Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

All published ETSI deliverables shall include information which directs the reader to the above source of information.

Foreword

This European Standard (Telecommunications series) has been produced by ETSI Technical Committee Services and Protocols for Advanced Networks (SPAN).

The present document is part 3 of a multi-part deliverable covering the Intelligent Network Capability Set 3 (CS3); Intelligent Network Application Protocol (INAP); Test Suite Structure and Test Purposes (TSS&TP) specification for Service Switching Function (SSF), as identified below:

Part 1: "Basic capability set of CS3";

Part 2: "Call Party Handling (CPH)";

Part 3: "Specialized Resource Function (SRF)".

National transposition dates	
Date of adoption of this EN:	10 January 2003
Date of latest announcement of this EN (doa):	30 April 2003
Date of latest publication of new National Standard or endorsement of this EN (dop/e):	31 October 2003
Date of withdrawal of any conflicting National Standard (dow):	31 October 2003

1 Scope

The present document contains the Test Suite Structure and Test Purposes (TSS&TP) for Specialized Resource Function (SRF), part of Core INAP CS-3.

The present document provides the Test Suite Structure and Test Purposes (TSS&TP) for the testing of the Specialized Resource Function (SRF) operations of the Service Switching Function (SSF), defined for the Intelligent Network Application Protocol (INAP) of Intelligent Network (IN) Capability Set 3 (CS3) according to EN 301 931-1 [1] and EN 301 931-2 [2].

The present document is completed by other parts constituting the testing of the CS3 Core INAP specifications: EN 301 933-1 [5] (Service Switching Function) and EN 301 933-2 [6] (Call party handling functions).

ISO/IEC 9646-1 [8] and ISO/IEC 9646-2 [9] are used as the basis for the testing methodology.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication and/or edition number or version number) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

- terms defined in EN 301 931-1 [1];
- terms defined in ISO/IEC 9646-1 [8] and in ISO/IEC 9646-2 [9].

In particular, the following terms defined in ISO/IEC 9646-1 [8] apply:

- Abstract Test Suite (ATS);
- Implementation Under Test (IUT);
- System Under Test (SUT);
- Protocol Implementation Conformance Statement (PICS).

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ATS	Abstract Test Suite
BI	Invalid Behaviour tests
BO	Inopportune Behaviour tests
BV	Valid Behaviour tests
CA	Capability tests
CPH	Call Party Handling
CS	Call Segment
CS	Capability Set
EDP-R	Event Detection Point - Request
FSM	Finite State Machine
IN	Intelligent Network
INAP	Intelligent Network Application Protocol
IP	Intelligent Peripheral
iS	initiating SSF
iSSP	initiating SSP
IUT	Implementation Under Test
MSC	Message Sequence Chart
PDU	Protocol Data Unit
PICS	Protocol Implementation Conformance Statement
PIXIT	Protocol Implementation eXtra Information for Testing
SCF	Service Control Function
SCP	Service Control Point
SDF	Service Data Function
SDL	Specification and Description Language
SRF	Specialized Resource Function
SSF	Service Switching Function
SSP	Service Switching Point
SUT	System Under Test
TCAP	Transaction Capabilities Application Part
TP	Test Purpose
TSS	Test Suite Structure

4 Test Purpose generalities

4.1 Introduction

The Implementation Under Test (IUT) is always an **SSF**. The testing of the direct interface between SCF and SRF is **not** within the scope of the present document.

Two basic scenarios are possible:

A) The SSF acts as a relay for operations exchanged between the SCF and the SRF;

B) The SSF establishes a temporary connection to an assisting SSF or handed-off SSF or directly to an SRF.

In A) the SSF is tested together with the addressed SRF, and, possibly, together with an intermediate Assisting/Handed-off SSF. The SRF can be integrated in the SSF or not. Case A) is applicable to an SSF operating as:

1) Initiating SSF,

2) Assisting SSF, or

3) Handed-off SSF.

Individual TPs can be applicable to a true subset of the three SSF sub-functions. To handle this, Test Parameters applicable to TP Selection are defined (see clause 4.6).

Case B) is only applicable to an SSF operating as an Initiating SSF. The operation used to connect to the SRF is EstablishTemporaryConnection.

Configurations for cases A) and B) are defined in clause 5.

A TP is defined for one or several conformance requirements to be tested. It is expected, that each TP will result in a test case keeping the same name, specified in the ATS.

4.2 Grouping of Test purposes

According to the two basic scenarios defined in the previous clause, the test purposes are grouped in the following 2 main groups:

a) SSF Relaying, and

b) Direct SCF-SRF operation.

Inside a main group the Test purposes are grouped by elementary procedures. A procedure groups elementary INAP operations belonging together conceptually. The procedures are defined in clause 6.2.

4.3 Source of Test purpose definitions

The test purposes are based on the requirement documented in EN 301 931-1 [1], EN 301 931-2 [2] and EN 301 931-3 [3].

4.4 Method used for developing Test purposes

See EN 301 933-1 [5].

4.5 Method used for Test purpose description

The table describing each TP is as shown in table 1.

Table 1: Test purpose description sample

	TP name, e.g. IN3_A_BASIC_FC_BV_01
Work item no.:	Temporary work item number; to be deleted when the TPs are stable
IN2 Ref	Reference to INAP CS2 TP (optional)
Purpose:	Textual phrasing of the TP to be achieved.
Requirements refs	Reference to clause(s) of EN 301 931-2 [2]. For TPs related to the SRF function: also reference to clause(s) of EN 301 931-3 [3]. In the latter case the Part numbers are explicitly indicated (part 2 and/or part 3).
Selection Cond.	Reference to a formal selection expression, if the TP is related to an optional INAP feature. If the field is empty, the TP is unconditional (mandatory requirement(s)).
Preamble:	Reference to a preamble or "None".
Test description	Sequence of transmitted and received events and timeouts (see clause "TTCN-like notation"). Textual description is also used, as appropriate.
Pass criteria	Indication of reception (or assured non-reception) of decisive message(s) related to the TP.
Postamble:	Reference to a postamble or "None".

4.5.1 Void

4.5.2 Test categories

Valid Behaviour tests (BV)

Predefined state transitions are considered as valid. The test purposes in the valid behaviour test sub group cover as far as reasonable the verification of the normal and exceptional procedures of the various Finite State Machines (FSMs), i.e. a valid behaviour test is a test where the message sequence and the message contents is considered as valid.

Invalid Behaviour tests (BI)

This test sub group is intended to verify that the IUT is able to react properly having received an invalid Protocol Data Unit (PDU). An invalid PDU is defined as a syntactically incorrect message.

Inopportune Behaviour tests (BO)

This test group is intended to verify that the IUT is able to react properly in the case an inopportune protocol event occurring. Such an event is syntactically correct but occurs when it is not expected, e.g. a correctly coded operation is received in a wrong state (the IUT may respond by sending error UnexpectedComponentSequence).

4.5.3 Test purpose naming convention

The identifier of the TP is built according to the scheme in table 2.

Table 2: TP identifier naming convention scheme

Identifier:		**IN3_<i>_<sss>_<pp>_<cc>_<nn>**		
IN3		indicates IN Capability Set 3		
<i>	=	interface:	A	SSF-SCF interface
			B	SSF-SRF interface
			C	SCF-SCF interface
<sss>	=	common set	BASIC	Basic set for CS3
			CPH	Call Party Handling from Capability Set 3
			SRF	SRF-related functions from Capability Set 3
<pp>	=	procedure name like		
			SF	ServiceFiltering
<cc>	=	test category:		
			BV	Valid Behaviour tests
			BI	Invalid Behaviour tests
			BO	Inopportune Behaviour tests
<nn>	=	sequential number:		(01-99)
Example of test purpose and test case name: **IN3_A_BASIC_SF_BV_02**				

4.5.4 Preambles and their naming conventions

Preambles are used to bring the IUT from the initial state to the state where the test takes place. In the CS3 scheme, the set of the preambles forms a tree, which means that in order to reach the state created by preamble P3, it is necessary to execute preamble P1 followed by preambles P2 then P3.

The naming convention used reflects the description of the connection view set by executing the preamble, in terms of nature of the legs per Call Segment (CS), starting from the stable legs then the ones on hold then the ones in transfer, with the indication of the number of legs, while the first letter indicates how this configuration was initiated.

The general form is:

> a_[stableLegsParty or onHold (legs) or transfer(legs) for CallSegment 1]_[idem for CallSegment2]_[idem for CallSegment 3]

where:

a is letter:

- O for Originating (outgoing call for a user);
- T for Terminating (incoming call for a user);
- I for Initiate Call Attempt (initiated from the network).

The state names and their abbreviations used are:

Null	
1_Party	1P
Originating_Set-up	OS
Terminating_Set-up	TS
Originating_ 1_Party_Setup	O1PS
Stable_1_Party	S1P
Stable_2_Party	S2P
Forward	FW
Stable_Multi_Passive_Party (no. of passive legs n)	SnPP
Stable_Multi_Party (no. of passive legs n)	SnP

The term "null" stands for "none" as in preamble O_NULL_S2P_OH3.

There can be two set of CSs with the same nature of legs present at the same time, as in the preamble name O_S2P_S1P_S1P.

4.6 Test purpose parametrization and selection

As shown in the "Introduction" clause, the Implementation under Test (IUT) is always an SSF, either connected to an Assisting SSF, a Handed-off SSF or to an SRF. Not all sub-functions defined for an SSF need to be implemented at the same time (see e.g. figure 37 in clause 8 of EN 301 931-2 [2]), and possibly not all operations are implemented (e.g. the use of scripts).

In order to define an appropriate set of TPs for all functions and operations, but to enable deselection of TPs not applicable to particular IUTs, the following Test Parameters are defined in table 3.

NOTE: It is assumed, that these Test Parameters are mapped to corresponding PIXIT/Test Suite Parameters.

Table 3: Test Parameters applicable to TP selection

Test Parameter name	Type	Explanation
CONFIGURATION	IA5STRING	The allowed values are: "CONFIGURATION A" and "CONFIGURATION B"
SSF_RELAYS_SRF_OPERATIONS	BOOLEAN	This parameter shall be set to TRUE, if the IUT relays the user interaction operations (PlayAnnouncement etc.) between SCF and SRF. Otherwise it shall be set to FALSE.
SSF_RELAYS_SRF_ASSISTING	BOOLEAN	This parameter shall be set to TRUE, if the IUT relays the user interaction operations (PlayAnnouncement etc.) between SCF and SRF via an Assisting SSF. Otherwise it shall be set to FALSE.
SSF_IS_INITIATING	BOOLEAN	This parameter shall be set to TRUE, if the IN SSM FSM is implemented in the IUT and is used for testing. Otherwise it shall be set to FALSE. See figure 37 in clause 8 of EN 301 931-2 [2]. (see note 1)
SSF_IS_ASSISTING	BOOLEAN	This parameter shall be set to TRUE, if the Assisting SSM FSM is implemented in the IUT and is used for testing. Otherwise it shall be set to FALSE. See figure 37 in clause 8 of EN 301 931-2 [2]. (see note 1)
SSF_IS_HANDED_OFF	BOOLEAN	This parameter shall be set to TRUE, if the Handed-off SSM FSM is implemented in the IUT and is used for testing. Otherwise it shall be set to FALSE. See figure 37 in clause 8 of EN 301 931-2 [2]. (see note 1)
SSF_IMPLEMENTS_SCRIPTS	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the script operations ScriptRun, ScriptClose and ScriptInformation. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_SCRIPT_EVENTS	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements a script invoking the ScriptEvent operation. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_PA	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the PlayAnnouncement procedure. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_PA_INTERRUPT	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the PlayAnnouncement procedure in an interruptable way, i.e. it can be cancelled with the Cancel operation. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_PCU	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the PrompAndCollectUserInformation procedure. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_PCU_INTERRUPT	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the PrompAndCollectUserInformation procedure in an interruptable way, i.e. it can be cancelled with the Cancel operation. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_PRM	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the PrompAndReceiveMessage procedure. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_PRM_INTERRUPT	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the PrompAndReceiveMessage procedure in an interruptable way, i.e. it can be cancelled with the Cancel operation. Otherwise it shall be set to FALSE.
SSF_IMPLEMENTS_UTSI	BOOLEAN	This parameter shall be set to TRUE, if the IUT implements the RequestReportUTSI, SendSTUI and ReportUTSI procedure. Otherwise it shall be set to FALSE.
SSF_TIMER_USED	BOOLEAN	The SSF timer is used.

Test Parameter name	Type	Explanation
SSF_PREDEFINED_SRF	BOOLEAN	The SSF has associated a predefined SRF being selected automatically when no Resource IP Address is specified. (see note 2).
SSF_ADRESSED_SRF	BOOLEAN	The SSF can select an SRF by a valid Resource IP Address. (see note 2).
ETC_EXPLICIT_CORRELATION	BOOLEAN	This parameter shall be set to TRUE, if the SSF expects the correlationID and sCFID parameters to be explicitly contained in the EstablishTemporaryConnection argument (and not implicitly encoded in the assistingSSPIPRoutingAddress), and FALSE otherwise.
ETC_TO_ASSIST	BOOLEAN	This parameter shall be set to TRUE, if the SSF establishes the Temporary Connection to the SRF via an Assisting SSF, and FALSE otherwise. (see note 3).
ETC_TO_SRF	BOOLEAN	This parameter shall be set to TRUE, if the SSF establishes the Temporary Connection directly to the SRF, and FALSE otherwise. (see note 3).
CO_EXPLICIT_CORRELATION	BOOLEAN	This parameter shall be set to TRUE, if the SSF expects the correlationID and sCFID parameters to be explicitly contained in the Connect argument (and not implicitly encoded in the destinationRoutingAddress parameter), and FALSE otherwise. (see note 4)
CO_TO_HANDED_OFF	BOOLEAN	This parameter shall be set to TRUE, if the SSF establishes the Connection to the SRF via a Handed-OFF SSF, and FALSE otherwise. (see notes 4 and 5).
CO_TO_SRF	BOOLEAN	This parameter shall be set to TRUE, if the SSF establishes the Connection directly to the SRF, and FALSE otherwise. (see notes 4 and 5).

NOTE 1: Exactly one of the parameters SSF_IS_INITIATING, SSF_IS_ASSISTING and SSF_IS_HANDED_OFF shall be set to TRUE (if more than one of the related functions is implemented, the tests should be repeated with the other applicable settings of this parameter).
NOTE 2: At least one of these Parameters must be set to TRUE.
NOTE 3: At least one of these Parameters must be set to TRUE.
NOTE 4: Connect operation only related to Handed-off SSF.
NOTE 5: At least one of these Parameters must be set to TRUE.

The following Test Parameters used to parameterize the TP descriptions, when necessary, are defined in table 4.

NOTE: It is assumed, that these Test Parameters are mapped to corresponding PIXIT/Test Suite Parameters.

Table 4: Test Parameters applicable to TP parametrization

Test Parameter name	Type	Explanation
UI_CTR_RES_ADDR_PA	ResourceAddress (see ConnectToResourceArg**)**	Resource address value used in the ConnectToResource invoke component issued in preamble PRE_UI_CTR_PA (used in TPs for the **PlayAnnouncement** operation). In case of an Initiating SSF the ResourceAddress identifies leg 1 or the CS containing leg 1. Otherwise only the resourceAddress formats "None" and "ipRoutingAddress" are applicable.
UI_CTR_RES_ADDR_PA_S2P	ResourceAddress (see ConnectToResourceArg**)**	Resource address value related to a CS with 2 legs used in the ConnectToResource invoke component issued after preamble PRE_UI_S2P_MON (used in TPs for the **PlayAnnouncement** operation).
UI_CTR_RES_ADDR_PR_S1P_1P	ResourceAddress (see ConnectToResourceArg**)**	Resource address value used in the ConnectToResource invoke component issued in preamble PRE_UI_CTR_PR_S1P_1P (used in TPs for the **PromptAndCollectUserInformation**, **PromptAndReceiveMessage** and **Script** operations). The address identifies leg 1 in CS 2. Only applicable to an **Initiating SSF**
UI_CTR_RES_ADDR_PR_1P	ResourceAddress (see ConnectToResourceArg**)**	Resource address value used in the ConnectToResource invoke component issued in preamble PRE_UI_CTR_PR_1P (used in TPs for the **PromptAndCollectUserInformation**, **PromptAndReceiveMessage** and **Script** operations). In case of an **Initiating SSF** the resourceAddress identifies leg 1 in (initial) CS 1. Otherwise only the resourceAddress formats "None" and "ipRoutingAddress" are applicable.
UI_CTR_RES_ADDR_PR_S2P	ResourceAddress (see ConnectToResourceArg**)**	Resource address value used in the ConnectToResource invoke component issued in preamble PRE_UI_CTR_PR_S2P (used in TPs for the **PromptAndCollectUserInformation**, **PromptAndReceiveMessage** and **Script** operations). The address identifies legs 1 and 2 in (initial) CS 1. Only applicable to an Initiating SSF.
UI_CTR_RES_ADDR_UT_S2P	ResourceAddress (see ConnectToResourceArg**)**	Resource address value used in the ConnectToResource invoke component issued in preamble PRE_UI_CTR_UT_S2P (used in TPs for the **RequestReportUTSI** and **SendSTUI** operations). The address identifies the CS containing 2 legs. Only applicable to an **Initiating SSF**.
UI_CTR_RES_ADDR_UT_1P	ResourceAddress (see ConnectToResourceArg**)**	Resource address value used in the ConnectToResource invoke component issued in preamble PRE_UI_CTR_UT_1P (used in TPs for the **RequestReportUTSI** and **SendSTUI** operations). In case of an **Initiating SSF** the resourceAddress identifies the CS containing 1 leg (the initial leg). Otherwise only the resourceAddress formats "None" and "ipRoutingAddress" are applicable.

Test Parameter name	Type	Explanation
UI_CTR_RES_ADDR_UT_S1P_1P	ResourceAddress (see ConnectToResourceArg**)**	Resource address value used in the ConnectToResource invoke component issued in preamble PRE_UI_CTR_UT_S1P_1P (used in TPs for the **RequestReportUTSI** and **SendSTUI** operations). The address identifies CS 2 containing leg 1 (controlling). Only applicable to an **Initiating SSF**.
UI_PA_CS	CallSegmentID	ID of Call segment affected by the PlayAnnouncement operation (according to preamble PRE_UI_CTR_PA and compatible with UI_CTR_RES_ADDR_PA).
UI_PA_INV_CONN_PTY	ConnectedParty (see PlayAnnouncementArg)	Syntactically valid value for the **connectedParty** parameter (used in the PlayAnnouncement invoke component), which is not compatible to the ResourceAddress value UI_CTR_RES_ADDR_PA. See first (unnumbered) table in clause 7.3.1.1 of EN 301 931-3 [3].
SCRIPT_INFO_1	UISCRIPT.&SpecificInfo	Contains the necessary information to be sent by the SCF as uIScriptSpecificInfo in the first ScriptInformation invoke component of SCRIPT_3 (see table 10).
SCRIPT_INFO_2	UISCRIPT.&SpecificInfo	Contains the necessary information to be sent by the SCF as uIScriptSpecificInfo in the second ScriptInformation invoke component of SCRIPT_3 (see table 10).
SCRIPT_INFO_3	UISCRIPT.&SpecificInfo	Contains the necessary information to be sent by the SCF as uIScriptSpecificInfo in the first ScriptInformation invoke component of SCRIPT_4 (see table 10).
SCRIPT_INFO_4	UISCRIPT.&SpecificInfo	Contains the necessary information to be sent by the SCF as uIScriptSpecificInfo in the second ScriptInformation invoke component of SCRIPT_4 (see table 10).

Table 5 combines the Test Parameter as selection expressions, used in the TP description tables.

Table 5: Selection expressions

Selection expression name	Boolean expression
ConfigurationA	CONFIGURATION = "CONFIGURATION A"
ConfigurationB	CONFIGURATION = "CONFIGURATION B"
RelayMethod	SSF_RELAYS_SRF_OPERATIONS = TRUE
NotRelayAssistingMethod	SSF_RELAYS_SRF_OPERATIONS AND NOT SSF_RELAYS_SRF_ASSISTING
DirectMethod	SSF_RELAYS_SRF_OPERATIONS = FALSE
Initiating	SSF_IS_INITIATING
InitiatingA	(CONFIGURATION = "CONFIGURATION A") AND SSF_IS_INITIATING
Assisting	CONFIGURATION = "CONFIGURATION A" AND SSF_IS_ASSISTING
HandedOff	CONFIGURATION = "CONFIGURATION A" AND SSF_IS_HANDED_OFF
AssistingOrHandedOff	Assisting OR HandedOff
InitiatingAndTimeout	CONFIGURATION = "CONFIGURATION A" AND SSF_IS_INITIATING AND SSF_TIMER_USED
AssistingAndTimeout	CONFIGURATION = "CONFIGURATION A" AND SSF_IS_INITIATING AND SSF_TIMER_USED
HandedOffAndTimeout	CONFIGURATION = "CONFIGURATION A" AND SSF_IS_HANDED_OFF AND SSF_TIMER_USED
InitiatingPredefinedSRF	CONFIGURATION = "CONFIGURATION A" AND SSF_IS_INITIATING AND SSF_PREDEFINED_SRF

Selection expression name	Boolean expression
AssistingHandoffPredefinedSRF	CONFIGURATION = "CONFIGURATION A" AND (SSF_IS_ASSISTING OR SSF_IS_HANDED_OFF) AND SSF_PREDEFINED_SRF
PredefinedSRF	AssistingHandoffPredefinedSRF OR InitiatingPredefinedSRF
InitiatingAddressedSRF	CONFIGURATION = "CONFIGURATION A" AND SSF_IS_INITIATING AND SSF_ADDRESSED_SRF
AssistingHandoffAddressedSRF	CONFIGURATION = "CONFIGURATION A" AND (SSF_IS_ASSISTING OR SSF_IS_HANDED_OFF) AND SSF_ADDRESSED_SRF

ScriptEventsImplemented	SSF_IMPLEMENTS_SCRIPTS AND SSF_IMPLEMENTS_SCRIPT_EVENTS
UTSIImplemented	SSF_IMPLEMENTS_UTSI

5 Test configurations

As shown in clause 4.1, two basic scenarios are applicable to testing the SRF functions of an SSF. Two generic configurations are defined accordingly in figures 1 and 2 below, referred to as **Configuration A** and **Configuration B** respectively.

NOTE: General functional configurations for INAP entities are described in annex A of EN 301 933-1 [5]. Physical configurations applicable to SSFs and SRFs are described in clause 7.3.1.1 of EN 301 931-3 [3].

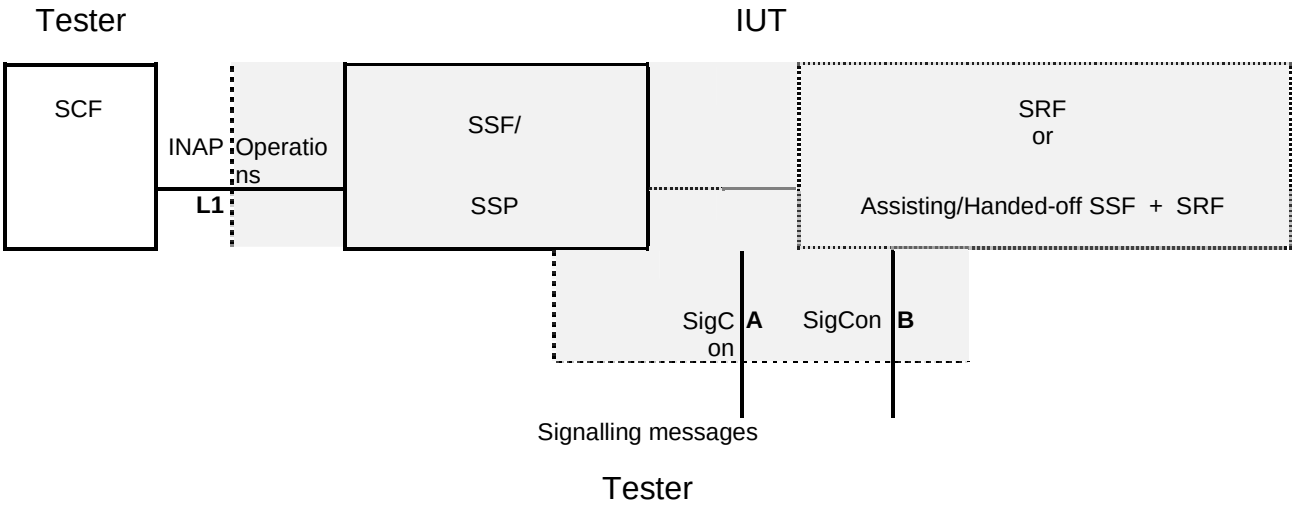

Figure 1: Configuration A

This test configuration covers a single SCP and a single SSF/SRF, where the SCP is represented by the tester and the SSF/SRF is the implementation under test (IUT). The SSF acts as a relay for INAP operations exchanged between the SCF and the SRF.

INAP PDUs (operations) are exchanged between the tester/SCF and the IUT across the interface named **L1**, which corresponds to a PCO in the TTCN-like notation used for the description of the test behaviour. INAP PDUs are embedded in TCAP messages as described in clause 10 of EN 301 931-1 [1] and clause 15 of EN 301 931-2 [2].

When call-related operations are tested, signalling messages are exchanged between the tester and the IUT, establishing bearer connections, where the signalling terminations in the IUT are named SigCon A and SigCon B. Depending on the implementation, the signalling messages can be messages of the DSS1 protocol, ISUP protocol or another protocol (see e.g. clause 6.2.2.1 of EN 301 931-2 [2]). To be independent of any particular signalling protocol, **Abstract Signalling Primitives** are used in the test descriptions instead of signalling messages. For the definition of the Abstract Signalling Primitives see clause 6.2.2.2 of EN 301 931-2 [2].

Depending on the sub-function of the SSF being tested (see clause 4.1):

1) Initiating SSF,

2) Assisting SSF, or

3) Handed-off SSF.

The signalling terminals inside the tester connected to SigCon A and SigCon B respectively, reside in different entities represented by the tester. Table 6 shows the entities represented by the tester depending on these cases.

Table 6: Signalling terminals represented by the tester in Configuration A

Tested SSF sub-function	SigCon in SSF	Signalling terminal entity represented by the tester
Initiating SSF	SigCon A	Initiating user (user A; leg 1)
	SigCon B	Called user (user B; leg 2)
Assisting SSF	SigCon A	Initiating SSF
	SigCon B	Not applicable
Handed-off SSF	SigCon A	Initiating SSF
	SigCon B	Not applicable

NOTE: The same Abstract Signalling Primitives are used, independent of the tested SSF sub-function. The actual signalling messages exchanged between the tester and the SSF however may depend on the tested sub-function (e.g. DSS1 messages to end users and ISUP messages to the Initiating SSF represented by the tester).

The interface between the SSF and the SRF is **not** part of the test configuration (neither INAP operations nor bearer connections nor "voice channels" interfaces). Accordingly Configuration A is applicable to the cases where:

a) the SRF is integrated in the SSF,

b) the SRF is directly connected to the SSF (using an implementation-depending protocol for bearer connection signalling),

c) the SRF is connected to the SSF via a number of intermediate exchanges.

Figure 2 shows Configuration B, which is only applicable to the Initiating SSF sub-function.

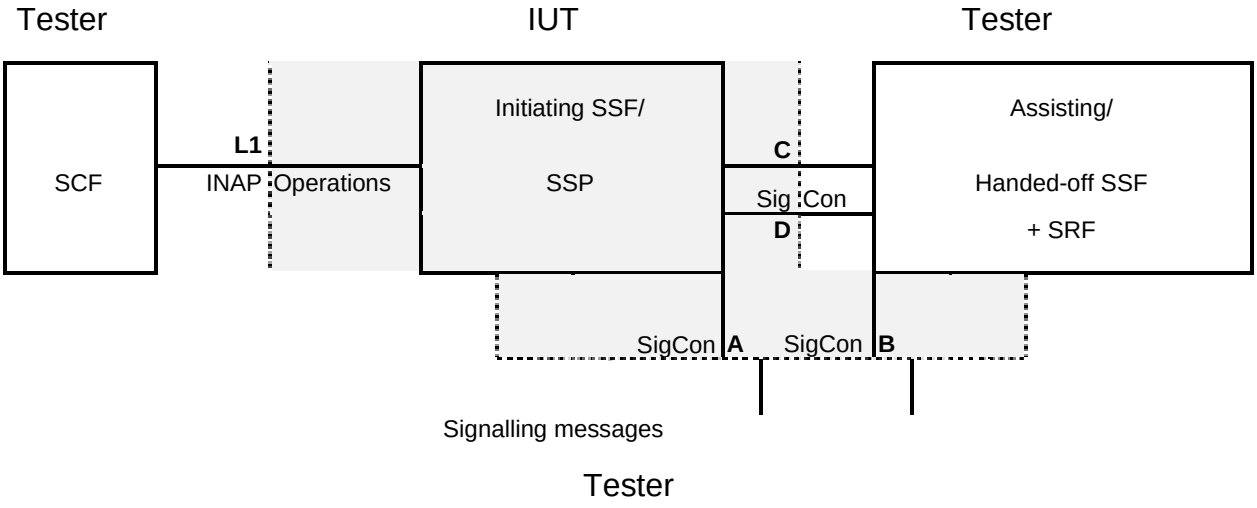

Figure 2: Configuration B

Configuration B is only used to test the **EstablishTemporaryConnection** procedure. The temporary bearer connection is established between SigCon C (located in the IUT/Initiating SSF) and the tester (representing the Assisting/Handed-off SSF). A temporary bearer connection is also established between SigCon D and the tester, when two temporary connections are established in parallel (SigConA and SigConB separated in two CSs).

With respect to the bearer connections terminated in the IUT by SigCon A and SigCon B, the tester represents the initiating user (user A; leg 1) and the called user (user B; leg 2) respectively.

Table 7 gives an overview on application and main differences of configurations A and B.

Table 7: Overview of configurations A and B differences

Configuration	Connecting operation(s)	Comments
Configuration A	ConnectToRessource EstablishTemporaryConnection	The IUT is composed of the SSF exchanging INAP operations with the SCF/Tester, plus SRF, plus intermediate Assisting/Handed-off SSF, if existing. The interface between the SSF and the SRF or the SSF and the Assisting/Handed-off SSF is "hidden"; it is only implicitly tested. When the **ConnectToRessource** operation is used to establish the connection to the SRF, the SSF acts as a relay for successing operations like PlayAnnoncement etc. The effect of these operations is observed at L1, SigCon A and SigConB. The **EstablishTemporaryConnection** operation is only used in this configuration, when the SRF is **incorporated** in the SSF or is **directly addressed** by the SSF, i.e. when there is no intermediate Assisting/Handed-off SSF. Since within the scope of the present document the direct interface between SCF and SRF is not tested, no user interaction procedures like PlayAnnoncement can be simulated in this case.
Configuration B	EstablishTemporaryConnection/ Connect	In this configuration the IUT consists of the **Initiating SSF only**, and the interface between the Initiating SSF and the Assisting/Handed-off SSF (simulated by the Tester) is **part of the testing interface**. The signalling messages exchanged between Initiating SSF and Assisting/Handed-off SSF at **SigConC** (and SigCon D) are treated in the same way as the signalling messages exchanged between Initiating SSF and users A and B (SigConA and SigConB).

6 Test purposes for SRF functions

6.1 SRF-related procedures

6.1.1 List of procedures

The Test Purposes for SRF-related functionalities are grouped according to the following procedures:

AR	AssistRequestInstructions
AT	ActivityTest
CG	CallGap
CO	Connect (only to Handed-off SSF)
CR	ConnectToResource
DF	DisconnectForwardConnection
EC	EstablishTemporaryConnection
PA	PlayAnnouncement
PC	PromptAndCollectUserInformation
PR	PromptAndReceiveMessage
RP	ReportUTSI
RU	RequestReportUTSI
SC	ScriptClose
SE	ScriptEvent
SI	ScriptInformation
SR	ScriptRun
SU	SendSTUI

6.1.2 Definitions of the procedures

ActivityTest procedure (AT)

```
Invoke: ActivityTest
Return Result:  ActivityTest
Return Error:   None
```

AssistRequestInstructions procedure (AR)

```
Invoke: AssistRequestInstructions
Return Result:  None
Return Error:   AssistRequestInstructions
```

CallGap procedure (CG)

```
Invoke: CallGap
Return Result:  None
Return Error:   None
```

ConnectToResource procedure (CR)

```
Invoke: ConnectToResource
Return Result:  None
Return Error:   ConnectToResource
```

DisconnectForwardConnection procedure (DF)

```
Invoke: DisconnectForwardConnection
Return Result:  None
Return Error:   DisconnectForwardConnection
```

DisconnectForwardConnectionWithArgument procedure (DW)

```
Invoke: DisconnectForwardConnectionWithArgument
Return Result:  None
Return Error:   DisconnectForwardConnectionWithArgument
```

EstablishTemporaryConnection procedure (EC)

```
Invoke: EstablishTemporaryConnection
Return Result:  None
Return Error:   EstablishTemporaryConnection
```

PlayAnnouncement procedure (PA)

```
Invoke: PlayAnnouncement
    Cancel
Return Result:  SpecializedResourceReport
Return Error:   PlayAnnouncement
```

PromptAndCollectUserInformation procedure (PC)

```
Invoke: PromptAndCollectUserInformation
    Cancel
Return Result:  PromptAndCollectUserInformation
Return Error:   PromptAndCollectUserInformation
```

PromptAndReceiveMessage procedure (PR)

```
Invoke: PromptAndReceiveMessage
    Cancel
Return Result:  PromptAndReceiveMessage
Return Error:   PromptAndReceiveMessage
```

RequestReportUTSI procedure (RU)

```
Invoke: RequestReportUTSI
Return Result:  None
Return Error:   RequestReportUTSI
```

ReportUTSI procedure (RP)

```
Invoke: ReportUTSI
Return Result:  None
Return Error:   None
```

ScriptRun procedure (SR)

```
Invoke: ScriptRun
Return Result:  None
Return Error:   ScriptRun
```

ScriptClose procedure (SC)

```
Invoke: ScriptClose
Return Result:  None
Return Error:   ScriptClose
```

ScriptInformation procedure (SI)

```
Invoke: ScriptInformation
Return Result:  None
Return Error:   ScriptInformation
```

ScriptEvent procedure (SE)

```
Invoke: ScriptEvent
Return Result:  None
Return Error:   None
```

SendSTUI procedure (SU)

```
Invoke: SendSTUI
Return Result:  None
Return Error:   SendSTUI
```

6.2 Structure of the test purposes

Test purposes for the relay method			
Procedure/Group	**Group identifier**	**Category**	**Number**

		BI	3
		BO	2
Total:			47

6.3 Notations

The notations of EN 301 933-1 [5] and EN 301 933-2 [6] are applicable, with the following additions:

When a message parameter is defined to be OPTIONAL or DEFAULT, and in the TP formulation or description a value for that parameter is indicated to be "valid" without further specification, then the omission of a value for this parameter is not precluded.

The Abstract Signalling Primitives related to messages exchanged on the signalling links have been defined in clause 6.2.2.2 of EN 301 931-2 [2]. Some SRF-related operations can have an effect upon the signalling connection(s) and/or on the in-band connections between user and SSF/SRF.

The modelling of the effect on a signalling link and/or on the in-band connection related to a **PromptAndCollectUserInformation** or **PromptAndCollectMessage** operation, is a **CallProgress** Abstract Signalling Primitive sent by the SSF/SRF and a **Data** Abstract Signalling Primitive sent by the user.

The modelling of the effect on a signalling link and/or on the in-band connection related to a **PlayAnnouncement** operation is a **CallProgress** Abstract Signalling Primitive sent by the SSF/SRF, but there is no explicit indication in the TPs.

NOTE: It is recommended, that an ATS based on these TPs will receive this Abstract Signalling Primitive as an unexpected acceptable event in the default.

When **Scripts** require user interaction on a signalling link and/or on an in-band connection, also the **CallProgress** and **Data** Abstract Signalling Primitives are used to model this situation.

The modelling of the effect on a signalling link of a **SendSTUI** and **RequestReportUTSI** operation is a **CallProgress** Abstract Signalling Primitive sent by the SSF/SRF. The resulting information sent on a signalling link by the user, leading to a **ReportUTSI** operation sent by the SSF/SRF, is modelled as a **Data** Abstract Signalling Primitive.

In order to express this appropriately in the TP descriptions, parameters have been defined for CallProgress and Data Abstract Signalling Primitives. The parameters defined for the **CallProgress** Abstract Signalling Primitive together with their possible values, are defined in table 8. The parameters defined for the **Data** Abstract Signalling Primitive and their possible values, are defined in table 9.

Table 8: Parameters of the CallProgress Abstract Signalling Primitive

Parameter name	Parameter values	Description
CPType	CPType_PA	The CallProgress Abstract Signalling Primitive indicates a signal resulting from a Play announcement operation.
	CPType_PCU	The CallProgress Abstract Signalling Primitive indicates a signal resulting from a PromtAndCollectUserInformation operation.
	CPType_PCM	The CallProgress Abstract Signalling Primitive indicates a signal resulting from a PromtAndCollectMessage operation.
	CPType_STUI	The CallProgress Abstract Signalling Primitive indicates a signal resulting from a SendSTUI operation.
	CPType_RR_UTSI	The CallProgress Abstract Signalling Primitive indicates a signal resulting from a RequestReportUTSI operation.
	CPType_SCRIPT	The CallProgress Abstract Signalling Primitive indicates one or more CallProgress signals received from the SSF/SRF during script operation (see note). This Abstract Signalling Primitive is issued, when (depending on the script) either no more CallProgress signal is issued by the SSF/SRF before the script terminates, or when a user interaction is required.
	CPType_Any	This parameter value is assigned, when a CallProgress Abstract Signalling Primitive is received which does not correspond to one of the previously defined types.
Script_ID	UISCRIPT.&id	This parameter is only applicable to CallProgress Abstract Signalling Primitives of type CPType_SCRIPT. Information about script IDs and the expected properties of scripts used for testing are contained in table 10.
CPEnd_Ind	TRUE, FALSE	This parameter is only applicable to CallProgress Abstract Signalling Primitives of type CPType_SCRIPT. It indicates, whether the current CallProgress Abstract Signalling Primitive is the last (TRUE) or not the last (FALSE) CallProgress Abstract Signalling Primitive expected in the current script.
NOTE: Depending on the script, the contents of the signal(s) leading to a CallProgress Abstract Signalling Primitive of CPType_SCRIPT may be undistinguishable from signals indicating PlayAnnouncement etc. But from the context (ScriptRun issued), the distinction can be made (for an implementor). Number and kind of CallProgress signals received on the signalling link (or in-band), before the CallProgress Abstract Signalling Primitive of CPType_SCRIPT is issued, depends on the script and on the signalling procedures implemented.		

In the TP descriptions, CallProgress Abstract Signalling Primitive and its parameters are received in the following two forms:

a) CP1_n?CallProgress(CPType_SCRIPT, <Script_No>, <CPEnd_Ind>),
where <Script_No> and <CPEnd_Ind> are valid values for parameters Script_No and CPEnd_Ind respectively;

b) CP1_n?CallProgress(CPType),
where CPType is one of the specified types except CPType_SCRIPT.

Table 9: Parameters of the Data Abstract Signalling Primitive

Parameter name	Parameter values	Description
DataType	DataType_PCU_Result	The Data Abstract Signalling Primitive requests a signal to be sent by the user to answer the previously invoked PromtAndCollectUserInformation operation.
	DataType_PCM_Result	The Data Abstract Signalling Primitive requests a signal to be sent by the user to answer the previously invoked PromtAndCollectMessage operation.
	DataType_SCRIPT	The Data Abstract Signalling Primitive requests one or more signals to be sent by the user during script operation (see note).
Script_No	Positive Integers, starting from 1.	This parameter is only applicable to Data Abstract Signalling Primitives of type DataType_SCRIPT. See also table 8.
NOTE: Depending on the script, the contents of the signal(s) to be sent can possibly be answers to PromtAndCollectUserInformation or other operations, if the script invokes such operations. Number and kind of Data signals required to be sent by the user on the signalling link (or in-band), in order to execute the Data Abstract Signalling Primitive of DataType_SCRIPT, depends on the individual script and on the signalling procedures implemented.		

In the TP descriptions, Data Abstract Signalling Primitive and its parameters are received in the following two forms:

a) CP1_n!Data(DataType_SCRIPT, <Script_No>),
where <Script_No> is a valid value for parameter Script_No;

b) CP1_n!Data(DataType),
where DataType is one of the specified types except CPType_SCRIPT.

The following table 10 lists the script ID parameters associated with scripts used for testing.

Table 10: Scripts used for testing

Script ID parameter	Expected Script behaviour
SCRIPT_1	General purpose script. It is run with parameter **disconnectFromIPForbidden** set to **TRUE**. It does not matter, whether the script sends ScriptEvent operations or expects ScriptInformation operations.
SCRIPT_2	The script is run with parameter **disconnectFromIPForbidden** set to FALSE. In order to get a defined operational condition for the postamble, it is assumed that the script sends a ScriptEvent invoke component indicating **lastEventIndicator** = FALSE.
SCRIPT_3	The script is assumed to send a ScriptEvent invoke component indicating **lastEventIndicator** = TRUE. The script possibly sends **n** ScriptEvent invoke components indicating **lastEventIndicator** = FALSE before. The number **n** shall not exceed the value of 2 (but may be 0). It is assumed that n ScriptInformation invoke components have to be sent by the SCF, each one following a ScriptEvent invoke component indicating **lastEventIndicator** = FALSE. Test Parameters SCRIPT_INFO_1 and SCRIPT_INFO_2 contain the necessary information to be sent by the SCF as uIScriptSpecificInfo in these cases.
SCRIPT_4	This script fulfils the same requirements as SCRIPT_3, except that **n** must be **greater or equal to 1** (ScriptInformation is actually sent).
NOTE: The possibility that all Script IDs identify the same script is not excluded.	

6.4 Preambles and postambles for SRF

6.4.1 Preambles used for SRF function testing

6.4.1.1 PRE_WFI preamble

This preamble initiates an incoming call in the SSF and leaves the SSF in the "Waiting for instructions" state for the single existing CS, containing one leg (leg 1).

The preamble is applicable to an IUT acting as Initiating SSF, Assisting SSF or Handed-off SSF. Parameters defined in clause "Test purpose selection" are used to distinguish between these 3 options. In case of Assisting SSF and Handed-off SSF the scfID and correlationID may be implicitly contained in the assistingSSPIRoutingAddress or destinationRoutingAddress respectively.

L1?AssistRequestInstructions(correlationID)

PRE_WFI

6.4.1.2 PRE_S2P_MON preamble

This preamble is used in TPs for the ConnectToResource operation. It initiates an incoming call in the **Initiating SSF** and connects the call to user B, leaving the SSF in the "**Monitoring**" FSM for CS state for the single existing CS, containing two legs (leg 1 (controlling) and leg 2 (passive)).

oMidcall event detection points are set so that the "**Wait for instructions**" FSM for CS state can be easily reached.

CP1_1!SetUpInd

L1?InitialDP

L1!RequestReportBCSMEvent(1,notifyAndContinue,oDisconnect)

L1!RequestReportBCSMEvent(2,notifyAndContinue,oDisconnect)

[SSF_IS_HANDED_OFF]

CP1_1!SetUpInd(destinationRoutingAddress,scfID, correlationID)

L1?AssistRequestInstructions(correlationID)

PRE_UI_1P_MON

6.4.1.13 PRE_UI_CTR_PA preamble

This preamble is used to test user interaction procedure **PlayAnnouncement**, being relayed through the SSF. It is applicable to Initiating SSF, Assisting SSF and Handed-off SSF.

PRE_UI_1P_MON

L1!ConnectToResource(UI_CTR_RES_ADDR_PA)

PRE_UI_CTR_PA

6.4.1.14 PRE_UI_CTR_PR_S2P preamble

This preamble is used to test procedures **PromptAndCollectUserInformation**, **PromptAndReceiveMessage**, and **Script** operations, all operations being relayed through the SSF, when the CS addressed in the operation contains 2 legs. It is only applicable to an **Initiating SSF**.

PRE_UI_S2P_MON

L1!ConnectToResource(UI_CTR_RES_ADDR_PR_S2P)

PRE_UI_CTR_PR_S2P

6.4.1.15 PRE_UI_CTR_PR_S1P_1P preamble

This preamble is used to test procedures **PromptAndCollectUserInformation**, **PromptAndReceiveMessage**, and **Script** operations, all operations being relayed through the SSF, when the CS addressed in the operation contains 1 leg (controlling). It is only applicable to an **Initiating SSF**.

PRE_UI_S1P_1P_MON

L1!ConnectToResource(UI_CTR_RES_ADDR_PR_S1P_1P)

PRE_UI_CTR_PR_S1P_1P

6.4.1.16 PRE_UI_CTR_PR_1P preamble

This preamble is used to test procedures **PromptAndCollectUserInformation**, **PromptAndReceiveMessage**, and **Script** operations, all operations being relayed through the SSF, when the CS addressed in the operation contains 1 leg (the initial leg). It is applicable to an **Initiating SSF**, **Assisting SSF** and **Handed-off SSF**.

PRE_UI_1P_WFI

L1!ConnectToResource(UI_CTR_RES_ADDR_PR_1P)

PRE_UI_CTR_PR_1P

6.4.1.17 PRE_UI_CTR_UT_S2P preamble

This preamble is used to test user interaction procedures **ReportUTSI**, **RequestReportUTSI** and **SendSTU**, all operations being relayed through the SSF, when the CS addressed in the operation contains 2 legs. It is only applicable to an **Initiating SSF**.

PRE_S2P_MON

L1!ConnectToResource(UI_CTR_RES_ADDR_UT_S2P)

PRE_UI_CTR_UT_S2P

6.4.1.18 PRE_UI_CTR_UT_S1P_1P preamble

This preamble is used to test user interaction procedures **ReportUTSI**, **RequestReportUTSI** and **SendSTU**, all operations being relayed through the SSF, when the CS addressed in the operation contains 1 leg (controlling). It is only applicable to an **Initiating SSF**.

PRE_UI_S1P_1P_MON

L1!ConnectToResource(UI_CTR_RES_ADDR_UT_S1P_1P)

PRE_UI_CTR_UT_S1P_1P

6.4.1.19 PRE_UI_CTR_UT_1P preamble

This preamble is used to test user interaction procedures **ReportUTSI**, **RequestReportUTSI** and **SendSTU**, all operations being relayed through the SSF, when the CS addressed in the operation contains 1 leg (the initial leg). It is applicable to an **Initiating SSF**, **Assisting SSF** and **Handed-off SSF**.

6.4.2 Postambles used for SRF function testing

6.4.2.1 ReleaseA

A connection to the SRF does not exist. The connection at SigConA is released.

[SSF_IS_INITIATING]

L1!ReleaseCall(allCallSegments)

CP1_1?ReleaseReq

CP1_2?ReleaseReq

ReleaseA

[SSF_IS_ASSISTING OR SSF_IS_HANDED_OFF]

CP1_1!ReleaseInd

CP1_2!ReleaseInd

ReleaseA

6.4.2.2 ReleaseAB

A connection to the SRF does not exist. The connections at SigConA and SigConB are released.

L1!ReleaseCall(allCallSegments)

CP1_1?ReleaseReq

CP1_2?ReleaseReq

ReleaseAB

6.4.2.3 ReleaseAC

The connections at SigConA and SigConC are released.

L1!ReleaseCall(allCallSegments)

CP1_1?ReleaseReq

CP1_3?ReleaseReq

ReleaseAC

6.4.2.4 ReleaseABC

The connections at SigConA, SigConB and SigConC are released.

L1!ReleaseCall(allCallSegments)

CP1_1?ReleaseReq

CP1_2?ReleaseReq

CP1_3?ReleaseReq

ReleaseABC

6.4.2.5 ReleaseABCD

The connections at SigConA, SigConB, SigConC and SigConD are released.

L1!ReleaseCall(allCallSegments)

CP1_1?ReleaseReq

CP1_2?ReleaseReq

CP1_3?ReleaseReq

CP1_4?ReleaseReq

ReleaseABCD

6.4.2.6 DisconnectForwardReleaseA

The connections at SigConA and the temporary connection to the SRF are released.

L1!DisconnectForwardConnection

ReleaseA

DisconnectForwardReleaseA

6.4.2.7 DisconnectForwardReleaseAB

The connections at SigConA, SigConB and the (invisible) temporary connection to the SRF are released.

L1!DisconnectForwardConnection

ReleaseAB

DisconnectForwardReleaseAB

6.4.2.8 DisconnectForwardReleaseAC

The connection at SigConA and the temporary connection to the assisting/handed-off SSF are released.

L1!DisconnectForwardConnection

CP1_3?ReleaseReq

DisconnectForwardReleaseAC

6.4.2.9 DisconnectForwardReleaseABC

The connections at SigConA, SigConB and the temporary connection to the assisting/handed-off SSF are released.

L1!DisconnectForwardConnection

CP1_3?ReleaseReq

ReleaseAB

DisconnectForwardReleaseABC

6.4.2.10 ScriptCloseDisconnectForwardReleaseA()

The running script is closed, the connection at SigConA and the temporary connection to the SRF are released. The postamble is parameterized with parameters scriptID, scriptspecificInfo and csID.

L1!ScriptClose(scriptID, scriptspecificInfo, csID)

L1!DisconnectForwardConnection

ReleaseA

ScriptCloseDisconnectForwardReleaseA

6.4.2.11 ScriptCloseDisconnectForwardReleaseAB()

The running script is closed, the connections at SigConA and SigConB, and the temporary connection to the SRF are released. The postamble is parameterized with parameters scriptID, scriptspecificInfo and csID.

L1!ScriptClose(scriptID, scriptspecificInfo, csID)

L1!DisconnectForwardConnection

ReleaseAB

ScriptCloseDisconnectForwardReleaseAB

6.4.2.12 DisconnectFWAReleaseA()

The connection at SigConA and the temporary connection to the SRF are released. The CSA contains more than one CS, so DisconnectForwardConnectionWithArgument is used. The postamble is parameterized with parameter **partyToDisconnect.**

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect)

ReleaseA

DisconnectFWAReleaseA

6.4.2.13 DisconnectFWAReleaseAB()

The connections at SigConA, SigConB and the temporary connection to the SRF are released. The CSA contains more than one CS, so DisconnectForwardWithArgument is used. The postamble is parameterized with parameter **partyToDisconnect.**

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect)

ReleaseAB

DisconnectFWAReleaseAB

6.4.2.14 DisconnectFWAReleaseAB2()

The connections at SigConA, SigConB and the temporary connections to the SRF are released. The CSA contains 2 CSs, where an independent temporary connection is established to each of the 2 CSs.
DisconnectForwardWithArgument is used twice. The postamble is parameterized with 2 parameters of type **partyToDisconnect.**

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect1)

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect2)

ReleaseAB

DisconnectFWAReleaseAB2

6.4.2.15 DisconnectFWAReleaseAC()

The connections at SigConA and SigConC are released. The postamble is parameterized with parameter **partyToDisconnect.**

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect)

CP1_3?ReleaseReq

ReleaseA

DisconnectFWAReleaseAC

6.4.2.16 DisconnectFWAReleaseABC()

The connections at SigConA, SigConB and SigConC are released. The postamble is parameterized with parameter **partyToDisconnect.**

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect)

CP1_3?ReleaseReq

ReleaseAB

DisconnectFWAReleaseABC

6.4.2.17 DisconnectFWAReleaseABCD()

The connections at SigConA, SigConB, SigConC and SigConD are released. The postamble is parameterized with 2 parameters of type **partyToDisconnect.**

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect1)

L1!DisconnectForwardConnectionWithArgument(partyToDisconnect2)

CP1_3?ReleaseReq

CP1_4?ReleaseReq

ReleaseAB

DisconnectFWAReleaseABCD

6.5 Test purposes for the relay method

This group of TPs is selected/deselected by selection expression **RelayMethod**.

6.5.1 AssistRequestInstructions procedure

	IN3_A_SRF_AR_BV_01
Work item no.:	ITEM_SRF_32
IN2 Ref(tmp)	IN2_A_BASIC_AR_CA_01
Purpose:	Verify that the Assisting SSF sends to SCF an **AssistRequestInstructions** invoke component containing the parameter correlationID, when it receives a SetupInd from the Initiating SSF, containing an assist indication.
Requirement ref	**Part 1.2**: 8.3.2, 11.5 **Part 1.3**: 7.2, 7.2.2, 8.2.1, 9.2
Selection Cond.	Assisting
Preamble:	PRE_OS_ASSIST
Test description	SetupInd from the Initiating SSF received (in the preamble), containing an assist indication.
Pass criteria	L1?AssistRequestInstructions(correlationID)
Postamble:	ReleaseA

	IN3_A_SRF_AR_BV_02
Work item no.:	ITEM_SRF_33
IN2 Ref(tmp)	IN2_A_BASIC_AR_BV_01
Purpose:	Verify that the Assisting SSF aborts the dialogue and releases SigCon A when timeout of Tssf occurs after having sent to SCF an **AssistRequestInstructions** invoke component.
Requirement ref	**Part 1.2**: 8.3.2, 11.5 **Part 1.3**: 7.2, 7.2.2, 8.2.1, 9.2
Selection Cond.	AssistingAndTimeout
Preamble:	PRE_OS_ASSIST
Test description	SetupInd from the Initiating SSF received (in the preamble), containing an assist indication. ?Timeout Tssf L1?Abort CP1_1?ReleaseReq
Pass criteria	- Check that after Tssf expiration, IUT aborts the dialogue and releases SigCon A
Postamble:	None

	IN3_A_SRF_AR_BV_03
Work item no.:	ITEM_SRF_34
IN2 Ref(tmp)	None
Purpose:	Verify that the Handed-off SSF sends to SCF an **AssistRequestInstructions** invoke component containing the parameter correlationID, when it receives a SetupInd from the Initiating SSF, containing an assist indication.
Requirement ref	**Part 1.2**: 8.4.2, 11.5 **Part 1.3**: 7.2, 7.2.2, 8.2.1, 9.2
Selection Cond.	HandedOff
Preamble:	PRE_OS_HANDED_OFF
Test description	SetupInd from the Initiating SSF received (in the preamble), containing an assist indication.
Pass criteria	L1?AssistRequestInstructions(correlationID)
Postamble:	ReleaseA

	IN3_A_SRF_AR_BV_04
Work item no.:	ITEM_SRF_35
IN2 Ref(tmp)	None
Purpose:	Verify that the Handed-off SSF aborts the dialogue and releases SigCon A when timeout of Tssf occurs after having sent to SCF an **AssistRequestInstructions** invoke component.
Requirement ref	**Part 1.2**: 8.3.2, 11.5 **Part 1.3**: 7.2, 7.2.2, 8.2.1, 9.2
Selection Cond.	AssistingAndTimeout
Preamble:	PRE_OS_HANDED_OFF
Test description	SetupInd from the Initiating SSF received (in the preamble), containing an assist indication. ?Timeout Tssf L1?TCAP-Abort CP1_1?ReleaseReq
Pass criteria	- Check that after Tssf expiration, IUT aborts the dialogue and releases SigCon A
Postamble:	None

6.5.2 ConnectToResource (CR) procedure

	IN3_A_SRF_CR_BV_01
Work item no.:	ITEM_SRF_1
IN2 Ref(tmp)	IN2_A_BASIC_CR_CA_01
Purpose:	Verify that the SSF, handling a single-CS CSA with a single leg and being in the "Wait for instructions" FSM for CS state, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates "none". In case of an Assisting or Handed-off SSF: verify also that a SetupResp is sent to the Initiating SSF.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	PredefinedSRF
Preamble:	PRE_WFI
Test description	L1!ConnectToResource (resourceAddress **none**)
Pass criteria	[SSF_IS_INITIATING] no ConnectToResource returnError received (within some Wait-time) [SSF_IS_ASSISTING] CP1_1?SetupResp
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_CR_BV_02
Work item no.:	ITEM_SRF_36
IN2 Ref(tmp)	None
Purpose:	Verify that the Initiating SSF, handling a single CS in the "Stable_2_Party" CSCV state and being in the "Monitoring" FSM for CS state, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates "none".
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	InitiatingPredefinedSRF
Preamble:	PRE_S2P_MON
Test description	L1!ConnectToResource (resourceAddress = none)
Pass criteria	no ConnectToResource returnError received (within some Wait-time)
Postamble:	DisconnectForwardReleaseAB

	IN3_A_SRF_CR_BV_03
Work item no.:	ITEM_SRF_37
IN2 Ref(tmp)	None
Purpose:	Verify that the Initiating SSF, handling a single CS in the "Stable_2_Party" CSCV state and being in the "Wait for instructions" FSM for CS state, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates "none".
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	InitiatingPredefinedSRF
Preamble:	PRE_S2P_MON
Test description	CP1_1!ServiceFeatureIndication L1?EventReportBCSM(1,oMidCall) L1!ConnectToResource (resourceAddress = none)
Pass criteria	no ConnectToResource returnError received (within some Wait-time)
Postamble:	DisconnectForwardReleaseAB

	IN3_A_SRF_CR_BV_04
Work item no.:	ITEM_SRF_38
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, handling a single-CS CSA with a single leg and being in the "Wait for instructions" FSM for CS state, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates "legID 1". In case of an Assisting or Handed-off SSF: verify also that a SetupResp is sent to the Initiating SSF.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	InitiatingPredefinedSRF
Preamble:	PRE_WFI
Test description	L1!ConnectToResource (resourceAddress legID 1)
Pass criteria	no ConnectToResource returnError received (within some Wait-time)
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_CR_BV_05
Work item no.:	ITEM_SRF_39
IN2 Ref(tmp)	None
Purpose:	Verify that the Initiating SSF, handling a single CS in the "Stable_2_Party" CSCV state and being in the "Monitoring" FSM for CS state, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates "legID 2".
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	InitiatingPredefinedSRF

Work item no.:	ITEM_SRF_49
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, handling a single-CS CSA with a single leg and being in the "Wait for instructions" FSM for CS state, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates "ipAddressAndCallSegment; ipRoutingAddress being a valid SRF address, csID=CS 1". In case of an Assisting or Handed-off SSF: verify also that a SetupResp is sent to the Initiating SSF.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	InitiatingAddressedSRF
Preamble:	PRE_WFI
Test description	L1!ConnectToResource (resourceAddress: ipAddressAndCallSegment; ipRoutingAddress being a valid SRF address, csID 1)
Pass criteria	no ConnectToResource returnError received (within some Wait-time)
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_CR_BV_16
Work item no.:	ITEM_SRF_50
IN2 Ref(tmp)	None
Purpose:	Verify that the Initiating SSF, being in the CS configuration S1P_1P and being in the "Monitoring" FSM for CS state for CS1, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates "ipAddressAndCallSegment; ipRoutingAddress being a valid SRF address, csID 1".
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	InitiatingAddressedSRF
Preamble:	PRE_S1P_1P_MON
Test description	L1!ConnectToResource (resourceAddress: ipAddressAndCallSegment; ipRoutingAddress being a valid SRF address, csID 1)
Pass criteria	no ConnectToResource returnError received (within some Wait-time)
Postamble:	DisconnectFWAReleaseAB(csID 1)

	IN3_A_SRF_CR_BV_17
Work item no.:	ITEM_SRF_51
IN2 Ref(tmp)	None
Purpose:	Verify that the Assisting or Handed-off SSF, handling a single-CS CSA with a single leg and being in the "Wait for instructions" FSM for CS state, aborts the TCAP transaction when it receives a ReleaseInd from the Initiating SSF at SigCon A (before a ConnectToResource invoke component has been received from the SCF).
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.13, 15.1.1.1.1.2 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1
Selection Cond.	AssistingOrHandedOff
Preamble:	PRE_WFI
Test description	CP1_1!ReleaseInd(Normal clearing)
Pass criteria	TCAP dialog abort received
Postamble:	None

	IN3_A_SRF_CR_BV_18
Work item no.:	ITEM_SRF_52
IN2 Ref(tmp)	None
Purpose:	Verify that the Assisting or Handed-off SSF, handling a single-CS CSA with a single leg and being in the "Wait for instructions" FSM for CS state, accepts a ConnectToResource invoke component received from the SCF (does not send a returnError component), when the resourceAddress received indicates a valid resourceAddress. Verify also that a SetupResp is sent to the Initiating SSF.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.13 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 13.1.1

Pass criteria	L1?CANCEL returnError(cancelFailed)
Postamble:	DisconnectForwardReleaseA

6.5.6 PromptAndReceiveMessage (PR) procedure

This group of TPs is selected/deselected by selection expression **PRMImplemented**.

	IN3_A_SRF_PR_BV_01
Work item no.:	ITEM_SRF_105
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF for a CS containing one joined leg, sends a **PromptAndReceiveMessage** returnResult component, when having received a **PromptAndReceiveMessage** invoke component from the SCF, containing parameters **informationToRecord** (any valid value) **informationToSend** (any valid value), **disconnectFromIPForbidden** (TRUE; DEFAULT) and **callSegmentID** (valid).
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1
Selection Cond.	
Preamble:	PRE_UI_CTR_PR_1P
Test description	L1!PromptAndReceiveMessage invoke (informationToRecord: any valid value; informationToSend: any valid value; disconnectFromIPForbidden: TRUE; callSegmentID: valid) CP1_1?CallProgress(CPType_PCM) CP1_1!Data(DataType_PCM_Result)
Pass criteria	L1?PromptAndReceiveMessage returnResult
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_PR_BV_02
Work item no.:	ITEM_SRF_106
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF for a CS containing one joined leg, sends a **PromptAndReceiveMessage** returnResult component, when having received a **PromptAndReceiveMessage** invoke component from the SCF, containing parameters **informationToRecord** (any valid value) **informationToSend** (any valid value), **disconnectFromIPForbidden** (FALSE) and **callSegmentID** (valid).
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1
Selection Cond.	NotRelayAssistingMethod
Preamble:	PRE_UI_CTR_PR_1P
Test description	L1!PromptAndReceiveMessage invoke (informationToRecord: any valid value; informationToSend: any valid value; disconnectFromIPForbidden: **FALSE**; callSegmentID: valid) CP1_1?CallProgress(CPType_PCM) CP1_1!Data(DataType_PCM_Result)
Pass criteria	L1?PromptAndReceiveMessage returnResult
Postamble:	ReleaseA

	IN3_A_SRF_PR_BV_03
Work item no.:	ITEM_SRF_107
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF for the initial CS containing one joined leg, sends a **PromptAndReceiveMessage** returnResult component, when having received a **PromptAndReceiveMessage** invoke component from the SCF, containing parameters **informationToRecord** (any valid value) **informationToSend** (any valid value) and **disconnectFromIPForbidden** (TRUE; DEFAULT), parameter **callSegmentID** being omitted.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1
Selection Cond.	
Preamble:	PRE_UI_CTR_PR_1P
Test description	L1!PromptAndReceiveMessage invoke (informationToRecord: any valid value; informationToSend: any valid value; disconnectFromIPForbidden: TRUE; callSegmentID: **omitted**) CP1_1?CallProgress(CPType_PCM) CP1_1!Data(DataType_PCM_Result)
Pass criteria	L1?PromptAndReceiveMessage returnResult
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_PR_BV_04
Work item no.:	ITEM_SRF_108
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF, sends a **PromptAndReceiveMessage** returnError component indicating errorCode "cancelled", when having received a **PromptAndReceiveMessage** invoke component from the SCF, containing parameters **informationToRecord** (any valid value) **informationToSend** (any valid value), **disconnectFromIPForbidden** (TRUE;DEFAULT) and **callSegmentID** (valid), during **PromptAndReceiveMessage** operation followed by a CANCEL invoke component.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1
Selection Cond.	
Preamble:	PRE_UI_CTR_PR_1P
Test description	L1!PromptAndReceiveMessage invoke (informationToRecord: any valid value; informationToSend: any valid value; disconnectFromIPForbidden: TRUE; callSegmentID: valid) CP1_1?CallProgress(CPType_PCM) L1!CANCEL
Pass criteria	L1?PromptAndReceiveMessage returnError(cancelled)
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_PR_BV_05
Work item no.:	ITEM_SRF_177
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF, sends a **PromptAndReceiveMessage** returnResult component and does not send a **PlayAnnouncement** returnError component, when having received a **PromptAndReceiveMessage** invoke component, followed by a **PlayAnnouncement** invoke component (the SRF buffers the **PlayAnnouncement** operation until the **PromptAndReceiveMessage** operation is completed).
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1
Selection Cond.	
Preamble:	PRE_UI_CTR_PR_1P
Test description	L1!PromptAndReceiveMessage invoke (informationToRecord: any valid value; informationToSend: any valid value; disconnectFromIPForbidden: TRUE; callSegmentID: valid) L1!PlayAnnouncement invoke (informationToSend: "any valid value"; disconnectFromIPForbidden: TRUE; requestAnnouncementComplete: FALSE; connectedParty: valid) CP1_1?CallProgress(CPType_PCM) CP1_1!Data(DataType_PCM_Result) L1?PromptAndReceiveMessage ReturnResultInd
Pass criteria	The IUT does not send a PlayAnnouncement returnError component (within some Wait-time)
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_PR_BI_01
Work item no.:	ITEM_SRF_109
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF, sends a **PromptAndReceiveMessage** returnError component indicating errorCode "missingParameter", when having received a **PromptAndReceiveMessage** invoke component from the SCF, without mandatory parameter **informationToRecord**.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1
Selection Cond.	
Preamble:	PRE_UI_CTR_PR_1P
Test description	L1!PromptAndReceiveMessage invoke (informationToRecord: **omitted**; informationToSend: any valid value; disconnectFromIPForbidden: TRUE; callSegmentID: valid; 7media: valid)
Pass criteria	L1?PromptAndReceiveMessage returnError(missingParameter)
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_PR_BI_02
Work item no.:	ITEM_SRF_110
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF, sends a **PromptAndReceiveMessage** returnError component indicating errorCode "unexpectedDataValue", when having received a **PromptAndReceiveMessage** invoke component from the SCF, with parameter callSegmentID=3 (invalid).
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1
Selection Cond.	
Preamble:	PRE_UI_CTR_PR_1P
Test description	L1!PromptAndReceiveMessage invoke (informationToRecord: any valid value; informationToSend: any valid value; disconnectFromIPForbidden: TRUE; callSegmentID: 3 (invalid))
Pass criteria	L1?PromptAndReceiveMessage returnError(unexpectedDataValue)
Postamble:	DisconnectForwardReleaseA

	IN3_A_SRF_PR_BI_03
Work item no.:	ITEM_SRF_111
IN2 Ref(tmp)	None
Purpose:	Verify that the Initiating SSF, having established a connection to the SRF, sends a **PromptAndReceiveMessage** returnError component indicating errorCode "unexpectedDataValue", when having received a **PromptAndReceiveMessage** invoke component from the SCF, with parameter callSegmentID indicating a valid csID not being compatible with the resourceAddress used in the ConnectToResource invoke component received.
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.6, 8.3.3, 8.4.2, 8.4.3, 11.18.1, 11.18.3.1 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.10, 9.10.3.1, 9.2.4.1

Pass criteria	The SSF/SRF does not send an ReportUTSI invoke component (during some Wait-time)
Postamble:	DisconnectForwardReleaseA

6.5.9 ActivityTest (AT) procedure

This group of TPs is selected/deselected by selection expression **PAImplemented** (PlayAnnouncement implemented) and uses the ConnectToResource resource parameters of PlayAnnouncement, because this is the most commonly implemented procedure, where an activity test of the SRF can be performed.

	IN3_A_SRF_AT_BV_01
Work item no.:	ITEM_SRF_175
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a connection to the SRF, sends an ActivityTest returnResult component after having received an ActivityTest invoke component from the SCF.
Requirement ref	**Part 1.3**: 9.1, 13.1.1
Selection Cond.	PAImplemented
Preamble:	PRE_UI_CTR_PA
Test description	L1!ActivityTest invoke L1?ActivityTest returnResult
Pass criteria	L1?ActivityTest returnResult
Postamble:	DisconnectForwardReleaseA

6.6 Test purposes for the direct SCF-SRF interaction method

This group of TPs is selected by expression **DirectMethod**.

NOTE: When the TP description requires valid values for the **assistingSSPIPRoutingAddress**, **correlationID** and **scfID** parameters, the possibility that correlationID and scfID are implicitly contained in the assistingSSPIPRoutingAddress is included. In the test campaign, the values of these elements should be parameterized appropriately (without affecting the TP).

6.6.1 Initiating SSF (IUT) interacting with Assisting SSF

This group of TPs is applicable to Configuration B only.

6.6.1.1 EstablishTemporaryConnection (EC) procedure

	IN3_A_SRF_EC_BV_01
Work item no.:	ITEM_SRF_29
IN2 Ref(tmp)	IN2_A_BASIC_EC_CA_01
Purpose:	Verify that the SSF, handling a single-CS CSA with a single leg and being in the "Wait for instructions" FSM for CS state, accepts an EstablishTemporaryConnection invoke component received from the SCF (does not send a returnError component), when the **assistingSSPIPRoutingAddress**, **correlationID** and **scfID** parameters are contained in the component and have valid values, but the **partyToConnect** parameter is not contained in the received component. Verify also that a SetupReq is sent from SigCon C.
Requirement ref	**Part 1.2**: 8.2.1.2, 8.2.2.4, 8.2.2.7, 11.18.1, 11.19.1, 11.22 **Part 1.3**: 7.2.2, 7.3.1.1, 7.3.5
Selection Cond.	InitiatingBAssist
Preamble:	PRE_WFI
Test description	L1!EstablishTemporaryConnection(assistingSSPIPRoutingAddress, correlationID, scfID, no partyToConnect)
Pass criteria	CP1_3?SetupReq
Postamble:	DisconnectForwardReleaseAC

	IN3_A_SRF_EC_BV_02
Work item no.:	ITEM_SRF_60
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, handling a single-CS CSA in the "Stable_2_Party (S2P) CSCV state and in the "Monitoring" FSM for CS state, accepts an EstablishTemporaryConnection invoke component received from the SCF (does not send a returnError component), when the **assistingSSPIPRoutingAddress**, **correlationID** and **scfID** parameters are contained in the component and have valid values, but the **partyToConnect** parameter is not contained in the received component. Verify also that a SetupReq is sent from SigCon C.
Requirement ref	**Part 1.2**: 8.2.1.2, 8.2.2.4, 8.2.2.7, 11.18.1, 11.19.1, 11.22 **Part 1.3**: 7.2.2, 7.3.1.1, 7.3.5
Selection Cond.	InitiatingBAssist
Preamble:	PRE_S2P_MON
Test description	L1!EstablishTemporaryConnection(assistingSSPIPRoutingAddress, correlationID, scfID, no partyToConnect)
Pass criteria	CP1_3?SetupReq
Postamble:	DisconnectForwardReleaseABC

	IN3_A_SRF_EC_BV_03
Work item no.:	ITEM_SRF_61
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, handling a two-CS CSA in the "Stable_1_Party (S1P) and "1_Party" CSCV states respectively and being in the "Monitoring" FSM for CS state for CS1, accepts an EstablishTemporaryConnection invoke component received from the SCF (does not send a returnError component), when the **assistingSSPIPRoutingAddress**, **correlationID** and **scfID** parameters are contained in the component and have valid values, and the **partyToConnect** parameter value is "legID 2". Verify also that a SetupReq is sent from SigCon C.
Requirement ref	**Part 1.2**: 8.2.1.2, 8.2.2.4, 8.2.2.7, 11.18.1, 11.19.1, 11.22 **Part 1.3**: 7.2.2, 7.3.1.1, 7.3.5

Preamble:	PRE_S1P_1P_MON
Test description	SCF sends to IUT an **EstablishTemporaryConnection** invoke component with valid parameter values for the **assistingSSPIPRoutingAddress**, correlationID and scfID parameters, but without parameter partyToConnect.
Pass criteria	L1!EstablishTemporaryConnection returnError(unexpectedComponentSequence)
Postamble:	ReleaseAB

6.6.3.2 Disconnect procedures

This group of TPs is selected/deselected by selection expression InitiatingAEtcSRF.

6.6.3.2.1 DisconnectForwardConnection (DF) procedure (without argument)

	IN3_A_SRF_DF_BV_05
Work item no.:	ITEM_SRF_147
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a temporary connection related to a single-CS CSA with a single leg and being in the "Waiting for End of Temporary Connection" FSM for CS state, accepts an **DisconnectForwardConnection** invoke component received from the SCF (does not send a returnError component).
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.2, 8.4.3, 11.18 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.18.1, 9.18.3.1, 9.8, 13.1.1
Selection Cond.	
Preamble:	PRE_WFI
Test description	L1!EstablishTemporaryConnection(valid assistingSSPIPRoutingAddress, correlationID, scfID, partyToConnect (if applicable)) Wait L1!**DisconnectForwardConnection** invoke
Pass criteria	No **DisconnectForwardConnection** returnError received (during some wait-time)
Postamble:	ReleaseA

	IN3_A_SRF_DF_BV_06
Work item no.:	ITEM_SRF_148
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a temporary connection related to a single-CS CSA in the "Stable_2_Party" (S2P) CSCV state and being in the "Waiting for End of Temporary Connection (MON)" FSM for CS state, accepts an **DisconnectForwardConnection** invoke component received from the SCF (does not send a returnError component).
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.2, 8.4.3, 11.18 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.18.1, 9.18.3.1, 9.8, 13.1.1
Selection Cond.	
Preamble:	PRE_S2P_MON
Test description	L1!EstablishTemporaryConnection(valid assistingSSPIPRoutingAddress, correlationID, scfID, partyToConnect (if applicable)) Wait L1!**DisconnectForwardConnection** invoke
Pass criteria	No **DisconnectForwardConnection** returnError received (during some wait-time)
Postamble:	ReleaseAB

	IN3_A_SRF_DF_BO_05
Work item no.:	ITEM_SRF_149
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, operating a single-CS CSA in the "Originating_Setup" (OS) CSCV state and being in the "Wait for Instructions" FSM for CS state (not having established a temporary connection), sends a **DisconnectForwardConnection** returnError component indicating errorCode "unexpectedComponentSequence", after having received an **DisconnectForwardConnection** invoke component.
Requirement ref	**Part 1.2**: 8.2.1.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.3, 11.18
Selection Cond.	
Preamble:	PRE_WFI
Test description	L1!**DisconnectForwardConnection** invoke
Pass criteria	L1?**DisconnectForwardConnection** returnError(UnexpectedComponentSequence)
Postamble:	ReleaseA

	IN3_A_SRF_DF_BO_06
Work item no.:	ITEM_SRF_150
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, operating a single-CS CSA in the "Stable_2_Party (S2P) CSCV state and being in the "Monitoring" FSM for CS state (not having established a temporary connection), sends a **DisconnectForwardConnection** returnError component indicating errorCode "unexpectedComponentSequence", after having received an **DisconnectForwardConnection** invoke component.
Requirement ref	**Part 1.2**: 8.2.1.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.3, 11.18
Selection Cond.	
Preamble:	PRE_S2P_MON
Test description	L1!**DisconnectForwardConnection** invoke
Pass criteria	L1?**DisconnectForwardConnection** returnError(UnexpectedComponentSequence)
Postamble:	ReleaseAB

6.6.3.2.2 DisconnectForwardConnectionWithArgument (DW) procedure

	IN3_A_SRF_DW_BV_05
Work item no.:	ITEM_SRF_151
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a temporary connection related to a single-CS CSA with a single leg and being in the "Waiting for End of Temporary Connection" FSM for CS state, does not send a **DisconnectForwardConnectionWithArgument** returnError component when having received from the SCF a **DisconnectForwardConnectionWithArgument** invoke component, indicating **partyToDisconnect** "legID 1".
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.2, 8.4.3, 11.18 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.18.1, 9.18.3.1, 9.8, 13.1.1
Selection Cond.	
Preamble:	PRE_WFI
Test description	L1!EstablishTemporaryConnection(valid assistingSSPIPRoutingAddress, correlationID, scfID, partyToConnect: legID 1) Wait L1!**DisconnectForwardConnectionWithArgument** invoke(partyToDisconnect "legID 1")
Pass criteria	No **DisconnectForwardConnectionWithArgument** returnError component received (during some wait-time)
Postamble:	ReleaseA

	IN3_A_SRF_DW_BV_06
Work item no.:	ITEM_SRF_152
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a temporary connection related to a two-CS CSA in the "Stable_1_Party" (S1P) and "1_Party" (1P) CSCV states respectively and being in the "Waiting for End of Temporary Connection (MON)" FSM for CS state for CS 2, does not send a **DisconnectForwardConnectionWithArgument** returnError component when having received from the SCF a **DisconnectForwardConnectionWithArgument** invoke component, indicating partyToDisconnect "csID 2".
Requirement ref	**Part 1.2**: 8.2, 8.2.1.2, 8.2.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.2, 8.4.3, 11.18 **Part 1.3**: 7.2, 7.2.1, 7.2.2, 7.2.3, 8.2.2, 9.18.1, 9.18.3.1, 9.8, 13.1.1
Selection Cond.	
Preamble:	PRE_S1P_1P_MON
Test description	L1!EstablishTemporaryConnection(valid assistingSSPIPRoutingAddress, correlationID, scfID, partyToConnect: "csID 2") Wait L1!**DisconnectForwardConnectionWithArgument** invoke (partyToDisconnect "csID 2")
Pass criteria	No **DisconnectForwardConnectionWithArgument** returnError component received (during some wait-time)
Postamble:	ReleaseAB

	IN3_A_SRF_DW_BI_07
Work item no.:	ITEM_SRF_153
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a temporary connection related to a single-CS CSA with a single leg and being in the "Waiting for End of Temporary Connection" FSM for CS state, sends a **DisconnectForwardConnectionWithArgument** returnError component indicating errorCode "missingParameter", after having received an **DisconnectForwardConnectionWithArgument** invoke component without partyToDisconnect parameter.
Requirement ref	**Part 1.2**: 8.2.1.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.3, 11.18
Selection Cond.	
Preamble:	PRE_WFI
Test description	L1!EstablishTemporaryConnection(valid assistingSSPIPRoutingAddress, correlationID, scfID, partyToConnect: legID 1) Wait L1!**DisconnectForwardConnectionWithArgument** invoke(no partyToDisconnect parameter)
Pass criteria	L1?**DisconnectForwardConnectionWithArgument** returnError(missingParameter)
Postamble:	DisconnectFWAReleaseA(legID 1)

	IN3_A_SRF_DW_BI_08
Work item no.:	ITEM_SRF_154
IN2 Ref(tmp)	None
Purpose:	Verify that the SSF, having established a temporary connection related to a two-CS CSA in the "Stable_1_Party (S2P) and "1_Party" CSCV states respectively and being in the "Waiting for End of Temporary Connection" FSM for CS state related to CS1, sends a **DisconnectForwardConnectionWithArgument** returnError component indicating errorCode "unknownLegID", after having received an **DisconnectForwardConnectionWithArgument** invoke component with partyToDisconnect parameter value indicating "legID 3" (invalid).
Requirement ref	**Part 1.2**: 8.2.1.2, 8.2.2.3, 8.2.2.4, 8.2.2.6, 8.2.2.7, 8.3.3, 8.4.3, 11.18

Annex A (normative): Parameter values used in MSCs for CORE INAP CS3 - SRF primitives

Table A.1 is an abstract from the PIXIT for CORE INAP CS3, showing the values of the parameters of CORE INAP primitives used to design the MSCs.

Table A.1

Item	Parameter	Parameter type	Explanation/Format	Value
	PIX_AChBillingChargingCharacteristics	AChBillingCharging Characteristics	"xx"H	44
	PIX_AlertingPattern	AlertingPattern	"xxx"H	123
	PIX_AlertingPattern_ICA	AlertingPattern	"xxx"H	124
	PIX_APtyAbandonCause	Cause	"xx"H	0F
	PIX_APtyDiscCause	Cause	"xx"H	10
	PIX_AssistingSSPIRoutingAddress	AssistingSSPIRouting Address	"xxxx"H	7755
	PIX_BPtyBusy_UDUBCause	Cause	"xx"H	0D
