Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

BLUETOOTH® is a trademark registered and owned by Bluetooth SIG, Inc.

Foreword

This ETSI Guide (EG) has been produced by ETSI Technical Committee Human Factors (HF).

The work has been conducted in an open collaboration with industry, user and consumer representatives, and other relevant stakeholders. The present document is based upon desk research (documents and online sources), best practices, expert knowledge, and an industry-wide consultation and consensus process, aimed at consensus building and a quick uptake and the largest possible support in future product implementations.

Intended readers of the present document include, but are not limited to:

- device designers, developers, and manufacturers;
- application developers;
- service providers;
- network operators;
- technical writers and developers of marketing materials; and
- national and international standards bodies and regulatory institutions.

The terminologies contained in the present document are accessible in machine-readable format under https://labs.etsi.org/rep/HF/eg203499/-/tree/v2.1.2.

Modal verbs terminology

In the present document "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the ETSI Drafting Rules (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

The terms (words, labels) used in the User Interface (UI) of a device, service or application may present an obstacle for their users if they are not familiar with those terms or if they are unsure as to their meaning. While some terms are introduced by manufacturers to denote a new class of features or to distinguish own features from those offered by competitors, most other terms denoting device or service features are not necessarily intended for differentiation. However, in the absence of a harmonized or recommended terminology, the use of those terms may differ considerably among manufacturers and service providers, thereby introducing ambiguity for end users.

The alternative to a confusing plethora of terms is some degree of harmonization among devices, services, and applications, at least for terms not intended to convey a certain brand feature or image. A harmonized terminology can be employed to help prevent the negative effects of an uncontrolled expansion of terms and the resulting ambiguity of the terms. Those negative effects include:

- increased user difficulties in understanding complex, ambiguous, and inconsistently-used terms, leading to unnecessary confusion;
- increased efforts in user education (user guides);
- increased costs for user support (hotline calls and call agent training);
- limited feature discovery and unclear user expectations (customers who do not understand certain features may not use them, hence some revenue may be missed);
- limited uptake (users may be reluctant to use a feature as they are not sure whether it has the expected effect);
- increase of cognitive complexity and subsequent learning effort; and
- abuse in the use of proprietary terms and lack of consistent use of terms.

The need for a harmonized terminology of device, service, and application features increases as new features and functionalities are being developed. Device software, services, and applications are frequently updated, often without even providing an update of the associated documentation to the users.

ETSI EG 202 132 [i.1] claims that in order to aid users' learning procedures and to enable and simplify transfer and reuse of knowledge between devices, applications and services, it is relevant to support harmonized vocabularies for the most common and generic mobile ICT functions.

Consistency across basic interactive elements increases the ease and transfer of learning and improves the overall usability of complex mobile ICT environments. Such a transfer becomes even more important when older users or people with cognitive functional limitations are addressed and expected to use smartphones, mobile services and Internet applications in most segments of everyday life, such as: sending an email, transferring a call, or setting an alarm, etc.

A harmonized terminology can also be fed into terminology management systems used within a company to ensure the consistent use of terms across products and the internal and external documentation (e.g. design documents, user guides and promotional materials), see clause 4.

ETSI EG 202 132 [i.1] contains harmonized English-language terms for a number of areas including user interfaces for hardware and software, configuration of messaging and data services, call features, and terminal functionality. ETSI TR 102 972 [i.2] extends the work done in ETSI EG 202 132 [i.1] towards 3G devices, mobile services, and applications. This extended list of proposed terms forms the initial basis for the terms considered. However, ETSI EG 202 132 [i.1] and ETSI TR 102 972 [i.2] were published a long time ago and require updating, inter alia to cover the many features and services evolved or not available at that time, and to cover other main European languages in addition to English.

The present document addresses this need on the basic level, covering 27 official EU and EFTA languages: Bulgarian, Croatian, Czech, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hungarian, Icelandic, Irish, Italian, Latvian, Lithuanian, Maltese, Norwegian, Polish, Portuguese, Rhaeto Romance, Romanian, Slovak, Slovenian, Spanish, and Swedish. In addition, given the speed of change in the mobile ICT landscape, it will naturally require updating to ensure continuing relevance. Furthermore, expansion to cover additional European languages and other languages used in Europe will further increase the usefulness and applicability of the present document.

The selection and validation process of the terms applied throughout their development, performed in collaboration with stakeholders is expected to add a quality dimension to the recommended vocabulary that would be difficult to achieve through an individual effort and is expected to contribute to the use and uptake of this freely available, public resource.

1 Scope

The present document aims at further simplifying end-user access to ICT devices, services, and applications by providing recommended terms for basic and commonly-used ICT-related objects and activities, notably those terms that end users are commonly exposed to. Recommended terms are provided in 27 languages: Bulgarian, Croatian, Czech, Danish, Dutch, English, Estonian, Finnish, French, German, Greek, Hungarian, Icelandic , Irish, Italian, Latvian, Lithuanian, Maltese, Norwegian, Polish, Portuguese, Rhaeto Romance, Romanian, Slovak, Slovenian, Spanish, and Swedish (as spoken in their respective European countries).

The recommended terms apply to mobile ICT devices and mobile applications (whether they are standalone or provide access to related services) commonly found in mobile ICT devices. Though developed in a mobile ICT context, most of the recommended terms are applicable to both mobile and fixed-network devices, services, and applications. The recommended terms are applicable to the User Interface (UI) design for a product as well as that of any user documentation accompanying it.

User requirements and, when available, industry-originated documents as well as results of previous standardization work have been considered and integrated in the present document, providing implementation-oriented guidance. Wherever possible, a Design-for-All approach has been adopted, taking functional abilities of users, including elderly users and users with cognitive, physical, or sensory limitations into account.

The present document provides recommendations for terms that may be used by those who consider supporting the languages addressed in future products and services. It does not provide design guidance, nor does it intend to restrict the ability of market players to further improve and develop their devices and services. Neither does it intend to limit their options to trademark user interface elements or profile the user experience of brand-specific user interface implementations as a competitive edge.

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the following terms apply:

authentication: process or action of verifying the identity of a user or a process

consensus: general agreement, characterized by the absence of sustained opposition to substantial issues by any of the concerned interests and by a process that involves taking into account the views of all parties concerned and to reconcile any conflicting arguments

control function: operation that manages the interaction of the end user with a device, e.g. via buttons or gestures

design-for-all: design of products to be usable by all people, to the greatest extent possible, without the need for specialized adoption

device: physical device which interfaces with a telecommunications network, and hence to a service provider, to enable access to a telecommunications service, see ETSI TR 102 972 [i.2]

NOTE: A device also provides an interface to the user to enable the interchange of control actions and information between the user and the device, network or service provider.

emergency call: call from a user to an emergency control centre

end user: See user.

function: abstract concept of a particular piece of functionality in a device or service

generic: generalized set or general purpose set, often in the sense of basic or ordinary

ICT devices and services: devices or services for processing information and/or supporting communication, which has an interface to communicate with a user

impairment: any temporary or permanent; progressive, regressive or static; or intermittent or continuous reduction or loss of psychological, physiological or anatomical function or structure of a user (environmental included)

login: username and password to enter a computer, program, or website

mobile device: personal communication device, e.g. a smartphone, capable of communicating by using one or several radio technologies, including support for internet access

search engine: software system that is designed to carry out web searches based on keywords or characters specified by a user

setting: adjustment in a software program or hardware device that adjusts it to the user's preference

setup: way in which a device is organized, or arranged

societal services: services relating to society or social relations

term: word or a phrase describing a thing or expressing a concept, in a specific language, domain or context

NOTE: Based on the Oxford dictionary definition.

terminal: physical device which interfaces with a telecommunications network, and hence to a service provider, to enable access to a telecommunications service

NOTE: A terminal also provides an interface to the user to enable the interchange of control actions and information between the user and the terminal, network or service provider.

terminology: vocabulary of technical terms in a particular field, subject, science, or art; nomenclature

usability: effectiveness, efficiency and satisfaction with which specified users can achieve specified goals (tasks) in a specified context and particular environments, see ETSI ETR 095 [i.4] and ISO 9241-11 [i.5]

NOTE: In telecommunications, usability includes the concepts of learnability and flexibility; and reference to the interaction of more than one user (the A and B parties) with each other and with the terminals and the telecommunications system, see ETSI ETR 116 [i.6].

user: person who uses a telecommunications device to gain access to and control of a telecommunications service or application

NOTE: The user may or may not be the person who has subscribed to the provision of the service or owns the terminal. Also, the user may or may not be a person with impairments.

User Interface (UI): physical and logical interface through which a user communicates with a telecommunications terminal or via a terminal to a telecommunications service (also called Man-Machine Interface (MMI))

NOTE: The communication is bi-directional in real time and the interface includes control, display, audio, haptic or other elements, in software or hardware.

user requirements: requirements based on user needs and capabilities, on a telecommunication service and any of its supporting components, terminals and interfaces, in order to make use of this service in the easiest, safest, most efficient and most secure way

voice (spoken) command: verbal or other auditory dialogue format which enables the user to input commands to control a device, service or application

3.2 Symbols

Void.

3.3 Abbreviations

4 User-centred development of terms

Intended *users* of the present document are those designing, developing, implementing, and deploying user interfaces for interaction with mobile ICT devices, services, and applications.

Intended *end users* mentioned in the present document are people who use mobile ICT devices, services, and applications ranging from first time users to experienced users.

Uniformity in the interactive elements increases the transfer of learning between different devices, services, and applications. Such knowledge transfer becomes even more important in a world of ubiquitous devices and services used by heterogeneous users. In particular, harmonized terms (used across devices, services, and applications from different manufacturers and providers) improve the overall usability of the entire ICT ecosystem. Use of the harmonized vocabulary in the present document for the development of ICT devices, services, and applications will enable end users to apply knowledge and experience, ensuring a user-friendly experience.

The present work goes beyond the automatic generation of bilingual terminologies, e.g. [i.11], addressing the automatic generation of bilingual terminologies, by applying a user-centred approach.

A consistent, harmonized, and accessible terminology will particularly benefit end users with temporary or permanent functional variations, such as those with literacy difficulties, or people with visual or cognitive impairments. A harmonized terminology should be easy to remember, recognize, and retrieve, and the individual terms should represent their related concepts well. A well-designed user terminology should have a shallow learning curve and cover most common tasks and use cases users are likely to encounter through the most common, every-day use patterns.

Finally, the terminology should also be useful for manufacturers' **terminology management** systems, a process to organize and associate terms with a clear set of rules for their usage (e.g. through a term base), also fostering its inclusion and, therefore, harmonization across user guides and user interfaces. Companies invest in terminology management in order to ensure that the terms used in internal documents, external documents such as user guides, in user interfaces, and for marketing information such as advertisements are used consistently.

Unmanaged and outdated terminology will easily become inconsistent, leading to time and resource-intensive documentation processes. It typically also reduces user satisfaction, limits cognitive accessibility and is often a main reason to the under-use of potentially beneficial functionality.

ETSI EG 202 417 [i.3] provides detailed guidelines on how terminology management can help improve the quality of user documentation. Applying these assists the user-centred generation of harmonised terminologies. Furthermore, prioritizing the user-centred view over "technical perfection" helps selecting terms the user will understand.

ISO 9999:2016 [i.12] and ISO/IEC TR 29138-1:2018 [i.13] are useful references and inspirational sources when developing mobile accessibility solutions and have been consulted, together with other functionality-area specific references (e.g. in the field of banking services or healthcare services, where terminology-related national regulations may exist and apply, and should be respected).

ISO/TC 37 [i.14] Terminology Principles and coordination (see https://www.iso.org/committee/48104.html) covers the standardization of descriptions, resources, technologies and services related to terminology, translation, and other language-based activities in the multilingual information society - without focusing on ICT in the mobile context of use.

Last but not least, consistently extending the focus of these efforts beyond the written word to include symbols, icons, pictograms and audiograms (often replacing text) will further benefit the user-centric product and service development.

5 Method

5.1 General

This clause describes the method applied for selecting the user-centred terminology presented in clauses 6 and 7.

The selection of device-related terms (clause 6) is inter alia based on the analysis of the documentation of the device manufacturers with the largest market shares in Europe. As the landscape of vendors for applications and services is much more diverse and fragmented across European regions, a different approach had to be selected for those functionality areas (clause 7).

The method employed consists of three phases:

- Phase 1: Identification of objects and activities from a range of functional areas such as telephony or photography;
- Phase 2: Collection of terms used by major stakeholders (e.g. Apple™, Samsung™, Huawei™, and Xiaomi™ in the case of the device-related terms); and
- Phase 3: Analysis of terms collected and selection of recommended terms.

5.2 Phase 1: Identification of device-related and service- and applications-related objects and activities

This first phase identified functional areas (such as telephony, accessibility and social media) that define the range of functionalities covered by the present document.

Four functional areas cover functionalities frequently used by many users of mobile ICT devices. These **device-related functional areas** are:

1) General;
2) Accessibility;
3) Telephony; and
4) Photography.

Twelve functional areas cover functionalities frequently used by many users of mobile ICT services and applications. These **service- and applications-related functional areas** are:

1) General;
2) Messaging services;
3) Media services;
4) Societal services and communications;
5) Social media;
6) Banking and payment services;
7) eHealth services;

8) Travel services;

9) Navigation and maps;

10) Games;

11) Searching and browsing; and

12) Tools and miscellaneous.

For each functional area, relevant objects and activities (i.e. those that are frequently used and used by many users) were identified and defined, and the following principles were developed and applied.

Objects and activities were **selected** if they help users in:

- Identifying the functionality (i.e. help the user understand what it does);
- Accessing the functionality;
- Understanding the available options related to a functionality; and/or
- Understanding messages displayed in the context of using a functionality (e.g. error feedback).

Objects and activities were **typically not selected** (unless required by the context) if they cover:

- The most common content of an application (e.g. "Photo", "Take the first exit at the roundabout"), or the style of the interaction;
- Common terms easily found in a dictionary (e.g. "hotel");
- The most common verbal expressions indicating an action taken on an object (e.g. "take a photo"); and/or
- Words, acronyms, or abbreviations used in a specific technical sense (e.g. "CCNR").

Objects and activities relevant for **multiple functional areas** are treated as general terms in both categories (see clauses 6.2 and 7.2 respectively).

5.3 Phase 2: Collection of terms

For each device-related functional area (Generic, Accessibility, Telephony and Photography), relevant device vendors were identified and the terms used by them for the objects and activities of the respective functional area were collected in the nineteen languages covered by the present document. For the analysis, the top smartphone manufacturers in Europe were selected based on their market share at the time of writing.

In most cases, the number of manufacturers had to be limited in order to keep the effort for the analysis manageable. The analysis showed that not all functionalities were necessarily offered by all manufacturers. Functionalities offered by a sole manufacturer were not included in the analysis, unless there were strong reasons requiring that (e.g. innovative and important, upcoming functionality or a considerable or dominant market share).

The approach described above for the device-related functionalities could not be applied to the applications and service-related functionalities, as the latter are not based in the device itself and are consequently more dynamic, less consistent, and more differentiated. Instead, a use-case-based approach was employed with the aim of capturing the most-frequently-used terms employed by key stakeholders.

5.4 Phase 3: Analysis and selection

In the final phase of the work, the terms collected in Phase 2 were reviewed and the terms to be recommended were selected based on:

- A check for semantics and syntax in relation to the functionality provided;
- An evaluation with regard to understandability, clarity, and jargon-freeness;
- A check for consistency between vendors (i.e. prevalence of certain terms);

- Final selection, reviews, and prioritization with stakeholders (electronically and through workshops and reviews).

5.5 Principles of use

For the present document, the following principles of use in implementations apply:

- Service and interaction design guidelines are not provided - with one exception: a firm recommendation for redundant support of multiple terms used under stress (e.g. in emergency situations);
- In some instances, more than one term is recommended (separated by semicolons), presented in an order of anticipated preference;
- Interchangeable elements within a phrase are separated with a slash (e.g. for "interruptor de timbre/silencio" both "interruptor de timbre" and "interruptor de silencio" are acceptable);
- Elements in brackets are optional (e.g. for "(Rufton-) Lautstärke" both "Lautstärke" and "Rufton-Lautstärke" are acceptable);
- Brand names and brand-specific, or brand-associated, commercial terms have been avoided to the largest extent possible;
- In certain cases, the support of multiple, redundant choices is recommended (even beyond emergency services mentioned above);
- While individual users are of diverse gender, only grammatically masculine terms related to humans are presented in the tables in clauses 6 and 7 (e.g. only "Benutzer" and not "Benutzerinnen und Benutzer"; only "interlocuteur" and not also "interlocutrice"). This is done in order to keep the tables easy to read. Implementors will have to apply the appropriate form(s) for a given application of the terminology;
- Similarly, while applications address the user either using formal or informal pronouns (e.g. "Deine Favoriten" vs. "Ihre Favoriten", or "Tes lieux" vs. "Vos lieux"), only one form is provided in the tables in clauses 6 and 7;
- Last but not least, the choice of the grammatical form (e.g. of the verbs) may be influenced by the specifics of the language in question and therewith not entirely consistent. However, this will always be adapted to the specific deployment and the context of use.

6 Device-related terminologies

6.1 Domain categories

The recommended device-related terms listed in the present clause are divided into the following domains or categories:

- General (clause 6.2);
- Accessibility (clause 6.3);
- Telephony (clause 6.4); and
- Photography (clause 6.5).

NOTE: The terminologies contained in the present document are accessible in machine-readable format under https://labs.etsi.org/rep/HF/eg203499/-/tree/v2.1.2.

6.2 General terms

6.2.1 Overview

General terms are fundamental terms related to the mobile device itself, its accessories, or its basic functionality. They are typically exposed to the end-user in user manuals, the UI, and in some cases, in commercial material. General terms related to basic functionality are used frequently across a wide range of applications, but they have similar effects, irrespective of the context in which they are employed.

General terms are classified in the following seven sub-categories:

- Hardware and physical elements (clause 6.2.2);
- Other physical items (clause 6.2.3);
- Software (clause 6.2.4);
- Control functions - softkeys (clause 6.2.5);
- Control functions - gestures (clause 6.2.6);
- Basic functions (clause 6.2.7); and
- Radio related (clause 6.2.8).

6.2.2 General terms: Hardware and physical elements

These terms describe physical elements of the mobile device, corresponding to what in technical terms is defined as "Hardware".

The meaning of each term is explained in Tables 1a to 1g, provided together with the language-specific versions of the terms in the 27 languages.

Table 1a: General terms: Hardware and physical elements

Index	Technical term	Functional description	Bulgarian	Croatian	Czech	Danish
D.1	battery	The internal rechargeable battery of a mobile device (it may or may not be detachable)	батерия	baterija	baterie	batteri
D.2	charging speed	Speed at which the battery of the mobile device can be charged	скорост на зареждане	brzina punjenja	rychlost nabíjení	opladningshastighed; opladningstid
D.3	device layout	External layout of the mobile device	оформление на устройството; запознавам се с устройството	izgled uređaja; izgled telefona	rozložení zařízení; rozložení telefonu	enhedens udseende; enhedslayout
D.4	dual SIM	Functionality of a mobile device to be able to handle two SIM cards (with two independent subscriptions)	две SIM карти	dvije SIM kartice; podrška za dvije SIM kartice; dual SIM	duální SIM karta	dobbelt-SIM
D.5	dust resistant	Quality of a mobile device of tolerance to dust to some degree	прахоустойчив	otporan na prašinu	odolnost vůči prachu	støvafvisning
D.6	ejection pin	Pin used to extract a tray from a mobile device, typically containing SIM or memory cards	щифт; инструмент за изваждане на SIM карта	iglica za izbacivanje / uklanjanje (SIM kartice); alat za izbacivanje / uklanjanje (SIM kartice)	vyhazovací kolík	udskubningsværktøj
D.7	ejection pin hole	Hole triggered by an ejection pin used to extract a tray from a mobile device, typically containing SIM or memory cards	дупчица за изваждане на поставката за SIM карта; дупчица за изваждане на поставката за карта памет	rupica za izbacivanje; rupica za uklanjanje	otvor pro vyhazovací kolík	udskubningshul
D.8	fast charging	Functionality of a mobile device for the rapid charging of the battery	бързо зареждане	brzo punjenje	rychlé nabíjení	hurtig opladning
D.9	fingerprint sensor	Fingerprint sensor of a mobile device (often used to unlock the device)	сензор за пръстови отпечатъци	senzor za prepoznavanje otiska prsta	snímač otisků prstů	fingeraftrykssensor
D.10	flash	Flash device of a mobile device used to take photos	светкавица	bljeskalica	blesk	blitz

D.14	hard key	Hard key (physical key as opposed to a soft key) of a mobile device	хардуерен бутон	tipka; tvrda tipka	tlačítko	knap
D.15	headset jack	Headset / earphone connector (socket) of a mobile device	жак за слушалки	priključak za slušalice	konektor pro slúchatká	headsetstik
D.16	heart rate sensor	Sensor used in a mobile device for detecting the heart rate of the user	сензор за сърдечен ритъм	senzor otkucaja srca; senzor pulsa	snímač srdečního tepu	pulssensor
D.17	iris recognition	Functionality of a mobile device for recognizing the iris of the user	разпознаване на ириса	prepoznavanje šarenice	rozpoznávání duhovky	irisgenkendelse
D.18	iris recognition camera	Camera used in a mobile device for iris recognition functionality	камера за ирисово разпознаване	kamera za prepoznavanje šarenice	kamera pro rozpoznávání duhovky	irisgenkendelseskamara
D.19	LED indicator	Light Emitter Diode indicator used in mobile devices to indicate a certain state (e.g. active state. charging, missed calls)	светлинен индикатор	LED indikator; LED	LED indikátor; LED	LED-indikator
D.20	loudspeaker	Loudspeaker of a mobile device (typically used for hands-free mode)	високоговорител	zvučnik	reproduktor	højtaler
D.21	main antenna	Antenna used for the telephony network	главна антена	glavna antena	hlavní anténa; anténa mobilní sítě	mobilantenne
D.22	memory card	Memory card used in a mobile device (e.g. for storing photos or music)	карта памет	memorijska kartica	paměťová karta	hukommelseskort
D.23	memory card tray	Tray for the memory card of a mobile device	поставка за карта памет	utor za memorijsku karticu	přihrádka na paměťovou kartu	hukommelseskortholder; hukommelseskortbakke
D.24	micro USB connector	Micro type USB connector (also used for providing power to the device)	микро USB конектор	micro USB priključak	micro USB konektor	mikro-USB-stik
D.25	microphone	Microphone of a mobile device (typically also used for hands-free mode)	микрофон	mikrofon	mikrofon	mikrofon
D.26	microSD card	microSD card used in a mobile device (e.g. for storing photos or music)	microSD карта	microSD kartica	microSD karta	mikro-SD-kort
D.27	mobile device	The mobile device that is used for accessing mobile services (e.g. a smart phone or tablet device)	устройство; телефон	telefon; mobilni telefon; mobilni uređaj; uređaj	telefon; mobilní telefon; mobilní zařízení; zařízení	telefon; mobiltelefon; mobilenhed
D.28	NFC	Near Field Communication (short range radio technology used to support various functionalities of a mobile device)	NFC	NFC	NFC	NFC
D.29	NFC antenna	Antenna for NFC	NFC антена	NFC antena	anténa NFC	NFC-antenne
D.30	overheating	Excessive temperature of a mobile device that is perceivable by the user	прегряване	pregrijavanje	přehřátí	overophedning

Index	Technical term	Functional description	Bulgarian	Croatian	Czech	Danish
D.31	pen	Pencil-like device used for several functions on a touchscreen	писалка	olovka	pero	touchpen; stylus
D.32	power key	Key used to power on and off the mobile device	бутон за захранване; бутон включване / изключване	tipka za uključivanje / isključivanje	power tlačítko	tænd / slukknap
D.33	proximity / light sensor	Sensor used in a mobile device for detecting user proximity or light (the sensor is typically infrared based)	сензор за близост; сензор за светлина	senzor blizine / svjetla	senzor přiblížení / světla	afstandssensor; lyssensor
D.34	rear camera	Camera situated on the back side of the mobile device	задна камера	stražnja kamera	zadní kamera	bagsidekamera
D.35	ring / silent switch	Key of a mobile device to put the device in silent mode or ring mode	тих режим	tipka za utišavanje	kroužkový / tichý přepínač	ringknap; lydløsknap
D.36	screen	Display of a mobile device	екран	ekran; zaslon	obrazovka	skærm
D.37	SIM card	Subscriber Identification Module (software running on a UICC card)	SIM карта	SIM kartica	karta SIM	SIM-kort
D.38	SIM card tray	Tray for the SIM card of a mobile device	поставка за SIM карта	utor za SIM karticu	přihrádka na SIM kartu	SIM-kortholder; SIM-kortbakke
D.39	torch	Flashlight function of a mobile device	фенерче	svjetiljka	svítilna	lommelygte
D.40	touch screen	Input and output device of a mobile device for direct user interaction with what is being displayed	сензорен екран	zaslon / ekran osjetljiv na dodir	dotyková obrazovka	touchskærm
D.41	USB connector	Connector for the USB interface of a mobile device (also used for providing power to the device)	USB (захранващ) адаптер	USB priključak	konektor USB	USB-stik
D.42	USB type-C connector	Type-C connector for a USB interface (also used for providing power to the device)	USB-C (захранващ) адаптер	USB-C priključak	konektor USB typu C	USB type C stik
D.43	USIM card	Universal Subscriber Identification Module (consisting of the USIM application software and the UICC card)	USIM карта	USIM kartica	USIM karta	USIM-kort
D.44	volume keys	Keys of a mobile device used to change the volume setting	бутони за сила на звука	tipke za glasnoću	tlačítka hlasitosti	lydstyrkeknapper
D.45	water resistant	Quality of a mobile device of tolerance to water to some degree	водоустойчив	vodootporan; otpornost na vodu	odolnost proti vodě	vandtæt
D.46	wireless charging	Functionality of a mobile device that allows charging the mobile device without cables (functionality typically based on magnetic induction)	безжично зареждане	bežično punjenje	bezdrátové nabíjení	trådløs opladning
D.47	wireless charging coil	Coil used for wireless charging	намотка за безжично зареждане	zavojnica za bežično punjenje	cívka pro bezdrátové nabíjení	trådløs oplader

6.2.6 General terms: Control functions - gestures

Control gestures are an important mechanism of interaction of the end user with the device. This sub-category describes those UI elements implemented using the capabilities of the touchscreen, requiring touching the screen (with one or more fingers). Depending on the way the user touches the screen, different actions happen.

The meaning of each term is explained in Tables 5a to 5e, provided together with the language-specific versions of the terms in the 19 languages.

D.99	multi window	Device functionality of (optionally) displaying contents on more than one screen	janelas múltiplas	visur dividì; fanestras multiplas	ferestre multiple	viacnásobné okno
D.100	mute all sounds	Functionality of a mobile device to mute all sounds	silêncio; silênciar todos os sons	metter giu tut ils tuns	oprirea tuturor sunetelor	stlmenie; stlmenie všetkých zvukov
D.101	navigation app	App that can be run on a mobile device that provides navigation guidance to the user	aplicação de navegação	applicaziun / app da navigaziun	aplicatie de navigație	navigačná aplikácia
D.102	notification	Notification function (e.g. news or incoming e-mails) displayed by a mobile device	notificação	notificaziun	notificare	oznámenie
D.103	on / off	States of a mobile device (activated/deactivated)	ligado / desligado; on / off	envidà / stizzà	pornire / oprire	zapnutie / vypnutie
D.104	pairing	Wireless connection configuration of devices and accessoires, e.g. through Bluetooth or Infrared	emparelhar / emparelhamento	connectar	conectare; asociere	párovanie
D.105	print	User activity (or device functionality) of printing data or media stored on a mobile device	imprimir	stampar	a printa; a imprima	vytlačiť
D.106	profile	Set of parameters defined and accessed by an individual user of a mobile device	perfil; perfil do utilizador	profil	profil; profil utilizator	profil; profil používateľa
D.107	rearrange	User activity (or device functionality) of rearranging items (e.g. image files) on mobile device	reorganizar; reordenar	spustar; ordinar	rearanjare	zmeniť usporiadanie
D.108	recording videos	User activity (or device functionality) of recording a video on a mobile device	gravação de vídeos	registrar in video	înregistrare clipuri video; filmare clipuri video / videoclipuri	nahrávanie videí
D.109	removing a memory card	User activity of removing a memory card from a mobile device	remover um cartão de memória	extrar la carta da memoria	inlăturare / scoatere card memorie	vybratie pamäťovej karty
D.110	rename	User activity (or device functionality) of renaming a file of data or media stored on a mobile device	alterar / mudar o nome	renumnar	redenumire	premenovať
D.111	reset to factory settings	User action (or device functionality) of resetting a mobile to factory settings	reinicialização para definições de fábrica	reinizialisar sin las configuraziuns da basa	revenire la setările din fabrică	obnoviť továrenské nastavenie
D.112	restarting the device	User action (or device functionality) of restarting a mobile device	reiniciar o dispositivo	reaviar il telefon	repornire dispozitiv	reštartovanie zariadenia
D.113	ring tone	Ring tone of a mobile device	toque de telemóvel	tun da scalin	ton de apel	vyzváňací tón
D.114	roaming	User activity (or device functionality) of connecting a mobile device to another network than the home network (i.e. the one associated with the main subscription)	roaming; itinerância	roaming	roaming	roaming

D.115	running apps	User activity (or device functionality) of running an app on a mobile device	abrir aplicação	avrir in'applicaziun / app	aplicații care rulează în fundal	spustenie aplikácií
D.116	save	Activity of saving information for later access / use	guardar; salvar	segirar; arcunar	salvează; înregistrează	uložiť
D.117	screenshot	Functionality of a mobile device for capturing the screen contents and saving it as a graphics file	imagem do ecrã; capturar imagem do ecrã	maletg dal visur; screenshot	captură de ecran	snímka obrazovky
D.118	search	User activity (or device functionality) of searching for data or media on a mobile device	procurar	tschertgar; retschertgar	căutare	hľadať
D.119	set wake-up	Activity of setting the alarm-clock functionality of a mobile device	definir alarme	metter il svegliarin	setare alarmă	nastaviť budík
D.120	setting	Parameter of a mobile device that can be adjusted by the user or remotely by a service provider	configuração	configuraziun	setare	nastavenie
D.121	setup	User action (or device functionality) of setting up a mobile device	configurar	installaziun	configurare	nastavenie zariadenia
D.122	share	User activity (or device functionality) of making data or media stored on a mobile device available to other users or services	partilhar	cundivider; parter	partajare	zdieľať
D.123	sounds	Sounds used as indication of incoming calls, events, alarms or notifications	sons	tuns	sunete	zvuky
D.124	status bar	Screen area of a mobile device with indications of selected device status information	barra de estado	trav dal status	bară de stare	stavový riadok
D.125	streaming videos	User activity (or device functionality) of streaming a video on a mobile device	ver vídeos em streaming	guardar in video en streaming	clipuri streaming; videoclipuri redate în flux	streamovanie videa
D.126	synchronize (with)	User activity (or device functionality) of syncing (selected) data items stored on mobile device with an external device (e.g. a cloud server)	sincronizar (com)	sincronisar	sincronizare (cu)	synchronizácia (s)
D.127	tethering	Ability of a mobile device to act as a hotspot (sharing a data connection with other devices)	ligação (entre dispositivos)	tethering	tethering; partajare conexiune la internet	tethering
D.128	text entry	Activity of entering text into a mobile device	introdução de texto	endataziun da text	introducerea textului	zadávanie textu
D.129	timer	Countdown clock alarm of a mobile device	cronómetro	timer	cronometru	časovač
D.130	transparency	Option to set desired level of object transparency	transparência	transparenza	transparență; opacitate	priehľadnosť
D.131	turning the device off	User action of turning a mobile device off	desligar o dispositivo / telemovél	stizzar il telefon / l'apparat	a opri telefonul / dispozitivul	vypnutie zariadenia

Index	Technical term	Functional description	Portuguese	Raeto-Romance	Romanian	Slovak

D.141	welcome screen	Display of a mobile device with initial/top-menu level functionalities	pozdravni zaslon	pantalla de inicio; pantalla de bienvenida	hemskärm
D.142	write memo	Take a memo or note in the mobile device	zabeležiti	nota; escribir una nota	skriva / skapa en anteckning

6.2.8 General terms: Radio related

Although the end-user is normally not aware of the technical complexity of a mobile phone, there are a few radio-related terms the user is exposed to. These terms typically define technical radio features and are perceived as such by the end-user. They are described in user manuals and in some cases - but not all - are used or activated with user participation. In other cases, they are exposed to the end user to allow understanding of radio considerations such as good/bad coverage or high/low data rate.

The meaning of each term is explained in Tables 7a to 7g, provided together with the language-specific versions of the terms in the 27 languages.

D.151	LTE network	LTE (4G) radio connection in the mobile service network	4G мрежа	LTE mreža	síť LTE	LTE-nætværk
D.152	mobile network signal	RF signal transmitted to and received by a mobile device (refers to the mobile network signal)	мрежов сигнал	signal mobilne mreže	signál mobilní sítě	mobilsignal; signal
D.153	Network	A radio network, typically the mobile service network	мрежа; мобилна мрежа	mreža; mobilna mreža	síť; mobilní síť	netværk
D.154	signal strength	Intensity of the RF signal received by a mobile device	сила на сигнала	jačina signala	síla signálu	signalstyrke
D.155	signal strength indicator	Indicator of signal strength received by a mobile device (typically a symbol or icon in the upper side of the display)	икона за сила на сигнала	indikator jačine signala	indikátor síly signálu	signalstatussymbol; signalstyrkesymbol
D.156	UMTS network	UMTS (3G) radio connection in the mobile service network	3G мрежа	UMTS mreža	síť UMTS	UMTS-netværk
D.157	weak signal	State of a mobile device of receiving signals that are weak (possibly too weak to allow the use of certain functionality such as making or receiving phone calls)	слаб сигнал	slab signal	slabý signál	svagt signal
D.158	Wi-Fi	Short range license-exempt radio based on IEEE 802.11 [i.8]	Wi-Fi	Wi-Fi	Wi-Fi	wi-fi

6.3 Accessibility terms

6.3.1 Overview

Accessibility terms provide access to the necessary settings, device adjustments, specific functionality, and connectivity to adapt the device UI to the functional variations and requirements of end users. This clause is additionally supporting inclusive design and the implementation of support for ETSI EN 301 549 [i.7] in mobile ICT products, services and applications. Guidance on supported and available accessibility features is available from the Mobile and Wireless Forum through GARI, see [i.10].

ISO 9999:2016 [i.12] and ISO/IEC TR 29138-1:2018 [i.13] have been consulted. A working group, ISO/TC 37 [i.14] Terminology Principles and coordination (see https://www.iso.org/committee/48104.html) covers the standardization of descriptions, resources, technologies and services related to terminology, translation, and other activities in the multilingual information society and may provide useful insights, even if not specifically focusing on the mobile context of use.

A practical difficulty often encountered is the OS- or platform-specific (and often not fully comparable) use of features and terminology applied to the accessibility terms of devices. For the purpose of the present document, these are classified into the following six sub-categories covered through the next clauses:

- Access and settings (clause 6.3.2);
- Vision (clause 6.3.3);
- Hearing (clause 6.3.4);
- Dexterity (clause 6.3.5);
- Cognitive assistance (clause 6.3.6); and
- Media retrieval (clause 6.3.7).

6.3.2 Accessibility terms: Access and settings

Accessibility settings provide access to device adjustments and connectivity settings, adapting the device UI to the functional variations of end users.

The meaning of each term is explained in Tables 8a to 8g, provided together with the language-specific versions of the terms in the 27 languages.

6.3.3 Accessibility terms: Vision

Accessibility terms related to vision provide access to device adjustments and connectivity settings, adapting the device UI to the functional variations of end users with regard to vision.

The meaning of each term is explained in Tables 9a to 9g, provided together with the language-specific versions of the terms in the 27 languages.

Table 9a: Accessibility terms: Vision

Index	Technical term	Functional description	Bulgarian	Croatian	Czech	Danish
D.164	bold text	Accessibility option of a mobile device to present text in bold	удебелен текс	podebljani tekst	tučný text	fed tekst
D.165	Braille support	Support for Braille chords or displays	брайлов дисплей	podrška za brajicu	podpora Braillova písma	punkskriftskombatibilitet; punkskriftunderstøtning; braillekompatilbilitet; brailleunderstøtning
D.166	button shapes	Option to select among multiple button shapes	форми на бутони	oblici tipki	tvary tlačítek	knapform(er)
D.167	colour filters	Filters to rearrange the colour presentation and perception on devices	цветни филтри	filtri boja	barevné filtry	farvefiltre
D.168	dark screen	A function to keep the screen switched off (dark) when using voice output (e.g. a screen reader)	тъмен режим	tamni zaslon	tmavá obrazovka	mørk skærm
D.169	dictation	Speech input-based text input (or navigation)	диктовка	diktiranje	diktování	indtaling
D.170	display accommodations	Access to display settings such as inverting colours and implementing grayscale	настройки на екрана	postavke zaslona	nastavení obrazovky; přizpůsobení displeje	skærmindstillinger
D.171	display size	Accessibility option of a mobile device to set the items on the screen to a larger size	размер на дисплея	veličina zaslona	velikost displeje	skærmstørrelse
D.172	flash alerts	Accessibility option of a mobile device of indicating incoming calls, messages, etc. with a blinking light	присветване за предупредителни сигнали; светлинна индикация	LED svjetlo za upozorenja	blesková upozornění	blinkadvarsler
D.173	greyscale mode	Accessibility functionality of a mobile device for displaying the screen in greyscale mode	нива на сивото	crno-bijelo	odstíny šedé barvy	gråtonetilstand
D.174	high contrast keyboard	Accessibility functionality of a mobile device for displaying the keyboard in high contrast	клавиатура със силен контраст	tipkovnica jakog kontrasta	vysoce kontrastní klávesnice	høj kontrasttastatur

Index	Technical term	Functional description	Bulgarian	Croatian	Czech	Danish

D.176	invert colours	A function to invert all colours on the screen	инвертиране на цветове	obrtanje boja; inverzija boja	tmavý režim; inverze barev	inverterede farver (selve farverne); farveinvertering (funktionen)
D.177	larger text / font size	Option to see larger characters and graphical elements	по-голям текст / размер на шрифта	veća veličina teksta / fonta	větší velikost textu / písma	forstør tekst / font størrelse
D.178	magnification	Tool that activates a "magnifying glass" that can be moved over a screen to magnify the content beneath it	увеличаване; лупа	povećavanje; uvećavanje	zvětšení	forstørrelse
D.179	pitch	Selection of higher or lower voice tones	тон	ton	nastavení tónu	tonehøjde; pitch
D.180	reduce motion	Option to reduce screen movement and motion effects	намаляване на движението	smanjenje kretanja na zaslonu	omezit pohyb	reduktion af begrundsbevægelse
D.181	screenreader	Assistive technology trying to convey what users with regular eyesight see on a display through non-visual means	изговаряне на екрана	čitač zaslona	čtečka obrazovky	skærmlæser
D.182	speaking rate	The number of speech units of a given type produced within a given amount of time	скорост на изговаряне	brzina čitanja	rychlost řeči	talehastighed
D.183	speech input and voice recognition	Accessibility functionality of a mobile device recognizing voice commands	разпознаване на звук	prepoznavanje glasa	rozpoznávání hlasu; zadávání řeči / hlasu	talegenkendelse
D.184	speech volume	Volume level of the screenreader of a mobile device	сила на гласа	glasnoća govora	hlasitost řeči	tale lydstyrke
D.185	usage with screen turned off	Usage of the mobile device with the display turned off (offering privacy to visually-impared users)	достъп до функции и информация от заключен екран	koristiti s ugašenim zaslonom	obrazovka vypnutá	brug med slukket skærm
D.186	voice recordings for voice labels	Accessibility functionality of a mobile device for using voice labels to distiguish objects of similar shapes by attaching labels to them	гласов етикет	glasovne snimke za glasovne oznake	hlasový štítek	stemmeoptagelse til stemmemærkat; stemmeoptagelse til stemmemærke
D.187	voice selection	Selection of a preferred voice to use (from a set of available voices)	избиране на гласа	odabir glasa	výběr hlasu	vælg stemme
D.188	zoom	A way to magnify the entire screen of a device	увеличаване на екрана	zumiranje zaslona	zvětšení obrazovky	forstør skærmbillede

6.3.7 Accessibility terms: Media retrieval

Accessibility terms related to media retrieval provide access to device adjustments and connectivity settings, adapting the device UI to the functional variations of end users with regard to media retrieval.

The meaning of each term is explained in Tables 13a to 13g, provided together with the language-specific versions of the terms in the 27 languages.

6.4 Telephony services

6.4.1 Overview

Previous work, such as that referenced in [i.1] and [i.2] is taken into account and a user focus is applied through the reduction of technical complexity by merging categories of features and functionality in cases where distinguishing these makes little sense and is mostly not understood by end users. This clause focuses on the mobile context.

Telephony service-related terms are classified in the following four sub-categories:

- Device UI (clause 6.4.2);
- Device functionality (clause 6.4.3);
- Voice call handling (clause 6.4.4); and
- System and network services (clause 6.4.5).

6.4.2 Telephony services: Device UI

This clause covers aspects related to the User Interface (UI) of devices.

The meaning of each term is explained in Tables 14a to 14g, provided together with the language-specific versions of the terms in the 27 languages.

7 Service- and application-related terminologies

7.1 Domain categories

The recommended service- and appliation-related terms listed in the present clause are divided into the following twelve domains or categories:

- General terms (clause 7.2);
- Messaging services (clause 7.3);
- Media services (clause 7.4);
- Societal services and communication (clause 7.5);
- Social media services (clause 7.6);
- Banking services (clause 7.7);
- eHealth services (clause 7.8);
- Travel planning (clause 7.9);
- Navigation (clause 7.10);
- Games (clause 7.11);
- Searching and browsing (clause 7.12); and
- Tools (clause 7.13).

NOTE: The terminologies contained in the present document are accessible in machine-readable format under https://labs.etsi.org/rep/HF/eg203499/-/tree/v2.1.2.

7.2 General terms

7.2.1 Overview

General terms are generic, common terms related to mobile ICT services and applications. They are typically exposed to the end-user in user manuals, the UIs for setup and use, and in marketing material (e.g. as service availability information). General terms related to basic functionality are frequently used across a wide range of services and applications, but they provide similar, common functionality, irrespective of the context in which they are employed.

General terms are classified in the following three sub-categories:

- Authentication, login and confirmation (clause 7.2.2);
- Setup and settings (clause 7.2.3); and
- Common functionality (clause 7.2.4).

7.2.2 General terms: Authentication, login and confirmation

This clause covers a sub-category of general terms related to mobile ICT services and applications: authentication, login and confirmation.

The meaning of each term is explained in Tables 21a to 21g, provided together with the language-specific versions of the terms in the 27 languages.
