16 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 17 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call in MPTY" |
| 18 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-E |
| 19 | MS -> SS | STATUS | Transaction identifier of Call A-E, state U10, auxiliary state "Call Held" |

### 31.4.4.4 Alternate between the MPTY call and the single call

Conformance requirement

GSM 04.84 subclause 1.4.1.5

### Applicability

MS supporting the MultiParty supplementary service.

### Test purpose

To test that the MS correctly alternates between the single call and the MultiParty call, by proper use of the hold and retrieve procedures.

### Method of test

### Related PICS/PIXIT statements

- method of alternating between the single call to the MultiParty call.

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (A-B and A-C) both in state U10 “Active” with auxiliary state “Call in MPTY”. The MS shall have in addition a single call (A-D) in state U10 “Active” with auxiliary state “Call held”. Both calls shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY". Call A-D state U10, auxiliary state "Call Held",

### Maximum duration of test

30 s.

### Procedure

Using suitable MMI commands, the MS shall alternate between the single call and the MultiParty call. The MS shall send a FACILITY message containing one of the transaction identifiers of the MultiParty call, and containing an invoke component HoldMPTY. The MS shall then send a RETRIEVE message with the transaction identifier for Call A-D. Call A-B and Call A-C shall enter the auxiliary state “Call in MPTY, hold request”. Call A-D shall enter auxiliary state “retrieve request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

The SS shall send a FACILITY message with a return result component and then send a RETRIEVE ACKNOWLEDGE message. On receipt of these messages, Calls A-B and A-C shall enter auxiliary state “Call in MPTY, call held”, and Call A-D shall enter state U10 “Active” with no auxiliary state. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable MMI commands, the MS shall again alternate between the single call and the MultiParty call. The MS shall send a FACILITY message containing one of the transaction identifiers of the MultiParty call, and containing an invoke component RetrieveMPTY. The MS shall also send a HOLD message with the transaction identifier for Call A-D. Call A-B and Call A-C shall enter the auxiliary state “Call in MPTY, retrieve request”. Call A-D shall enter auxiliary state “hold request”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

The SS shall send a FACILITY message with a return result component and shall also send a HOLD ACKNOWLEDGE message. On receipt of these messages, Call A-B and A-C shall enter auxiliary state “Call in MPTY”, and Call A-D shall enter state U10 “Active” with auxiliary state “Call held”. The call states shall be verified

by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, alternate between the active and held calls |
| 2 | MS -> SS | FACILITY | TI for Call A-B or call A-C, HoldMPTY Invoke component |
| 3 | MS -> SS | RETRIEVE | Transaction identifier of Call A-D |
| 4 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 5 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, Hold request" |
| 6 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 7 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, Hold request |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Retrieve request" |
| 10 | SS -> MS | FACILITY | Same TI as step 2, Return result component |
| 11 | SS -> MS | RETRIEVE ACKNOWLEDGE | Transaction identifier of Call A-D |
| 12 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 13 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, Call held" |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, Call held" |
| 16 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 17 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, no auxiliary state |
| 21 | SS | | Check that the TCH is through-connected |
| 18 | MS | | Using MMI commands, alternate between the active and held calls |
| 19 | MS -> SS | HOLD | Transaction identifier of Call A-D |
| 20 | MS -> SS | FACILITY | TI for Call A-B or call A-C, RetrieveMPTY Invoke component |
| 21 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 22 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY, Retrieve request" |
| 23 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 24 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY, Retrieve request |
| 25 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 26 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Holdrequest" |
| 27 | SS -> MS | HOLD ACKNOWLEDGE | Transaction identifier of Call A-D |
| 28 | SS -> MS | FACILITY | Same TI as step 20, Return result component |
| 29 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 30 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 31 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 32 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 33 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 34 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call Held" |
| 35 | SS | | Check that the TCH is through-connected |

## 31.4.5 Adding extra remote parties

Conformance requirement

GSM 04.84 subclause 1.5

### Applicability

MS supporting the MultiParty supplementary service.

### Test purpose

To test that the MS adds extra remote parties to the MultiParty call.

### Method of test

### Related PICS/PIXIT statements

- method of alternating between the single call to the MultiParty call.

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 “Active” with auxiliary state “Call in MPTY”. The call shall be of a basic service supported by the MS and relevant to the MultiParty supplementary service as stated in GSM 02.04 Table A.1,

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call in MPTY". Call A-C, state U10, auxiliary state "Call in MPTY". Call A-D state U10, auxiliary state "Call in MPTY".

### Maximum duration of test

30 s.

### Procedure

The procedure of test 34.4.2.1.1.1 “Put the MultiParty call on hold, successful case” shall be performed followed by the procedure of 34.4.3.2 “Initiate a new call”, followed by the procedure of 31.4.4.3.1 ” Add the single call to the MPTY, successful case”.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, put the MultiParty call on Hold |
| 2 | MS -> SS | FACILITY | TI for Call A-B or call A-C, HoldMPTY Invoke component |
| 3 | SS -> MS | FACILITY | Same TI as step 2, Return Result component |
| 4 | MS -> SS | SETUP | TI different from Call A-B or Call A-C (new Call A-D) |
| 5 | SS -> MS | ALERTING | Transaction identifier of Call A-D |
| 6 | SS -> MS | CONNECT | Transaction identifier of Call A-D |
| 7 | MS -> SS | CONNECT ACKNOWLEDGE | Transaction identifier of Call A-D |
| 8 | MS -> SS | FACILITY | TI for Call A-B, Call A-C or call A-D, BuildMPTY Invoke component |
| 9 | SS -> MS | FACILITY | TI same as step 8, Return Result component |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call in MPTY" |
| 12 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 13 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, auxiliary state "Call in MPTY" |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-D |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-D, state U10, auxiliary state "Call in MPTY" |
| 16 | SS | | Check that the TCH is through-connected |

## 31.5 Community of interest supplementary services

(Reserved).

## 31.6 Charging supplementary services

The following Advice of Charge abbreviations are used in this section:

| | |
|---|---|
| AoC | Advice of Charge |
| AoCC | Advice of Charge Charging |
| AoCI | Advice of Charge Information |
| ACM | Accumulated Charge Meter |
| ACMmax | Accumulated Charge Meter Maximum |
| CCM | Current Call Meter |
| CAI | Charge Advice Information |
| CDUR | Chargeable Duration |

The following other abbreviations are used:

| | |
|---|---|
| IE | Information Element |
| FIE | Facility Information Element |
| TCH | Traffic CHannel |

General on Advice of Charge.

The purpose of these tests is to verify that the MS under test correctly performs procedures related to the AoC supplementary service.

The reasons for these test purposes are:

- One example of a possible use for AoCC is in applications where the subscriber hires out a GSM ME and SIM to a user and bills the user according to the charge stored on the SIM at the end of the hire period. If a mobile station claims to support AoCC but does so incorrectly or not at all, this may cause the subscriber to mischarge the user of the hire phone. Hence an MS claiming to support AoCC must be shown to be reliable in that context.

- Since AoCC offers the use of telecommunication services according to the charge stored independently in the MS, the AoCC service must not be susceptible to fraud at the MS end.

- To ensure that a mobile station **not** claiming to support AoCC does not respond with a signal to the network indicating that it does. This could cause the network to allow the call to be placed without any charge being inserted on to the SIM.

Mobile originating and terminating speech AoC calls are tested and if supported, Call Hold and Multi-party calls. The type testing of data calls (i.e. those calls with a volume related charging component) will not be specified at the phase 2 stage but will be deferred to phase 2+ since the interaction of AoC with packet services is not yet defined in GSM 09.06 and GSM 09.07.

Tests are made on the ME-SIM interface to ensure that call charges are being correctly stored in the ACM field of the SIM in several situations. The AoC ACMmax function is also tested for incoming and outgoing calls.

Basic service verification tests for the AoCC, Call Hold, and Multi-party supplementary services which have direct relevance to the testing of AoC have been added to GSM 11.10, sections 11.3, 11.4 and 11.5 respectively.

## 31.6.1 Advice of Charge Charging

### 31.6.1.1 AoCC time related charging / MS originated call

Purpose:

1) To verify that when the MS receives the AoCC parameters in a Facility IE which is contained in the CONNECT message and when a TCH has already been assigned, the MS returns a FACILITY message containing the acknowledgement within 1 second.

2) To verify that when the MS receives the AoCC parameters in a Facility IE which is contained in a CONNECT message and when a TCH has already been assigned, the MS stores the correct value in the ACM field of the SIM.

3) To verify that the when the call has no volume related component the MS ignores non-zero AoCC e5, e6 parameters sent to it.

Conformance Requirement(s):

1) When the MS receives the AoCC parameters in a Facility IE which is contained in a CONNECT message and when a TCH has already been assigned, the MS shall return a FACILITY message containing the acknowledgement within 1 second.

2) When the MS receives the AoCC parameters in a Facility IE which is contained in a CONNECT or FACILITY message and when a TCH has already been assigned, the MS shall store the correct value in the ACM field of the SIM.

3) When the call has no volume related component the MS shall ignore non-zero AoC e5 and e6 parameters sent to it.

Reference(s):

Conformance requirement 1: GSM 03.86, GSM 04.13, GSM 04.86.

Conformance requirement 2: GSM 02.24.

Conformance requirement 3: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.

- Supported rates (full rate/half rate).

- Method of reading ACM from the SIM via the ME.

- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCC acknowledgement within 1 second of the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent by the MS before or after the CONNECT ACKNOWLEDGE.

The SS sends the DISCONNECT y seconds after sending the CONNECT message containing the CAI. The MS shall have stored the correct amount on the SIM according to the e-parameters sent. The test is repeated for several different sets of e-parameters as defined below.

Maximum Duration of Test:

30 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,...,5.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | call duration y seconds after CAI information sent by SS |
| 15 | SS -> MS | DISCONNECT | |
| 16 | MS -> SS | RELEASE | |
| 17 | SS -> MS | RELEASE COMPLETE | |
| 18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 19 | MS | | SIM contents checked (either via MMI or by removing the SIM and using SIM reader). ACM shall have been incremented correctly. |

NOTE: The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

y is set to a constant value of 90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as below:

| k-value | e-parameter | | | | | CCM total | | Step 0 ACM at call end | value increased by |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 6 | 14 | 1 | 25 | 0 | 0 | 60 | 43 | 43 |
| 2 | 0 | 0 | 1 | 100 | 0 | 0 | 0 | 100 | 143 |
| 3 | 250 | 16 | 2 | 500 | 0 | 0 | 60 | 2000 | 2143 |
| 4 | 1 | 1 | 1 | 0 | 10 | 10 | 1 | 89 or 90 | 2232 or 2233 |
| 5 | 12,5 | 30 | 1 | 25 | 10 | 10 | 30 | 50 or 62,5 | 2295, 2296, 2282 or 2283 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

The ASN.1 description for each e-parameter allows integers in the range 0 to 8191 to be transmitted but some e-parameters have different actual ranges (e.g. e1 can take any value 0..819,1 with 0,1 resolution). The MS knows how to interpret the received parameter (e.g. received e1 refers to 10 times actual e1, see GSM 04.80 section 4.4.3). Therefore e1=12,5 would be sent to the MS as 125. The MS knows the value sent is 10 times the "real" e1 and hence interprets the value as 12,5.

The non-zero e5 and e6 values for the k=4 and k=5 execution of the test are to check that the MS ignores the volume related parameters when carrying out time only related charging.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.1.2 AoCC time related charging / MS terminated call

Purpose:

1) To verify that when the MS receives certain AoCC e-parameters in a Facility IE which is contained in a FACILITY message sent after the CONNECT message and when a TCH has already been assigned, the MS returns a FACILITY message containing the acknowledgement within 1 second.

2) To verify that when the MS receives the AoCC parameters in a Facility IE which is contained in a FACILITY message and when a TCH has already been assigned, the MS stores the correct value in the ACM field of the SIM.

Conformance Requirement(s):

1) When the MS receives the AoCC parameters in a Facility IE which is contained in a FACILITY message sent after the CONNECT message and when a TCH has already been assigned, the MS shall return a Facility message containing the acknowledgement within 1 second.

2) When the MS receives the AoCC parameters in a Facility IE which is contained in a FACILITY message and when a TCH has already been assigned, the MS shall store the correct value in the ACM field of the SIM.

Reference(s):

Conformance requirement 1: GSM 03.86, GSM 04.13, GSM 04.86.

Conformance requirement 2: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of reading ACM from the SIM via the ME.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The SS is made to initiate a call. The call is established and certain AoCC e-parameters are sent to the MS in a Facility IE contained within a FACILITY message. The MS shall return the AoCC acknowledgement within 1 second of the FACILITY message. It is an implementation option whether the AoCC e-parameters and the AoCC acknowledge are sent before or after the CONNECT ACKNOWLEDGE.

The SS sends the DISCONNECT y seconds after sending the FACILITY message. The MS shall have stored the correct amount on the SIM according to the e-parameters sent. The test is repeated for several different sets of e-parameters as defined below.

Maximum Duration of Test:

30 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,...,5.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | SS | | The SS is made to initiate a call |
| 2 | SS -> MS | PAGING REQUEST | |
| 3 | MS -> SS | CHANNEL REQUEST | |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | PAGING RESPONSE | |
| 6 | SS -> MS | SETUP | |
| 7 | MS -> SS | CALL CONFIRMED | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | MS -> SS | ALERTING | |
| 11 | MS -> SS | CONNECT | |
| 12 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A13 | SS -> MS | CONNECT ACKNOWLEDGE | |
| A14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B14 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 15 | | | call duration y seconds after CAI information sent by SS |
| 16 | SS -> MS | DISCONNECT | |
| 17 | MS -> SS | RELEASE | |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 20 | MS | | SIM contents checked (either via MMI or by removing the SIM and using SIM reader) ACM shall have been incremented correctly. |

NOTE: The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

y is set to a constant value of 90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as below:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 2 | 0 | 0 | 1 | 100 | 0 | 0 | 0 | 100 | 100 |
| 3 | 6 | 14 | 1 | 25 | 0 | 0 | 60 | 43 | 143 |
| 4 | 1 | 1 | 1 | 0 | 0 | 0 | 1 | 89 or 90 | 233 or 232 |
| 5 | 12,5 | 30 | 1 | 25 | 0 | 0 | 30 | 50 or 62,5 | 296, 295, 282 or 283 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.1.3 AoCC volume related charging / MS originated call

Future addition at GSM Phase 2+ stage.

### 31.6.1.4 AoCC volume related charging / MS terminated call

Future addition at GSM Phase 2+ stage.

### 31.6.1.5 Change in charging information during a call

Purpose:

1) To verify that when the MS receives new AoCC parameters mid-way through a call in a Facility IE which is contained within a FACILITY message the MS returns a FACILITY message containing the acknowledgement within 1 second.

2) To verify that when the MS receives new charging information mid-way through a call in the form of a Facility IE contained within a FACILITY message the MS correctly indicates the total charge considering both sets of charging information.

Conformance Requirement(s):

1) When the MS receives new AoCC parameters mid-way through a call in a Facility IE which is contained within a FACILITY message the MS shall return a FACILITY message containing the acknowledgement within 1 second.

2) When the MS receives new charging information mid-way through a call in the form of a Facility IE contained within a FACILITY message the MS correctly indicates the total charge considering both sets of charging information.

Reference(s):

Conformance requirement 1: GSM 03.86, GSM 04.13, GSM 04.86.

Conformance requirement 2: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of reading ACM from the SIM via the ME.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in a FACILITY message sent after the CONNECT message. The MS shall return the AoCC acknowledgement within 1 second of the FACILITY message. x seconds after sending the original CAI, new (and different) e-parameters are sent to the MS in a Facility IE contained within a FACILITY message. The MS shall return the AoCC acknowledge within 1 second of the FACILITY message.

The SS sends the DISCONNECT y seconds after sending the first CAI in the FACILITY message. The MS shall have stored the correct amount on the SIM according to the two sets of e-parameters sent and the times for the two parts of the call.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | |
| | | | Either A, B or C branch is taken |
| A12 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| A13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| B13 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| B14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| C12 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| C13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| C14 | MS-> SS | CONNECT ACKNOWLEDGE | |
| | | | Second CAI sent x sec after first CAI |
| 15 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in iii below |
| 16 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below New CAI held in abeyance until CDUR has timed out present e2 value |
| 17 | | | Call duration y seconds after first CAI information sent by SS |
| 18 | SS -> MS | DISCONNECT | |
| 19 | MS -> SS | RELEASE | |
| 20 | SS -> MS | RELEASE COMPLETE | |
| 21 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 22 | MS | | SIM contents checked (either via MMI or by removing the SIM and using SIM reader) ACM shall have been incremented correctly |

NOTE The values of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x, y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as defined below:

| | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| | 10 | 28 | 1 | 10 | 0 | 0 | 60 | (30) | (30) |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

iii) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x is set to a constant value of 80 seconds.

y is set to a constant value of 180 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| | 10 | 14 | 1 | 5 | 0 | 0 | 60 | 65 | 65 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

### 31.6.1.6 Different formats of charging information

Purpose:

1) To verify that when the MS receives a Facility IE in which certain e-parameters are set to zero the total charge accumulated is the same as that when the same e-parameters are completely omitted from the Facility IE.

2) To verify the operation of a shortened channel release procedure where the SS does not send DISCONNECT but only the RELEASE COMPLETE and CHANNEL RELEASE messages or just the CHANNEL RELEASE message.

Conformance Requirement(s):

1) When the MS receives a Facility IE in which certain e-parameters are set to zero the total charge accumulated shall be the same as that when the same e-parameters are completely omitted from the Facility IE.

2) The channel shall be correctly released when a shortened channel release procedure is used - the SS does not send DISCONNECT but only the RELEASE COMPLETE and CHANNEL RELEASE messages or just the CHANNEL RELEASE message.

Reference(s):

Conformance requirement 1: GSM 02.24.

Conformance requirement 2: GSM 04.08.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of reading ACM from the SIM via the ME.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

Part 1:

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in a FACILITY message sent before the CONNECT message.

The SS sends the DISCONNECT y seconds after sending the FACILITY message containing the e-parameters. The MS shall have stored the correct amount on the SIM according to the e-parameters sent.

Part 2:

Part 1 is repeated twice with the e-parameters that were set to zero above now omitted completely from the Facility IE. The shortened release procedures are used. The MS shall have stored the correct amount on the SIM.

The results of parts 1 and 2 are compared. The value for the charge calculated by the MS shall be identical for parts 1 and 2.

Maximum Duration of Test:

20 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,..3.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A, B or C branch is taken |
| A12 | SS -> MS | CONNECT | |
| A13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | SS -> MS | CONNECT | |
| B13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B14 | MS -> SS | CONNECT ACKNOWLEDGE | |
| C12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| C13 | SS -> MS | CONNECT | |
| C14 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 15 | | | call duration y seconds after CAI information sent by SS |
| | | | Branch D, E and F shall be taken for k= 1,2 and 3 respectively |
| D16 | SS -> MS | DISCONNECT | |
| D17 | MS -> SS | RELEASE | |
| D18 | SS -> MS | RELEASE COMPLETE | |
| D19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| E16 | SS -> MS | RELEASE COMPLETE | Shortened channel release procedure |
| E17 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| F16 | SS -> MS | CHANNEL RELEASE | |
| 20 | MS | | SIM contents checked (either via MMI or by removing the SIM and using SIM reader) ACM shall have been incremented correctly. |

NOTE The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

y is set to a constant value of 90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 10 | 40 | 1 | 0 | 0 | 0 | 0 | 20 | 20 |
| 2 | 10 | 40 | 1 | ---------omitted--------- | | | | 20 | 40 |
| 3 | 10 | 40 | 1 | ---------omitted--------- | | | | 20 | 60 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.1.7 AoCC on a Call Hold call

Purpose:

1) To verify that when the MS invokes a Call Hold call and hence receives Facility IEs containing AoCC e-parameters for each chargeable call the MS returns a FACILITY message containing the AoCC acknowledgement within 1 second of transmission of each set of e-parameters.

2) To verify that when the MS invokes a Call Hold call and hence receives Facility IEs containing CAI elements for each chargeable call the CCM records the sum of all the charges for the services currently being used and hence that the ME inserts the correct charge in the ACM field of the SIM.

**Conformance Requirement(s):**

1) When the MS invokes a Call Hold call and hence receives Facility IEs containing AoCC e-parameters for each chargeable call the MS shall return a FACILITY message containing the AoCC acknowledgement within 1 second of receiving each set of e-parameters.

2) When the MS invokes a Call Hold call and hence receives Facility IEs containing CAI elements for each chargeable call the CCM shall record the sum of all the charges for the services currently being used and hence the ME shall insert the correct charge in the ACM field of the SIM.

Reference(s):

Conformance requirement 1: GSM 04.13.

Conformance requirement 2: GSM 02.24, GSM 04.83, GSM 04.84, GSM 04.86.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of reading ACM from the SIM via the ME.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCC acknowledgement within 1 second of transmission of the CONNECT message.

The call (call B) is then put on hold by sending a HOLD message from the MS to the SS. The SS shall reply with a HOLD ACKNOWLEDGE. The traffic channel is now available to originate another call.

The MS is made to initiate a second call (call C). The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCC acknowledgement in a FACILITY message within 1 second of transmission of the CONNECT message.

The SS sends the DISCONNECT to the MS for call B x seconds after sending the call B CAI in the CONNECT/FACILITY message and the DISCONNECT for call C y seconds after sending the call C CAI in the CONNECT/FACILITY message. The MS shall have stored the correct amount on the SIM according to the two sets of e-parameters sent and call times x and y.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either D or E branch is taken |
| D12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| D13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | MS | | The MS is made to initiate a second call, and the first call is placed on hold. DTMF signalling may occur, when MMI keys are depressed |
| 15 | MS -> SS | HOLD | |
| 16 | SS -> MS | HOLD ACKNOWLEDGE | |
| 17 | MS -> SS | CM SERVICE REQUEST | |
| 18 | SS -> MS | CM SERVICE ACCEPT | |
| 19 | MS -> SS | SETUP | TI arbitrary but different from existing TI |
| 20 | SS -> MS | CALL PROCEEDING | |
| 21 | SS -> MS | ALERTING | |
| 22 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either F or G branch is taken |
| F23 | MS -> SS | CONNECT ACKNOWLEDGE | |
| F24 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G23 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G24 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 25 | | | Call durations x and y seconds after respective CAI information sent by SS |
| | | | Branch H and I branch are taken, the sequence depending on the durations x and y |
| | | | For call C |
| H26 | SS -> MS | DISCONNECT | y seconds after call C CAI sent |
| H27 | MS -> SS | RELEASE | |
| H28 | SS -> MS | RELEASE COMPLETE | |
| | | | For call B |
| I26 | SS -> MS | DISCONNECT | x seconds after call B CAI sent |
| I27 | MS -> SS | RELEASE | |
| I28 | SS -> MS | RELEASE COMPLETE | |
| 29 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |
| 30 | MS | | SIM contents checked (either via MMI or by removing the SIM and using SIM reader) ACM shall have been incremented correctly. |

NOTE The value of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x,y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x set to 180 s, y is set to 90 s.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| Call | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| B(time x) | 7 | 40 | 1 | 0 | 0 | 0 | 0 | | |
| C(time y) | 13 | 40 | 1 | 0 | 0 | 0 | 0 | 54 | 54 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.1.8 AoCC on a Multi-party call

Purpose:

1) To verify that when the MS invokes a Multi-party call and hence receives Facility IEs containing AoCC e-parameters for each chargeable call the MS returns a FACILITY message containing the AoCC acknowledgement within 1 second of transmission of each set of e-parameters.

2) To verify that when the MS originates a Multi-party call and hence receives Facility IEs containing CAI elements for each chargeable call the CCM records the sum of all the charges for the services currently being used and hence the ME inserts the correct charge in the ACM field of the SIM.

Conformance Requirement(s):

1) When the MS invokes a Multi-party call and hence receives Facility IEs containing AoCC e-parameters for each chargeable call the MS shall return a FACILITY message containing the AoCC acknowledgement within 1 second of receiving each set of e-parameters.

2) When the MS originates a Multi-party call and hence receives Facility IEs containing CAI elements for each chargeable call the CCM shall record the sum of all the charges for the services currently being used and hence the ME shall insert the correct charge in the ACM field of the SIM.

Reference(s):

Conformance requirement 1: GSM 04.13.

Conformance requirement 2: GSM 02.24, GSM 04.83, GSM 04.84, GSM 04.86.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of reading ACM from the SIM via the ME.

- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCC acknowledgement within 1 second of transmission of the CONNECT message.

The call (call B) is then put on hold by sending a HOLD message from the MS to the SS. The SS shall reply with a HOLD ACKNOWLEDGE. The traffic channel is now available to originate another call.

The MS is made to initiate a second call (call C). The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCC acknowledgement within 1 second of transmission of the CONNECT message.

The MS invokes the multi-party service by sending a FACILITY message to the SS containing the BuildMPTY request.

The SS accepts the request and connects the MS with the other existing connections (active call C and held call B) and confirms with a FACILITY message.

The SS sends the DISCONNECT to the MS for call B x seconds after sending the call B CAI in the CONNECT message and the DISCONNECT for call C y seconds after sending the call C CAI in the CONNECT message. The MS shall have stored the correct amount on the SIM according to the two sets of e-parameters sent and call times x and y.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either D or E branch is taken |
| D12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| D13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |

| Step | Direction | Message | Comments |
|---|---|---|---|
| E12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | MS -> SS | HOLD | The MS is made to initiate a second call and the first call (call B) is placed on hold. DTMF signalling may occur, when MMI keys are depressed |
| 15 | MS->SS | HOLD | |
| 16 | SS -> MS | HOLD ACKNOWLEDGE | |
| 17 | MS -> SS | CM SERVICE REQUEST | |
| 18 | SS -> MS | CM SERVICE ACCEPT | |
| 19 | MS -> SS | SETUP | TI arbitrary but different from existing TI |
| 20 | SS -> MS | CALL PROCEEDING | |
| 21 | SS -> MS | ALERTING | |
| 22 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either F or G branch is taken |
| F23 | MS -> SS | CONNECT ACKNOWLEDGE | |
| F24 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G23 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G24 | MS -> SS | CONNECT ACKNOWLEDGE | |
| | | | The MS is made to build a multi-party call. DTMF signalling may occur, when MMI keys are depressed |
| 25 | MS -> SS | FACILITY (TI A-B/A-C) | As default message except contains Facility IE with contents as indicated in iii below |
| 26 | SS -> MS | FACILITY (TI A-B/A-C) | As default message except contains Facility IE with contents as indicated in iv, below |
| 27 | | | Call durations x and y seconds after respective CAI information sent by SS |
| | | | Branch H and branch I are taken, the sequence depending on the durations x and y |
| | | | For call C |
| H28 | SS -> MS | DISCONNECT | y seconds after call C CAI sent |
| H29 | MS -> SS | RELEASE | |
| H30 | SS -> MS | RELEASE COMPLETE | |
| | | | For call B |
| I28 | SS -> MS | DISCONNECT | x seconds after call B CAI sent |
| I29 | MS -> SS | RELEASE | |
| I30 | SS -> MS | RELEASE COMPLETE | |
| 31 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 32 | MS | | SIM contents checked (either via MMI or by removing the SIM and using SIM reader) ACM shall have been incremented correctly. |

NOTE: A-B/A-C indicates a choice. the transaction identifier (TI) used must be that of the active call or the held call (ref. GSM 04.84).

The values of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x,y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x set to 180 s, y set to 90 s.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| Call | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| B(time x) | 19 | 40 | 1 | 0 | 0 | 0 | 0 | | |
| C(time y) | 29 | 40 | 1 | 0 | 0 | 0 | 0 | 134 | 134 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

iii) FACILITY Information Element with Invoke = BuildMPTY component type as defined in GSM 04.80 section 3.6.1 table 3.4.

## 31.6.2 Charge Storage

### 31.6.2.1 Removal of SIM during an active call

Purpose:

1) To verify that when the SIM is removed from the ME during an active AoCC call the ME immediately terminates the call.

2) To verify that when the SIM is removed during an active AoCC call the ME has written the total charge up to that point in the call to the ACM field of the SIM.

Conformance Requirement(s):

1) When the SIM is removed from the ME during an active AoCC call the ME shall immediately terminate the call.

2) When the SIM is removed during an active AoCC call midway through an AoC charging time interval (e7 or e2) the ME shall have written the total charge up to the point in the call where the charging time interval last expired to the ACM field of the SIM.

Reference(s):

Conformance requirement 1: GSM 02.17.

Conformance requirement 1: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Removal of the SIM is possible without disconnection of power supply.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

This test is only performed if it is possible to remove SIM without disconnecting the power supply. If the battery pack must be removed to get at the SIM see 31.6.2.2.

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent before or after the CONNECT ACKNOWLEDGE.

If possible, without removing the power supply, the SIM is removed from the ME y seconds after the SS sends the CAI in the CONNECT/FACILITY message. The call shall be terminated immediately by the MS and the MS shall have stored the correct amount on the SIM according to the e-parameters sent.

Maximum Duration of Test:

5 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | SIM removed y seconds after CAI information sent by SS. |
| | | | Either C, D, E or F branch is taken |
| C15 | MS -> SS | DISCONNECT | |
| C16 | SS -> MS | RELEASE | |
| C17 | MS -> SS | RELEASE COMPLETE | |
| C18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| D15 | MS -> SS | RELEASE COMPLETE | |
| D16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| E15 | MS -> SS | Layer 2 DISC | |
| E16 | SS -> MS | UA | |
| F15 | | | No further messages are sent |
| 19 | | | SIM contents checked (by removing the SIM and using SIM reader). ACM shall have been incremented correctly. |

NOTE: The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

The SIM is removed after approximately y=90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| | 10 | 55 | 1 | 10 | 0 | 0 | 10 | 30 | 30 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.2.2 Interruption of power supply during an active call

Purpose:

To verify that when the power supply of the MS is removed during an active AoCC call the ME has written the total charge up to that point in the call to the ACM field of the SIM.

Conformance Requirement(s):

When the power supply of the MS is removed during an active AoCC call midway through an AoC charging time interval (e7 or e2) the ME shall have written the total charge up to the point in the call where the charging time interval last expired to the ACM field of the SIM.

Reference(s):

Conformance requirement 1: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of removing power supply.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is switched off.

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent before or after the CONNECT ACKNOWLEDGE.

The ME power is switched off by pressing power button on MMI during the active call. The call shall be terminated immediately and the MS shall have stored the correct amount on the SIM according to the e-parameters sent.

The test is repeated for ME power being lost by removal of battery pack. The call shall be terminated immediately and the MS shall have stored the correct amount on the SIM according to the e-parameters sent.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,2.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | ME power interrupted y seconds after CAI information sent by SS by: MMI power switch (for k=1) Removing battery pack (for k=2) Depending on the value of k C or D branch is taken |
| 15 | | | SIM contents checked (by removing the SIM and using SIM reader). ACM shall have been incremented correctly. |

NOTE: The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

The ME power is removed after approximately y=90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| | 10 | 55 | 1 | 10 | 0 | 0 | 10 | 30 | 30 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.2.3 MS going out of coverage during an active AoCC call

NOTE: At present the core recommendations for AoCC in the case where the radio link is lost during an active call are vague. Does the mobile go on charging for a fixed period after radio link loss and continue as usual if radio link reestablishment occurs, or does charging stop? Input from people involved in charging for GSM is required.

Hence this test will be enhanced in the future when the requirements become clearer.

Purpose:

To verify that when the MS goes out of radio coverage area and an active call is dropped the ME has written the total charge up to that point in the call to the ACM field of the SIM.

Conformance Requirement(s):

When the MS goes out of radio coverage area during an active AoCC call midway through an AoC charging time interval (e7 or e2) and the call is dropped the ME shall have written the total charge up to the point in the call where the charging time interval last expired to the ACM field of the SIM.

Reference(s):

Conformance requirement 1: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of reading ACM from the SIM via the ME.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCC e-parameters sent in a Facility IE in the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent before or after the CONNECT ACKNOWLEDGE.

The cell simulated by the system simulator is then switched off to model the MS losing radio coverage. The MS shall have stored the correct amount on the SIM according to the e-parameters sent. [What happens on call reestablishment?]

Maximum Duration of Test:

5 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | SS cell switched off y seconds after CAI information sent by SS Failure of radio path, end of call (CEND) occurs and MS stops charging (ref. GSM 02.24 sec 2) |
| 15 | | | SIM contents checked (either via MMI or by removing the SIM and using SIM reader). ACM shall have been incremented correctly. |

NOTE: The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

The cell being simulated by the SS is switched off after approximately y=90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| | 10 | 55 | 1 | 10 | 0 | 0 | 10 | 30 | 30 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.2.4 ACMmax operation / Mobile Originating

Purpose:

1) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum value, the ACMmax, any outgoing calls in progress for which a non-zero CAI exists are terminated by the ME, with cause value #68 once the chargeable interval determined by the CAI has elapsed, with an appropriate indication given to the user.

2) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMmax, the making of non-emergency calls is inhibited.

3) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMmax, the making of emergency calls is uninhibited.

Conformance Requirement(s):

1) When the value stored in the ACM becomes equal to or exceeds its maximum value, the ACMmax, any outgoing calls in progress for which a non-zero CAI exists shall be terminated by the ME with cause value #68, once the chargeable interval determined by the CAI has elapsed, with an appropriate indication given to the user.

2) When the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMmax, the making of further non-emergency calls shall be inhibited.

3) When the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMmax, the making of emergency calls shall be uninhibited.

Reference(s):

Conformance requirement 1: GSM 02:24, GSM 04.86 section 2.3.

Conformance requirement 2: GSM 02.24.

Conformance requirement 3: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).

- Method of reading ACM from the SIM via the ME.
- Type of user indication when ACMmax exceeded.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

PIN 2 is entered into the MS allowing modification of both the ACM and ACMmax fields on the SIM. The ACM is reset to zero and the ACMmax is set to 2 units.

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCC non-zero e-parameters sent in a Facility IE in the CONNECT message. It is an implementation option whether the AoCC acknowledge is sent before or after the CONNECT ACKNOWLEDGE.

After the ACM has been incremented to 2 units (60 s) the call shall be terminated by the MS once an additional chargeable interval of 30s has elapsed, and an indication given to the user. The call duration is recorded and the ACM is checked to ensure it has been incremented to 2 units.

The MS is then made to attempt to originate an ordinary call to the MS for which a non-zero CAI exists for the calling party and shall be unsuccessful. The MS shall not send a CHANNEL REQUEST for that call.

The MS is then made to attempt to originate an emergency call and shall be successful.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM (it shall be zero) |
| | | | For k= 1 |
| A1 | MS | | The MS is made to initiate an ordinary call |
| A2 | MS -> SS | CHANNEL REQUEST | |
| A3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| A4 | MS -> SS | CM SERVICE REQUEST | |
| A5 | SS -> MS | CM SERVICE ACCEPT | |
| A6 | MS -> SS | SETUP | |
| A7 | SS -> MS | CALL PROCEEDING | |
| A8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| A9 | MS -> SS | ASSIGNMENT COMPLETE | |
| A10 | SS -> MS | ALERTING | |
| A11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in I below |
| | | | For k = 3 |
| B1 | MS | | The MS is made to initiate an emergency call |
| B2 | MS -> SS | CHANNEL REQUEST | Establishment cause is emergency call establishment |
| B3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| B4 | MS -> SS | CM SERVICE REQUEST | CM service type IE indicates "emergency call establishment" |
| B5 | SS -> MS | CM SERVICE ACCEPT | |
| B6 | MS -> SS | EMERGENCY SETUP | |
| B7 | SS -> MS | CALL PROCEEDING | |
| B8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| B9 | MS -> SS | ASSIGNMENT COMPLETE | |
| B10 | SS -> MS | ALERTING | |
| B11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below For k=1 or 3 either branch C or D is taken |
| C12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| C13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| D12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| D13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| | | | For k=1 |
| L14 | | | Record call duration, x seconds, after CAI information sent by SS until call is terminated by the ME |
| L15 | MS -> SS | DISCONNECT | Cause value #68 |
| L16 | SS -> MS | RELEASE | |
| L17 | MS -> SS | RELEASE COMPLETE | |
| L18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| L19 | | | ACM checked (shall be 2 units) |
| | | | For k=3 |
| M14 | | | Call duration y seconds after CAI information sent by SS |
| M15 | MS -> SS | DISCONNECT | |
| M16 | SS -> MS | RELEASE | |
| M17 | MS -> SS | RELEASE COMPLETE | |
| M18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| M19 | | | ACM checked (shall be 2 units) |

k=1 - Non zero CAI call attempted by MS and should succeed.

k=2 - Non zero CAI call attempted by MS and should fail.

k=3 - Emergency call attempted by MS and should succeed.

NOTE: The values of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x,y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x shall be 90 ± 2 seconds.

y shall be set to 120 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 1 | 30 | 1 | 0 | 0 | 0 | 0 | 2 | 2 |
| 2 | 1 | 30 | 1 | 0 | 0 | 0 | 0 | 0 | 2 |
| 3 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 2 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.2.5 ACMmax operation / Mobile Terminating

Purpose:

1) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum value, the ACMmax, any mobile terminating calls in progress for which a non-zero CAI exists are terminated by the ME with cause value #68, once the chargeable interval determined by the CAI has elapsed, with an appropriate indication given to the user.

2) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum value, the ACMmax, and an incoming call is received for which subsequently a non-zero CAI is received, then the call is terminated by the ME using cause value #68 with an appropriate indication given to the user.

3) To verify that when the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMmax, the receiving of calls for which the CAI is zero is uninhibited.

Conformance Requirement(s):

1) When the value stored in the ACM becomes equal to or exceeds its maximum value, the ACMmax, any mobile terminating calls in progress for which a non-zero CAI exists shall be terminated by the ME with cause value #68, once the chargeable interval determined by the CAI has elapsed, with an appropriate indication given to the user.

2) When the value stored in the ACM becomes equal to or exceeds its maximum value, the ACMmax, and an incoming call is received for which subsequently a non-zero CAI is received, the call shall be terminated by the ME using cause value #68 with an appropriate indication given to the user.

3) When the value stored in the ACM becomes equal to or exceeds its maximum limit, the ACMmax, the receiving of calls for which the CAI is zero shall be uninhibited.

Reference(s):

Conformance requirement 1: GSM 02:24, GSM 04.86 section 2.3.

Conformance requirement 2: GSM 02.24, GSM 04.86 section 2.3.

Conformance requirement 2: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCC.
- Supported rates (full rate/half rate).
- Method of reading ACM from the SIM via the ME.
- Type of user indication when ACMmax exceeded.
- Supported teleservices.
- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

PIN 2 is entered into the MS allowing modification of both the ACM and ACMmax fields on the SIM. The ACM is reset to zero and the ACMmax is set to 2 units.

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The SS is made to initiate a call. The call is established with certain non-zero AoCC e-parameters sent in a Facility IE contained in a FACILITY message sent before the CONNECT message. It is an implementation option whether the AoCC e-parameters and AoCC acknowledge are sent before or after the CONNECT ACKNOWLEDGE.

After the ACM has been incremented to 2 units (60s) the call shall be terminated by the MS once an additional chargeable interval of 30s has elapsed and an indication given to the user. The ACM shall be checked to ensure that it has been incremented to 2 units.

The SS is then made to attempt to make an ordinary call to the MS for which a non-zero CAI exists for the called party and shall be unsuccessful. The MS shall terminate the call with a DISCONNECT message.

The SS is then made to attempt to make an ordinary call to the MS for which a zero CAI exists for the called party and shall be successful.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,...,3..

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | SS | | The SS is made to initiate a call |
| 2 | SS -> MS | PAGING REQUEST | |
| 3 | MS -> SS | CHANNEL REQUEST | |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | PAGING RESPONSE | |
| 6 | SS -> MS | SETUP | |
| 7 | MS -> SS | CALL CONFIRMED | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | MS -> SS | ALERTING | |
| 11 | MS -> SS | CONNECT | |
| 12 | SS -> MS | CONNECT ACKNOWLEDGE | |
| | | | For k=1 or 3 branch A is taken |
| A13 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| A14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| | | | For k=2 branch B, and then either branch C, D or E is taken |
| B13 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| C13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| C14 | MS -> SS | DISCONNECT | MS terminates call with cause value #68 |
| D13 | MS -> SS | DISCONNECT | MS terminates call with cause value #68 |
| D14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E13 | MS -> SS | DISCONNECT | MS terminates call with cause value #68. DISCONNECT may or may not contain Facility IE with contents as indicated in ii below |
| | | | For k= 1, 2 and 3, F, G and branch shall be taken respectively |
| | | | For k=1 |
| F15 | | | Record call duration, x seconds, after CAI information sent by SS until call is terminated by the ME |
| F16 | MS -> SS | DISCONNECT | MS terminates call with cause value #68 |
| F17 | SS -> MS | RELEASE | |
| F18 | MS -> SS | RELEASE COMPLETE | |
| F19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| | | | For k=2 |
| G15 | SS -> MS | RELEASE | |
| G16 | MS -> SS | RELEASE COMPLETE | RELEASE COMPLETE may or may not contain Facility IE with contents as indicated in ii below |
| G17 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| | | | For k=3 |
| H15 | | | Call duration y seconds after CAI information sent by SS |
| H16 | MS -> SS | DISCONNECT | MS terminates call |
| H17 | SS -> MS | RELEASE | |
| H18 | MS -> SS | RELEASE COMPLETE | |
| H19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 20 | | | ACM checked (should be 2 units) |

k=1 - Non zero CAI call attempted to MS and should succeed.

k=2 - Non zero CAI call attempted to MS and should fail.

k=3 - Zero CAI call attempted to MS and should succeed.

NOTE: The values of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x,y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x shall be 90 ± 2 seconds.

y shall be set to 120 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 1 | 30 | 1 | 0 | 0 | 0 | 0 | 2 | 2 |
| 2 | 1 | 30 | 1 | 0 | 0 | 0 | 0 | 0 | 2 |
| 3 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 2 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

## 31.6.3 Advice of Charge Information

### 31.6.3.1 AoCI time related charging / MS originated call

Purpose:

1) To verify that when the MS receives the AoCI parameters in a Facility IE which is contained in the CONNECT message and when a TCH has already been assigned, the MS returns a FACILITY message containing the acknowledgement within 1 second.

2) To verify that the when the call has no volume related component the MS ignores non-zero AoCI e5, e6 parameters sent to it.

Conformance Requirement(s):

1) When the MS receives the AoCI parameters in a Facility IE which is contained in a CONNECT message and when a TCH has already been assigned, the MS shall return a FACILITY message containing the acknowledgement within 1 second.

2) When the call has no volume related component the MS shall ignore non-zero AoC e5 and e6 parameters sent to it.

Reference(s):

Conformance requirement 1: GSM 03.86, GSM 04.13, GSM 04.86.

Conformance requirement 2: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCI.

- Supported rates (full rate/half rate).
- Supported teleservices.
- Support for active state of the call control protocol (U10).
- MMI method of reading the AoCI information

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCI e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCI acknowledgement within 1 second of the CONNECT message. It is an implementation option whether the AoCI acknowledge is sent by the MS before or after the CONNECT ACKNOWLEDGE.

The SS sends the DISCONNECT y seconds after sending the CONNECT message containing the CAI. The test is repeated for several different sets of e-parameters as defined below.

Maximum Duration of Test:

30 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,...,5.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | | | call duration y seconds after CAI information sent by SS |
| 15 | SS -> MS | DISCONNECT | |
| 16 | MS -> SS | RELEASE | |
| 17 | SS -> MS | RELEASE COMPLETE | |
| 18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 19 | MS | | MS display is checked to determine whether the correct call charge has been indicated |

NOTE: The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

y is set to a constant value of 90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as below:

| k-value | e-parameter | | | | | CCM total | | Step 0 ACM at call end | value increased by |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 6 | 14 | 1 | 25 | 0 | 0 | 60 | 43 | 43 |
| 2 | 0 | 0 | 1 | 100 | 0 | 0 | 0 | 100 | 143 |
| 3 | 250 | 16 | 2 | 500 | 0 | 0 | 60 | 2000 | 2143 |
| 4 | 1 | 1 | 1 | 0 | 10 | 10 | 1 | 89 or 90 | 2232 or 2233 |
| 5 | 12,5 | 30 | 1 | 25 | 10 | 10 | 30 | 50 or 62,5 | 2295, 2296, 2282 or 2283 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

The ASN.1 description for each e-parameter allows integers in the range 0 to 8191 to be transmitted but some e-parameters have different actual ranges (e.g. e1 can take any value 0..819,1 with 0,1 resolution). The MS knows how to interpret the received parameter (e.g. received e1 refers to 10 times actual e1, see GSM 04.80 section 4.4.3). Therefore e1=12,5 would be sent to the MS as 125. The MS knows the value sent is 10 times the "real" e1 and hence interprets the value as 12,5.

The non-zero e5 and e6 values for the k=4 and k=5 execution of the test are to check that the MS ignores the volume related parameters when carrying out time only related charging.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.3.2 AoCI time related charging / MS terminated call

Purpose:

1) To verify that when the MS receives certain AoCI e-parameters in a Facility IE which is contained in a FACILITY message sent after the CONNECT message and when a TCH has already been assigned, the MS returns a FACILITY message containing the acknowledgement within 1 second.

Conformance Requirement(s):

1) When the MS receives the AoCI parameters in a Facility IE which is contained in a FACILITY message sent after the CONNECT message and when a TCH has already been assigned, the MS shall return a Facility message containing the acknowledgement within 1 second.

Reference(s):

Conformance requirement 1: GSM 03.86, GSM 04.13, GSM 04.86.

Conformance requirement 2: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCI.
- Supported rates (full rate/half rate).
- Supported teleservices.
- Support for active state of the call control protocol (U10).
- MMI method of reading the AoCI information

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The SS is made to initiate a call. The call is established and certain AoCI e-parameters are sent to the MS in a Facility IE contained within a FACILITY message. The MS shall return the AoCI acknowledgement within 1 second of the FACILITY message. It is an implementation option whether the AoCI e-parameters and the AoCI acknowledge are sent before or after the CONNECT ACKNOWLEDGE.

The SS sends the DISCONNECT y seconds after sending the FACILITY message. The test is repeated for several different sets of e-parameters as defined below.

Maximum Duration of Test:

30 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,...,5.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | SS | | The SS is made to initiate a call |
| 2 | SS -> MS | PAGING REQUEST | |
| 3 | MS -> SS | CHANNEL REQUEST | |
| 4 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 5 | MS -> SS | PAGING RESPONSE | |
| 6 | SS -> MS | SETUP | |
| 7 | MS -> SS | CALL CONFIRMED | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | MS -> SS | ALERTING | |
| 11 | MS -> SS | CONNECT | |
| 12 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A or B branch is taken |
| A13 | SS -> MS | CONNECT ACKNOWLEDGE | |
| A14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B14 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 15 | | | call duration y seconds after CAI information sent by SS |
| 16 | SS -> MS | DISCONNECT | |
| 17 | MS -> SS | RELEASE | |
| 18 | SS -> MS | RELEASE COMPLETE | |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 20 | MS | | MS display is checked to determine whether the correct call charge has been indicated |

NOTE: The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

y is set to a constant value of 90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as below:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| 2 | 0 | 0 | 1 | 100 | 0 | 0 | 0 | 100 | 100 |
| 3 | 6 | 14 | 1 | 25 | 0 | 0 | 60 | 43 | 143 |
| 4 | 1 | 1 | 1 | 0 | 0 | 0 | 1 | 89 or 90 | 233 or 232 |
| 5 | 12,5 | 30 | 1 | 25 | 0 | 0 | 30 | 50 or 62,5 | 296, 295, 282 or 283 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.3.3 AoCI volume related charging / MS originated call

Future addition at GSM Phase 2+ stage.

### 31.6.3.4 AoCI volume related charging / MS terminated call

Future addition at GSM Phase 2+ stage.

### 31.6.3.5 Change in charging information during a call

Purpose:

1) To verify that when the MS receives new AoCI parameters mid-way through a call in a Facility IE which is contained within a FACILITY message the MS returns a FACILITY message containing the acknowledgement within 1 second.

2) To verify that when the MS receives new charging information mid-way through a call in the form of a Facility IE contained within a FACILITY message the MS correctly indicates the total charge considering both sets of charging information.

Conformance Requirement(s):

1) When the MS receives new AoCI parameters mid-way through a call in a Facility IE which is contained within a FACILITY message the MS shall return a FACILITY message containing the acknowledgement within 1 second.

2) When the MS receives new charging information mid-way through a call in the form of a Facility IE contained within a FACILITY message the MS correctly indicates the total charge considering both sets of charging information.

Reference(s):

Conformance requirement 1: GSM 03.86, GSM 04.13, GSM 04.86.

Conformance requirement 2: GSM 02.24.

Related PICS/PIXIT Statement(s):

- Support of AoCI.
- Supported rates (full rate/half rate).
- Supported teleservices.

- Support for active state of the call control protocol (U10).
- MMI method of reading the AoCI information

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCI e-parameters sent in a Facility IE in a FACILITY message sent after the CONNECT message. The MS shall return the AoCI acknowledgement within 1 second of the FACILITY message. x seconds after sending the original CAI, new (and different) e-parameters are sent to the MS in a Facility IE contained within a FACILITY message. The MS shall return the AoCI acknowledge within 1 second of the FACILITY message.

The SS sends the DISCONNECT y seconds after sending the first CAI in the FACILITY message.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | |
| | | | Either A, B or C branch is taken |
| A12 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| A13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| B13 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| B14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| C12 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| C13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| C14 | MS-> SS | CONNECT ACKNOWLEDGE | |
| | | | Second CAI sent x sec after first CAI |
| 15 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in iii below |
| 16 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below New CAI held in abeyance until CDUR has timed out present e2 value |
| 17 | | | Call duration y seconds after first CAI information sent by SS |
| 18 | SS -> MS | DISCONNECT | |
| 19 | MS -> SS | RELEASE | |
| 20 | SS -> MS | RELEASE COMPLETE | |
| 21 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 22 | MS | | MS display is checked to determine whether the correct call charge has been indicated |

NOTE The values of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x, y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set as defined below:

| | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| | 10 | 28 | 1 | 10 | 0 | 0 | 60 | (30) | (30) |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

iii) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x is set to a constant value of 80 seconds.

y is set to a constant value of 180 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| | 10 | 14 | 1 | 5 | 0 | 0 | 60 | 65 | 65 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

### 31.6.3.6 Different formats of charging information

Purpose:

1) To verify that when the MS receives a Facility IE in which certain e-parameters are set to zero the total charge accumulated is the same as that when the same e-parameters are completely omitted from the Facility IE.

2) To verify the operation of a shortened channel release procedure where the SS does not send DISCONNECT but only the RELEASE COMPLETE and CHANNEL RELEASE messages or just the CHANNEL RELEASE message.

Conformance Requirement(s):

1) When the MS receives a Facility IE in which certain e-parameters are set to zero the total charge accumulated shall be the same as that when the same e-parameters are completely omitted from the Facility IE.

2) The channel shall be correctly released when a shortened channel release procedure is used - the SS does not send DISCONNECT but only the RELEASE COMPLETE and CHANNEL RELEASE messages or just the CHANNEL RELEASE message.

Reference(s):

Conformance requirement 1: GSM 02.24.

Conformance requirement 2: GSM 04.08.

Related PICS/PIXIT Statement(s):

- Support of AoCI.
- Supported rates (full rate/half rate).
- Supported teleservices.
- Support for active state of the call control protocol (U10).
- MMI method of reading the AoCI information

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

Part 1:

The MS is made to initiate a call. The call is established with certain AoCI e-parameters sent in a Facility IE in a FACILITY message sent before the CONNECT message.

The SS sends the DISCONNECT y seconds after sending the FACILITY message containing the e-parameters. The MS shall have stored the correct amount on the SIM according to the e-parameters sent.

Part 2:

Part 1 is repeated twice with the e-parameters that were set to zero above now omitted completely from the Facility IE. The shortened release procedures are used. The MS shall have stored the correct amount on the SIM.

The results of parts 1 and 2 are compared. The value for the charge calculated by the MS shall be identical for parts 1 and 2.

Maximum Duration of Test:

20 minutes.

Expected Sequence:

The sequence step 1-20 is executed for execution counter k = 1,..3.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | FACILITY | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either A, B or C branch is taken |
| A12 | SS -> MS | CONNECT | |
| A13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| A14 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B12 | SS -> MS | CONNECT | |
| B13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| B14 | MS -> SS | CONNECT ACKNOWLEDGE | |
| C12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| C13 | SS -> MS | CONNECT | |
| C14 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 15 | | | call duration y seconds after CAI information sent by SS |
| | | | Branch D, E and F shall be taken for k= 1,2 and 3 respectively |
| D16 | SS -> MS | DISCONNECT | |
| D17 | MS -> SS | RELEASE | |
| D18 | SS -> MS | RELEASE COMPLETE | |
| D19 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| E16 | SS -> MS | RELEASE COMPLETE | Shortened channel release procedure |
| E17 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| F16 | SS -> MS | CHANNEL RELEASE | |
| 20 | MS | | MS display is checked to determine whether the correct call charge has been indicated |

NOTE The value of y is given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

y is set to a constant value of 90 seconds.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| k-value | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| 1 | 10 | 40 | 1 | 0 | 0 | 0 | 0 | 20 | 20 |
| 2 | 10 | 40 | 1 | ---------omitted--------- | | | | 20 | 40 |
| 3 | 10 | 40 | 1 | ---------omitted--------- | | | | 20 | 60 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.3.7 AoCI on a Call Hold call

Purpose:

1) To verify that when the MS invokes a Call Hold call and hence receives Facility IEs containing AoCI e-parameters for each chargeable call the MS returns a FACILITY message containing the AoCI acknowledgement within 1 second of transmission of each set of e-parameters.

**Conformance Requirement(s):**

1) When the MS invokes a Call Hold call and hence receives Facility IEs containing AoCI e-parameters for each chargeable call the MS shall return a FACILITY message containing the AoCI acknowledgement within 1 second of receiving each set of e-parameters.

Reference(s):

Conformance requirement 1: GSM 04.13.

Conformance requirement 2: GSM 02.24, GSM 04.83, GSM 04.84, GSM 04.86.

Related PICS/PIXIT Statement(s):

- Support of AoCI.
- Supported rates (full rate/half rate).
- Supported teleservices.
- Support for active state of the call control protocol (U10).
- MMI method of reading the AoCI information

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCI e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCI acknowledgement within 1 second of transmission of the CONNECT message.

The call (call B) is then put on hold by sending a HOLD message from the MS to the SS. The SS shall reply with a HOLD ACKNOWLEDGE. The traffic channel is now available to originate another call.

The MS is made to initiate a second call (call C). The call is established with certain AoCI e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCI acknowledgement in a FACILITY message within 1 second of transmission of the CONNECT message.

The SS sends the DISCONNECT to the MS for call B x seconds after sending the call B CAI in the CONNECT/FACILITY message and the DISCONNECT for call C y seconds after sending the call C CAI in the CONNECT/FACILITY message.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either D or E branch is taken |
| D12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| D13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E13 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 14 | MS | | The MS is made to initiate a second call, and the first call is placed on hold. DTMF signalling may occur, when MMI keys are depressed |
| 15 | MS -> SS | HOLD | |
| 16 | SS -> MS | HOLD ACKNOWLEDGE | |
| 17 | MS -> SS | CM SERVICE REQUEST | |
| 18 | SS -> MS | CM SERVICE ACCEPT | |
| 19 | MS -> SS | SETUP | TI arbitrary but different from existing TI |
| 20 | SS -> MS | CALL PROCEEDING | |
| 21 | SS -> MS | ALERTING | |
| 22 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either F or G branch is taken |
| F23 | MS -> SS | CONNECT ACKNOWLEDGE | |
| F24 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G23 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G24 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 25 | | | Call durations x and y seconds after respective CAI information sent by SS |
| | | | Branch H and I branch are taken, the sequence depending on the durations x and y |
| | | | For call C |
| H26 | SS -> MS | DISCONNECT | y seconds after call C CAI sent |
| H27 | MS -> SS | RELEASE | |
| H28 | SS -> MS | RELEASE COMPLETE | |
| | | | For call B |
| I26 | SS -> MS | DISCONNECT | x seconds after call B CAI sent |
| I27 | MS -> SS | RELEASE | |
| I28 | SS -> MS | RELEASE COMPLETE | |
| 29 | SS -> MS | CHANNEL RELEASE | The main signalling link is released |
| 30 | MS | | MS display is checked to determine whether the correct call charge has been indicated |

NOTE The value of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x,y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x set to 180 s, y is set to 90 s.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| Call | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| B(time x) | 7 | 40 | 1 | 0 | 0 | 0 | 0 | | |
| C(time y) | 13 | 40 | 1 | 0 | 0 | 0 | 0 | 54 | 54 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

### 31.6.3.8 AoCI on a Multi-party call

Purpose:

1) To verify that when the MS invokes a Multi-party call and hence receives Facility IEs containing AoCI e-parameters for each chargeable call the MS returns a FACILITY message containing the AoCI acknowledgement within 1 second of transmission of each set of e-parameters.

2) To verify that when the MS originates a Multi-party call and hence receives Facility IEs containing CAI elements for each chargeable call the CCM records the sum of all the charges for the services currently being used and hence the ME inserts the correct charge in the ACM field of the SIM.

Conformance Requirement(s):

1) When the MS invokes a Multi-party call and hence receives Facility IEs containing AoCI e-parameters for each chargeable call the MS shall return a FACILITY message containing the AoCI acknowledgement within 1 second of receiving each set of e-parameters.

2) When the MS originates a Multi-party call and hence receives Facility IEs containing CAI elements for each chargeable call the CCM shall record the sum of all the charges for the services currently being used and hence the ME shall insert the correct charge in the ACM field of the SIM.

Reference(s):

Conformance requirement 1: GSM 04.13.

Conformance requirement 2: GSM 02.24, GSM 04.83, GSM 04.84, GSM 04.86.

Related PICS/PIXIT Statement(s):

- Support of AoCI.
- Supported rates (full rate/half rate).
- MMI method of reading the AoCI information
- Supported teleservices.

- Support for active state of the call control protocol (U10).

Initial Conditions:

System Simulator:

1 cell, default parameters, IMSI attach/detach disabled.

Mobile Station:

The MS is in MM-state "idle, updated".

Foreseen Final State of the MS:

The MS is in MM-state "idle, updated".

Method of Test:

The MS is made to initiate a call. The call is established with certain AoCI e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCI acknowledgement within 1 second of transmission of the CONNECT message.

The call (call B) is then put on hold by sending a HOLD message from the MS to the SS. The SS shall reply with a HOLD ACKNOWLEDGE. The traffic channel is now available to originate another call.

The MS is made to initiate a second call (call C). The call is established with certain AoCI e-parameters sent in a Facility IE in the CONNECT message. The MS shall return the AoCI acknowledgement within 1 second of transmission of the CONNECT message.

The MS invokes the multi-party service by sending a FACILITY message to the SS containing the BuildMPTY request.

The SS accepts the request and connects the MS with the other existing connections (active call C and held call B) and confirms with a FACILITY message.

The SS sends the DISCONNECT to the MS for call B x seconds after sending the call B CAI in the CONNECT message and the DISCONNECT for call C y seconds after sending the call C CAI in the CONNECT message. The MS shall have stored the correct amount on the SIM according to the two sets of e-parameters sent and call times x and y.

Maximum Duration of Test:

10 minutes.

Expected Sequence:

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | | | At start of test only, read and note value of ACM on SIM |
| 1 | MS | | The MS is made to initiate a call |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | |
| 7 | SS -> MS | CALL PROCEEDING | |
| 8 | SS -> MS | ASSIGNMENT COMMAND | to a supported channel type |
| 9 | MS -> SS | ASSIGNMENT COMPLETE | |
| 10 | SS -> MS | ALERTING | |
| 11 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either D or E branch is taken |
| D12 | MS -> SS | CONNECT ACKNOWLEDGE | |
| D13 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E12 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| E13 | MS -> SS | CONNECT ACKNOWLEDGE | |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 14 | MS -> SS | HOLD | The MS is made to initiate a second call and the first call (call B) is placed on hold. DTMF signalling may occur, when MMI keys are depressed |
| 15 | MS->SS | HOLD | |
| 16 | SS -> MS | HOLD ACKNOWLEDGE | |
| 17 | MS -> SS | CM SERVICE REQUEST | |
| 18 | SS -> MS | CM SERVICE ACCEPT | |
| 19 | MS -> SS | SETUP | TI arbitrary but different from existing TI |
| 20 | SS -> MS | CALL PROCEEDING | |
| 21 | SS -> MS | ALERTING | |
| 22 | SS -> MS | CONNECT | As default message except contains Facility IE with contents as indicated in i below |
| | | | Either F or G branch is taken |
| F23 | MS -> SS | CONNECT ACKNOWLEDGE | |
| F24 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G23 | MS -> SS | FACILITY | As default message except contains Facility IE with contents as indicated in ii below |
| G24 | MS -> SS | CONNECT ACKNOWLEDGE | |
| | | | The MS is made to build a multi-party call. DTMF signalling may occur, when MMI keys are depressed |
| 25 | MS -> SS | FACILITY (TI A-B/A-C) | As default message except contains Facility IE with contents as indicated in iii below |
| 26 | SS -> MS | FACILITY (TI A-B/A-C) | As default message except contains Facility IE with contents as indicated in iv, below |
| 27 | | | Call durations x and y seconds after respective CAI information sent by SS |
| | | | Branch H and branch I are taken, the sequence depending on the durations x and y |
| | | | For call C |
| H28 | SS -> MS | DISCONNECT | y seconds after call C CAI sent |
| H29 | MS -> SS | RELEASE | |
| H30 | SS -> MS | RELEASE COMPLETE | |
| | | | For call B |
| I28 | SS -> MS | DISCONNECT | x seconds after call B CAI sent |
| I29 | MS -> SS | RELEASE | |
| I30 | SS -> MS | RELEASE COMPLETE | |
| 31 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 32 | MS | | MS display is checked to determine whether the correct call charge has been indicated |

NOTE: A-B/A-C indicates a choice. the transaction identifier (TI) used must be that of the active call or the held call (ref. GSM 04.84).

The values of x and y are given below.

The correct value of the ACM is found from the general AoC formula given in GSM 02.24 section 4 with CDUR = x,y seconds and e parameters as defined below.

Specific Message Contents:

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For ASN.1 description see default message contents in section 31.6.4.

x set to 180 s, y set to 90 s.

The values of the e-parameters within the parameter part of the Facility Information Element shall be set to:

| Call | e-parameter | | | | | | | CCM total at call end increased by | Step 0 ACM value |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | | |
| B(time x) | 19 | 40 | 1 | 0 | 0 | 0 | 0 | | |
| C(time y) | 29 | 40 | 1 | 0 | 0 | 0 | 0 | 134 | 134 |

Values shown in table are in the format and have units as in GSM 02.24 section 3.

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

For ASN.1 description see default message contents in section 31.6.4.

iii) FACILITY Information Element with Invoke = BuildMPTY component type as defined in GSM 04.80 section 3.6.1 table 3.4.

The following abbreviations are used in the descriptions below:

U Universal tag class.

CS Context Specific tag class.

P Primitive tag form.

C Constructed tag form.

FIE Facility Information Element.

| **Contents** | **Value/remark** | **Coding** |
|---|---|---|
| Facility IE Identifier | As GSM 04.80 | 00111100 |
| Length of FIE contents | 8 | 00001000 |
| Component type tag | CS/C/tag=1 | 10100001 |
| Component length | 6 | 00000110 |
| Invoke ID tag | U/P/tag=2 | 00000010 |
| Invoke ID length | 1 | 00000001 |
| Invoke ID | Arbitrary (1 octet) | (00000000) |
| Op-Code tag | From GSM 04.80 | 00000010 |
| Op-Code length | 1 | 00000001 |
| Op-Code | Build Multi-party operation (local value 124) | 00000001 |

ii) FACILITY Information Element with Return Result component type as defined in GSM 04.80 section 3.6.1 table 3.4.

| **Contents** | **Value/remark** | **Coding** |
|---|---|---|
| Facility IE Identifier | As GSM 04.80 | 00111100 |
| Length of FIE contents | 5 | 00001001 |
| Component type tag | CS/C/tag=2 | 10100010 |
| Component length | 3 | 00000011 |
| Invoke ID tag | U/P/Integer | 00000010 |
| Invoke ID length | 1 | 00000001 |
| Invoke ID | Same as used as Invoke ID in Invoke FIE | (00000000) |

## 31.6.4 Default contents of messages

As default message contents in GSM 11.10 Section 26.8 "Tests related to circuit switched call control". These messages shall not contain SS version IEs.

Where indicated in specific tests CONNECT and FACILITY messages have Facility Information Elements as defined below.

Default contents of ForwardChargeAdvice Facility Information Elements

The following abbreviations are used in the descriptions below:

U Universal tag class.

CS Context Specific tag class.

P Primitive tag form.

C Constructed tag form.

FIE Facility Information Element.

i) FACILITY Information Element with Invoke = ForwardChargeAdvice component type as defined in GSM 04.80 section 3.6.1 table 3.3.

| Contents | Value/remark | Coding |
|---|---|---|
| Facility IE Identifier | As GSM 04.80 | 00011100 |
| Length of FIE contents | 43 | 00101011 |
| Component type tag | CS/C/tag=1 | 10100001 |
| Component length | 41 | 00101001 |
| Invoke ID tag | U/P/tag=2 | 00000010 |

# 31.7 Additional information transfer supplementary services

(Reserved).

# 31.8 Call restriction supplementary services

The following abbreviations are used:

| | |
|---|---|
| BO: | Barring of Outgoing calls. |
| BAOC: | Barring of All Outgoing Calls. |
| BOIC: | Barring of Outgoing International Calls. |
| BOICExHC: | Barring of Outgoing International Call EXcept those directed to the Home PLMN country. |
| BI: | Barring of Incoming calls. |
| BAIC: | Barring of All Incoming calls. |
| BICRoam: | Barring of Incoming when Roaming outside the home PLMN country. |
| B: | Barring (common name for BAOC, BOIC, BOICExHC, BAIC and BICRoam). |

These abbreviations are also used to represent the corresponding SS-Code; e.g. B is the SS-Code for all barring services.

NOTE: The password(s) to be used during tests of this section 31.8 may be randomly chosen - unless otherwise stated - in accordance with GSM 02.04 section 5.2.

## 31.8.1 Registration of a password

### 31.8.1.1 Registration accepted

#### 31.8.1.1.1 Conformance requirements

1) For registration of a password for all barring services, the MS shall transmit successively

   1.1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user",

   1.2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

   1.3) and then the REGISTER message containing a facility IE that includes an invoke of the RegisterPassword operation with parameter values according to the user's request (MMI action).

2) When the mobile subscriber wants to register a new password, the old password, the new password and the repeat of the new password shall be entered into the MS. Then the MS sends to the network an invoke component of the operation "register password".

3) The MS shall be able to send a password by sending a FACILITY message in accordance to the user request (MMI actions).

4) Upon receipt of the result of the procedure, contained in RELEASE COMPLETE or FACILITY message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1.1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

1.2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

1.3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.

2) GSM 04.10 section 4.2.

3) GSM 04.80.

4) GSM 02.30.

#### 31.8.1.1.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for registration of a password for all barring services in CHANNEL REQUEST message.

2) To check that the MS correctly requests a supplementary service transaction for registration of a password for all barring services in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all barring services.

4) To check that when the mobile subscriber wants to register a new password, the old password, the new password and the repeat of the new password shall be entered into the MS before the MS sends to the network a CHANNEL REQUEST.

5) To check that the MS is able to send a password by sending a FACILITY message in accordance to the user request (MMI actions).

6) To check that upon receipt of the result of the procedure, contained in RELEASE COMPLETE or FACILITY message, the MS provides the appropriate user indication (as described by the manufacturer).

These checks are done for:

all barring services, the result of the operation being sent in a RELEASE COMPLETE message.

#### 31.8.1.1.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call barring.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests registration of a new password for all barring services by entering the old password, new password and a repeat of the old password.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the old password.

Upon receipt of the FACILITY message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring a new password.

Upon receipt of the FACILITY message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring again the new password.

Upon receipt of the FACILITY message, the system simulator answers with the RELEASE COMPLETE message with the Facility information element containing the return result of the RegisterPassword operation.

Maximum duration of test

3 minutes.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of a password for all call barring services. The old password, the new password and a repeat of the new password are entered. |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | FACILITY | Invoke = GetPassword (password) |
| 8 | MS -> SS | FACILITY | GetPassword operation ReturnResult |
| 9 | SS -> MS | FACILITY | Invoke = GetPassword (new password) |
| 10 | MS -> SS | FACILITY | GetPassword operation ReturnResult |
| 11 | SS -> MS | FACILITY | Invoke = GetPassword (new password again) |
| 12 | MS -> SS | FACILITY | GetPassword operation ReturnResult |
| 13 | SS -> MS | RELEASE COMPLETE | RegisterPassword operation ReturnResult |
| 14 | SS -> MS | CHANNEL RELEASE | |

Specific message content

step 6 -

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = RegisterPassword

    Supplementary service code = B

steps 7, 9, and 11 -

- protocol discriminator: non call related SS message
- message type: FACILITY
- facility

  invoke = GetPassword

    Guidance info: Password (step 7), new password (step 9), new password again (step 11)

The linked ID must be the same as the invoke ID in the invoke of the RegisterPassword operation.

## 31.8.1.2 Registration rejected

### 31.8.1.2.1 Rejection after invoke of the RegisterPassword operation

#### 31.8.1.2.1.1 Conformance requirements

1) A transaction of any kind being already established, for registration of a password for all call restriction services, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the RegisterPassword operation with parameter values according to the user's request (MMI action).

3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.8.1.2.1.2 Test purpose

1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of registration of a password for all call restriction services, sending a CM SERVICE REQUEST.

2) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all call restriction services.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:

all call restriction services, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".

#### 31.8.1.2.1.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statement(s)

Description of the user's commands and of display of the answers from the network for call barring.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests registration of a new password for all call restriction services by entering the old password, the new password and a repeat of the new password.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE (PD and TI of the SS transaction) message with the Facility information element containing a Return_error(error: SS subscription violation) of the RegisterPassword operation.

Upon receipt of the FACILITY message, the system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of a new password for all call restriction services. The old password, the new password and a repeat of the new password are entered. |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | RegisterPassword operation Return_error |
| 6 | MS | | provide correct MMI user indication |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | STATUS | CC staTE U10 |

Specific message content

step 4 -

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = RegisterPassword

    Supplementary service code = all call restrictions

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS subscription violation

For the return error the invoke ID must be the same as in the invoke of the RegisterPassword operation.

#### 31.8.1.2.2 Rejection after password check with negative result

##### 31.8.1.2.2.1 Conformance requirements

1) A transaction of any kind being already established, for registration of a password for all call restriction services, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",
2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the RegisterPassword operation with parameter values according to the user's request (MMI action).
3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.
2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.
3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6, GSM 04.10 section 4.2.2, GSM 03.11 section 3.
4) GSM 02.30 section 4.5.

##### 31.8.1.2.2.2 Test purpose

1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of registration of a password for all call restriction services, sending a CM SERVICE REQUEST.
2) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all call restriction services.
3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.
4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:

all call restriction services, the RELEASE COMPLETE message being sent at the end of the procedure with a facility IE containing a return_error(error) where error is "NegativePasswordCheck".

31.8.1.2.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

WPA > 3

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests registration of a new password for all call restriction services. By means of appropriate MMI functions the user enters the old and new passwords.

Upon receipt of the REGISTER message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the old password.

Upon receipt of the FACILITY message, the system simulator answers with the RELEASE COMPLETE message (PD and TI of the SS transaction) with the Facility information element containing a Return_error(error: NegativePasswordCheck) of the RegisterPassword operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

5 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of a new password for all call restriction services. The old and new passwords are entered. |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | FACILITY | Invoke = GetPassword (password) |
| 6 | SS -> MS | RELEASE COMPLETE | Register Password operation ReturnError |
| 7 | MS | | provide correct MMI user indication |
| 8 | SS -> MS | STATUS ENQUIRY | |
| 9 | MS -> SS | STATUS | CC staTE U10 |

Specific message content

step 4 -

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = RegisterPassword

  Supplementary service code = B

step 6 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  error code: NegativePasswordCheck

For the reject the invoke ID must be the same as in the invoke of the Registerpassword operation.

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: in FACILITY same as previous REGISTER message
- message type: FACILITY
- facility

  invoke = GetPassword

  Guidance info: Password (step 1)

### 31.8.1.2.3 Rejection after new password mismatch

#### 31.8.1.2.3.1 Conformance requirements

1) A transaction of any kind being already established, for registration of a password for all call restriction services, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the RegisterPassword operation with parameter values according to the user's request (MMI action).

3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

5) GSM 04.10 section 4.2.

### 31.8.1.2.3.2 Test purpose

1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of registration of a password for all call restriction services, sending a CM SERVICE REQUEST.

2) To check that the MS sends a REGISTER message containing the invoke of the RegisterPassword operation with the expected parameter values for registration of a password for all call restriction services.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:

all call restriction services, the RELEASE COMPLETE message being sent at the end of the procedure with a facility IE containing a return_error(error) where error is "PasswordRegistrationFailure" with diagnostic "new password mismatch".

### 31.8.1.2.3.3 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

#### Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

#### Foreseen final state of the MS

The MS is in CC state U10.

#### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests registration of a new password for all call restriction services by entering the old password, the new password and a repeat of the new password.

Upon receipt of the REGISTER message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the old password.

Upon receipt of the FACILITY message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the new password.

Upon receipt of the FACILITY message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring again the new password.

Upon receipt of the FACILITY message, the system simulator answers with the RELEASE COMPLETE message (PD and TI of the SS transaction) with the Facility information element containing a Return_error(error: PasswordRegistrationFailure, parameter: NewPasswordMismatch) of the RegisterPassword operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of a new password for all call restriction services. The old password, new password and a repeat of the new password are entered. |

## 31.8.2 Erasure

Not applicable.

## 31.8.3 Activation

### 31.8.3.1 Activation accepted

#### 31.8.3.1.1 Conformance requirements

1) For activation of any specific call restriction service with any parameters, the MS shall transmit successively

   1.1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user",

   1.2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

   1.3) and then the REGISTER message containing a facility IE that includes an invoke of the ActivateSS operation with parameter values according to the user's request (MMI action).

2) Upon receipt of FACILITY message requiring the password, the MS shall be able to send a password by sending a FACILITY message.

3) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.2.9.

2) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.

3) GSM 02.30 section 4.5.

#### 31.8.3.1.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for activation of a specific call restriction service in CHANNEL REQUEST message.

2) To check that the MS correctly requests a supplementary service transaction for activation of call restriction service in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the ActivateSS operation with the expected parameter values for activation of a specific call restriction service.

4) To check that upon receipt of FACILITY message requiring the password, the MS is able to send a password by sending a FACILITY.

5) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (which is to be described by the manufacturer).

These checks are done for:

a) BAOC, for basic service group "all synchronous services".

b) BICRoam, for all basic service groups.

#### 31.8.3.1.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

##### Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

##### Foreseen final state of the MS

The MS is "idle updated".

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests activation of BAOC, for basic service group "all synchronous services".

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the current password.

If the manufacturer defined MMI has been used to request the activation of BAOC, then the MS may, by means of appropriate manufacturer defined MMI functions, prompt the user to give a password, depending on the implementation of the manufacturer defined MMI functions.

Upon receipt of the FACILITY message, the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the Return_result of the ActivateSS operation.

The SS transaction and the dedicated channel are released.

Then again, by means of appropriate MMI functions, the user requests activation of BICRoam, for all basic service groups.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the current password.

If the manufacturer defined MMI has been used to request the activation of BICRoam, then the MS may, by means of appropriate manufacturer defined MMI functions, prompt the user to give a password, depending on the implementation of the manufacturer defined MMI functions.

Upon receipt of the FACILITY message, the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the Return_result of the ActivateSS operation.

The dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a activation of BAOC(all synchronous services) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | FACILITY | GetPassword |
| 8 | MS -> SS | FACILITY | Getpassword operation Return Result |
| 9 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return_result |
| 10 | MS | | provide user MMI indication |
| 11 | SS -> MS | CHANNEL RELEASE | |
| 12 | MS | | The MS is made to initiate an activation of BICRoam(all basic service groups), |
| 13 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 14 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 15 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 16 | SS -> MS | CM SERVICE ACCEPT | |
| 17 | MS -> SS | REGISTER | |
| 18 | SS -> MS | FACILITY | GetPassword |
| 19 | MS -> SS | FACILITY | Getpassword operation Return Result |
| 20 | SS -> MS | RELEASE COMPLETE | ActivateSS operation Return result |
| 21 | MS | | provide correct MMI user indication |
| 22 | SS -> MS | CHANNEL RELEASE | |

Specific message contents

step 6 - BAOC

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Activation

  Supplementary service code = BAOC

  Basic service code: Bearer Service (all synchronous services), no teleservice present.

step 17 - BICRoam

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Activation

  Supplementary service code = BICRoam

  Basic service code: no bearer service present, no teleservice present.

steps 7, 18 -

- protocol discriminator: non call related SS message
- transaction identifier: in FACILITY same as previous REGISTER message
- message type: FACILITY
- facility

  invoke = GetPassword

  Guidance info: Password

## 31.8.3.2 Activation rejected

### 31.8.3.2.1 Rejection after invoke of ActivateSS operation

#### 31.8.3.2.1.1 Conformance requirements

1) A transaction of any kind being already established, for activation of one specific barring services, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",
2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the ActivateSS operation with parameter values according to the user's request (MMI action).
3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.
2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.
3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.
4) GSM 02.30 section 4.5.

#### 31.8.3.2.1.2 Test purpose

1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of specific call barring service, sending a CM SERVICE REQUEST.
2) To check that the MS sends a REGISTER message containing the invoke of the ActivateSS operation with the expected parameter values for specific call barring service.
3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.
4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:

BOIC, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".

31.8.3.2.1.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests activation of BOIC.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE (PD and TI of the SS transaction) message with the Facility information element containing a Return_error(error: SS subscription violation) of the ActivateSS operation.

The system simulator then sends STATUS ENQUIRY, and the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

2 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of a new password for BOIC |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | RegisterPassword operation Return_error |
| 6 | MS | | provide correct MMI user indication |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4 -

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = ActivateSS

  Supplementary service code = BOIC

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS subscription violation

For the return error the invoke ID must be the same as in the invoke of the ActivateSS operation.

#### 31.8.3.2.2 Rejection after use of password procedure

##### 31.8.3.2.2.1 Conformance requirements

1) A transaction of any kind being already established, for activation of any specific call restriction services, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",
2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the ActivateSS operation with parameter values according to the user's request (MMI action).
3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.
2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.
3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.
4) GSM 02.30 section 4.5.

##### 31.8.3.2.2.2 Test purpose

1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of activation of one specific call restriction service, sending a CM SERVICE REQUEST.
2) To check that the MS sends a REGISTER message containing the invoke of the ActivateSS operation with the expected parameter values for activation of one specific call restriction service.
3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.
4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:

BAIC, the RELEASE COMPLETE message being sent at the end of the procedure with a facility IE containing a return_error(error) where error is "NegativePasswordCheck".

31.8.3.2.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

Foreseen final state of the MS

The MS is in CC state U10.

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests activation of BAIC.

Upon receipt of the REGISTER message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the current password.

If the manufacturer defined MMI has been used to request the activation of BAIC, then the MS may, by means of appropriate manufacturer defined MMI functions, prompt the user to give a password, depending on the implementation of the manufacturer defined MMI functions.

Upon receipt of the FACILITY message, the system simulator sends RELEASE COMPLETE message (PD and TI of the SS transaction) with the Facility information element containing a Return_error(error: NegativePasswordCheck) of the GetPassword operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of BAIC |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | FACILITY | Invoke = GetPassword (password) |
| 6 | MS -> SS | FACILITY | GetPassword operation Return Result |
| 7 | SS -> MS | RELEASE COMPLETE | Register Password operation ReturnError |
| 8 | MS | | provide correct MMI user indication |
| 9 | SS -> MS | STATUS ENQUIRY | |
| 10 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4 - BAIC

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Activation

  Supplementary service code = BAIC

step 5 - All Barring services

- protocol discriminator: non call related SS message
- transaction identifier: in FACILITY same as previous REGISTER message
- message type: FACILITY
- facility

  invoke = GetPassword

  Guidance info: Password (step 5)

step 8 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  reject code: NegativePasswordCheck

For the reject the invoke ID must be the same as in the invoke of the GetPassword operation.

## 31.8.4 Deactivation

### 31.8.4.1 Deactivation accepted

#### 31.8.4.1.1 Conformance requirements

1) For deactivation of any group of call restriction services with any parameters, the MS shall transmit successively

   1.1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user",

   1.2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

   1.3) and then the REGISTER message containing a facility IE that includes an invoke of the DeactivateSS operation with parameter values according to the user's request (MMI action).

2) Upon receipt of FACILITY message requiring the password, the MS shall be able to send a password by sending a FACILITY message.

3) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.2.9.

2) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.

3) GSM 02.30 section 4.5.

#### 31.8.4.1.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for deactivation of a group of call barring services in CHANNEL REQUEST message.

2) To check that the MS correctly requests a supplementary service transaction for deactivation of a group of call barring services in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for deactivation of a group of call restriction services.

4) To check that upon receipt of FACILITY message requiring the password, the MS is able to send a password by sending a FACILITY message.

5) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (which is to be described by the manufacturer).

These checks are done for:

a) all restrictions, for basic service group "speech".

b) barring of outgoing calls, for all facsimile.

#### 31.8.4.1.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

##### Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

##### Foreseen final state of the MS

The MS is "idle updated".

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests deactivation of all restrictions, for speech.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the current password.

If the manufacturer defined MMI has been used to request the deactivation of all restrictions for speech, then the MS may, by means of appropriate manufacturer defined MMI functions, prompt the user to give a password, depending on the implementation of the manufacturer defined MMI functions.

Upon receipt of the FACILITY message, the system simulator answers with the FACILITY message with the Facility information element containing the Return_result of the DeactivateSS operation.

The SS transaction and the dedicated channel are released.

Then again, by means of appropriate MMI functions, the user requests deactivation of barring of outgoing calls, for all facsimile.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the current password.

If the manufacturer defined MMI has been used to request the deactivation of barring of outgoing calls for all facsimile, then the MS may, by means of appropriate manufacturer defined MMI functions, prompt the user to give a password, depending on the implementation of the manufacturer defined MMI functions.

Upon receipt of the FACILITY message, the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the Return_result of the DeactivateSS operation.

The dedicated channel is released.

### Maximum duration of test

5 min.

### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a deactivation of all call restrictions(speech) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | FACILITY | GetPassword |
| 8 | MS -> SS | FACILITY | Getpassword operation Return Result |
| 9 | SS -> MS | RELEASE COMPLETE | DeactivateSS operation Return_result |
| 10 | SS -> MS | CHANNEL RELEASE | |
| 11 | MS | | The MS is made to initiate a deactivation of barring of outgoing calls(all facsimile), |
| 12 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 13 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 14 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 15 | SS -> MS | CM SERVICE ACCEPT | |
| 16 | MS -> SS | REGISTER | |
| 17 | SS -> MS | FACILITY | GetPassword |
| 18 | MS -> SS | FACILITY | Getpassword operation Return Result |
| 19 | SS -> MS | RELEASE COMPLETE | DeactivateSS operation Return result |
| 20 | MS | | provide correct MMI user indication |
| 21 | SS -> MS | CHANNEL RELEASE | |

### Specific message contents

step 6 - all call restrictions:

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Deactivation

  Supplementary service code = B

  Basic service code: no Bearer Service present, teleservice: speech.

step 16 - barring of outgoing calls,

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Deactivation

  Basic service code: no bearer service present, teleservice: all facsimile.

steps 7, 17 -

- protocol discriminator: non call related SS message
- transaction identifier: in FACILITY same as previous REGISTER message
- message type: FACILITY

  invoke = GetPassword

  Guidance info: Password

## 31.8.4.2 Deactivation rejected

### 31.8.4.2.1 Rejection after invoke of DeactivateSS operation

#### 31.8.4.2.1.1 Conformance requirements

1) A transaction of any kind being already established, for deactivation of a group of call restriction services, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",
2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the DeactivateSS operation with parameter values according to the user's request (MMI action).
3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.
2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.
3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.
4) GSM 02.30 section 4.5.

#### 31.8.4.2.1.2 Test purpose

1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of a group of call barring services, sending a CM SERVICE REQUEST.
2) To check that the MS sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for a group of call barring services.
3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

These checks are performed with a call transaction already established for:

BOIC, the RELEASE COMPLETE message being sent at the beginning of the procedure with a facility IE containing a return_error(error) where error is "SS subscription violation".

### 31.8.4.2.1.3 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

#### Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

#### Foreseen final state of the MS

The MS is in CC state U10.

#### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests deactivation of incoming calls.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the RELEASE COMPLETE (PD and TI of the SS transaction) message with the Facility information element containing a Return_error(error: SS subscription violation) of the DeactivateSS operation.

The system simulator then sends STATUS ENQUIRY, and the MS responds with STATUS message indicating CC state U10.

#### Maximum duration of test

30 s.

#### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a deactivation for bi |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | DeactivateSS operation Return_error |
| 6 | MS | | provide correct MMI user indication |
| 7 | SS -> MS | STATUS ENQUIRY | |
| 8 | MS -> SS | STATUS | CC state U10 |

#### Specific message content

step 4 -

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = DeactivateSS

  Supplementary service code = bi

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS subscription violation

For the return error the invoke ID must be the same as in the invoke of the DeactivateSS operation.

#### 31.8.4.2.2 Rejection after use of password procedure

##### 31.8.4.2.2.1 Conformance requirements

1) A transaction of any kind being already established, for deactivation of a group of call restriction services, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",
2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the DeactivateSS operation with parameter values according to the user's request (MMI action).
3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.
4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.
2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.
3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.
4) GSM 02.30 section 4.5.

##### 31.8.4.2.2.2 Test purpose

1) To check that, when a call transaction is already established, the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of deactivation of a group of call restriction services, sending a CM SERVICE REQUEST.
2) To check that the MS sends a REGISTER message containing the invoke of the DeactivateSS operation with the expected parameter values for deactivation of a group of call restriction service.
3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

Those checks are performed with a call transaction already established for:

BOICExHC, the RELEASE COMPLETE message being sent at the end of the procedure with a facility IE containing a return_error(error) where error is "NegativePasswordCheck".

#### 31.8.4.2.2.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

##### Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

##### Foreseen final state of the MS

The MS is in CC state U10.

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests deactivation of a group of call restriction services.

Upon receipt of the REGISTER message, the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the DeactivateSS operation requiring the current password.

If the manufacturer defined MMI has been used to request the deactivation of a group of call restriction services, then the MS may, by means of appropriate manufacturer defined MMI functions, prompt the user to give a password, depending on the implementation of the manufacturer defined MMI functions.

Upon receipt of the FACILITY message, the system simulator sends RELEASE COMPLETE message (PD and TI of the SS transaction) with the Facility information element containing a Return_error(error: NegativePasswordCheck) of the GetPassword operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

##### Maximum duration of test

3 min.

##### Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a deactivation of BoicExHC |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | FACILITY | Invoke = GetPassword (password) |
| 6 | MS -> SS | FACILITY | GetPassword operation Return Result |
| 7 | SS -> MS | RELEASE COMPLETE | Register Password operation ReturnError |
| 8 | MS | | provide correct MMI user indication |

  Guidance info: Password (step 5)

## 31.8.5 Invocation

Invocation is not applicable.

## 31.8.6 Interrogation

### 31.8.6.1 Interrogation accepted

#### 31.8.6.1.1 Conformance requirements

1) For interrogation of any specific call restriction service with any parameters, the MS shall transmit successively:

   1.1) a CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user",

   1.2) a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

   1.3) and then the REGISTER message containing a facility IE that includes an invoke of the InterrogateSS operation with parameter values according to the user's request (MMI action).

2) Upon receipt of FACILITY message requiring the password, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

3) The MS shall be able to send a password by sending a FACILITY message in accordance to the user request (MMI actions).

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.8.6.1.2 Test purpose

1) To check that the MS correctly requests a supplementary service transaction for interrogation of a specific call barring service in CHANNEL REQUEST message.

2) To check that the MS correctly requests a supplementary service transaction for interrogation of a call barring service in the subsequent CM SERVICE REQUEST.

3) To check that the MS sends a REGISTER message containing the invoke of the InterrogateSS operation with the expected parameter values for interrogation of one call restriction service.

4) To check that upon receipt of FACILITY message requiring the password, the MS provides the appropriate user indication (as described by the manufacturer).

5) To check that the MS is able to send a password by sending a FACILITY message in accordance to the user request (MMI actions).

6) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (which is to be described by the manufacturer).

These checks are done for:

a) BAIC, the result of the operation being a Basic Service code.

b) BOICExHC, the result of the operation being a SS-status.

#### 31.8.6.1.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

Foreseen final state of the MS

The MS is "idle updated".

Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of BAIC.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the current password.

Then, by means of appropriate MMI functions, the user gives a password.

Upon receipt of the FACILITY message, the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the Return_result (basic service) of the InterrogateSS operation.

The SS transaction and the dedicated channel are released.

Then again, by means of appropriate MMI functions, the user requests interrogation of BOICExHC.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with the FACILITY message with the Facility information element containing an invoke of the GetPassword operation requiring the current password.

Then, by means of appropriate MMI functions, the user gives a password.

Upon receipt of the FACILITY message, the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the Return_result(SS-status) of the InterrogateSS operation.

The dedicated channel is released.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a interrogation of BAIC |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | |
| 7 | SS -> MS | FACILITY | GetPassword |
| 8 | MS | | provide correct MMI user indication A password is entered. |
| 9 | MS -> SS | FACILITY | Getpassword operation Return Result |
| 10 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_result |
| 11 | SS -> MS | CHANNEL RELEASE | |
| 12 | MS | | The MS is made to initiate a interrogation of call forwarding service for BOICExHC, |
| 13 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 14 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 15 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 16 | SS -> MS | CM SERVICE ACCEPT | |

    Guidance info: Password

## 31.8.6.2 Interrogation rejected

### 31.8.6.2.1 Conformance requirements

1) A transaction of any kind being already established, for interrogation of any specific call barring with any parameters, the MS shall establish a parallel MM transaction, sending a CM SERVICE REQUEST with CM service type indicating "supplementary service activation",

2) Then the MS shall send a REGISTER message related to the present SS transaction containing a facility IE that includes an invoke of the InterrogateSS operation with parameter values according to the user's request (MMI action).

3) Upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the SS transaction shall be released but the first transaction shall remain unaffected.

4) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the Manufacturer).

References

1) GSM 04.08 sections 3.3.1.1.2 and 9.1.9.

2) GSM 04.08 sections 4.5.1.1, 9.2.9 and 10.5.33.

3) GSM 04.88, GSM 04.80 sections 2.3 and 3.6.

4) GSM 02.30 section 4.5.

#### 31.8.6.2.2 Test purpose

1) To check that the MS correctly requests the establishment of a parallel MM transaction for supplementary service transaction of interrogation of a specific call barring service message, sending a CM SERVICE REQUEST.

2) To check that the MS sends a REGISTER message containing the invoke of the InterrogateSS operation with the expected parameter values for interrogation of call barring.

3) To check that upon receipt of the RELEASE COMPLETE message related to the present SS transaction, the first transaction remains unaffected.

4) To check that upon receipt of the RELEASE COMPLETE message, the MS provides the appropriate user indication (as described by the Manufacturer).

These checks are performed with a call transaction already established for:

a) BICRoam, the RELEASE COMPLETE message being sent with a facility IE containing a return_error(error) where error is "SS not available".

b) BOIC, the RELEASE COMPLETE message being sent with a facility IE containing a reject(invoke_problem) where invoke_problem is "resource limitation".

#### 31.8.6.2.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in CC state U10.

##### Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

##### Foreseen final state of the MS

The MS is in CC state U10.

##### Test procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of BICRoam.

Upon receipt of the operation (in a REGISTER message),the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing a Return_error(error: SS not available) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Then again, by means of appropriate MMI functions, the user requests interrogation of BOIC.

Upon receipt of the REGISTER message, the system simulator answers with the RELEASE COMPLETE message (same PD and TI that in the REGISTER message) with the Facility information element containing a reject(invoke_problem: resource limitation) of the InterrogateSS operation.

The system simulator sends STATUS ENQUIRY, the MS responds with STATUS message indicating CC state U10.

Maximum duration of test

3 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a interrogation of call barring service for BICRoam |
| 2 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 3 | SS -> MS | CM SERVICE ACCEPT | |
| 4 | MS -> SS | REGISTER | |
| 5 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_error |
| 6 | SS -> MS | STATUS ENQUIRY | |
| 7 | MS -> SS | STATUS | CC state U10 |
| 8 | MS | | The MS is made to initiate a interrogation of call barring service for BOIC |
| 9 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 10 | SS -> MS | CM SERVICE ACCEPT | |
| 11 | MS -> SS | REGISTER | |
| 12 | SS -> MS | RELEASE COMPLETE | (SS) |
| 13 | MS | | provide correct MMI user indication |
| 14 | SS -> MS | STATUS ENQUIRY | |
| 15 | MS -> SS | STATUS | CC state U10 |

Specific message content

step 4 - BICRoam

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = BICRoam

step 5 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  return error code: SS not available

For the return error the invoke ID must be the same as in the invoke of the InterrogateSS operation.

step 11 - BOIC

- protocol discriminator: non call related SS message
- message type: REGISTER
- facility

  invoke = Interrogation

  Supplementary service code = BOIC

step 12 -

- protocol discriminator: non call related SS message
- transaction identifier: same TI as previous REGISTER message
- message type: RELEASE COMPLETE
- facility:

  reject code: resource limitation

For the reject the invoke ID must be the same as in the invoke of the InterrogateSS operation.

## 31.8.7 Normal operation

In case of barring of outgoing call the calling mobile receives information about the activation of supplementary services subscribed.

In case of barring of incoming call the calling mobile receives information about the activation of supplementary services subscribed by the other party (the mobile called).

### 31.8.7.1 Conformance requirements

Upon receipt of the RELEASE COMPLETE message the MS shall provide the appropriate user indication (which is to be described by the manufacturer).

#### References

### 31.8.7.2 Test purpose

To check that upon receipt of the RELEASE COMPLETE message the MS provides the appropriate user indication (as described by the manufacturer).

This is tested in the case of an MS making a call to a mobile with incoming calls barred.

### 31.8.7.3 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is "idle updated".

#### Related PICS/PIXIT statements

Description of the user's commands and of display of the answers from the network for call barring.

#### Foreseen final state of the MS

The MS is "idle updated".

#### Test procedure

The MS is made to initiate a call.

Upon receipt of the SETUP message, the system simulator answers with the negative acknowledgement RELEASE COMPLETE (to simulate a case where call barring is activated).

Maximum duration of test

1 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | CHANNEL REQUEST | |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 3 | MS -> SS | CM SERVICE REQUEST | |
| 4 | SS -> MS | CM SERVICE ACCEPT | |
| 5 | MS -> SS | SETUP | |
| 6 | SS -> MS | RELEASE COMPLETE | provide correct MMI user indication |
| 7 | SS -> MS | CHANNEL RELEASE | |

Specific message content

- transaction identifier
- message type
- facility

  invoke = notification

  SS code = BI

  SS status = activation indicator (indicating:

  Provisioned, registered and active)

# 31.9 Handling of undefined (future) GSM supplementary services

## 31.9.1 Mobile station initiated Unstructured supplementary service data operation

### 31.9.1.1 ProcessUnstructuredSS-request/accepted

Conformance requirements

1) The mobile station shall invoke an USSD request by sending a REGISTER message to the network containing a ProcessUnstructuredSS-Request invoke component. This message will contain the alphabet indicator set to "SMS default alphabet" and the language indicator set to "language unspecified". The ussd-string parameter shall contain the following digits and symbols depending on the operation initiated:

   Activation *NN(N)# (no supplementary information included)

   *NN(N)*SI# (one field of supplementary infor. included)

   *NN(N)*SIA*SIB# (two fields of supplementary infor. included)

   Deactivation #NN(N)#

   #NN(N)*SI#

#NN(N)*SIA*SIB#

Interrogation *#NN(N)#

*#NN(N)*SI#

*#NN(N)*SIA*SIB#

Registration **NN(N)#

**NN(N)*SI#

**NN(N)*SIA*SIB#

Erasure ##NN(N)#

##NN(N)*SI#

##NN(N)*SIA*SIB#

Operations not yet see conformance requirement 2)

defined in GSM 02.30

NN(N) features a set of service codes which have not yet been allocated for GSM supplementary services (see GSM 02.30 for service codes already specified).

N is a digit within 1..9 and SI, SIA, SIB strings of characters.

2) Concerning operations which are not yet specified in GSM 02.30, the MS shall proceed as follows:

The entry of 1 or 2 characters defined in the GSM 03.38 default alphabet followed by "SEND" shall be interpreted by the MS as an USSD request unless the MS is not engaged in a call and the first of the two character entry followed by "SEND" is a "1". Except if the 1 or 2 characters are MS manufacturer defined procedure in idle mode.

3) For supplementary service procedures independent of any call, the initiating side shall establish a MM-connection between the network and the mobile station according to the rules given in GSM 4.08.

4) Within a call, the MS shall transmit a USSD request from the user if any. See GSM 04.07 and GSM 04.08 for the handling of multiple MM connections.

5) Upon receipt of the RELEASE COMPLETE message, the MS shall display the information contained to the user in a way described by the manufacturer.

### References

Conformance requirement 1: GSM 04.90 subclause 6.1, GSM 02.30 subclause 4.5.2, and GSM 02.90 subclause 4.1.1.
Conformance requirement 2: GSM 02.30 subclause 4.5.3.2.
Conformance requirement 3: GSM 04.10 subclause 3.2.1.
Conformance requirement 4: GSM 04.08 subclause 4.5.1.1.
Conformance requirement 5: GSM 03.90 subclause 6.2.1.

### Test Purpose

1) To verify that the mobile station invokes an USSD request by sending a REGISTER message to the network containing a ProcessUnstructuredSS-Request invoke component. This message will contain the alphabet indicator set to "SMS default alphabet" and the language indicator set to "language unspecified". The ussd-string parameter shall contain the following digits and symbols depending on the operation initiated:

Activation *NN(N)# (no supplementary information included)

*NN(N)*SI# (one field of supplementary infor. included)

*NN(N)*SIA*SIB# (two fields of supplementary infor. included)

defined in GSM 02.30

NN(N) features a set of service codes which have not yet been allocated for GSM supplementary services (see GSM 02.30 for service codes already specified).

N is a digit within 1..9 and SI, SIA, SIB strings of characters.

2) To check that the entry of 1 or 2 characters defined in the GSM 03.38 default alphabet followed by "SEND" shall be interpreted by the MS as an USSD request unless the MS is not engaged in a call and the first of the two character entry followed by "SEND" is a "1". Except if the 1 or 2 characters are MS manufacturer defined procedure in idle mode.

3) To verify that, for supplementary service procedures independent of any call, the initiating side must establish a MM-connection between the network and the mobile station according to the rules given in GSM 04.07 and GSM 04.08.

4) To verify that, within a call the MS shall transmit a USSD request if any. See GSM 04.07 and GSM 04.08 for the handling of multiple MM connections.

5) To check that upon receipt of the RELEASE COMPLETE message, the MS shall display the information contained to the user in a way described by the manufacturer.

## Related PICS/PIXIT Statements

- support of USSD.

- Description of the user's commands and of display of USSD.

- Full rate supported.

- Supported teleservices.

- Support of active state of the call control protocol (U10).

- Identification of the short strings defining MS manufacturer defined procedure in idle mode (1 or 2 characters defined in the GSM 03.38 default alphabet followed by “SEND”).

## Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the MM-state "idle updated".

### Foreseen final state of the MS

MM-state "idle updated".

### Test Procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI) the mobile is made to initiate an Unstructured SS data operation. The mobile first establishes a MM-connection with the SS. Then, a REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message. Then a CHANNEL RELEASE message is sent to the MS to release the main signalling link.

The mobile station is forced to originate a call. After the MS has received a CONNECT ACKNOWLEDGE, MMI keys are depressed on the mobile in order to initiate an Unstructured SS data operation. Then a REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message. Finally, the main signalling link is released by transferring a CHANNEL RELEASE message to the MS.

### Expected Sequence

The sequence is executed for execution counters c=1,..,16.

The second part of the sequence, namely from step 9 to step 18, is executed for execution counter c=17.

Counter c determines the ussd-string selected by the user and sent by the MS (see specific message contents concerning the REGISTER message).

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The user presses appropriate MMI keys to initiate the desired unstructured SS data operation. |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause set to "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | "Supplementary service activation". |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | The SS checks that the content of this message matches specific message content i). |
| 7 | SS -> MS | RELEASE COMPLETE | It terminates the transaction used to initiate the desired unstructured SS data operation. It is checked that the ussd string, if any, is displayed by the MS in a way described by the manufacturer. See ii). |
| 8 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 9 | MS | | The MS is brought to state U10 by initiating a Mobile originating call |
| 10 | | | Specific MMI keys are depressed to initiate the desired undefined SS service operation. DTMF signalling may occur. |
| 11 | MS -> SS | CM SERVICE REQUEST | "Supplementary service activation". |
| 12 | SS -> MS | CM SERVICE ACCEPT | |
| 13 | MS -> SS | REGISTER | The MS starts the transaction on the radio interface. The SS checks that REGISTER matches i). |
| 14 | SS -> MS | RELEASE COMPLETE | It terminates the transaction used to activate the desired undefined SS data operation. See specific message contents ii). |
| 15 | SS -> MS | DISCONNECT | |
| 16 | MS -> SS | RELEASE | |
| 17 | SS -> MS | RELEASE COMPLETE | See message contents iii). |
| 18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

### 31.9.1.2 ProcessUnstructuredSS-request/cross phase compatibility and error handling

Conformance requirements

1) If a mobile initiated USSD request using protocol version 2 is rejected by the network, and the reason for the rejection is indicated either by the problem code "unrecognized operation" or a cause "facility rejected", the mobile station shall assume that the network only supports protocol version 1 of USSD operations. The mobile station shall re-attempt the request by using the appropriate protocol version 1 USSD operation without a SS version indicator if the unstructured data entered by the user can be coded as an IA5 string.

2) Upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer). If ussd-String information is included this shall be given to the user (in a way described by the manufacturer).

References

Conformance requirement1:GSM 04.90 subclause 6.2.1.
Conformance requirement2:GSM 03.90 subclause.

### Test Purpose

1) To verify that If a mobile initiated USSD request using protocol version 2 is rejected by the network, and the reason for the rejection is indicated either by the problem code "unrecognized operation" or a cause "facility rejected", the mobile station shall assume that the network only supports protocol version 1 of USSD operations. The mobile station shall re-attempt the request by using the appropriate protocol version 1 USSD operation without a SS version indicator if the unstructured data entered by the user can be coded as an IA5 string.

2) To check that, upon receipt of the RELEASE COMPLETE message, the MS shall provide the appropriate user indication (which is to be described by the manufacturer). If ussd-String information is included this shall be given to the user (in a way described by the manufacturer).

### Related PICS/PIXIT Statements

- support of USSD.

- Full rate supported.

- Supported teleservices.

- Support of active state of the call control protocol (U10).

### Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the MM-state "idle updated".

### Foreseen final state of the MS

MM-state "idle updated".

### Test Procedure

Appropriate MMI keys are pressed on the mobile in order to activate an USSD service. The mobile first establishes a MM-connection with the SS. Then, a REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message with the problem code set to "unrecognized operation", the main signalling link is released. Then the SS checks that the MS re-establishes a MM-connection and re-attempts the request by using a REGISTER message containing an invoke of the ProcessUnstructuredData operation. The SS answers with a normal RELEASE COMPLETE to terminate the transaction. Finally the main signalling link is released by transferring to the MS a CHANNEL RELEASE.

Appropriate MMI keys are pressed on the mobile in order to activate an USSD service. The mobile first establishes a MM-connection with the SS. Then, a REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message with the cause element set to "Facility rejected", the main signalling link is released. Then the SS checks that the MS re-establishes a MM-connection and re-attempts the request by using a REGISTER message containing an invoke of the ProcessUnstructuredData operation. Then the SS answers with a normal RELEASE COMPLETE to terminate the transaction. Finally the main signalling link is released by transferring to the MS a CHANNEL RELEASE.

The mobile station is forced to originate a call. After the SS has sent a CONNECT ACKNOWLEDGE, MMI keys are pressed on the mobile in order to activate an USSD service. A REGISTER message is sent to the SS. Upon receipt of this message, the system simulator answers with the RELEASE COMPLETE message containing a return error with an error or a reject with a problem. Then the radio link is release by transferring to the MS a CHANNEL RELEASE message. This subtest is repeated with different errors and problems in the RELEASE COMPLETE message.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The user presses appropriate MMI keys to initiate the desired undefined supplementary service operation. |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause set to "Other procedures which can be completed with an SDCCH". |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | "Supplementary service activation". |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | See specific message contents i).Operation code set to "ProcessUnstructuredSS-Request" |
| 7 | SS -> MS | RELEASE COMPLETE | See specific message contents ii). |
| 8 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 9 | MS -> SS | CHANNEL REQUEST | with establishment cause set to "Other procedures which can be completed with an SDCCH". |
| 10 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 11 | MS -> SS | CM SERVICE REQUEST | "Supplementary service activation". |
| 12 | SS -> MS | CM SERVICE ACCEPT | |
| 13 | MS -> SS | REGISTER | Operation code is set to "ProcessUnstructuredSS-Data". See specific message content i). |
| 14 | SS -> MS | RELEASE COMPLETE | normal release of the transaction. See iiia). |
| 15 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 16 | MS | | The user presses appropriate MMI keys to initiate the desired undefined supplementary service. |
| 17 | MS -> SS | CHANNEL REQUEST | with establishment cause set to "Other procedures which can be completed with an SDCCH". |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 19 | MS -> SS | CM SERVICE REQUEST | "Supplementary service activation". |
| 20 | SS -> MS | CM SERVICE ACCEPT | |
| 21 | MS -> SS | REGISTER | See specific message contents i).Operation code is set to "ProcessUnstructureSS- Request". See i). |
| 22 | SS -> MS | RELEASE COMPLETE | see iii).cause is set to "facility rejected" |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 24 | MS -> SS | CHANNEL REQUEST | with establishment cause set to "Other procedures which can be completed with an SDCCH". |
| 25 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 26 | MS -> SS | CM SERVICE REQUEST | "Supplementary service activation". |
| 27 | SS -> MS | CM SERVICE ACCEPT | |
| 28 | MS -> SS | REGISTER | Operation code is "ProcessUnstructuredSSdata". See specific message contents i). |
| 29 | SS -> MS | RELEASE COMPLETE | normal release of the transaction. See iiia). |
| 30 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| | | | For k=1 to 10, go through steps 31 to 40. Counter k deals with different kinds of general and invoke problems in step 36. |
| 31 | MS | | The MS is brought to state U10 by initiating a Mobile originating call |
| 32 | | | Specific MMI keys are pressed to initiate the desired undefined supplementary service. DTMF signalling may occur. |
| 33 | MS -> SS | CM SERVICE REQUEST | "supplementary service activation" |
| 34 | SS -> MS | CM SERVICE ACCEPT | |
| 35 | MS -> SS | REGISTER | The MS starts the transaction on the radio interface. See specific message contents i).The operation code is set to "ProcessUnstructuredSS-Request". |
| 36 | SS -> MS | RELEASE COMPLETE | different errors and problems are sent. See specific message contents iiib) and iiic). |
| 37 | SS -> MS | DISCONNECT | |
| 38 | MS -> SS | RELEASE | |
| 39 | SS -> MS | RELEASE COMPLETE | See message contents iv). |
| 40 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |

Specific message contents.

i) **REGISTER** message.

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | set to "Supplementary service (call independent)" |
| Transaction identifier | |
| Register message type | As GSM 04.80 |
| Facility Information Element | See below |
| SS version indicator | As specified in GSM 04.80 for version 2 protocol<br>Always omitted for version 1 protocol |

For steps 6, 21 and 35, Facility Information Element with Invoke = ProcessUnstructuredSS-Request (for version 2 protocol) component type as defined in GSM 04.80 section 3.6.1 table 3.3.

For steps 13 and 28, Facility Information Element with Invoke = ProcessUnstructuredSS-Data (for version 1 protocol) as defined in GSM 04.80 section 3.6.1 table 3.3.

| Contents | Value/remark |
|---|---|
| Facility IE identifier | As GSM 04.08 |
| Length of FIE contents | |
| Component type tag | Invoke from GSM 04.80 |
| Component length | Depending on the length of ussd-string |
| InvokeID tag | From GSM 04.80 |
| Invoke ID length | 1 |
| Invoke ID | Arbitrary (1 octet) |
| Operation Code tag | From GSM 04.80 |
| Operation Code length | 1 |
| Operation Code | ProcessUnstructuredSS-Request (for version 2 protocol)<br>ProcessUnstructuredSS-Data (for version 1 protocol) |
| ussd-dataCodingScheme | 1 octet long. Alphabet indicator set to "default alphabet". Language indicator set to "undefined" |
| ussd-string | *70*635*562# |

ii) RELEASE COMPLETE message.

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | Set to "Supplementary service (call independent)" |
| Transaction identifier | The transaction value is the same as the REGISTER transaction value but the transaction flag is different |
| Facility message type | As GSM 04.80 |
| Facility Information Element | See below |

Facility Information Element with Reject = ProcessUnstructuredSS-Request component type as defined in GSM 04.80 section 3.6.1 table 3.6.

| Contents | Value/remark |
|---|---|
| Facility IE identifier | As GSM 04.08 |
| Length of FIE contents | |
| Component type tag | Reject from GSM 04.80 |
| Component length | Depending on the length of ussd-string |
| InvokeID tag | From GSM 04.80 |
| Invoke ID length | 1 |
| Invoke ID | The same as the invoke of the ProcessUnstructuredSS-Request |
| Problem Code tag | As GSM 04.80 |
| Problem Code length | |
| General Problem code | Unrecognized operation |

iii) **RELEASE COMPLETE** message.

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | Set to "Supplementary service (call independent)" |
| Transaction identifier | The transaction value is the same as the REGISTER transaction value but the transaction flag is different |
| Release complete message type | As GSM 04.80 |
| Cause | For step 22, cause is set to "facility rejected" and FIE is omitted.<br>For steps 14, 29 and 36 this field is omitted. |
| Facility Information Element | For step 14 and 29 see iiia).<br>For step 36 see iiib) and iiic).<br>For step 22 this field is omitted. |

iiia) For steps 14 and 29, Facility Information Element with Return Result = ProcessUnstructuredSS-Data component type as defined in GSM 04.80 section 3.6.1 table 3.4.

| Contents | Value/remark |

| Invoke ID | The same as the invoke of the ProcessUnstructuredSS-Request |
| Problem Code tag | As GSM 04.80 |
| Problem Code length | |
| General Problem code<br><br><br>Invoke Problem code | k=5, Unrecognized component<br>k=6, Mistyped component<br>k=7, Badly structured component<br>k=8, Mistyped parameter<br>k=9, Resource limitation<br>k=10, Initiating release |

iv) **RELEASE COMPLETE** message.

| Contents | Value/remark |
|---|---|
| Protocol Discriminator | Set to "Supplementary service (call control)" |
| Transaction identifier | Same as current call. |
| Release Complete message type | As GSM 04.08 |

## 31.9.2 Network initiated unstructured supplementary service operations

### 31.9.2.1 UnstructuredSS-Notify/accepted

#### Conformance requirements

1) For a USSD notification, the MS shall display the text provided and await user input. The MS shall acknowledge the operation by sending a FACILITY message containing an empty result component to the network.

2) The MS shall include alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".

3) At any stage while the MS is registered with a network, the network may send an unstructured string to the MS. So, the MS shall be able to process the operation during a call or out of a call.

#### References

conformance requirement 1: GSM 04.90 subclause 5.2.1.

conformance requirement 2: GSM 02.90 subclause 4.2.2.

conformance requirement 3: GSM 02.90 subclause 4.2.1.

#### Test Purpose

1) To verify that for a USSD notification, the MS shall display the text provided and await user input. If the user enters a response, the MS shall acknowledge the operation by sending a FACILITY message containing an empty result component to the network.

2) To verify that the MS shall include alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".

3) To check that the MS shall be able to process the operation during a call or out of a call.

### Related PICS/PIXIT Statements

- support of USSD.

- Full rate supported.

- Supported teleservices.

- Support of active state of the call control protocol (U10).

### Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the MM-state "idle updated".

### Foreseen final state of the MS

MM-state "idle updated".

### Test Procedure

- The MS is paged and a RR-connection is established. Then, the SS sends a REGISTER message containing a facility information element with operation code set to ProcessUnstructuredSS-Notify. The user checks that the ussd string sent by the SS is correctly displayed by the MS. The MS has to send a FACILITY message with an empty return result component.

- Then the SS originates a call to the MS. When the MS is in the U10 state, the SS releases the transaction identifier concerning USSD transaction by sending a RELEASE COMPLETE. The SS initiates a new ussd transaction by sending a REGISTER message containing a facility information element with operation code set to UnstructuredSS-Notify. The user checks that the ussd string sent by the SS is correctly displayed by the MS. The MS has to send a FACILITY message with an empty return result component. Finally the SS releases both MM connections and the radio link.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | a SDCCH is allocated to the MS. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | REGISTER | initiation of the transaction concerning the USSD notification operation. See i). |
| 6 | | | The MS has to display the USSD string sent from the network. |
| 7 | MS -> SS | FACILITY | signalling message sent by the MS as the response. The SS checks that it matches ii). |
| 8 | SS -> MS | SETUP | incoming call. |
| 9 | MS -> SS | CALL CONFIRMED | |
| 10 | MS -> SS | ALERTING | |
| 11 | MS -> SS | CONNECT | |
| 12 | SS -> MS | ASSIGNMENT COMMAND | a TCH is allocated to the MS. |
| 13 | MS -> SS | ASSIGNMENT COMPLETE | |
| 14 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 15 | SS -> MS | RELEASE COMPLETE | this message releases the transaction concerning the USSD operation. See iii). |
| 16 | SS -> MS | REGISTER | initiation of a USS request operation during a call. See specific message contents i). |
| 17 | | | The MS has to display the USSD string received from the SS. |
| 18 | MS -> SS | FACILITY | The SS checks that this message matches ii). |
| 19 | SS -> MS | RELEASE COMPLETE | It releases he transaction identifier concerning the ussd operation. |
| 20 | SS -> MS | DISCONNECT | call release initiation. see iv). |
| 21 | MS -> SS | RELEASE | |
| 22 | SS -> MS | RELEASE COMPLETE | |
| 23 | SS -> MS | CHANNEL RELEASE | |

**Specific message contents**.

| Transaction identifier | same as current call. |
| Release Complete message type | As GSM 04.08 |

### 31.9.2.2 UnstructuredSS-Notify/rejected on user busy

Conformance requirements

1) When the mobile station receives an USSD operation in parallel to any call independent supplementary transaction, it shall respond with a return error component in a RELEASE COMPLETE message, containing the "USSD-Busy" error.

References

conformance requirement 1: GSM 04.90 subclause 5.1.1.

Test Purpose

1) To verify that when the mobile station receives an USSD operation in parallel to any call independent supplementary transaction, it responds with a return error component in a RELEASE COMPLETE message, containing the "USSD-Busy" error.

Related PICS/PIXIT Statements

- support of USSD.

- Full rate supported.

- Supported teleservices.

- Support of active state of the call control protocol (U10).

Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the MM-state "idle updated".

Foreseen final state of the MS

MM-state "idle updated".

Test Procedure

- The MS is paged and a RR-connection is established. Then, the SS sends a REGISTER message containing a facility information element with operation code set to UnstructuredSS-Notify. The SS initiates an other USSD transaction by sending a REGISTER message with transaction identifier different form the previous one. The SS checks that the MS answers with a RELEASE COMPLETE message with an error component set to "USSD busy". Then the SS releases the radio link.

Test Procedure

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | a SDCCH is allocated to the MS. |
| 4 | MS -> SS | PAGING RESPONSE | |
| 5 | SS -> MS | REGISTER | initiation of the transaction concerning the USSD notification operation. See i). |
| 6 | | | The MS has to display the USSD string sent from the SS. |
| 7 | MS -> SS | FACILITY | See ii). |
| 8 | SS -> MS | REGISTER | initiation of an other USSD notification. The transaction identifier is different from that in step 5.See i). |
| 9 | MS -> SS | RELEASE COMPLETE | error set to "USSD busy". Transaction initiated in step 6 by the network is rejected by the MS. See iii). |
| 10 | SS -> MS | RELEASE COMPLETE | normal release of transaction initiated in step 5.See iii). |
| 11 | SS -> MS | CHANNEL RELEASE | release of the main signalling link. |

## 31.9.2.3 UnstructuredSS-Request/accepted

Conformance requirements

1) For a USSD request, the MS shall display the text provided and await user input. if the user enters a response, the MS shall return the response to the network, maintaining the transaction.

2) The MS shall include alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".

3) At any stage while the MS is registered with a network, the network may send an unstructured string to the MS. So, the MS shall be able to process the operation during a call or out of a call.

### References

conformance requirement 1: GSM 03.90 subclause 5.2.5.

conformance requirement 2: GSM 02.90 subclause 4.2.2.

conformance requirement 3: GSM 02.90 subclause 4.2.1.

### Test Purpose

1) To test that, for a USSD request, the MS shall display the text provided and await user input. if the user enters a response, the MS shall return the response to the network, maintaining the transaction.

2) To verify that the MS shall include alphabet and language indicators in the response to the network. The alphabet indicator shall indicate "SMS default alphabet". The language indicator shall indicate "language unspecified".

3) To check that the MS shall be able to process the operation during a call or out of a call.

### Related PICS/PIXIT Statements

- support of USSD.

- Full rate supported.

- Supported teleservices.

- Support of active state of the call control protocol (U10).

### Initial Conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in the MM-state "idle updated".

### Foreseen final state of the MS

MM-state "idle updated".

### Test Procedure

- The MS is paged and a RR-connection is established. Then, the SS sends a REGISTER message containing a facility information element with operation code set to ProcessUnstructuredSS-Request. The user checks that the ussd string sent by the SS is correctly displayed by the MS and answers the request by depressing MMI keys. Then the MS has to send a FACILITY message with ussd string exactly containing the digits and symbols expressed on the mobile equipment keypad.

- Then the SS originates a call to the MS. When the MS is in the U10 state, the SS releases the transaction identifier concerning USSD transaction by sending a RELEASE COMPLETE. The SS initiates a new ussd transaction by sending a REGISTER message containing a facility information element with operation code set to UnstructuredSS-Request. The user checks that the ussd string sent by the SS is correctly displayed by the MS and answers the request by depressing MMI keys. Then the MS has to send a FACILITY message with ussd string exactly containing the digits and symbols expressed on the mobile equipment keypad. Finally the SS releases both MM connections and the radio link.

# 31.10 MMI input for USSD

## 31.10.1 Conformance requirements

If the MS cannot interpret the MMI input as a defined GSM Supplementary Services, SIM control procedure or MS manufacturer-defined procedure, and if the MMI input is in the form:

"entry of any characters defined in the GSM 03.38 Default Alphabet (up to the maximum defined in GSM 04.80) followed by #SEND"

or

"entry of 1 or 2 characters defined in the GSM 03.38 Default Alphabet followed by SEND"

then it shall be interpreted by the MS as Unstructured SS Data and sent transparently towards the network, unless the MS is not engaged in a call and the first digit of the 2 character entry, followed by SEND, is a "1". In this case the MS shall transmit this as a call-setup request.

References

GSM 02.30 section 4.5.3.

### 31.10.2 Test purpose

To check that the entry of 2 digits in the form 1X (X in the set 0,...9) followed by SEND is accepted by the mobile station in idle mode as a normal call establishment for the 1X number. It is checked that the MS sends a CHANNEL REQUEST, sends CM SERVICE REQUEST message for mobile originated call (after having received an IMMEDIATE ASSIGNMENT), and then sends the SETUP message containing the 1X phone number as called number (after having received the CM SERVICE ACCEPT message).

### 31.10.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station

The MS is "idle updated";

Related PICS/PIXIT statement(s)

Foreseen final state of the MS:

The MS is "idle updated.

Test procedure

The user requests call establishment successively for every 2 digit phone number of the 1X form (X in the set 0,...9) allowing ten seconds between each attempts.

Maximum duration of test

3 min.

Expected Sequence

The following sequence is executed for execution counter k = 1 to 10.

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate call establishment for phone number 1X (where X = k-1) |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause related to mobile originating call |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | "mobile originating call" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | SETUP | called BCD number is 1X |
| 7 | SS -> MS | RELEASE COMPLETE | |
| 8 | | | Wait for 10 seconds |

**Specific message contents**.

None.

# 31.11 Specific message contents and ASN.1 codings

Introduction

In this section a mixed form of ASN.1 coding has been used in ASN.1 components within the messages.

Some components use the indefinite form of coding, and some use the short definite form.

An example of a FACILITY message using indefinite form of coding is described below.

The same message using short definite form of coding is described in Test 31.2.1.1.1 Step 7 of this section.

| Contents | Value/remark | Coding |
|---|---|---|
| Length of FIE contents | 43 | 2B |

Test 31.6.1.7. AOC on a Call Hold call

Step 11: SS -> MS CONNECT

| Contents | Value/remark | Coding |
|---|---|---|
| CAI header element | | |
| e1 | Value = 7,0 | 46 |
| e2 | Value = 40,0 | 01 90 |
| e3 | Value = 1,0 | 64 |
| e4 | Value = 0,0 | 00 |
| e5 | Value = 0,0 | 00 |
| e6 | Value = 0,0 | 00 |
| e7 | Value = 0,0 | 00 |

Step 20: SS -> MS CONNECT

| Contents | Value/remark | Coding |
|---|---|---|
| CAI header element | | |
| e1 | Value = 13,0 | 00 82 |
| e2 | Value = 40,0 | 01 90 |
| e3 | Value = 1,0 | 64 |
| e4 | Value = 0,0 | 00 |
| e5 | Value = 0,0 | 00 |
| e6 | Value = 0,0 | 00 |
| e7 | Value = 0,0 | 00 |

Test 31.6.1.8. AOC on a Multi-party call

Step 11 & 20: SS -> MS CONNECT

| | e-parameter values | | | | | | |
|---|---|---|---|---|---|---|---|
| **k-value** | **e1** | **e2** | **e3** | **e4** | **e5** | **e6** | **e7** |
| 1 | 19 | 40 | 1 | 0 | 0 | 0 | 0 |
| 2 | 29 | 40 | 1 | 0 | 0 | 0 | 0 |

| | e-parameter coding | | | | | | |
|---|---|---|---|---|---|---|---|
| **k-value** | **e1** | **e2** | **e3** | **e4** | **e5** | **e6** | **e7** |
| 1 | 00 BE | 01 90 | 64 | 00 | 00 | 00 | 00 |
| 2 | 01 22 | 01 90 | 64 | 00 | 00 | 00 | 00 |

Step 23: MS -> SS FACILITY

| Contents | Value/remark | Coding |
|---|---|---|
| Length of FIE contents | 8 | 08 |
| Component type tag | **Invoke** | A1 (1) |
| Component length | 6 | 06 |
| Invoke ID tag | | 02 |
| Invoke ID length | 1 | 01 |
| Invoke ID | Arbitrary | -- |
| Operation code tag | | 02 |
| Operation code length | 1 | 01 |
| Operation code | **BuildMPTY** | 7C |

Step 24: SS -> MS FACILITY

| Contents | Value/remark | Coding |
|---|---|---|
| Length of FIE contents | 7 | 07 |
| Component type tag | **Return Result** | A2 (1) |
| Component length | indefinite | 80 |
| Invoke ID tag | | 02 |
| Invoke ID length | 1 | 01 |
| Invoke ID | As received | -- |
| End-Of-Content Tag | 0 | 00 |
| Length Indicator | 0 | 00 |

Test 31.6.2. Charge Storage

31.6.2.1 Removal of SIM during an active call

and 31.6.2.2 Interruption of power supply during an active call

and 31.6.2.3 MS going out of coverage during an active AoCC call

Step A11: SS -> MS CONNECT

| Contents | Value/remark | Coding |
|---|---|---|
| Length of FIE contents | 39 | 27 |
| Component type tag | **Invoke** | A1 (1) |
| Component length | indefinite | 80 |
| Invoke ID tag | | 02 |
| Invoke ID length | 1 | 01 |

Step 9 & 20: short messages

Step 10 and 22 messages can be coded using this shorter form:

Message containing only the "Return result"

| Contents | Value/remark | Coding |
|---|---|---|
| Length of FIE contents | 5 | 05 |
| Component type tag | **Return Result** | A2 (1) |
| Component length | 3 | 03 |
| Invoke ID tag | | 02 |
| Invoke ID length | 1 | 01 |
| Invoke ID | As received | -- |

Message containing the "Return result" and the "Operation Code"

| Contents | Value/remark | Coding |
|---|---|---|
| Length of FIE contents | 12 | 0C |
| Component type tag | **Return Result** | A2 (1) |
| Component length | indefinite | 80 |
| Invoke ID tag | | 02 |
| Invoke ID length | 1 | 01 |
| Invoke ID | As received | -- |
| Sequence identifier | | 30 (1) |
| Sequence length | 3 | 03 |
| Operation code tag | | 02 |
| Operation code length | 1 | 01 |
| Operation code | **ActivateSS** | 0C |
| End-Of-Content Tag | 0 | 00 |
| Length Indicator | 0 | 00 |

Test 31.8.3.2.1. Rejection after invoke of ActivateSS operation

MMI sequence: *331*1234#

Step 4: MS -> SS REGISTER

| Contents | Value/remark | Coding |
|---|---|---|
| Length of FIE contents | 13 | 0D |
| Component type tag | **Invoke** | A1 (1) |
| Component length | 11 | 0B |
| Invoke ID tag | | 02 |
| Invoke ID length | 1 | 01 |
| Invoke ID | Arbitrary | -- |

# 31.12 eMLPP Service

This section is applicable to the mobile stations supporting eMLPP service. The eMLPP is applicable to teleservices 1x, 6x, 9x and bearer services 2x, 3x, 4x, 5x.

For an MS supporting speech the test procedures in 31.12.1 and 31.12.2 are performed for full rate speech (teleservice 11, telephony). For an MS not supporting speech but supporting at least one of telecommunication services (TS6x, BS2x, BS3x, BS4x, BS5x), for each of the test procedures 31.12.1 and 31.12.2 a full rate service supported by the MS (see PICS/PIXIT statement) is chosen, and the test is performed corresponding to that service.

## 31.12.1 eMLPP Service / priority level of MO call

### 31.12.1.1 Conformance requirement

For the MS supporting MO calls:

1. Mobile stations indicate the priority of their call in the signalling that takes place during the call establishment process.
2. The MS shall verify the selected priority level against the priority levels stored in the SIM. If the selected priority is not allowed, then the priority of the call shall be modified to that of the nearest allowed priority level below the requested level.
3. In case of no priority selection or use of a non-compatible Mobile Station the Mobile Station shall send a standard service request message.
4. Signalling information required for the prioritisation at mobile originating call establishment. (see figure 1 of GSM 04.67 subclause 4.1.1) and Signalling information between the network and the calling mobile station required for the prioritisation in case of a VGCS or VBS call (figure 4 of GSM 04.67 subclause 4.1.4).
5. The user or the network may wish to omit or postpone authentication and ciphering in order to provide for a faster call set-up.

Reference(s)

GSM 03.67 section 11.3.1.1, 11.3.1.2, 11.6, 11.3.1.3

GSM 02.67 section 4.

GSM 04.67 section 4.1.1, 4.1.4

### 31.12.1.2 Test purpose

For the MS supporting MO, to verify that:

1. When user selects priority level for normal MO call, the priority level is indicated in the signalling message.
2. The MS verifies the selected priority level against the priority levels stored in the SIM. If the selected priority is not allowed, then the priority of the call shall be modified to that of the nearest allowed priority level below the requested level.
3. If the user does not select a priority level, the priority level is not indicated in the signalling message.
4. If a priority selection is performed by the user the MS provides the priority level information element in L3-MM CM SERVICE REQUEST message when a group call is initiated.
5. The mobile is able to establish a normal MO call with a priority level or a group call with a priority level according to the procedure specified in GSM 04.67 subclause 4.1.1 and the procedure in GSM 04.67 subclause 4.1.4.
6. The mobile is able to initiate a fast call set-up without authentication and ciphering.

### 31.12.1.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters.

Mobile Station:

The MS is in idle mode with SIM in which the available priority levels are level 2, level 3, and level 4

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support mobile originating call.

Support mobile emergency call (TS12).

Support VGCS originating.

Support VBS originating.

Support eMLPP.

Way to select a priority level.

#### Foreseen Final State of the MS

"Idle, updated".

#### Test Procedure

The test steps 1 to 26 are repeated for k=1, 2, 3. After the repetition is finished the steps 27 to 71 are performed.

The test steps 1 to 7 are performed if the mobile station supports normal MO call. The steps 8 to 13 are executed if the MS supports TS12. The test steps 20 to step 26 are executed for k= 1, 2, 3, if the mobile station supports VGCS/VBS originating.

An allowed priority level (level 3) or a priority level (level 1) higher than allowed level or no priority level is selected by MMI action (for k=1, 2, 3 respectively). An MO call is attempted. It is checked that the MS indicates the selected priority level (for k=1) or the nearest allowed priority level below the selected level (for k=2) or no priority level (for k=3) in the signalling message.

A normal MO call is attempted with an allowed priority level (level 3). It is checked that the MS establishes completely this call.

If the mobile station supports VGCS/VBS originating a VGCS/VBS call is initiated via the MMI by using the SETUP procedure.

A MO VGCS/VBS call is attempted with the allowed priority level 0. It is checked that the MS establishes completely this call using the immediate setup procedure without authentication and ciphering.

#### Maximum Duration of Test

5 minutes

Expected Sequence

| Step | Direction | Message | Comments |

## 31.12.2 eMLPP Service / automatic answering point-to-point MT call

### 31.12.2.1 Conformance requirement

For the MS supporting MT call:

1. Automatic answering or, if necessary, called-party pre-emption has to be performed by the Mobile Station as defined in the following:

   - point-to-point calls:

   If the user is in idle mode, the Mobile Station shall automatically connect to an incoming call of a sufficient priority level. If the user is in dedicated mode and has a subscription to Call Waiting, a Call Waiting indication including the priority level of the call shall be given to the Mobile Station which automatically accepts the waiting call.

2. In dedicated mode, in the case where the called subscriber has a subscription for eMLPP and for Call Waiting and is using a compatible Mobile Station, the Mobile Station shall be informed of the priority of the new call together with the call waiting indication. The Mobile Station will then consult the internal service configuration list stored on the SIM to establish whether it should automatically accept the waiting call without consulting the user, or whether the call waiting facility will be used as normal.

3. In the case where the called subscriber has a subscription for eMLPP and for CW, the mobile station shall be informed of the priority of the new call together with the CW indication. On reception of the set-up message the compatible mobile station decides on called party pre-emption. If called party pre-emption applies, the mobile station shall automatically accept the waiting call and send a hold message to the network. If a hold acknowledge is received, the waiting call is accepted. If a hold reject is received for any reason, e.g. there is no subscription for hold, the other call shall be released and the waiting call accepted. If the ongoing call is not a TS11 call, the mobile station should not send a hold message to the network but release the call and accept the waiting call.

GSM 04.83 section 1.1, 1.2.

### 31.12.2.2 Test purpose

For the MS supporting MT call, to verify that:

1. In idle mode the MS automatically accepts an incoming point-to-point call of priority level for which automatic answering is enabled.
2. In idle mode the MS alerts an incoming point-to-point call of a priority level for which automatic answering is disabled.
3. In dedicated mode and supporting Call Waiting, when a Call Waiting indication includes a level for which automatic answering is enabled and the priority level is higher than the ongoing point-to-point call, the MS automatically confirms the waiting call and sends a hold message to the network. If a hold reject is received the other call is released and the waiting call is accepted.
4. In dedicated mode and supporting Call Waiting, when a Call Waiting indication includes a priority level for which automatic answering is enabled and the priority level is equal or lower than the priority level of the ongoing call, the MS indicates the waiting call.
5. In group receive mode the MS automatically responds to the paging message containing a priority level for which automatic answering is enabled and the priority level is higher than the priority level of the ongoing call.
6. In group receive mode the MS indicates an incoming point-to-point call of a priority level for which automatic answering is enabled and the priority level is equal or lower than the priority level of the ongoing call.

### 31.12.2.3 Method of test

Initial Conditions

System Simulator:

1 cell with default parameters.

Mobile Station:

the MS is in idle mode;

The auto answering priority level is set to higher than priority level 2.

Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support VGCS listening.

Support VBS listening.

Support call waiting

Support hold

Support eMLPP.

Way to configure automatic answering.

Way to indicate a call has been automatically answered.

### Foreseen Final State of the MS

"Idle, updated".

### Test Procedure

The call waiting is activated. The MS is in idle mode and automatic answering for priority level 2 is disabled. A PAGING REQUEST message containing priority level 2 is sent. It is checked that the MS indicates the incoming call to the user. The automatic answering for level 1 is enabled. A PAGING REQUEST message with priority level 2 is sent. It is checked that the MS automatically accepts the incoming normal call. The call is released. A PAGING REQUEST message without priority level is sent, and during the call set-up the SETUP message contains priority level 1. It is checked that the MS automatically accepts the incoming normal call.

The MS is in dedicated mode (If the MS supports TS11, TS11service shall be selected for the dedicated mode testing). a SETUP message with priority level higher enough for auto answering is sent by the SS. It is checked that the MS automatically accepts the incoming normal call. A SETUP message containing low priority level without auto answering is sent. It is checked that the MS indicates the incoming call to the user.

The MS is in group receive mode, a NOTIFICATION/FACCH message containing paging information and a PAGING REQUEST message with priority level 0 are sent. It is checked that the MS automatically accepts the incoming normal call. The MS is brought into group receive mode. A NOTIFICATION/FACCH message containing paging information and a PAGING REQUEST message containing low priority level are sent. It is checked that the MS indicates the incoming call to the user.

### Maximum Duration of Test

5 minutes

### Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | the MS is in idle mode and auto answering for priority level 2 is disabled |
| 1 | SS -> MS | PAGING REQUEST TYPE 1 | with priority level 2 |

## 31.12.3 eMLPP Service / automatic answering MT VGCS or VBS call

### 31.12.3.1 Conformance requirement

For the MS supporting VGCS/VBS listening:

1. Automatic answering or, if necessary, called-party pre-emption has to be performed by the Mobile Station as defined in the following:

   - voice group calls and voice broadcast calls:

   Notifications for other voice group calls, voice broadcast calls or information on paging for point-to-point calls shall be given to the Mobile Stations involved in on-going voice group calls or voice broadcast calls as defined in GSM 03.68 and GSM 03.69, respectively. The notifications include the related priority level of the call. In case of a notified call with higher priority where called-party pre-emption applies, the Mobile Station shall automatically leave the on-going voice group call or voice broadcast call and react according to the type of the notified call type.

2. In dedicated mode, in the case where the called subscriber has a subscription for eMLPP and for Call Waiting and is using a compatible Mobile Station, the Mobile Station shall be informed of the priority of the new call together with the call waiting indication. The Mobile Station will then consult the internal service configuration list stored on the SIM to establish whether it should automatically accept the waiting call without consulting the user, or whether the call waiting facility will be used as normal.

3. In the case where the called subscriber has a subscription for eMLPP and for CW, the mobile station shall be informed of the priority of the new call together with the CW indication. On reception of the notification message the compatible mobile station decides on called party pre-emption. If called party pre-emption applies, the mobile station shall automatically release the call and join the new call.

GSM 03.67 section 4.

GSM 04.67 section 4.1.5

### 31.12.3.2 Test purpose

For the MS supporting VGCS/VBS listening, to verify that:

1. In idle mode the MS automatically accepts an incoming VGCS or VBS call of sufficient priority level.

2. In idle mode the MS indicates an incoming VGCS or VBS call of priority level not high enough for automatic answering.

3. In dedicated mode, the MS automatically accepts an incoming VGCS or VBS call of sufficient priority level.

4. In dedicated mode, the MS indicates an incoming VGCS or VBS call of priority level not high enough for automatic answering.

5. In group receive mode the MS automatically accepts an incoming VGCS or VBS call of sufficient priority level.

6. In group receive mode the MS indicates an incoming VGCS or VBS call of priority level not high enough for automatic answering.

### 31.12.3.3 Method of test

#### Initial Conditions

System Simulator:

1 cell with default parameters.

Mobile Station:

the MS is in idle mode;

The auto answering priority level is set to higher than priority level 2.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support eMLPP.

Way to configure automatic answering.

Way to indicate that a VGCS/VBS call has been automatically accepted.

#### Foreseen Final State of the MS

"Idle, updated".

#### Test Procedure

The MS is in idle mode. a NOTIFICATION/NCH message with priority level higher enough for auto answering is sent. It is checked that the MS automatically accepts the incoming VGCS/VBS call. The call is released. A NOTIFICATION/NCH message containing low priority level without auto answering is sent. It is checked that the MS indicates the incoming VGCS/VBS call to the user.

The MS is in dedicated mode. a NOTIFICATION/FACCH message with priority level higher enough for auto answering is sent. It is checked that the MS automatically accepts the incoming VGCS/VBS call. A NOTIFICATION/FACCH message containing low priority level without auto answering is sent. It is checked that the MS indicates the incoming VGCS/VBS call to the user.

The MS is in group receive mode. a NOTIFICATION/FACCH message with priority level higher enough for auto answering and containing VGCS/VBS channel description is sent. It is checked that the MS automatically accepts the incoming VGCS/VBS call. A NOTIFICATION/FACCH message containing priority level not higher enough for auto answering and containing VGCS/VBS channel description is sent. It is checked that the MS indicates the incoming VGCS/VBS call to the user.

#### Maximum Duration of Test

5 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | the MS is in idle mode |
| 2 | SS -> MS | NOTIFICATION/NCH | containing priority level 1 |
| 3 | MS | | to check that the MS automatically accepts the VGCS/VBS call |
| 4 | SS | | stop sending NOTIFICATION/NCH |
| 5 | SS -> MS | CHANNEL RELEASE | UI format, release VGCS/VBS channel |
| 6 | SS -> MS | NOTIFICATION/NCH | containing priority level 3 |
| 7 | MS | | to check that the MS indicates the VGCS/VBS call to the user |
| 8 | SS | | stop sending NOTIFICATION/NCH |
| 15 | MS | | the MS is in dedicated mode, the priority level of current call is level 3 |
| 16 | SS -> MS | NOTIFICATION/FACCH | containing priority level 2 |

| 19 | MS -> SS | RELEASE COMPLETE | |
| 20 | SS -> MS | CHANNEL RELEASE | |
| 21 | MS | | to check that the MS automatically accepts the VGCS/VBS call |
| 22 | SS -> MS | CHANNEL RELEASE | UI format, release VGCS/VBS channel |
| 23 | MS | | the MS is brought into dedicated mode, the priority level of current call is level 3 |
| 24 | SS -> MS | NOTIFICATION/FACCH | containing priority level 4 |
| 25 | MS | | to check that the MS indicates the VGCS/VBS call to the user |
| 26 | SS | | stop sending NOTIFICATION/FACCH |
| 27 | SS -> MS | DISCONNECT | |
| 28 | MS -> SS | RELEASE | |
| 29 | SS -> MS | RELEASE COMPLETE | |
| 30 | SS -> MS | CHANNEL RELEASE | I format, release dedicated channel |
| 31 | MS | | the MS is in group receive mode, the priority level of current call is level 3 |
| 32 | SS -> MS | NOTIFICATION/FACCH | containing priority level 1 and with VGCS/VBS channel description |
| 33 | MS | | to check the MS automatically accepts the incoming VGCS/VBS call |
| 34 | SS -> MS | NOTIFICATION/FACCH | containing priority level 4 and with VGCS/VBS channel description |
| 35 | MS | | to check the MS indicates the incoming VGCS/VBS call to the user |
| 36 | SS -> MS | CHANNEL RELEASE | UI format, release VGCS/VBS channel |

## 31.12.4 eMLPP Service / registration

### 31.12.4.1 Conformance requirement

For registration of eMLPP default priority level, the MS shall transmit successively:

1. A CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user";
2. A CM SERVICE REQUEST with CM service type indicating "supplementary service activation";
3. An eMLPP registration request from a mobile user shall include the SS-Code of the eMLPP service and the default priority level.

Reference(s)

GSM 04.67 section 4.2 (figure 6),

GSM 04.08 sections 3.3.1.2, 4.5.1.1, 9.1.8, 9.2.9.

#### 31.12.4.2 Test purpose

To check that the MS:

1. Correctly requests a supplementary service transaction for registration of eMLPP in CHANNEL REQUEST message.
2. Correctly requests a supplementary service transaction for registration of eMLPP in the subsequent CM SERVICE REQUEST.
3. Then sends a REGISTER message containing the invoke of the RegisterSS operation with the expected parameter values for registration of eMLPP default priority level.
4. Provides the appropriate user indication (as described by the manufacturer) upon receipt of the result of the operation (in a RELEASE COMPLETE message).

#### 31.12.4.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters.

Mobile Station:

the MS is in idle mode

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support eMLPP.

Way to select a priority level.

Way to initiate eMLPP registration.

Way to indicate the result of the eMLPP registration.

##### Foreseen Final State of the MS

"Idle, updated".

##### Test Procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests registration of eMLPP for a default priority level DefaultPriorityLevel arbitrarily selected.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the RegisterSS operation.

The SS transaction is released and the dedicated channel is released.

Then check the MS provides a correct user indication.

##### Maximum Duration of Test

3 min

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a registration of eMLPP default priority level |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | RegisterSS(eMLPP, DefaultPriorityLevel) |
| 7 | SS -> MS | RELEASE COMPLETE | RegisterSS operation Return_result |
| 8 | MS | | provide correct MMI user indication |
| 9 | SS -> MS | CHANNEL RELEASE | |

| Default Priority | arbitrary |

## 31.12.5 eMLPP Service / interrogation

### 31.12.5.1 Conformance requirement

For interrogation of eMLPP default priority level, the MS shall transmit successively:

1. A CHANNEL REQUEST with establishment cause set to "other services requested by the mobile user";
2. A CM SERVICE REQUEST with CM service type indicating "supplementary service activation";
3. And then the REGISTER message containing a facility IE that includes an invoke of the InterrogateSS operation with parameter values eMLPP (MMI action) (See Figure 7 of GSM 04.67 subclause 4.5).

Reference(s)

GSM 04.67 section 4.5 (figure 7),

GSM 04.08 sections 3.3.1.2, 4.5.1.1, 9.1.9, 9.2.9.

### 31.12.5.2 Test purpose

To check that the MS:

1. Correctly requests a supplementary service transaction for interrogation of eMLPP in CHANNEL REQUEST message.
2. Correctly requests a supplementary service transaction for interrogation of eMLPP in the subsequent CM SERVICE REQUEST.
3. Then sends a REGISTER message containing the invoke of the InterrogateSS operation with the expected parameter values for interrogation of eMLPP default priority level.

4. Provides the appropriate user indication (as described by PIXIT) upon receipt of the result of the operation (in a RELEASE COMPLETE message).

#### 31.12.5.3 Method of test

##### Initial Conditions

System Simulator:

1 cell with default parameters.

Mobile Station:

the MS is in idle mode

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM 480, GSM 700, GSM 850, P-, E-, R-GSM 900, DCS 1800 or PCS 1900).

Support eMLPP.

Way to select a priority level.

Way to initiate eMLPP interrogation.

Way to indicate the result of the eMLPP interrogation.

##### Foreseen Final State of the MS

"Idle, updated".

##### Test Procedure

By means of appropriate MMI functions (using either GSM 02.30 or manufacturer defined MMI), the user requests interrogation of eMLPP.

Upon receipt of the operation (in a REGISTER message), the system simulator answers with a RELEASE COMPLETE message with the Facility information element containing the return result of the InterrogateSS operation.

The SS transaction is released and the dedicated channel is released.

Then check the MS provides a correct user indication.

##### Maximum Duration of Test

3 min

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | The MS is made to initiate a interrogation of eMLPP default priority level |
| 2 | MS -> SS | CHANNEL REQUEST | with establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | InterrogateSS(eMLPP) |
| 7 | SS -> MS | RELEASE COMPLETE | InterrogateSS operation Return_result containing SS-Status, MaximumPriorityLevel, DefaultPriorityLevel |
| 8 | MS | | provide correct MMI user indication |

# 31.13 Explicit Call Transfer (ECT)

NOTE: In this section, Subscriber A is the MS under test, and subscribers B and C are distant parties to the calls made during the tests.

## 31.13.1 Explicit Call Transfer invocation

### 31.13.1.1 Explicit Call Transfer invocation, successful case, both calls active, clearing using DISCONNECT

Conformance requirement

GSM 04.91 subclause 4.1, 4.2

Applicability

MS supporting the Explicit Call Transfer supplementary service.

Test purpose

To test that the MS invokes explicit call transfer between two active calls by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of a DISCONNECT response from the network.

Method of test

Related PICS/PIXIT statements

Method of performing Explicit Call transfer on two active calls

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” with auxiliary state “Call held” and Call A-C in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and applicable to the ECT supplementary service as described in GSM 02.04 Table A.1.

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall invoke an explicit call transfer between the two calls. The MS shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a DISCONNECT message with respect to one of the calls containing a return result component, followed by a DISCONNECT message for the other call, the MS shall respond with a RELEASE message for each call. On receipt of a RELEASE COMPLETE message for each call, the MS shall enter state U0 “Null”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, perform and explicit call transfer |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, ExplicitCT Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |
| 7 | SS -> MS | DISCONNECT | Transaction identifier of Call A-B |
| 8 | MS -> SS | RELEASE | Transaction identifier of Call A-B |
| 9 | SS -> MS | DISCONNECT | Transaction identifier of Call A-C |
| 10 | MS -> SS | RELEASE | Transaction identifier of Call A-C |
| 11 | SS -> MS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 12 | SS -> MS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 13 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 14 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 15 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 16 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |

### 31.13.1.2 Explicit Call Transfer invocation, successful case, both calls active, clearing using RELEASE

#### Conformance requirement

GSM 04.91 subclause 4.1, 4.2

#### Applicability

MS supporting the Explicit Call Transfer supplementary service.

#### Test purpose

To test that the MS invokes explicit call transfer between two active calls by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of a RELEASE response from the network.

#### Method of test

#### Related PICS/PIXIT statements

Method of performing Explicit Call transfer on two active calls

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” with auxiliary state “Call held” and Call A-C in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and applicable to the ECT supplementary service as described in GSM 02.04 Table A.1.

#### Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0.

#### Maximum duration of test

30 s.

#### Procedure

Using suitable MMI commands, the MS shall invoke an explicit call transfer between the two calls. The MS shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a RELEASE message with respect to one of the calls containing a return result component, followed by a RELEASE message for the other call, the MS shall respond with a RELEASE COMPLETE message for each call and shall enter state U0 “Null”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, perform and explicit call transfer |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, ExplicitCT Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |
| 7 | SS -> MS | RELEASE | Transaction identifier of Call A-B |
| 8 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 9 | SS -> MS | RELEASE | Transaction identifier of Call A-C |
| 10 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 12 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 13 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 14 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |

### 31.13.1.3 Explicit Call Transfer invocation, successful case, both calls active, clearing using RELEASE COMPLETE

#### Conformance requirement

GSM 04.91 subclause 4.1, 4.2

#### Applicability

MS supporting the Explicit Call Transfer supplementary service.

#### Test purpose

To test that the MS invokes explicit call transfer between two active calls by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of a RELEASE COMPLETE response from the network.

#### Method of test

#### Related PICS/PIXIT statements

### 31.13.1.4 Explicit Call Transfer invocation, successful case, second call alerting

Conformance requirement

GSM 04.91 subclause 4.1, 4.2

Applicability

MS supporting the Explicit Call Transfer supplementary service.

Test purpose

To test that the MS invokes explicit call transfer between an active held call and an alerting call by sending a FACILITY message with the correct invoke component, and reacts correctly on receipt of clearing messages from the network.

Method of test

Related PICS/PIXIT statements

Method of performing Explicit Call transfer on an active call and an alerting call.

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” with auxiliary state “Call held” and Call A-C in state U4 “Call Delivered” with no auxiliary state. Both calls shall be of a basic service supported by the MS and applicable to the ECT supplementary service as described in GSM 02.04 Table A.1.

Foreseen final state of the MS

Call A-B, state U0. Call A-C, state U0.

Maximum duration of test

30 s.

Procedure

Using suitable MMI commands, the MS shall invoke an explicit call transfer between the two calls. The MS shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a DISCONNECT message with respect to one of the calls containing a return result component, followed by a DISCONNECT message for the other call, the MS shall respond with a RELEASE message for each call. On receipt of a RELEASE COMPLETE message for each call, the MS shall enter state U0 “Null”. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a RELEASE COMPLETE message with cause #81 "invalid transaction identifier value".

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, perform and explicit call transfer |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, ExplicitCT Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U4 |
| 7 | SS -> MS | DISCONNECT | Transaction identifier of Call A-B |
| 8 | MS -> SS | RELEASE | Transaction identifier of Call A-B |
| 9 | SS -> MS | DISCONNECT | Transaction identifier of Call A-C |
| 10 | MS -> SS | RELEASE | Transaction identifier of Call A-C |
| 11 | SS -> MS | RELEASE COMPLETE | Transaction identifier of Call A-B |
| 12 | SS -> MS | RELEASE COMPLETE | Transaction identifier of Call A-C |
| 13 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 14 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-B, with cause #81 "invalid transaction identifier value" |
| 15 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 16 | MS -> SS | RELEASE COMPLETE | Transaction identifier of Call A-C, with cause #81 "invalid transaction identifier value" |

## 31.13.1.5 Explicit Call Transfer invocation, unsuccessful case

Conformance requirement

GSM 04.91 subclause 4.1, 4.2

### Applicability

MS supporting the Explicit Call Transfer supplementary service.

### Test purpose

To test that the MS invokes explicit call transfer between an active held call and an alerting call by sending a FACILITY message with the correct invoke component, and returns both calls to their original states on receipt of an error or reject response.

### Initial conditions

The MS shall have Call A-B in state U10 “Active” with auxiliary state “Call held” and Call A-C in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and applicable to the ECT supplementary service as described in GSM 02.04 Table A.1.

### Method of test

### Related PICS/PIXIT statements

Method of performing Explicit Call transfer on two active calls

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” with auxiliary state “Call held” and Call A-C in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and applicable to the ECT supplementary service as described in GSM 02.04 Table A.1.

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call held". Call A-C, Call A-C, state U10, no auxiliary state.

### Maximum duration of test

30 s.

### Procedure

Using suitable MMI commands, the MS shall invoke an explicit call transfer between the two calls. The MS shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message using the same transaction identifier and including a return error component, the MS shall not send any further messages in respect of the transfer attempt, and shall remain in the same call state for both calls. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Using suitable MMI commands, the MS shall again invoke an explicit call transfer between the two calls. The MS shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

On receipt of a FACILITY message using the same transaction identifier and including a reject component, the MS shall not send any further messages in respect of the transfer attempt, and shall remain in the same call state for both calls. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, perform an explicit call transfer |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, ExplicitCT Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |
| 7 | SS -> MS | FACILITY | TI same as step 2, Return Error component |
| 8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |
| 12 | MS | | Using MMI commands, perform an explicit call transfer |
| 13 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, ExplicitCT Invoke component |
| 14 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 15 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 16 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 17 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |
| 18 | SS -> MS | FACILITY | TI same as step 2, Reject component |
| 19 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 20 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 21 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 22 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |

### 31.13.1.6 Explicit Call Transfer invocation, expiry of T(ECT)

#### Conformance requirement

GSM 04.91 subclause 4.1, 4.2, GSM 04.80 subclause 4.2

#### Applicability

MS supporting the Explicit Call Transfer supplementary service.

#### Test purpose

To test that the MS invokes explicit call transfer between an active held call and an alerting call by sending a FACILITY message with the correct invoke component, and returns both calls to their original states on expiry of T(ECT).

#### Method of test

#### Related PICS/PIXIT statements

Method of performing Explicit Call transfer on two active calls

### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall have Call A-B in state U10 “Active” with auxiliary state “Call held” and Call A-C in state U10 “Active” with no auxiliary state. Both calls shall be of a basic service supported by the MS and applicable to the ECT supplementary service as described in GSM 02.04 Table A.1.

### Foreseen final state of the MS

Call A-B, state U10, auxiliary state "Call held". Call A-C, Call A-C, state U10, no auxiliary state.

### Maximum duration of test

45 s.

### Procedure

Using suitable MMI commands, the MS shall invoke an explicit call transfer between the two calls. The MS shall send a FACILITY message with a transaction identifier for either call A-B or call A-C and containing an ExplicitCT invoke component. The call state of both calls shall be unchanged. The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Between 5s and 15s after sending the FACILITY message, the MS shall either:-

- remain in the same call states and indicate failure to the user, or
- send another FACILITY message with the same contents.

The call states shall be verified by the SS sending a STATUS ENQUIRY message in respect of the transaction identifier of each call, and receiving a STATUS message indicating the appropriate call state.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS | | Using MMI commands, perform an explicit call transfer |
| 2 | MS -> SS | FACILITY | TI for Call A-B or Call A-C, ExplicitCT Invoke component |
| 3 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| 4 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| 5 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| 6 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |
| 7 | SS | | Wait 15 s from receiving FACILITY message |
| | | | Take this branch if no message is received within 15 s |
| A8 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| A9 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| A10 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| A11 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |
| | | | Take this branch if a message is received within 15 s |
| B8 | MS -> SS | FACILITY | Same as Step 2. Message shall not be received less than 5 s after the first FACILITY message |
| B9 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-B |
| B10 | MS -> SS | STATUS | Transaction identifier of Call A-B, state U10, auxiliary state "Call held" |
| B11 | SS -> MS | STATUS ENQUIRY | Transaction identifier of Call A-C |
| B12 | MS -> SS | STATUS | Transaction identifier of Call A-C, state U10, no auxiliary state |

# 31.14 User-to-User Signalling (UUS)

This clause applies to mobile station supporting User-to-User Signalling (UUS). The objective of this clause is to test UUS concerned procedures.

Unless indicated in individual sub-clauses, the default message contents in clause 26.8.4 are applied for CC calls and default message contents in clause 26.14.10 are applied for VGCS/VBS calls.

## 31.14.1 UUS / Implicit UUS1

### 31.14.1.1 UUS / Implicit UUS1 / CC MO call

#### 31.14.1.1.1 Conformance requirement

The UUI service is activated implicitly by the presence of UUI in the set-up request from the mobile station;

To activate UUS1 implicitly, the MS shall include a User-user information element in the SETUP message as part of a normal call request;

The MS shall accept the presence of User-user information element in the ALERTING, CONNECT, DISCONNECT, RELEASE or RELEASE COMPLETE messages (as indicated in 3G TS 24.087, Figure 1 in clause 4.1.1).

References

3G TS 23.087 clauses 4.1.1, 5.2.1.2.1

3G TS 24.087 clause 4.1.1

#### 31.14.1.1.2 Test purpose

To verify that upon initiation of an outgoing basic call with implicit UUS1 by the user, the MS includes a User-user information element in the SETUP message;

To verify that inclusion of the User-user information element with different data length in either of the downlink messages ALERTING, CONNECT, DISCONNECT or RELEASE COMPLETE, causes no adverse effects on the operation of the MS.

#### 31.14.1.1.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM480, GSM 700, GSM 850, P-, E-, R-GSM900, DCS 1800 or PCS 1900)

Support MO telephony

Support UUS

Support implicit UUS1

Way to activate implicit UUS1

Description of display of the User-user data received from the network.

##### Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI.

##### Test procedure

By means of appropriate MMI function, the user requests implicit UUS1 and enters a string, which shall be included in the UUS1. Then MS is made to initiate a call. In the SETUP message, the User-user information element shall be present and shall include the requested string. Then, SS releases the call.

The MS is made to initiate a second call with implicit UUS1. In the SETUP message, the User-user information element shall be present with the requested string. SS releases the call, by sending a RELEASE COMPLETE message including a User-user information element with a long data value. It is checked that the MS is not disturbed by the optional User-user information element.

The MS is made to initiate a third call with implicit UUS1. In the SETUP message, the User-user information element shall be present with the requested string. Then SS shall include User-user information element in the ALERTING and in the CONNECT message with respectively short and long data value, it is checked that MS does not respond adversely to the inclusion of the optional User-user information element. After 10 seconds, SS initiates call clearing. SS sends DISCONNECT and RELEASE COMPLETE messages with User-user information element respectively without data and with a short data value, again the MS shall not respond adversely to the inclusion of the User-user information element, but shall continue to clear down the call normally.

##### Maximum Duration of Test

2 minutes

Expected Sequence

| Step | Direction | Message | Comments/actions/next state |
|---|---|---|---|
| 0 | MS | | The MS is in idle mode.<br>MMI actions to initiate a CC call with implicit UUS1 including the string 'abc0123456'. |
| 1 | MS -> SS | CHANNEL REQUEST | |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH4 |
| 3 | MS -> SS | CM SERVICE REQUEST | |
| 4 | MS -> SS | SETUP | Check User-user IE is included. See specific message contents |
| 5 | SS -> MS | RELEASE COMPLETE | |
| 6 | SS -> MS | CHANNEL RELEASE | The main signalling link shall be released by the MS (L2: DISC/UA). |
| 10 | MS | | MMI actions to initiate a CC call with implicit UUS1 including the string 'abc' |
| 11 | MS -> SS | CHANNEL REQUEST | |
| 12 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH4 |
| 13 | MS -> SS | CM SERVICE REQUEST | |
| 14 | MS -> SS | SETUP | Check User-user IE is included. See specific message contents |
| 15 | SS -> MS | RELEASE COMPLETE | Message contains the User-user IE with a long data value, see Specific message contents |
| 16 | MS | | It is checked that the MS, in a way described by the manufacturer, displays user-user data. |
| 17 | SS -> MS | CHANNEL RELEASE | The main signalling link shall be released by the MS (L2: DISC/UA). |
| 20 | MS | | MMI actions to initiate a CC call with implicit UUS1 including the string '123497'. |
| 21 | MS -> SS | CHANNEL REQUEST | |
| 22 | SS -> MS | IMMEDIATE ASSIGNMENT | SDCCH4 |
| 23 | MS -> SS | CM SERVICE REQUEST | |
| 24 | MS -> SS | SETUP | Check User-user IE is included. See specific message contents |
| 25 | SS -> MS | AUTHENTICATION REQUEST | |
| 26 | MS -> SS | AUTHENTICATION RESPONSE | |
| 27 | SS -> MS | CALL PROCEEDING | |
| 28 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 29 | MS -> SS | ASSIGNMENT COMPLETE | |
| 30 | SS -> MS | ALERTING | Message contains the User-user IE with a short data value, see Specific message contents |
| 31 | MS | | It is checked that the MS, in a way described by the manufacturer, displays user-user data. |
| 32 | SS -> MS | CONNECT | Message contains the User-user IE with a long data value, see Specific message contents |
| 33 | MS | | It is checked that the MS, in a way described by the manufacturer, displays user-user data. |
| 34 | MS -> SS | CONNECT ACKNOWLEDGE | |
| 35 | SS -> MS | DISCONNECT | Without Progress Indication IE<br>Including the User-user IE without data, see Specific message contents |
| 36 | MS | | It is checked that the MS, in a way described by the manufacturer, displays no user-user data. |
| 37 | MS -> SS | RELEASE | |
| 38 | SS-> MS | RELEASE COMPLETE | Message contains the User-user IE with a short data value, see Specific message contents |
| 39 | SS | | It is checked that the MS, in a way described by the manufacturer, displays user-user data. |

| | | | |
|---|---|---|---|
| 40 | SS -> MS | CHANNEL RELEASE | The main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

SETUP

As default message contents as defined in section 26.8.4 (mobile station to network direction), except:

## 31.14.1.2 UUS / Implicit UUS1 / CC MT call

### 31.14.1.2.1 Conformance requirement

The MS shall accept the presence of User-user information element in the SETUP and DISCONNECT messages (as indicated in 3G TS 23.087, Figure 5.2.1.2.1.1).

The MS may include User-user information element in the ALERTING or CONNECT messages (as indicated in 3G TS 23.087, Figure 5.2.1.2.1.1).

#### References

3G TS 23.087 clause 5.2.1.2.1

3G TS 24.087 clause

### 31.14.1.2.2 Test purpose

To verify that, the receipt of SETUP message including user-user information element with a short or large data value causes no adverse effects on the call establishment operation of the MS.

To verify that MS could include User-user information element in either of the uplink messages ALERTING or CONNECT.

To verify that inclusion of the User-user information element with different data length in either of the downlink message DISCONNECT or RELEASE COMPLETE, causes no adverse effects on the operation of the MS.

### 31.14.1.2.3 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM480, GSM 700, GSM 850, P-, E-, R-GSM900, DCS 1800 or PCS 1900)

Support MT telephony

Support UUS

Support implicit UUS1

Support the sending of UUS1 information element in ALERTING message

Support the sending of UUS1 information element in CONNECT message

Way to activate implicit UUS1

Description of display of the User-user data received from the network.

### Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI.

### Test procedure

SS initiates a call. In the SETUP message, the User-user information element shall be present. It is checked that the MS, in a way described by the manufacturer, displays the user-user data. Then, SS releases the call immediately after the MS call confirmation.

The SS initiates a second call and in the SETUP message, the User-user information element shall contain a larger data value. It is checked that the MS, in a way described by the manufacturer, displays the user-user data. Then the SS releases the call immediately after the MS call confirmation. In the RELEASE COMPLETE message, the User-user information element shall also contain a large data value. It is checked that the MS is not disturbed by the User-user optional information element.

By means of appropriate MMI function and if MS supports User-user information element in ALERTING or CONNECT messages, the user enters a string, which shall be included in the UUS1. The SS initiates a third call and in the SETUP message, the User-user information element shall be included without data. After the MS call confirmation and depending on the MS capability, it is checked that the MS sends in the User-user information element of the ALERTING message the string as requested. When the TCH is allocated and depending on the MS capability, it is checked that the MS sends in the User-user information element of the CONNECT message the string as requested. When the call is established, the SS releases the call and shall include in the DISCONNECT message the optional User-user information element. It is checked that the MS is not disturbed by the User-user information element. The SS shall also include in the RELEASE COMPLETE message the optional User-user information element. It is checked that the MS is not disturbed by the User-user information element.

### Maximum Duration of Test

2 minutes

Expected Sequence

| Step | Direction | Message | Comments/actions/next state |
|---|---|---|---|
| 0 | MS | | The MS is in idle mode. |
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | U0, SDCCH4 |
| 4 | MS -> SS | PAGING RESPONSE | |
| 7 | SS -> MS | SETUP | User-user IE included with a short data value, see Specific message contents |
| 8 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 9 | MS -> SS | CALL CONFIRMED | |
| 10 | SS -> MS | RELEASE COMPLETE | |
| 11 | SS -> MS | CHANNEL RELEASE | The main signalling link shall be released by the MS (L2: DISC/UA). |
| 15 | SS -> MS | PAGING REQUEST | |
| 16 | MS -> SS | CHANNEL REQUEST | |
| 17 | SS -> MS | IMMEDIATE ASSIGNMENT | U0, SDCCH4 |
| 18 | MS -> SS | PAGING RESPONSE | |
| 21 | SS -> MS | SETUP | User-user IE included with a large data value, see Specific message contents |
| 22 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 23 | MS -> SS | CALL CONFIRMED | |
| 24 | SS -> MS | RELEASE COMPLETE | Message contains the User-user IE with a long data value, see Specific message contents. |
| 25 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 26 | SS -> MS | CHANNEL RELEASE | The main signalling link shall be released by the MS (L2: DISC/UA). |
| | | | If supported, MMI actions to initiate implicit UUS1 with the string '12346aA' |
| 30 | SS -> MS | PAGING REQUEST | |
| 31 | MS -> SS | CHANNEL REQUEST | |
| 32 | SS -> MS | IMMEDIATE ASSIGNMENT | U0, SDCCH4 |
| 33 | MS -> SS | PAGING RESPONSE | |
| 34 | SS -> MS | AUTHENTICATION REQUEST | |
| 35 | MS -> SS | AUTHENTICATION RESPONSE | |
| 36 | SS -> MS | SETUP | User-user IE included without data. See Specific message contents. |
| 37 | MS | | Check that the MS, in a way described by the manufacturer, displays no User-user data value. |
| 38 | MS -> SS | CALL CONFIRMED | |
| 39 | MS -> SS | ALERTING | If MS support User-user IE in ALERTING message, then check the presence of this IE. See specific message contents. |
| 40 | MS -> SS | CONNECT | If MS support User-user IE in CONNECT message, then check the presence of this IE. See specific message contents. |
| 41 | SS -> MS | ASSIGNMENT COMMAND | TCH |
| 42 | MS -> SS | ASSIGNMENT COMPLETE | |
| 43 | SS -> MS | CONNECT ACKNOWLEDGE | |
| 44 | SS -> MS | DISCONNECT | With the User-user IE with a long data value, see Specific message contents |
| 45 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |

| | | | |
|---|---|---|---|
| 46 | MS -> SS | RELEASE | |
| 47 | SS-> MS | RELEASE COMPLETE | Message contains the User-user IE with a short data value, see Specific message contents. |
| 48 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 49 | SS -> MS | CHANNEL RELEASE | The main signalling link shall be released by the MS (L2: DISC/UA). |

Specific message contents:

SETUP – **step 7**

As default message contents as defined in section 26.8.4 (network to mobile station direction), except:

| Information Element | value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 4 |
| - PD | User specific protocol |
| - user-user | The following string coded in IA5 characters :"012" |

SETUP – **step 21**

As default message contents as defined in section 26.8.4 (network to mobile station direction), except:

| Information Element | value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 33 |
| - PD | User specific protocol |
| - user-user | The following string coded in IA5 characters : "abcdefghijklmnopqrstuvwxyz012345'" |

SETUP – **step 36**

As default message contents as defined in section 26.8.4 (network to mobile station direction), except:

| Information Element | value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 1 |
| - PD | User specific protocol |
| - user-user | - |

RELEASE COMPLETE – **step 24**

As default message contents as defined in section 26.8.4 (network to mobile station direction), except:

| Information Element | value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 37 |
| - PD | User specific protocol |
| - user-user | The following string coded in IA5 characters : "abcdefghijklmnopqrstuvwxyz0123456789" |

RELEASE COMPLETE – **step 47**

As default message contents as defined in section 26.8.4 (network to mobile station direction), except:

| Information Element | value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 2 |
| - PD | User specific protocol |
| - user-user | The following string coded in IA5 characters: "A" |

ALERTING

As default message contents as defined in section 26.8.4 (mobile station to network direction), except:

| Information Element | value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 8 |
| - PD | User specific protocol |
| - user-user | The string '12346aA' coded in IA5 characters |

CONNECT

As default message contents as defined in section 26.8.4 (mobile station to network direction), except:

| Information Element | Value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 8 |
| - PD | User specific protocol |
| - user-user | The string '12346aA ' coded in IA5 characters |

DISCONNECT

As default message contents as defined in section 26.8.4 (network to mobile station direction), except:

| Information Element | Value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 37 |
| - PD | User specific protocol |
| - user-user | The following string coded in IA5 characters :<br>”abcdefghijklmnopqrstuvwxyz0123456789” |

## 31.14.1.3 UUS / Implicit UUS1 / Interactions with Call Waiting and call HOLD supplementary services

### 31.14.1.3.1 Conformance requirement

There are no interactions between UUS and the Call hold (HOLD) and Call waiting (CW) supplementary services;

To activate UUS1 implicitly, the MS shall include a User-user information element in the SETUP message as part of a normal call request;

The MS shall accept the presence of User-user information element in the SETUP and DISCONNECT messages (as indicated in 3G TS 23.087, Figure 5.2.1.2.1.1).

References

3G TS 23.087 clauses 4.1.1, 5.2.1.2.1.1, 5.2.1.2.1

3G TS 24.087 clause 4.1.1, 6.4, 6.5

#### 31.14.1.3.2 Test purpose

To verify that when in active Call State and supporting Call Hold, to initiate a second call with implicit UUS1, the MS places the first call on hold and sends a SETUP message with the User-user information element. Verify that the second call is successfully established;

In call active state and supporting Call Waiting, when a Call Waiting indication includes a User-user information element, the MS accepts the waiting call and places the first call on hold and successfully establishes the second call.

#### 31.14.1.3.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS has a call ("Call A-B") in the active state. The SIM in the MS under test has Call Waiting enabled.

##### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM480, GSM 700, GSM 850, P-, E-, R-GSM900, DCS 1800 or PCS 1900)

Support MO telephony

Support UUS

Support implicit UUS1

Support hold

Way to activate implicit UUS1

Description of display of the User-user data received from the network

##### Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI.

##### Test procedure

A call is established between the MS and SS. This call is the active call named Call A-B.

Using suitable MMI commands, the MS shall request that the call A-B be placed on hold. The MS shall send a HOLD message and enter auxiliary state “hold request”. On receipt of a HOLD ACKNOWLEDGE message from the SS, the MS is made to initiate a second call with implicit UUS1. It is checked that the MS includes the User-user information element in the SETUP message. Then the SS sends an ALERTING message including the optional User-user information. It is checked that the MS, in a way described by the manufacturer, displays the User-user data value. Then the SS sends a CONNECT message including the optional User-user information element. It is checked that the MS, in a way described by the manufacturer, displays the User-user data value. On receipt of a CONNECT ACKNOWLEDGE message, MS shall enter state U10 “Active”. The SS releases the second call A-C and shall include in the DISCONNECT message the optional User-user information element. It is checked that the MS is not disturbed by the User-user information element. The SS shall also include in the RELEASE COMPLETE message the optional User-user information element. It is checked that the MS is not disturbed by the User-user information element.

The Call A-B is still alive. By means of appropriate MMI function, the user enters a string, which shall be included in the UUS1 sent by the MS. The SS sends a SETUP message including a User-user information element and indicating

the request of a new call, named Call C-A. It is checked with the appropriate MMI function, that the MS displays the contents of the User-user information element. Then the MS shall place Call A-B on hold, and answer Call C-A. The MS shall send a HOLD message to the SS using the transaction identifier of Call A-B. On receipt of a HOLD ACKNOWLEDGE from the SS, the MS shall send a CALL CONFIRMED message and an ALERTING message to the SS, using the transaction identifier of Call C-A, and depending on the MS capability including the optional User-user information element as requested by the user. Then the MS shall send a CONNECT message to the SS, using the transaction identifier of Call C-A, and depending on the MS capability including the optional User-user information element as entered by the user. On receipt of a CONNECT ACKNOWLEDGE message, MS shall enter state U10 “Active”. The SS releases the call C-A and shall include in the DISCONNECT message the optional User-user information element. It is checked that the MS is not disturbed by the User-user information element. The SS shall also include in the RELEASE COMPLETE message the optional User-user information element. It is checked that the MS is not disturbed by the User-user information element.

Then SS releases the first call A-B.

Maximum Duration of Test

2 minutes

Expected Sequence

| Step | Direction | Message | Comments/actions/next state |
|---|---|---|---|
| 0 | MS | | Active call state with call A-B. |
| 1 | MS | | If supported, MMI actions to initiate implicit UUS1 with the string '12345'. |
| 2 | MS | | Call A-C is requested using MMI commands and Call A-B is placed on hold using MMI commands |
| 3 | MS -> SS | CM SERVICE REQUEST | Transaction identifier of Call A-C |
| 4 | SS -> MS | CM SERVICE ACCEPT | Transaction identifier of Call A-C |
| 5 | MS -> SS | SETUP | Check User-user IE is included, transaction identifier of Call A-C, see Specific message contents. |
| 6 | SS -> MS | ALERTING | Message contains the User-user IE with a short data value, transaction identifier of Call A-C, see Specific message contents |
| 7 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 8 | MS -> SS | HOLD | Transaction identifier of Call A-B |
| 9 | SS -> MS | HOLD ACKNOWLEDGE | Transaction identifier of Call A-B |
| 10 | SS -> MS | CONNECT | Message contains the User-user IE with a long data value, transaction identifier of Call A-C, see Specific message contents |
| 11 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 12 | MS -> SS | CONNECT ACKNOWLEDGE | Transaction identifier of Call A-C |
| 13 | SS -> MS | DISCONNECT | Without Progress Indication IE, transaction identifier of Call A-C.<br>With the User-user IE without data, see Specific message contents |
| 14 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 15 | MS -> SS | RELEASE | |
| 16 | SS-> MS | RELEASE COMPLETE | Message contains the User-user IE with a short data value, transaction identifier of Call A-C, see Specific message contents |
| 17 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 18 | SS | | Call A-B is released |
| 19 | SS -> MS | CHANNEL RELEASE | The main signalling link shall be released by the MS (L2: DISC/UA). |
| 20 | | | Active call state with call A-B. |
| 21 | MS | | MMI actions to initiate implicit UUS1 with the string '201'. |
| 22 | SS -> MS | PAGING REQUEST | |
| 23 | MS -> SS | PAGING RESPONSE | |
| 31 | SS->MS | SETUP | User-user IE is included, see Specific message contents. Transaction identifier of Call C-A |
| 32 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value.<br>Call A-B is placed on hold using MMI commands. |
| 34 | MS -> SS | HOLD | Transaction identifier of Call A-B |
| 35 | SS -> MS | HOLD ACKNOWLEDGE | Transaction identifier of Call A-B |
| 36 | MS | | Call C-A is answered using MMI commands |
| 37 | MS -> SS | CALL CONFIRMED | Transaction identifier of Call C-A |
| 38 | MS -> SS | ALERTING | If MS support User-user IE in ALERTING message, then check the presence of this IE. Transaction identifier of Call C-A |
| 39 | MS -> SS | CONNECT | If MS supports User-user IE in CONNECT message, then check the presence of this IE. Transaction identifier of Call C-A |
| 40 | SS -> MS | CONNECT ACKNOWLEDGE | Transaction identifier of Call C-A |

| | | | |
|---|---|---|---|
| 41 | SS -> MS | DISCONNECT | With the User-user IE without data, transaction identifier of Call C-A, see Specific message contents. |
| 42 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |
| 43 | MS -> SS | RELEASE | |
| 44 | SS-> MS | RELEASE COMPLETE | Message contains the User-user IE with a short data value, see Specific message contents. Transaction identifier of Call C-A |
| 45 | MS | | Check that the MS, in a way described by the manufacturer, displays the User-user data value. |

Specific message contents:

SETUP – **step 5**

As default message contents as defined in section 26.8.4 (mobile station to network direction), except:

| Information Element | value/remark |
|---|---|
| User-user | |
| - IEI | '7E'O |
| - length | 1 + the entered string length |
| - PD | User specific protocol |
| - user-user | The string as entered, coded in IA5 characters |

SETUP – **step 31**

As default message contents as defined in section 26.8.4 (network direction to mobile station), except:

| Information Element | value/remark |
|---|---|
| User-user | |

# 31.15 Follow Me (FM)

This clause applies to mobile station supporting Follow Me (FM). The objective of this clause is to test FM concerned procedures.

Unless indicated in individual sub-clauses, the default message contents in clause 31.11 are applied.

## 31.15.1 Follow Me (FM) / Registration

### 31.15.1.1 Conformance requirement

The initiating subscriber registers the Follow Me feature with respect to a particular remote party. The initiating subscriber shall provide the following information to the network: the number of the remote party. The initiating subscriber shall receive an indication if the FM registration request was accepted or rejected by the network;

MS shall behave as indicated in the Information flow as indicated in 3G TS 23.094, Figure 4.1;

As an operator's option additional information (such as passwords) for registration may be required from the initiating subscriber. This information shall be coded as a USSD string with a length not exceeding 30 characters;

All the messages between MS and the mobile network and internal to the mobile network, which are used for control of Follow Me, are USSD Phase 2 messages;

If a mobile initiated USSD request using protocol version 2 is rejected by the network, and the reason for the rejection is indicated either by the problem code "unrecognized operation" or a cause "Facility rejected", the MS shall assume that the network only supports protocol version 1 of USSD operations. The MS shall re-attempt the request by using the appropriate protocol version 1 USSD operation without an SS version indicator if the unstructured data entered by the user can be coded as an IA5 string.

#### References

3G TS 22.094 clause 6.3

3G TS 23.094 clauses 4.1, 4.2, 4.4

3G TS 24.090 clause 6.1

### 31.15.1.2 Test purpose

To check that the MS correctly requests a supplementary service transaction for registration of FM in CHANNEL REQUEST message and in the subsequent CM SERVICE REQUEST;

To check that the MS sends a REGISTER message using USSD phase 2 and containing the FM-request control message for registration;

To check that upon receipt of the result or the error of the operation (in a RELEASE COMPLETE message), the MS provides the appropriate user indication (as described by the manufacturer);

To check that upon receipt of a rejection from the network with the problem code "unrecognized operation" or a cause "Facility rejected", the MS re-attempt the request by using USSD version 1.

### 31.15.1.3 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM480, GSM 700, GSM 850, P-, E-, R-GSM900, DCS 1800 or PCS 1900)

Support FM

Way to activate the registration of FM

Description of display of the FM answers from the network.

#### Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI.

### Test procedure

By means of appropriate MMI functions, the user requests registration of FM for a remote number. Upon receipt of the REGISTER message, SS answers with the RELEASE COMPLETE message with an unsuccessful FM-result information. Check that the MS provides the appropriate user indication (as described by the manufacturer). Then SS transaction is released. This procedure is executed for all possible error values.

The user requests registration of FM for another remote subscriber. Upon receipt of the operation (in a REGISTER message), SS answers with a RELEASE COMPLETE message with a successful FM-response information. Check that the MS provides the appropriate user indication (as described by the manufacturer). The SS transaction is released.

Then user request again two registrations, upon receipt of the REGISTER message, SS answers with a RELEASE COMPLETE message including a rejection with respectively the problem code “unrecognized operation” or a cause “facility rejected”. Check that MS re-attempt the request by using USSD version 1: without the SS version indicator information element included in the REGISTER message.

### Maximum Duration of Test

2 minutes

### Expected Sequence

Test steps 1 to 10 are executed for k=1 to 13 with respectively the following error values:

1. Illegal interaction with incoming barring
2. Unauthorised request
3. Unknown remote party
4. FM not subscribed
5. Remote party already registered
6. Unauthorised changes to remote party
7. Illegal interaction with call forwarding
8. Illegal interaction with call barring
9. Request to own MSISDN not possible
10. Forwarded-to number is invalid directory number
11. Insufficient information
12. Forwarded-to number is a special code
13. Conflicting situation with other supplementary services

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in idle mode. |
| 1 | MS | | The MS is made to initiate a registration of FM |
| 2 | MS -> SS | CHANNEL REQUEST | With establishment cause "Other procedures which can be completed with an SDCCH" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | |
| 4 | MS -> SS | CM SERVICE REQUEST | Cause: "supplementary service activation" |
| 5 | SS -> MS | CM SERVICE ACCEPT | |
| 6 | MS -> SS | REGISTER | Check that the content of this message matches specific message contents. |
| 7 | SS -> MS | RELEASE COMPLETE | With an unsuccessful FM-result info with the following error value:<br>k=1: Illegal interaction with incoming barring (code 21)<br>k=2: Unauthorised request (code 22)<br>k=3: Unknown remote party (code 41)<br>k=4: FM not subscribed (code 42)<br>k=5: Remote party already registered (code 61)<br>k=6: Unauthorised changes to remote party (code 64)<br>k=7: Illegal interaction with call forwarding (code 65)<br>k=8: Illegal interaction with call barring (code 66)<br>k=9: Request to own MSISDN not possible (code 67)<br>k=10: Forwarded-to number is invalid directory number (code 80)<br>k=11: Insufficient information (code 81)<br>k=12: Forwarded-to number is a special code (code 82)<br>k=13: Conflicting situation with other supplementary services (code 83)<br>See specific message contents. |
| 8 | MS | | It is checked that the MS, in a way described by the manufacturer, displays the error. |
| 10 | SS -> MS | CHANNEL RELEASE | |
| 15 | MS | | The MS is made to initiate a registration of FM |

## 31.15.2 Follow Me (FM) / Interrogation

### 31.15.2.1 Conformance requirement

An initiating subscriber (also the FM service supervisor) shall be able to interrogate the Follow Me data of any remote party, for which she is authorised to become initiating subscriber.

In case the remote party corresponds to a subscriber the remote party shall be able to interrogate her own Follow Me data stored in the network.

As an operator's option additional information (such as passwords) for interrogation may be required from the subscriber. The registration procedure shall transport this information from the subscriber to the network of the remote party. This information shall be coded as a USSD string with a length not exceeding 30 characters.

All the messages between MS and the mobile network and internal to the mobile network, which are used for control of Follow Me, are USSD Phase 2 messages.

MS shall behave as indicated in the Information flow as indicated in 3G TS 23.094, Figure 4.1.

#### References

3G TS 22.094 clauses 6.8, 7.3

3G TS 23.094 clauses 4.1, 4.2, 4.4

3G TS 24.090 clause 6.1

### 31.15.2.2 Test purpose

To check that the MS (as initiating subscriber or remote party) correctly requests a supplementary service transaction for interrogation of FM in CHANNEL REQUEST message and in the subsequent CM SERVICE REQUEST;

To check that the MS sends a REGISTER message using USSD version 2 and containing the FM-request control message for interrogation;

To check that upon receipt of the result or the error of the operation (in a RELEASE COMPLETE message), the MS provides the appropriate user indication (as described by the manufacturer).

### 31.15.2.3 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS is in MM-state "idle, updated" with valid TMSI and CKSN. The MS is registered to FM with respect to a remote party B.

#### Related PICS/PIXIT Statement(s)

Type of MS (GSM 450, GSM480, GSM 700, GSM 850, P-, E-, R-GSM900, DCS 1800 or PCS 1900)

Support FM

Way to activate the interrogation of FM

Description of display of the FM answers from the network.

### Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI.

### Test procedure

MS is registered to FM.

By means of appropriate MMI functions, the user requests interrogation of FM for a remote number. Upon receipt of the REGISTER message, SS answers with the RELEASE COMPLETE message with an unsuccessful FM-result in a facility information element. Check that the MS provides the appropriate user indication (was described by the manufacturer). Then SS transaction is released. This procedure is executed for all possible error values.

The user requests interrogation of FM for another remote subscriber. Upon receipt of the operation (in a REGISTER message), SS answers with a RELEASE COMPLETE message with a successful FM-response information. Check that the MS provides the appropriate user indication (as described by the manufacturer). The SS transaction is released.

### Maximum Duration of Test

2 minutes

### Expected Sequence

Test steps 1 to 10 are executed for k=1 to 6 with respectively the following error values:

1. Illegal interaction with incoming barring
2. Unauthorised request
3. Unknown remote party
4. FM not subscribed
5. FM not registered to remote party
6. Conflicting situation with other supplementary services

| Step | Direction | Message | Comments |
|---|---|---|---|
| 0 | MS | | The MS is in idle mode. MS is registered to FM with respect to a remote party B. |
| 1 | MS | | The MS is made to initiate an interrogation of FM of remote subscriber other than B. |

## 31.15.3 Follow Me (FM) / Erasure

### 31.15.3.1 Conformance requirement

A previous FM registration can be erased in either of the following ways:

a) The initiating subscriber can specifically erase her previous registration with an appropriate control procedure.

b) In case the remote party corresponds to a subscriber the remote party can erase any previous registration with an appropriate control procedure.

c) The FM service supervisor can erase any previous registration to any remote party with an appropriate control procedure (forced erasure).

The subscriber who initiates the FM erase request shall be informed of the outcome of the request by the network.

As an operator's option additional information (such as passwords) for erasure may be required from the subscriber. The registration procedure shall transport this information from the subscriber to the network of the remote party. This information shall be coded as a USSD string with a length not exceeding 30 characters.

MS shall behave as indicated in the Information flow as indicated in 3G TS 23.094, Figure 4.1.

All the messages between MS and the mobile network and internal to the mobile network, which are used for control of Follow Me, are USSD Phase 2 messages.

Description of display of the FM answers from the network.

#### Foreseen final state of the MS

The MS is in MM-state "idle, updated" with valid TMSI.

### Test procedure

MS is registered to FM.

By means of appropriate MMI functions, the user requests erasure of FM for a remote number. Upon receipt of the REGISTER message, SS answers with the RELEASE COMPLETE message with an unsuccessful FM-result information. Check that the MS provides the appropriate user indication (as described by the manufacturer). Then SS transaction is released. This procedure is executed for all possible error values.

The user requests erasure of FM for another remote subscriber. Upon receipt of the operation (in a REGISTER message), SS answers with a RELEASE COMPLETE message with a successful FM-response information. Check that the MS provides the appropriate user indication (as described by the manufacturer). The SS transaction is released.

By means of appropriate MMI functions, the user requests forced-erasure of FM for a remote number. Upon receipt of the REGISTER message, SS answers with the RELEASE COMPLETE message with an unsuccessful FM-result information. Check that the MS provides the appropriate user indication (which is to be described by the manufacturer). Then SS transaction is released. This procedure is executed for all possible error values.

The user requests forced-erasure of FM for another remote subscriber. Upon receipt of the operation (in a REGISTER message), SS answers with a RELEASE COMPLETE message with a successful FM-response information. Check that the MS provides the appropriate user indication (as described by the manufacturer). The SS transaction is released.

### Maximum Duration of Test

2 minutes

### Expected Sequence

Test steps 1 to 10 and 25 to 34 are executed for k=1 to 10 with respectively the following error values:

1. Illegal interaction with incoming barring
2. Unauthorised request
3. Unknown remote party
4. FM not subscribed
5. FM not registered to remote party
6. Remote party not registered to this MSISDN
7. Unauthorised changes to remote party
8. Illegal interaction with call barring
9. Insufficient information
10. Inconsistent with registration

| Step | Direction | Message | Comments |
|---|---|---|---|

# 32 Testing of speech transcoding functions

The test sequences for speech transcoding and DTX tests, both for input and required output, are defined in GSM 06.10, section 5, and GSM 06.32, section 4 for the full rate speech codec. For the half rate speech codec the test sequences are defined in GSM 06.20, section 5 and GSM 06.42 section 7. They are available on floppy disks in IBM/AT MS-DOS format from ETSI publications department.

The Digital Audio Interface (DAI) is described in 36.4.

NOTE: For a definition of the term "traffic frame" used in this chapter, refer to GSM 06.32 and GSM 06.42.

## 32.1 Full Rate Downlink speech transcoding

### 32.1.1 Definition and applicability

Downlink speech transcoding transforms the 13 kbit/s net bit stream obtained by channel decoding the incoming bit stream from the air interface to 13 bit linear PCM.

The requirements and this test apply to all MS supporting TCH/FS.

### 32.1.2 Conformance requirement

The output bit stream from the speech transcoder shall be continuous and bit by bit exactly the same as the predefined output sequence (SEQ01.OUT, SEQ03.OUT, SEQ04.OUT and SEQ05.OUT).

GSM 06.01, 2; GSM 06.10, 5.2/5.2.2.

### 32.1.3 Test purpose

To verify that the speech transcoding of the MS can transform all predefined sequences (SEQ01.OUT, SEQ03.OUT, SEQ04.OUT and SEQ05.OUT) at 13 kbits/s level to 104 kbit/s (13 bit linear PCM at 8 kHz) level correctly.

### 32.1.4 Method of test

#### 32.1.4.1 Initial conditions

DTX is off.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech decoder/DTX functions (downlink)".

#### 32.1.4.2 Procedure

a) The SS resets the speech decoder of the MS via the DAI.

b) The SS sends test sequence SEQ01.COD at 13 kbit/s to the MS via the air interface after passing it through the SS channel encoder.

NOTE: These test sequence files contain 16 bit words for all speech encoded parameters and are justified as described in GSM 06.10 table 5.1. 76 words are used as input in a period of 20 ms.

c) The SS records the 104 kbit/s output bit stream from the MS on the digital audio interface.

d) The test is repeated using the test sequences SEQ03.COD, SEQ04.COD and SEQ05.COD.

### 32.1.5 Test requirements

The bit stream output shall be continuous and bit by bit exactly the same as the sequence given in the files SEQ01.OUT, SEQ03.OUT, SEQ04.OUT and SEQ05.OUT.

NOTE: These files contain 16 bit words of 13 bit linear PCM left justified.

# 32.2 Full Rate Downlink receiver DTX functions

## 32.2.1 Definition and applicability

The DTX receiver functions consist of a SID frame detector, comfort noise generator functions and lost frame substitution and muting functions.

The requirements and this test apply to all MS supporting TCH/FS.

## 32.2.2 Conformance requirement

1) The output level of the decoder has to be constant for an input signal consisting of identical speech frames.

   GSM 06.10.

2/3) When, after the first lost speech frame subsequent speech frames are lost, a muting technique shall be used that will gradually decrease the output level, resulting in the silencing of the output after a maximum of 320 ms. Speech frames with the FACCH flag set provoke a Bad Frame Indication (BFI = 1) and are hence regarded as lost speech frames.

   GSM 06.01, 6; GSM 06.11, 2.1/2.2/3 for requirement 2 (first part).

   GSM 06.01, 6; GSM 06.11, 2.1/2.2/3; GSM 06.31, 1.2.2/3.1.1 for requirement 3 (second part).

4/5) A valid SID-frame followed by a sequence of lost speech frames shall result in comfort noise generation with constant block amplitude parameters. Speech frames with the FACCH flag set provoke a Bad Frame Indication (BFI = 1) and are hence regarded as lost speech frames.

   GSM 06.01, 3/5; GSM 06.12, 3/3.1;

   GSM 06.31, 1.2.2/3.1/3.1.1/3.1.2 for requirement 4 (first part).

   GSM 06.01, 3/5/6; GSM 06.11, 2.1/2.2; GSM 06.12, 3/3.1;

   GSM 06.31, 1.2.2/3.1/3.1.1/3.1.2 for requirement 5 (second part).

6/7) An invalid SID-frame followed by a sequence of lost speech frames shall result in comfort noise generation, using the set of parameters from the last valid SID-frame. Speech frames with the FACCH flag set provoke a Bad Frame Indication (BFI = 1) and are hence regarded as lost speech frames.

   GSM 06.01, 3/5; GSM 06.12, 3/3.1;

   GSM 06.31, 1.2.2/3.1/3.1.1/3.1.2 for requirement 6 (first part).

   GSM 06.01, 3/5/6; GSM 06.11, 2.1/2.2; GSM 06.12, 3/3.1;

   GSM 06.31, 1.2.2/3.1/3.1.1/3.1.2 for requirement 7 (second part).

8) The energy of the output signal is controlled by the block amplitude parameter, xmaxc.

   GSM 06.10, 3.1.20/3.1.21/3.2.1;

9/10) The first SID-frame that is expected and not received shall be substituted by the last valid SID-frame and the procedure for valid SID-frames shall be applied. For the second lost SID-frame, a muting technique shall be used that will gradually decrease the output level, resulting in silencing the output after a maximum of 320 ms. Speech frames with the FACCH flag set provoke a Bad Frame Indication (BFI = 1) and are hence regarded as lost speech frames.

   GSM 05.08, 8.3; GSM 06.01, 6; GSM 06.11, 2.3/2.4;

   GSM 06.31, 1.2.2/3.1.1/3.1.2.

### 32.2.3 Test purpose

1) To verify that the signal energy at the output of the decoder is constant with a tolerance of +/- 3 dB if a sequence of identical speech frames is applied at the receiver input.

2) To verify that the muting function of the receiver is within the required limits if a sequence of lost speech frames is applied at the receiver input.

3) To verify that the muting function of the receiver is within the required limits if a sequence of speech frames with the FACCH flag set is applied at the receiver input.

4) To verify the function of comfort noise generation when a valid SID-frame is received followed by a sequence of lost speech frames. The signal energy at the output of the decoder shall be constant with a tolerance of +/- 3 dB.

5) To verify the function of comfort noise generation when a valid SID-frame is received followed by a sequence of speech frames with the FACCH flag set. The signal energy at the output of the decoder shall be constant with a tolerance of +/- 3 dB.

6) To verify the function of comfort noise generation when an invalid SID-frame is received followed by a sequence of lost speech frames. The signal energy at the output of the decoder shall be constant with a tolerance of +/- 3 dB.

7) To verify the function of comfort noise generation when an invalid SID-frame is received followed by a sequence of speech frames with the FACCH flag set. The signal energy at the output of the decoder shall be constant with a tolerance of +/- 3 dB.

8) To verify that the signal energy at the output of the decoder depends on the block amplitude xmaxc of the input frames if a sequence of speech frames is applied to the decoder. The signal energy at the output of the decoder shall be constant with a tolerance of +/- 3 dB.

9) To verify the SID-frame substitution and muting functions on the comfort noise, if two consecutive expected SID-frames are lost with the other frames being lost speech frames.

10) To verify the SID-frame substitution and muting functions on the comfort noise, if two consecutive expected SID-frames are lost with the other frames being speech frames with the FACCH flag set.

### 32.2.4 Method of test

#### 32.2.4.1 Initial conditions

Uplink DTX is off.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech decoder/DTX functions (downlink)".

#### 32.2.4.2 Procedure

a) The SS transmits coded "speech" traffic frames on the air interface after passing them trough the SS channel encoder. They contain a special test signal at 13 kbit/s as defined below. All traffic frames are identical with the exception of some frames which are SID frames as defined in GSM 06.32.

b) The energy of the PCM signal is evaluated (as a mean square average) at the digital audio interface of the MS at 104 kbit/s level (13 bit, 8 kHz linear PCM) and recorded for each block of 20 ms synchronized to the 20 ms speech frame structure.

c) The SS transmission of the TDMA frames of the TCH/FS on the air interface is ramped "on" and "off" on a traffic frame by traffic frame basis, taking into account the block diagonal interleaving scheme defined in GSM 05.03. The first traffic frame in step 1 occurs one frame after the window of the SACCH multiframe (TDMA frame 60 modulo 104), allocated for the SID frame (see GSM 05.02 and GSM 05.08). The SACCH will also be transmitted.

NOTE 1: 8 timeslots in 8 consecutive TCH/FS TDMA frames are seen as one traffic frame, and the next traffic frame starts in the middle of the previous one (i.e. after 4 TDMA frames of the previous one) due to the block diagonal interleaving scheme defined in GSM 05.03.

d) The special test frame is an encoded "speech" traffic frame of 260 bits obtained from white Gaussian noise band limited to 300 - 3 400 Hz. When repeated, the special test frame results in a humming sound with a fairly constant level when decoded, and is defined in table 32-1.

**Table 32-1: Table of special test traffic frame for receiver DTX tests**

| Encoded parameter: | Value: | | | |
|---|---|---|---|---|
| LARc(1) | 38 | | | |
| LARc(2) | 42 | | | |
| LARc(3) | 24 | | | |
| LARc(4) | 20 | | | |
| LARc(5) | 10 | | | |
| LARc(6) | 9 | | | |
| LARc(7) | 5 | | | |
| LARc(8) | 3 | | | |
| | Sub-block no: | | | |
| | 0 | 1 | 2 | 3 |
| Grid position (Mc) | 1 | 3 | 2 | 0 |
| Block amplitude (xmaxc) | 40 | 40 | 40 | 40 |
| LTP gain (Bc) | 0 | 0 | 0 | 0 |
| LTP lag (Nc) | 40 | 120 | 40 | 120 |
| RPE pulses (xmc) | | | | |
| - pulse no 1 | 4 | 6 | 6 | 6 |
| - pulse no 2 | 4 | 5 | 4 | 3 |
| - pulse no 3 | 2 | 1 | 3 | 4 |
| - pulse no 4 | 6 | 2 | 1 | 3 |
| - pulse no 5 | 3 | 6 | 4 | 1 |
| - pulse no 6 | 5 | 1 | 6 | 3 |
| - pulse no 7 | 5 | 2 | 5 | 5 |
| - pulse no 8 | 5 | 6 | 2 | 1 |
| - pulse no 9 | 1 | 3 | 4 | 4 |
| - pulse no 10 | 3 | 2 | 4 | 3 |
| - pulse no 11 | 5 | 5 | 4 | 5 |
| - pulse no 12 | 6 | 1 | 2 | 2 |
| - pulse no 13 | 1 | 3 | 4 | 3 |

NOTE 2: The signal energy of the decoded special test frame is controlled with the block amplitude parameter (xmaxc). Reducing xmaxc from 40 to 32 reduces the signal energy by 6 dB, and reducing xmaxc from 40 to 24 reduces the signal energy by 12 dB.

e) The sequence of traffic frames on the air interface is as follows:

e.1) 23 test frames "on".

e.2) 20 frames "off".

e.3) 20 test frames "on".

e.4) 1 SID frame followed by 6 frames "off", another identical SID frame and 23 frames "off". Except for the SID codeword, the SID frames are identical to the test frame.

e.5) 1 different SID frame, however with 2 to 15 errors inserted in the SID codeword, followed by 23 frames "off".

e.6) 20 test frames "on", but with the block amplitude parameter xmaxc = 24.

e.7) 1 SID frame followed by 50 frames "off". Except for the SID codeword, the SID frames are identical to the test frame.

e.8) The whole test is repeated, but the frames "off" are replaced by frames "on" with the FACCH flag set.

### 32.2.5 Test requirements

1) In step e.1), the signal energy shall be fairly constant within +/- 3 dB.
2) In step e.2), the signal energy shall decrease to less than -60 dBm within 17 frames.
3) In step e.4), comfort noise shall be generated. The same requirements as in step e.1) apply.
4) In step e.5), the same requirements as in step e.4) apply.
5) In step e.6), the same requirements as in step e.1) apply. However, the signal energy shall be 12 dB lower.
6) In step e.7), the signal energy shall be fairly constant within +/- 3 dB for 28 frames. Then the signal energy shall decrease to less than -60 dBm within 16 frames.
7) In step e.8), the same requirements as in all previous steps apply.

## 32.3 Full Rate Uplink speech transcoding

### 32.3.1 Definition and applicability

Uplink speech transcoding transforms 13 bit linear PCM to the 13 kbit/s net bit stream. This net bit stream is to be channel encoded for transmission on the air interface.

The requirements and this test apply to all MS supporting TCH/FS.

### 32.3.2 Conformance requirement

The output bit stream from the speech transcoder shall be bit by bit exactly the same as the predefined output sequence (SEQ01.OUT, SEQ02.OUT, SEQ03.OUT and SEQ04.OUT).

GSM 06.01, 2; GSM 06.10, 5.2/5.2.1.

### 32.3.3 Test purpose

To verify that the speech transcoder on the MS can transform all predefined sequences (SEQ01.INP, SEQ02.INP, SEQ03.INP and SEQ04.INP) at 104 kbit/s (13 bit linear PCM at 8 kHz) level to 13 kbit/s level correctly.

### 32.3.4 Method of test

#### 32.3.4.1 Initial conditions

Uplink DTX is off.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech encoder/DTX functions (uplink)".

#### 32.3.4.2 Procedure

a) The SS resets the speech decoder on the MS (see 36.4).
b) The SS sends a test sequence SEQ01.INP to the MS at 104 kbit/s level via the digital audio interface.

NOTE: These files contain 16 bit words for 13 bit linear PCM left justified. See also GSM 06.10 table 5.1.

c) The SS records the 13 kbit/s output bit stream obtained by channel decoding the incoming bit stream from the air interface.
d) The test is repeated using the test sequences SEQ02.INP, SEQ03.INP and SEQ04.INP.

### 32.3.5 Test requirements

The bit stream output shall be bit by bit exactly the same as the sequence given in the files SEQ01.COD, SEQ02.COD, SEQ03.COD and SEQ04.COD.

NOTE: These files contain 16 bit words of all the 76 parameters in a speech frame justified as in GSM 06.10 table 5.1. 76 codewords shall occur in a frame of 20 ms.

## 32.4 Full Rate Uplink transmitter DTX functions

### 32.4.1 Definition and applicability

The VAD/DTX transmitter functions consist of a Voice Activity Detector (VAD) and a surrounding Discontinuous Transmission (DTX) system introducing additional "speech" traffic frames on the air interface compared to those the VAD itself would classify as speech frames containing real speech. The additional traffic frames on the air are introduced due to:

1) A "hangover" period at the end of speech bursts in order to be certain that the traffic frames contain only noise and to evaluate the background acoustic noise characteristics when no real speech is present.

2) Special traffic frames (SID frames) added on the air at regular intervals containing only the evaluated background acoustic noise characteristics. These frames are used for generation of comfort noise in speaker silence periods on the receiving side.

The requirements and this test apply to all MS supporting TCH/FS.

### 32.4.2 Conformance requirement

The MS VAD and DTX function allows only those frames to be transmitted that are either marked with SP = 1 or that are properly positioned SID-frames.

GSM 05.08, 8.3; GSM 06.01, 3/4; GSM 06.31, 2.1/2.1.1/2.1.2; GSM 06.32, 1/2/2.1/2.2.8.

### 32.4.3 Test purpose

To verify that the combination of VAD and DTX operates correctly.

### 32.4.4 Method of test

#### 32.4.4.1 Initial conditions

A call is set up on a TCH/FS according to the generic call set-up procedure.

Uplink DTX is on.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech encoder/DTX functions (uplink)".

#### 32.4.4.2 Procedure.

a) The SS sends a test sequence SPEC_A1.INP of PCM samples, which are grouped into frames of 20 ms synchronized to the TDMA and traffic frame structure on the air interface, on the digital audio interface in the MS at 104 kbits/s (13 bit, 8 kHz linear PCM).

   The start of the test sequences is synchronized with the radio transmission on the air interface so that the first traffic frame on the air occurs just after the traffic frame allocated for the SID frame (TDMA frame 56 modulo 104, see GSM 05.02 and GSM 05.08).

NOTE: 8 timeslots in 8 consecutive TCH/FS TDMA frames are seen as one traffic frame and the next traffic frame starts in the middle of the previous one (i.e. after 4 TDMA frames of the previous one) due to the block diagonal interleaving scheme defined in GSM 05.03.

b) The SS detects whether or not there is any power transmitted over the radio path on a timeslot basis excluding SACCH frames. The speech frame by speech frame on/off transmission (on = 1) is recorded.

c) The test is repeated for all test sequences *.INP described in GSM 06.32 section 4.

#### 32.4.5 Test requirements

1) In step b), the traffic frame on/off sequence recorded shall be bit exact like the sequence of SP flags stored as bit 15 of LAR(2) on the respective reference files *.COD described in GSM 06.32, with the following exceptions:

   1.1) The occurrence of a SID frame in its allowed window within the SACCH multiframe as defined in GSM 05.08.

   1.2) The occurrence of a SID frame after 1 or more real speech frames consecutively transmitted on the air.

## 32.5 Full Rate Speech channel transmission delay

### 32.5.1 Definition and applicability

The total transmission delay within the various elements of a GSM system are specified as round trip delays. For the MS this would be equivalent to applying an RF equivalent of a speech signal to the MS receiver, closing an acoustic path from the ERP to the MRP, detecting the corresponding RF signal at the MS transmitter output and measuring the time interval between the signal originally fed to the MS receiver and that transmitted by the MS transmitter.

This simple approach cannot be demonstrated to be accurate due to the inherent non linear characteristic of the speech transcoder. The overall delay therefore is split into four identifiable and measurable delays. The delays are respectively:

- the downlink delay from RF input to DAI output,
- DAI output to ERP,
- MRP to DAI output, and
- DAI to uplink RF output.

Each delay is defined and its method of test described in the following sections.

The requirements and this test apply to all MS supporting TCH/FS.

### 32.5.2 Conformance requirement

The overall speech channel transmission delay shall be less than 143,9 ms.

GSM 03.50, section 3.3.6.1.

### 32.5.3 Test purpose

To verify that the round trip delay, of a speech channel for a MS, which consists of the sum of:

- the downlink delay from RF input to DAI output,
- DAI output to ERP,
- MRP to DAI output, and
- DAI to uplink RF output

meets the requirements when using the predefined test sequences SEQ01.COD, SEQ03.COD, SEQ04.COD and SEQ05.COD.

## 32.5.4 Downlink processing delay

### 32.5.4.1 Definition and applicability

The downlink processing delay is the delay from the first bit of a speech block transmitted from the RF output of the SS up to the last bit of the corresponding speech block received at the DAI on the output of the speech transcoder.

The requirements and this test apply to all MS supporting TCH/FS.

### 32.5.4.2 Method of test

#### 32.5.4.2.1 Initial conditions

DTX is off.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech decoder/DTX functions (downlink)".

#### 32.5.4.2.2 Procedure

a) The test set up is that described in 32.1 for downlink speech transcoding.

b) The SS transmits one of the test patterns SEQ01.COD, SEQ03.COD, SEQ04.COD or SEQ05.COD to the MS.

c) The SS measures for each speech block it transmits the time between the first bit at the air interface and the last bit of that speech block on the DAI. This difference is the delay measured.

d) Step c) is repeated 20 times and the maximum delay measured in ms is the downlink processing delay TDP.

NOTE: This is to account for the fact that the processing time may not be constant.

## 32.5.5 Downlink coding delay

### 32.5.5.1 Definition and applicability

The downlink coding delay is defined as the delay between the digital representation of an acoustic signal on the DAI and the corresponding acoustic signal at the ERP.

The requirements and this test apply to all MS supporting TCH/FS.

### 32.5.5.2 Method of test

#### 32.5.5.2.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

The handset is mounted in the LRGP (see annex 1 of CCITT recommendation P.76) and the earpiece is sealed to the knife edge of the artificial ear conforming to CCITT recommendation P.51.

#### 32.5.5.2.2 Procedure

a) The SS generates on the DAI a digital representation of a sine wave with a frequency of 1 000 Hz.

b) The SS measures the "phase shift" $\varnothing_1$, in the range of 0 to 360 degrees, between the equivalent sine wave generated at the DAI and the sine wave at the input to the artificial ear.

c) The frequency is increased to 1100 Hz and the resulting phase shift $\varnothing_2$ noted.

d) The downlink coding delay TDC is calculated from either:

$TDC = (\varnothing_2 - \varnothing_1)/36$ ms for $\varnothing_2 > \varnothing_1$

or

$TDC = (\varnothing_2 + 360 - \varnothing_1)/36$ ms for $\varnothing_2 < \varnothing_1$

## 32.5.6 Uplink processing delay

### 32.5.6.1 Definition and applicability

The uplink processing delay is the delay from the first bit of a speech block on the DAI to the last bit of that speech block being transmitted on the air interface of the MS.

The requirements and this test apply to all MS supporting TCH/FS.

### 32.5.6.2 Method of test

#### 32.5.6.2.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech encoder/DTX functions (uplink)".

#### 32.5.6.2.2 Procedure

a) The test set up is that described in 32.3 for uplink speech transcoding.

b) The SS sends one of the test patterns SEQ01.INP, SEQ03.INP, SEQ04.INP or SEQ05.INP to the DAI of the MS.

c) The SS measures the time between the first bit on the DAI, and the last transmitted bit of the block at the air interface for each speech block the SS sends on the DAI. This time difference is the delay measured.

d) Step c) is repeated 20 times. The maximum delay measured in ms is the uplink coding delay TUP.

NOTE: This is to account for the fact that the processing time may not be constant.

## 32.5.7 Uplink coding delay

### 32.5.7.1 Definition and applicability

The uplink coding delay is defined as the delay between an acoustic signal at the MRP and the digital representation of that signal on the DAI.

The requirements and this test apply to all MS supporting TCH/FS.

#### 32.5.7.2 Method of test

##### 32.5.7.2.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

The handset is mounted in the LRGP (see annex 1 of CCITT recommendation P.76) and the earpiece is sealed to the knife edge of the artificial ear conforming to CCITT recommendation P.51.

##### 32.5.7.2.2 Procedure

a) The SS generates an acoustic signal at the artificial mouth of the LRGP, being a pure sine wave with a frequency of 1 000 Hz.

b) The SS measures the "phase shift" $\varnothing_1$, in the range of 0 to 360 degrees, between the signal at the MRP and its digital representation on the DAI.

c) The SS set the generated frequency to 1 100 Hz and measures the resulting phase shift $\varnothing_2$.

d) The uplink coding delay TUC is calculated from either:

$TUC = (\varnothing_2 - \varnothing_1)/36$ ms for $\varnothing_2 > \varnothing_1$

or

$TUC = (\varnothing_2 + 360 - \varnothing_1)/36$ ms for $\varnothing_2 < \varnothing_1$

### 32.5.8 Test requirement

The sum of the delays {TDP + TDC + TUP + TUC} shall be less than 144,9 ms.

NOTE 1: This limit includes an allowance of 4*0,25 ms delay from the DAI to the MS transmission path.

NOTE 2: No allowances have been made for any delays within the measurement system. These must either be calibrated out or subtracted from the individual delays before performing the sum above.

## 32.6 Half Rate Downlink speech transcoding

### 32.6.1 Definition and applicability

Downlink speech transcoding transforms the 5,6 kbit/s net bit stream obtained by channel decoding the incoming bit stream from the air interface to 104 kbit/s (13 bit linear PCM at 8 kHz) level.

The requirements and this test apply to all MS supporting TCH/HS.

### 32.6.2 Conformance requirement:

The output bit stream from the speech transcoder shall be continuous and bit by bit exactly the same as the predefined output sequences contained in SEQ01.OUT, SEQ02.OUT, SEQ03.OUT and SEQ04.OUT.

GSM 06.02, 5; GSM 06.20.

### 32.6.3 Test purpose:

To verify that the speech transcoder of the MS can transform all the predefined sequences (SEQ01.DEC, SEQ02.DEC, SEQ03.DEC and SEQ04.DEC) at 5,6 kbit/s level to 104 kbit/s (13 bit linear PCM at 8 kHz) level correctly.

### 32.6.4 Method of test

#### 32.6.4.1 Initial conditions

Uplink DTX is off.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech decoder/DTX functions (downlink)".

Frequency hopping is on, where the BCCH carrier is part of the hopping sequence. Frequency hopping shall be performed over four carriers using random frequency hopping. Downlink power control shall be activated and a difference of 30 dB between the level of the BCCH carrier and the other carriers adjusted.

NOTE: Frequency hopping is used to ensure that the MS can cope with the reception of bursts (on the BCCH carrier) that have a power level that is different from the rest of the bursts.

#### 32.6.4.2 Procedure

a) The SS sends a reset pulse to the MS on the digital audio interface. This reset pulse will start the clock output of the MS at 104 kHz (pin 24 of the DAI).

b) The SS sends test sequence SEQ01.DEC at 5,6 kbit/s to the MS via the air interface after passing it through the SS channel encoder. The speech decoder of the MS is reset by the special reset sequence which is at the beginning of the test sequence.

c) The SS records the 104 kbit/s output bit stream from the MS on the digital audio interface. The recording shall be triggered by the reception of the encoder homing frame. The encoder homing frame itself shall not be recorded.

d) The test is repeated using test sequences SEQ02.DEC, SEQ03.DEC and SEQ04.DEC.

### 32.6.5 Test requirement

The bit stream output shall be continuous and bit by bit exactly the same as the sequence describing the speech data contained in the files SEQ01.OUT, SEQ02.OUT, SEQ03.OUT and SEQ04.OUT. The two encoder homing frames at the beginning of each test sequence *.OUT shall be disregarded for this comparison.

## 32.7 Half Rate Downlink receiver DTX functions

### 32.7.1 Definition and applicability

The DTX receiver functions consist of a SID frame detector, comfort noise generator functions and lost frame substitution and muting functions.

The requirements and this test apply to all MS supporting TCH/HS.

### 32.7.2 Conformance requirement

The output bit stream from the speech transcoder shall be continuous and bit by bit exactly the same as the predefined output sequences contained in DTX*.OUT described in GSM 06.07 subclause 7.

GSM 06.02, 6/8; GSM 06.22; GSM 06.41.

### 32.7.3 Test purpose

To verify that the MS generates comfort noise correctly.

### 32.7.4 Method of test

#### 32.7.4.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech decoder/DTX functions (downlink)".

Frequency Hopping is on, where the BCCH carrier is part of the hopping sequence. Frequency Hopping shall be done over four carriers using random Frequency Hopping.

NOTE: Frequency Hopping is used to ensure that the MS can cope with the reception of dummy bursts (on the BCCH frequency) during DTX.

#### 32.7.4.2 Procedure

a) The SS sends a reset pulse to the MS on the digital audio interface. This reset pulse will start the clock output of the MS at 104 kHz (pin 24 of the DAI).

b) The SS sends test sequence DTX01.DEC at 5,6 kbit/s to the MS via the air interface after passing it through the SS channel encoder. The speech decoder of the MS will be reset by the special reset sequence which is at the beginning of the test sequence.

c) The SS transmission of the TDMA frames of the TCH/HS on the air interface is ramped "on" and "off" on a traffic frame by traffic frame basis, taking into account the block diagonal interleaving scheme defined in GSM 05.03. The first traffic frame in step b occurs one frame after the window of the SACCH multiframe (TDMA frame 0 or 52 modulo 104 for subchannel 0 and TDMA frame 1 or 53 modulo 104 for subchannel 1), allocated for the SID frame (see GSM 05.02 and GSM 05.08). The SACCH will also be transmitted.

d) The information whether to ramp the transmitter of the SS "on" or "off" is derived from the sequence of SP-flags contained in the file DTX01.COD (see file format description in GSM 06.07 subclause 5 for the position of the SP-flag).

e) The SS records the 104 kbit/s output bit stream from the MS on the digital audio interface. The recording shall be triggered by the reception of the encoder homing frame. The encoder homing frame itself is not recorded.

f) The test is repeated using test sequences *.DEC described in GSM 06.07 subclause 7.

### 32.7.5 Test requirement

The bit stream output shall be continuous and bit by bit exactly the same as the sequence describing the speech data contained in the files DTX*.OUT described in GSM 06.07 subclause 7. The two encoder homing frames at the beginning of each test sequence *.OUT shall be disregarded for this comparison.

## 32.8 Half Rate Uplink speech transcoding

### 32.8.1 Definition and applicability

Uplink speech transcoding transforms 104 kbit/s (13 bit linear PCM at 8 kHz) level to the 5,6 kbit/s net bit stream. This net bit stream is to be channel encoded for transmission on the air interface.

The requirements and this test applies to all MS supporting TCH/HS.

### 32.8.2 Conformance requirement

The output bit stream from the speech transcoder shall be bit by bit exactly the same as the predefined sequences contained in SEQ01.COD, SEQ02.COD and SEQ03.COD described in GSM 06.07 subclause 6.

GSM 06.02, 5; GSM 06.20.

### 32.8.3 Test purpose

To verify that the speech transcoder of the MS can transform all the predefined sequences SEQ01.INP, SEQ02.INP and SEQ03.INP at 104 kbit/s (13 bit linear PCM at 8 kHz) level to 5,6 kbit/s level correctly.

### 32.8.4 Method of test

#### 32.8.4.1 Initial conditions

Uplink DTX is off.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech encoder/DTX functions (uplink)".

Frequency hopping is on.

#### 32.8.4.2 Procedure

a) The SS sends a reset pulse to the MS on the digital audio interface. This reset pulse will start the clock output of the MS at 104 kHz (pin 24 of the DAI).

b) The SS synchronizes the input of the test sequences via the digital audio interface to the framing of the MS in the uplink. This can be done in two steps as follows:

b.1) The SS sends to the MS at 104 kbit/s level via the digital audio interface 13 triplets of input frames, each triplet consisting of 480 samples. The 480 samples of one triplet shall all be identical. The 13 bits of one sample shall all be set to "zero" except for one which is set to "one". The position of the bit within the 13 bits of a sample that is set to "one" shall vary in such a way, that all possible 13 positions are exercised within the 13 triplets of input frames. An example for such a sequence is given in test sequence BITSYNC.INP described in GSM 06.07 subclause 8. The SS records the 5,6 kbit/s output bit stream obtained by channel decoding the incoming bit stream from the air interface. As soon as the decoder homing frame is detected at the output, the framing of the MS with respect to the 13 bit long input words is known by looking at the corresponding input frame that has caused the decoder homing frame at the output.

NOTE: The encoder homing frame consists of 160 identical samples, each 13 bit long left justified, with the least significant bit set to "one" and all other bits set to "zero" (0008 hex). The speech encoder will go to its predefined home state at the end of the first received encoder homing frame. Consecutive encoder homing frames will produce the decoder homing frame at the output of the speech encoder.

b.2) Synchronized to the 13 bit framing of the MS, the SS now sends test sequence SEQSYNC.INP described in GSM 06.07 subclause 8 to the MS at 104 kbit/s level via the digital audio interface. The SS records the 5,6 kbit/s output bit stream obtained by channel decoding the incoming bit stream from the air interface. The recording shall be triggered by the reception of the decoder homing frame. By comparing the first recorded frame that is not a decoder homing frame with the 160 possible output frames contained in sequences SYNC*.COD, the offset of the input to the 20 ms framing of the MS is known.

c) Synchronized to the 20 ms framing of the MS, the SS sends a test sequence SEQ01.INP to the MS at 104 kbit/s level via the digital audio interface. The speech encoder of the MS is reset by the special homing sequence which is at the beginning of the test sequence.

d) The SS records the 5,6 kbit/s output bit stream obtained by channel decoding the incoming bit stream from the air interface. The recording shall be triggered by the reception of the decoder homing frame. The decoder homing frame itself is not recorded.

e) The test is repeated using test sequences SEQ02.INP and SEQ03.INP.

### 32.8.5 Test requirements

The bit stream output shall be bit by bit exactly the same as the sequences describing the speech parameters contained in the files SEQ01.COD, SEQ02.COD and SEQ03.COD. The two decoder homing frames at the beginning of each test sequence *.COD shall be disregarded for this comparison.

# 32.9 Half Rate Uplink transmitter DTX functions

## 32.9.1 Definition and applicability

The VAD/DTX transmitter functions consist of a Voice Activity Detector (VAD) that inhibits the transmitter during speech pauses, and a surrounding Discontinuous Transmission (DTX) system introducing Silence Descriptor (SID) frames on the air interface.

The requirements and this test apply to all MS supporting TCH/HS.

## 32.9.2 Conformance requirement

The MS VAD and DTX function allow only those frames to be transmitted that are either properly positioned SID-frames, SACCH-frames or frames marked with SP-flag = 1.

For the transmitted frames, the output bit stream from the speech transcoder shall be bit by bit exactly the same as the predefined sequences contained in DTX*.COD described in GSM 06.07 subclause 6.

GSM 05.08, 8.3; GSM 06.02, 6/7; GSM 06.41; GSM 06.42.

## 32.9.3 Test purpose

To verify that the combination of VAD and DTX operates correctly.

## 32.9.4 Method of test

### 32.9.4.1 Initial conditions

Uplink DTX is on.

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech encoder/DTX functions (uplink)".

Frequency Hopping is on.

### 32.9.4.2 Procedure

a) The SS sends a reset pulse to the MS on the digital audio interface. This reset pulse will start the clock output of the MS at 104 kHz (pin 24 of the DAI).

b) The SS synchronizes the input of the test sequences via the digital audio interface to the framing of the MS in the uplink. This can be done in two steps as follows:

b.1) The SS sends to the MS at 104 kbit/s level via the digital audio interface 13 triplets of input frames, each triplet consisting of 480 samples. The 480 samples of one triplet shall all be identical. The 13 bits of one sample shall all be set to "zero" except for one which is set to "one". The position of the bit within the 13 bits of a sample that is set to "one" shall vary in such a way, that all possible 13 positions are exercised within the 13 triplets of input frames. An example for such a sequence is given in test sequence BITSYNC.INP described in GSM 06.07 subclause 8. The SS records the 5,6 kbit/s output bit stream obtained by channel decoding the incoming bit stream from the air interface. As soon as the decoder homing frame is detected at the output, the framing of the MS with respect to the 13 bit long input words is known by looking at the corresponding input frame that has caused the decoder homing frame at the output.

NOTE: The encoder homing frame consists of 160 identical samples, each 13 bit long left justified, with the least significant bit set to "one" and all other bits set to "zero" (0008 hex). The speech encoder will go to its predefined home state at the end of the first received encoder homing frame. Consecutive encoder homing frames will produce the decoder homing frame at the output of the speech encoder.

b.2) Synchronized to the 13 bit framing of the MS, the SS now sends test sequence SEQSYNC.INP described in GSM 06.07 subclause 8 to the MS at 104 kbit/s level via the digital audio interface. The SS records the 5,6 kbit/s output bit stream obtained by channel decoding the incoming bit stream from the air interface. The recording shall be triggered by the reception of the decoder homing frame. By comparing the first recorded frame that is

not a decoder homing frame with the 160 possible output frames contained in sequences SYNC*.COD, the offset of the input to the 20 ms framing of the MS is known.

c) The SS sends test sequence DTX01.INP of PCM samples described in GSM 06.07 subclause 7 on the digital audio interface in the MS at 104 kbit/s (13 bit linear PCM at 8 kHz). The speech encoder of the MS will be reset by the special homing sequence which is at the beginning of the test sequence.

d) The start of the test sequence is synchronized with the radio transmission on the air interface so that the first traffic frame on the air caused by the first encoder homing frame in the test sequence occurs just after the traffic frame allocated for the SID frame (TDMA frame 0 or 52 modulo 104 for subchannel 0 and TDMA frame 1 or 53 modulo 104 for subchannel 1), allocated for the SID frame (see GSM 05.02 and GSM 05.08).

e) The SS detects whether or not there is any power transmitted over the radio path on a time slot basis excluding SACCH frames. The speech frame by speech frame on/off transmission (on = 1) is calculated and recorded. The recording shall be triggered by the reception of the decoder homing frame. The flag marking the decoder homing frame itself is not recorded.

f) The SS records the 5,6 kbit/s output bit stream obtained by channel decoding the incoming bit stream from the air interface. The recording shall be triggered by the reception of the decoder homing frame. The decoder homing frame itself is not recorded.

g) The test is repeated for all test sequences DTX*.INP described in GSM 06.07 subclause 7.

#### 32.9.5 Test requirements

1) The bit stream recorded in step e) shall be continuous and bit by bit exactly the same as the sequence of SP-flags contained in the files DTX*.COD (see file format description in GSM 06.07 subclause 5 for the position of the SP-flag), except for the bits marking those frames that are SID frames scheduled for transmission according to GSM 06.41. The first two frames in the reference files *.COD shall be disregarded for this comparison.

2) The bit stream recorded in step f) shall be continuous and bit by bit exactly the same as the sequence describing the speech parameters contained in the files *.COD described in GSM 06.07 subclause 7, except for the bits of the speech frames marked with SP-flag=0. The two decoder homing frames at the beginning of each test sequence *.COD shall be disregarded for this comparison.

## 32.10 Half Rate Speech channel transmission delay

### 32.10.1 Definition and applicability

The total transmission delay within the various elements of a GSM system are specified as round trip delays. For the MS this would be equivalent to applying an RF equivalent of a speech signal to the MS receiver, closing an acoustic path from the ERP to the MRP, detecting the corresponding RF signal at the MS transmitter output and measuring the time interval between the signal originally fed to the MS receiver and that transmitted by the MS transmitter.

This simple approach cannot be demonstrated to be accurate due to the inherent non linear characteristic of the speech transcoder. The overall delay therefore is split into four identifiable and measurable delays. The delays are respectively:

- the downlink delay from RF input to DAI output,
- DAI output to ERP,
- MRP to DAI output, and
- DAI to uplink RF output.

Each delay is defined and its method of test described in the following sections.

The requirements and this test applies to all MS supporting TCH/HS.

### 32.10.2 Conformance requirement

The overall speech channel transmission delay shall be less than 143,9 ms.

GSM 03.50 section 3.3.6.2.

## 32.10.3 Test purpose

To verify that the round trip delay of a speech channel for a MS which consists of the sum of:

- the downlink delay from RF input to DAI output,
- DAI output to ERP,
- MRP to DAI output, and
- DAI to uplink RF output

meets the requirements when using the predefined test sequences SEQ01.INP and SEQ01.DEC.

## 32.10.4 Downlink processing delay

### 32.10.4.1 Definition and applicability

The downlink processing delay is the delay from the first bit of a speech block transmitted from the RF output of the SS up to the last bit of the corresponding speech block received at the DAI on the output of the speech transcoder.

The requirements and this test apply to all MS supporting TCH/HS.

### 32.10.4.2 Method of test

#### 32.10.4.2.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech decoder/DTX functions (downlink)".

#### 32.10.4.2.2 Procedure

a) The test set up is that described in section 32.6.4.2 for downlink speech transcoding.

b) The SS transmits the test pattern SEQ01.DEC described in GSM 06.07 subclause 6 to the MS.

c) The SS measures for each speech block it transmits the time between the first bit at the air interface and the last bit of that speech block on the DAI. This time difference is the delay measured.

d) Step c) is repeated 20 times and the maximum delay measured in ms is the downlink processing delay TDP.

NOTE: This is to account for the fact that the processing time may not be constant.

## 32.10.5 Downlink coding delay

### 32.10.5.1 Definition and applicability

The downlink coding delay is defined as the delay between the digital representation of an acoustic signal on the DAI and the corresponding acoustic signal at the ERP.

The requirements and this test applies to all MS supporting TCH/HS.

### 32.10.5.2 Method of test

#### 32.10.5.2.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of acoustic devices and A/D & D/A".

The handset is mounted in the LRGP (see annex 1 of CCITT recommendation P.76) and the earpiece is sealed to the knife edge of the artificial ear conforming to CCITT recommendation P.51.

#### 32.10.5.2.2 Procedure

a) The SS generates on the DAI a digital representation of a sine wave with a frequency of 1 000 Hz.

b) The SS measures the "phase shift" $\varnothing_1$, in the range of 0 to 360 degrees, between the equivalent sine wave generated at the DAI and the sine wave at the input to the artificial ear.

c) The frequency is increased to 1 100 Hz and the resulting phase shift $\varnothing_2$ noted.

d) The downlink coding delay TDC is calculated from either:

$TDC = (\varnothing_2 - \varnothing_1)$ ms/36 for $\varnothing_2 > \varnothing_1$

or

$TDC = (\varnothing_2 + 360 - \varnothing_1)$ ms/36 for $\varnothing_2 < \varnothing_1$

## 32.10.6 Uplink processing delay

### 32.10.6.1 Definition and applicability

The uplink processing delay is the delay from the first bit of a speech block on the DAI to the last bit of that speech block being transmitted on the air interface of the MS.

The requirements and this test apply to all MS supporting TCH/HS.

### 32.10.6.2 Method of test

#### 32.10.6.2.1 Initial conditions

The DAI of the MS is connected to the SS and is set to the operating mode "Test of speech encoder/DTX functions (uplink)".

#### 32.10.6.2.2 Procedure

a) The test set up is that described in section 32.8.4.2 for uplink speech transcoding.

b) The SS sends one of the test patterns SEQ01.INP described in GSM 06.07 subclause 6 to the DAI of the MS.

c) The SS measures the time between the first bit on the DAI, and the last transmitted bit of the block at the air interface for each speech block the SS sends on the DAI. This time difference is the delay measured.

d) Step c) is repeated 20 times. The maximum delay measured in ms is the uplink coding delay TUP.

NOTE: This is to account for the fact that the processing time may not be constant.

## 32.10.7 Uplink coding delay

### 32.10.7.1 Definition and applicability

The uplink coding delay is defined as the delay between an acoustic signal at the MRP and the digital representation of that signal on the DAI.

The requirements and this test applies to all MS supporting TCH/HS.

32.10.7.2 Method of test

32.10.7.2.1 Initial conditions

The handset is mounted in the LRGP (see annex 1 of CCITT recommendation P.76) and the earpiece is sealed to the knife edge of the artificial ear conforming to CCITT recommendation P.51.

32.10.7.2.2 Procedure

a) The SS generates an acoustic signal at the artificial mouth of the LRGP, being a pure sine wave with a frequency of 1 000 Hz.

b) The SS measures the "phase shift" $\varnothing_1$, in the range of 0 to 360 degrees, between the signal at the MRP and its digital representation on the DAI.

c) The SS sets the generated frequency to 1 100 Hz, and measures the resulting phase shift $\varnothing_2$.

d) The uplink coding delay TUC is calculated from either:

$TDC = (\varnothing_2 - \varnothing_1)$ ms/36 for $\varnothing_2 > \varnothing_1$

or

$TDC = (\varnothing_2 + 360 - \varnothing_1)$ ms/36 for $\varnothing_2 < \varnothing_1$

32.10.8 Test requirement

The sum of the delays TDP, TDC, TUP, and TUC shall be less than 144,9 ms.

NOTE: This limit includes an allowance of 4*0,25 ms delay from the DAI to the MS transmission path.

# 32.11 Intra cell channel change from a TCH/HS to a TCH/FS

32.11.1 Definition and applicability

Dual rate MSs support an intra cell channel change from a TCH/HS to a TCH/FS by switching the Speech and channel codec used from HR to FR.

The requirements and this test apply to all MS supporting TCH/HS.

32.11.2 Conformance requirement:

1) When commanded to perform an intra cell channel change from a TCH/HS to a TCH/FS, the MS shall switch channels from HR to FR. The maximum time allowed for the MS to perform this switch in rates is 20 ms.

   GSM 05.10, section 6.8.

2) For an intra cell channel change, the time between the end of the last complete speech or data frame or message block sent on the old channel and the time the MS is ready to transmit on the new channel shall be less than 20 ms.

   GSM 05.10, section 6.8.

32.11.3 Test purpose:

1) To verify that the MS encodes speech correctly after performing an intra cell channel change from a TCH/HS to a TCH/FS.

2) To verify that the MS, when commanded to perform an intracell channel change to a new ARFCN and/or timeslot number within the same cell, if the starting time is not used in the ASSIGNMENT COMMAND, is

ready to transmit on the new channel within 20 ms of the last complete speech frame or message block sent on the old channel.

### 32.11.4 Method of test

#### 32.11.4.1 Initial conditions

Uplink DTX is off.

The SS sets up a call according to the generic call set up procedure on a HR channel in the low ARFCN range on timeslot 1.

#### 32.11.4.2 Procedure

a) The SS records the sequence of BFI flags obtained by channel decoding the incoming bit stream from the uplink air interface using the HR channel decoder on the old channel and at the same time records the sequence of BFI flags obtained by channel decoding the incoming bit stream from the uplink air interface using the FR channel decoder on the channel to which the channel change will take place.

b) The SS sends an ASSIGNMENT COMMAND to the MS allocating a FR channel in the high ARFCN range on timeslot 2, and with a power command of 7. These old and new carriers have a relative frequency tolerance of 0, and a relative timing tolerance of 1/4 bit.

c) The time at which the sequence of BFI flags at the output of the HR channel decoder performs the first transition from 0 to 1 is registered ($t_1$). In case of occurrence of speech frames after an RR frame, the next transition of the BFI flag from 0 to 1 after the reception of the RR frame is defined as $t_1$.

d) The time values at which the sequence of BFI flags at the output of the FR channel decoder performs transitions from 1 to 0 are registered. The time $t_2$ is defined as the time where the BFI flag at the output of the FR channel decoder toggles from 1 to 0 due to a correctly received speech traffic frame received at the channel decoder. Transitions due to the occurrence of an ASSIGNMENT COMPLETE frame or an SABM frame after the reception of good speech frames shall not be considered. If the first frame sent on the new traffic channel was an SABM frame, $t_2$ is defined as the time the BFI flag toggles from 1 to 0 due to a correctly received speech traffic frame after the reception of the SABM frame.

NOTE: There shall be an allowance of at maximum two transitions for this BFI flag from 0 to 1 and back to zero again after $t_2$. These transitions are caused by the SABM frame if it was not the first frame to be sent on the new TCH, or the ASSIGNMENT COMPLETE frame, or both. Since both frames are FACCH frames, each would cause exactly one BFI=1 indications.

e) The time difference $Dt = t_2 - t_1$ shall be calculated.

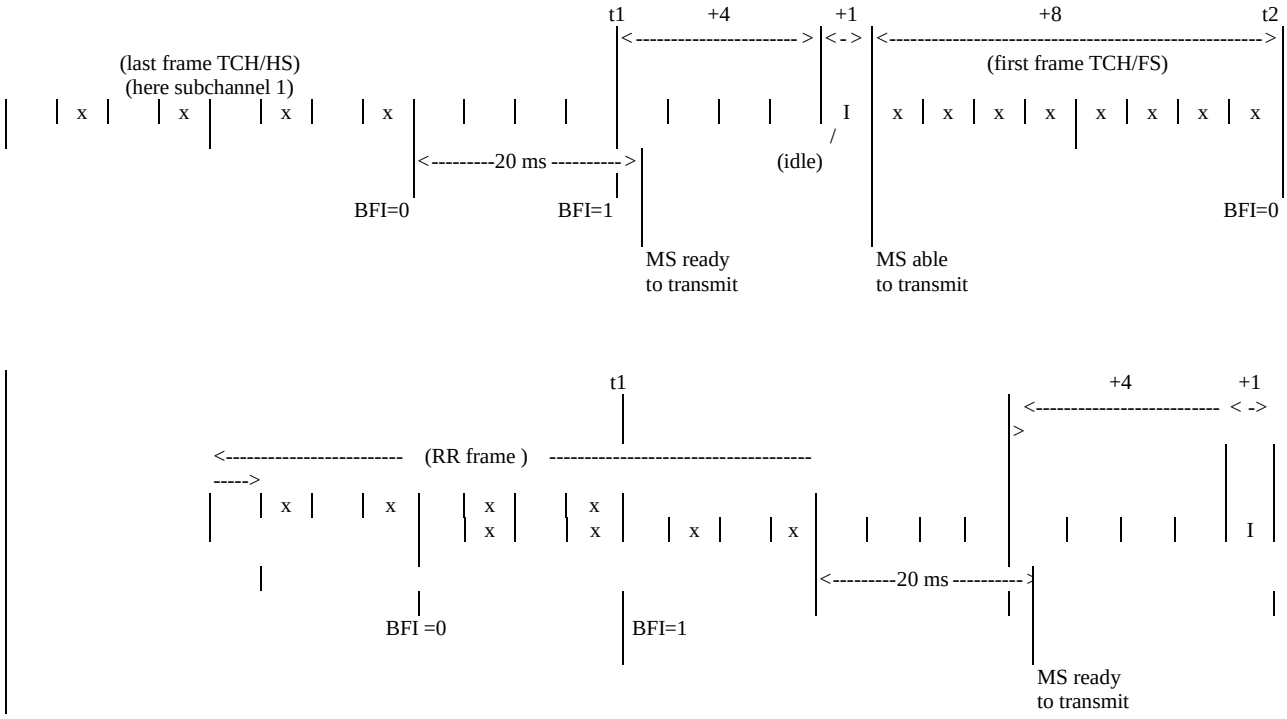
### 32.11.5 Test requirement

1) The last transition of the BFI flag at the output of the FR channel decoder from 1 to 0 shall be followed by a sequence of at least 50 zeroes, interrupted by at maximum two transitions to 1, each interruption containing exactly one BFI=1 flag, caused by the SABM or the ASSIGNMENT COMPLETE frames.

2) The calculated time difference Dt shall not exceed 13 TDMA frames. If the first frame sent on the new channel was an SABM frame, an additional time difference of 4 frames is allowed. If the last frame sent on the old channel was an RR frame, an additional time difference of 9 frames is allowed.

NOTE: The BFI of the old channel will toggle from 0 to 1 only four frames after the reception of the last bit of the speech frame sent on the old channel. The time between the last bit of the last complete speech or data frame or message block sent on the old channel and the time the MS is ready to transmit on the new channel shall be less than 20 ms (5.10, section 6.8). This time will expire 4 frames and 3 timeslots after the sending of the last bit of the last complete speech frame on the old channel, i.e. the MS may not be able to transmit in the corresponding timeslot in the current frame, but must wait approx. 4 frames until the next allowed frame (FN mod 13 = 0, 4 or 8) is reached.
The next frame could be an idle frame, so the MS must wait for another frame. This equates to 5 frames, after which the MS is able to start transmission on the new channel.
Additionally, 8 frames will be needed due to interleaving until the last bit of the first speech frame on the new channel is received and the BFI flag toggles from 1 to 0.
This makes a total of 13 frames or 60 ms between the frame number when the BFI toggles from 0 to 1 on the old channel and the frame number when the BFI toggles from 1 to 0 on the new channel. See diagram below.
If SABM is the first frame received on the new channel, 4 more frames are allowed.

If RR is the last frame sent on the old channel, additionally 9 more frames are allowed (RR frames plus an idle frame).



# 32.12 Intra cell channel change from a TCH/FS to a TCH/HS

## 32.12.1 Definition and applicability

Dual rate MSs support an intra cell channel change from a TCH/FS to a TCH/HS by switching the Speech and channel codec used from FR to HR.

The requirements and this test apply to all MS supporting TCH/HS.

### 32.12.2 Conformance requirement:

1) When commanded to perform an intra cell channel change from a TCH/FS to a TCH/HS, the MS shall switch channels from FR to HR.

   GSM 05.10 section 6.8.

2) For an intra cell channel change, the time between the end of the last complete speech or data frame or message block sent on the old channel and the time the MS is ready to transmit on the new channel shall be less than 20 ms.

GSM 05.10, section 6.8.

### 32.12.3 Test purpose:

1) To verify that the MS encodes speech correctly after performing an intra cell channel change from a TCH/FS to a TCH/HS.

2) To verify that the MS, when commanded to perform an intra cell channel change to a new ARFCN and/or new timeslot number within the same cell, if the starting time is not used in the ASSIGNMENT COMMAND, is ready to transmit on the new channel within 20 ms of the last complete speech frame or message block sent on an old channel.

### 32.12.4 Method of test

#### 32.12.4.1 Initial conditions

Uplink DTX is off.

The SS sets up a call according to the generic call set up procedure on a FR channel in the low ARFCN range on timeslot 1.

#### 32.12.4.2 Procedure

a) The SS records the sequence of BFI flags obtained by channel decoding the incoming bit stream from the uplink air interface using the FR channel decoder on the old channel and at the same time the sequence of BFI flags obtained by channel decoding the incoming bit stream from the uplink air interface using the HR channel decoder on the channel to which the channel change will take place.

b) The SS sends an ASSIGNMENT COMMAND to the MS allocating a HR channel in the high ARFCN range on timeslot 2, and with a power command of 7. These old and new carriers have a relative frequency tolerance of 0, and a relative timing tolerance of 1/4 bit.

c) The time at which the sequence of BFI flags at the output of the FR channel decoder performs the first transition from 0 to 1 is registered ($t_1$). In case of occurrence of speech frames after an RR frame, the next transition of the BFI flag from 0 to 1 after the reception of the RR frame is defined as $t_1$.

d) The time values at which the sequence of BFI flags at the output of the HR channel decoder performs transitions from 1 to 0 are registered. The time $t_2$ is defined as the time where the BFI flag at the output of the FR channel decoder toggles from 1 to 0 due to a correctly encoded speech traffic frame received at the channel decoder. Transitions due to the occurrence of an ASSIGNMENT COMPLETE frame or and SABM frame after the reception of good speech frames shall not be considered. If the first frame sent on the new traffic channel was an SABM frame, $t_2$ is defined as the time the BFI flag toggles from 1 to 0 due to a correctly received speech traffic frame after the reception of the SABM frame.

NOTE: There shall be an allowance of at maximum two transitions for this BFI flag from 0 to 1 and back to zero again after $t_2$. These transitions are caused by the SABM frame if it was not the first frame to be sent on the new TCH, or the ASSIGNMENT COMPLETE frame, or both. Since both frames are FACCH frames, each would cause exactly two BFI=1 indications.

e) The time difference $Dt = t_2 - t_1$ shall be calculated.

32.12.5 Test requirement

1) The last transition of the BFI flag at the output of the HR channel decoder from 1 to 0 shall be followed by a sequence of at least 50 zeroes, interrupted by at maximum two transitions to 1, each interruption containing exactly two BFI=1 flags, caused by the SABM or the ASSIGNMENT COMPLETE frames.

2) The calculated time difference Dt shall not exceed 12 TDMA frames. if the first frame sent on the new channel was an SABM frame,an additional time difference of 9 frames is allowed. If the last frame sent on the old channel was an RR frame, an additional time difference of 5 frames is allowed.

NOTE: The BFI of the old channel will toggle from 0 to 1 only 4 frames after the reception of the last bit of the last speech frame sent on the old channel. The BFI on the old channel will toggle from 0 to 1 only four frames after the reception of the last bit of the last complete speech or data frame or message block sent on the old channel.

The time between the last bit of the last complete speech frame sent on the old channel and the time the MS is ready to transmit on the new channel shall be less than 20 ms (5.10, section 6.8). This time will expire 4 frames and 3 timeslots after the sending of the last bit of the last complete speech frame on the old channel, i.e. the MS may not be able to transmit in the corresponding new timeslot in its current frame, but must wait approx. 4 frames until the next allowed frame (FN mod 13 = 0, 4 or 8) is reached.

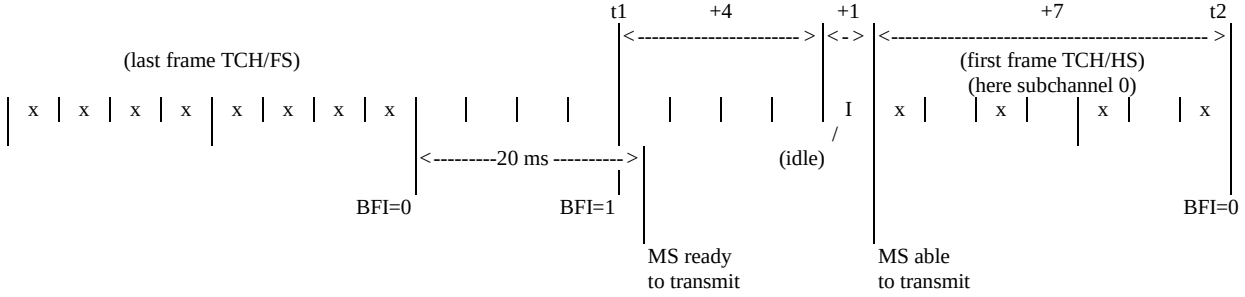
The next frame could be an idle frame, so the MS must wait for another frame. This equates to 5 frames, after which the MS is able to start transmission on the new channel.

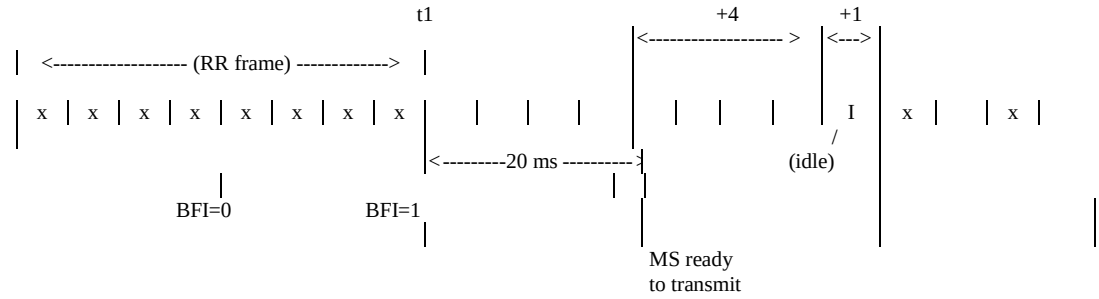
Additionally, 7 frames will be needed due to interleaving until the last bit of the first speech frame on the new channel is received and the BFI flag toggles from 1 to 0.

This makes a total of 12 frames or 55,4 ms between the frame number when the BFI toggles from 0 to 1 on the old channel and the frame number when the BFI toggles from 1 to 0 on the new channel. See diagram below.

If SABM is the first frame received on the new channel, 9 more frames are allowed.

If RR is the last frame sent on the old channel, 5 more frames are allowed.





# 33 Mobile station features

GSM 02.07 defines mandatory and optional MS features. Their presence and appropriate functioning are verified by the following tests.

## 33.1 Entry and display of called number

### 33.1.1 Definition and applicability

The entry and display of a called number is the ability of a MS to correctly display and signal to the network the user required number.

The requirements and this test apply to all MS.

### 33.1.2 Conformance requirement

1) The number of the called subscriber is included in the Called party BCD number Information element of the SETUP message for an outgoing call.

   The "Display of Called number" shall be implemented in an MS where a human interface is provided.

2) The "Numbering plan identification" is included in the Called party BCD number Information element of the SETUP message for an outgoing call.

   An MS with MMI shall as default use the Numbering Plan Identification CCITT E164, unless otherwise indicated by the user.

3) The "Type of number" is included in the Called party BCD number Information element of the SETUP message for an outgoing call.

   An MS with MMI shall, if the "+" is not entered, and a number is entered, set the Type of Number to "unknown".

4) The "Type of number" is included in the Called party BCD number Information element of the SETUP message for an outgoing call.

   An MS with MMI shall, if the "+" is entered, and a number is entered, set the Type of Number to "International".

### 33.1.3 Test purpose

1) To verify that an MS with human interface, in a SETUP message sent to originate a call, includes the same “Number digits" in the "Called party BCD number" of the SETUP message as displayed.

2) To verify that an MS with MMI, when made to establish a call sends a SETUP message, which includes the "Numbering plan identification" in the "Called party BCD number" of the SETUP message for an outgoing call with the value "ISDN/telephony numbering plan (E.164/E.163)".

3) To verify that an MS with MMI, when made to establish a call without use of the "+-key" function, sends a SETUP message, which includes the "Type of number" in the "Called party BCD number" of the SETUP message for an outgoing call with the value "unknown".

4) To verify that an MS with MMI, implementing the "+-key" function, when made to establish a call with use of the "+-key" function, sends a SETUP message, which includes the "Type of number" in the "Called party BCD number" of the SETUP message for an outgoing call with the value "international number.

### 33.1.4 Method of test

#### 33.1.4.1 Initial conditions

The MS is registered in a cell of the SS.

#### 33.1.4.2 Procedure

a) A number (not including "+ function") is entered and then a call is set up.

b) After the SS has accepted the call the number displayed on the MS and the number received in the SS are compared.

c) The NPI and TON are examined in the SS.

d) Steps a) to c) are repeated, but in a), the number entered starts with the "+ function".

NOTE 1: This test may also be performed automatically using the EMMI.

### 33.1.5 Test requirements

1) In step b), both numbers shall be identical.

2) In step c), the NPI shall be "E164" and the TON shall be "unknown".

3) In step d), the NPI shall be "E164" and the TON shall be "international".

## 33.2 Indication of call progress signals

### 33.2.1 Definition and applicability

### 33.2.2 Conformance requirement

### 33.2.3 Test purpose

### 33.2.4 Ringing tone

#### 33.2.4.1 Method of test

a) According to section "Structured procedures, Mobile originating call, early assignment, Method of test", paragraphs a) to j).

#### 33.2.4.2 Requirements

1) According to section "Structured procedures, Mobile originating call, early assignment, Requirements", paragraphs 1) to 7).

2) The ringing tone characteristics shall be as follows:

| Tone | Frequency | Tolerance | Type |
|---|---|---|---|
| Ringing tone | 425 Hz | 15 Hz | Periodic<br>tone on 1 s,<br>silence 4 s |

## 33.2.5 Busy tone

### 33.2.5.1 Method of test

a) According to section "Structured procedures, Mobile originating call, early assignment, Method of test", paragraphs a) to h).

b) The SS then sends message DISCONNECT with cause number 17.

| Message: DISCONNECT | (GSM 04.08, 9.3.7) to the MS: |
|---|---|
| Information element | Comment |
| Protocol discriminator | CM |
| Transaction identifier | MS orig. |
| Message type | |
| Cause | |
| - Coding standard | GSM |
| - Location | User |
| - Cause value | #17 "user busy" |

### 33.2.5.2 Requirements

1) According to section "Structured procedures, Mobile originating call, early assignment, Requirements", paragraphs 1) to 5).

2) After the reception of DISCONNECT a busy tone shall be generated. The busy tone characteristics shall be as follows:

| Tone | Frequency | Tolerance | Type |
|---|---|---|---|
| Busy tone | 425 Hz | 15 Hz | Periodic<br>tone on 500 ms,<br>silence 500 ms |

## 33.2.6 Congestion tone

### 33.2.6.1 Method of test

a) According to section "Structured procedures, Mobile originating call, early assignment, Method of test", paragraphs a) to h).

b) The SS then sends message DISCONNECT with cause number 42.

DISCONNECT message: As in 33.2.3.1 with cause value #42 "Switching equipment congestion" (0101010).

### 33.2.6.2 Requirements

1) According to section "Structured procedures, Mobile originating call, early assignment, Requirements", paragraphs 1) to 5).

2) After the reception of DISCONNECT a congestion tone shall be generated.

3) The congestion tone characteristics shall be as follows:

| Tone | Frequency | Tolerance | Type |
|---|---|---|---|
| Congestion tone | 425 Hz | 15 Hz | Periodic<br>tone on 200 ms,<br>silence 200 ms |

## 33.2.7 Authentication failure tone

### 33.2.7.1 Method of test

a) According to section "Structured procedures, Mobile originating call, early assignment, Method of test", paragraphs a) to e).

b) After reception of message AUTHENTICATION RESPONSE the SS sends message AUTHENTICATION REJECT.

Message: AUTHENTICATION REJECT (GSM 04.08, 9.2.1) to the MS:

| Information element | Comment |
|---|---|
| Protocol discriminator | MM |
| Transaction identifier | not relevant |
| Message type | |

### 33.2.7.2 Requirements

1) According to section "Structured procedures, Mobile originating call, early assignment, Requirements", paragraphs 1) to 4).

2) After reception of AUTHENTICATION REJECT a tone shall be generated indicating authentication failure.

3) The authentication failure tone is the error/special information tone with characteristics as follows:

| Tone | Frequency | Tolerance | Type |
|---|---|---|---|
| Error/Special | 950 Hz | 50 Hz | Triple tone |
| Information tone | 1400 Hz | 50 Hz | tones on 330 ms |
| | 1800 Hz | 50 Hz | silence 1,0 s |

## 33.2.8 Number unobtainable tone

### 33.2.8.1 Method of test

a) According to section "Structured procedures, Mobile originating call, early assignment, Method of test", paragraphs a) to h).

b) The SS then sends message DISCONNECT with cause number 1.

DISCONNECT message: As in 33.2.3.1 with cause value #1 "Unassigned (unallocated) number" (0000001).

### 33.2.8.2 Requirements

1) According to section "Structured procedures, Mobile originating call, early assignment, Requirements", paragraphs 1) to 5).

2) After reception of DISCONNECT a tone shall be generated indicating that the called number is unobtainable.

The number unobtainable tone is the error/special information tone with characteristics as in 33.2.7.2.

## 33.2.9 Call dropped tone

### 33.2.9.1 Method of test

a) According to section "Structured procedures, Mobile originating call, early assignment, Method of test", paragraphs a) to l). However, it shall be indicated in the system information messages that call re-establishment shall not be attempted (RACH control parameters).

b) When the call has been established the SS stops transmitting on the TCH/SACCH.

#### 33.2.9.2 Requirements

1) According to section "Structured procedures, Mobile originating call, early assignment, Requirements", paragraphs 1) to 8).

2) After the radio link time-out period has expired a tone shall be generated indicating that the call has been dropped.

   The call dropped tone characteristics shall be as follows:

| Tone | Frequency | Tolerance | Type |
|---|---|---|---|
| Call dropped tone | 425 Hz | 15 Hz | Tone on 200 ms,<br>silence 200 ms<br>3 bursts of on/off |

## 33.3 Network selection / indication

### 33.3.1 Definition and applicability

Network selection and indication is the ability of the MS to correctly select a network and display to the user in accordance with GSM 02.11 and GSM 03.22.

The requirements and this test apply to all MS.

Tests concerning the MS behaviour after having received a location updating reject message with specific causes are included in section 26.7.4.2.

Tests concerning the MS handling of the forbidden PLMN list are also included in section 26.7.4.

### 33.3.2 Conformance requirement

1) Upon switching on, when an IMSI is available and there is no registered PLMN on the SIM, the MS shall select its Home PLMN and perform the cell selection procedure.

2) If the MS loses radio coverage for its registered PLMN, and the MS is in automatic PLMN selection mode, it shall attempt to select its Home PLMN.

3) If the Registered PLMN is unavailable due to the loss of radio coverage and the MS is in automatic PLMN selection mode and the HPLMN is also unavailable, it shall attempt to select a suitable cell and access the PLMNs in turn, in the order of priority as stored in the SIM,.

4) If there is no registered PLMN in the SIM or the registered PLMN is unavailable and If the Home PLMN is unavailable and the MS is in automatic PLMN selection mode, it shall attempt to select a suitable cell and accesses the PLMNs in turn, in the order of priority as stored in the SIM, upon switching on and when the IMSI is available.

5) An MS, roaming in a VPLMN whose MCC is the same as the MCC of the IMSI, shall periodically attempt to obtain service on its Home PLMN in automatic mode. For this purpose, a value T minutes, which is the HPLMN search period, may be stored in the SIM; T is either in the range 6 minutes to 8 hours in 6 minutes step or it indicates that no periodic attempt shall be made. If no HPLMN search value is available on the SIM the mobile equipment shall use a default value of 30 minutes.

6) At switch on, the MS selects and attempts to perform a Location Update on the Registered PLMN if it exists. If the registered PLMN is a VPLMN of the SIM’s home country, the MS shall wait at least 2 minutes before attempting to obtain service on its home PLMN.

### 33.3.3 Test purpose

1) To verify that the MS with SIM containing in the PLMN selector field at least one PLMN different from the Home PLMN and containing no registered PLMN, when in automatic PLMN selection mode, selects its Home PLMN, if available, upon switching on and when the IMSI is available. (This is verified by observation of the location updating procedure).(Steps 1.1 through 1.5).

2) To verify that if the MS loses radio coverage for its registered PLMN, and the MS is in automatic PLMN selection mode, it shall attempt to select its Home PLMN. (Steps 1.14C through 1.16C).

3) To verify that the MS, when it looses radio coverage for its selected PLMN (i.e. Registered PLMN) and in automatic PLMN selection mode, selects the PLMN with the highest priority among the PLMNs stored on the SIM, if the Home PLMN is unavailable. (Steps 1.10 through 1.12).

4) If there is no registered PLMN in the SIM or the registered PLMN is unavailable and If the Home PLMN is unavailable and the MS is in automatic PLMN selection mode, it shall attempt to select a suitable cell and accesses the PLMNs in turn, in the order of priority as stored in the SIM, upon switching on and when the IMSI is available. (Steps 1.22 through 1.25).

5) To verify that an MS, roaming in a VPLMN whose MCC is the same as the MCC of the IMSI, shall attempt to obtain service on its Home PLMN in automatic mode with a period of T. To verify that the MS shall not attempt to obtain service on its home PLMN in automatic mode when T is set to "no periodic attempts shall be made". To verify that a default value of 30 min is used when no HPLMN search timer value is available on the SIM. (Steps 1.13 A through 1.15A, 1.13B through 1.15B and 1.13C.)

6) To verify that, at switch on, the MS selects and attempts to perform a Location Update on the registered PLMN if it exists. If the registered PLMN is a VPLMN of the SIM's home country, the MS shall wait at least 2 minutes before attempting to obtain service on its home PLMN. (Steps 1.25 through 1.28).

**Reference**

Requirements 1, 2, 3: see GSM 03.22 section 4.4.3.1.
Requirements 4: see GSM 03.22 section 3.1.
Requirement 5, 6: see GSM 03.22 section 4.4.3.3.

### 33.3.4 Method of Test

Procedure 1: This procedure applies to both automatic and manual mode for PLMN selection. This procedure is run for each of the following cases:

case A) Timer T is set to 6 min in the SIM.

case B) No HPLMN search timer value is available on the SIM.

case C) Timer T is set to "no periodic attempt to obtain service on the HPLMN shall be made" in the SIM.

Procedure 2: This procedure applies to the manual mode for PLMN selection.

#### 33.3.4.1 Procedure 1

1.1) The MS is set up with a SIM which contains, in the "PLMN selector" data field, a list of 3 PLMN in the priority order PLMN2 (highest priority), PLMN3, PLMN4 (lowest priority). PLMN1 is the Home PLMN of the MS as defined in the IMSI. The "Forbidden PLMN" data field shall contain NULL values. "registered PLMN" data field shall contain Null values.

case A) Timer T is set to 6 min in the SIM.

case B) No HPLMN search timer value is available on the SIM.

case C) Timer T is set to "no periodic attempt to obtain service on the HPLMN shall be made" in the SIM.

1.2) The SS transmits 4 BCCH carriers with the following parameters:

| | PLMN | Level dBµVemf( ) |
|---|---|---|
| Carrier 1 | PLMN1 any value for MCC | 28 |
| Carrier 2 | PLMN2 any value for MCC | 33 |
| Carrier 3 | PLMN3 with the same MCC as PLMN1 | 38 |
| Carrier 4 | PLMN4 any value for MCC | 43 |

Each carrier has the "IMSI attach" (ATT) flag set in the BCCH data. (The purpose of this is to force the MS to do location updating whenever it is switched on, so that the SS can determine which PLMN has been selected).

The other system information parameters are as in table 33-1.

1.3) The MS is brought into the "on" condition with automatic selection mode active.

1.4) The SS checks that the MS sends a "location updating request" on carrier 1.

1.5) The SS sends a "location updating accept" message to the MS on carrier 1. After 5 s, the MS "selected PLMN indicator" is checked.

1.6) The SS switches off carriers 1.

1.7) The SS checks that the MS sends a "location updating request" on carrier2.

1.8) The SS sends a "location updating accept" message to the MS on carrier 2. After 5 s, the MS "selected PLMN indicator" is checked.

1.9) Carrier 2 is turned off.

1.10) The SS checks that the MS sends a "location updating request" on carrier 3.

1.11) The SS sends a "location updating accept" message on carrier 3. After 5 s, the MS "selected PLMN indicator" is checked.

1.12) Carriers 1 and 2 are turned on with the same parameters as in step 1.2) above.

In case A for which T is set to 6 min, take branch A.

In case B for which default value for T is applied take branch B.

In case C for which T is set to “no periodic attempt shall be made”, take branch C.

**Branch A**

1.13A) The SS checks that the MS does not send a "location updating request" on either carrier 1 or 2during 6 minutes after step 1.11 is completed.

1.14A) The SS checks that the MS sends a “location updating request” on channel 1 between 6 and 12 min after step 1.11 is completed.

1.15A) The SS sends a “location updating accept” message on carrier 1. After 5 s, the MS “selected PLMN indicator” is checked.

**Branch B**

1.13B) The SS checks that the MS does not send a "location updating request" on either carrier 1 or 2 during 30 minutes after step 1.11 is completed.

1.14B) The SS checks that the MS sends a “location updating request” on channel 1 between 30 and 60 min after step 1.11 is completed.

1.15B) The SS sends a “location updating accept” message on carrier 1. After 5 s, the MS “selected PLMN indicator” is checked.

**Branch C**

1.13C) The SS checks that the MS does not send a "location updating request" on either carrier 1 or 2 during 40 min.

1.14C) The SS switches off carrier 3.

1.15C) The SS checks that the MS sends a “location updating request” on channel 1.

1.16C) The SS sends a “location updating accept” message on carrier 1. After 5 s, the MS “selected PLMN indicator “ is checked.

1.17) The SS switches off carrier 1 and switches on carrier 3.

1.18) The SS checks that the MS sends a "location updating request" on carrier 2.

1.19) The SS sends a “location updating accept” message on carrier 2. After 5 s, the MS “selected PLMN indicator” is checked.

1.20) The mobile station is switched off.

1.21) The SS switches off carrier 2.

1.22) The mobile station is switched on.

1.23) The SS checks that the MS sends a "location updating request" on carrier 3.

1.24) The SS sends a “location updating accept” message on carrier 3. After 5 s, the MS “selected PLMN indicator” is checked.

1.25) The MS is switched off.

1.26) The SS switches on carrier 1.

1.27) The mobile station is switched on.

1.28) The SS checks that the MS does not send a “location updating request” on carrier 1. After 2 min, the MS “selected PLMN indicator” is checked.

### 33.3.4.2 Requirements 1

Requirement 1.1) is mandatory for all MS. Requirements 1.2) and 1.3) only apply to MS with a human interface.

1.1) The MS shall make a response as indicated in steps 1.4, 1.7, 1.10, 1.13A, 1.13B, 1.14A, 1.14B, 1.15C, 1.18, 1.23 above. In cases 1.4, 1.7, 1.10, 1.15C, 1.18 and 1.23, the MS shall respond within 30 s.

1.2) The selected PLMN shall be indicated:

| | | | | | |
|---|---|---|---|---|---|
| End of Step | 1.5 | 1.8 | 1.11 | 1.15A/B | 1.16C |
| PLMN indicated: | PLMN1 | PLMN2 | PLMN3 | PLMN1 | PLMN1 |
| End of Step | 1.19 | 1.24 | 1.28 | | |
| PLMN indicated: | PLMN2 | PLMN3 | PLMN3 | | |

### 33.3.4.3 Procedure 2

2a) The MS is set up with a SIM which contains NULL values in the "PLMN selector" data field. PLMN1 is the Home PLMN of the MS as defined in the IMSI. The "forbidden PLMN" data field shall contain PLMN3. the “registered PLMN” field is set to PLMN2.

2b) The SS transmits 4 BCCH carriers with the following parameters:

| | PLMN | Level dBµVemf( ) |
|---|---|---|
| Carrier 1 | PLMN1 | 28 |
| Carrier 2 | PLMN2 | 33 |
| Carrier 3 | PLMN3 | 38 |
| Carrier 4 | PLMN4 | 43 |

Each carrier has the "IMSI attach" (ATT) flag set in the BCCH data. (The purpose of this is to force the MS to do location updating whenever it is switched on, so that the SS can determine which PLMN has been selected.)

The other system information parameters are as in table 33-1.

2c) The MS is brought into the "on" condition with manual selection mode active.

2d) The SS checks that the MS sends a "location updating request" on carrier 2.

#### 33.3.4.4 Requirements 2

2.1) The MS shall make a response as indicated in step 2d). The MS shall respond within 30 s.

**Table 33-1: Normal system information fields**

| Parameter | Reference in GSM 04.08 | Abbreviation | Normal setting |
|---|---|---|---|
| Cell Channel Description | 10.5.2.1 | - | Any values |
| Max retrans | 10.5.2.17 | - | 1 |
| Tx-integer | 10.5.2.17 | - | Any value |
| CELL_BAR_ACCESS | 10.5.2.17 | CBA | 0 (i.e. no barred) |
| AC CN | 10.5.2.17 | AC | All 0 |
| RE | 10.5.2.17 | RE | 0 (i.e. re-establishment allowed) |
| BA ARFCN | 10.5.2.13 | BA | One entry equal to the ARFCN of the carrier |
| NCC | 10.5.2.15 | NCC | Any value |
| Cell Identity | 10.5.1.1 | - | Any value |
| MCC, MNC | 10.5.1.3 | PLMN | Ref. 33.3.2, 1b) and 33.3.2, 2b) |
| LAC | 10.5.1.3 | LAC | 1111 (Hex) |
| ATT, B_AG_BLKS_RES,T3212, | 10.5.2.8 | - | ATT = "1" |
| CCCH_CONF | | | Other parameters any values. |
| BS_PA_MFRMS | 10.5.2.8 | BPM | 5 frames |
| Cell Options | 10.5.2.3 | - | Any values |
| CELL_RESELECT_HYSTERESIS | 10.5.2.4 | CRH | 10 dB |
| MS_TXPWR_MAX_CCH | 10.5.2.4 | MTMC | Maximum RF output power of MS. |
| RXLEV_ACCESS_MIN | 10.5.2.4 | RAM | -95 dBm |

## 33.4 Invalid and blocked PIN indicators

### 33.4.1 Definition and applicability

The requirements and this test apply to all MS.

### 33.4.2 Conformance requirement

### 33.4.3 Test purpose

### 33.4.4 Method of test

#### 33.4.4.1 Initial conditions

The MS contains a SIM with the PIN enabled, and the SIM unblocking counter set to zero by previous presentation of the personal unblocking key.

#### 33.4.4.2 Procedure

a) The MS is switched on.

b) Three wrong PIN are entered.

Activation may be either manual or via the EMMI.

### 33.4.5 Test requirements

For the first and second incorrect PIN the MS shall indicate that the PIN code has been rejected

For the third incorrect PIN the MS shall indicate that the PIN is blocked.

## 33.5 Service indicator

### 33.5.1 Definition and applicability

The requirements and this test apply to all MS.

### 33.5.2 Conformance requirement

### 33.5.3 Test purpose

### 33.5.4 Method of test

#### 33.5.4.1 Initial conditions

a) The MS is in idle mode, unregistered.

b) The SS shall emulate perfect radio conditions so that the MS is able to register and to set up or receive a call.

#### 33.5.4.2 Procedure

a) The MS is brought in an active state by either switching it on or by inserting a SIM.

### 33.5.5 Test requirements

1) The successful registration and the good condition shall be indicated by the MS indicator and by the SS.

## 33.6 Subscription identity management

### 33.6.1 Definition and applicability

Subscription identity management is the ability of the MS to prevent the establishment of MO (except MO emergency calls) and MT calls without a valid subscription.

The requirements and this test apply to all MS.

### 33.6.2 Conformance requirement

An MS can only be operated, if a valid IMSI is present.

### 33.6.3 Test purpose

1) To verify that during an established call:

   either
   1.1) on removal of the SIM from an MS, the MS will perform an IMSI detach;

   or
   1.2) after removing the power source from the MS, removing the SIM, and restoring the power source to the MS, the MS may perform an IMSI detach.

2) To verify that an MS without SIM card will not establish a MO call which is not an emergency call.

3) To verify that an MS without SIM card will not accept an incoming call.

### 33.6.4 Method of test

#### 33.6.4.1 Initial conditions

#### 33.6.4.2 Procedure

a) A call is set up.

b) (Reserved).

c) Either

(i) the SIM is removed;

or

(ii) where this is not possible, the power source is removed from the MS, the SIM is removed and the power source is restored to the MS.

The SS observes whether or not the MS performs IMSI detach.

d) An attempt to establish a MO call is made (not an emergency call).

e) An attempt to establish a MT call is made.

### 33.6.5 Test requirements

1) Either
in step c(i), the MS shall perform an IMSI detach;

or
in step c(ii), the MS may perform an IMSI detach.

2) In step d) the MS shall not attempt to set up a new call via the Um interface.

3) In step e), the MS shall not respond to the attempt to set up a new call via the Um interface.

## 33.7 Barring of outgoing calls

### 33.7.1 Definition and applicability

The barring of outgoing calls is an optional feature. It is the ability of the MS to prevent all MO calls except emergency calls.

The requirements and this test apply to all MS supporting this feature.

### 33.7.2 Conformance requirement

An MS may have an optional facility to bar outgoing calls. Such barring facility shall not prevent the transmission on emergency calls.

### 33.7.3 Test purpose

To verify that an MS for which a local facility to bar outgoing calls has been declared as being implemented, is able to establish an emergency call if this facility is activated.

### 33.7.4 Method of test

#### 33.7.4.1 Initial conditions

#### 33.7.4.2 Procedure

a) The local facility to bar outgoing calls is activated.

b) Via MMI, the MS is actioned to establish an emergency call.

### 33.7.5 Test requirements

1) The MS shall establish an emergency call.

## 33.8 Prevention of unauthorized calls

### 33.8.1 Definition and applicability

The prevention of unauthorized calls is an optional feature in the MS. It is the ability of the MS to prevent unauthorized use by using a key or keyword protection facility. When activated the MS does not prevent the establishment of except emergency calls.

The requirements and this test apply to all MS supporting this feature.

### 33.8.2 Conformance requirement

An MS may have an optional facility to prevent unauthorized use. Such facility shall not prevent the transmission on emergency calls.

### 33.8.3 Test purpose

To verify that an MS for which a local facility to prevent unauthorized use has been declared to be implemented, is able to establish an emergency call, if this facility is activated.

### 33.8.4 Method of test

#### 33.8.4.1 Initial conditions

#### 33.8.4.2 Procedure

a) The local facility to restrict operation such that the MS can only be operated by using a key or a keyword is activated. The most restrictive situation is created.

b) Via MMI, the MS is actioned to establish an emergency call.

### 33.8.5 Test requirements

1) The MS shall establish an emergency call.

# 34 Short message service (SMS)

**Ref.: GSM 03.40, GSM 04.11 (point to point)**
**GSM 03.41, GSM 04.12 (cell broadcast)**

## 34.1 General

The purpose of these tests is to verify that the MS can handle GSM functions when submitting or receiving Short Messages (SM) between MS and a short message service centre as described in GSM 03.40.

The procedures are based upon services provided by the Mobility Management (MM) sublayer which is not tested in this case.

The SMS comprises three basic services. The SMS point to point services shall work in an active MS at any time independent of whether or not there is a speech or data call in progress. The SMS cell broadcast service only works when the MS is in idle mode.

Since the timer TC1M currently is not standardized, the value of TC1M shall be declared by the manufacturer (to be used in 34.2.1 and 34.2.2).

The manufacturer shall declare whether SMS messages are stored in the SIM and/or the ME. This shall be referred to as the SMS message store in the following tests.

Unless otherwise stated default message contents from section 26.6.14 applies for GSM 900 and default message contents from section 26.6.15 applies for DCS 1 800 and default message contents from section 26.6.16 applies for GSM 450 and default message contents from section 26.6.17 applies for GSM 480 and default message contents from section 26.6.18 applies for PCS 1900 and default message contents from section 26.6.19 applies for GSM 700 and default message contents from section 26.6.20 applies for GSM 850.

## 34.2 Short message service point to point

### 34.2.1 SMS mobile terminated

#### 34.2.1.1 Conformance requirements

An active MS shall be able to receive short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is a speech or data call in progress. A report will always be returned to the SC, confirming that the MS has received the short message.

Reference

GSM 03.40; 3.1.

#### 34.2.1.2 Test purpose

To verify the ability of a MS to receive and decode the SMS where provided for the point to point service.

#### 34.2.1.3 Method of test

Initial Conditions

System simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in "Idle, updated" state.

The SMS message storage shall be empty.

### Related PICS/PIXIT Statements

Support for Short message MT/PP.

Description of the basic procedures to display a mobile terminated short message.

The value of timer TC1M.

Whether SMS messages are stored in the SIM and/or the ME.

Support for call control state U10.

### Foreseen Final State of MS

Idle, updated.

### Test Procedure

a) The SS initiates the transmission of a short message using a paging request. Upon response of the MS to the paging the SS assigns an SDCCH, authenticates the MS and activates ciphering. Then the SS establishes SAPI 3 by sending a SABM frame with SAPI 3 on the SDCCH.

When a UA frame (SAPI 3) is received in response, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU).

b) The SS waits a maximum of 25 seconds for the CP-ACK message and then a maximum of 60 seconds for the CP-DATA message containing the RP-ACK RPDU.

c) The SS sends a CP-ACK to the MS within TC1M with no further CP-DATA messages and the SS initiates channel release.

d) Steps a), b) and c) are repeated but the first CP-DATA message from the MS is not acknowledged. The second CP-DATA message from the MS is acknowledged by a CP-ACK within a time TC1M.

e) Steps a) and b) are repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 5 seconds after the last CP-DATA retransmission the SS then initiates the channel release. The 5 seconds is the appropriate time to wait to verify that the MS does not send more than the maximum allowed (3) CP-DATA retransmissions.

f) The SMS message store shall be cleared manually by the operator.

g) A data or speech call is established on a TCH with the SS and the state U10 of call control is entered. The SS sends a SABM frame with SAPI-3 on the SACCH associated to the TCH.

When a UA frame (SAPI-3) is received in response, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU). The SS waits a maximum of 25 seconds for the CP-ACK message and then a maximum of 60 seconds for the CP-DATA message containing the RP-ACK RPDU.

h) The SS sends a CP-ACK to the MS within TC1M with no further CP-DATA messages and the SS initiates channel release. The SMS message store shall be cleared manually by the operator.

i) Steps g) and h) are repeated but the first CP-DATA message from the MS is not acknowledged. The second CP-DATA message from the MS is acknowledged by a CP-ACK within a time TC1M.

j) Step g) is repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 15 seconds after the last CP-DATA retransmission the SS initiates the channel release. The 15 seconds is the appropriate time to wait to verify that the MS does not send more than the maximum allowed (3) CP-DATA retransmissions (during a call in progress).

k) A data or speech call is established on a TCH with the SS and the state U10 of call control shall be entered. The SS sends a SABM frame with SAPI-3 on the SACCH associated to the TCH. After the UA response on SAPI-3, the speech call is cleared by the SS with a disconnect message. (The call clearing is continued on the FACCH in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA RPDU (SMS DELIVER TPDU) message. The information element of the CP-DATA message is RP-DATA.

The SS waits a maximum of 25 seconds for the CP-ACK message and then a maximum of 60 seconds for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the MS within TC1M with no further CP-DATA messages and the SS initiates channel release.

The SMS message store shall be cleared manually by the operator.

l) A data or speech call is established on a TCH with the SS and the state U10 of call control is entered. The SS sends a SABM frame with SAPI-3 on the SACCH associated to the TCH. After the UA response on SAPI-3, the speech call shall be cleared from the MS. (The call clearing is continued on the FACCH in parallel to the following exchange of messages related to SMS).

The SS sends a CP-DATA message. The information element of the CP-DATA message is RP-DATA RPDU (SMS DELIVER TPDU).

The SS waits a maximum of 25 seconds for the CP-ACK message and then a maximum of 60 seconds for the CP-DATA message containing the RP-ACK RPDU.

The SS sends a CP-ACK to the MS within TC1M with no further CP-DATA messages and the SS initiates channel release.

The SMS message store shall be cleared manually by the operator.

Maximum Duration of Test

20 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 11 | MS -> SS | UA (SAPI=3) | MS shall respond to SABM in step 10 |
| 12 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 13 | SS | | Waits max 25 seconds for CP-ACK |
| 14 | MS -> SS | CP-ACK | |
| 15 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 16 | MS -> SS | CP-DATA | Contains RP-ACK RPDU |
| 17 | SS -> MS | CP-ACK | |
| 18 | MS | | There should be no further CP-DATA messages until the MS abirts the RR connection (disconnection of layer 2). |
| 19 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 20 | SS -> MS | PAGING REQUEST | |
| 21 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 22 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 23 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 24 | SS -> MS | AUTHENTICATION REQUEST | |
| 25 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 26 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 27 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 28 | SS | | SS starts ciphering. |
| 29 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 30 | MS -> SS | UA (SAPI=3) | The MS shall respond to the SABM |
| 31 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 32 | SS | | Waits max 25 seconds for CP-ACK |
| 33 | MS -> SS | CP-ACK | |
| 34 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 35 | MS -> SS | CP-DATA | First CP-DATA from MS, contains RP-ACK RPDU |
| 36 | SS | | First CP-DATA message not acknowledged by SS |
| 37 | MS -> SS | CP-DATA | Retransmitted CP-DATA from MS within twice TC1M, after step 35, contains RP-ACK RPDU |
| 38 | SS -> MS | CP-ACK | Second CP_DATA message is acknowledged |
| 39 | MS | | There should be no further CP-DATA messages until the MS aborts the RR connection (disconnection of layer 2). |
| 40 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 41 | SS -> MS | PAGING REQUEST | |
| 42 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 43 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 44 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 45 | SS -> MS | AUTHENTICATION REQUEST | |
| 46 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 47 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 48 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 49 | SS | | SS starts ciphering. |
| 50 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 51 | MS -> SS | UA (SAPI=3) | The MS shall respond to the SABM |
| 52 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 53 | SS | | Waits max 25 seconds for CP-ACK |
| 54 | MS -> SS | CP-ACK | |
| 55 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 56 | MS -> SS | CP-DATA | Contains RP-ACK RPDU |
| 57 | SS | | First CP-DATA message not acknowledged by SS |
| 58 | MS -> SS | CP-DATA | Retransmitted CP-DATA from MS within twice TC1M after step 56, contains RP-ACK RPDU |
| 59 | SS | | Retransmitted CP-DATA message not acknowledged by SS |
| 60 | MS | | Depending upon the maximum number of CP-DATA retransmissions implemented, step 58 and 59 may be repeated. |
| 61 | SS -> MS | CHANNEL RELEASE | The main signalling link is released after a duration of TC1M + 5 seconds after the last CP-DATA retransmission.. |
| 62 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 63 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 64 | SS -> MS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 65 | MS -> SS | UA (SAPI=3) | The MS shall respond to the SABM |
| 66 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 67 | SS | | Waits max 25 seconds for CP-ACK |
| 68 | MS -> SS | CP-ACK | |
| 69 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 70 | MS -> SS | CP-DATA | Contains RP-ACK RPDU |
| 71 | SS -> MS | CP-ACK | |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 72-1 | SS -> MS | DISCONNECT | Disconnect the active call |
| 72-2 | MS -> SS | RELEASE | |
| 72-3 | SS -> MS | RELEASE COMPLETE | |
| 72-4 | MS | | There should be no further CP-DATA messages until the MS aborts the RR connection (disconnection of layer 2) |
| 73 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 74 | MS | | Clear the SMS message store |
| 75 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 76 | SS -> MS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 77 | MS -> SS | UA (SAPI=3) | The MS shall respond to the SABM |
| 78 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 79 | SS | | Waits max 25 seconds for CP-ACK |
| 80 | MS -> SS | CP-ACK | |
| 81 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 82 | MS -> SS | CP-DATA | First CP-DATA from MS, contains RP-ACK RPDU |
| 83 | SS | | First CP-DATA message not acknowledged by SS |
| 84 | MS -> SS | CP-DATA | Retransmitted CP-DATA message within twice TC1M after step 82, contains RP-ACK RPDU |
| 85 | SS -> MS | CP-ACK | Second CP-DATA message is acknowledged |
| 86-1 | SS -> MS | DISCONNECT | Disconnect the active call |
| 86-2 | MS -> SS | RELEASE | |
| 86-3 | SS -> MS | RELEASE COMPLETE | |
| 86-4 | MS | | There should be no further CP-DATA messages until the MS aborts the RR connection (disconnection of layer 2) |
| 87 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 88 | MS | | Clear the SMS message store |
| 89 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 90 | SS -> MS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 91 | MS -> SS | UA (SAPI=3) | The MS shall respond to the SABM |
| 92 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 93 | SS | | Waits max 25 seconds for CP-ACK |
| 94 | MS -> SS | CP-ACK | |
| 95 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 96 | MS -> SS | CP-DATA | First CP-DATA from MS, contains RP-ACK RPDU |
| 97 | SS | | First CP-DATA message not acknowledged by SS |
| 98 | MS -> SS | CP-DATA | Transmitted CP-DATA message within twice TC1M after step 96, contains RP-ACK RPDU |
| 99 | SS | | Retransmitted CP-DATA message not acknowledged by SS |
| 100 | MS | | Depending on the maximum number of CP-DATA retransmissions implemented, step 98-99 may be repeated. The maximum number of retransmissions may however not exceed three. |
| 101 | SS -> MS | CHANNEL RELEASE | The main signalling link is released after a duration of TC1M + 15 seconds after the last CP-DATA retransmission. |
| 102 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 103 | MS | | Clear the SMS message store |
| 104 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 105 | SS -> MS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 106 | MS -> SS | UA (SAPI=3) | The MS shall respond to the SABM |
| 107 | SS -> MS | DISCONNECT | The speech call is cleared by the SS. The call clearing is continued on the FACCH in parallel to the following exchange of messages related to SMS. |
| 108 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 109 | SS | | Waits max 25 seconds for CP-ACK |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 110 | MS -> SS | CP-ACK | |
| 111 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 112 | MS -> SS | CP-DATA | Contains RP-ACK RPDU |
| 113 | SS -> MS | CP-ACK | |
| 114 | MS | | There should be no further CP-DATA messages until the MS aborts the RR connection (disconnection of layer 2). |
| 115 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 116 | MS | | Clear the SMS message store |
| 117 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 118 | SS -> MS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 119 | MS -> SS | UA (SAPI=3) | The MS shall respond to the SABM |
| 120 | MS -> SS | DISCONNECT | The speech call is cleared from the MS. |
| 121 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 122 | SS -> MS | RELEASE | This message is likely to be sent on the FACCH before all of the CP-DATA message has been sent on the SACCH. |
| 123 | MS -> SS | RELEASE COMPLETE | |
| 124 | MS -> SS | CP-ACK | shall be sent before 25 seconds after the start of step 121 |
| 125 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 126 | MS -> SS | CP-DATA | Contains RP-ACK RPDU |
| 127 | SS -> MS | CP-ACK | |
| 128 | MS | | There should be no further CP-DATA messages until the MS aborts the RR connection (disconnection of layer 2). |
| 129 | MS | | The MS shall indicate that an SM has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed |
| 130 | MS | | Clear the SMS message store |

NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the MS has enough time to respond to the different messages.

Specific Message Contents:

SMS DELIVER TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned"0"B |
| TP-OA | an international number coded E.164 |
| TP-PID | default"00000000"B |
| TP-DCS | default alphabet "00000000"B |
| TP-SCTS | any legal value (cf. GSM 03.40) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

NOTE: The 160 characters shall include at least one occurrence of each character in the default alphabet (see GSM 03.40 annex 2).

## 34.2.2 SMS mobile originated

### 34.2.2.1 Conformance requirements

An active MS shall be able to submit short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is a speech or data call in progress.

Reference

GSM 03.40; 3.1.

#### 34.2.2.2 Test purpose

To verify that the MS is able to correctly send a short message where the SMS is provided for the point to point service. The test also verifies that the MS is capable of simultaneously receive a network originated SM whilst sending a mobile originated SM.

#### 34.2.2.3 Method of test

Initial Conditions

System simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in "Idle, updated" state.
The SMS message storage shall be empty.

**Related PICS/PIXIT Statements**

Support for Short message MO/PP.

Description of the basic procedures to display a mobile originated short message.

Support for state U10 of call control.

The value of timer TC1M.

Whether SMS messages are stored in the SIM and/or the ME.

Maximum length (characters) of a mobile originated short message.

Foreseen Final State of MS

Idle, updated.

Test Procedure

a) The MS shall be set up to send a SM to the SS. The SS responds to the channel request message by allocating an SDCCH. The SS answers correctly to the SABM on SAPI 0 and then performs the authentication and ciphering procedures.

b) The SS responds with a UA frame SAPI-3 to the MS.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the MS with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 seconds for the CP-ACK message.

d) The SS sends a channel release message to the MS.

e) Steps a) and b) are repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 5 seconds after the last CP-DATA retransmission the SS initiates channel release. The 5 seconds is the appropriate time to wait to verify that the MS does not send more than the maximum CP-DATA retransmissions.

f) Steps a) and b) are repeated. On receipt of the CP-DATA from the MS the SS sends a CP-ERROR message within TC1M containing a "Network Failure" cause. Then the SS initiates channel release.

g) A data or speech call is established on a TCH with the SS and the state U10 of call control is entered. The MS is setup to send an SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM

SERVICE ACCEPT message. The SS responds with a UA frame SAPI-3 to the SABM with SAPI-3 received from the MS.

h) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the MS with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 seconds for the CP-ACK message. Then the SS sends a channel release message to the MS.

i) Step g) is repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 15 seconds after the last CP-DATA retransmission the SS initiates channel release. The 15 seconds is the appropriate time to wait to verify that the MS does not send more than the maximum CP-DATA retransmissions (during a call in progress).

j) The SS is configured to receive a mobile originated SM. Steps a) and b) are repeated and, using the end of the CP-DATA message from the MS as a trigger, the SS sends a SM to the MS. In this case a new transaction identifier shall be used in the CP messages of SMS mobile terminated.

k) The MS is set up to send an SM to the SS. On receipt of the CM SERVICE REQUEST the SS sends a CM SERVICE REJECT message with the reject cause set to "Service Option not supported" or "Service Option temporarily out of order". After 5 seconds the SS initiates channel release.

Maximum Duration of Test

20 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Other procedures which can be completed with an SDDCH” NECI = 0 |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 3 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM on SAPI 0. CM service type set to "Short message transfer" |
| 4 | SS -> MS | AUTHENTICATION REQUEST | |
| 5 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 6 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 7 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 8 | SS | | SS starts ciphering. |
| 9 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 |
| 10 | SS -> MS | UA (SAPI=3) | |
| 11 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 12 | SS -> MS | CP-ACK | Sent within TC1M after step 11 |
| 13 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 14 | SS | | Waits max 25 seconds for CP-ACK |
| 15 | MS -> SS | CP-ACK | |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 17 | MS -> SS | DISC (SAPI=0) | MS shall respond to channel release with a layer 2 DISC frame with SAPI 0 |
| 18 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Other procedures which can be completed with an SDDCH” (NECI=0) |
| 19 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 20 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM on SAPI 0. |
| 21 | SS -> MS | AUTHENTICATION REQUEST | |
| 22 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 23 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 24 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 25 | SS | | SS starts ciphering. |
| 26 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 |
| 27 | SS -> MS | UA (SAPI=3) | |
| 28 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 29 | SS | | SS configured not to send CP-ACK |
| 30 | MS -> SS | CP-DATA | Retransmitted CP-DATA message within twice TC1M after step 28 |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 31 | MS | | Depending on the maximum number of CP-DATA retransmissions implemented, step 30 may be repeated. The maximum number of retransmissions may however not exceed three. |
| 32 | SS -> MS | CHANNEL RELEASE | The main signalling link is released after a duration of TC1M + 5 seconds after the last CP-DATA retransmission. |
| 32a | MS -> SS | DISC (SAPI = 0) | MS shall respond to channel release with a layer 2 DISC frame with SAPI 0. |
| 33 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Other procedures which can be completed with an SDDCH” (NECI=0) |
| 34 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 35 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. CM service type set to "short message transfer" |
| 36 | SS -> MS | AUTHENTICATION REQUEST | |
| 37 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 38 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 39 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 40 | SS | | SS starts ciphering. |
| 41 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 |
| 42 | SS -> MS | UA (SAPI=3) | |
| 43 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 44 | SS -> MS | CP-ERROR | Sent within TC1M containing "Network Failure" cause. |
| 45 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 45a | MS -> SS | DISC (SAPI = 0) | MS shall respond to channel release with a layer 2 DISC frame with SAPI 0. |
| 46 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 47 | MS | | The MS is set up to send an SM |
| 48 | MS -> SS | CM SERVICE REQUEST | Sent in a layer 2 frame on the FACCH. CM service type set to "short message transfer" |
| 49 | SS -> MS | CM SERVICE ACCEPT | |
| 50 | MS -> SS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 51 | SS -> MS | UA (SAPI=3) | |
| 52 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 53 | SS -> MS | CP-ACK | Sent within TC1M after step 52 |
| 54 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 55 | SS | | Waits max 25 seconds for CP-ACK |
| 56 | MS -> SS | CP-ACK | |
| 57 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 58 | MS -> SS | DISC (SAPI =0) | The MS shall respond to channel release with a layer 2 DISC frame with SAPI 0. |
| 59 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 60 | MS -> SS | CM SERVICE REQUEST | Sent in a layer 2 frame on the FACCH. CM service type set to "short message transfer" |
| 61 | SS -> MS | CM SERVICE ACCEPT | |
| 62 | MS -> SS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 63 | SS -> MS | UA (SAPI=3) | |
| 64 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 65 | SS | | SS configured not to send CP-ACK |
| 66 | MS -> SS | CP-DATA | Transmitted CP-DATA message within twice TC1M after step 64 |
| 67 | MS | | Depending on the maximum number of CP-DATA retransmissions implemented, step 66 may be repeated. The maximum number of retransmissions may however not exceed three. |
| 68 | SS -> MS | CHANNEL RELEASE | The main signalling link is released after a duration of TC1m + 15 seconds after the last CP-DATA retransmission. |
| 69 | MS -> SS | DISC (SAPI =0) | The MS shall respond to channel release |
| 70 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Other procedures which can be completed with an SDDCH” (NECI=0) |
| 71 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 72 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. CM service type set to "short message transfer" |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 73 | SS -> MS | AUTHENTICATION REQUEST | |
| 74 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 75 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 76 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 77 | SS | | SS starts ciphering. |
| 78 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 |
| 79 | SS -> MS | UA (SAPI=3) | |
| 80 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 81 | SS | | The SS sends an SM to the MS triggered by the end of the CP-DATA message from the MS |
| 82 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) |
| 83 | MS | | The MS shall correctly receive the SM and indicate that a message has arrived. If the MS provides the functionality to display MT messages, it is checked that the correct message is displayed. In the MO case the MS shall send the CP-ACK message with transaction identifier assigned to this transfer. In the MT case the MS shall send a CP-ACK message and a CP-DATA message containing the RP-ACK RPDU. The transaction identifier shall be the same as chosen by the SS for the MT transfer. |
| 84 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Other procedures which can be completed with an SDDCH” (NECI=0) |
| 85 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 86 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. CM service type set to "short message transfer" |
| 87 | SS -> MS | CM SERVICE REJ | Reject cause set to "Service Option not supported" or "Service Option temporarily out of order" |
| 88 | MS | | The MS shall not establish SAPI-3 |
| 89 | SS -> MS | CHANNEL RELEASE | Sent 5 seconds after CM SERVICE REJ |

NOTE: Time values for SS wait times are chosen sufficiently high to be sure that the MS has enough time to respond to the different messages.

Specific Message Contents:

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS SUBMIT "01"B |
| TP-VPF | not checked |
| TP-RP | no reply path "0"B |
| TP-UDHI | not checked |
| TP-SRR | not checked |
| TP-MR | not checked |
| TP-RD | not checked |
| TP-DA | not checked (an E164 number) |
| TP-PID | default "00000000"B |
| TP-DCS | default alphabet "00000000"B |
| TP-VP | not checked |
| TP-UDL | as applicable |
| TP-UD (140 octets max) | maximum number of characters (text of message) as defined by the manufacturer (see PICS/PIXIT) |

## 34.2.3 Test of memory full condition and memory available notification:

The Memory Available Notification provides a means for the MS to notify the network that it has memory available to receive one or more short messages. The SMS status field in the SIM contains status information on the "memory available" notification flag.

#### 34.2.3.1 Conformance requirement

1. When a mobile terminated message is Class 2, the MS shall ensure that the message has been transferred to the SMS data field in the SIM before sending an acknowledgement to the SC. The MS shall return a protocol error message if the short message cannot be stored in the SIM and there is other short message storage available in the MS. If all the short message storage in the MS is already in use, the MS shall return "memory capability exceeded".

2. When the MS rejects a short message due to lack of available memory capability the need to transfer notification shall be stored in the SIM.

3. If the memory capability becomes available because memory is cleared, the value of the memory capability exceeded notification flag in the SIM is read. If the flag is set, the MS notifies the network that memory capability is now available. After a positive acknowledgement from the network, the ME unsets the memory capability exceeded notification flag in the SIM.

##### References

GSM 03.40, 9.2.3.10, GSM 03.38, 4.

GSM 03.40, 10.3 (operation 14).

GSM 03.40, 10.3 (operation 14).

#### 34.2.3.2 Test purpose

1. To verify that the MS sends the correct acknowledgement when its memory in the SIM becomes full.

2. To verify that the MS sends the correct acknowledgement when its memory in the ME and the SIM becomes full, and sets the "memory exceeded" notification flag in the SIM.

3. To verify that the MS performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.

#### 34.2.3.3 Method of test

##### Initial conditions

System Simulator:

1 cell, default parameters

Mobile Station:

The MS shall be in the idle updated state.

The SMS message storage shall be empty.

The MS shall be connected to the SIM simulator. The following shall be present in the SIM simulator:

- $EF_{SMS}$ with at least one record;
- $EF_{SMSstatus}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
- Service no. 4 (SMS) in $EF_{SST}$ set to allocated and activated.

For storing of Class 1 Short Messages the MS shall be set up to store Short Messages in the ME memory (by way of MMI, as described in PICS/PIXIT statement).

##### Related PICS/PIXIT Statements

Support for Short message MT/PP.

Description of the basic procedures to display a mobile terminated short message.

Whether SMS messages are stored in the SIM and/or the ME.

The value of timer TC1M.

### Foreseen Final State of MS

Idle, updated.

### Test Procedure

a) step a) of 34.2.5.3 (test of Class 2 Short Messages) is repeated until the MS sends a negative acknowledgement (RP-ERROR). The SIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the SIM.

b) a Class 1 Short Message is sent to the MS.

c) step b) is repeated until the MS sends a negative acknowledgement (RP-ERROR). The SIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the SIM.

d) a Short Message is sent to the MS with the DCS field of the SMS-DELIVER TPDU set to 0.

e) the SS prompts the operator to read a short message and to remove it from the message store of the MS.

f) the SS waits for a CHANNEL REQUEST from the MS, and sends an IMMEDIATE ASSIGNMENT allocating an SDCCH.

g) the SS answers correctly to the SABM on SAPI 0.

h) the SS answers correctly to the SABM on SAPI 3.

i) the SS answers to the RP-SMMA from the MS with a CP-DATA containing a RP-ACK RPDU.

j) after the MS has acknowledged the CP-DATA with a CP-ACK, the SS releases the channel with a CHANNEL RELEASE message. The SIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the SIM.

k) step e) is repeated.

### Maximum Duration of Test

-

### Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 11 | MS -> SS | UA (SAPI=3) | |
| 12 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 13 | SS | | Waits max 25 seconds for CP-ACK |
| 14 | MS -> SS | CP-ACK | |
| 15 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 16 | MS -> SS | CP-DATA | Contains RP-ACK RPDU |
| 17 | SS -> MS | CP-ACK | Within TC1M after step 16 |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 18 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. Step 1-18 is repeated until MS sends a negative acknowledgement (RP-ERROR) in step 16. The RP-ERROR RPDU cause field shall be "Protocol error, unspecified" if there is message capability in the ME, or "Memory capability exceeded" if there is no message capability in the ME. If the total memory store of the MS is full, the ME shall set the "memory capability exceeded" notification flag on the SIM. |
| 19 | SS -> MS | PAGING REQUEST | |
| 20 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 21 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 22 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 23 | SS -> MS | AUTHENTICATION REQUEST | |
| 24 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 25 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 26 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 27 | SS | | SS starts ciphering. |
| 28 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 29 | MS -> SS | UA (SAPI=3) | |
| 30 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 31 | SS | | Waits max 25 seconds for CP-ACK |
| 32 | MS -> SS | CP-ACK | |
| 33 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 34 | MS -> SS | CP-DATA | Shall contain RP-ACK RPDU if there is memory capability in the ME. If not it shall contain RP-ERROR RPDU which cause field shall be "memory capability exceeded". If the total memory store of the MS now becomes full at this step, the ME shall set the "memory cap. exceed" notification flag on the SIM. |
| 35 | SS -> MS | CP-ACK | Within TC1M after step 34 |
| 36 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. Step 19-36 is repeated until the MS sends an RP-ERROR. The SIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the SIM. |
| 37 | SS -> MS | PAGING REQUEST | |
| 38 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 39 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 40 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 41 | SS -> MS | AUTHENTICATION REQUEST | |
| 42 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 43 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 44 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 45 | SS | | SS starts ciphering. |
| 46 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 47 | MS -> SS | UA (SAPI=3) | |
| 48 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) with TP-DCS set to 0 |
| 49 | SS | | Waits max 25 seconds for CP-ACK |
| 50 | MS -> SS | CP-ACK | |
| 51 | SS | | Waits max 60 seconds for RP-ACK RPDU |
| 52 | MS -> SS | CP-DATA | Shall contain RP-ERROR RPDU with error cause "memory capability exceeded". |
| 53 | SS -> MS | CP-ACK | Within TC1M after step 52 |
| 54 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 55 | SS | | Prompts the operator to remove one of the short messagesfrom the message store of the MS. |
| 57 | MS -> SS | CHANNEL REQUEST | Establishment cause "Other services which can be completed with an SDCCH" (NECI=0). |
| 58 | SS -> MS | IMMEDIATE ASSIGNMENT | SS allocates an SDCCH |
| 59 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. CM service type information element is set to "Short message transfer". |
| 60 | SS -> MS | CM SERVICE ACCEPT (UA) | SAPI 0 |
| 61 | MS -> SS | SABM (SAPI=3) | MS shall establish SAPI 3 |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 62 | SS -> MS | UA (SAPI=3) | |
| 63 | MS -> SS | CP-DATA | Contains RP-SMMA RPDU |
| 64 | SS -> MS | CP-ACK | |
| 65 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 66 | MS -> SS | CP-ACK | Acknowledge of CP-DATA containing the RP-ACK RPDU. The ME shall unset the "memory capability exceeded" notification flag on the SIM. |
| 67 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. The SIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the SIM. |
| 68 | SS | | Prompts the operator to remove one of the short messagesfrom the message store of the MS. |
| 69 | MS | | Shall not attempt to send a RP-SMMA RPDU. This is verified by checking that the MS does not send a CHANNEL REQUEST message with the establishment cause "Other services which can be completed with an SDCCH" |

NOTE: Time values for SS wait time are chosen sufficiently high to be sure that the MS has enough time to respond to the different messages.

Specific Message Contents:

SMS-DELIVER TPDU in step 12

| Information element | CommentValue |
|---|---|
| TP-MTI | SMS DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned"0"B |
| TP-OA | an international number coded E.164 |
| TP-PID | default"00000000"B |
| TP-DCS | default alphabet, class 2 "11110010"B |
| TP-SCTS | any legal value (cf. GSM 03.40) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

SMS-DELIVER TPDU in step 30

same as in step 12 except:

| | |
|---|---|
| TP-DCS | default alphabet, class 1 "11110001"B |

SMS-DELIVER TPDU in step 48

same as in step 12 except:

| | |
|---|---|
| TP-DCS | default alphabet "00000000"B |

## 34.2.4 Test of the status report capabilities and of SMS-COMMAND:

This test applies to MSs which support the status report capabilities.

### 34.2.4.1 Conformance requirement

The SMS offers the SC the capabilities of informing the MS of the status of a previously sent mobile originated short message. This is achieved by the SC returning a status report TPDU (SMS-STATUS-REPORT) to the originating MS.

SMS-COMMAND enables an MS to invoke an operation at the SC.

The MS shall increment TP-MR by 1 for each SMS-SUBMIT or SMS-COMMAND being submitted.

**References**

GSM 03.40; 3.2.9.

GSM 03.40; 9.2.3.6.

### 34.2.4.2 Test purpose

1) To verify that the MS is able to accept a SMS-STATUS-REPORT TPDU.

2) To verify that the MS is able to use the SMS-COMMAND functionality correctly and sends an SMS-COMMAND TPDU with the correct TP-Message-Reference.

### 34.2.4.3 Method of test

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in the idle updated state.

#### Related PICS/PIXIT Statements

Support of SMS MO/PP and MT/PP.

#### Foreseen Final State of MS

Idle, updated.

#### Test Procedure

a) The MS is made to send a Mobile Originated short message as in steps a) to d) of test 34.2.2 (SMS Mobile originated).

b) The SS establishes a data link on SAPI-3 with the MS, then sends a CP-DATA message containing a RP-DATA RPDU itself containing an SMS-STATUS-REPORT TPDU.

c) The SS sends a CHANNEL RELEASE message.

d) The MS is made to send an SMS-COMMAND message enquiring about the previously submitted short message.

e) The SS responds to the MS so as to enable it to establish a data link on SAPI-3 on an SDCCH.

f) The SS acknowledges the CP-DATA message from the MS with a CP-ACK followed by a CP-DATA message containing an RP-ACK RPDU

g) After receiving the CP-ACK from the MS, the SS releases the channel by using a CHANNEL RELEASE message.

h) The MS is made to send an SMS-COMMAND message requiring to delete the previously submitted short message.

i) steps e) to g) are repeated.

#### Maximum Duration of Test

-

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Other procedures which can be completed with an SDCCH " (NECI=0) |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 3 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 4 | SS -> MS | AUTHENTICATION REQUEST | |
| 5 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 6 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 7 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 8 | SS | | SS starts ciphering. |
| 9 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 |
| 10 | SS -> MS | UA (SAPI=3) | |
| 11 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU) |
| 12 | SS -> MS | CP-ACK | Sent within TC1M after step 11 |
| 13 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 14 | SS | | Waits max 25 seconds for CP-ACK |
| 15 | MS -> SS | CP-ACK | |
| 16 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 17 | SS -> MS | PAGING REQUEST | |
| 18 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 19 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 20 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 22 | SS -> MS | AUTHENTICATION REQUEST | |
| 23 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 24 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 25 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 26 | SS | | SS starts ciphering. |
| 27 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 28 | MS -> SS | UA (SAPI=3) | |
| 29 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS-STATUS-REPORT TPDU) |
| 30 | MS -> SS | CP-ACK | |
| 31 | MS -> SS | CP-DATA | Contains RP-ACK RPDU |
| 32 | SS ->MS | CP-ACK | |
| 33 | SS -> MS | CHANNEL RELEASE | |
| 34 | MS | | The MS is made to send an SMS-COMMAND message enquiring about the previously submitted SM |
| 35 | MS -> SS | CHANNEL REQUEST | Establishment cause "Other services which can be completed with an SDCCH". |
| 36 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 37 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 38 | SS -> MS | AUTHENTICATION REQUEST | |
| 39 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 40 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 41 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 42 | SS | | SS starts ciphering. |
| 43 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 |
| 44 | SS -> MS | UA (SAPI=3) | |
| 45 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS-COMMAND TPDU) which shall contain the correct TP-MR |
| 46 | SS -> MS | CP-ACK | |
| 47 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 48 | MS -> SS | CP-ACK | |
| 49 | SS -> MS | CHANNEL RELEASE | |
| 50 | MS | The MS is made to send an SMS-COMMAND | message requiring to delete the previously submitted SM. |
| 51 | MS -> SS | CHANNEL REQUEST | Establishment cause "Other services which can be completed with an SDCCH". |
| 52 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 53 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM. |
| 54 | SS -> MS | AUTHENTICATION REQUEST | |
| 55 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 56 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 57 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 58 | SS | | SS starts ciphering. |
| 59 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 |
| 60 | SS -> MS | UA (SAPI=3) | |
| 61 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS-COMMAND TPDU) which shall contain the correct TP-MR |
| 62 | SS -> MS | CP-ACK | |
| 63 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 64 | MS -> SS | CP-ACK | |
| 65 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents:

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|

SMS-STATUS-REPORT TPDU (SS to MS in step 29):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-STATUS-REPORT "10"B |
| TP-MR | same as previous SMS-SUBMIT |
| TP-MMS | no more messages "1"B |
| TP-SRQ | result of SMS-SUBMIT "0"B |
| TP-RA | same as the Destination address of the SMS-SUBMIT |
| TP-SCTS | any legal value (cf. GSM 03.40) |
| TP-DT | any legal value (cf. GSM 03.40) |
| TP-ST | SM received "00000000"B |

first SMS-COMMAND TPDU (MS to SS in step 44)

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-COMMAND "10"B |
| TP-MR | TP-MR in previous SMS-SUBMIT plus "1" |
| TP-SRR | status report requested (GSM 03.40 9.2.3.19) "1"B |
| TP-PID | default "00000000"B |
| TP-CT | Enquiry relating to previously submitted short message "00000000"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |
| TP-DA | not checked (an E164 number) |
| TP-CDL | not checked |
| TP-CD | not checked |

second SMS-COMMAND TPDU (MS to SS in step 60)

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-COMMAND "10"B |
| TP-MR | TP-MR in previous SMS-COMMAND plus "1" |
| TP-SRR | status report not requested "0"B |
| TP-PID | default "00000000"B |
| TP-CT | Delete previously submitted short message "00000010"B |
| TP-MN | not checked (TP-MR in previous SMS-SUBMIT) |
| TP-DA | not checked (an E164 number) |
| TP-CDL | not checked |
| TP-CD | not checked |

## 34.2.5 Test of message class 0 to 3

The tests under this section only apply to a MS capable of displaying short messages (see PICS/PIXIT).

### 34.2.5.1 Short message class 0

#### 34.2.5.1.1 Conformance requirement

When a mobile terminated message is class 0 and the MS has the capability of displaying short messages, the MS shall display the message immediately and send an acknowledgement to the SC when the message has successfully reached the MS irrespective of whether there is memory available in the SIM or ME. The message shall not be automatically stored in the SIM or ME.

References

GSM 03.38, 4.

#### 34.2.5.1.2 Test purpose

To verify that the MS will accept and display but not store a class 0 message, and that it will accept and display a class 0 message if its message store is full.

NOTE: failure of this test in a mobile could cause it to reject a class 0 message when its SMS memory becomes full. This could lead to unwanted repetitions between the MS and the service centre.

#### 34.2.5.1.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in the idle updated state.

The MS message store shall be empty.

Related PICS/PIXIT Statements

Support for Short message MT/PP.

Description of the basic procedures to display a mobile terminated short message.

The value of timer TC1M.

Whether SMS messages are stored in the SIM and/or the ME.

Foreseen Final State of MS

Idle, updated.

Test Procedure

a) The SS sends a class 0 message by using the method described in step a) of section 34.2.1 but with the TPDU described in this section.

b) The MS message store shall be filled (for example by using the method of 34.2.3 test of the memory available notification) with the same SMS-DELIVER TPDU except that TP-DCS is set to class 1.

c) The SS sends a class 0 message as in step a).

Maximum Duration of Test

-

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 11 | MS -> SS | UA (SAPI=3) | |
| 12 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 13 | MS -> SS | CP-ACK | |
| 14 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 15 | SS -> MS | CP-ACK | |
| 16 | SS -> MS | CHANNEL RELEASE | |
| 17 | MS | | The content of the short message shall be displayed by the ME. The MS shall not store the message. This can be checked by verifying that it is impossible to retrieve any short messages from the MS message store. |
| 18 | SS | | The MS message store shall be filled (for example by using the method of 34.2.3) with Class 1 SMS-DELIVER TPDU. |
| 19 | SS -> MS | PAGING REQUEST | |
| 20 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 21 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 22 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 23 | SS -> MS | AUTHENTICATION REQUEST | |
| 24 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 25 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 26 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 27 | SS | | SS starts ciphering. |
| 28 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 29 | MS -> SS | UA (SAPI=3) | |
| 30 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 0 Short Message |
| 31 | MS -> SS | CP-ACK | |
| 32 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 33 | SS -> MS | CP-ACK | |
| 34 | SS -> MS | CHANNEL RELEASE | |
| 35 | MS | | The content of the short message shall be displayed by the ME. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a class 0 message) (SS to MS):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned 0 |
| TP-OA | an international number coded E.164 |
| TP-PID | default "00000000"B |
| TP-DCS | default alphabet, class 0 “1111 0000"B |
| TP-SCTS | any legal value (cf. GSM 03.40) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

SMS-DELIVER TPDU (containing a class 1 message to fill the MS message store) (SS to MS):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned 0 |
| TP-OA | an international number coded E.164 |
| TP-PID | default "00000000"B |
| TP-DCS | default alphabet, class 1 "1111 0001"B |
| TP-SCTS | any legal value (cf. GSM 03.40) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

## 34.2.5.2 Test of class 1 short messages

This test shall apply to MSs which support:

- storing of received Class 1 Short Messages and
- displaying of stored Short Messages.

### 34.2.5.2.1 Conformance requirement

When a mobile terminated message is class 1, the MS shall send an acknowledgement to the SC when the message has successfully reached the MS and can be stored, either in the ME or in the SIM.

**References**

GSM 03.38, 4.

### 34.2.5.2.2 Test purpose

This procedure verifies that the MS acts correctly on receiving a class 1 message, i.e. that it stores the message in the ME or SIM and sends an acknowledgement (at RP and CP-Layer).

34.2.5.2.3 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in the idle updated state.

The MS message store shall be empty.

For storing of class 1 Short Messages, the MS shall be set up to store Short Messages in the ME memory (by way of MMI, as described in PICS/PIXIT statement).

Related PICS/PIXIT Statements

Support for Short message MT/PP.

Description of the basic procedures to display a mobile terminated short message.

The value of timer TC1M.

Whether SMS messages are stored in the SIM and/or the ME.

Foreseen Final State of MS

Idle, updated.

Test Procedure

a) the SS delivers a Short Message of class 1 to the MS as specified in section 34.2.1, step a).

b) the Short Message is recalled (e.g. by means of the MMI).

Maximum Duration of Test

-

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 11 | MS -> SS | UA (SAPI=3) | |
| 12 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 1 Short Message |
| 13 | MS -> SS | CP-ACK | |
| 14 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 15 | SS -> MS | CP-ACK | |
| 16 | SS -> MS | CHANNEL RELEASE | |
| 17 | MS | | The short message shall be recalled and displayed at the MS. |

Specific Message Contents:

SMS-DELIVER TPDU (containing a class 1 message) (SS to MS):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no status report returned 0 |
| TP-OA | an international number coded E.164 |
| TP-PID | default "00000000"B |
| TP-DCS | default alphabet, class 1 "1111 0001"B |
| TP-SCTS | any legal value (cf. GSM 03.40) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

## 34.2.5.3 Test of class 2 short messages

### 34.2.5.3.1 Definition and applicability

Class 2 Short Messages are defined as SIM specific, and the MS shall ensure that a message of this class is stored on the SIM.

This test shall apply to MSs which support:

- storing of received Class 2 Short Messages in the SIM.

### 34.2.5.3.2 Conformance requirement

When a mobile terminated message is Class 2, the MS shall ensure that the message has been correctly transferred to the SMS data field in the SIM before sending an acknowledgement to the SC. The MS shall return a "protocol error, unspecified" error message if the short message cannot be stored in the SIM and there is other short message storage available at the MS. If all the short message storage at the MS is already in use, the MS shall return "memory capacity exceeded".

Reference(s)

GSM 03.40, 9.2.3.10; GSM 03.38, 4. GSM 11.11, 10.3.3.

### 34.2.5.3.3 Test purpose

This procedure verifies that the MS acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the SIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network.

There are 2 cases:

1) If the MS supports storing of short messages in the SIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the SIM, the error cause shall be "protocol error, unspecified".

2) If the MS supports storing of short messages in the SIM and not in the ME, and storage in the ME is not full, and the short message cannot be stored in the SIM, the error cause shall be "memory capacity exceeded".

NOTE: If the MS supports storing of short messages in the SIM and the ME, and storage in the ME is full, and the short message cannot be stored in the SIM, the error cause shall be "memory capacity exceeded". This case is not tested in this test.

34.2.5.3.4 Test method

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in the idle updated state.

The ME message store shall be empty.

The ME shall be connected to the SIM simulator. The following shall be present in the SIM simulator:

- $EF_{SMS}$ with at least two free records and one full record;
- $EF_{SMSstatus}$, with SMS "Memory Cap. Exceed" notification flag set to "memory available";
- Service no. 4 (SMS) in $EF_{SST}$ set to allocated and activated;

For storing of Class 1 Short Messages the MS shall be set up to store Short Messages in the ME memory (by way of MMI, as described in PICS/PIXIT statement).

Related PICS/PIXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the SIM and/or the ME.

Foreseen Final State of MS

Idle, updated.

Test Procedure

a) the SS delivers a Short Message of class 2 to the MS as specified in section 34.2.1, step b).

b) following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the SIM, the SIM simulator returns the status response "OK" ("90 00").

c) step a) is repeated.

d) following an attempt by the ME to store the short message in a free record of $EF_{SMS}$ in the SIM, the SIM simulator returns the status response "memory problem" ("92 40").

e) the SIM simulator indicates if an attempt was made in steps a) and c) to store the messages and if the messages are stored according to the requirement.

Maximum Duration of Test

-

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 11 | MS -> SS | UA (SAPI=3) | |
| 12 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 13 | MS -> SS | CP-ACK | |
| 14 | ME | | The ME shall correctly store the short message in a free record of EFSMS in the SIM, i.e. - the ME shall use a free record - the first byte of the record shall indicate "message received by MS from network"<br>- the TS-Service-Centre-Address shall be correctly stored<br>- the TPDU shall be identical to that sent by the SS<br>- bytes following the TPDU shall be set to "FF" |
| 15 | SIM | | The SIM simulator returns the status response "OK" ("90 00"). The SIM simulator shall indicate if an attempt was made by the ME to store the short message in the SIM. |
| 16 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 16A | SS -> MS | CP-ACK | |
| 17 | SS -> MS | CHANNEL RELEASE | |
| 18 | SS -> MS | PAGING REQUEST | |
| 19 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 20 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 21 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 22 | SS -> MS | AUTHENTICATION REQUEST | |
| 23 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 24 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 25 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 26 | SS | | SS starts ciphering. |
| 27 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 28 | MS -> SS | UA (SAPI=3) | |
| 29 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU), Class 2 Short Message |
| 30 | MS -> SS | CP-ACK | |
| 31 | ME | | The ME shall attempt to store the short message in a free record of EFSMS in the SIM. |
| 32 | SIM | | The SIM simulator returns the status response "memory problem" ("92 40"). The SIM simulator shall indicate if an attempt was made by the ME to store the short message in the SIM. |
| 33 | MS -> SS | CP-DATA | Contains RP-ERROR RPDU with error cause "protocol error, unspecified" if the MS supports storing of short messages in the ME, or error cause "memory capacity exceeded" if not. |
| 33A | SS -> MS | CP-ACK | |
| 34 | SS -> MS | CHANNEL RELEASE | |

Specific Message Contents:

SMS-DELIVER TPDU (containing a class 2 message) (SS to MS):

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | more messages are waiting in SC "0"B |
| TP-RP | no reply path "0"B |
| TP-UDHI | TP-UD contains only the SM "0"B |
| TP-SRI | no status report returned 0 |
| TP-OA | an international number coded E.164 |
| TP-PID | default "00000000"B |
| TP-DCS | default alphabet, class 2 "1111 0010"B |
| TP-SCTS | any legal value (cf. GSM 03.40) |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) |

#### 34.2.5.4 Test of class 3 short messages

For further study.

### 34.2.6 Test of short message type 0

For further study.

### 34.2.7 Test of the replace mechanism for SM type 1-7

#### 34.2.7.1 Definition and applicability

This test shall apply to MSs which support:

- Replace Short Messages and
- display of received Short Messages.

#### 34.2.7.2 Conformance requirement

On receipt of a short message, the MS shall check to see if the associated Protocol Identifier contains a Replace Short Message Type code. If such a code is present, then the MS will check the associated SC address (RP-OA) and originating address (TP-OA) and replace any existing stored message having the same Protocol Identifier code, SC address and originating address with the new short message.

Reference(s)

GSM 03.40; 9.2.3.9.

#### 34.2.7.3 Test purpose

This procedure verifies the correct implementation of the replace mechanism for Replace Short Messages.

34.2.7.4 Test method

Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in the idle updated state.

The MS message store shall be empty.

Related PICS/PIXIT Statements

Support for Short message MT/PP.

Description of the basic procedures to display a mobile terminated short message.

The value of timer TC1M.

Foreseen Final State of MS

Idle, updated.

Test Procedure

a) two different numbers n and m are drawn randomly between 1 and 7. Two different addresses for TP-Originating-Address (TPOA1 and TPOA2) are drawn. Two different addresses for RP-Originating-Address (RPOA1 and RPOA2) are drawn.

b) the SS delivers a short message to the MS as specified in section 34.2.1 step a). In the SMS-DELIVER TPDU, the TP-Protocol-Identifier parameter is "Replace Short Message Type n", the TP-Originating-Address is TPOA1, and the RP-Originating-Address is RPOA1.

c) step b) is repeated but with a different TP-Originating-Address (TPOA2), and different contents of TP-User-Data in the SMS-DELIVER TPDU. The other parameters are the same as in step b).

d) step c) is repeated but with RPOA2 in the RP-Originated-Address, and contents of TP-User-Data different from the former two messages. The other parameters are the same as in step c).

e) step d) is repeated but with the TP-Protocol-Identifier equal to "Replace Short Message Type m", and contents of TP-User-Data different from the former three messages. The other parameters are the same as in step d).

f) step e) is repeated but the contents of TP-User-Data are different from that used in step e).

g) the SS prompts the operator to display the Short Messages stored in the MS.

Maximum Duration of Test

-

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 11 | MS -> SS | UA (SAPI=3) | |
| 12 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) TP-PID is "Replace Short Message Type n", TP-OA is TPOA1 and RP-OA is RPOA1 |
| 13 | MS -> SS | CP-ACK | |
| 14 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 14A | SS -> MS | CP-ACK | |
| 15 | SS -> MS | CHANNEL RELEASE | |
| 16 | SS -> MS | PAGING REQUEST | |
| 17 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 18 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 19 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 20 | SS -> MS | AUTHENTICATION REQUEST | |
| 21 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 22 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 23 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 24 | SS | | SS starts ciphering. |
| 25 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 26 | MS -> SS | UA (SAPI=3) | |
| 27 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) TP-PID is "Replace Short Message Type n", TP-OA is TPOA2 and RP-OA is RPOA1, TP-UD different from step 12 |
| 28 | MS -> SS | CP-ACK | |
| 29 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 29A | SS -> MS | CP-ACK | |
| 30 | SS -> MS | CHANNEL RELEASE | |
| 31 | SS -> MS | PAGING REQUEST | |
| 32 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 33 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 34 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 35 | SS -> MS | AUTHENTICATION REQUEST | |
| 36 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 37 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 38 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 39 | SS | | SS starts ciphering. |
| 40 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 41 | MS -> SS | UA (SAPI=3) | |
| 42 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) TP-PID is "Replace Short Message Type n", TP-OA is TPOA2 and RP-OA is RPOA2, TP-UD different from step 12 and 27 |
| 43 | MS -> SS | CP-ACK | |
| 44 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 44A | SS -> MS | CP-ACK | |
| 45 | SS -> MS | CHANNEL RELEASE | |
| 46 | SS -> MS | PAGING REQUEST | |
| 47 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 48 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 49 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 50 | SS -> MS | AUTHENTICATION REQUEST | |
| 51 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |

| Step | Direction | Message | Comments |
|---|---|---|---|
| 52 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 53 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 54 | SS | | SS starts ciphering. |
| 55 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 56 | MS -> SS | UA (SAPI=3) | |
| 57 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) TP-PID is "Replace Short Message Type m", TP-OA is TPOA2 and RP-OA is RPOA2, TP-UD different from step 12, 27 and 42 |
| 58 | MS -> SS | CP-ACK | |
| 59 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |

| 71 | MS -> SS | UA (SAPI=3) | |
| 72 | SS -> MS | CP-DATA | Contains RP-DATA RPDU (SMS DELIVER TPDU) TP-PID is "Replace Short Message Type m", TP-OA is TPOA2 and RP-OA is RPOA2, TP-UD different from step 57 |
| 73 | MS -> SS | CP-ACK | |
| 74 | MS -> SS | CP-DATA | Contains RP-ACK RPDU. |
| 74A | SS -> MS | CP-ACK | |
| 75 | SS -> MS | CHANNEL RELEASE | |
| 76 | SS | | Prompts the operator to display the Short Messages stored in the MS. Only the Short Messages delivered in step 12, 27, 42 and 72 shall be retrievable and displayed |

Specific Message Contents:

SMS-DELIVER TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS-DELIVER "00"B |
| TP-MMS | no more messages are waiting in SC "1"B |
| TP-RP | no Reply Path"0"B |
| TP-UDHI | TP-UD contains only the SM"0"B |
| TP-SRI | no Status Report returned "0"B |
| TP-OA | an international number coded E.164 (see test method description) |
| TP-PID | binary 01000xxx, xxx represents n resp. m (see test method description) |
| TP-DCS | default alphabet "00000000"B |
| TP-SCTS | the time when the message was submitted according to GSM 03.40 |
| TP-UDL | 160 |
| TP-UD (140 octets) | text of message (160 characters) (see test method description) |

## 34.2.8 Test of the reply path scheme

### 34.2.8.1 Definition and applicability

This test applies to MSs which support

- reply procedures (the class of MSs for which this is mandatory is described in GSM 03.40, annex 4)
- displaying of received Short Messages and
- submitting Short Messages.

Steps b) and d) are only executed for MSs which support storing of Short messages.

### 34.2.8.2 Conformance requirement

When a replying MS receives an original mobile terminated short message it has:

originating SME = TP-Originating Address in the SMS-DELIVER TPDU;

original SC = RP-Originating Address in the RP-MT-DATA.

When submitting the reply mobile originated short message, the replying MS should use parameters as follows:

TP-Destination Address in SMS-SUBMIT TPDU = originating SME;

RP-Destination Address in RP-MO-DATA = original SC.

#### Reference(s)

GSM 03.40 annex 4, sect. 5, 6.

### 34.2.8.3 Test purpose

This procedure verifies that the MS is able to send a Reply Short Message back to the correct originating SME even if in the meantime it receives another Short Message.

### 34.2.8.4 Test method

#### Initial conditions

System Simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in the idle updated state.

The MS message store shall be empty.

#### Related PICS/PIXIT Statements

Support for Short message MT/PP.

Support for Short message MO/PP.

Description of the basic procedures to display a mobile terminated short message.

Description of the basic procedures to send a mobile originated short message.

The value of timer TC1M.

Foreseen Final State of MS

Idle, updated.

Test Procedure

a) the SS delivers a Short Message as specified in section 34.2.1, step b) with TP-Reply-Path set to 1.

b) step a) is repeated but with:

- different TP-Originating-Address for the originating SME;
- different RP-Originating-Address for the original SC and
- different message contents TP-User-Data.

c) one of the two Short Messages is displayed (e.g. by means of the MMI) and the Reply Short Message is submitted (e.g. by means of the MMI).

d) step c) is repeated for the other Short Message.

**Maximum Duration of Test**

-

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> MS | PAGING REQUEST | |
| 2 | MS -> SS | CHANNEL REQUEST | Establishment cause is "Answer to paging" |
| 3 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 4 | MS -> SS | PAGING RESPONSE | Message is contained in SABM. |
| 5 | SS -> MS | AUTHENTICATION REQUEST | |
| 6 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 7 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 8 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 9 | SS | | SS starts ciphering. |
| 10 | SS -> MS | SABM (SAPI=3) | SS establishes SAPI 3 |
| 11 | MS -> SS | UA (SAPI=3) | |

## 34.2.9 Multiple SMS mobile originated

### 34.2.9.1 MS in idle mode

This test applies to MS supporting the ability of sending multiple short messages on the same RR connection when there is no call in progress.

#### 34.2.9.1.1 Conformance requirements

When the MS chooses to use the same RR connection to send another short message or a memory available notification, then:

- the MS shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the MS shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the MS shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

Reference

GSM 03.40; 3.1

GSM 04.11; 5.4

GSM 04.13; 5.6

#### 34.2.9.1.2 Test purpose

To verify that the MS is able to correctly send multiple short messages on the same RR connection when using an SDCCH.

#### 34.2.9.1.3 Method of test

Initial conditions

System simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in "Idle, updated" state.

The SMS message storage shall be empty.

Related PICS/PIXIT statements

Support for multiple short message MO/PP on the same RR connection
Description of how to enter multiple SMS
Description of the basic procedures to display a mobile originated short message
Whether SMS messages are stored in the SIM and/or the ME.

Foreseen final state of MS

Idle, updated

Test procedure

a) The MS shall be set up to send 3 short messages as multiple SM to the SS. The SS responds to the channel request message by allocating an SDCCH. The SS answers correctly to the SABM on SAPI 0 and then performs the authentication and ciphering procedures.

b) The SS responds with a UA frame SAPI-3 to the MS.

c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the MS with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU. The Transaction Identifier used on this MM connection is 'x'.

d) the MS shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. The MS shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the first short message) has been received. Before transmission of the first CP-DATA on the new MM connection, the MS shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be y, where y <> x (see procedure c)).

e) The SS waits a maximum of 5 seconds after receiving the CM SERVICE REQUEST for the CP-ACK message from the MS.

f) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the MS with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.

g) the MS shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. Before transmission of the first CP-DATA on the new MM connection, the MS shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be z, where z <> y (see procedure d)). The MS shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the second short message) has been received.

h) The SS waits a maximum of 5 seconds after receiving the CM SERVICE REQUEST for the CP-ACK message from the MS.

i) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the MS with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.

j) The SS waits a maximum of 5 seconds after sending CP-DATA for the CP-ACK message from the MS.

k) The SS sends a Channel Release message to the MS.

Maximum duration of test

5 min.

Expected sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | MS -> SS | CHANNEL REQUEST | Establishment cause is “Other procedures which can be completed with an SDCCH” NECI = 0 |
| 2 | SS -> MS | IMMEDIATE ASSIGNMENT | SS assigns an SDCCH |
| 3 | MS -> SS | CM SERVICE REQUEST | Message is contained in SABM on SAPI 0. CM service type set to "Short message transfer" |
| 4 | SS -> MS | AUTHENTICATION REQUEST | |
| 5 | MS -> SS | AUTHENTICATION RESPONSE | SRES specifies correct value. |
| 6 | SS -> MS | CIPHERING MODE COMMAND | SS starts deciphering after sending the message. |
| 7 | MS -> SS | CIPHERING MODE COMPLETE | Shall be sent enciphered. All following messages shall be sent enciphered. |
| 8 | SS | | SS starts ciphering. |
| 9 | MS -> SS | SABM (SAPI=3) | MS establishes SAPI 3 on DCCH |
| 10 | SS -> MS | UA (SAPI=3) | |
| 11 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 11, 12, 13 and 15 shall be x. |
| 12 | SS -> MS | CP-ACK | |
| 13 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 14 | MS -> SS | CM SERVICE REQUEST | CM service type set to "Short message transfer". |
| 15 | MS -> SS | CP-ACK | Shall be sent within 5 seconds of step 14 |
| 16 | SS -> MS | CM SERVICE ACCEPT | |
| 17 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 17, 18, 19 and 21 shall be y where y <> x (see step 11). |
| 18 | SS -> MS | CP-ACK | |
| 19 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 20 | MS -> SS | CM SERVICE REQUEST | CM service type set to "Short message transfer". |
| 21 | MS -> SS | CP-ACK | Shall be sent within 5 seconds of step 20 |
| 22 | SS -> MS | CM SERVICE ACCEPT | |
| 23 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 23, 24, 25 and 26 shall be z, where z <> y (see step 17). |
| 24 | SS -> MS | CP-ACK | |
| 25 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 26 | MS -> SS | CP-ACK | Shall be sent within 5 seconds of step 25 |
| 27 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 28 | MS -> SS | DISC (SAPI=0) | MS shall respond to channel release with a layer 2 DISC frame with SAPI 0 |

Specific message contents:

SMS SUBMIT TPDU

| Information element | Comment Value |
|---|---|
| TP-MTI | SMS SUBMIT ‘01’B |
| TP-VPF | not checked |
| TP-RP | no reply path ‘0’B |

| TP-VP | not checked |
| TP-UDL | as applicable |
| TP-UD (140 octets max.) | the user data consist of an arbitrarily chosen amount of octets |

## 34.2.9.2 MS in active mode

This test applies to MS supporting the ability of sending multiple short messages when there is a call in progress.

### 34.2.9.2.1 Conformance requirements

When the MS chooses to use the same RR connection to send another short message or a memory available notification, then:

- the MS shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the MS shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the MS shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

#### Reference

GSM 03.40; 3.1

GSM 04.11; 5.4

GSM 04.13; 5.6

### 34.2.9.2.2 Test purpose

To verify that the MS is able to correctly send multiple short messages on the same RR connection when sent parallel to a call.

### 34.2.9.2.3 Method of test

#### Initial conditions

System simulator:

1 cell, default parameters.

Mobile Station:

The MS shall be in "Idle, updated" state.

The SMS message storage shall be empty.

#### Related PICS/PIXIT statements

Support for multiple short message MO/PP on the same RR connection
Description of how to enter multiple SMS
Description of the basic procedures to display a mobile originated short message
Support for state U10 of call control
Whether SMS messages are stored in the SIM and/or the ME.

#### Foreseen final state of MS

Idle, updated

Test procedure

a) A data or speech call is established on a TCH with the SS and the state U10 of call control is entered. The MS is set up to send 3 short messages as multiple SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM SERVICE ACCEPT message. The SS responds with a UA frame SAPI-3 to the SABM with SAPI-3 received from the MS.

b) Steps c) to k) of the test procedure in section 34.2.9.1.3 are repeated.

Maximum duration of test

5 min.

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS | | A data or speech call is established on a TCH and the state U10 of call control is entered. |
| 2 | MS | | The MS is set up to send 3 short messages as multiple SM |
| 3 | MS -> SS | CM SERVICE REQUEST | Sent in a layer 2 frame on the FACCH. CM service type set to "short message transfer" |
| 4 | SS -> MS | CM SERVICE ACCEPT | |
| 5 | MS -> SS | SABM (SAPI=3) | Sent on SACCH associated with the TCH |
| 6 | SS -> MS | UA (SAPI=3) | |
| 7 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 7, 8, 9 and 11 shall be x. |
| 8 | SS -> MS | CP-ACK | |
| 9 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 10 | MS -> SS | CM SERVICE REQUEST | Sent in a layer 2 frame on the FACCH. CM service type set to "short message transfer" |
| 11 | MS -> SS | CP-ACK | Shall be sent within 5 seconds of step 10 |
| 12 | SS -> MS | CM SERVICE ACCEPT | |
| 13 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 13, 14, 15 and 17 shall be y where y <> x (see step 7). |
| 14 | SS -> MS | CP-ACK | |
| 15 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 16 | MS -> SS | CM SERVICE REQUEST | Sent in a layer 2 frame on the FACCH. CM service type set to "short message transfer" |
| 17 | MS -> SS | CP-ACK | Shall be sent within 5 seconds of step 16 |
| 18 | SS -> MS | CM SERVICE ACCEPT | |
| 19 | MS -> SS | CP-DATA | Contains RP-DATA RPDU (SMS SUBMIT TPDU). The Transaction Identifier used in steps 19, 20, 21 and 22 shall be z, where z <> y (see step 13). |
| 20 | SS -> MS | CP-ACK | |
| 21 | SS -> MS | CP-DATA | Contains RP-ACK RPDU |
| 22 | MS -> SS | CP-ACK | Shall be sent within 5 seconds of step 21 |
| 23 | SS -> MS | CHANNEL RELEASE | The main signalling link is released. |
| 24 | MS -> SS | DISC (SAPI = 0) | MS shall respond to channel release with a layer 2 DISC frame with SAPI 0. |

Specific Message Contents:

SMS SUBMIT TPDU

| Information element | Comment Value |

# 34.3 Short message service cell broadcast

This test applies to all MSs.

## 34.3.1 Conformance requirements

If the MS supports SMS-CB, it is responsible for recombination of the four blocks received via the radio path into a single block which constitutes the cell broadcast short message.

In idle mode, the MS listens to the BCCH and to the paging sub-channel for the paging group it belongs to. The MS is required to receive and analyse the paging messages and immediate assignment messages sent on the paging subchannel corresponding to its paging subgroup.

### Reference

GSM 03.41; 8.

GSM 04.08; 3.2.1, 3.3.2.1.

## 34.3.2 Test purpose

This test verifies that an MS supporting SMS-CB is able to receive SMS-CB messages.

This test verifies that an MS is able to respond to a paging requested during the transmission of a cell broadcast short message.

## 34.3.3 Test method

### Initial conditions

System Simulator:

1 cell, default parameters, except BS_PA_MFRMS = 2.

The SS provides a BCCH/CCCH to support the MS in idle mode.

Periodic location updating is disabled.

Mobile Station:

The MS shall be in the idle updated state.

**Related PICS/PIXIT Statements**

Support for short message transmission cell broadcast.

Description of the basic procedures to display a cell broadcasted short message.

**Foreseen Final State of MS**

Idle, updated.

Test Procedure

a) Three Cell Broadcast (CB) messages are sent by the SS on the CBCH with serial numbers 0,1,1.

b) Step a) is repeated, but the SS pages the MS during the transmission of the second CB message. This shall be achieved by paging the MS immediately after the first block of the CB message has been sent. The SS shall ensure that the page is transmitted on the radio interface prior to the transmission of the 4th block of the CB message.

NOTE: The use of BS_PA_MFRMS = 2 ensures that this can be achieved irrespective of the IMSI.

The MS shall respond to the page.

**Maximum Duration of Test**

-

**Expected Sequence**

Since the SMS-CB messages are sent continuously, a table is not applicable in this test.

**Specific Message Contents:**

Cell broadcast test message content

| Information element | Comment Value |
|---|---|
| Serial Number | |
| - Geographical scope | "00"B |
| - Message code | see test procedure "0000000000"B or "0000000001"B as applicable |
| - Update number | |
| Message identifier | "0"B |
| Data Coding Scheme | Default alphabet, English "00000001"B |
| Page parameter | "0001 0001"B |
| Contents of message | 93 user characters using 93 different characters of default 7 bit coded alphabet |

SYSTEM INFORMATION TYPE 4

As default except:

| Information element | Value/remark |
|---|---|
| CBCH Channel Description | |
| - Channel type and TDMA offset | SDDCH/4 + SACCH/C4 or CBCH (SDDCH/4) |
| - Timeslot number | time slot zero |
| - Training sequence code | 5 (same as BCC) |
| - Hopping channel | Single RF channel |
| -Channel selector | Channel number 263 (for GSM 450 MS) Channel number 310 (for GSM 480 MS) Channel number 20 (for GSM 900 MS) Channel number 590 (for DCS 1 800 and PCS 1900 MS) Channel number 457 (for GSM 700 MS) Channel number 147 (for GSM 850 MS) |
| CBCH Mobile Allocation | Not included |

# 35 Low battery voltage detection

## 35.1 Definition and applicability

Low battery or shutdown voltage detection is used to trigger inhibition of all RF transmission before the MS supply voltage reaches a level where effective use of the radio frequency spectrum is no longer guaranteed.

The requirements and this test apply to all types of GSM 450, GSM 480, GSM 700, GSM 850, GSM 900, DCS 1 800 and PCS 1900 MS.

## 35.2 Conformance requirement

1. The MS shall not make ineffective use of the radio frequency spectrum. In no case shall the MS exceed the transmitted levels as defined in GSM 05.05 for extreme operation.

   GSM 05.05, annex D.2.2.

2. The MS shall inhibit all RF transmission when the power supply voltage is below the manufacturer declared approximate shutdown voltage.

   GSM 05.05, annex D.2.2.

## 35.3 Test purpose

1. To verify that the MS does not make ineffective use of the RF spectrum.
2. To verify that the MS inhibits all RF transmission when the battery voltage falls below the manufacturer declared shutdown level.

## 35.4 Method of test

### 35.4.1 Initial conditions

The SS transmits a BCCH with a location updating time set to 0,1 hours.

The SS sends a paging request message to the MS.

The MS responds with a channel request message.

The SS sends an immediate assignment message establishing an SDCCH.

### 35.4.2 Procedure

a) The SS gradually reduces the power supply voltage until the MS ceases the production of RF output.

   The RF output spectrum shall be monitored for any anomalies while the supply voltage is being reduced.

NOTE 1: The declared approximate shutdown voltage gives an indication of the voltage where the MS will cease RF output.

NOTE 2: If any anomalies occur, then additional testing using the transmitter tests at the voltage where the anomaly occurred is performed to determine in an objective manner, whether or not the conformance requirement is met.

c) After 7 minutes, the SS sends a paging message to the MS.

d) The SS observes whether or not the MS produces any RF output.

   This measurement is performed over the relevant transmit band.

The spectrum analyser is set to:

Bandwidth: 3 MHz

Peak Hold

e) The SS modifies the location area of the BCCH.

f) For 7 minutes, the SS observes whether or not the MS produces any RF output.

NOTE 3: It is anticipated that the MS might attempt location updating.

g) The MS is switched off and on.

h) The SS pages the MS.

i) The SS observes whether or not the MS produces any RF output.

### 35.5 Test requirement

1. In step a) no anomalies shall occur.
2. In step a), the MS shall cease the production of RF output.
3. In steps d), f) and i), the MS shall not produce any RF output above -30 dBm.

# 38 Void

# 39 Additional CTS-MS testcases

## 39.1 General paragraph

## 39.2 Tests for CTS-MS/PLMN interface

### 39.2.1 CTS not allowed by GSM Network

The normal location updating procedure is used to update the registration of the actual Location Area of a Mobile Station in the network.

#### 39.2.1.1 Conformance requirements

The network may grant authorisation for the mobile station to use GSM-Cordless Telephony System (CTS) in the Location Area and its immediate neighbourhood. The mobile should memorise this permission in non-volatile memory. If the "CTS permission" IE is not present in the message, the mobile is not authorised to use GSM-CTS, and shall accordingly delete any memorised permission.

#### 39.2.1.2 Test purpose

To check that the CTS-MS is able to delete any memorised CTS permission when CTS permission is not allowed by a GSM network.

##### References

GSM 04.08 section 4.4.4.6

#### 39.2.1.3 Method of test

##### Related PICS/PIXIT statements

##### Initial conditions

CTS-MS:

CTS-MS is OFF and under coverage of a GSM network.

CTS-MS is enroled on at least one CTS-FP

##### Foreseen Final State of the CTS-MS

CTS-MS is "idle, updated"

##### Test procedure

The CTS-MS in switched ON. The CTS-MS shall perform a Location Registration procedure. The SS answers with a LOCATION UPDATE ACCEPT without including "CTS permission" IE. The CTS-MS shall accordingly delete any memorised CTS permission. The SS establish a BCH channel. The CTS-MS had one entry in the DF_CTS of the SIM corresponding to the FPBI broadcasted by the SS, before the location updating procedure. The CTS-MS shall not perform an Attachment procedure.

##### Maximum Duration of Test

[TBD]

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | CTS-MS -> SS | ACCESS REQUEST | |
| 2 | SS -> CTS-MS | IMMEDIATE ASSIGNMENT | |
| 3 | CTS-MS -> SS | LOCATION UPDATE REQUEST | |
| 4 | SS -> CTS-MS | IDENTITY REQUEST | |
| 5 | CTS-MS -> SS | IDENTITY RESPONSE | |
| 6 | SS -> CTS-MS | AUTHENTICATION REQUEST | |
| 7 | CTS-MS -> SS | AUTHENTICATION RESPONSE | |
| 8 | SS -> CTS-MS | CIPHERING COMMAND | |
| 9 | CTS-MS -> SS | CIPHERING COMPLETE | |
| 10 | SS -> CTS-MS | LOCATION UPDATE ACCEPT | "CTS permission" IE is not present |
| 11 | SS -> CTS-MS | CHANNEL RELEASE | |
| 12 | | | The SS establish a BCH channel. The CTS-MS had one entry in the DF_CTS of the SIM corresponding to the FPBI broadcasted by the SS, before the location updating procedure. |
| 13 | | | Check that the CTS-MS does not send CTS ACCESS REQUEST for 2 minutes. |

# 39.3 RF tests for CTS-MS/FP interface

## 39.3.1 Transmit power control timing and confirmation

### 39.3.1.1 Definition and applicability

The RF power level to be employed by the CTS-MS is indicated by means of the 5 bit TXPWR field sent in the layer 1 header of each downlink SACCH message block and may be sent in a dedicated signalling block.

When a power change is signalled the CTS-MS must change its power control level to the new level at a certain rate of change.

The CTS-MS shall confirm the power level that it is currently employing by setting the CTS-MS_TXPWR_CONF field in the uplink SACCH L1 header.

The requirements and this test apply to all types of GSM 900 and DCS 1 800 CTS-MS.

### 39.3.1.2 Conformance requirement

1. The RF power control level to be employed by the CTS-MS is indicated by means of the power control information sent in the layer 1 header of each downlink SACCH message block and may be sent in a dedicated signalling block; GSM 05.08, 11.3.2.

2. The CTS-MS shall confirm the power level that it is currently employing in the uplink SACCH L1 header. The indicated value shall be the power control level actually used by the CTS-MS for the last burst of the previous SACCH period; GSM 05.08, 11.3.2.

3. Upon receipt of a command on the SACCH to change its RF power level, the CTS-MS shall change to the new level at a rate of one nominal 2 dB power control step every 60 ms; GSM 05.08, 11.3.7.

4. The change (in conformance requirement 3) shall commence at the first TDMA frame belonging to the next reporting period; GSM 05.08, 11.3.7.

5. In case of channel change the commanded power level shall be applied on the new channel immediately; GSM 05.08, 11.3.7.

#### 39.3.1.3 Test purpose

1. To verify that the CTS-MS will set its transmitter output power in accordance with conformance requirement 1.
2. To verify that the CTS-MS will confirm the power level it is currently employing according to conformance requirement 2.
3. To verify that the CTS-MS, upon receipt of a command from the SACCH to change its RF power level, will change according to conformance requirement 3.
4. To verify that the CTS-MS will commence the change of power level at least by the sixth TDMA frame belonging to the next reporting period.
5. To verify that in case of new channel assignment the commanded power level is applied on the new channel according to conformance requirement 5.

#### 39.3.1.4 Method of test

NOTE: The method of measuring the CTS-MS transmitter output power is given in section 13.3. For CTS-MS transmission, the nominal maximum output power is:
- 11 dBm (0.015 W) in GSM 900 i.e. power control level 16
- 12 dBm (0.016 W) in DCS 1800 i.e. power control level 19. (see GSM 05.05, 4.1.1)

##### Initial conditions

A call is set up by the SS according to the generic call set up procedure on a channel with ARFCN in the Mid ARFCN range (ref. table 3.3), power control level set to maximum power.

##### Procedure

a) The SS signals minimum power control level to the CTS-MS in the SACCH.

b) The SS measures the CTS-MS transmitter output power on TDMA frames 6, 19, 32 and every subsequent 13th TDMA frame to TDMA frame 214. The SS also monitors the CTS-MS_TXPWR_CONF field in the uplink SACCH L1 header for the four SACCH multiframes after the SS signals the power change.

c) The SS now sets TXPWR in the SACCH to the maximum peak power appropriate to the CTS-MS.

d) The SS measures the CTS-MS transmitter output power on TDMA frames 6, 19, 32 and every subsequent 13th TDMA frame to TDMA frame 214. The SS also monitors the CTS-MS_TXPWR_CONF field in the uplink SACCH L1 header for the four SACCH multiframes after the SS signals the power change.

e) The SS now sets the SACCH TXPWR to 17 in GSM 900 or 11 in DCS 1800.

f) After 3 s the SS sets the SACCH TXPWR to 18 in GSM 900 or 12 in DCS 1800.

g) The SS measures the CTS-MS transmitter output power on TDMA frame 6.

h) The SS sets the SACCH TXPWR to 17 in GSM 900 or 11 in DCS 1800

i) The SS measures the CTS-MS transmitter output power on TDMA frame 6.

j) The channel assignment is changed and the demanded power within the channel assignment is set to the minimum power control level of the CTS-MS.

k) When the CTS-MS has changed channel its output power is measured on the first burst on the new channel.

##### Test requirements

NOTE: Refer to tables 13-2 and 13-4 for relationship between the power control level, transmitter output power and the relevant tolerances.

a) In steps b) and d), the transmitter output power shall change by one power step towards the new level signalled for each measured burst until the CTS-MS is operating at the closest supported power control level and from then on, all transmissions shall be at that level.

b) In steps b) and d), the value of the CTS-MS_TXPWR_CONF field in the uplink SACCH L1 header shall correspond to the actual power control level used for the last transmitted burst of the previous SACCH multiframe. The first one shall indicate the initial transmitted power control level, the subsequent ones shall change by 17 in GSM 900 or 11 in DCS 1800 each time until the final power control level has been reached in which case that value shall be indicated.

c) In steps g) and i) the transmitter output power of TDMA frame 6 shall correspond to the new commanded power control level.

d) In step k) the CTS-MS output power, measured on the new channel shall correspond to the power control level in the channel assignment.

## 39.3.2 CTS Fixed Part selection

### 39.3.2.1 Definition and applicability

CTS-FP selection is a process in which a CTS-MS attempts to find a suitable CTS-FP. Two methods of searching for a suitable CTS-FP are possible, automatic mode and manual mode. The process ensures that the CTS-MS is attached to a CTS-FP from which it can reliably decode downlink data and with which it has a high probability of communications on the uplink. Once the CTS-MS is attached to a CTS-FP, access to the network is allowed.

In CTS mode only or in automatic mode with CTS preferred, the CTS-MS normally operates on CTS fixed part on which the mobile station is already enrolled. If the CTS-MS loses coverage in these modes, it shall attempt periodically to select again a CTS fixed part.

There are two modes for CTS-FP selection:

i) automatic mode : This mode uses a list of CTS-FP in priority order. The highest priority CTS-FP available is selected.

ii) Manual mode : The user selects one of the CTS-FP on which the MS is enrolled. The MS shall attempt only to attach to the selected CTS-FP.

To select a CTS fixed part, the CTS-MS shall listen to the CTSBCH frequencies of all the fixed parts on which the MS is currently enrolled.

This test is applicable for all types of GSM 900 and DCS 1 800 MSs.

### 39.3.2.2 Conformance requirement

1. In CTS mode only, the CTS-MS shall be able to synchronise to the CTSBCH carrier and to transmit on CTSARCH within 30 seconds.

2. There are various requirements that a CTS fixed part must satisfy before an CTS-MS can perform normal camping on it:

   2.1 (i) It should be a CTS fixed part on which the CTS-MS is enrolled with.

   2.2 (ii) The radio path loss between CTS-MS and CTS fixed part must be below a threshold set by the CTS operator. This is estimated as shown in section GSM 05.08, 11.1.2.

3. The MS shall be able to calculate correctly the path loss criterion parameter C1, used for CTS fixed part cell selection; GSM 05.08, 11.1.2.

### 39.3.2.3 Test purpose

1. To verify that the MS meets conformance requirement 1.

2. To verify that the CTS-MS does not select a CTS fixed part on which it is not enrolled.

3. To verify that the MS does not select a cell with C1<0.

39.3.2.4 Method of test

**Initial conditions**

| Parameter | Carrier 1 | Carrier 2 |
|---|---|---|
| RF Signal Level (dBµV emf() / dBm ) | 48 / -65 | 38 / -75 |
| CBA | 1 | 0 |
| RXLEV_ACCESS_MIN (dBm) | -90 | -67 |
| C1 | 25 | -8 |

The CTS-MS is enrolled with the SS.

**Procedure**

a) The SS activates the carriers and monitors carriers 1 and 2 for Access requests from the CTS-MS.

b) The CTS-MS which is in CTS mode only, is switched on.

**Test requirements**

After step b), the CTS-MS shall be able to send a CTSARCH on carrier 1 within 30 seconds. There shall be no Acess requests from the CTS-MS on carrier 2.

## 39.3.3 Monitoring of CTSBCH

39.3.3.1 Definition and applicability

Whilst in CTS idle mode, the CTS-MS shall measure the received signal level of the CTSBCH and shall calculate the received level average of the CTSBCH carrier. This ensure that the CTS-MS is attached on a CTS-FP from which it can reliably decode downlink data and with which it has a high probability of communications on the uplink.

This test is applicable for all types of GSM 900 and DCS 1 800 CTS-MSs.

39.3.3.2 Conformance requirement

1. The CTS-MS shall measure the received signal level of the CTSBCH and shall calculate the received level average of the CTSBCH carrier on at least five collected measurement samples ; GSM 05.08, 11.1.3.1.

2. There are various requirements that a cell must satisfy before an CTS-MS can perform normal camping on it:

   2.1 (i) It should be a CTS fixed part on which the CTS-MS is enrolled with.

   2.2 (ii) The radio path loss between CTS-MS and CTS fixed part must be below a threshold set by the CTS operator. This is estimated as shown in section GSM 05.08, 11.1.2.

NOTE : Criterion (ii) refers to the C1 parameter.

3. The CTS-MS shall be able to calculate correctly the path loss criterion parameter C2 used for the monitoring of received signal level everytime that it decodes the CTSBCH in its CTS paging group; GSM 05.08, 11.1.3.1.

39.3.3.3 Test purpose

1. To verify that the CTS-MS meets conformance requirement 1

2. To verify that:

   2.1 The CTS-MS does not “reselect” a fixed part on which it is not enrolled with.

   2.2 The CTS-MS does not “reselect” a CTS cell which has a C1<0.

3. To verify that the CTS-MS calculates the C2 parameter correctly.

#### 39.3.3.4 Method of test

**Initial conditions**

The CTS-MS is enrolled with the SS.

The CTS-MS is in CTS preffered mode.

| Parameter | Carrier 1 | Carrier 2 |
|---|---|---|
| RF Signal Level (dBµV emf() / dBm ) | 63 / -50 | 33 / -80 |
| RXLEV_ACCESS_MIN (dBµV emf() / dBm ) | 43 / -70 | 23 / -90 |
| CTS_CELL_RESELECT_OFFSET | 5 | 0 |
| C1 | 20 | 10 |
| C2 | 35 | 10 |

**Procedure**

a) The SS activates the carriers. The CTS-MS is not paged on carrier 1. The SS monitors CTSBCH on carrier 1 and BCCH on carrier 2 for Acess requests from the CTS-MS.

b) The CTS-MS which is in CTS preffered mode is switched on.

c) The SS reduces signal level on carrier 1 to -80 dBm / 33 dBµV emf() for 4 s. Then, the SS raises the level back to -50 dBm / 63 dBµV emf(). (C1 becomes -10 dB and C2, -5 dB during this period).

d) The SS reduces signal level on carrier 1 to -80 dBm / 33 dBµV emf().

#### 39.3.3.5 Test requirements

1) After step b), the CTS-MS shall be able to transmit a CTSARCH on carrier 1 within 30 seconds and there shall be no access request from the CTS-MS on carrier 2.

2) After step c), the CTS-MS is still “attached to carrier 1” and there shall be no access on carrier 2.

3) After step d), the CTS-MS shall consider itself as de-attached to carrier 1 and perform a GSM cell selection by sending a RACH on carrier 2 within 30 seconds.

## 39.3.4 AFA measurement and reporting

#### 39.3.4.1 Definition and applicability

A precise frequency planning can not be applied to the CTS-FP/MS pair, as the CTS is intended to be developed by the end-user. Therefore, a list of frequencies (GFL) on which it is allowed to operate is given to the CTS. With the AFA, interference measurements will be performed on the frequencies in the GFL to provide a ranking in the AFA table, in order to exclude unacceptably interfered frequencies from the usage in CTS. A set of frequencies shall be selected from the AFA table by the CTS-FP for effective use by the CTS-FP and CTS-MS performing frequency hopping. This subset of frequencies is called the TFH carrier list.

The requirements and this test apply to all types of GSM 900 and DCS 1800 CTS-MS.

#### 39.3.4.2 Conformance requirement

1. For each carrier of the AMFL (AFA monitoring frequency list) the CTS-MS shall perform NAMC (Number of AFA monitoring cycles) basic measurements, where a basic measurement shall be the average received signal level on the 8 timeslots of the TDMA frame, over the full range of -110 dBm to -48 dBm ; GSM 05.08, 11.1.4.1.

2. The RMS received signal level at the receiver input for each frequency specified in the AMFL shall be measured with an absolute accuracy of +/-6 dB over the full range of -110 dBm to -48 dBm under normal conditions; GSM 05.08, 8.1.2.

3. When ordered by the CTS-FP, the CTS-MS shall report in the next AFA monitoring report message a table of received interference level of the AMFL, AMFL_INTERF_LEV (1,…,n) with the tolerances given in conformance requirements 2. Above, together with the minimum of the numbers of performed AFA monitoring cycles, NAMC_REAL ; GSM 05.08, 11.1.4.1.

### 39.3.4.3 Test purpose

To check that the CTS-MS is able to perform AFA monitoring procedure.

1. To check that the CTS-MS is able to perform AFA monitoring reporting when order by the CTS-FP.

### 39.3.4.4 Method of test

#### Initial conditions

The CTS-MS is in the "Attached, idle, updated" mode, with a CTS-MSI allocated.

AFML:

| Parameter | Carrier 1 | Carrier 2 | Carrier 3 | Carrier 4 | Carrier 5 | Carrier 6 | Carrier 7 |
|---|---|---|---|---|---|---|---|
| RF signal level (dBµV emf ( )/dBm) | 53 / -60 | 48 /-65 | 43 / -70 | 38 / -75 | 33 / -80 | 33 /-80 | 38 / -75 |

NAMC= 50

#### Procedure

a) The SS activates carriers 1 to 7. The CTS-MS is not paged on any of the carriers.

b) The attached CTS-MS shall respond to a pending CTS_PAGING_REQUEST message.

c) The CTS-MS shall send CTS_ACCESS_REQUEST messages until the SS answered.

d) The SS sends a CTS_AFA_MONITORING_COMMAND to ask the CTS_MS to performed 50 basic average received signal measurement on each of the seven carriers representing the AMFL. The received interference level of the carrier shall be the maximum of the NAMC basic measurement.

e) The SS shall wait (NAMC*5 + 20) seconds ie. Approximately five minutes before starting the AFA reporting procedure to let the CTS-MS enough time to perform the monitoring procedure during NAMC cycles.

f) When ordered by the SS, the CTS_MS shall report in the CTS_AFA_MONITORING_REPORT message a table of received interference level for all frequencies of the AFA list.

#### Test requirements

1. After step d), the CTS-MS shall perform 50 basic measurements on each of the frequencies contained in the AMFL.

2. After step f), the CTS-MS shall report to the SS an ordered table of received interference level of the carriers of AMFL containing the seven carriers with the average received signal level at the receiver input for each frequency measured with an absolute accuracy of +/-6 dB as specified in the section 39.3.4.4.1.

# 39.4 L2 tests for CTS-MS/FP interface

# 39.5 L3 tests for CTS-MS/FP interface

### 39.5.3.1 Elementary Procedures

#### 39.5.3.1.1 System Access

##### 39.5.3.1.1.1 Not corresponding FPBI

The purpose of the immediate assignment procedure is to establish an RR connection between the mobile station and the CTS-FP.

###### 39.5.3.1.1.1.1 Conformance requirements

The MS when attached to GSM, but not registered to the CTS-FP, and with a user selection for parallel mode or automatic mode with CTS preferred, shall register with the CTS-FP within 2 minutes after coming in range of the CTS-FP.

The FPBI field indicates the identity of the CTS-FP, in such a way that invalid attachment attempts by CTS-MS which are not enrolled (see GSM 03.56) with this CTS-FP are minimised.

###### 39.5.3.1.1.1.2 Test purpose

To verify that the CTS-MS does not access to a CTS-FP if the FPBI does not match.

References

GSM 2.56 section 5.6

###### 39.5.3.1.1.1.3 Method of test

Related PICS/PIXIT statements

Initial conditions

SS:

Radio_Link_Timeout set to [TBC]

CTS-MS:

The CTS-MS is OFF.

The CTS-MS does not have the FPBI nor IFPEI of the SS in the DF-CTS field of the SIM.

The CTS-MS is enrolled on a CTS-FP with a different FPBI but with the same CTSBCH ARFCN.

Foreseen Final State of the CTS-MS

Scanning for an available Network.

Test procedure

The CTS-MS is switched ON. The CTS-MS is looking for a suitable Network. It shall not select nor send a CTS ACCESS REQUEST message to start attachment to the SS as long as its FPBI is not known.

Maximum Duration of Test

[TBD]

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | | | The CTS-MS is looking for a suitable Network. |
| 2 | | | Check that the CTS-MS does not send CTS ACCESS REQUEST for 2 minutes. |

Specific Message Contents

None

39.5.3.1.1.2 Retransmission of CTS Access Request

39.5.3.1.1.2.1 Conformance requirements

After sending the first CTS ACCESS REQUEST, the CTS-MS shall start listening continuously to the CTSAGCH. After having sent MCTS + 1 CTS ACCESS REQUEST messages, the CTS-RR entity of the CTS-MS shall start timer TC3150. At expiry of this timer, the immediate assignment procedure is aborted. If the immediate assignment procedure was triggered by a request from the CTS-MM sublayer, a access failure is indicated to the CTS-MM sublayer.

39.5.3.1.1.2.2 Test purpose

To check that the CTS-MS well manages MCTS and TC3150.

### 39.5.3.1.2 Immediate Assignment

#### 39.5.3.1.2.1 Immediate assignment success

The immediate assignment procedure is used by the CTS-FP to establish a dedicated control channel for the attached CTS-MS and CTS-FP to communicate the detail of the service requested.

##### 39.5.3.1.2.1.1 Conformance requirements

Following a CTS PAGING REQUEST message, the attached CTS-MS shall correctly set up an RR connection on the dedicated channel TCH/F described in the CTS IMMEDIATE ASSIGNMENT message

##### 39.5.3.1.2.1.2 Test purpose

To check that the attached CTS-MS is able to accept a CTS IMMEDIATE ASSIGNMENT message and to switch to the indicated channel by sending a CTS PAGING RESPONSE message.

References:

GSM 04.56 section 4.3.1

39.5.3.1.2.1.3 Method of test

Related PICS/PIXIT statements:

Initial conditions:

CTS-MS

"Idle, updated", with CTS-MSI allocated.

Foreseen Final State of the CTS-MS

"Idle, updated", with CTS-MSI allocated.

Test procedure

The SS pages the attached CTS-MS and after the CTS-MS has responded with an CTS ACCESS REQUEST message the SS assigns a dedicated channel. The CTS-MS shall go to the correct channel and send a CTS PAGING RESPONSE message. Then the SS initiates RR-release by sending a CTS CHANNEL RELEASE message.

Maximum Duration of Test

6 seconds

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> CTS-MS | CTS PAGING REQUEST | |
| 2 | CTS-MS -> SS | CTS ACCESS REQUEST | |
| 3 | SS -> CTS-MS | CTS IMMEDIATE ASSIGNMENT | Channel Type: TCH/F |
| 4 | CTS-MS -> SS | CTS PAGING RESPONSE | Shall be sent on the correct channel |
| 5 | SS -> CTS-MS | CTS CHANNEL RELEASE | |

Specific Message Contents

None

39.5.3.1.2.2 Immediate Assignment after Immediate assignment rejection

39.5.3.1.2.2.1 Conformance requirements

If no channel is available for assignment, the CTS-FP may send to the CTS-MS a CTS IMMEDIATE ASSIGNMENT REJECT in unacknowledged mode in the CTSAGCH channel. This message contains an access request reference and a wait indication.

39.5.3.1.2.2.2 Test purpose

To verify that the MS correctly responds to an CTS IMMEDIATE ASSIGNMENT message sent after an CTS IMMEDIATE ASSIGNMENT REJECT message before expiration of Wait indication.

References

GSM 4.56 section 4.3.1.1.3.2

39.5.3.1.2.2.3 Method of test

Related PICS/PIXIT statements

Initial conditions

SS:

Radio_Link_Timeout set to [TBC]

CTS-MS:

The CTS-MS is in the “Attached, idle, updated” mode, with a CTS-MSI allocated

Foreseen Final State of the CTS-MS

Scanning for available Network.

Test procedure

The SS pages the CTS-MS, which shall react by sending a CTS CHANNEL REQUEST. Immediately after reception of the CTS CHANNEL REQUEST the SS sends a CTS IMMEDIATE ASSIGNMENT REJECT message which has the Wait Indication IE set to 6 seconds.

Between 0,75 seconds and 1,25 seconds after sending the CTS IMMEDIATE ASSIGNMENT REJECT message the SS sends a CTS IMMEDIATE ASSIGNMENT message. The MS shall go to the correct channel and send a CTS PAGING RESPONSE message. Then the SS initiates RR-release by sending a CTS CHANNEL RELEASE message.

Maximum Duration of Test

[TBD]

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> CTS-MS | CTS PAGING REQUEST | |
| 2 | CTS-MS -> SS | CTS ACCESS REQUEST | |
| 3 | SS -> CTS-MS | CTS IMMEDIATE ASSIGNMENT REJECT | Wait Indication IE set to 6 seconds. |
| 4 | SS -> CTS-MS | CTS IMMEDIATE ASSIGNMENT | references the request from the SS sent between 0,75 s and 1,25 s after the completion of step 3. |
| 5 | CTS-MS -> SS | CTS PAGING RESPONSE | |
| 6 | SS -> CTS-MS | CTS CHANNEL RELEASE | |

Specific Message Contents

39.5.3.1.2.3 Immediate assignment / ignore assignment

The purpose of the immediate assignment procedure is to establish an RR connection between the mobile station and the CTS-FP.

39.5.3.1.2.3.1 Conformance requirements

A CTS-MS waiting for a response from the CTS-FP, following the sending of a CTS ACCESS REQUEST, shall ignore a CTS IMMEDIATE ASSIGNMENT message with an Access Request Reference containing another CTS-MSI.

39.5.3.1.2.3.2 Test purpose

To verify that the CTS-MS ignores an assignment for another CTS-MS while waiting for an assignment of its own.

References

GSM 4.56 section 4.3.1.1.3

39.5.3.1.2.3.3 Method of test

Related PICS/PIXIT statements

Initial conditions

SS:

Radio_Link_Timeout set to [TBC]

CTS-MS:

The CTS-MS is in the "Attached, idle, updated" mode, with a CTS-MSI allocated

Foreseen Final State of the CTS-MS

Scanning for available Network.

Test procedure

The SS pages the CTS-MS, which shall react by sending CTS ACCESS REQUEST. Immediately after reception of the third CTS ACCESS REQUEST the SS sends a CTS IMMEDIATE ASSIGNMENT message which has another CTS-MSI in the access request reference field. The CTS-MS shall ignore the assignment and send another CTS ACCESS REQUEST message.

Maximum Duration of Test

[TBD]

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> CTS-MS | CTS PAGING REQUEST | |
| 2 | CTS-MS -> SS | CTS ACCESS REQUEST | |
| 3 | SS -> CTS-MS | CTS IMMEDIATE ASSIGNMENT | CTS-MSI in the access request reference field is not the one allocated to the CTS-MS. |

### 39.5.3.1.3 Paging

#### 39.5.3.1.3.1 Paging with current CTS-MSI

The Paging procedure is used by the CTS-FP to cause the CTS Mobile Station to establish a radio connection. Normally the CTS Mobile Station listens to its paging subchannel but the correct implementation of the paging procedure in the CTS Mobile Station is essential for the basic establishment of a connection.

##### 39.5.3.1.3.1.1 Conformance requirements:

The attached CTS-MS shall respond correctly to various CTS PAGING REQUEST messages. The MS shall send CTS ACCESS REQUEST messages, with an Establishment Cause set to "Answer to Paging", until the CTS-FP answers. The number of CTS ACCESS REQUEST messages shall be limited by the parameter Max-retrans. After the assignment procedure, the CTS-MS shall send a CTS PAGING RESPONSE message on the channel assigned by the CTS-FP.

##### 39.5.3.1.3.1.2 Test purpose:

To test that the attached CTS-MS is able to determine its paging subgroup correctly and that the CTS-MS responds correctly to various CTS PAGING REQUEST messages. All valid ways of addressing the CTS-MS are tested. It is tested that the CTS-MS responds with the same last issued CTS-MS Identity that is used in the CTS PAGING REQUEST message.

References:

GSM 04.56 section 4.3.2

##### 39.5.3.1.3.1.3 Method of test

Related PICS/PIXIT statements:

Initial conditions:

SS:

Max-Retrans = 2

CTS-MS:

The CTS-MS is in the "Attached, idle, updated", with a CTS-MSI allocated.

Foreseen Final State of the CTS-MS

"Attached, idle, updated", with CTS-MSI allocated.

Test procedure

The SS pages the attached CTS-MS 5 times with different CTS PAGING REQUEST messages on the paging subchannel which corresponds to the CTS-MS's IMSI (CTS-IMSI).

In all the cases the attached CTS-MS shall answer to the paging by sending CTS ACCESS REQUESTs. The SS responds to the second CTS ACCESS REQUEST by assigning a channel, and the CTS-MS shall then send a correct CTS PAGING RESPONSE.

Maximun Duration of Test

5 minutes

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| | | | PROCEDURE 1. |
| 1 | SS -> CTS-MS | CTS PAGING REQUEST | 1st CTS-MSI addresses CTS-MS; 2nd, 3rd and 4th CTS-MSIs address other CTS-MSs. |

#### 39.5.3.1.3.2 Paging with invalid CTS-MSI

##### 39.5.3.1.3.2.1 Conformance requirements

The attached CTS-MS shall not respond to CTS PAGING REQUEST messages with invalides CTS-MSIs

##### 39.5.3.1.3.2.2 Test purpose

To test that the attached CTS-MS is able to determine its paging subgroup correctly and that the CTS-MS does not respond to a CTS PAGING REQUEST message containing invalid CTS Mobile identities CTS-MSIs.

References:

GSM 04.56 section 4.3.2

39.5.3.1.3.2.3 Method of test

Related PICS/PIXIT statements:

None

Initial conditions:

The CTS-MS is in the "Attached, idle, updated", with a CTS-MSI allocated.

Foreseen Final State of the CTS-MS

"Attached, idle, updated", with CTS-MSI allocated.

Test procedure

The SS pages the attached CTS-MS with a CTS PAGING REQUEST message containing invalid CTS-MSIs on the paging subchannel which corresponds to the CTS-MS's IMSI (CTS-IMSI). The SS does not respond nor produce any Layer 3 message. The SS then stop the paging upon timer expiration.

Maximun Duration of Test

2 seconds

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS -> CTS-MS | CTS PAGING REQUEST | None of the 4 CTS-MSIs addresses correctly CTS-MS. |
| 2 | -------- | -------- | During 1 second, the SS checks that the CTS-MS does not produce any Layer 3 messages. |

## 39.5.3.1.9 Channel Release

### 39.5.3.1.9.1 Channel Release/ TCH-F - L2 ACK

#### 39.5.3.1.9.1.1 Conformance requirements[TBC]

After the acknowledgement of the Layer 2 disconnection by the CTS-FP, the CTS-MS shall not produce any further RF-transmission.

39.5.3.1.9.1.2 Test purpose

To verify that the CTS-MS is able to correctly release a full-rate TCH after having received a CTS CHANNEL RELEASE message.

References:

GSM 04.56 section 4.4.13.1

39.5.3.1.9.1.3 Method of test

Related PICS/PIXIT statements:

Initial conditions:

CTS-MS:

The CTS-MS is in the "Attached, idle, updated", with a CTS-MSI allocated.

Foreseen Final State of the CTS-MS

"Attached, idle, updated", with CTS-MSI allocated.

Test procedure

The CTS-MS is paged and allocated a dedicated channel and the Layer 2 signalling link is established. The SS then sends a CTS CHANNEL RELEASE message, after which the CTS-MS shall initiate a Layer 2 disconnection process on the main signalling link. After the acknowledgement of the Layer 2 disconnection by the SS, the CTS-MS shall stop transmission of Layer 2 messages. This is verified for 3 seconds. The CTS-MS shall return to the idle state, which is verified through the paging procedure to which the CTS-MS shall respond

Maximun Duration of Test

[TBD]

Expected Sequence

| Step | Direction | Message | Comments |
|---|---|---|---|
| 1 | SS->CTS-MS | CTS PAGING REQUEST | |
| 2 | CTS-MS->SS | CTS ACCESS REQUEST | Establishment cause indicates "answer to paging". |
| 3 | SS->CTS-MS | CTS IMMEDIATE ASSIGNMENT | Channel Type = "Bm + ACCHs" |
| 4 | CTS-MS->SS | CTS PAGING RESPONSE | |
| 5 | SS->CTS-MS | CTS CHANNEL RELEASE | With a valid RR cause value |
| 6 | CTS-MS->SS | DISC L2 frame | The CTS-MS may send the DISC message without performing a layer 2 acknowledgement of the CTS CHANNEL RELEASE message |
| 7 | SS->CTS-MS | UA L2 frame | |
| 8 | | | The SS verifies for 3 seconds that the CTS-MS does not produce any Layer 2 messages. |
| 9 | SS->CTS-MS | CTS PAGING REQUEST | |

### 39.5.3.1.10 Authentication

#### 39.5.3.1.10.1 Local Mutual Authentication failure

According to GSM 03.20 Annex E, section 3.2.1.1, an authentication failure occurs if:

- the CTS-MS and the CTS-FP have different Ka or/and
- the algorithms B3 and/or B4 are not implemented as specified (i.e. non type approved equipment)

##### 39.5.3.1.10.1.1 Conformance requirements:

After reception of a CTS Authentication Response message from the CTS-FP and SRES2 does not match with the local XSRES2, the CTS Mobile Station shall disconnect the main signalling link by sending a DISC L2 frame to the CTS-FP.

##### 39.5.3.1.10.1.2 Test purpose:

To check that the CTS-MS is able to process B3 and B4 algorithms.

To check that the CTS-MS abort the RR connection if the authentication of the fixed part fails.

References:

GSM 3.20 section 3.2.1

GSM 4.56 section

39.5.3.1.10.1.3 Method of test

Related PICS/PIXIT statements:

Initial conditions:

SS:

The SS has valid Ka, Kc.

CTS-MS:

The CTS-MS is in the "Attached, idle, updated", with valid CTS-MSI1, Ka', Kc'.

Ka # Ka'

Foreseen Final State of the CTS-MS

"Attached, idle, updated", with CTS-MSI2, Ka', Kc' allocated.

Test procedure

The attached CTS-MS is paged. After the CTS-MS has sent a CTS PAGING RESPONSE message to the SS, the SS initiates a CTS authentication procedure by sending a CTS MS AUTHENTICATION REQUEST with an unpredictable number CH1. The CTS-MS shall send in turn a CTS FP AUTHENTIFICATION REQUEST with an unpredictable number CH2 and checks the value SRES2 sent by the SS in the CTS FP AUTHENTICATION RESPONSE message. Ka and Ka' are different so the checked SRES2 value is not valid, then CTS-MS shall disconnect the main signalling link by sending a DISC L2 frame to the SS.

Maximun Duration of Test

[TBD]

Expected Sequence

#### 39.5.3.1.12 Reserved

#### 39.5.3.1.13 Radio Link Management

##### 39.5.3.1.13.1 AFA Measurement and Reporting

The CTS radio interface has been designed to meet a requirement of low generated interference, either from the CTS to existing overlaying PLMNS, either from a CTS to another CTS. This requirement is achieved by the combined usage of the three concepts : beacon concept, AFA concept and TFH concept.

###### 39.5.3.1.13.1.1 Conformance requirements

A precise radio frequency planning can not be applied to the CTS-FP/MS pair, as the CTS is intended to be deployed by the end-user. Therefore, a list of frequencies (the GFL) on which it is allowed to operate is given to the CTS. With the AFA, interference measurements will be performed on the frequencies in the GFL to provide a ranking in the AFA table, in order to exclude unacceptably interfered frequencies from the usage in CTS.

###### 39.5.3.1.13.1.2 Test purpose

To check that the CTS-MS is able to perform AFA monitoring procedure.

To check that the CTS-MS is able to perform AFA monitoring reporting when order by the CTS-FP.

###### References

GSM 3.52 section 12.2.2.1

###### Related PICS/PIXIT statements

###### Initial conditions

CTS-MS:

The CTS-MS is in the “Attached, idle, updated” mode, with a CTS-MSI allocated.

###### Foreseen Final State of the CTS-MS

The CTS-MS is in the “Attached, idle, updated” mode, with a CTS-MSI allocated.

###### Test procedure

The attached CTS-MS shall respond to a pending CTS PAGING REQUEST message. The CTS-MS shall send CTS ACCESS REQUEST messages, with an Establishment Cause set to "Answer to Paging", until the SS answers. The general access procedure is then performed. The SS sends a CTS AFA MONITORING COMMAND. Finally the SS sends a CTS CHANNEL RELEASE. For each carrier of the AFA List, the CTS-MS shall perform NAMC basic measurements, where a basic measurement shall be the average received signal level on the 8 timeslots of the TDMA frame. The delay between two consecutive basic measurements shall be at least 5 seconds. The received interference level of the carrier shall be the maximum of the NAMC basic measurements. The maximum processing time for this procedure shall be NAMC x 10 seconds.

The SS shall wait (NAMC x 10 + 20) seconds before starting the AFA reporting procedure to let the CTS-MS enough time to perform the monitoring procedure during NAMC cycle. When ordered by the SS with the CTS AFA MONITORING ENQUIRY, the CTS-MS shall report in the CTS AFA MONITORING REPORT message a table of received interference level for all frequencies of the AFA List, together with the AFA monitoring cycles equal to NAMC. Finally the SS sends a CTS CHANNEL RELEASE.

Maximum Duration of Test

### 39.5.3.1.13.2 Total Frequency Hopping List update

The CTS radio interface has been designed to meet a requirement of low generated interference, either from the CTS to existing overlaying PLMNS, either from a CTS to another CTS. This requirement is achieved by the combined usage of the three concepts : beacon concept, AFA concept and TFH concept.

#### 39.5.3.1.13.2.1 Conformance requirements

A precise radio frequency planning can not be applied to the CTS-FP/MS pair, as the CTS is intended to be deployed by the end-user. Therefore, a list of frequencies (the GFL) on which it is allowed to operate is given to the CTS. With the AFA, interference measurements will be performed on the frequencies in the GFL to provide a ranking in the AFA table, in order to exclude unacceptably interfered frequencies from the usage in CTS.

The remaining frequencies are used by the Total Frequency Hopping algorithm in order to reduce the interference of the CTS with the overlaying PLMN and other CTS-FP/MS pairs. With TFH the interference caused by the CTS link is spread across multiple GSM links (interference averaging) and the co-channel interference is due to different users at different locations (interference diversity).

#### 39.5.3.1.13.2.2 Test purpose

To check that the CTS-MS is able to store the new TFH list broadcast by the CTS-FP on a dedicated channel. To check that the CTS-MS is able to establish a TCH/F channel in total frequency hopping mode using the new TFH list.
