| Note 1: Ack-Nack Power Offset is the difference in the desired RX power between HS-SICH transmissions conveying an acknowledgement and transmissions conveying a negative acknowledgement signalled to the UE in IE "HS-SCCH Info".<br>Note 2: The list of HS-SCCH(s) is assumed to be indexed starting from one. | | | | | |

| Condition | Explanation |
|---|---|
| *UE* | This IE is mandatory present when the value of the IE "Midamble Allocation Mode" is "UE specific midamble" and not needed otherwise. |
| *NoDPCH_EAGCH* | This IE is mandatory present when neither DPCH nor E-AGCH is configured and not needed otherwise. |

## 10.3.6.36ab HS-SCCH less information

NOTE: For FDD only

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *HS-SCCH less operation* | MP | | | | REL-7 |
| >Continue HS-SCCH less operation | | | (no data) | | REL-7 |
| >New HS-SCCH less operation | | | | | REL-7 |
| >>HS-PDSCH Code Index | MP | | Integer (1..15) | Index of first HS-PDSCH code | REL-7 |
| >>Transport Block Size List | | 1..< maxHS-SCCHLessTrBlk > | | | REL-7 |
| >>>Transport Block Size Index | MP | | Integer (1..90) | Index of the MAC-hs or MAC-ehs transport block size as described in appendix A of [15] | REL-7 |
| >>>HS-PDSCH Second Code Support | MP | | Boolean | Indicates whether the second HS-PDSCH code is used for this TB size. If TRUE, the HS-PDSCH second code index value is the value of IE “HS-PDSCH Code Index” incremented by 1. | REL-7 |

## 10.3.6.36b HS-SICH Power Control Info

This IE is used to transfer HS-SICH power control info to the UE and only applies to TDD 3.84 Mcps and 7.68 Mcps.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UL target SIR | MP | | Real (-11..20 by step of 0.5 ) | dB | REL-5 |
| HS-SICH Constant value | MP | | Constant value 10.3.6.11 | NOTE 1 | REL-5 |

NOTE 1: Alignment to ASN.1: the IE "Constant value TDD" (10.3.6.11a) should have been used to provide the correct value range. The IE "Constant value" (10.3.6.11) is used to keep compatibility with REL-5.

## 10.3.6.36c HS-DSCH common system information

NOTE: For FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CCCH mapping info | MP | | Common RB mapping info 10.3.4.oa | | REL-7 |
| SRB1 mapping info | MD | | Common RB mapping info 10.3.4.oa | Note | REL-7 |
| Common MAC-ehs reordering queue list | MP | | Common MAC-ehs reordering queue list 10.3.5.3a | | REL-7 |
| HS-SCCH system info | MP | | HS-SCCH system info 10.3.6.36e | | REL-7 |
| HARQ system Info | MP | | HARQ Info 10.3.5.7a | | REL-7 |
| Common H-RNTI Information | MP | 1 to <maxCommonHRNTI> | | | REL-7 |
| >Common H-RNTI | MP | | H-RNTI 10.3.3.14a | | REL-7 |
| BCCH specific H-RNTI | MP | | H-RNTI 10.3.3.14a | | REL-7 |

NOTE: The default values for the "SRB1 mapping info" are 1 for the Logical channel identity and 0 for the MAC-ehs queue identity.

## 10.3.6.36ca HS-DSCH common system information 1.28Mcps TDD

NOTE: For 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CCCH mapping info | MP | | Common RB mapping info 10.3.4.oa | | REL-8 |
| SRB1 mapping info | MD | | Common RB mapping info 10.3.4.oa | Note 1 | REL-8 |
| Common MAC-ehs reordering queue list | MP | | Common MAC-ehs reordering queue list 10.3.5.3a | | REL-8 |
| HS-SCCH system info | MP | | HS-SCCH system info 1.28Mcps TDD 10.3.6.36ea | Note 2 | REL-8 |
| HARQ system Info | MP | | HARQ Info 10.3.5.7a | | REL-8 |
| HS-PDSCH Midamble Configuration | MP | | HS-PDSCH Midamble Configuration 10.3.6.36oo | | REL-8 |
| Common H-RNTI Information | MP | 1 to <maxCommonHRNTI> | | | REL-8 |
| >Common H-RNTI | MP | | H-RNTI 10.3.3.14a | | REL-8 |
| BCCH specific H-RNTI | MP | | H-RNTI 10.3.3.14a | | REL-8 |

NOTE 1: The default values for the "SRB1 mapping info" are 1 for the Logical channel identity and 0 for the MAC-ehs queue identity.

NOTE 2: These IEs correspond to the HS-DSCH configuration for CELL_FACH, CELL_PCH state.

## 10.3.6.36d HS-DSCH paging system information

These parameters enable the UE in CELL_PCH and URA_PCH to receive transmissions on HSDPA cell resources.

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| DL Scrambling Code | MD | | Secondary scrambling code 10.3.6.74 | DL Scrambling code to be applied for HS-DSCH and HS-SCCH. Default is same scrambling code as for the primary CPICH. | REL-7 |
| PICH for HSDPA supported paging list | MP | 1 to <maxSCCPCH> | | | REL-7 |

| | | | | | |
|---|---|---|---|---|---|
| >HSDPA associated PICH info | MP | | PICH info 10.3.6.49 | | REL-7 |
| >HS-PDSCH Channelisation Code | MP | | Integer (0..15) | HS-PDSCH channel, associated with the PICH for HS-SCCH less PAGING TYPE 1 message transmission. | REL-7 |
| Number of PCCH transmissions | MP | | Integer (1..5) | number of subframes used to transmit the PAGING TYPE 1. | REL-7 |
| Transport Block Size List | MP | 1 to 2 | | | REL-7 |
| >Transport Block Size Index | MP | | Integer (1..32) | Index of value range 1 to 32 of the MAC-ehs transport block size as described in appendix A of [15] | REL-7 |

## 10.3.6.36da HS-DSCH paging system information 1.28Mcps TDD

These parameters enable the UE in CELL_PCH and URA_PCH to receive PCCH, DCCH/DTCH transmissions on HSDPA cell resources.

NOTE: Only for 1.28 Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| PICH for HS-DSCH list | MP | 1 to <maxSCCPCH> | | | REL-8 |
| >CHOICE Configuration Mode | MP | | | | REL-8 |
| >>Implicit | | | | The choice Indicates the PICH is shared with PCH. | REL-8 |
| >>>Occurrence sequence number in S-CCPCH system Info | MD | | Integer (1..maxSCCPCH) | Indicates the occurrence sequence number of "PICH Info" in Secondary CCPCH System Information. Default value implies the first occurrence or the only occurrence of "PICH Info" in Secondary CCPCH System Information. | REL-8 |
| >>Explicit | | | | | REL-8 |
| >>>HSDPA associated PICH info | MP | | PICH info 10.3.6.49 | | REL-8 |
| DTCH/DCCH Reception window size | MP | | Integer (1..16) | Number of subframe for UE to detect the HS-SCCH | REL-8 |
| PCCH related information | OP | | | See Note 1 | REL-8 |
| >Paging associated HS-PDSCH info | MP | 1 to <maxSCCPCH> | | See Note 3 | REL-8 |
| >>HS-PDSCH Midamble Configuration | MP | | HS-PDSCH Midamble Configuration 10.3.6.36oo | | REL-8 |
| >>Timeslot Resource Related InformationI | MP | | Bit string (6) | Each bit indicates availability of a timeslot, where the bit 0 corresponds to TS0, the bit 1 is TS2, the bit 2 is TS3… bit 6 corresponds to TS6. The value 1 of a bit indicates that the corresponding timeslot is available. Bit 0 is the first/leftmost bit of the bit string. | REL-8 |
| >>Code Resource Information | MP | | | Note 2 | REL-8 |
| >>>Start code | MP | | Enumerated((16/1)..(16/16)) | | REL-8 |
| >>>Stop code | MP | | Enumerated((16/1)..(16/16)) | | REL-8 |
| >Paging Sub-Channel Size | MP | | Integer (1..3) | number of frames for a Paging sub- | REL-8 |

| | | | | | |
|---|---|---|---|---|---|
| | | | | channel | |
| >Transport Block Size List | MP | 1 to 2 | | | REL-8 |
| >>Transport Block Size Index | MP | | Integer (1..32) | Index of value range 1 to 32 of the MAC-ehs transport block size as described in Table 9.2.3.3.8 [15] | REL-8 |

NOTE 1: The IE is not signalled when the "PICH info" is present in "Secondary CCPCH system information" in SIB5 and SIB6.

NOTE 2: HS-PDSCH channelisation codes are allocated contiguously from a signalled start code to a signalled stop code, and the allocation includes both the start and stop code. If a value of Start code = 16 and Stop code = 1 is signalled, a spreading factor of SF=1 shall be used for the HS-PDSCH resources.

NOTE 3: The timing between PICH and the paging associated HS-PDSCH is specified in [30]. UE should receives the HS-PDSCH based on the timing specification.

## 10.3.6.36e HS-SCCH system info

These parameters enable the UE to receive transmission on HSDPA cell resources, when the UE is not in CELL_DCH.

NOTE: for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| DL Scrambling Code | MD | | Secondary scrambling code 10.3.6.74 | DL Scrambling code to be applied for HS-DSCH and HS-SCCH. Default is same scrambling code as for the primary CPICH. | REL-7 |
| HS-SCCH Channelisation Code Information | MP | 1 to <maxHSSCCHs> | | | REL-7 |
| >HS-SCCH Channelisation Code | MP | | Integer (0..127) (NOTE) | | REL-7 |

NOTE: UTRAN should use the first indexed HS-SCCH Channelisation code for the BCCH specific H-RNTI to indicate system information change information. Otherwise UE behaviour is unspecified.

## 10.3.6.36ea HS-SCCH system info 1.28Mcps TDD

These parameters enable the UE to receive transmission on HSDPA cell resources on primary frequency or secondary frequency, when the UE is not in CELL_DCH.

NOTE: for 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS-SCCH Set Configuration | MP | 1 to <maxHSSCCHs> | | | REL-8 |

| TPC step size | MP | | Enumerated (1, 2, 3) | dB. TPC step size for HS-SICH. One spare value. | REL-8 |
| BLER target | MP | | Real (-3.15..0 by step of 0.05) | Signalled value is Log10(HS-SCCH BLER quality target). | REL-8 |
| Power Control GAP | MD | | Integer (1…255) | Unit: Number of subframes Default value is 1. | REL-8 |
| Pathloss compensation switch | MD | | Boolean | TRUE: UE shall perform the pathloss compensation for HS-SICH power control when HS-SICH | REL-8 |

| | | | | | |
|---|---|---|---|---|---|
| | | | | transmission gap is less than "Power Control GAP".<br>FALSE: UE shall not consider the pathloss compensation for HS-SICH power control.<br>Default value is FALSE. | |

| Condition | Explanation |
|---|---|
| *UE* | This IE is mandatory present when the value of the IE "Midamble Allocation Mode" is "UE specific midamble" and not needed otherwise. |

NOTE: UTRAN should use the first indexed HS-SCCH Channelisation code for the BCCH specific H-RNTI to indicate system information change information on primary frequency or secondary frequency. Otherwise UE behaviour is unspecified.

## 10.3.6.36f Void

## 10.3.6.36g HS-DSCH DRX in CELL_FACH information

These parameters configure the UE in CELL_FACH state to discontinuously receive HS-DSCH.

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| T321 | MP | | Enumerated (100, 200, 400, 800) | Determines the time the UE waits until initiating DRX operation, in ms. | REL-8 |
| HS-DSCH DRX $cycle_{FACH}$ | MP | | Enumerated (4, 8, 16, 32) | Determines the length of the DRX Cycle during DRX operation, in frames | REL-8 |
| HS-DSCH Rx $burst_{FACH}$ | MP | | Enumerated (1, 2, 4, 8, 16) | Determines the period within the DRX Cycle that the UE continuously receives HS-DSCH, in frames. Three spare values are needed | REL-8 |
| DRX Interruption by HS-DSCH data | MP | | Boolean | TRUE means that the DRX operation can be interrupted by HS-DSCH data.<br>FALSE means that the DRX operation cannot be interrupted by HS-DSCH data | REL-8 |

## 10.3.6.36h HS-DSCH DRX in CELL_FACH information 1.28Mcps TDD

These parameters configure the UE in CELL_FACH state to discontinuously receive HS-DSCH.

NOTE: Only for 1.28 Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| T321 | MP | | Enumerated (100, 200, 400, 800) | Determines the time the UE waits until initiating DRX operation, in ms. | REL-8 |
| DRX $cycle_{FACH}$ | MP | | Enumerated (4, 8, 16, 32) | Determines the length of the DRX Cycle during DRX operation, in frames | REL-8 |
| Rx $burst_{FACH}$ | MP | | Enumerated (1, 2, 4, 8, 16) | Determines the period within the DRX Cycle that the UE continuously receives HS-DSCH, in frames. Three spare values are needed | REL-8 |

## 10.3.6.37 Individual timeslot info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Timeslot number | MP | | Timeslot number | Timeslot within a frame | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | 10.3.6.84 | | |
| TFCI existence | MP | | Boolean | TRUE indicates that the TFCI exists. It shall be coded in the physical channel defined in [30] of this timeslot. | |
| Midamble Shift and burst type | MP | | Midamble shift and burst type 10.3.6.41 | For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, the UE shall ignore the contents of this IE. | |
| CHOICE *TDD option* | MP | | | | REL-4 |
| >3.84 Mcps TDD | | | | (no data) | REL-4 |
| >7.68 Mcps TDD | | | | (no data) | REL-7 |
| >1.28 Mcps TDD | | | | | REL-4 |
| >>Modulation | MP | | Enumerated( QPSK, 8PSK) | | REL-4 |
| >>SS-TPC Symbols | MP | | Enumerated( 0, 1, 16/SF) | Denotes amount of SS and TPC bits send in this timeslot | REL-4 |
| >>Additional TPC-SS Symbols | OP | | Integer(1..15 ) | Specifies the number of additional codes in this timeslot that carry TPC and SS symbols as specified in [33] | REL-4 |

## 10.3.6.38 Individual Timeslot interference

Parameters used by the UE for uplink open loop power control in TDD.

| Information element | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Timeslot number | MP | | Timeslot number 10.3.6.84 | |
| UL Timeslot Interference | MP | | UL Interference TDD 10.3.6.87a | |

## 10.3.6.39 Maximum allowed UL TX power

This information element indicates the maximum allowed uplink transmit power.

| Information Element | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Maximum allowed UL TX power | MP | | Integer(-50..33) | In dBm |

### 10.3.6.39a Multi-frequency Info (1.28 Mcps TDD only)

| IE/Group Name | Presence | Multi | IE Type and Reference | Semantics Description | Version |
|---|---|---|---|---|---|
| Second Frequency Info | OP | | Integer (0 .. 16383) | 1.28 Mcps TDD only | REL-7 |
| FPACH Frequency Info | OP | | Integer (0 .. 16383) | 1.28 Mcps TDD only | REL-7 |
| UpPCH Position Info | OP | | Integer (0 .. 127) | Only for 1.28 Mcps TDD, if UpPCH occupies UpPTS, the parameter is not needed. Or the parameter is calculated for the uplink access position of a cell | REL-7 |

### 10.3.6.40 Void

### 10.3.6.40a Measurement Feedback Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *mode* | MP | | | | REL-5 |
| >FDD | | | | | REL-5 |
| >>Measurement Power Offset | MP | | Real (-6 .. 13 by step of 0.5) | The measurement power offset, $\Gamma$, in dB, as described in [29]. | REL-5 |
| >>CQI Feedback cycle, k | MP | | Integer (0, 2, 4, 8, 10, 20, 40, 80, 160, | In milliseconds. | REL-5 |
| | | | 16, 32, 64) | In milliseconds. | REL-7 |
| >>CQI repetition factor | MP | | Integer (1..4) | | REL-5 |
| >>$\Delta_{CQI}$ | MP | | Integer (0..8) | Refer to quantization of the power offset in [28] | REL-5 |
| >TDD | | | | (no data) | REL-5 |

### 10.3.6.41 Midamble shift and burst type

NOTE: Only for TDD.

This information element indicates burst type and midamble allocation. Three different midamble allocation schemes exist:

- Default midamble: the midamble shift is selected by layer 1 depending on the associated channelisation code (DL and UL)
- Common midamble: the midamble shift is chosen by layer 1 depending on the number of channelisation codes (possible in DL only)
- UE specific midamble: a UE specific midamble is explicitly assigned (DL and UL).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *TDD option* | MP | | | | REL-4 |

### 10.3.6.53 PRACH partitioning

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Access Service class | MP | 1 to maxASC | | If only "NumASC+1" (with, NumASC+1 < maxASC) ASCs are listed, the remaining (NumASC+2 through maxASC) ASCs are unspecified. |
| >ASC Setting | MD | | ASC setting 10.3.6.6 | The default values are same as the previous ASC.<br>If the "default" is used for the first ASC, the default values are all available signatures and "all available sub-channels" for FDD and "all available channelisation codes" and "all available subchannels" with "subchannel size=Size 1" in TDD. |

### 10.3.6.54 PRACH power offset

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Power Ramp Step | MP | | Integer (1..8) | Power step when no acquisition indicator is received in dB |
| Preamble Retrans Max | MP | | Integer (1..64) | Maximum number of preambles in one preamble ramping cycle |

### 10.3.6.54a PRACH preamble control parameters (for Enhanced Uplink)

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|

| | | | | | |
|---|---|---|---|---|---|
| Available Signature | MD | | Bit string(16) | The default value is the inverse of the bitstring indicated in the IE "Available Signature" in the IE "PRACH Info (for RACH)" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis.<br>Each bit indicates availability for a signature.<br>Each available signature on the AICH is associated with one Common E-DCH Resource Configuration in the “Common E-DCH resource configuration information list”. | REL-8 |
| E-AI Indication | MP | | BOOLEAN | TRUE: E-AIs are in use on the AICH.<br>FALSE: E-AIs are not in use on the AICH. | REL-8 |
| Preamble scrambling code number | MD | | Integer (0 .. 15) | The default value is the value indicated in the IE "Preamble scrambling code number" in the IE "PRACH Info (for RACH)" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis.<br>Identification of scrambling code, see [28] | REL-8 |
| Available Sub Channel Number | MD | | Bit string(12) | The default value is the same value indicated in the IE "Available Sub Channel Number" in the IE "PRACH system information list" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis.<br>Each bit indicates availability for a subchannel, where the subchannels are numbered "subchannel 0" to "subchannel 11". The value 1 of a bit indicates that the corresponding subchannel is available and the value 0 indicates that it is not available. | REL-8 |

| | | | | | |
|---|---|---|---|---|---|
| PRACH partitioning | MD | | PRACH partitioning 10.3.6.53 | Default value is the value of "PRACH partitioning" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis. | REL-8 |
| Persistence scaling factors | OP | | Persistence scaling factors 10.3.6.48 | This IE shall not be present if only ASC 0 and ASC 1 are defined. If this IE is absent, default value is the value of "Persistence scaling factors" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis, if value exists | REL-8 |
| AC-to-ASC mapping | MD | | AC-to-ASC mapping 10.3.6.1 | Default value is the value of "AC-to-ASC mapping" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis. | REL-8 |
| Primary CPICH TX power | MD | | Primary CPICH TX power 10.3.6.61 | Default value is the value of "Primary CPICH TX power" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis. | REL-8 |
| Constant value | MD | | Constant value 10.3.6.11 | Default value is the value of "Constant value" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis | REL-8 |
| PRACH power offset | MD | | PRACH power offset 10.3.6.54 | Default value is the value of "PRACH power offset" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis | REL-8 |
| PRACH transmission parameters | MD | | RACH transmission parameters 10.3.6.67 | Default value is the value of "RACH transmission parameters" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis. | REL-8 |
| AICH info | MD | | AICH info 10.3.6.2 | Default value is the value of "AICH info" in the first occurrence in list “PRACH system information list” in SIB5 or SIB5bis. | REL-8 |
| Power offset $P_{p\text{-}e}$ | MP | | Integer(-5..10) | In dB. Power offset between the last transmitted preamble and the initial DPCCH transmission as defined in [26] | REL-8 |

## 10.3.6.55 PRACH system information list

| Information element | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| PRACH system information | MP | 1 .. <maxPRACH> | | | |
| >PRACH info | MP | | PRACH info (for RACH) 10.3.6.52 | | |
| >Transport channel identity | MP | | Transport channel identity 10.3.5.18 | | |
| >RACH TFS | MD | | Transport format set 10.3.5.23 | Default value is the value of "RACH TFS" for the previous PRACH in the list<br>NOTE: The first occurrence is then MP).<br>NOTE: For TDD in this release there is a single TF within the RACH TFS. | |
| >Additional RACH TFS for CCCH | OP | | Additional Dynamic Transport Format Information for CCCH 10.3.5.2a | FDD only | REL-6 |
| >RACH TFCS | MD | | Transport Format Combination Set 10.3.5.20 | Default value is the value of "RACH TFCS" for the previous PRACH in the list.<br>NOTE: The first occurrence is then MP).<br>NOTE: For TDD in this release there is no TFCS required. | |
| >Additional RACH TFCS for CCCH | CV-*Add-RACH-TFS* | | Additional RACH TFCS for CCCH 10.3.5.2b | | REL-6 |
| >PRACH partitioning | MD | | PRACH partitioning 10.3.6.53 | Default value is the value of "PRACH partitioning" for the previous PRACH in the list (note : the first occurrence is then MP) | |
| >Persistence scaling factors | OP | | Persistence scaling factors 10.3.6.48 | This IE shall not be present if only ASC 0 and ASC 1 are defined. If this IE is absent, value is the value of "Persistence scaling factors" for the previous PRACH in the list if value exists | |
| >AC-to-ASC mapping | CV-*SIB5-MD* | | AC-to-ASC mapping 10.3.6.1 | Only present in SIB 5 and in SIB 5bis.<br>Default value is the value of "AC-to-ASC mapping" for the previous PRACH in the list.<br>NOTE: The first occurrence is then MP in SIB5 and in SIB5bis. | |
| >CHOICE *mode* | MP | | | | |
| >>FDD | | | | | |
| >>>Primary CPICH TX power | MD | | Primary | Default value is the value of | |

| Information element | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | CPICH TX power 10.3.6.61 | "Primary CPICH TX power" for the previous PRACH in the list. NOTE: The first occurrence is then MP. | |
| >>>Constant value | MD | | Constant value 10.3.6.11 | Default value is the value of "Constant value" for the previous PRACH in the list. NOTE: The first occurrence is then MP. | |
| >>>PRACH power offset | MD | | PRACH power offset 10.3.6.54 | Default value is the value of "PRACH power offset" for the previous PRACH in the list. NOTE: The first occurrence is then MP. | |
| >>>RACH transmission parameters | MD | | RACH transmission parameters 10.3.6.67 | Default value is the value of "RACH transmission parameters" for the previous PRACH in the list. NOTE: The first occurrence is then MP. | |
| >>>AICH info | MD | | AICH info 10.3.6.2 | Default value is the value of "AICH info" for the previous PRACH in the list. NOTE: The first occurrence is then MP. | |
| >>TDD | | | | (no data) | |

| Condition | Explanation |
|---|---|
| *SIB5-MD* | The information element is present only in SIB 5 and in SIB5bis. In SIB 5 and in SIB 5bis it is mandatory with default. |
| *Add-RACH-TFS* | The information element is MP if the IE "Additional RACH TFS for CCCH" is included. Otherwise the information element is not needed. |

NOTE: If the setting of the PRACH information results in that a combination of a signature, preamble scrambling code and subchannel corresponds to a RACH with different TFS and/or TFCS, then for that combination only the TFS/TFCS of the PRACH listed first is valid, where PRACHs listed in System Information Block type 5 or 5bis shall be counted first.

## 10.3.6.56 Predefined PhyCH configuration

This information element concerns a pre- defined configuration of physical channel parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |

|---|---|---|---|---|---|
| CHOICE *Configuration info* | MP | | | | REL-9 |
| >Continue | | | (no data) | (no data)Used in reconfigurations without interruption of dual cell operation with MIMO. | REL-9 |
| >New configuration | | | | | REL-9 |
| >> MIMO N_cqi_typeA/M_cqi ratio | OP | | Enumerated( 1/2, 2/3, 3/4, 4/5, 5/6, 6/7, 7/8, 8/9, 9/10, 1/1) | | REL-9 |
| >>MIMO pilot configuration | OP | | MIMO pilot configuration 10.3.6.41b | | REL-9 |
| >>Precoding weight set restriction | OP | | Enumerated (TRUE) | If present, the UE applies precoding weight set restriction to this secondary cell. | REL-9 |

## 10.3.6.73 Secondary CPICH info

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Secondary scrambling code | MD | | Secondary scrambling code 10.3.6.74 | Default is the same scrambling code as for the Primary CPICH |
| Channelisation code | MP | | Integer(0..255) | SF=256 |

## 10.3.6.74 Secondary scrambling code

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Secondary scrambling code | MP | | Integer(1..15) | |

## 10.3.6.74a Serving HS-DSCH cell information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| $\Delta_{ACK}$ | OP | | Integer(0..8) | Refer to quantization of the power offset in [28] | REL-6 |
| $\Delta_{NACK}$ | OP | | Integer(0..8) | Refer to quantization of the power offset in [28] | REL-6 |
| HARQ_preamble_mode | MP | | Integer(0, 1) | 1 indicates that preamble and postamble are used on the HS-DPCCH – see [29] | REL-6 |
| Primary CPICH info | OP | | Primary CPICH info 10.3.6.60 | Indicate the new HS-DSCH serving cell | REL-6 |
| Downlink HS-PDSCH Information | OP | | Downlink HS_PDSCH Information 10.3.6.23a | | REL-6 |
| HARQ Info | OP | | HARQ info 10.3.5.7a | | REL-6 |
| MAC-hs reset indicator | OP | | Enumerated (TRUE) | TRUE Indicates the MAC-hs/ehs entity needs to be reset. | REL-6 |

## 10.3.6.74b Serving Cell Change Parameters

The IE "Serving Cell Change Parameters" is used prepare the UE for enhanced serving cell change.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Serving Cell Change MAC reset | MP | | Boolean | TRUE means the MAC-hs/ehs entity needs to be reset, FALSE means TPC combination Index is used to determine if MAC-hs/ehs reset is needed, 8.2.2.3 | REL-8 |
| Serving Cell Change Message Type | MP | | Enumerated (RadioBearerSetup, RadioBearerReconfiguration, TransportChannelReconfiguration, PhysicalChannelReconfiguration) | The reconfiguration procedure configuration used for Target cell preconfiguration, 8.2.2.4 | REL-8 |
| Serving Cell Change Transaction Id | MP | | Integer (0..3) | Transaction Id that shall be used as the RRC Transaction Identifier with the corresponding response message configured by the IE "Serving Cell Change Message Type" | REL-8 |

### 10.3.6.75 SFN Time info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Activation time SFN | MP | | Integer (0..4095) | System frame number start of the physical channel existence. |
| Duration | MP | | Integer(1..4096) | Total number of frames the physical channel will exist. |

### 10.3.6.75a Special Burst Scheduling

NOTE: Only for TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Special Burst Generation Period | MP | | Integer (0..7) | Value represents number of radio frames<br>0 = 2 frames, 1 = 4 frames,<br>2 = 8 frames, 3 = 16 frames,<br>4 = 32 frames, 5 = 64 frames,<br>6 = 128 frames, 7 =256 frames |

### 10.3.6.76 Void

### 10.3.6.77 Void

## 10.3.6.78 STTD indicator

NOTE: Only for FDD

Indicates whether STTD is used or not.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| STTD Indicator | MP | | Boolean | TRUE means that STTD is used |

## 10.3.6.78o SYNC_UL codes bitmap

NOTE: Only for 1.28 Mcps TDD.

| Information Element/ Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| SYNC_UL codes bitmap | MP | | Bitstring(8) | Each bit indicates availability of a SYNC_UL code, where the SYNC_UL codes are numbered "code 0" to "code 7".<br>The value 1 of a bit indicates that the corresponding SYNC_UL code can be used.<br>The value 0 of a bit indicates that the corresponding SYNC_UL code can not be used. | REL-7 |

## 10.3.6.78a SYNC_UL info

NOTE: Only for 1.28 Mcps TDD.

| Information Element/ Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| SYNC_UL codes bitmap | MP | | SYNC_UL codes bitmap 10.3.6.78o | | REL-4 |
| $PRX_{UpPCHdes}$ | MP | | Integer(-120…-58 by step of 1) | In dBm | REL-4 |
| Power Ramp Step | MP | | Integer(0,1,2,3) | In dB | REL-4 |
| Max SYNC_UL Transmissions | MP | | Integer(1,2,4,8) | Maximum numbers of SYNC_UL transmissions in a power ramping sequence. | REL-4 |
| Mmax | MP | | Integer(1..32) | Maximum number of synchronisation attempts. | REL-4 |

| Information Element/ Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E-RUCCH SYNC_UL codes bitmap | MP | | SYNC_UL codes bitmap 10.3.6.78o | | REL-7 |

## 10.3.6.78b TDD MBSFN Information

NOTE: Only for TDD

This information indicates which timeslots are assigned to TDD MBSFN and the scrambling codes assigned to each timeslot.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Time slot list | MP | 1.. <maxTS> | | | REL-7 |
| >Timeslot Number | MP | | Timeslot Number 10.3.6.84 | | REL-7 |
| >Cell parameters ID | MP | | Cell parameters Id 10.3.6.9 | | REL-7 |

## 10.3.6.78c LCR TDD MBSFN Information

NOTE: Only for 1.28Mcps TDD

This information indicates which timeslots of the secondary frequency of a multi-frequency cell are assigned to 1.28Mcps TDD MBSFN and the scrambling codes related to each timeslot.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Time slot info list | MP | 1 to <maxMBSFNclusters> | | | REL-7 |
| >Frequency index | MP | | Integer (1..<maxMBSFNclusters>) | For 1.28 Mcps TDD index pointing to a frequency indicated in the SIB 11. | REL-7 |
| >Time slot list | MP | 1 to <maxTS> | | | REL-7 |
| >>Timeslot Number | MP | | Timeslot Number 10.3.6.84 | | REL-7 |
| >>Cell parameters ID | MP | | Cell parameters Id 10.3.6.9 | | REL-7 |

## 10.3.6.78d SYNC_UL info for E-RUCCH

NOTE: Only for 1.28 Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| PRXUpPCHdes | CV-*Synchronisation parameters* | | Integer(-120…-58 by step of 1) | In dBm | REL-7 |
| Power Ramp Step | CV-*Synchronisation parameters* | | Integer(0,1,2,3) | In dB | REL-7 |
| Max SYNC_UL Transmissions | CV-*Synchronisation parameters* | | Integer(1,2,4,8) | Maximum numbers of SYNC_UL transmissions in a power ramping sequence. | REL-7 |
| Mmax | MP | | Integer(1..32) | Maximum number of synchronisation attempts. | REL-7 |
| E-RUCCH SYNC_UL codes bitmap | MP | | SYNC_UL codes bitmap 10.3.6.78o | | REL-7 |

| Condition | Explanation |
|---|---|
| *Synchronisation parameters* | This IE is mandatory present if the IE "Synchronisation parameters" does not exist, Otherwise it is not needed. |

## 10.3.6.79 TDD open loop power control

This information element contains parameters for open loop power control setting for TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Primary CCPCH Tx Power | MP | | Primary CCPCH Tx Power 10.3.6.59 | For path loss calculation | |
| CHOICE *TDD option* | MP | | | | REL-4 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >1.28 Mcps TDD | | | | | REL-4 |
| >>Timeslot number | MP | | Integer(0..6) | Timeslot within a subframe | REL-4 |

## 10.3.6.85 TPC combination index

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| TPC combination index | MP | | Integer(0..5) | Radio links with the same index have TPC bits, which for the UE are known to be the same. | |
| | | | | Radio links that are part of the E-DCH active set and with the same index have acknowledgement feedback signals on the E-HICH which for the UE are known to be the same. | REL-6 |

## 10.3.6.85a TSTD indicator

NOTE: Only for 1.28 Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| TSTD indicator | MD | | Boolean | Default value is TRUE | REL-4 |

## 10.3.6.86 TX Diversity Mode

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Tx diversity Mode | MP | | Enumerated (none, STTD, closed loop mode1) | |

## 10.3.6.86o UL 16QAM configuration

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UL 16QAM settings | CV-*2msTTI* | | UL 16QAM settings 10.3.6.86a | Presence of this IE indicates that the UE should operate in 16QAM mode; absence indicates that the UE is not to operate in 16QAM mode. See Note 2. | REL-7 |
| MAC-es/e reset indicator | OP | | Enumerated (TRUE) | TRUE Indicates the MAC-es/e or MAC-i/is entity needs to be reset. | REL-7 |
| E-TFCI table index | OP | | Integer (0..1) | Indicates which standardised E-TFCI TB size table shall be used. See Note 1. | REL-7 |
| NOTE 1: If the UE is operating in 16QAM mode, the value of "E-TFCI table index" is increased by 2, and indices in the SG-Table refer to Scheduling Grant Table 2 in [15]. | | | | | |
| NOTE 2: If this IE is not present, the indices signalled on the E-AGCH refer to the Mapping of Absolute Grant Value Table 16B in [27]. | | | | | |

| Condition | Explanation |
|---|---|
| *2msTTI* | This IE is present only if 2ms TTI is configured, otherwise it is not needed. |

## 10.3.6.86a UL 16QAM settings

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| BetaEd gain E-AGCH table selection | MP | | Integer (0..1) | The value 0 indicates that the indices signalled on the E-AGCH refer to the Mapping of Absolute Grant Value Table 16B in [27], and the value 1 indicates Mapping using Absolute Grant Value Table 16B.1 in [27]. | REL-7 |

## 10.3.6.87 UL interference

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UL interference | MP | | Integer (-110..-70) | In dBm |

NOTE: In TDD, this IE is a timeslot specific value.

## 10.3.6.87a UL interference TDD

NOTE: Only for TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| TDD UL interference | MP | | Integer (-110..-52) | In dBm |

NOTE: This IE is a timeslot specific value.

## 10.3.6.87b Uplink DPCH code info for Common E-DCH

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Scrambling code type | MP | | Enumerated( short, long) | | REL-8 |
| Scrambling code number | CV-Short | | Integer(0..16 777215) | NOTE1 | REL-8 |
| NOTE1: If this IE is not included, the value is given by:<br>Scrambling code number = (offset + common E-DCH resource list position) mod 16777216 where<br>"offset" is the value of the last occurrence of the IE "scrambling code number".<br>"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. | | | | | |

| Condition | Explanation |
|---|---|
| *Short* | This IE is mandatory present for the first occurrence. Otherwise, this IE is optional. |

## 10.3.6.88 Uplink DPCH info

| NOTE 1: If this IE is not present, the indices signalled on the E-AGCH refer to the Mapping of Absolute Grant Value Table 16B in [27]. | | | | | |

## 10.3.6.98 E-DPCCH Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E-DPCCH/DPCCH power offset | MP | | Integer (0..8) | Refer to quantization of the power offset in [28] | REL-6 |
| Happy bit delay condition | MP | | Enumerated (2ms, 10ms,20ms, 50ms, 100ms, 200ms, 500ms, 1000ms) | To be used when determining the setting of the happy bit (see [15]) | REL-6 |
| E-TFC Boost Info | OP | | E-TFC Boost Info 10.3.6.106 | Absence of this IE means that boosting of E-DPCCH is disabled | REL-7 |
| E-DPDCH power interpolation | OP | | Boolean | TRUE means E-DPDCH power interpolation formula is used, FALSE means E-DPDCH power extrapolation formula is used for the computation of the gain factor $\beta_{ed}$ according to [29] | REL-7 |

## 10.3.6.99 E-DPDCH Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E-TFCI table index | MP | | Integer (0..1) | Indicates which standardised E-TFCI TB size table shall be used. See Note 3. | REL-6 |
| E-DCH minimum set E-TFCI | MD | | Integer (0..127) | See [15]; Absence means no E-DCH minimum set | REL-6 |
| Reference E-TFCIs | MP | 1 to 8 | | See [29] | REL-6 |
| >Reference E-TFCI | MP | | Integer (0..127) | | REL-6 |
| >Reference E-TFCI PO | MP | | Integer (0..29, | Refer to quantization of the power offset in [28] | REL-6 |
| | | | 30, 31) | Values 30 and 31 are only used for E-TFCI > ETFCI Boost | REL-7 |
| Minimum reduced E-DPDCH gain factor | OP | | Enumerated (8/15, 11/15, 15/15, 21/15, 30/15, 42/15, 60/15, 84/15) | $\beta_{ed,k,reduced,min}$ [29]; the default value is 8/15. If the configurable reduced E-DPDCH gain factor is not supported by the UE, the default value is used. | REL-8 |

| | | | | | |
|---|---|---|---|---|---|
| Maximum channelisation codes | MP | | Enumerated (sf256, sf128, sf64, sf32, sf16, sf8, sf4, 2sf4, 2sf2, 2sf2and2sf4) | | REL-6 |
| $PL_{non-max}$ | MP | | Real (0.44 ..1.0 by step of 0.04) | As defined in [27] | REL-6 |
| Scheduling Information Configuration | MP | | | | REL-6 |
| >Periodicity for Scheduling Info – no grant | MD | | Enumerated (everyEDCHTTI,4,10,20,50,100,200,500,1000) | Values in ms. Default value is "no report" NOTE 1. | REL-6 |
| >Periodicity for Scheduling Info – grant | MD | | Enumerated (everyEDCHTTI,4,10,20,50,100,200,500,1000) | Values in ms. Default value is "no report" NOTE 1. | REL-6 |
| >Power Offset for Scheduling Info | MP | | Integer (0..6) | Only used when no MACd PDUs are included in the same MAC-e or MAC-i PDU. Unit is in dB. | REL-6 |
| 3-Index-Step Threshold | MD | | Integer (0..37) | Refers to an index in the "SG-Table" (see [15]). Default value is 0. NOTES 2, 3. | REL-6 |
| 2-Index-Step Threshold | MD | | Integer (0..37) | Refers to an index in the "SG-Table" (see [15]). Default value is 0. NOTES 2, 3. | REL-6 |

NOTE 1: If the Periodicity is set to 4ms and the E-DCH TTI is set to 10ms, the UE shall interpret the periodicity value as 10ms.
NOTE 2: If the 3-index-Step Threshold value is greater than 2-index-Step Threshold, the UE behaviour is unspecified.
NOTE 3: If the UE is operating in 16QAM mode, the value of "E-TFCI table index" is increased by 2, and indices in the SG-Table refer to Scheduling Grant Table 2 in [15].

| Primary E-RNTI | OP | | E-RNTI 10.3.3.10a | | REL-9 |
| Secondary E-RNTI | OP | | E-RNTI 10.3.3.10a | | REL-9 |

### 10.3.6.117 Secondary E-DCH info common

NOTE: For FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Frequency info | MP | | Frequency info 10.3.6.36 | | REL-9 |
| Scrambling code type | MP | | Enumerated( short, long) | | REL-9 |
| Scrambling code number | MP | | Integer(0..16 777215) | | REL-9 |
| 2ms scheduled transmission grant HARQ process allocation | MD | | Bitstring (8) | MAC-d PDUs are only allowed to be transmitted in those processes for which the bit is set to "1". Bit 0 corresponds to HARQ process 0, bit 1 corresponds to HARQ process 1,… Default value is: transmission in all HARQ processes is allowed. Bit 0 is the first/leftmost bit of the bit string. | REL-9 |
| Serving Grant | OP | | | | REL-9 |
| >Primary/Secondary Grant Selector | MP | | Enumerated ("primary", "secondary") | Indicates whether the Serving Grant is received with a Primary E-RNTI or Secondary E-RNTI | REL-9 |
| Minimum reduced E-DPDCH gain factor | OP | | Enumerated (8/15, 11/15, 15/15, 21/15, 30/15, 42/15, 60/15, 84/15) | $\beta_{ed,k,reduced,min}$ [29]; the default value is 8/15. If the configurable reduced E-DPDCH gain factor is not supported by the UE, the default value is used. | REL-9 |
| E-DCH minimum set E-TFCI | OP | | Integer (0..127) | See [15]; Absence means no E-DCH minimum set on secondary uplink frequency | REL-9 |
| DPCCH Power offset for secondary UL frequency | MP | | Integer (0..7 by step of 1) | In dB The power offset between the initial DPCCH power level on secondary UL frequency when it is activated and the current DPCCH power level on primary UL frequency. | REL-9 |
| PC Preamble | MP | | Integer (0..7) | In number of frames | REL-9 |

### 10.3.6.118 Downlink information per radio link list on secondary UL frequency

NOTE: For FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Downlink information for each radio link on secondary UL frequency | | 1 to <maxEDCHRL> | | | REL-9 |

## 10.3.6.122 E-RGCH Info for Common E-DCH

Includes the configuration for the E-DCH related Relative Grant Channel to be used with common E-DCH in CELL_FACH and Idle mode. The E-RGCH is using the same channelisation code as configured for the E-HICH channel (see subclause 10.3.6.123).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Signature Sequence | MD | | Integer(0..39) | NOTE1 | REL-8 |
| NOTE1: The default value is defined by:<br>Signature Sequence = (offset + common E-DCH resource list position) mod 40<br>where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero.<br>"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. | | | | | |

### 10.3.6.123 E-HICH Info for Common E-DCH

Includes the configuration for the E-DCH related HARQ Acknowledgement Indicator Channel.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Channelisation Code | CV-Short | | Integer (0..127) | If this IE is not present, the value is equal to the last occurrence of this IE. | REL-8 |
| Signature Sequence | MD | | Integer (0..39) | NOTE1 | REL-8 |
| NOTE1: The default value is defined by:<br>Signature Sequence = (offset + common E-DCH resource list position) mod 40<br>where "offset" is the value of the last occurrence of the IE "Signature Sequence". If "Signature Sequence" is not present in the first occurrence, "offset" is equal to zero.<br>"common E-DCH resource list position" indicates the Common E-DCH resource Configuration Information number by order of appearance. The value of the "common E-DCH resource list position" is zero for the first occurrence. | | | | | |

| Condition | Explanation |
|---|---|
| *Short* | This IE is mandatory present for the first occurrence. Otherwise, this IE is optional. |

## 10.3.7 Measurement Information elements

### 10.3.7.1 Additional measurements list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Additional measurements | MP | 1 to <MaxAdditionalMeas> | | |
| >Additional measurement identity | MP | | Measurement identity 10.3.7.48 | |

### 10.3.7.2 Cell info

Includes non-frequency related cell info used in the IE "inter-frequency cell info list" and "intra frequency cell info list".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Cell individual offset | MD | | Real(-10..10 by step of 0.5) | In dB<br>Default value is 0 dB<br>Used to offset | |

| | | | | | |
|---|---|---|---|---|---|
| | | | | measured quantity value<br>If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. | |
| Reference time difference to cell | OP | | Reference time difference to cell 10.3.7.60 | In chips.<br>This IE is absent for serving cell.<br>If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. | |
| Read SFN indicator | MP | | Boolean | TRUE indicates that read of SFN is requested for the target cell<br>If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. | |
| CHOICE *mode* | MP | | | | |
| >FDD | | | | | |
| >>Primary CPICH info | OP | | Primary CPICH info 10.3.6.60 | This IE is absent only if measuring RSSI only (broadband measurement.) | |
| >>Primary CPICH Tx power | OP | | Primary CPICH Tx power 10.3.6.61 | Required if calculating pathloss. | |
| >>TX Diversity Indicator | MP | | Boolean | TRUE indicates that transmit diversity is used. | |
| >TDD | | | | | |
| >>Primary CCPCH info | MP | | Primary CCPCH info 10.3.6.57 | | |
| >>Primary CCPCH TX power | OP | | Primary CCPCH TX power 10.3.6.59 | | |
| >>Timeslot list | OP | 1 to <maxTS> | | The UE shall report Timeslot ISCP values according the | |

| | | | | | |
|---|---|---|---|---|---|
| | | | | order of the listed Timeslot numbers.<br>If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. | |
| >>>CHOICE *TDD option* | MP | | | | REL-4 |
| >>>>3.84 Mcps TDD | | | | | REL-4 |
| >>>>>Timeslot number | MP | | Integer (0...14) | Timeslot numbers, for which the UE shall report Timeslot ISCP | |
| >>>>>Burst Type | MD | | Enumerated (Type1, Type2) | Use for Timeslot ISCP measurements only. Default value is "Type1" | |
| >>>>7.68 Mcps TDD | | | | | REL-7 |
| >>>>>Timeslot number | MP | | Integer (0...14) | Timeslot numbers, for which the UE shall report Timeslot ISCP | REL-7 |
| >>>>>Burst Type | MD | | Enumerated (Type1, Type2) | Use for Timeslot ISCP measurements only. Default value is "Type1" | REL-7 |
| >>>>1.28 Mcps TDD | | | | | REL-4 |
| >>>>>Timeslot number | MP | | Integer (0...6) | Timeslot numbers, for which the UE shall report Timeslot ISCP | REL-4 |
| Cell Selection and Re-selection Info | CV-*BCHopt* | | Cell Selection and Re-selection for SIB11/12Info 10.3.2.4 | This IE is absent for the serving cell.<br>If the cell from which this IE has been received is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. | |

| Condition | Explanation |
|---|---|
| *BCHopt* | This IE is Optional when sent in SYSTEM INFORMATION or for 1.28 Mcps TDD when sent in the MEASUREMENT CONTROL, Otherwise, the IE is not needed |

### 10.3.7.3 Cell measured results

Includes non-frequency related measured results for a cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Cell Identity | OP | | Cell Identity 10.3.2.2 | | |
| CSG Identity | CV-*CSG* | | CSG Identity 10.3.2.8 | | REL-9 |
| CSG Member indication | CV-*CSG* | | Enumerated(member) | | REL-9 |
| Cell synchronisation information | OP | | Cell synchronisation information 10.3.7.6 | | |
| CHOICE *mode* | MP | | | | |
| >FDD | | | | | |
| >>Primary CPICH info | MP | | Primary CPICH info 10.3.6.60 | | |
| >>CPICH Ec/N0 | OP | | Integer(0..49) | According to CPICH_Ec/No in [19] and [20]. Fourteen spare values are needed. | |
| >>CPICH RSCP | OP | | Integer(0..91) | According to CPICH_RSCP in [19] and [20]. Thirty-six spare values are needed. | |
| >>$Delta_{CPICH\ RSCP}$ | CV-*RSCP* | | Integer(-5..-1) | If present, the actual value of CPICH RSCP = CPICH RSCP+ $Delta_{CPICH\ RSCP}$ | REL-5 |
| >>Pathloss | OP | | Integer(46..158) | In dB. Fifteen spare values are needed. | |
| >TDD | | | | | |
| >>Cell parameters Id | MP | | Cell parameters Id 10.3.6.9 | | |
| >>Proposed TGSN | OP | | Integer (0..14) | Proposal for the next TGSN | |
| >>Primary CCPCH RSCP | OP | | Primary CCPCH RSCP info 10.3.7.54 | | |
| >>Pathloss | OP | | Integer(46..158) | In dB. Fifteen spare values are needed. | |
| >>Timeslot list | OP | 1 to < maxTS> | | | |
| >>>Timeslot ISCP | MP | | Timeslot ISCP Info 10.3.7.65 | The UE shall report the Timeslot ISCP in the same order as indicated in the cell info | |

| Condition | Explanation |
|---|---|
| *RSCP* | This IE is mandatory if the IE "Cell measured results" is included in the IE "Measured Results" (i.e. not included in the IE "Additional Measured Results") and if CPICH RSCP is present and if the value of the CPICH RSCP is below 0. It is not needed otherwise. |
| *CSG* | This IE is optionally present if the target cell's Primary scrambling code (as determined from *Primary CPICH info* IE) is found in the CELL_INFO_CSG_LIST set of PSCs. Otherwise it is not needed. |

### 10.3.7.4 Cell measurement event results

Includes non-frequency related cell reporting quantities.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| CHOICE *mode* | MP | | | |
| >FDD | | | | |
| >>Primary CPICH info | MP | 1 to <maxCellMeas> | Primary CPICH info 10.3.6.60 | |

| CHOICE *event result* | Condition under which the given *event result* is chosen |
|---|---|
| Intra-frequency measurement event results | If measurement type = intra-frequency measurement |
| Inter-frequency measurement event results | If measurement type = inter-frequency measurement |
| Inter-RAT measurement event results | If measurement type = inter-RAT measurement |
| Traffic volume measurement event results | If measurement type = traffic volume measurement |
| Quality measurement event results | If measurement type = Quality measurement |
| UE internal measurement event results | If measurement type = UE internal measurement |
| UE positioning measurement event results | If measurement type = UE positioning measurement |

## 10.3.7.8 FACH measurement occasion info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| FACH Measurement occasion cycle length coefficient | OP | | Integer(1..12) | | |
| Inter-frequency FDD measurement indicator | MP | | Boolean | TRUE means that measurements are required | |
| Inter-frequency TDD 3.84 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-4 |
| Inter-frequency TDD 7.68 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-7 |
| Inter-frequency TDD 1.28 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-4 |
| Inter-RAT measurement indicators | OP | 1 to <maxOtherRAT> | | | |
| >RAT type | MP | | Enumerated( GSM, IS2000) | | |

### 10.3.7.9 Filter coefficient

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Filter coefficient | MD | | Integer(0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 11, 13, 15, 17, 19) | Default value is 0 |

### 10.3.7.9a GSM cell group

This IE encodes a list of GSM cells specified by their ARFCN values [45].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Starting ARFCN | MP | | Integer (0..1023) | First ARFCN value in the set | REL-8 |
| Band Indicator | MP | | Enumerated (dcs1800, pcs1900) | GSM BAND_INDICATOR [45] | REL-8 |
| CHOICE *Following ARFCNs* | MP | | | | REL-8 |
| >Explicit list | | | | | REL-8 |
| >>List of ARFCNs | MP | 0 to 31 | Integer (0..1023) | Following ARFCN values | REL-8 |
| >Equally spaced | | | | | REL-8 |
| >>ARFCN spacing | MP | | Integer (1..8) | Increment "d" ARFCN values | REL-8 |
| >>Number of following ARFCNs | MP | | Integer (0..31) | Number "n" of following ARFCN values, NOTE 1 | REL-8 |
| >Variable bitmap format | | | | | REL-8 |
| >>Bitmap | MP | | Octet string (1..16) | NOTE 2 | REL-8 |
| >Continuous range | | | | | REL-8 |
| >>Ending ARFCN | MP | | Integer (0..1023) | Last ARFCN value in the set, NOTE 3 | REL-8 |
| NOTE 1: Let the IE "Starting ARFCN" = s. The complete set of (n+1) ARFCN values is defined as: {s, ((s + d) mod 1024), ((s + 2*d) mod 1024) ... ((s + n*d) mod 1024)}. | | | | | |
| NOTE 2: Bitmap representing the following ARFCN values in the set. Let the IE "Starting ARFCN" = s. The first bit of the first octet in the bitmap corresponds to ARFCN = ((s + 1) mod 1024), the next bit to the ARFCN = ((s + 2) mod 1024), and so on. If the bitmap consist of N octets, the last bit of octet N corresponds to ARFCN = ((s + 8*N) mod 1024). The complete set of ARFCN values consists of ARFCN = s and the ARFCN values, where the corresponding bit in the bitmap is set to "1". | | | | | |
| NOTE 3: Let the IEs "Starting ARFCN" = s and "Ending ARFCN" = t. The complete set of ARFCN values is defined as: {s, ((s + 1) mod 1024), ((s + 2) mod 1024) ... ((t − 1) mod 1024), t}. | | | | | |

### 10.3.7.10 HCS Cell re-selection information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Penalty_time | MD | | Integer(0, 10, 20, 30, 40, 50, 60) | Default value is 0 which means = not used<br>In seconds |
| Temporary_offsets | CV-*Penalty used* | | | |
| >Temporary_offset1 | MP | | Integer(3, 6, 9, 12, 15, 18, 21, inf) | [dB] |
| >Temporary_offset2 | CV-*FDD-Quality-Measure* | | Integer(2, 3, 4, 6, 8, 10, 12, inf) | [dB] |

| Condition | Explanation |
|---|---|
| *Penalty used* | This IE is not needed if the IE "Penalty time" equals "not used", else it is mandatory present. |
| *FDD-Quality-Measure* | This IE is not needed if the IE "Cell selection and reselection quality measure" has the value CPICH RSCP, otherwise the IE is mandatory present. This conditional presence is implemented in ASN.1 by the use of a specific RSCP and EcN0 variant of 10.3.7.10. |

### 10.3.7.11 HCS neighbouring cell information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| HCS_PRIO | MD | | Integer (0..7) | Default value = 0 |
| Qhcs | MD | | Qhcs 10.3.7.54a | Default value = 0 |
| HCS Cell Re-selection Information | MP | | HCS Cell Re-selection Information 10.3.7.10 | |

### 10.3.7.12 HCS Serving cell information

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| HCS_PRIO | MD | | Integer (0..7) | Default value = 0 |
| Qhcs | MD | | Qhcs 10.3.7.54a | Default value = 0 |
| $T_{CRmax}$ | MD | | Enumerated( not used, 30, 60, 120, 180, 240) | [s]<br>Default value is not used |
| $N_{CR}$ | CV-*UE speed detector* | | Integer(1..16 ) | Default value = 8 |
| $T_{CrmaxHyst}$ | CV-*UE speed detector* | | Enumerated( not used, 10, 20, 30, 40, 50, 60, 70) | [s] |

| Condition | Explanation |
|---|---|
| *UE Speed detector* | This IE is not needed if $T_{Crmax}$ equals 'not used', else it is mandatory present. |

### 10.3.7.12a Idle Interval Information

NOTE: Used for TDD only. If the multi-RAT UE needs idle interval for E-UTRAN measurements in CELL_DCH state, this IE may be configured.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| k | MD | | Integer (2..3) | This IE is the coefficient parameter to calculate the idle interval period. Default value is 2. The actual idle interval period equal to 2^k radio frames. | REL-8 |
| Offset | MD | | Integer (0..7) | The idle interval position in the period. Default value is 0. | REL-8 |

### 10.3.7.13 Inter-frequency cell info list

Contains the information for the list of measurement objects for an inter-frequency measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *Inter-frequency cell removal* | OP | | | | |
| >Remove all inter-frequency cells | | | | No data | |
| >Remove some inter-frequency cells | | | | | |
| >>Removed inter-frequency cells | MP | 1 .. <maxCellMeas> | | | |
| >>>Inter-frequency cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| >No inter-frequency cells removed | | | | No data | |
| New inter-frequency cells | OP | 1 to <maxCellMeas> | | | |
| >Inter-frequency cell id | MD | | Integer(0 .. <maxCellMeas>-1) | | |
| >Frequency info | MD | | Frequency info 10.3.6.36 | Default value is the value of the previous "frequency info" in the list.<br>NOTE: The first occurrence is then MP. | |
| >Cell info | MP | | Cell info 10.3.7.2 | | |
| >CHOICE *mode specific info* | MP | | | | REL-7 |
| >>No information | | | | No data for FDD, TDD 3.84 Mcps or TDD 7.68 Mcps | REL-7 |
| >>TDD 1.28 Mcps | | | | | REL-7 |
| >>>Intra-SecondaryFrequency Indicator | MP | | Boolean | TRUE means the inter frequency neighbour cell has a secondary frequency which is the same as the current working frequency of UE. | REL-7 |
| Cells for measurement | CV-*BCHopt* | 1 to <maxCellMeas> | | | |
| >Inter-frequency cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| CSG Inter-frequency cell info | CV-BCHopt | | 10.3.7.120 | | REL-9 |
| Inter-frequency SI Acquisition | CV-BCHopt | | 10.3.7.124 | | REL-9 |

| Condition | Explanation |
|---|---|
| *BCHopt* | This IE is not needed when sent in SYSTEM INFORMATION. Otherwise, the IE is Optional |

### 10.3.7.14 Inter-frequency event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-frequency event identity | MP | | Enumerated( 2a, 2b, 2c, 2d, 2e, 2f) | Two spare values are needed. |

### 10.3.7.15 Inter-frequency measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-frequency measurement results | OP | 1 to <maxFreq> | | |
| >Frequency info | MD | | Frequency info 10.3.6.36 | Default value is the value of the previous "frequency info" in the list.<br>NOTE: The first occurrence is then MP. |
| >UTRA carrier RSSI | OP | | Integer(0..76 ) | According to UTRA_carrier_RSSI_LEV in [19] and [20].<br>Fifty-one spare values are needed. |
| >Inter-frequency cell measurement results | OP | 1 to <maxCellMeas> | | Only cells for which all reporting quantities are available should be included. |
| >>Cell measured results | MP | | Cell measured results 10.3.7.3 | |

### 10.3.7.16 Inter-frequency measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Inter-frequency measurement objects list | MP | | Inter-frequency cell info list 10.3.7.13 | | |
| Inter-frequency measurement quantity | OP | | Inter-frequency measurement quantity 10.3.7.18 | | |
| Inter-frequency reporting quantity | OP | | Inter-frequency reporting quantity 10.3.7.21 | | |
| Reporting cell status | CV-*reporting* | | Reporting cell status 10.3.7.61 | | |
| Measurement validity | OP | | Measurement validity 10.3.7.51 | | |
| Inter-frequency set update | OP | | Inter-frequency set update 10.3.7.22 | | |
| Adjacent frequency index | OP | | Integer (0..<maxCellMeas-1>) | Index to an element in the IE “New inter-frequency cell” containing a cell on | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | the adjacent frequency; index = 0 corresponds to the first element in the IE | |
| Inter-band frequency index | OP | | Integer (0..<maxCell Meas-1>) | Index to an element in the IE "New inter-frequency cell" containing a cell on an inter-band frequency; index = 0 corresponds to the first element in the IE | REL-9 |
| CHOICE *report criteria* | MP | | | | |
| >Intra-frequency measurement reporting criteria | | | Intra-frequency measurement reporting criteria 10.3.7.39 | | |
| >Inter-frequency measurement reporting criteria | | | Inter-frequency measurement reporting criteria 10.3.7.19 | | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | | |
| >No reporting | | | | (no data)<br>Chosen when this measurement only is used as additional measurement to another measurement | |

| Condition | Explanation |
|---|---|
| *reporting* | This IE is optional if the CHOICE "*report criteria*" is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed |

## 10.3.7.17 Inter-frequency measurement event results

This IE contains the measurement event results that are reported to UTRAN for inter-frequency measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-frequency event identity | MP | | Inter-frequency event identity 10.3.7.14 | |
| Inter-frequency cells | OP | 1 to <maxFreq> | | |
| >Frequency info | MP | | Frequency info 10.3.6.36 | |
| >Non frequency related measurement event results | MP | | Cell measurement event results 10.3.7.4 | |

### 10.3.7.18 Inter-frequency measurement quantity

The quantity the UE shall measure in case of inter-frequency measurement. It also includes the filtering of the measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| CHOICE *reporting criteria* | MP | | | |
| >Intra-frequency reporting criteria | | | | |
| >>Intra-frequency measurement quantity | MP | | Intra-frequency measurement quantity 10.3.7.38 | |
| >Inter-frequency reporting criteria | | | | |
| >>Filter coefficient | MP | | Filter coefficient 10.3.7.9 | |
| >>CHOICE *mode* | MP | | | |
| >>>FDD | | | | |
| >>>>Measurement quantity for frequency quality estimate | MP | | Enumerated( CPICH Ec/N0, CPICH RSCP) | |
| >>>TDD | | | | |
| >>>>Measurement quantity for frequency quality estimate | MP | | Enumerated( Primary CCPCH RSCP) | |

### 10.3.7.19 Inter-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an inter-frequency measurements. All events concerning inter-frequency measurements are labelled 2x where x is a,b,c, ...

Event 2a: Change of best frequency.

Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

Event 2c: The estimated quality of a non-used frequency is above a certain threshold.

Event 2d: The estimated quality of the currently used frequency is below a certain threshold.

Event 2e: The estimated quality of a non-used frequency is below a certain threshold.

Event 2f: The estimated quality of the currently used frequency is above a certain threshold.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Parameters required for each event | OP | 1 to <maxMeasEvent> | | | |
| >Inter-frequency event identity | MP | | Inter-frequency event identity 10.3.7.14 | | |
| >Threshold used frequency | CV–*clause 0* | | Integer(-115..0) | Ranges used depend on measurement quantity.<br>CPICH Ec/No -24..0dB<br>CPICH/Primary CCPCH RSCP -115..-25dBm | |
| | | | Integer (-120..0) | Ranges used depend on measurement quantity.<br>CPICH Ec/No -24..0dB<br>CPICH/Primary CCPCH RSCP -120..-25dBm | REL-6 |
| >$Delta_{Threshold\ used\ frequency}$ | CV-*clause 3* | | Integer(-5..-1) | If present, the actual value of Threshold used frequency = Threshold used frequency + $Delta_{Threshold\ used\ frequency}$ | REL-5 |
| | | | | Not used in Release 6 and later | REL-6 |
| >W used frequency | CV–*clause 2* | | Real(0, 0.1..2.0 by step of 0.1) | | |
| >Hysteresis | MP | | Real(0, 0.5..14.5 by step of 0.5) | In event 2a, 2b, 2c, 2d, 2e, 2f | |
| >Time to trigger | MP | | Time to trigger 10.3.7.64 | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms. | |
| >Reporting cell status | OP | | Reporting cell status 10.3.7.61 | | |
| >Parameters required for each non-used frequency | OP | 1 to <maxFreq> | | In this release, the first listed threshold and W parameter shall apply to all non-used frequencies. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >>Threshold non used frequency | CV– *clause 1* | | Integer(-115..0) | Ranges used depend on measurement quantity.<br>CPICH Ec/No -24..0dB<br>CPICH/Primary CCPCH RSCP -115..-25dBm.<br>This IE is not needed if the IE "Inter-frequency event identity" is set to 2a. However, it is specified to be mandatory to align with the ASN.1. | |
| | | | Integer (-120..0) | Ranges used depend on measurement quantity.<br>CPICH Ec/No -24..0dB<br>CPICH/Primary CCPCH RSCP -120..-25dBm<br>This IE is not needed if the IE "Inter-frequency event identity" is set to 2a. | REL-6 |
| >> $Delta_{Threshold\ non\ used\ frequency}$ | CV- *clause 4* | | Integer(-5..-1) | If present, the actual value of Threshold non used frequency = Threshold non used frequency + $Delta_{Threshold\ non\ used\ frequency}$ | REL-5 |
| | | | | Not used in Release 6 and later | REL-6 |
| >>W non-used frequency | CV- *clause 1* | | Real(0, 0.1..2.0 by step of 0.1) | | |

| Condition | Explanation |
|---|---|
| *Clause 0* | This IE is mandatory present if the IE "Inter frequency event identity" is set to 2b, 2d, or 2f, otherwise the IE is not needed. |
| *Clause 1* | This IE is mandatory present if the IE "Inter frequency event identity" is set to 2a, 2b, 2c or 2e, otherwise the IE is not needed |
| *Clause 2* | This IE is mandatory present if the IE "Inter-frequency event identity" is set to 2a, 2b, 2d or 2f, otherwise the IE is not needed. |
| *Clause 3* | This IE is optional if the IE "Inter frequency event identity" is set to 2b, 2d, or 2f. Otherwise the IE is not needed.<br>Note that in order to align with the ASN.1, this IE is always included when the IE "$Delta_{Threshold\ non\ used\ frequency}$" is present, but the value shall be ignored if the "Inter-frequency event identity" is not set to 2b, 2d or 2f. |
| *Clause 4* | This IE is optional if the IE "Inter frequency event identity" is set to 2a, 2b, 2c or 2e. Otherwise the IE is not needed. |

### 10.3.7.20 Inter-frequency measurement system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Inter-frequency cell info list | OP | | Inter-frequency cell info list 10.3.7.13 | | |
| Inter-frequency RACH reporting information | OP | | Inter-frequency RACH reporting information 10.3.7.20a | | REL-6 |

### 10.3.7.20a Inter-frequency RACH reporting information

Contains the reporting configuration information for an inter-frequency measurement report, which is sent on the RACH.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *mode* | MP | | | | REL-6 |
| >FDD | | | | | REL-6 |
| >> Inter-frequency RACH reporting quantity | MP | | Enumerated(CPICH Ec/N0, CPICH RSCP) | | REL-6 |
| >TDD | | | | | REL-6 |
| >>Reporting quantity list | MP | 1 to 2 | | | REL-6 |
| >>> Inter-frequency RACH reporting quantity | MP | | Enumerated(Primary CCPCH RSCP) | | REL-6 |
| Inter-frequency RACH reporting threshold | MP | | Integer(-115..0) | Ranges used depend on measurement quantity.<br>CPICH Ec/No -24..0dB<br>CPICH/Primary CCPCH RSCP -115..-25dBm. | REL-6 |
| Maximum number of inter-frequency RACH reporting cells | MP | | Integer(1..8) | Indicates the total number for all non-used frequencies | REL-6 |

### 10.3.7.21 Inter-frequency reporting quantity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UTRA Carrier RSSI | MP | | Boolean | TRUE means report is requested. |
| Frequency quality estimate | MP | | Boolean | TRUE means that report is requested.<br>This parameter is not used in this release and should be set to FALSE. It shall be ignored by the UE. |
| Non frequency related cell reporting quantities | MP | | Cell reporting quantities 10.3.7.5 | |

### 10.3.7.22 Inter-frequency SET UPDATE

NOTE 1: Only for FDD.

This information makes it possible to use events defined for Intra-frequency measurement within the same non-used frequency for Inter-frequency measurement reporting criteria.

| Information Element/group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE autonomous update mode | MP | | Enumerated (On with no reporting) | Required for backwards compatibility with a UE not supporting this revision of the standard |

### 10.3.7.23 Inter-RAT cell info list

Contains the information for the list of measurement objects for an inter-RAT measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *Inter-RAT cell removal* | MP | | | | |
| >Remove all inter-RAT cells | | | | (no data) | |
| >Remove some inter-RAT cells | | | | | |
| >>Removed inter-RAT cells | MP | 1 to <maxCellMeas> | | | |
| >>>Inter-RAT cell id | MP | | Integer(0 .. <maxCellMeas> - 1) | | |
| >Remove no inter-RAT cells | | | | (no data) | |
| New inter-RAT cells | MP | 1 to <maxCellMeas> | | Although this IE is not always required, need is MP to align with ASN.1 | |
| | OP | | | | REL-4 |
| >Inter-RAT cell id | OP | | Integer(0 .. <maxCellMeas> - 1) | | |
| >CHOICE *Radio Access Technology* | MP | | | | |
| >>GSM | | | | | |
| >>>Cell individual offset | MP | | Integer (-50..50 ) | In dB<br>Used to offset measured quantity value | |
| >>>Cell selection and re-selection info | OP | | Cell selection and re-selection info for SIB11/12 10.3.2.4 | See subclause 8.6.7.3 | |
| >>>BSIC | MP | | BSIC 10.3.8.2 | | |
| >>>Band indicator | MP | | Enumerated (DCS 1800 band used, PCS 1900 band used) | Indicates how to interpret the BCCH ARFCN | |
| >>>BCCH ARFCN | MP | | Integer (0..1023) | [45] | |
| >>IS-2000 | | | | | |
| >>>System specific measurement info | MP | | enumerated (frequency, timeslot, | For IS-2000, use fields from TIA/EIA/IS- | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | colour code, output power, PN offset) | 2000.5, subclause 3. 7.3.3.2.27, *Candidate Frequency Neighbour List Message* | |
| >>None | | | (no data) | This value has been introduced to handle the case when IE "New inter-RAT cells" is not required | |
| Cell for measurement | OP | 1 to <maxCellMeas> | | | |
| >Inter-RAT cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| Inter-RAT cell info indication | CV-*Message* | | Integer (0..3) | NOTE 1 and 2 | REL-5 |

| Condition | Explanation |
|---|---|
| *Message* | The IE is optionally present in the MEASUREMENT CONTROL and in the SRNS RELOCATION INFO messages, otherwise the IE is not needed. |

NOTE 1: The UTRAN may choose not to use the "Inter-RAT cell info indication" value "0" in the MEASUREMENT CONTROL message, to distinguish that case from those cases where the UE receives the IE "Inter-RAT cell info list" in SIB11 or SIB12.

NOTE 2: In case of an SRNS relocation, if the UE has been sent the "Inter-RAT cell info indication" in the MEASUREMENT CONTROL message and the IE "Inter-RAT cell info list" is included in the SRNS RELOCATION INFO sent from the source RNC to the target RNC, the "Inter-RAT cell info indication" should be included in the IE "Inter-RAT cell info list".

NOTE 3: If the UTRAN configures a UE with a "Inter-RAT cell info list" containing a set of GSM cells where one or more cell(s) belong to DCS 1800 band and one or more cell(s) belong to PCS 1900 band, the UE behaviour is unspecified.

### 10.3.7.24 Inter-RAT event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-RAT event identity | MP | | Enumerated (3a, 3b, 3c, 3d) | |

### 10.3.7.25 Inter-RAT info

Inter-RAT info defines the target system for redirected cell selection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Inter-RAT info | MP | | Enumerated (GSM | | |
| | | | , E-UTRA) | | REL-8 |
| GSM target cell info | CV-*GSM* | | GSM target cell info 10.3.8.4g | | REL-6 |
| E-UTRA target info | CV-*E-UTRA* | | E-UTRA target info 10.3.8.4L | | REL-8 |

| Condition | Explanation |
|---|---|
| *GSM* | This IE is optionally present if the IE "Inter-RAT info" is set to 'GSM' and not needed otherwise. |
| *E-UTRA* | This IE is mandatory present if the IE "Inter-RAT info" is set to 'E-UTRA' and not needed otherwise. |

### 10.3.7.26 Inter-RAT measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-RAT measurement results | OP | 1 to <maxOtherRAT-16> | | |
| >CHOICE *system* | MP | | | One spare value is needed. |
| >>GSM | | | | |
| >>>Measured GSM cells | MP | 1 to <maxReportedGSMCells> | | |
| >>>>GSM carrier RSSI | OP | | bit string(6) | RXLEV is mapped to a value between 0 and 63, [46]. When mapping the RXLEV value to the RSSI bit string, the first/leftmost bit of the bit string contains the most significant bit. |
| >>>>CHOICE *BSIC* | MP | | | |
| >>>>>Verified BSIC | | | | |
| >>>>>>inter-RAT cell id | MP | | Integer(0..<maxCellMeas>-1) | |
| >>>>>Non verified BSIC | | | | |
| >>>>>>BCCH ARFCN | MP | | Integer (0..1023) | [45] |

### 10.3.7.27 Inter-RAT measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *Inter-RAT measurement objects* | OP | | | | REL-8 |
| >Inter-RAT cell info list | MP | | Inter-RAT cell info list 10.3.7.23 | | |
| >E-UTRA frequency list | MP | | E-UTRA frequency list 10.3.7.6b | | REL-8 |
| Inter-RAT measurement quantity | OP | | Inter-RAT measurement quantity 10.3.7.29 | | |
| Inter-RAT reporting quantity | OP | | Inter-RAT reporting quantity 10.3.7.32 | | |
| Reporting cell status | CV-*reporting* | | Reporting cell status 10.3.7.61 | | |
| CHOICE *report criteria* | MP | | | | |
| >Inter-RAT measurement reporting criteria | | | Inter-RAT measurement reporting criteria 10.3.7.30 | | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | | |
| >No reporting | | | | (no data)<br>Chosen when this measurement only is used as additional measurement to another measurement | |
| Idle Interval Information | OP | | Idle Interval Information 10.3.7.12a | This IE is used for TDD only. | REL-8 |

| Condition | Explanation |
|---|---|
| *reporting* | This IE is optional if the CHOICE "*report criteria*" is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed |

### 10.3.7.28 Inter-RAT measurement event results

This IE contains the measurement event results that are reported to UTRAN for inter-RAT measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-RAT event identity | MP | | Inter-RAT event identity 10.3.7.24 | |
| Cells to report | MP | 1 to <maxCellMeas> | | |
| >CHOICE *BSIC* | MP | | | |
| >>Verified BSIC | | | | |
| >>>inter-RAT cell id | MP | | Integer(0..<maxCellMeas>-1) | |
| >>Non verified BSIC | | | | |
| >>>BCCH ARFCN | MP | | Integer (0..1023) | [45] |

## 10.3.7.29 Inter-RAT measurement quantity

The quantity the UE shall measure in case of inter-RAT measurement. It also includes the filtering of the measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Measurement quantity for UTRAN quality estimate | OP | | Intra-frequency measurement quantity 10.3.7.38 | | |
| CHOICE *system* | MP | | | | |
| >GSM | | | | | |
| >>Measurement quantity | MP | | Enumerated (GSM Carrier RSSI) | | |
| >>Filter coefficient | MP | | Filter coefficient 10.3.7.9 | | |
| >>BSIC verification required | MP | | Enumerated (required, not required) | | |
| >IS2000 | | | | | |
| >>TADD $E_c/I_0$ | MP | | Integer (0..63) | Admission criteria for neighbours, see subclause 2.6.6.2.6 of TIA/EIA/IS-2000.5 | |
| >>TCOMP $E_c/I_0$ | MP | | Integer (0..15) | Admission criteria for neighbours, see subclause 2.6.6.2.5.2 of TIA/EIA/IS-2000.5 | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >>SOFT SLOPE | OP | | Integer (0..63) | Admission criteria for neighbours, see subclause 2.6.6.2.3 and 2.6.6.2.5.2 of TIA/EIA/IS-2000.5 | |
| >>ADD_INTERCEPT | OP | | Integer (0..63) | Admission criteria for neighbours, see subclause 2.6.6.2.5.2 of TIA/EIA/IS-2000.5 | |
| >E-UTRA | | | | | REL-8 |
| >>Measurement quantity | MP | | Enumerated (RSRP, RSRQ) | This IE indicates the quantity that the UE uses to determine the event trigger. | REL-8 |
| >>Filter coefficient | MP | | Filter coefficient 10.3.7.9 | | REL-8 |

### 10.3.7.30 Inter-RAT measurement reporting criteria

The triggering of the event-triggered reporting for an inter-RAT measurement. All events concerning inter-RAT measurements are labelled 3x where x is a,b,c, ...

Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

Event 3b: The estimated quality of other system is below a certain threshold.

Event 3c: The estimated quality of other system is above a certain threshold.

Event 3d: Change of best cell in other system.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Parameters required for each event | OP | 1 to <maxMeasEvent> | | |
| >Inter-RAT event identity | MP | | Inter-RAT event identity 10.3.7.24 | |
| >Threshold own system | CV–*clause 0* | | Integer (-115..0) | |
| >W | CV–*clause 0* | | Real(0, 0.1..2.0 by step of 0.1) | In event 3a |
| >Threshold other system | CV–*clause 1* | | Integer (-115..0) | In event 3a, 3b, 3c<br>If the other system is EUTRA, the range used depends on: if measurement quantity is RSRQ, range should be (-39..-6), the actual value = Threshold other system/2 [dB], if measurement quantity is RSRP, range should be (-115..-19), the actual value = Threshold other system - 25 [dBm] |
| >Hysteresis | MP | | Real(0..7.5 by step of 0.5) | |
| >Time to trigger | MP | | Time to trigger 10.3.7.64 | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. |
| >Reporting cell status | OP | | Reporting cell status 10.3.7.61 | |

| Condition | Explanation |
|---|---|
| *Clause 0* | The IE is mandatory present if the IE "Inter-RAT event identity" is set to "3a", otherwise the IE is not needed |
| *Clause 1* | The IE is mandatory present if the IE "Inter-RAT event identity" is set to 3a, 3b or 3c, otherwise the IE is not needed |

## 10.3.7.31 Inter-RAT measurement system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|

## 10.3.7.32 Inter-RAT reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UTRAN estimated quality | MP | | Boolean | This parameter is not used in this release and should be set to FALSE. | |
| CHOICE *system* | MP | | | | |
| >GSM | | | | | |
| >>GSM Carrier RSSI Reporting indicator | MP | | Boolean | | |
| >E-UTRA | | | | | REL-8 |
| >>Reporting quantity | MP | | Enumerated (‘measurement quantity’, ‘both’) | This IE indicates the quantity that the UE reports; if this IE is set to ‘measurement quantity’ the UE reports either RSRP or RSRQ which is indicated in the “measurement quantity” (see subclause 10.3.7.29); if this IE is set to ‘both’, the UE reports both RSRP and RSRQ. | REL-8 |

## 10.3.7.33 Intra-frequency cell info list

Contains the information for the list of measurement objects for an intra-frequency measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *Intra-frequency cell removal* | OP | | | Absence of this IE is equivalent to choice "Remove no intra-frequency cells". | |
| >Remove all intra-frequency cells | | | | (no data) | |
| >Remove some intra-frequency cells | | | | | |
| >>Removed intra-frequency cells | MP | 1 to <maxCellMeas> | | | |
| >>>Intra-frequency cell id | MP | | Integer(0 .. <maxCellMeas> - 1) | | |
| >Remove no intra-frequency cells | | | | (no data) | |
| New intra-frequency cells | OP | 1 to <maxCellMeas> | | This information element must be present when "Intra-frequency cell info list" is included in the system information | |
| >Intra-frequency cell id | OP | | Integer(0 .. <maxCellMeas> - 1) | | |
| >Cell info | MP | | Cell info 10.3.7.2 | This IE must be included for the serving cell when the IE "Intra frequency cell info list" is included in System Information Block type 11. | |
| Cells for measurement | CV-*BCHopt* | 1 to <maxCellMeas> | | | |
| >Intra-frequency cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| CSG Intrafrequency cell info | CV-BCHopt | | 10.3.7.121 | | REL-9 |
| Intra-frequency SI Acquisition | CV-BCHopt | | 10.3.7.125 | | REL-9 |

| Condition | Explanation |
|---|---|
| *BCHopt* | This IE is not needed when sent in SYSTEM INFORMATION. Otherwise, the IE is Optional |

### 10.3.7.34 Intra-frequency event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Intra-frequency event identity | MP | | Enumerated (1a,1b,1c,1d, 1e,1f,1g,1h,1 i, | Seven spare values are needed. | |
| | | | 1j) | Six spare values are needed. | REL-6 |

### 10.3.7.35 Intra-frequency measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Intra-frequency measurement results | OP | 1 to < maxCellMeas> | | | |
| >Cell measured results | MP | | Cell measured results 10.3.7.3 | Only cells for which all reporting quantities are available should be included. | |

### 10.3.7.36 Intra-frequency measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Intra-frequency measurement objects list | OP | | Intra-frequency cell info list 10.3.7.33 | | |
| Intra-frequency measurement objects list on secondary UL frequency | OP | | Intra-frequency cell info list on secondary UL frequency 10.3.7.116 | | REL-9 |
| Intra-frequency measurement quantity | OP | | Intra-frequency measurement quantity 10.3.7.38 | | |
| Intra-frequency reporting quantity | OP | | Intra-frequency reporting quantity 10.3.7.41 | | |
| Reporting cell status | CV-*reporting* | | Reporting cell status 10.3.7.61 | | |
| Measurement validity | OP | | Measurement validity 10.3.7.51 | | |
| CHOICE *report criteria* | OP | | | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | MP | | | NOTE 1 | REL-6 |
| | OP | | | | REL-7 |
| >Intra-frequency measurement reporting criteria | | | Intra-frequency measurement reporting criteria 10.3.7.39 | | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | | |
| >No reporting | | | | (no data)<br>Chosen when this measurement only is used as additional measurement to another measurement | |

| Condition | Explanation |
|---|---|
| *reporting* | This IE is optional if the CHOICE "*report criteria*" is equal to "periodical reporting criteria" or "No reporting", otherwise the IE is not needed |

NOTE 1: The IE "report criteria" is optional in all releases except Rel-6. In Rel-6 the IE "report criteria" is mandatory present in order to align the tabular format with the Rel-6 ASN.1.

## 10.3.7.37 Intra-frequency measurement event results

This IE contains the measurement event results that are reported to UTRAN for intra-frequency measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Intra-frequency event identity | MP | | Intra-frequency event identity 10.3.7.34 | | |
| Cell measurement event results | MP | | Cell measurement event results 10.3.7.4 | | |

## 10.3.7.38 Intra-frequency measurement quantity

The quantity the UE shall measure in case of intra-frequency measurement. It also includes the filtering of the measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Filter coefficient | MP | | Filter coefficient 10.3.7.9 | |
| CHOICE *mode* | MP | | | |
| >FDD | | | | |
| >>Measurement quantity | MP | | Enumerated( CPICH Ec/N0, | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| | | | CPICH RSCP, Pathloss) | |
| >TDD | | | | |
| >>Measurement quantity list | MP | 1 to 4 | | |
| >>>Measurement quantity | MP | | Enumerated( Primary CCPCH RSCP, Pathloss, Timeslot ISCP) | |

### 10.3.7.39 Intra-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an intra-frequency measurement. All events concerning intra-frequency measurements are labelled 1x where x is a, b, c….

Event 1a: A Primary CPICH enters the Reporting Range (FDD only).

Event 1b: A Primary CPICH leaves the Reporting Range (FDD only).

Event 1c: A Non-active Primary CPICH becomes better than an active Primary CPICH (FDD only).

Event 1d: Change of best cell (FDD only).

Event 1e: A Primary CPICH becomes better than an absolute threshold (FDD only).

Event 1f: A Primary CPICH becomes worse than an absolute threshold (FDD only).

Event 1g: Change of best cell in TDD.

Event 1h: Timeslot ISCP below a certain threshold (TDD only).

Event 1i: Timeslot ISCP above a certain threshold (TDD only).

Event 1j: A Non-active E-DCH but active DCH Primary CPICH becomes better than an active E-DCH Primary CPICH (FDD only).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Parameters required for each event | OP | 1 to <maxMeasEvent> | | | |
| >Intra-frequency event identity | MP | | Intra-frequency event identity 10.3.7.34 | | |

| >>>All MBSFN services notified | OP | | Enumerated (TRUE) | | REL-7 |

### 10.3.7.44 Measured results

Contains the measured results of the quantity indicated optionally by Reporting Quantity in Measurement Control. "Measured results" can be used for both event trigger mode and periodical reporting mode. For intra-frequency and

inter-frequency measurements the list shall be in the order of the value of the measurement quantity (the first cell shall be the best cell). The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP". For intra-frequency measurements, the ordering shall be applied to all cells included in the IE "Measured results". For inter-frequency measurements, the ordering shall be applied to all cells on the same frequency included in the IE "Measured results". For other measurements, the order of reported measurement objects is not specified.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|

| >UE positioning measured results | | | UE positioning measured results 10.3.7.99 | |

## 10.3.7.45 Measured results on RACH

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non- used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP".

| Condition | Explanation |
|---|---|
| *MBSFN* | This IE is mandatory present in a cell operating in MBSFN mode. |

### 10.3.7.47a Measurement control system information extension

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Intra-frequency cell info list | OP | | | | REL-6 |
| >New intra-frequency cells | MP | 1 to <maxCellMeas> | | | REL-6 |
| >>Intra-frequency cell id | OP | | Integer(0 .. <maxCellMeas> - 1) | | REL-6 |
| >>Cell info | MP | | Cell info 10.3.7.2 | | REL-6 |
| Inter-frequency cell info list | OP | | | | REL-6 |
| >New inter-frequency cells | MP | 1 to <maxCellMeas> | | | REL-6 |
| >>Frequency Info | MD | | Frequency info 10.3.6.36 | Default value is the value of the previous "frequency info" in the list. NOTE: The first occurrence is then MP. | REL-6 |
| >>Inter-frequency cell id | OP | | Integer(0 .. <maxCellMeas> - 1) | | REL-6 |
| >>Cell info | MP | | Cell info 10.3.7.2 | | REL-6 |
| Inter-RAT cell info list | OP | | | | REL-6 |
| >>New inter-RAT cells | MP | 1 to <maxCellMeas> | | | REL-6 |
| >>Inter-RAT cell id | OP | | Integer(0 .. <maxCellMeas> - 1) | | REL-6 |
| >>CHOICE *Radio Access Technology* | MP | | | | REL-6 |
| >>>GSM | | | | | REL-6 |
| >>>>Cell individual offset | MP | | Integer (-50..50 ) | In dB Used to offset measured quantity value | REL-6 |
| >>>>Cell selection and re-selection info | OP | | Cell selection and re-selection info for SIB11/12 10.3.2.4 | See subclause 8.6.7.3 | REL-6 |
| >>>>BSIC | MP | | BSIC 10.3.8.2 | | REL-6 |
| >>>>Band indicator | MP | | Enumerated (DCS 1800 band used, PCS 1900 band used) | Indicates how to interpret the BCCH ARFCN | REL-6 |
| >>>>BCCH ARFCN | MP | | Integer (0..1023) | [45] | REL-6 |
| >>>IS-2000 | | | | | REL-6 |
| >>>>System specific measurement info | MP | | enumerated (frequency, timeslot, colour code, output power, PN offset) | For IS-2000, use fields from TIA/EIA/IS-2000.5, subclause 3. 7.3.3.2.27, *Candidate* | REL-6 |

| | | | | | |
|---|---|---|---|---|---|
| | | | | *Frequency Neighbour List Message* | |
| >>>None | | | (no data) | This value has been introduced to handle the case when IE "New inter-RAT cells" is not required | REL-6 |

## 10.3.7.48 Measurement Identity

A reference number that is used by the UTRAN at modification and release of the measurement, and by the UE in the measurement report.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Measurement identity | MP | | Integer(1..16 | | |
| | | | 17..32) | | REL-9 |

NOTE: The specific handling of the Measurement Identity for UEs supporting the measurement identity extension is captured in ASN.1

## 10.3.7.49 Measurement reporting mode

Contains the type of Measurement Report transfer mode and the indication of periodical/event trigger.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Measurement Report Transfer Mode | MP | | enumerated (Acknowledged mode RLC, Unacknowledged mode RLC) | |
| Periodical Reporting / Event Trigger Reporting Mode | MP | | Enumerated (Periodical reporting, Event trigger) | |

### 10.3.7.50 Measurement Type

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Measurement Type | MP | | Enumerated( Intra-frequency, Inter-frequency, Inter-RAT, Traffic volume, Quality, UE internal, UE positioning, CSG proximity) | |

### 10.3.7.51 Measurement validity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE state | MP | | Enumerated( CELL_DCH, all states except CELL_DCH, all states) | |

### 10.3.7.52 Void

### 10.3.7.53 Periodical reporting criteria

Contains the periodical reporting criteria information. It is necessary only in the periodical reporting mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Amount of reporting | MD | | Integer(1, 2, 4, 8, 16, 32, 64, Infinity) | The default value is infinity. | |
| Reporting interval | MP | | Integer(250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 12000, 16000, 20000, 24000, 28000, 32000, 64000) | Indicates the interval of periodical report. Interval in milliseconds. If this IE is configured for SI acquisition, then it specifies the maximum time the UE can take for SI acquisition. | |

### 10.3.7.53aa Periodical reporting info-1b

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Amount of reporting | MP | | Integer(1, 2, 4, 8, 16, | | REL-5 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | 32, 64, Infinity) | | |
| Reporting interval | MP | | Integer(0, 250, 500, 1000, 2000, 4000, 8000, 16000) | Indicates the interval of periodical reporting when such reporting is triggered by an event. Interval in milliseconds.<br>0 means no periodical reporting. | REL-5 |

## 10.3.7.53a PLMN identities of neighbour cells

This IE contains the PLMN identities of neighbour cells.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| PLMNs of intra-frequency cells list | OP | 1 to <maxCellMeas> | | NOTE | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| PLMNs of inter-frequency cells list | OP | 1 to <maxCellMeas> | | NOTE | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| PLMNs of inter-RAT cells list | OP | 1 to <maxCellMeas> | | | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| Multiple PLMNs of intra-frequency cells list | OP | 1 to <maxCellMeas> | | | REL-8 |
| >Multiple PLMN list | OP | 1 to 6 | | Action when not present is specified in subclause 8.1.1.6.18. | REL-8 |
| >> PLMN identity with Optional MCC | MP | | PLMN identity with Optional MCC 10.3.1.11a | | REL-8 |
| Multiple PLMNs of inter-frequency cells list | OP | 1 to <maxCellMeas> | | | REL-8 |
| >Multiple PLMN list | OP | 1 to 6 | | Action when not present is specified in subclause 8.1.1.6.18. | REL-8 |
| >> PLMN identity with Optional MCC | MP | | PLMN identity with Optional MCC 10.3.1.11a | | REL-8 |

NOTE: The IE "PLMNs of intra-frequency cells list" and/or the IE "PLMNs of inter-frequency cells list" can be used when each entry in those lists is either empty or includes a single PLMN identity. If multiple PLMNs need to be indicated in a non-empty entry, the network uses the IE "Multiple PLMNs of intra-frequency cells list" and/or the IE "Multiple PLMNs of inter-frequency cells list" instead.

### 10.3.7.54 Primary CCPCH RSCP info

NOTE: Only for TDD

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Primary CCPCH RSCP | MP | | Integer(0..91) | According to P-CCPCH_RSCP_LEV in [19] and [20]. Thirty-six spare values are needed. | |
| $Delta_{Primary\ CCPCH\ RSCP}$ | CV-*Rel5* | | Integer(-5..-1) | If present, the actual value of Primary CCPCH RSCP = Primary CCPCH RSCP+ $Delta_{Primary\ CCPCH\ RSCP}$ | REL-5 |

| Condition | Explanation |
|---|---|
| *Rel5* | This IE is mandatory if the value of Primary CCPCH RSCP is below 0. Othewise the IE is not needed. |

### 10.3.7.54a Qhcs

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Qhcs | MP | | Integer(0..99) | Qhcs, mapped from CPICH Ec/No (FDD), see [4]<br>[dB]<br>0: -24<br>1: -23.5<br>2: -23<br>3: -22.5<br>...<br>45: -1.5<br>46: -1<br>47: -0.5<br>48: 0<br>49: (spare)<br>...<br>98: (spare)<br>99: (spare) | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | Qhcs, mapped from CPICH RSCP (FDD), see [4]<br>[dBm]<br>0: -115<br>1: -114<br>2: -113<br>:<br>88: -27<br>89: -26<br>90: -(spare)<br>91: -(spare)<br>:<br>98: -(spare)<br>99: -(spare) | |
| | | | | Qhcs, mapped from PCCPCH RSCP (TDD), see [4]<br>[dBm]<br>0: -115<br>1: -114<br>2: -113<br>:<br>88: -27<br>89: -26<br>90: -(spare)<br>91: -(spare)<br>:<br>98: -(spare)<br>99: -(spare) | |
| | | | | Qhcs level, mapped from Averaged received signal level RSSI (GSM), see [4]<br>[dBm]<br>0: -110<br>1: -109<br>2: -108<br>:<br>61: -49<br>62: -48<br>63: -47<br>64: -46<br>65: -45<br>66: -44<br>67: -43<br>68: -42<br>69: -41<br>70: -40<br>71: -39<br>72: -38<br>73: -37<br>74: -(spare)<br>:<br>98: -(spare)<br>99: -(spare) | |
| $Delta_{Qhcs-RSCP}$ | CV-*RSCP* | | Integer(-5..-1) | If present, the actual value of Qhcs = Qhcs + $Delta_{Qhcs-RSCP}$ | REL-5 |

| Condition | Explanation |
|---|---|
| *RSCP* | This IE is optional if Qhcs is mapped from CPICH RSCP or PCCPCH RSCP, and if the value of the RSCP is below 0 (-115dBm). It is not needed otherwise. |

## 10.3.7.55 Quality measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| BLER measurement results | OP | 1 to <maxTrCH> | | |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |
| >DL Transport Channel BLER | OP | | Integer (0..63) | According to BLER_LOG in [19] and [20] |
| CHOICE *mode* | MP | | | |
| >FDD | | | | No data |
| >TDD | | | | |
| >>SIR measurement results | OP | 1 to <MaxCCTrCH> | | SIR measurements for DL CCTrCH |
| >>>TFCS ID | MP | | Integer(1...8) | |
| >>>Timeslot list | MP | 1 to <maxTS> | | for all timeslot on which the CCTrCH is mapped on |
| >>>>SIR | MP | | Integer(0..63) | According to UE_SIR in [20] |

## 10.3.7.56 Quality measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Quality reporting quantity | OP | | Quality reporting quantity 10.3.7.59 | |
| CHOICE *report criteria* | MP | | | |
| >Quality measurement reporting criteria | | | Quality measurement reporting criteria 10.3.7.58 | Note<br>Given this choice, the IE "DL Transport Channel BLER" shall be set to FALSE (see subclause 10.3.7.59) |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | Note |
| >No reporting | | | | Note<br>(no data)<br>Chosen when this measurement only is used as additional measurement to another measurement |

NOTE: In this version of the specification, BLER as additional measurement is not supported.

### 10.3.7.57 Quality measurement event results

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Transport channels causing the event | OP | 1 to <maxTrCH> | | |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |

### 10.3.7.58 Quality measurement reporting criteria

Event 5a: Number of bad CRCs on a certain transport channel exceeds a threshold.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Parameters sent for each transport channel | MP | 1 to <maxTrCH> | | |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |
| >Total CRC | MP | | Integer(1..512) | Number of CRCs |
| >Bad CRC | MP | | Integer(1..512) | Number of CRCs |
| >Pending after trigger | MP | | Integer(1..512) | Number of CRCs |

### 10.3.7.59 Quality reporting quantity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| DL Transport Channel BLER | MP | | Boolean | TRUE means report requested |
| Transport channels for BLER reporting | CV-*BLER reporting* | 1 to <maxTrCH> | | The default, if no transport channel identities are present, is that the BLER is reported for all downlink transport channels |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |
| CHOICE *mode* | MP | | | |
| >FDD | | | | No data |
| >TDD | | | | |
| >>SIR measurement list | OP | 1 to <maxCCTrCH> | | SIR measurements shall be reported for all listed TFCS IDs |
| >>>TFCS ID | MP | | Integer(1...8) | |

| Condition | Explanation |
|---|---|
| *BLER reporting* | This IE is not needed if the IE "DL Transport Channel BLER" is FALSE and optional if the IE "DL Transport Channel BLER" is TRUE |

### 10.3.7.60 Reference time difference to cell

In the System Information message, the reference time difference to cell indicates the timing difference between the primary CCPCH of the current cell and the primary CCPCH of a neighbouring cell..

In the Measurement Control message, the reference time difference to cell indicates the timing difference between UE uplink transmission timing and the primary CCPCH of a neighbouring cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| CHOICE *accuracy* | MP | | | |
| >40 chips | | | | |
| >>Reference time difference | MP | | Integer(0..38 400 by step of 40) | In chips |
| >256 chips | | | | |
| >>Reference time difference | MP | | Integer(0.. 38400 by step of 256) | In chips |
| >2560 chips | | | | |
| >>Reference time difference | MP | | Integer(0.. 38400 by step of 2560) | In chips |

### 10.3.7.61 Reporting Cell Status

Indicates maximum allowed number of cells to report and whether active set cells and/or virtual active set cells and/or monitored set cells on and/or detected set cells used frequency and/or monitored set cells on non used frequency should/should not be included in the IE "Measured results".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| CHOICE *reported cell* | MP | | | |
| >Report cells within active set | | | | This choice is not valid for inter-RAT measurements. For inter-frequency measurements it is only valid for reporting events 2D and 2F. See NOTE 1. |
| >>Maximum number of reported cells | MP | | Integer(1..6) | |
| >Report cells within monitored set cells on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported cells | MP | | Integer(1..6) | |
| >Report cells within active set and/or monitored set cells on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported cells | MP | | Integer(1..6) | |
| >Report cells within detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported cells | MP | | Integer(1..6) | |
| >Report cells within monitored set and/or detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported cells | MP | | Integer(1..6) | |
| >Report all active set cells + cells within monitored set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported | MP | | Enumerated | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| cells | | | (virtual/active set cells+1, virtual/active set cells+2, …., virtual/active set cells+6) | |
| >Report all active set cells + cells within detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported cells | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2, …., virtual/active set cells+6) | |
| >Report all active set cells + cells within monitored set and/or detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements |
| >>Maximum number of reported cells | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2, …., virtual/active set cells+6) | |
| >Report cells within virtual active set | | | | This choice is not valid for intra-frequency or inter-RAT measurements |
| >>Maximum number of reported cells per reported non-used frequency | MP | | Integer(1..6) | |
| >Report cells within monitored set on non-used frequency | | | | This choice is not valid for intra-frequency or inter-RAT measurements |
| >>Maximum number of reported cells per reported non-used frequency | MP | | Integer(1..6) | |
| >Report cells within monitored and/or virtual active set on non-used frequency | | | | This choice is not valid for intra-frequency or inter-RAT measurements |
| >>Maximum number of reported cells per reported non-used frequency | MP | | Integer(1..6) | |
| >Report all virtual active set cells + cells within monitored set on non-used frequency | | | | This choice is not valid for intra-frequency or inter-RAT measurements |
| >>Maximum number of reported cells per reported non-used frequency | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2, …., virtual/active set cells+6) | |
| >Report cells within active set or within virtual active set or of the other RAT | | | | If this choice is selected for inter-RAT measurements, the UE shall report only cells of the other RAT.<br>If this choice is selected for intra-frequency measurements, the UE shall report cells within the active |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| | | | | set. If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set. |
| >>Maximum number of reported cells | MP | | Integer (1..12) | |
| >Report cells within active and/or monitored set on used frequency or within virtual active and/or monitored set on non-used frequency | | | | This choice is not valid for inter-RAT measurements.<br>If this choice is selected for intra-frequency measurements, the UE shall report cells within the active and/or monitored set.<br>If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set and/or monitored set on non-used frequency. |
| >>Maximum number of reported cells | MP | | Integer(1..12) | |

NOTE 1: For Inter-frequency reporting events 2D and 2F, only CHOICE "Report cells within active set" is valid.

## 10.3.7.62 Reporting information for state CELL_DCH

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Intra-frequency reporting quantity | MP | | Intra-frequency reporting quantity 10.3.7.41 | |
| Measurement Reporting Mode | MP | | Measurement Reporting Mode 10.3.7.49 | |
| CHOICE *report criteria* | MP | | | |
| >Intra-frequency measurement reporting criteria | | | Intra-frequency measurement reporting criteria 10.3.7.39 | This IE may only contain measurement events from 1A to 1I, but not measurement event 1J. |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |

## 10.3.7.63 SFN-SFN observed time difference

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *type* | MP | | | | |
| >Type 1 | | | Integer(0..9830399) | According to T1_SFN-SFN_TIME in [19] and [20].<br>For FDD and 3.84 Mcps TDD and 7.68 Mcps TDD:<br>6946816 spare values are needed. | |
| | | | Integer(0..3276799) | For 1.28 Mcps TDD:<br>13500416 spare values are needed. | Rel-4 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >Type 2 | | | Integer(0..40961) | According to T2_SFN-SFN_TIME in [19] and [20].<br>24574 spare values are needed. | |
| | | | Integer(0..27649) | For 1.28 Mcps TDD:<br>37886 spare values are needed. | Rel-4 |

### 10.3.7.64 Time to trigger

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Time to trigger | MP | | Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000) | Time in ms |

### 10.3.7.65 Timeslot ISCP info

NOTE: Only for TDD

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|---|---|---|---|---|
| Timeslot ISCP | MP | | Integer (0..91) | According to UE_TS_ISCP_LEV in [20].<br>Thirty-six spare values are needed. |

### 10.3.7.66 Traffic volume event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Traffic volume event identity | MP | | Enumerated( 4a, 4b) | |

### 10.3.7.67 Traffic volume measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Traffic volume measurement results | OP | 1 to <maxRB> | | |
| >RB Identity | MP | | RB Identity 10.3.4.16 | |
| >RLC Buffers Payload | OP | | Enumerated( 0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K) | In bytes<br>And N Kbytes = N*1024 bytes.<br>Twelve spare values are needed. |
| >Average of RLC Buffer Payload | OP | | Enumerated( 0, 4, 8, 16, 32, 64, 128, 256, 512, | In bytes<br>And N Kbytes = N*1024 bytes.<br>Twelve spare values are needed. |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| | | | 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K) | |
| >Variance of RLC Buffer Payload | OP | | Enumerated( 0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K) | In bytes<br>And N Kbytes = N*1024 bytes.<br>Two spare values are needed. |

## 10.3.7.68 Traffic volume measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Traffic volume measurement Object | OP | | Traffic volume measurement Object 10.3.7.70 | |
| Traffic volume measurement quantity | OP | | Traffic volume measurement quantity 10.3.7.71 | |
| Traffic volume reporting quantity | OP | | Traffic volume reporting quantity 10.3.7.74 | |
| Measurement validity | OP | | Measurement validity 10.3.7.51 | |
| CHOICE *report criteria* | MP | | | |
| >Traffic volume measurement reporting criteria | | | Traffic volume measurement reporting criteria 10.3.7.72 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |
| >No reporting | | | | (no data)<br>Chosen when this measurement only is used as additional measurement to another measurement |

## 10.3.7.69 Traffic volume measurement event results

Contains the event result for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Uplink transport channel type causing the event | MP | | Enumerated( DCH,RACH, USCH) | USCH is TDD only.<br>RACH is the currently configured default in the uplink.<br>For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| UL Transport Channel identity | CV-*UL-DCH/USCH* | | Transport channel identity 10.3.5.18 | |
| Traffic volume event identity | MP | | Traffic volume event identity 10.3.7.66 | |

| Condition | Explanation |
|---|---|
| *UL-DCH/USCH* | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

## 10.3.7.70 Traffic volume measurement object

Contains the measurement object information for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Traffic volume measurement objects | MP | 1 to <maxTrCH> | | |
| >Uplink transport channel type | MP | | Enumerated( DCH,RACH, USCH) | USCH is TDD only.<br>RACH is the currently configured default in the uplink.<br>For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Target Transport Channel ID | CV-*UL-DCH/USCH* | | Transport channel identity 10.3.5.18 | |

| Condition | Explanation |
|---|---|
| *UL-DCH/USCH* | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

## 10.3.7.71 Traffic volume measurement quantity

Contains the measurement quantity information for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Measurement quantity | MP | | Enumerated( RLC buffer payload, Average RLC buffer payload, Variance of RLC buffer payload) | This parameter should be ignored. |
| Time Interval to take an average or a variance | CV-*A/V* | | Integer(20, 40, ..260, by steps of 20) | In ms |

| Condition | Explanation |
|---|---|
| *A/V* | This IE is mandatory present when "Average RLC buffer" or "Variance of RLC buffer payload" is chosen and not needed otherwise. |

### 10.3.7.72 Traffic volume measurement reporting criteria

Contains the measurement reporting criteria information for a traffic volume measurement.

Event 4a: Transport Channel Traffic Volume [15] exceeds an absolute threshold.

Event 4b: Transport Channel Traffic Volume [15] becomes smaller than an absolute threshold.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Parameters sent for each transport channel | OP | 1 to <maxTrCH> | | This IE is always required, need is OP to align with ASN.1 |
| >Uplink transport channel type | OP | | Enumerated( DCH,RACH, USCH) | USCH is TDD only.<br>RACH is the currently configured default in the uplink.<br>For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Transport Channel ID | CV-*UL-DCH/USCH* | | Transport channel identity 10.3.5.18 | |
| >Parameters required for each Event | OP | 1 to <maxMeasparEvent> | | |
| >>Traffic volume event identity | MP | | Traffic volume event identity 10.3.7.66 | |
| >>Reporting Threshold | MP | | Enumerated( 8,16,32,64,128,256,512,1024,2K,3K,4K,6K,8K,12K,16K,24K,32K,48K,64K,96K,128K,192K,256K,384K,512K,768K) | Threshold in bytes<br>And N Kbytes = N*1024 bytes |
| >>Time to trigger | OP | | Time to trigger 10.3.7.64 | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report.<br>Time in ms |
| >>Pending time after trigger | OP | | Integer(250, 500, 1000, 2000, 4000, 8000, 16000) | Indicates the period of time during which it is forbidden to send any new measurement reports with the same Traffic volume event identity even if the triggering condition is fulfilled. Time in milliseconds |
| >>Tx interruption after trigger | OP | | Integer (250, 500, 1000, 2000, 4000, 8000, 16000) | Time in milliseconds. Indicates how long the UE shall block DTCH transmissions on the RACH after a measurement report is triggered. |

| Condition | Explanation |
|---|---|
| *UL-DCH/USCH* | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is optional. Otherwise the IE is not needed. |

### 10.3.7.73 Traffic volume measurement system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Traffic volume measurement identity | MD | | Measurement identity 10.3.7.48 | The traffic volume measurement identity has default value 4. |
| Traffic volume measurement object | OP | | Traffic volume measurement object 10.3.7.70 | |
| Traffic volume measurement quantity | OP | | Traffic volume measurement quantity 10.3.7.71 | |
| Traffic volume reporting quantity | OP | | Traffic volume reporting quantity 10.3.7.74 | |
| Measurement validity | OP | | Measurement validity 10.3.7.51 | |
| Measurement Reporting Mode | MP | | Measurement Reporting Mode 10.3.7.49 | |
| CHOICE *reporting criteria* | MP | | | |
| >Traffic volume measurement reporting criteria | | | Traffic volume measurement reporting criteria 10.3.7.72 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |

### 10.3.7.74 Traffic volume reporting quantity

Contains the reporting quantity information for a traffic volume measurement.

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| RLC Buffer Payload for each RB | MP | | Boolean | |
| Average of RLC Buffer Payload for each RB | MP | | Boolean | |
| Variance of RLC Buffer Payload for each RB | MP | | Boolean | |

### 10.3.7.75 UE internal event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE internal event identity | MP | | Enumerated( 6a,6b,6c,6d, 6e, 6f, 6g) | |

### 10.3.7.76 UE internal measured results

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *mode* | MP | | | | |
| >FDD | | | | | |

## 10.3.7.77 UE internal measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE internal measurement quantity | OP | | UE internal measurement quantity 10.3.7.79 | |
| UE internal reporting quantity | OP | | UE internal reporting quantity 10.3.7.82 | |
| CHOICE *report criteria* | MP | | | |
| >UE internal measurement reporting criteria | | | UE internal measurement reporting criteria 10.3.7.80 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |
| >No reporting | | | | (no data)<br>Chosen when this measurement only is used as additional measurement to another measurement |

| CHOICE *report criteria* | Condition under which the given *report criteria* is chosen |
|---|---|
| UE internal measurement reporting criteria | Chosen when UE internal measurement event triggering is required |
| Periodical reporting criteria | Chosen when periodical reporting is required |
| No reporting | Chosen when this measurement only is used as additional measurement to another measurement |

## 10.3.7.78 UE internal measurement event results

This IE contains the measurement event results that are reported to UTRAN for UE internal measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE internal event identity | MP | | UE internal event identity 10.3.7.75 | |
| CHOICE *mode* | MP | | | |
| >FDD | | | | |
| >Primary CPICH info | CV-*clause 1* | | Primary CPICH info 10.3.6.60 | |
| >TDD | | | | (no data) |

| Condition | Explanation |
|---|---|
| *Clause 1* | This IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed. |

## 10.3.7.79 UE internal measurement quantity

The quantity the UE shall measure in case of UE internal measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *mode* | MP | | | | |
| >FDD | | | | | |
| >>Measurement quantity | MP | | Enumerated( UE Transmitted Power, UTRA Carrier RSSI, UE Rx-Tx time difference) | | |
| >TDD | | | | | |
| >>Measurement quantity | MP | | Enumerated( UE Transmitted Power, UTRA Carrier RSSI, | | |
| | | | $T_{ADV}$) | Measurement on Timing Advance is for 1.28 Mcps TDD | REL-4 |
| Filter coefficient | OP | | Filter coefficient 10.3.7.9 | If the IE "Measurement quantity" is set to "Rx-Tx time difference" and this IE is present, the UE behaviour is unspecified. | |

## 10.3.7.80 UE internal measurement reporting criteria

The triggering of the event-triggered reporting for a UE internal measurement. All events concerning UE internal measurements are labelled 6x where x is a, b, c…. In TDD, the events 6a - 6d are measured and reported on timeslot basis.

Event 6a: The UE Transmitted Power becomes larger than an absolute threshold

Event 6b: The UE Transmitted Power becomes less than an absolute threshold

Event 6c: The UE Transmitted Power reaches its minimum value

Event 6d: The UE Transmitted Power reaches its maximum value

Event 6e: The UE RSSI reaches the UEs dynamic receiver range

Event 6f (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

Event 6f (1.28 Mcps TDD): The time difference indicated by $T_{ADV}$ becomes larger than an absolute threshold

Event 6g: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Parameters sent for each UE internal measurement event | OP | 1 to <maxMeas Event> | | | |
| >UE internal event identity | MP | | UE internal event identity 10.3.7.75 | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >Time-to-trigger | MP | | Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000) | Time in ms. Indicates the period of time between the timing of event detection and the timing of sending Measurement Report. | |
| >UE Transmitted Power Tx power threshold | CV-*clause 1* | | Integer(-50..33) | Power in dBm. In event 6a, 6b. | |
| >UE Rx-Tx time difference threshold | CV-*clause 2* | | Integer(768..1280) | Time difference in chip. In event 6f, 6g. | |
| >$T_{ADV}$ threshold | CV-*clause 3* | | Real (0..63 step 0.125) | Time difference in chip. In event 6f | REL-4 |

| Condition | Explanation |
|---|---|
| *Clause 1* | The IE is mandatory present if the IE "UE internal event identity" is set to "6a" or "6b", otherwise the IE is not needed. |
| *Clause 2* | In FDD, the IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed. |
| *Clause 3* | In 1.28 Mcps TDD the IE is mandatory present if the IE "UE internal event identity" is set to "6f", otherwise the IE is not needed. |

### 10.3.7.81 Void

### 10.3.7.82 UE Internal reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE Transmitted Power | MP | | Boolean | | |
| CHOICE *mode* | MP | | | | |
| >FDD | | | | | |
| >>UE Rx-Tx time difference | MP | | Boolean | | |
| >TDD | | | | | |
| >>CHOICE *TDD option* | | | | | REL-4 |

| >>>7.68 Mcps TDD | | | | | REL-7 |
| >>>>Applied TA | MP | | Boolean | | REL-7 |
| >>>1.28 Mcps TDD | | | | | REL-4 |
| >>>>$T_{ADV}$ info | MP | | Boolean | | REL-4 |

### 10.3.7.83 UE Rx-Tx time difference type 1

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7]. This measurement is for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE Rx-Tx time difference type 1 | MP | | Integer(768..1280) | In chips.<br>511 spare values are needed. |

### 10.3.7.84 UE Rx-Tx time difference type 2

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE Rx-Tx time difference type 2 | MP | | Integer (0..8191) | According to [19]. |

### 10.3.7.85 UE Transmitted Power info

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|---|---|---|---|---|
| UE Transmitted Power | MP | | Integer (0..104) | According to UE_TX_POWER in [19] and [20] |

### 10.3.7.86 UE positioning Ciphering info

This IE contains information for the ciphering of UE positioning assistance data broadcast in System Information.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Ciphering Key Flag | MP | | Bit string(1) | |
| Ciphering Serial Number | MP | | Integer(0..65535) | The serial number used in the DES ciphering algorithm |

## 10.3.7.87 UE positioning Error

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Error reason | MP | | Enumerated( Not Enough OTDOA Cells, Not Enough GPS Satellites, Assistance Data Missing, Not Accomplished GPS Timing Of Cell Frames, Undefined Error, Request Denied By User, Not Processed And Timeout, Reference Cell Not Serving Cell, | Note 1 | |
| | | | Not Enough GANSS Satellites, Not Accomplished GANSS Timing Of Cell Frames) | Note 1 | REL-7 |
| GPS Additional Assistance Data Request | CV-*GPSdataMissing* | | UE positioning GPS Additional Assistance Data Request 10.3.7.88a | | |
| GANSS Additional Assistance Data Request | CV-*GANSSdataMissing* | | UE positioning GANSS Additional Assistance Data Request 10.3.7.88c | | REL-7 |

NOTE 1: The following table describes each value of the IE "Error reason".

| Value | Indication |
|---|---|
| Not Enough OTDOA Cells | There were not enough cells to be received. |
| Not Enough GPS Satellites | There were not enough GPS satellites to be received. |
| Assistance Data Missing | UE positioning GANSS or/and GPS assistance data missing. |
| Not Accomplished GPS Timing Of Cell Frames | UE was not able to accomplish the GPS timing of cell frames measurement. |
| Undefined Error | Undefined error. |
| Request Denied By User | UE positioning request denied by upper layers. |
| Not Processed And Timeout | UE positioning request not processed by upper layers and timeout. |
| Reference Cell Not Serving Cell | UE was not able to read the SFN of the reference cell. |
| Not Enough GANSS Satellites | There were not enough GANSS satellites to be received. |
| Not Accomplished GANSS Timing Of Cell Frames | UE was not able to accomplish the GANSS timing of cell frames measurement. |

| Condition | Explanation |
|---|---|
| *GPSdataMissing* | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |
| *GANSSdataMissing* | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |

## 10.3.7.88 UE positioning GPS acquisition assistance

This IE contains parameters that enable fast acquisition of the GPS signals in UE-assisted GPS positioning.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GPS TOW msec | MP | | Integer(0..6.048*10$^8$-1) | GPS Time of Week in milliseconds rounded down to the nearest millisecond unit. It is also the time when satellite information is valid. | |
| UTRAN GPS reference time | OP | | | | |
| >UTRAN GPS timing of cell frames | MP | | Integer(0 ... 2322431999999) | GPS timing of cell frames in steps of 1 chip. | |
| >CHOICE *mode* | OP | | | | |
| >>FDD | | | | | |
| >>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >>TDD | | | | | |
| >>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >SFN | MP | | Integer(0..4095) | The SFN which the UTRAN GPS timing of cell frames time stamps. | |
| UE Positioning GPS ReferenceTime Uncertainty | OP | | UE positioning GPS reference time uncertainty 10.3.7.96a | | REL-7 |
| Satellite information | MP | 1 to <maxSat> | | | |
| >SatID | MP | | Integer (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |
| >Doppler (0$^{th}$ order term) | MP | | Real(-5120..5117.5 by step of 2.5) | Hz | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >Extra Doppler | OP | | | | |
| >>Doppler (1st order term) | MP | | Real (-0.966..0.483 by step of 0.023) | Hz/s | |
| >>Doppler Uncertainty | MP | | Enumerated (12.5,25,50,100,200) | Hz.<br>Three spare values are needed.<br>The Doppler experienced by a stationary UE is in the range "Doppler – Doppler Uncertainty" to "Doppler + Doppler Uncertainty". | |
| >Code Phase | MP | | Integer(0..1022) | GPS chips.<br>Increasing binary values of the field signify increasing predicted pseudoranges. | |
| >Integer Code Phase | MP | | Integer(0..19) | Number of code periods that have elapsed since the latest GPS bit boundary, in units of C/A code period. | |
| >GPS Bit number | MP | | Integer(0..3) | Specifies GPS bit number modulo 4 | |
| >Code Phase Search Window | MP | | Integer(1023,1,2,3,4,6,8,12,16,24,32,48,64,96,128,192) | Expected code-phase is in the range "Code Phase – Code Phase Search Window" to "Code Phase + Code Phase Search Window". | |
| >Azimuth and Elevation | OP | | | | |
| >>Azimuth | MP | | Real(0..348.75 by step of 11.25) | Degrees<br>An angle of x degrees means the satellite azimuth a is in the range x ≤ a < x+11.25 degrees. | |
| >>Elevation | MP | | Real(0..78.75 by step of 11.25) | Degrees<br>An angle of y degrees means the satellite elevation e is in the range y ≤ e < y+11.25 degrees except for y=78.75 where the range is extended to include 90 degrees. | |

## 10.3.7.88a UE positioning GPS Additional Assistance Data Request

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Almanac | MP | | Boolean | TRUE means requested |
| UTC Model | MP | | Boolean | TRUE means requested |
| Ionospheric model | MP | | Boolean | TRUE means requested |
| Navigation Model | MP | | Boolean | TRUE means requested |
| DGPS Corrections | MP | | Boolean | TRUE means requested |
| Reference Location | MP | | Boolean | TRUE means requested |
| Reference Time | MP | | Boolean | TRUE means requested |
| Acquisition Assistance | MP | | Boolean | TRUE means requested |
| Real-Time Integrity | MP | | Boolean | TRUE means requested |
| Navigation Model Additional data | CV-*Navigation Model* | | | this IE is present only if "Navigation Model" is set to TRUE otherwise it is absent |
| >GPS Week | MP | | Integer (0..1023) | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| >GPS_Toe | MP | | Integer (0..167) | GPS time of ephemeris in hours of the latest ephemeris set contained by the UE. Eighty-eight spare values needed. |
| >T-Toe limit | MP | | Integer (0..10) | ephemeris age tolerance of the UE to UTRAN in hours. Five spare values needed. |
| >Satellites list related data | MP | 0 to <maxSat> | | |
| >>SatID | MP | | Integer (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |
| >>IODE | MP | | Integer (0..255) | Issue of Data Ephemeris for SatID |

## 10.3.7.88b UE positioning GANSS reference measurement information

This IE provides reference code and Doppler measurement information of visible satellites of a GNSS constellation. The information enables fast acquisition of the GANSS signals in UE-assisted GANSS positioning. If the IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the Satellite Information is valid at the time as given in the IE "UE positioning GANSS reference time" IE. I.e., if IE "UE positioning GANSS reference measurement information" is included in IE "UE positioning GANSS assistance data" and IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the IE "UE positioning GANSS reference time" shall also be included. If the IE "UE positioning GPS acquisition assistance" is included in IE "UE positioning measurement", the IE "GPS TOW msec" and IE "UTRAN GPS reference time" included in IE "UE positioning GPS acquisition assistance" is also valid for the Satellite information in IE "UE positioning GANSS reference measurement information".

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID.<br>If this IE is asked by SIB 15.6, the GANSS shall be solved by the scheduling information. | REL-7 |
| Satellite information | MP | 1 to <maxGANSSSat> | | | REL-7 |
| >SatID | MP | | Integer (0..63) | Identifies the satellite within a GANSS constellation.<br>For coding description, see Note 2. | REL-7 |
| >Doppler ($0^{th}$ order term) | MP | | Real(-1024..1023.5 by step of 0.5) | m/s<br>Conversion between m/s and Hz shall be made by using the *nominal* wavelength of the assisted signal. | REL-7 |
| >Extra Doppler | OP | | | | REL-7 |
| >>Doppler ($1^{st}$ order term) | MP | | Real (-0.2..0.1 by step of 1/210) | $m/s^2$ | REL-7 |
| >>Doppler Uncertainty | MP | | Enumerated (40,20,10,5, 2.5) | m/s.<br>The Doppler experienced by a stationary UE is in the range “Doppler – Doppler Uncertainty” to “Doppler + Doppler Uncertainty”.<br>Three spare values are needed. | REL-7 |
| >Code Phase | MP | | Integer(0..1023) | ms, scaling factor $2^{-10}$<br>*Nominal* chipping rate of the GNSS signal shall be used in conversion.<br>Increasing binary values of the field signify increasing predicted code phases. | REL-7 |
| >Integer Code Phase | MP | | Integer(0..127) | ms.<br>Integer code phase (expressed modulo 128 ms) currently being transmitted at the Reference Time included in either IE "UE positioning GANSS reference time” or IE “UE positioning GPS acquisition assistance”, as seen by a receiver at the Reference Location.<br>The UE can calculate the expected code phase as | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | follows:<br>Reference Time – Integer Code Phase + Code Phase. | |
| >Code Phase Search Window | MP | | Bit string (5) | Coded expected code-phase is in the range "Code Phase – Code Phase Search Window" to "Code Phase + Code Phase Search Window".<br>For coding description, see Note 1 | REL-7 |
| >Azimuth and Elevation | OP | | | | REL-7 |
| >>Azimuth | MP | | Real(0..348.75 by step of 11.25) | Degrees<br>An angle of x degrees means the satellite azimuth a is in the range x ≤ a < x+11.25 degrees. | REL-7 |
| >>Elevation | MP | | Real(0..78.75 by step of 11.25) | Degrees<br>An angle of y degrees means the satellite elevation e is in the range y ≤ e < y+11.25 degrees except for y=78.75 where the range is extended to include 90 degrees. | REL-7 |

NOTE 1: Code phase search window parameter format:

| CODE_PHASE_SEARCH_WINDOW | Code Phase Search Window [ms] |
|---|---|
| '00000' | No information |
| '00001' | 0,002 |
| '00010' | 0,004 |
| '00011' | 0,008 |

| >>Clock Model ID | OP | | Integer (0..7) | This IE may be included if IE "GANSS Navigation Model" is set to TRUE or if the IE “GANSS Additional Navigation Models” is included and defines the non-native or non-default clock model number as defined in 10.3.7.91d/10.3.7.91f. | REL-8 |
| >>UTC Model ID | OP | | Integer (0..7) | This IE may be included if IE “GANSS Additional UTC Models” is included and defines the non-native or non-default UTC model number as defined in 10.3.7.97d. | REL-8 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >>Almanac Model ID | OP | | Integer (0..7) | This IE may be included if IE "GANSS Almanac" set to TRUE and defines the non-native or non-default model number as defined in 10.3.7.89a. | REL-8 |

| Condition | Explanation |
|---|---|
| *GANSS-ID-SBAS* | This IE is mandatory present if the IE "GANSS ID" is "SBAS" and not needed otherwise. |
| *GANSSNavigation Model* | The IE is mandatory present if the IE "GANSS Navigation Model" is set to TRUE or if the IE "GANSS Additional Navigation Models" is included and not needed otherwise. |
| *AssistanceChoices* | This IE is mandatory present if non-native or non-default assistance data choices are requested and not needed otherwise. |

## 10.3.7.88d DGANSS Signal Id

The DGANSS signal Id refers to the signal for which differential corrections or data bit assistance are required. It depends on the GANSS ID. Each bit refers to a particular signal. When the bit is set to 1, this means that the differential corrections or data bit assistance are requested for this particular signal. Differential corrections or data bit assistance can be requested for several signals using the bit string.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| DGANSS Signal Id | MP | | BIT STRING (8) | See Note 1. | REL-7 |

## 10.3.7.89 UE positioning GPS almanac

This IE contains a reduced-precision subset of the ephemeris and clock correction parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| $WN_a$ | MP | | Bit string(8) | Almanac Reference Week [12] |
| Satellite information | MP | 1 to <maxSat> | | |
| >DataID | MP | | Integer(0..3) | See [12] |
| >SatID | MP | | Enumerated( 0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |
| >e | MP | | Bit string(16) | Eccentricity [12] |
| >$t_{oa}$ | MP | | Bit string(8) | Reference Time of Almanac [12] |
| >$\delta i$ | MP | | Bit string(16) | |
| >OMEGADOT | MP | | Bit string(16) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [12] |
| >SV Health | MP | | Bit string(8) | |
| >$A^{1/2}$ | MP | | Bit string(24) | Semi-Major Axis (meters)$^{1/2}$ [12] |
| >$OMEGA_0$ | MP | | Bit string(24) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [12] |
| >$M_0$ | MP | | Bit string(24) | Mean Anomaly at Reference Time (semi-circles) [12] |
| >$\omega$ | MP | | Bit string(24) | Argument of Perigee (semi-circles) [12] |
| >$af_0$ | MP | | Bit string(11) | apparent clock correction [12] |
| >$af_1$ | MP | | Bit string(11) | apparent clock correction [12] |
| SV Global Health | OP | | Bit string(364) | This enables GPS time recovery and possibly extended GPS correlation intervals. It is specified in page 25 of subframes 4 and 5 [12] |

## 10.3.7.89a UE positioning GANSS almanac

This IE contains a reduced-precision subset of the ephemeris and clock correction parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Week Number | MP | | Integer(0..255) | Almanac reference week , number of weeks since the beginning of GANSS specific system time (mod 256) | REL-7 |
| | | | | If “Model 5” or “Model 6” is included, the UE shall ignore the Week Number. | REL-8 |
| Keplerian parameters (“Model 1”) | OP | | | NOTE | REL-7 |
| >$T_{oa}$ | MP | | Integer(0..602112 by step of 4096) | Almanac Reference Time common to all satellites in GANSS Almanac using Keplerian Parameters given in GNSS specific system time | REL-7 |
| >$IOD_a$ | MP | | INTEGER(0..3) | Issue-Of –Data, common to all satellites | REL-7 |
| >Satellite information KP | MP | 1 to <maxGANSSSat> | | Almanacs are in the order of the SV IDs, the smallest ID first. | REL-7 |
| >>SV ID | MP | | Integer (0..63) | Satellite ID, as defined in Note 2 of 10.3.7.88b. | REL-7 |

### 10.3.7.91 UE positioning GPS DGPS corrections

This IE contains DGPS corrections to be used by the UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GPS TOW sec | MP | | Integer(0..604799) | seconds<br>GPS time-of-week when the DGPS corrections were calculated | |
| Status/Health | MP | | Enumerated( UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data) | | |
| DGPS information | CV-*Status/Health* | 1 to <maxSat> | | If the Cipher information is included these fields are ciphered. | |
| >SatID | MP | | Enumerated (0…63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |
| >IODE | MP | | Integer(0..255) | | |
| >UDRE | MP | | Enumerated( UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE) | The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite. | |
| >PRC | MP | | Real(-655.04..655.04 by step of 0.32) | meters (different from [13]) | |
| >RRC | MP | | Real(-4.064..4.064 by step of 0.032) | meters/sec (different from [13]) | |
| >Delta PRC2 | MP | | Integer(-127..127) | In this version of the protocol this IE should be set to zero and the UE shall ignore it | |
| >Delta RRC2 | MP | | Real(-0.224..0.224 by step of 0.032) | In this version of the protocol this IE should be set to zero and the UE shall ignore it | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >Delta PRC3 | OP | | Integer(-127..127) | This IE should not be included in this version of the protocol and if received the UE shall ignore it | |
| >Delta RRC3 | OP | | Real(-0.224..0.224 by step of 0.032) | This IE should not be included in this version of the protocol and if received the UE shall ignore it | |
| >UDRE Growth Rate | OP | | Enumerated( UDRE growth 1.5, UDRE growth 2, UDRE growth 4, UDRE growth 6, UDRE growth 8, UDRE growth 10, UDRE growth 12, UDRE growth 16) | This field provides an estimate of the growth rate of uncertainty (1-$\sigma$) in the corrections. The UDRE at time value specified in the *Time of Validity for UDRE Growth Rate* field is the value of this field times the value of UDRE. | REL-9 |
| >Time of Validity for UDRE Growth Rate | OP | | Enumerated( val20sec, val40sec, val80sec, val160sec, val320sec, val640sec, val1280sec, val2560sec) | This field specifies the time when the *UDRE Growth Rate* field applies. | REL-9 |

| Condition | Explanation |
|---|---|
| *Status/Health* | This IE is mandatory present if "status" is not equal to "no data" or "invalid data", otherwise the IE is not needed. |

## 10.3.7.91a UE positioning GPS Ephemeris and Clock Correction parameters

This IE contains information for GPS ephemeris and clock correction.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| C/A or P on L2 | MP | | Bit string(2) | Code(s) on L2 Channel [12] |
| URA Index | MP | | Bit string(4) | User Range Accuracy [12] |
| SV Health | MP | | Bit string(6) | [12] |
| IODC | MP | | Bit string(10) | Issue of Data, Clock [12] |
| L2 P Data Flag | MP | | Bit string(1) | [12] |
| SF 1 Reserved | MP | | Bit string(87) | [12] |
| $T_{GD}$ | MP | | Bit string(8) | Estimated group delay differential [12] |
| $t_{oc}$ | MP | | Bit string(16) | apparent clock correction [12] |
| $af_2$ | MP | | Bit string(8) | apparent clock correction [12] |
| $af_1$ | MP | | Bit string(16) | apparent clock correction [12] |
| $af_0$ | MP | | Bit string(22) | apparent clock correction [12] |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| $C_{rs}$ | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [12] |
| $\Delta n$ | MP | | Bit string(16) | Mean Motion Difference From Computed Value (semi-circles/sec) [12] |
| $M_0$ | MP | | Bit string(32) | Mean Anomaly at Reference Time (semi-circles) [12] |
| $C_{uc}$ | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [12] |
| e | MP | | Bit string(32) | c |
| $C_{us}$ | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [12] |
| $(A)^{1/2}$ | MP | | Bit string(32) | Semi-Major Axis (meters)$^{1/2}$ [12] |
| $t_{oe}$ | MP | | Bit string(16) | Reference Time Ephemeris [12] |
| Fit Interval Flag | MP | | Bit string(1) | [12] |
| AODO | MP | | Bit string(5) | Age Of Data Offset [12] |
| $C_{ic}$ | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [12] |
| $OMEGA_0$ | MP | | Bit string(32) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [12] |
| $C_{is}$ | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [12] |
| $i_0$ | MP | | Bit string(32) | Inclination Angle at Reference Time (semi-circles) [12] |
| $C_{rc}$ | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [12] |
| $\omega$ | MP | | Bit string(32) | Argument of Perigee (semi-circles) [12] |
| OMEGAdot | MP | | Bit string(24) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [12] |
| Idot | MP | | Bit string(14) | Rate of Inclination Angle (semi-circles/sec) [12] |

## 10.3.7.91b UE positioning DGANSS corrections

This IE contains DGANSS corrections to be used by the UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| DGANSS Reference TIme | MP | | Integer(0..3570 by step of 30) | Seconds.<br>Time in GNSS system time (modulo 3600 s) when the DGANSS corrections were calculated | REL-7 |
| DGANSS information | MP | 1 to <maxSgnType> | | | REL-7 |
| >GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID. | REL-7 |
| >Status/Health | MP | | Enumerated( UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data) | | REL-7 |
| >DGANSS signal information | CV-*Status/Health* | 1 to <maxGANSSSat> | | If the Cipher information is included these fields are ciphered. | REL-7 |
| >>SatID | MP | | Integer (0…63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>IOD | MP | | Bit string(10) | 10 LSBs of Issue of Data field, which contains the identity of the GANSS Navigation Model. | REL-7 |
| >>UDRE | MP | | Enumerated( UDRE ≤ 1.0 m,<br>1.0m < UDRE ≤ 4.0m,<br>4.0m < UDRE ≤ 8.0m,<br>8.0m < UDRE) | The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite. | REL-7 |
| >>PRC | MP | | Real(-655.04..655.04 by step of 0.32) | meters<br>Pseudo-range corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS). | REL-7 |
| >>RRC | MP | | Real(-4.064..4.064 by step of 0.032) | meters/sec<br>Pseudo-range rate corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS). | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >>UDRE Growth Rate | OP | | Enumerated( UDRE growth 1.5, UDRE growth 2, UDRE growth 4, UDRE growth 6, UDRE growth 8, UDRE growth 10, UDRE growth 12, UDRE growth 16) | This field provides an estimate of the growth rate of uncertainty (1-σ) in the corrections. The UDRE at time value specified in the *Time of Validity for UDRE Growth Rate* field is the value of this field times the value of UDRE. | REL-9 |
| >>Time of Validity for UDRE Growth Rate | OP | | Enumerated( val20sec, val40sec, val80sec, val160sec, val320sec, val640sec, val1280sec, val2560sec) | This field specifies the time when the *UDRE Growth Rate* field applies. | REL-9 |

| Condition | Explanation |
|---|---|
| *Status/Health* | This IE is mandatory present if "status" is not equal to "no data" or "invalid data", otherwise the IE is not needed. |

## 10.3.7.91c UE positioning GANSS orbit model

This IE contains information for GANSS orbit model parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Keplerian Parameters ("Model 1") | OP | | | NOTE | REL-7 |
| >$t_{oe}$ | MP | | Bit String(14) | Time-of-Ephemeris in seconds, scale factor 60 [61] | REL-7 |
| >$\omega$ | MP | | Bit string(32) | Argument of Perigee (semi-circles) [61] | REL-7 |
| >$\Delta n$ | MP | | Bit string(16) | Mean Motion Difference From Computed Value (semi-circles/sec) [61] | REL-7 |
| >$M_0$ | MP | | Bit string(32) | Mean Anomaly at Reference Time (semi-circles) [61] | REL-7 |
| >OMEGAdot | MP | | Bit string(24) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [61] | REL-7 |
| >e | MP | | Bit string(32) | Eccentricity, scale factor $2^{-33}$ [61] | REL-7 |
| >Idot | MP | | Bit string(14) | Rate of Inclination Angle (semi-circles/sec) [61] | REL-7 |
| >sqrtA | MP | | Bit String(32) | Semi-Major Axis in (meters)$^{1/2}$, scale factor $2^{-19}$ [61] | REL-7 |
| >$i_0$ | MP | | Bit string(32) | Inclination Angle at Reference Time (semi-circles) [61] | REL-7 |
| >$OMEGA_0$ | MP | | Bit string(32) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [61] | REL-7 |
| >$C_{rs}$ | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [61] | REL-7 |
| >$C_{is}$ | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [61] | REL-7 |
| >$C_{us}$ | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [61] | REL-7 |
| >$C_{rc}$ | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [61] | REL-7 |
| >$C_{ic}$ | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [61] | REL-7 |
| >$C_{uc}$ | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [61] | REL-7 |

NOTE: This IE shall contain exactly one of the optional fields indicated by "NOTE".

## 10.3.7.91d UE positioning GANSS clock model

The IE contains fields needed to model the GANSS clock parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Satellite clock model ("Model 1") | MP | 1 to <maxSatClockModels> | | There may be more than one clock model included if defined in SIS ICD (e.g. two for Galileo) | REL-7 |
| >$t_{oc}$ | MP | | BIT STRING(14) | Time-of-Clock in seconds. Scale factor 60 seconds. | REL-7 |
| >$a_{f2}$ | MP | | BIT STRING (12) | sec/sec$^2$, scale factor $2^{-65}$ for Galileo | REL-7 |
| >$a_{f1}$ | MP | | BIT STRING (18) | sec/sec, scale factor $2^{-45}$ | REL-7 |
| >$a_{f0}$ | MP | | BIT STRING (28) | sec, scale factor $2^{-33}$ | REL-7 |
| >$T_{GD}$ | OP | | BIT STRING (10) | sec, scale factor $2^{-32}$ for Gaileo | REL-7 |
| >Model ID | OP | | Integer(0..1) | NOTE 1 | REL-7 |

NOTE 1: Coding of Model ID:

| GNSS | Value | Explanation |
|---|---|---|
| Galileo | 0 | I/Nav |
| | 1 | F/Nav |

## 10.3.7.91e UE positioning GANSS additional orbit models

This IE contains information for GANSS orbit model parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| NAV-Keplerian Parameters ("Model 2") | OP | | | NOTE | REL-8 |
| >URA Index | MP | | Bit String(4) | SV accuracy (dimensionless) [72] | REL-8 |
| >Fit Interval Flag | MP | | Bit String(1) | Fit interval indication (dimensionless) [72] | REL-8 |
| >$t_{oe}$ | MP | | Bit String(16) | Time of ephemeris (seconds) [72] | REL-8 |
| >$\omega$ | MP | | Bit String(32) | Argument of perigee (semi-circles) [72] | REL-8 |
| >$\Delta n$ | MP | | Bit String(16) | Mean motion difference from computed value (semi-circles/sec) [72] | REL-8 |
| >$M_0$ | MP | | Bit String(32) | Mean anomaly at reference time (semi-circles) [72] | REL-8 |
| >OMEGAdot | MP | | Bit String(24) | Rate of right ascension (semi-circles/sec) [72] | REL-8 |
| >e | MP | | Bit String(32) | Eccentricity (dimensionless) [72] | REL-8 |
| >Idot | MP | | Bit String(14) | Rate of inclination angle (semi-circles/sec) [72] | REL-8 |
| >sqrtA | MP | | Bit String(32) | Square root of semi-major axis (meters$^{1/2}$) [72] | REL-8 |
| >$i_0$ | MP | | Bit String(32) | Inclination angle at reference time (semi-circles) [72] | REL-8 |
| >$OMEGA_0$ | MP | | Bit String(32) | Longitude of ascending node of orbit plane at weekly epoch (semi-circles) [72] | REL-8 |
| >$C_{rs}$ | MP | | Bit String(16) | Amplitude of sine harmonic correction term to the orbit radius (meters) [72] | REL-8 |
| >$C_{is}$ | MP | | Bit String(16) | Amplitude of sine harmonic correction term to the angle of inclination (radians) [72] | REL-8 |
| >$C_{us}$ | MP | | Bit String(16) | Amplitude of sine harmonic correction term to the argument of latitude (radians) [72] | REL-8 |
| >$C_{rc}$ | MP | | Bit String(16) | Amplitude of cosine harmonic correction term to the orbit radius (meters) [72] | REL-8 |
| >$C_{ic}$ | MP | | Bit String(16) | Amplitude of cosine harmonic correction term to the angle of inclination (radians) [72] | REL-8 |
| >$C_{uc}$ | MP | | Bit String(16) | Amplitude of cosine harmonic correction term to the argument of latitude (radians) [72] | REL-8 |
| CNAV/CNAV-2 Keplerian Parameters ("Model 3") | OP | | | NOTE | REL-8 |
| >$t_{op}$ | MP | | Bit String(11) | Data predict time of week (seconds) [68,69,70,72] | REL-8 |
| >$URA_{oe}$ Index | MP | | Bit String(5) | SV accuracy (dimensionless) [68,69,70,72] | REL-8 |
| >$\Delta A$ | MP | | Bit String(26) | Semi-major axis difference at reference time (meters) [68,69,70,72] | REL-8 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >A_dot | MP | | Bit String(25) | Chane rate in semi-major axis (meters/sec) [68,69,70,72] | REL-8 |
| >$\Delta n_0$ | MP | | Bit String(17) | Mean motion difference from computed value at reference time (semi-circles/sec) [68,69,70,72] | REL-8 |
| >$\Delta n_0$_dot | MP | | Bit String(23) | Rate of mean motion difference from computed value (semi-circles/sec$^2$) [68,69,70,72] | REL-8 |
| >$M_{0\text{-}n}$ | MP | | Bit String(33) | Mean anomaly at reference time (semi-circles) [68,69,70,72] | REL-8 |
| >$e_n$ | MP | | Bit String(33) | Eccentricity (dimensionless) [68,69,70,72] | REL-8 |
| >$\omega_n$ | MP | | Bit String(33) | Argument of perigee (semi-circles) [68,69,70,72] | REL-8 |
| >$\Omega_{0\text{-}n}$ | MP | | Bit String(33) | Reference right ascension angle (semi-circles) [68,69,70,72] | REL-8 |
| >$\Delta\Omega$_dot | MP | | Bit String(17) | Rate of right ascension difference (semi-circles/sec) [68,69,70,72] | REL-8 |
| >$i_{o\text{-}n}$ | MP | | Bit String(33) | Inclination angle at reference time (semi-circles) [68,69,70,72] | REL-8 |
| >$I_{0\text{-}n}$_dot | MP | | Bit String(15) | Rate of inclination angle (semi-circles/sec) [68,69,70,72] | REL-8 |
| >$C_{is\text{-}n}$ | MP | | Bit String(16) | Amplitude of sine harmonic correction term to the angle of inclination (radians) [68,69,70,72] | REL-8 |
| >$C_{ic\text{-}n}$ | MP | | Bit String(16) | Amplitude of cosine harmonic correction term to the angle of inclination (radians) [68,69,70,72] | REL-8 |
| >$C_{rs\text{-}n}$ | MP | | Bit String(24) | Amplitude of sine harmonic correction term to the orbit radius (meters) [68,69,70,72] | REL-8 |
| >$C_{rc\text{-}n}$ | MP | | Bit String(24) | Amplitude of cosine harmonic correction term to the orbit radius (meters) [68,69,70,72] | REL-8 |
| >$C_{us\text{-}n}$ | MP | | Bit String(21) | Amplitude of sine harmonic correction term to the argument of latitude (radians) [68,69,70,72] | REL-8 |
| >$C_{uc\text{-}n}$ | MP | | Bit String(21) | Amplitude of cosine harmonic correction term to the argument of latitude (radians) [68,69,70,72] | REL-8 |
| GLONASS Earth-Centered, Earth-fixed Parameters ("Model 4") | OP | | | NOTE | REL-8 |
| >$E_n$ | MP | | Bit String(5) | Age of data (days) [73] | REL-8 |
| >P1 | MP | | Bit String(2) | Time interval between two adjacent values of $t_b$ (minutes) [73] | REL-8 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >P2 | MP | | Bit String(1) | Change of $t_b$ flag (dimensionless) [73] | REL-8 |
| >M | OP | | Bit String(2) | Type of satellite (dimensionless) [73] | REL-8 |
| > $x_n(t_b)$ | MP | | Bit String(27) | x-coordinate of satellite at time $t_b$ (kilometers) [73] | REL-8 |
| > $\dot{x}_n(t_b)$ | MP | | Bit String(24) | x-coordinate of satellite velocity at time $t_b$ (kilometers/sec) [73] | REL-8 |
| > $\ddot{x}_n(t_b)$ | MP | | Bit String(5) | x-coordinate of satellite acceleration at time $t_b$ (kilometers/sec$^2$) [73] | REL-8 |
| > $y_n(t_b)$ | MP | | Bit String(27) | y-coordinate of satellite at time $t_b$ (kilometers) [73] | REL-8 |
| > $\dot{y}_n(t_b)$ | MP | | Bit String(24) | y-coordinate of satellite velocity at time $t_b$ (kilometers/sec) [73] | REL-8 |
| > $\ddot{y}_n(t_b)$ | MP | | Bit String(5) | y-coordinate of satellite acceleration at time $t_b$ (kilometers/sec$^2$) [73] | REL-8 |
| > $z_n(t_b)$ | MP | | Bit String(27) | z-coordinate of satellite at time $t_b$ (kilometers) [73] | REL-8 |
| > $\dot{z}_n(t_b)$ | MP | | Bit String(24) | z-coordinate of satellite velocity at time $t_b$ (kilometers/sec) [73] | REL-8 |
| > $\ddot{z}_n(t_b)$ | MP | | Bit String(5) | z-coordinate of satellite acceleration at time $t_b$ (kilometers/sec$^2$) [73] | REL-8 |
| SBAS Earth-Centered, Earth-fixed Parameters ("Model 5") | OP | | | NOTE | REL-8 |
| >$t_0$ | CV-*ClockModel* | | Bit String(13) | Time of applicability (seconds) [71] | REL-8 |
| >Accuracy | MP | | Bit String(4) | (dimensionless) [71] | REL-8 |
| >$X_G$ | MP | | Bit String(30) | (meters) [71] | REL-8 |
| >$Y_G$ | MP | | Bit String(30) | (meters) [71] | REL-8 |
| >$Z_G$ | MP | | Bit String(25) | (meters) [71] | REL-8 |

NOTE: This IE shall contain exactly one of the optional fields indicated by "NOTE".

## 10.3.7.92 UE positioning GPS ionospheric model

The IE contains fields needed to model the propagation delays of the GPS signals through the ionosphere.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| $\alpha_0$ | MP | | Bit string(8) | Note 1 |
| $\alpha_1$ | MP | | Bit string(8) | Note 1 |
| $\alpha_2$ | MP | | Bit string(8) | Note 1 |
| $\alpha_3$ | MP | | Bit string(8) | Note 1 |
| $\beta_0$ | MP | | Bit string(8) | Note 2 |
| $\beta_1$ | MP | | Bit string(8) | Note 2 |
| $\beta_2$ | MP | | Bit string(8) | Note 2 |
| $\beta_3$ | MP | | Bit string(8) | Note 2 |

NOTE 1: The parameters αn are the coefficients of a cubic equation representing the amplitude of the vertical delay [12].

NOTE 2: The parameters βn are the coefficients of a cubic equation representing the period of the ionospheric model [12].

## 10.3.7.92a UE positioning GANSS ionospheric model

The IE contains fields needed to model the propagation delays of the GANSS signals through the ionosphere.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| $a_{i0}$ | MP | | Bit string(12) | This parameter is used as defined in [61] | REL-7 |
| $a_{i1}$ | MP | | Bit string(12) | This parameter is used as defined in [61] | REL-7 |
| $a_{i2}$ | MP | | Bit string(12) | This parameter is used as defined in [61] | REL-7 |
| GANSS Ionosphere Regional Storm Flags | OP | | | | REL-7 |
| >Storm Flag 1 | MP | | Boolean | This parameter is used as defined in [61] | REL-7 |
| >Storm Flag 2 | MP | | Boolean | This parameter is used as defined in [61] | REL-7 |
| >Storm Flag 3 | MP | | Boolean | This parameter is used as defined in [61] | REL-7 |
| >Storm Flag 4 | MP | | Boolean | This parameter is used as defined in [61] | REL-7 |
| >Storm Flag 5 | MP | | Boolean | This parameter is used as defined in [61] | REL-7 |

## 10.3.7.92b UE positioning GANSS additional ionospheric model

This IE contains parameters to model the propagation delays of the GANSS signals through the ionosphere.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Data ID | MP | | Bit String(2) | The value '11' indicates that the parameters have been generated by QZSS, and the parameters have been specialized and are applicable within the area defined in [72]. When Data ID has the value '00' it indicates the parameters are applicable worldwide [72]. All other values for Data ID are reserved. | REL-8 |
| $\alpha_0$ | MP | | Bit string(8) | seconds [72] | REL-8 |
| $\alpha_1$ | MP | | Bit string(8) | sec/semi-circle [72] | REL-8 |
| $\alpha_2$ | MP | | Bit string(8) | sec/(semi-circle)$^2$ [72] | REL-8 |
| $\alpha_3$ | MP | | Bit string(8) | sec/(semi-circle)$^3$ [72] | REL-8 |
| $\beta_0$ | MP | | Bit string(8) | seconds [72] | REL-8 |
| $\beta_1$ | MP | | Bit string(8) | sec/semi-circle [72] | REL-8 |
| $\beta_2$ | MP | | Bit string(8) | sec/(semi-circle)$^2$ [72] | REL-8 |
| $\beta_3$ | MP | | Bit string(8) | sec/(semi-circle)$^3$ [72] | REL-8 |

## 10.3.7.92c UE positioning GANSS Earth orientation parameters

This IE provides parameters to construct the ECEF and ECI coordinate transformation as defined in [68]. The Earth Orientation Parameters (EOP) indicate the relationship between the Earth's rotational axis and WGS-84 reference system.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| $t_{EOP}$ | MP | | Bit String(16) | EOP data reference time (seconds) [68] | REL-8 |
| PM_X | MP | | Bit String(21) | X-axis polar motion value at reference time (arc-seconds) [68] | REL-8 |
| PM_X_dot | MP | | Bit String(15) | X-axis polar motion drift at reference time (arc-seconds/day) [68] | REL-8 |
| PM_Y | MP | | Bit String(21) | Y-axis polar motion value at reference time (arc-seconds) [68] | REL-8 |
| PM_Y_dot | MP | | Bit String(15) | Y-axis polar motion drift at reference time (arc-seconds/day) [68] | REL-8 |
| ΔUT1 | MP | | Bit String(31) | UT1-UTC difference at reference time (seconds) [68] | REL-8 |
| ΔUT1_dot | MP | | Bit String(19) | Rate of UT1-UTC difference at reference time (seconds/day) [68] | REL-8 |

## 10.3.7.93 UE positioning GPS measured results

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *Reference Time* | MP | | | | |
| >UTRAN reference time | | | | | |
| >>UE GPS timing of cell frames | MP | | Integer(0..3715891199999 99) | GPS Time of Week in units of $1/16^{th}$ UMTS chips according to [19]. 33209832177664 spare values are needed. | |
| >>CHOICE *mode* | MP | | | | |
| >>>FDD | | | | | |
| >>>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GPS TOW-SFN relationship. | |
| >>>TDD | | | | | |
| >>>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GPS TOW-SFN relationship. | |
| >>Reference SFN | MP | | Integer(0..4095) | The SFN for which the location is valid. This IE indicates the SFN at which the UE timing of cell frames is captured. | |
| >GPS reference time only | | | | | |
| >>GPS TOW msec | MP | | Integer(0..6.048*$10^8$-1) | GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). | |
| UE Positioning GPS ReferenceTime Uncertainty | OP | | UE positioning GPS reference time uncertainty 10.3.7.96a | | REL-7 |
| Measurement Parameters | MP | 1 to <maxSat> | | | |
| >Satellite ID | MP | | Enumerated(0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |
| >$C/N_o$ | MP | | Integer(0..63) | the estimate of the carrier-to- | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | noise ratio of the received signal from the particular satellite used in the measurement. It is given in units of dB-Hz (typical levels will be in the range of 20 – 50 dB-Hz). | |
| >Doppler | MP | | Integer(-32768..32768) | Hz, scale factor 0.2. | |
| >Whole GPS Chips | MP | | Integer(0..1022) | Unit in GPS chips.<br>Whole value of the UE GPS code-phase measurement, where increasing binary values of the field signify increasing measured pseudoranges. The UE GPS code-phase measurement is divided into the fields "Whole GPS Chips" and "Fractional GPS Chips". | |
| >Fractional GPS Chips | MP | | Integer(0..($2^{10}$-1)) | Scale factor $2^{-10}$<br>Fractional value of the UE GPS code-phase measurement. | |
| >Multipath Indicator | MP | | Enumerated(NM, low, medium, high) | Note 1. | |
| >Pseudorange RMS Error | MP | | Enumerated(range index 0..range index 63) | Note 2. | |

NOTE 1: The following table gives the mapping of the multipath indicator field.

| Value | Multipath Indication |
|---|---|
| NM | Not measured |
| Low | MP error < 5m |
| Medium | 5m < MP error < 43m |
| High | MP error > 43m |

NOTE 2: The following table gives the bitmapping of the Pseudorange RMS Error field.

| Range Index | Mantissa | Exponent | Floating-Point value, $x_i$ | Pseudorange value, P |
|---|---|---|---|---|
| 0 | 000 | 000 | 0.5 | P < 0.5 |
| 1 | 001 | 000 | 0.5625 | 0.5 <= P < 0.5625 |
| I | X | Y | $0.5 * (1 + x/8) * 2^y$ | $x_{i-1}$ <= P < $x_i$ |
| 62 | 110 | 111 | 112 | 104 <= P < 112 |
| 63 | 111 | 111 | -- | 112 <= P |

## 10.3.7.93a UE positioning GANSS measured results

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE Reference Time | MP | | | | REL-7 |
| >UTRAN reference time | | | | | REL-7 |
| >>UE GANSS timing of cell frames | MP | | Integer(0..8639999999750 by step of 250) | GANSS Time of Day in ns | REL-7 |
| >>GANSS Time Id | OP | | INTEGER (0..7) | Absence means Galileo. For coding description see NOTE 2. | |
| >>GANSS TOD Uncertainty | OP | | Integer(0..127) | Coding as in 10.3.7.96a | REL-7 |
| >>CHOICE mode | MP | | | | REL-7 |
| >>>FDD | | | | | REL-7 |
| >>>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GANSS TOD-SFN relationship. | REL-7 |
| >>>TDD | | | | | REL-7 |
| >>>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GANSS TOD-SFN relationship. | REL-7 |
| >>Reference SFN | MP | | Integer(0..4095) | The SFN for which the location is valid. This IE indicates the SFN at which the UE timing of cell frames is captured. | REL-7 |
| >GANSS reference time only | | | | | REL-7 |
| >>GANSS Time Id | OP | | INTEGER (0..7) | Absence means Galileo. For coding description see NOTE 2. | |
| >>GANSS TOD msec | MP | | Integer(0..3599999) | GANSS Time of Day (modulo 1 hour) in milliseconds (rounded down to the nearest millisecond unit). | REL-7 |
| >>GANSS TOD Uncertainty | OP | | Integer(0..127) | Coding as in 10.3.7.96a | REL-7 |
| GANSS Generic Measurement Information | MP | 1 to <maxGANSS> | | | REL-7 |
| >GANSS ID | OP | | Integer(0..7) | Absence of this IE means Galileo. For coding description, see Note 1 in 10.3.7.90b. | REL-7 |
| >GANSS Signal Measurement Information | MP | 1 to <maxSgnType> | | | REL-7 |
| >>GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID. | REL-7 |
| >>GANSS Code Phase Ambiguity | OP | | Integer (0..31) | The "GANSS Code Phase Ambiguity" field gives the ambiguity of the code phase measurement. It is given in ms and is an integer between 0 and 31. The Total Code Phase for a satellite k (Satk) is given modulo this "GANSS Code Phase Ambiguity" and is reconstructed with:<br>Code_Phase_Tot(Satk) = Code_Phase (Satk)+ Integer Code Phase(Satk)<br>If there is no code phase ambiguity, the "GANSS Code Phase Ambiguity" shall be set to 0. | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | The field is optional. If "GANSS Code Phase Ambiguity" and "GANSS Code Phase Ambiguity Extension" is absent, the default value is 1ms. | |
| >>GANSS Code Phase Ambiguity Extension | OP | | Integer(32..127) | If the total GANSS code phase ambiguity is greater than 31 ms, then this field shall be used. The definition is the same as for the "GANSS Code Phase Ambiguity" field except the value range is from 32 to 127 ms. | REL-8 |
| >>GANSS Measurement Parameters | MP | 1 to <maxGANSSSat> | | | REL-7 |
| >>>Satellite ID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>>$C/N_o$ | MP | | Integer(0..63) | The estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in units of dB-Hz (typical levels will be in the range of 20 – 50 dB-Hz). | REL-7 |
| >>>Multipath Indicator | MP | | Enumerated( NM, low, medium, high) | Coding as in 10.3.7.93 | REL-7 |
| >>>Carrier Quality Indicaton | OP | | Bit string(2) | Note 1 | REL-7 |
| >>>GANSS Code Phase | MP | | Integer(0..$2^{21}$-1) | Scale factor $2^{-21}$<br>Code phase for the particular satellite signal at the time of measurement in the units of milliseconds. Increasing binary values of the field signify increasing measured pseudoranges. GNSS specific code phase measurements (e.g. chips) are converted into unit of ms by dividing the measurements by the nominal values of the measured signal chipping rate. | REL-7 |
| >>>GANSS Integer Code Phase | OP | | Integer(0..63) | In ms<br>Indicates the integer millisecond part of the code phase, that is expressed modulo the GANSS Code Phase Ambiguity. | REL-7 |
| >>>GANSS Integer Code Phase Extension | OP | | Integer(64..127) | If the total GANSS integer code phase is greater than 63 ms, then this field shall be used. The definition is the same as for the GANSS Integer Code Phase field except the value range is from 64 to 127 ms. | REL-8 |
| >>>Code Phase RMS Error | MP | | Enumerated( range index 0..range index 63) | Coding as in Note 2 of 10.3.7.93 | REL-7 |
| >>>Doppler | MP | | Integer(- | m/s, scale factor 0.04. Doppler | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | 32768..32767) | measured by the UE for the particular satellite signal | |
| >>>ADR | OP | | Integer(0..33554431) | Meters, scale factor $2^{-10}$ ADR measurement measured by the UE for the particular satellite signal. | REL-7 |

NOTE 1: Coding of Carrier quality indication:

| MSB | LSB | Explanation |
|---|---|---|
| 0 | | Carrier phase not continuous |
| 1 | | Carrier phase continuous |
| | 0 | Data direct |
| | 1 | Data Inverted |

NOTE 2: Coding of GANSS Time Id:

| Value of GANSS Time id | Explanation | Version |
|---|---|---|
| 0 | GPS system time | REL-8 |
| 1 | QZSS system time | |
| 2 | GLONASS system time | |
| 3-7 | Reserved | |

## 10.3.7.94 UE positioning GPS navigation model

This IE contain information required to manage the transfer of precise navigation data to the GPS-capable UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Satellite information | MP | 1 to <maxSat> | | |
| >SatID | MP | | Enumerated(0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |
| >Satellite Status | MP | | Enumerated(NS_NN, ES_SN, ES_NN, REVD) | NOTE |
| >GPS Ephemeris and Clock Correction parameters | CV-*Satellite status* | | UE positioning GPS Ephemeris and Clock Correction parameters 10.3.7.91a | |

NOTE: The UE shall interpret enumerated symbols as follows.

| Value | Indication |
|---|---|
| NS_NN | New satellite, new Navigation Model |
| ES_SN | Existing satellite, same Navigation Model |
| ES_NN | Existing satellite, new Navigation Model |
| REVD | Reserved |

| Condition | Explanation |
|---|---|
| *Satellite status* | The IE is not needed if the IE "Satellite status" is ES_SN and mandatory present otherwise. |

## 10.3.7.94a UE positioning GANSS navigation model

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Non-Broadcast Indication | OP | | Enumerated (TRUE) | If this IE is present, GANSS navigation model is not derived from satellite broadcast | REL-7 |
| Satellite information | MP | 1 to <maxGANSSSat> | | | REL-7 |
| >SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >SV Health | MP | | Bit string(5) | NOTE | REL-7 |
| >IOD | MP | | Bit string(10) | | REL-7 |
| >GANSS Clock Model | MP | | UE positioning GANSS clock model 10.3.7.91d | | REL-7 |
| > GANSS Orbit Model | MP | | UE positioning GANSS orbit model 10.3.7.91c | | REL-7 |

NOTE: The Health values are GNSS specific. For Galileo, the UE shall interpret bit string as follows:

| Parameter | Bit | Type | Explanation |
|---|---|---|---|
| E5a Data Validity Status | 0 | Boolean | |
| E5b Data Validity Status | 1 | Boolean | |
| E1-B Data Validity Status | 2 | Boolean | |
| E5a Signal Health Status | 3-4 | Bit string | See [61], Table 67 |

## 10.3.7.94b UE positioning GANSS additional navigation models

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Non-Broadcast Indication | OP | | Enumerated (TRUE) | If this IE is present, GANSS navigation model is not derived from satellite broadcast | REL-8 |
| Satellite information | MP | 1 to <maxGANSSSat> | | | REL-8 |
| >SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-8 |
| >SV Health | MP | | Bit string(6) | NOTE 1 | REL-8 |
| >IOD | MP | | Bit string(11) | NOTE 2 | REL-8 |
| >GANSS additional clock models | MP | | UE positioning GANSS additional clock models 10.3.7.91f | | REL-8 |
| >GANSS additional orbit models | MP | | UE positioning GANSS additional orbit models 10.3.7.91e | | REL-8 |

NOTE 1: The SV Health values are GNSS specific as identified by the GANSS ID :

| GANSS | SV Health Bit String(6) | | | | | |
|---|---|---|---|---|---|---|
| | **Bit 1 (MSB)** | **Bit 2** | **Bit 3** | **Bit 4** | **Bit 5** | **Bit 6 (LSB)** |
| Modernized GPS | L1C Health [70] | L1 Health [68,69] | L2 Health [68,69] | L5 Health [68,69] | '0' (reserved) | '0' (reserved) |
| SBAS | Ranging On (0), Off(1) [71] | Corrections On (0), Off (1) [71] | Integrity On (0), Off(1) [71] | '0' (reserved) | '0' (reserved) | '0' (reserved) |
| QZSS QZS-L1 | SV Health [72] | | | | | |
| QZSS QZS-L1C/L2C/L5 | L1C Health [72] | L1 Health [72] | L2 Health [72] | L5 Health [72] | '0' (reserved) | '0' (reserved) |
| GLONASS | $B_n$ (MSB) [73, page 23] | $F_T$ [73, Table 4.4] | | | | '0' (reserved) |

NOTE 2: The IOD values are GNSS specific as identified by the GANSS ID :

| GANSS | IOD Bit String(11) | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | **Bit 1 (MSB)** | **Bit 2** | **Bit 3** | **Bit 4** | **Bit 5** | **Bit 6** | **Bit 7** | **Bit 8** | **Bit 9** | **Bit 10** | **Bit 11 (LSB)** |
| Modernized GPS | $t_{oe}$ (seconds, scale factor 300, range 0 – 604500) [68, 69, 70] | | | | | | | | | | |
| SBAS | '0' | '0' | '0' | Issue of Data ([71], Message Type 9) | | | | | | | |
| QZSS QZS-L1 | '0' | Issue of Data, Clock [72] | | | | | | | | | |
| QZSS QZS-L1C/L2C/L5 | $t_{oe}$ (seconds, scale factor 300, range 0 – 604500) [72] | | | | | | | | | | |
| GLONASS | '0' | '0' | '0' | '0' | $t_b$ (minutes, scale factor 15, range 0 – 1425) [73] | | | | | | |

## 10.3.7.95 UE positioning GPS real-time integrity

This IE contains parameters that describe the real-time status of the GPS constellation.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Satellite information | MP | 1 to <maxSat> | | |
| >BadSatID | MP | | Enumerated( 0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |

## 10.3.7.95a Void

## 10.3.7.95b UE positioning GANSS real-time integrity

This IE contains parameters that describe the real-time status of the GANSS constellation.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Satellite information | MP | 1 to <maxGANSSSat> | | | REL-7 |
| >Bad GANSS SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >Bad GANSS Signal ID | OP | | Bit string (8) | Absence of this IE means that all signals of the specific SV are bad. NOTE | REL-7 |

NOTE: Coding of Bad GANSS Signal ID

| GNSS | Bit | Explanation | Version |
|---|---|---|---|
| Galileo | 1 | E1 | REL-7 |
| | 2 | E5A | |
| | 3 | E5B | |
| | 4 | E6 | |
| | 5 | E5A + E5B | |
| | 6-8 | Spare | |
| Modernized GPS | 1 | L1C | REL-8 |
| | 2 | L2C | |
| | 3 | L5 | |
| | 4-8 | Spare | |
| SBAS | 1 | L1 | |

| | 3 | QZS-L2C | |
| | 4 | QZS-L5 | |
| | 5-8 | Spare | |
| GLONASS | 1 | G1 | |
| | 2 | G2 | |
| | 3 | G3 | |
| | 4-8 | Spare | |

## 10.3.7.96 UE positioning GPS reference time

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GPS Week | MP | | Integer(0..1023) | | |
| GPS TOW msec | MP | | Integer(0..6.048*$10^8$-1) | GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| UTRAN GPS reference time | OP | | | | |
| >UTRAN GPS timing of cell frames | MP | | Integer(0..2322431999999) | UTRAN GPS timing of cell frames in steps of 1 chip | |
| >CHOICE *mode* | OP | | | | |
| >>FDD | | | | | |
| >>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >>TDD | | | | | |
| >>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >SFN | MP | | Integer(0..4095) | The SFN which the UTRAN GPS timing of cell frames time stamps. | |
| UE Positioning GPS ReferenceTime Uncertainty | OP | | UE positioning GPS reference time uncertainty 10.3.7.96a | NOTE 1 | REL-7 |
| SFN-TOW Uncertainty | OP | | Enumerated (lessThan10, moreThan10) | This field indicates the uncertainty of the relation GPS TOW/SFN. lessThan10 means the relation is accurate to at least 10 ms. NOTE 1 | |
| $T_{UTRAN-GPS}$ drift rate | OP | | Integer (0, 1, 2, 5, 10, 15, 25, 50, -1, -2, -5, -10, -15, -25, -50) | in 1/256 chips per sec. | |
| GPS TOW Assist | OP | 1 to <maxSat> | | | |
| >SatID | MP | | Enumerated(0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |
| >TLM Message | MP | | Bit string(14) | | |
| >TLM Reserved | MP | | Bit string(2) | | |
| >Alert | MP | | Boolean | | |
| >Anti-Spoof | MP | | Boolean | | |
| NOTE 1: If the IE "UE Positioning GPS ReferenceTime Uncertainty" is present, the IE "SFN-TOW Uncertainty" is not needed and shall be ignored. | | | | | |

## 10.3.7.96o UE positioning GANSS reference time

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GANSS Day | OP | | Integer(0..8191) | The sequential number of days from the origin of the GNSS system time indicated by GANSS Time ID modulo 8192 days (about 22 years). NOTE. | REL-7 |
| GANSS TOD | MP | | Integer(0..86399) | GANSS Time of Day in seconds | REL-7 |
| GANSS TOD Uncertainty | OP | | Integer(0..127) | Coding as in subclause 10.3.7.96a | REL-7 |
| GANSS Time ID | OP | | Integer (0..7) | Absence of this IE means Galileo, values 0-7 are reserved for future use | REL-7 |
| | | | | Absence of this IE means Galileo,<br>For coding description see NOTE 2 in 10.3.7.93a. | REL-8 |
| UTRAN GANSS reference time | OP | | | | REL-7 |

NOTE: Definition of GNSS system time origin:

| GANSS | GNSS System Time Origin |
|---|---|
| Galileo System Time | August 22, 1999; 00:00:00 UTC(BIPM) |
| GPS System Time | January 6, 1980; 00:00:00 UTC(USNO) |
| QZSS System Time | January 6, 1980; 00:00:00 UTC(USNO) |
| GLONASS System Time | January 1, 1996; 03:00:00 UTC(RU) |

### 10.3.7.96a UE positioning GPS reference time uncertainty

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE Positioning GPS Reference Time Uncertainty | MP | | Integer (0..127) | This element provides the accuracy of the provided GPS time, or alternatively the accuracy of the provided relation between GPS and UTRAN time. If "GPS TOW" is the provided GPS time, or alternatively the GPS time corresponding to the UTRAN time provided, then the true GPS time lies in the interval ["GPS TOW" – "GPS Reference Time Uncertainty", "GPS TOW" + "GPS Reference Time Uncertainty"].<br>The uncertainty *r*, expressed in microseconds, is mapped to a number K with the following formula:<br>$r = C*(((1+x)^K)-1)$<br>with C = 0.0022 and x = 0.18.<br>To encode any higher value of the uncertainty than that corresponding to K=127 in the formula above, or to indicate an undefined value of the "GPS TOW", the same value, K=127, shall be used. | REL-7 |

NOTE: This IE is not needed in the SRNS RELOCATION INFO message.

### 10.3.7.97 UE positioning GPS UTC model

The UTC Model field contains a set of parameters needed to relate GPS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| $A_1$ | MP | | Bit string(24) | sec/sec [12] |
| $A_0$ | MP | | Bit string(32) | seconds [12] |
| $t_{ot}$ | MP | | Bit string(8) | seconds [12] |
| $WN_t$ | MP | | Bit string(8) | weeks [12] |
| $\Delta t_{LS}$ | MP | | Bit string(8) | seconds [12] |
| $WN_{LSF}$ | MP | | Bit string(8) | weeks [12] |
| DN | MP | | Bit string(8) | days [12] |
| $\Delta t_{LSF}$ | MP | | Bit string(8) | seconds [12] |

### 10.3.7.97a UE positioning GANSS time model

The GANSS time model field contains a set of parameters needed to relate GANSS time for the GANSS indicated by "GANSS ID" to selected time reference indicated by "GNSS_TO_ID".

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GANSS Time Model Reference Time | MP | | Integer(0..604784 by step of 16) | GANSS reference time of week for GANSS Time Model, given in GNSS specific system time, with a 16s scale factor. | REL-7 |
| $T_{A0}$ | MP | | Integer (-2147483648 .. 2147483647) | Seconds, scale factor $2^{-35}$ | REL-7 |
| $T_{A1}$ | OP | | Integer (-8388608 .. 8388607) | sec/sec, scale factor $2^{-51}$ | REL-7 |
| $T_{A2}$ | OP | | Integer (-64 .. 63) | sec/sec$^2$ , scale factor $2^{-68}$ | REL-7 |
| GNSS_TO_ID | MP | | Enumerated (GPS, | GNSS Time Offset ID Seven spare values needed. | REL-7 |
| | | | Galileo, QZSS, GLONASS) | GNSS Time Offset ID Four spare values needed. | REL-8 |
| Week Number | OP | | Integer(0..8191) | Reference week of GANSS Time Model given in GNSS specific system time | REL-7 |

## 10.3.7.97b UE positioning GANSS data bit assistance

This element provides data bit assistance data for specific satellite signals for data wipe-off.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GANSS TOD | MP | | Integer(0..59) | Reference time (modulo 1 minute) of the first bit of the data in IE "Data Bits", in seconds | REL-7 |
| Data Bit Assistance List | MP | 1 to <maxGANSSSat> | | The following fields are present N_Sat times, with 1 ≤ N_Sat ≤ maxGANSSSat | REL-7 |
| >Satellite ID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >Data bit assistance Sgn List | MP | 1 to <maxSgnType> | | The following fields are present N_Sgn times, with 1 ≤ N_Sgn ≤ maxSgnType | REL-7 |
| >>GANSS Signal ID | MP | | GANSS Signal ID 10.3.3.45a | | REL-7 |
| >>Data Bits | MP | | Bit string (1..1024) | Raw data bits as transmitted from a specific satellite at the time indicated by GANSS_TOD.<br>In case of Galileo, it contains the FEC encoded and interleaved modulation symbols. The logical levels 1 and 0 correspond to signal levels -1 and +1, respectively. N_BIT is the actual number of elements in Data bits: 1 ≤ N_BIT ≤ 1024. | REL-7 |
| | | | | In case of Modernized GPS L1C, it contains the encoded and interleaved modulation symbols as defined in [70] section 3.2.3.1.<br>In case of Modernized GPS L2C, it contains either the NAV data modulation bits, the FEC encoded NAV data modulation symbols, or the FEC encoded CNAV data modulation symbols, dependent on the current signal configuration of this satellite as defined in [68, Table 3-III].<br>In case of Modernized GPS L5, it contains the FEC encoded CNAV data modulation symbols as defined in [69].<br>In case of SBAS, it contains the FEC encoded data modulation symbols as defined in [71].<br>In case of QZSS QZS-L1, it contains the NAV data modulation bits as defined in [72] section 5.2. In case of QZSS QZS-L1C, it contains the encoded and interleaved modulation symbols as defined in [72] section 5.3. In case of QZSS QZS-L2C, it contains the encoded modulation symbols as defined in [72] section 5.5. In case of QZSS QZS-L5, it contains the | REL-8 |

| | | | | | |
|---|---|---|---|---|---|
| | | | | encoded modulation symbols as defined in [72] section 5.6. In case of GLONASS, it contains the 100 sps differentially Manchester encoded modulation symbols as defined in [73] section 3.3.2.2. | |

## 10.3.7.97c UE positioning GANSS UTC model

The UTC Model field contains a set of parameters needed to relate GANSS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| $A_1$ | MP | | Bit string(24) | |
| $A_0$ | MP | | Bit string(32) | |
| $t_{ot}$ | MP | | Bit string(8) | |
| $\Delta t_{LS}$ | MP | | Bit string(8) | |
| $WN_t$ | MP | | Bit string(8) | |
| $WN_{LSF}$ | MP | | Bit string(8) | |
| DN | MP | | Bit string(8) | |
| $\Delta t_{LSF}$ | MP | | Bit string(8) | |

For a GANSS Id referring to Galileo, the definition and the unit of the elements are provided in [61].

## 10.3.7.97d UE positioning GANSS additional UTC models

This element contains several sets of parameters needed to relate GNSS system time to Universal Time Coordinate (UTC), as defined in [68, 69, 70, 71, 72, 73]. Only one parameter set can be included in one UE positioning GANSS additional UTC models and which set of parameters to include depends on the GANSS-ID and UE capabilities.

The UTC time standard, UTC(k), is GNSS specific. E.g., if GANSS ID indicates QZSS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate QZST to UTC(NICT). If GANSS ID indicates Modernized GPS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GPS system time to UTC(USNO). If GANSS ID indicates GLONASS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GLONASS system time to UTC(RU). If GANSS ID indicates SBAS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate SBAS network time for the SBAS indicated by SBAS ID to the UTC standard defined by the UTC Standard ID.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Model-1 | OP | | | NOTE | REL-8 |
| >$A_{0-n}$ | MP | | Bit String(16) | Bias coefficient of GNSS time scale relative to UTC time scale (seconds) [68,69,70,72] | REL-8 |
| >$A_{1-n}$ | MP | | Bit String(13) | Drift coefficient of GNSS time scale relative to UTC time scale (sec/sec) [68,69,70,72] | REL-8 |
| >$A_{2-n}$ | MP | | Bit String(7) | Drift rate correction coefficient of GNSS time scale relative to UTC time scale ($sec/sec^2$) [68,69,70,72] | REL-8 |
| >$\Delta t_{LS}$ | MP | | Bit String(8) | Current or past leap second count (seconds) [68,69,70,72] | REL-8 |

| >UTC Standard ID | MP | | Bit String(3) | dimensionless NOTE 1 | REL-8 |

NOTE: This IE shall contain exactly one of the optional fields indicated by "NOTE".

NOTE 1: Coding of UTC Standard ID:

| Value of UTC Standard ID | UTC Standard |
|---|---|
| 0 | UTC as operated by the Communications Research Laboratory (CRL), Tokyo, Japan |
| 1 | UTC as operated by the National Institute of Standards and Technology (NIST) |
| 2 | UTC as operated by the U. S. Naval Observatory (USNO) |
| 3 | UTC as operated by the International Bureau of Weights and Measures (BIPM) |
| 4-7 | Reserved for future definition |

## 10.3.7.97e UE positioning GANSS SBAS ID

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| SBAS ID | MP | | Enumerated( WAAS, EGNOS, MSAS, GAGAN) | Four spare values are needed. | REL-8 |

## 10.3.7.97f UE positioning GANSS auxiliary information

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *GANSS-ID* | | | | | REL-8 |
| >GANSS-ID-1 | | | | This choice may only be present if GANSS ID indicated “Modernized GPS” | REL-8 |
| >>Aux Info List | MP | 1 to <maxGANSS Sat> | | | REL-8 |
| >>>Sat ID | MP | | Integer(0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-8 |
| >>>Signals Available | MP | | Bit String(8) | This field indicates the ranging signals supported by the satellite indicated by | REL-8 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | Sat ID. This field is given as a bit string as shown in NOTE 1 for Modernized GPS. If a bit is set to '1' it indicates that the satellite identified by Sat ID transmits ranging signals according to the signal correspondence in NOTE 1. If a bit is set to '0' it indicates that the corresponding signal is not supported on the satellite identified by Sat ID | |
| >GANSS-ID-3 | | | | This choice may be present if GANSS ID indicated "GLONASS" | REL-8 |
| >>Aux Info List | MP | 1 to <maxGANSS Sat> | | | REL-8 |
| >>>Sat ID | MP | | Integer(0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-8 |
| >>>Signals Available | MP | | Bit String(8) | This field indicates the ranging signals supported by the satellite indicated by Sat ID. This field is given as a bit string as shown in NOTE 1 for GLONASS. If a bit is set to '1' it indicates that the satellite identified by Sat ID transmits ranging signals according to the signal correspondence in NOTE 1. If a bit is set to '0' it indicates that the corresponding signal is not supported on the satellite identified by Sat ID. | REL-8 |
| >>>Channel Number | MP | | Integer(-7..13) | This field indicates the GLONASS carrier frequency number of the satellite identified by Sat ID, as defined in [73]. | REL-8 |

NOTE 1: Coding of Signals Available

| GANSS ID | Signals Available Bit String(8) | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | Bit 1 (MSB) | Bit 2 | Bit 3 | Bit 4 | Bit 5 | Bit 6 | Bit 7 | Bit 8 (LSB) |
| 1 Modernized GPS | L1C | L2C | L5 | '0' Spare | '0' Spare | '0' Spare | '0' Spare | '0' Spare |
| 3 GLONASS | G1 | G2 | G3 | '0' Spare | '0' Spare | '0' Spare | '0' Spare | '0' Spare |

### 10.3.7.98 UE positioning IPDL parameters

This IE contains parameters for the IPDL mode. The use of this parameters is described in [29].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *mode* | | | | | REL-4 |
| >FDD | | | | | REL-4 |
| >>IP spacing | MP | | Integer(5,7,10,15,20,30,40,50) | See [29] | |
| >>IP length | MP | | Integer(5,10) | See [29] | |
| >>IP offset | MP | | Integer(0..9) | See [29] | |
| >>Seed | MP | | Integer(0..63) | See [29] | |
| >TDD | | | | | REL-4 |
| >>IP spacing | MP | | Integer(30,40,50,70,100) | See [33] | REL-4 |
| >>IP_Start | MP | | Integer(0..4095) | See [33] | REL-4 |
| >>IP_Slot | MP | | Integer(0..14) | See [33] | REL-4 |
| >>IP_PCCPCH | CV-*channel* | | Boolean | See [33] | REL-4 |
| Burst mode parameters | OP | | | | |
| >Burst Start | MP | | Integer(0..15) | See [29] and [33] | |
| >Burst Length | MP | | Integer(10..25) | See [29] and [33] | |
| >Burst freq | MP | | Integer(1..16) | See [29] and [33] | |

| Condition | Explanation |
|---|---|
| *channel* | This IE is present only if the idle slot carries the PCCPCH |

| *IPDLs* | This IE is mandatory present if IPDLs are applied and not needed otherwise. |

## 10.3.7.106a UE positioning OTDOA neighbour cell info for UE-based

This IE gives approximate cell timing in order to decrease the search window, as well as the cell locations and fine cell timing for UE based OTDOA.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE positioning OTDOA neighbour cell info | MP | | UE positioning OTDOA neighbour cell info 10.3.7.106 | | |
| Cell Position | MD | | | Default is the same as previous cell | |
| >Relative North | OP | | Integer(-20000..20000) | Seconds of angle, scale factor 0.03. Relative position compared to reference cell. | |
| >Relative East | OP | | Integer(-20000..20000) | Seconds of angle, scale factor 0.03. Relative position compared to reference cell. | |
| >Relative Altitude | OP | | Integer(-4000..4000) | Relative altitude in meters compared to ref. cell. | |
| Fine SFN-SFN | MP | | Real(0..0.9375 in steps of 0.0625) | Gives finer resolution | |
| UE positioning Relative Time Difference Quality | MP | | UE positioning OTDOA quality 10.3.7.109a | Quality of the relative time difference between neighbour and reference cell. | |
| Round Trip Time | OP | | Real (876.00 .. 2923.875 in steps of 0.0625) | In chips. Included if cell is in active set. | |
| Round Trip Time Extension | CV-*FDD* | | Real (0 .. 4392.125 in steps of 0.0625) | In chips. Included if cell is in active set. Default = 0. NOTE. | REL-7 |
| NOTE: Total Round Trip Time = IE "Round Trip Time" + IE "Round Trip Time Extension". | | | | | |

| Condition | Explanation |
|---|---|
| *FDD* | The IE is optionally present in FDD, otherwise it is not needed. |

## 10.3.7.107 UE positioning OTDOA quality

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Std Resolution | MP | | Bit string(2) | Std Resolution field includes the resolution used in Std of OTDOA Measurements field. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| | | | | Encoding on two bits as follows:<br>'00' 10 meters<br>'01' 20 meters<br>'10' 30 meters<br>'11' Reserved |
| Number of OTDOA Measurements | MP | | Bit string(3) | The 'Number of OTDOA measurements' field indicates how many OTDOA measurements have been used in the UE to determine the sample standard deviation of the measurements.<br>Following 3 bit encoding is used:<br>'001' 5-9<br>'010' 10-14<br>'011' 15-24<br>'100' 25-34<br>'101' 35-44<br>'110' 45-54<br>'111' 55 or more<br>Special case:<br>'000':In this case the field 'Std of OTDOA measurements' contains the std of the reported SFN-SFN otd value = $\sqrt{E[(x-\mu)^2]}$, where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x. This std can be used irrespective of the number of measurements and reporting of the number of measurements is not needed. Also other measurements such as Ec/No or Rx levels can be utilised in this case to evaluate the 'Std of OTDOA measurements' reported in this IE. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Std of OTDOA Measurements | MP | | Bit string(5) | Std of OTDOA Measurements field includes sample standard deviation of OTDOA measurements (when number of measurements is reported in 'Number of OTDOA measurements field') or standard deviation of the reported SFN-SFN otd value = $\sqrt{E[(x-\mu)^2]}$, where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x (when '000' is given in 'Number of OTDOA measurements' field).<br>Following linear 5 bit encoding is used:<br>'00000' 0 - (R*1-1) meters<br>'00001' R*1 – (R*2-1) meters<br>'00010' R*2 – (R*3-1) meters<br>…<br>'11111' R*31 meters or more<br>where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m,…,620+ m. |

## 10.3.7.108 UE positioning OTDOA reference cell info

This IE defines the cell used for time references in all OTDOA measurements.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| SFN | OP | | Integer (0..4095) | Time stamp (SFN of Reference Cell) of the SFN-SFN relative time differences and SFN-SFN drift rates. Included if any SFN-SFN drift value is included in IE UE positioning OTDOA neighbour cell info. |
| CHOICE *mode* | MP | | | |
| >FDD | | | | |
| >>Primary CPICH info | MP | | Primary CPICH info 10.3.6.60 | |
| >TDD | | | | |
| >>cell and channel ID | MP | | Cell and Channel Identity info 10.3.6.8a | Identifies the channel to be measured on. |
| Frequency info | MD | | Frequency info 10.3.6.36 | Default value is the existing value of frequency information. This IE shall always be set to default value |
| CHOICE *PositioningMode* | MP | | | |
| >UE based | | | | |
| >UE assisted | | | | (no data) |
| IPDL parameters | OP | | UE positioning IPDL parameters 10.3.7.98 | If this element is not included there are no idle periods present |

## 10.3.7.108a UE positioning OTDOA reference cell info for UE-based

This IE defines the cell used for time references in all OTDOA measurements for UE-based methods.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE positioning OTDOA reference cell info | MP | | UE positioning OTDOA reference cell info 10.3.7.108 | | |
| CHOICE *Cell Position* | OP | | | The position of the antenna that defines the cell. Used for the UE based method. | |
| >Ellipsoid | | | | | |
| >>Ellipsoid point | MP | | Ellipsoid point 10.3.8.4a | | |
| >Ellipsoid with altitude | | | | | |
| >>Ellipsoid point with altitude | MP | | Ellipsoid point with altitude 10.3.8.4b | | |
| Round Trip Time | OP | | Real (876.00 .. 2923.875 in steps of 0.0625) | In chips. | |
| Round Trip Time Extension | CV-*FDD* | | Real (0 .. 4392.125 in steps of 0.0625) | In chips. Default = 0. NOTE. | REL-7 |
| NOTE: Total Round Trip Time = IE "Round Trip Time" + IE "Round Trip Time Extension". | | | | | |

| Condition | Explanation |
|---|---|
| *FDD* | The IE is optionally present in FDD, otherwise it is not needed. |

## 10.3.7.109 UE positioning position estimate info

The purpose of this IE is to provide the position estimate from the UE to the network, if the UE is capable of determining its own position.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *Reference Time* | MP | | | | |
| >UTRAN GPS reference time | | | | | |
| >>UE GPS timing of cell frames | MP | | Integer(0.. 3715891199 9999) | GPS Time of Week in units of 1/16$^{th}$ UMTS chips according to [19]. 33209832177664 spare values are needed. | |
| >>CHOICE *mode* | MP | | | | |
| >>>FDD | | | | | |
| >>>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >>>TDD | | | | | |
| >>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GPS TOW-SFN relationship. | |
| >>Reference SFN | MP | | Integer(0..40 95) | The SFN for which the location is valid. This IE indicates the SFN at which the UE timing of cell frame is captured. | |
| >GPS reference time only | | | | | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >>GPS TOW msec | MP | | Integer(0..6.048*10$^8$-1) | GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). | |
| >Cell timing | | | | | |
| >>SFN | MP | | Integer(0..4095) | SFN during which the position was calculated. | |
| >>CHOICE *mode* | MP | | | | |
| >>>FDD | | | | | |
| >>>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for SFN | |
| >>>TDD | | | | | |
| >>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies reference cell for SFN | |
| >UTRAN GANSS reference time | | | | | REL-7 |
| >>UE GANSS timing of cell frames | MP | | Integer(0..8639999999750 by step of 250) | GANSS Time of Day in ns | REL-7 |
| >>GANSS Time ID | OP | | Integer(0..7) | Absence of this field means Galileo.<br>For coding description see NOTE 2 in 10.3.7.93a. | REL-7 |
| >>GANSS TOD Uncertainty | OP | | Integer(0..127) | Coding as in 10.3.7.96a | REL-7 |
| >>CHOICE *mode* | MP | | | | REL-7 |
| >>>FDD | | | | | REL-7 |
| >>>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GANSS TOD-SFN relationship | REL-7 |
| >>>TDD | | | | | REL-7 |
| >>>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GANSS TOD-SFN relationship. | REL-7 |
| >>Reference SFN | MP | | Integer(0..4095) | The SFN for which the location is valid. This IE indicates the SFN at which the UE timing of cell frame is captured. | REL-7 |
| >GANSS reference time only | | | | | REL-7 |
| >>GANSS TOD msec | MP | | Integer(0..3599999) | GANSS Time of Day in milliseconds (rounded down to the nearest millisecond unit). | REL-7 |
| >>GANSS Time ID | OP | | Integer(0..7) | Absence of this field means Galileo.<br>For coding description see NOTE 2 in 10.3.7.93a. | REL-7 |
| CHOICE *Position estimate* | MP | | | The position estimate is provided in WGS-84 reference system. | |
| >Ellipsoid Point | | | Ellipsoid Point; 10.3.8.4a | | |
| >Ellipsoid point with uncertainty circle | | | Ellipsoid point with uncertainty circle 10.3.8.4d | | |
| >Ellipsoid point with uncertainty ellipse | | | Ellipsoid point with uncertainty ellipse 10.3.8.4e | | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| >Ellipsoid point with altitude | | | Ellipsoid point with altitude 10.3.8.4b | | |
| >Ellipsoid point with altitude and uncertainty ellipsoid | | | Ellipsoid point with altitude and uncertainty ellipsoid 10.3.8.4c | | |
| Position Data | MP | | Bit string(16) | For each bit, if set to '1', indicates that respective GNSS or position system was used for position calculation.<br>Bit 0: OTDOA<br>bit 1: GPS<br>bit 2: Galileo<br>bit 3-15: reserved | REL-7 |
| | | | | bit 3: SBAS<br>bit 4: Modernized GPS<br>bit 5: QZSS<br>bit 6: GLONASS<br>bit 7-15: reserved | REL-8 |
| CHOICE *Velocity estimate* | OP | | | | REL-7 |
| >Horizontal Velocity | | | Horizontal Velocity 10.3.8.4h | | REL-7 |
| >Horizontal with Vertical Velocity | | | Horizontal with Vertical Velocity 10.3.8.4i | | REL-7 |
| >Horizontal Velocity with Uncertainty | | | Horizontal Velocity with Uncertainty 10.3.8.4j | | REL-7 |
| >Horizontal with Vertical Velocity and Uncertainty | | | Horizontal with Vertical Velocity and Uncertainty 10.3.8.4k | | REL-7 |
| UE Positioning GPS ReferenceTime Uncertainty | CV-*Tutran-gps* | | UE positioning GPS reference time uncertainty 10.3.7.96a | | REL-7 |

| Condition | Explanation |
|---|---|
| *Tutran-gps* | This IE is optionally present if "UTRAN GPS reference time" is included and not needed otherwise. |

### 10.3.7.109a UE positioning Relative Time Difference quality

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Relative Time Difference Std Resolution | MP | | Bit string(2) | Std Resolution field includes the resolution used in Std of Relative Time Difference field. Encoding on two bits as follows:<br>'00' 10 meters<br>'01' 20 meters<br>'10' 30 meters<br>'11' Reserved |
| Std of Relative Time Difference | MP | | Bit string(5) | Std of Relative Time difference field includes standard deviation of (SFN-SFN relative time difference + Fine SFN-SFN). Following linear 5 bit encoding is used:<br>'00000' 0 - (R*1-1) meters<br>'00001' R*1 – (R*2-1) meters<br>'00010' R*2 – (R*3-1) meters<br>…<br>'11111' R*31 meters or more<br>where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m,…,620+ m. |

### 10.3.7.110 UE positioning reporting criteria

The triggering of the event-triggered reporting for a UE positioning measurement.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Parameters required for each event | MP | 1 to <maxMeasEvent> | | Note: need corrected to MP in Rel-7 to align with ASN.1. | |
| >Amount of reporting | MP | | Integer(1, 2, 4, 8, 16, 32, 64,infinite) | | |
| >Report first fix | MP | | Boolean | If TRUE the UE reports the position once the measurement control is received, and then each time an event is triggered. | |
| >Measurement interval | MP | | Integer(5,15,60,300,900,1800,3600,7200) | Indicates how often the UE should make the measurement<br>In seconds | |
| >CHOICE *Event ID* | MP | | | | |
| >>7a | | | | | |
| >>>Threshold Position Change | MP | | Integer(10, 20,30,40,50,100,200, 300,500,1000,2000,5000,10000,20000,50000,100000) | Meters. Indicated how much the position should change compared to last reported position fix in order to trigger the event. | |
| >>7b | | | | | |
| >>>Threshold SFN-SFN change | MP | | Real(0.25, 0.5,1,2,3,4, 5,10,20,50, 100,200,500,1000,2000,5000) | Chips. Indicates how much the SFN-SFN measurement of ANY measured cell is allowed to change before the event is triggered. | |
| >>7c | | | | | |
| >>>Threshold SFN-GPS TOW | MP | | Integer(1,2,3,5,10,20, 50,100) | Time in ms. When the GPS TOW and SFN timer has drifted apart more than the specified value the event is triggered. | |
| | | | | Time in micro seconds (NOTE 1). | REL-7 |
| >>7d | | | | | REL-7 |
| >>>Threshold SFN-GANSS TOW | MP | | Integer(1,2,3,5,10,20, 50,100) | Time in micro seconds. When the GANSS TOW and SFN timer has drifted apart more than the specified value the event is triggered. | REL-7 |
| NOTE 1: In previous versions of the protocol, the IE "Threshold SFN-GPS TOW" was provided in units of milli seconds. If the information is provided in units of micro seconds, the UE shall ignore any information provided in units of milli seconds. | | | | | |

## 10.3.7.111 UE positioning reporting quantity

The purpose of the element is to express the allowed/required location method(s), and to provide information desired QoS.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| Method Type | MP | | Enumerated( UE assisted, UE based, | | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | UE based is preferred but UE assisted is allowed, UE assisted is preferred but UE based is allowed) | | |
| Positioning Methods | MP | | Enumerated( OTDOA, GPS, OTDOA or GPS, Cell ID) | | |
| Response Time | MP | | Integer(1,2,4, 8, 16, 32, 64, 128) | This IE shall be ignored. | |
| Horizontal Accuracy | CV-*MethodType* | | Bit string(7) | The uncertainty is derived from the "uncertainty code" k by $r = 10*(1.1^k-1)$ in meters. | |
| Vertical Accuracy | CV-*MethodType* | | Bit string(7) | The uncertainty is derived from the "uncertainty code" k by $r = 45*(1.025^k-1)$ in meters. | |
| GPS timing of Cell wanted | MP | | Boolean | If TRUE the SRNC wants the UE to report the SFN-GPS timing of the reference cell. This is however optional in the UE. | |
| Multiple Sets | MP | | Boolean | This IE shall be ignored. | |
| Additional Assistance Data Request | MP | | Boolean | TRUE indicates that the UE is requested to send the IE "GPS Additional Assistance Data Request" and/or the “IE "GANSS Additional Assistance Data Request" (if the IE “GANSS Positioning Methods” is included) when the IE "UE positioning Error" is present in the UE positioning measured results. FALSE indicates that the UE shall use the assistance data available. | |
| Environment Characterisation | OP | | Enumerated( possibly heavy multipath and NLOS conditions, no or light multipath and usually LOS conditions, not defined or mixed environment) | One spare value is needed. | |
| Velocity Requested | OP | | Enumerated (TRUE) | If this element is present the UE is requested to send a velocity estimate | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---|---|---|---|---|---|
| GANSS Positioning Methods | OP | | Bit string(16) | For each bit, if set to '1', indicates that respective GNSS is allowed.<br>bit 0: GPS<br>bit 1: Galileo<br>bit 2-15: reserved for future GNSSes<br><br>Note 1 | REL-7 |
| | | | | bit 2: SBAS (WAAS, EGNOS, MSAS, GAGAN)<br>bit 3: Modernized GPS (L1C, L2C, L5)<br>bit 4: QZSS<br>bit 5: GLONASS<br>bit 6-15: reserved for future GNSSes<br><br>Note 1 | REL-8 |
| GANSS timing of Cell wanted | OP | | Bit string(8) | Each bit refers to a GANSS. Bit 0 is for Galileo. Other bits are reserved.<br>If one bit is set to one the SRNC wants the UE to report the SFN-GANSS timing of the reference cell. This is however optional in the UE. | REL-7 |
| | | | | Bit 1 is for Modernized GPS;<br>Bit 2 is for QZSS;<br>Bit 3 is for GLONASS;<br>Other bits are reserved.<br>If one bit is set to one the SRNC wants the UE to report the SFN-GANSS timing of the reference cell. This is however optional in the UE.<br>If more than one bit is set to one, the UE will select the GANSS among the allowed GANSS for the SFN-GANSS timing of the reference cell in the measurement report. | Rel-8 |
| GANSS Carrier-Phase Measurement Requested | OP | | Bit string(8) | Each bit refers to a GANSS. Bit 0 is for Galileo. Other bits are reserved.<br>This is however optional in the UE. | REL-7 |
| | | | | Bit 1 is for SBAS;<br>Bit 2 is for Modernized GPS;<br>Bit 3 is for QZSS;<br>Bit 4 is for GLONASS;<br>Other bits are reserved.<br>This is however optional in the UE. | Rel-8 |
| GANSS Multi-frequency Measurement Requested | OP | | Bit String(8) | Each bit refers to a GANSS.<br>Bit 0 is for Galileo;<br>Bit 1 is for SBAS;<br>Bit 2 is for Modernized GPS;<br>Bit 3 is for QZSS;<br>Bit 4 is for GLONASS;<br>Other bits are reserved.<br>This is however optional in the UE. | REL-8 |

| Condition | Explanation |
|---|---|
| *Method Type* | The IE is optional if the IE "Method Type" is "UE assisted"; otherwise it is mandatory present. |

NOTE 1: Bit 0 of this bitmap shall not be the only one set to 1.

### 10.3.7.112 $T_{ADV}$ info

NOTE: Only for 1.28 Mcps TDD.

$T_{ADV}$ indicates the difference between the Rx timing and Tx timing of a UE.

| Information Element/group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| $T_{ADV}$ | MP | | Integer (0..2047, | As defined in [20]. | REL-4 |
| | | | 2048..8191) | | REL-7 |
| SFN | MP | | Integer(0..4095) | SFN during which the $T_{ADV}$ measurement was performed. | REL-4 |

### 10.3.7.113 UTRA priority info list

Contains priority based reselection information for UTRA.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UTRA Serving Cell | MP | | | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio –1>) | 0 is the lowest priority and maxPrio-1 is the highest | REL-8 |
| >$S_{prioritysearch1}$ | MP | | Integer (0..62 by step of 2) | dB | REL-8 |
| >$S_{prioritysearch2}$ | MD | | Integer (0..7 by step of 1) | dB, default value is 0 | REL-8 |
| >$Thresh_{serving,low}$ | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >$Thresh_{serving,low2}$ | MD | | Integer (0..31) | Ec/N0, dB, default value is 0 | REL-9 |
| UTRAN FDD Frequencies | OP | 1 to < maxNumFDDFreqs> | | | REL-8 |
| >UARFCN | MP | | Integer(0..16383) | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio –1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >$Thresh_{x, high}$ | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >$Thresh_{x, low}$ | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >QqualminFDD | MD | | Integer (-24..0) | Ec/N0, [dB] Default value is Qqualmin for the serving cell | REL-8 |
| >QrxlevminFDD | MD | | Integer (-119..-25 by step of 2) | RSCP, [dBm] Default value is Qrxlevmin for the serving cell | REL-8 |
| UTRAN TDD Frequencies | OP | 1 to < maxNumTDDFreqs> | | | REL-8 |
| >UARFCN | MP | | Integer(0..16383) | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio –1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >$Thresh_{x, high}$ | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >$Thresh_{x, low}$ | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >QrxlevminTDD | MD | | Integer (-119..-25 by step of 2) | RSCP, [dBm] Default value is Qrxlevmin for the serving cell | REL-8 |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

### 10.3.7.114 GSM priority info list

Contains priority based reselection information for GSM.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| GSM Priority Info | MP | 1 to <maxNumGSMCellGroup> | | | REL-8 |
| >GSM cell group List | MP | | GSM cell group 10.3.7.9a | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio–1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >QrxlevminGSM | MP | | Integer (-115..-25 by step of 2) | GSM RSSI, [dBm] | REL-8 |
| >$Thresh_{x, high}$ | MP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |
| >$Thresh_{x, low}$ | MP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

### 10.3.7.115 E-UTRA frequency and priority info list

Contains information about neighbour E-UTRA frequencies (with associated blacklists), together with priority based reselection information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E-UTRA frequency and priority | | 1 to <maxNumEUTRAFreqs> | | | REL-8 |
| >EARFCN | MP | | Integer(0..65535) | EARFCN of the downlink carrier frequency [36.101] | REL-8 |
| >Measurement Bandwidth | MD | | Enumerated( 6, 15, 25, 50, 75, 100) | Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, $N_{RB}$ [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6. | REL-8 |
| >priority | MP | | Integer (0..<maxPrio–1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >QrxlevminEUTRA | MP | | Integer (-140..-44 by step of 2) | RSRP, [dBm] | REL-8 |
| >$Thresh_{x, high}$ | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >$Thresh_{x, low}$ | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >QqualminEUTRA | MD | | Integer (-34..-3) | RSRQ, dB default value is negative infinity | REL-9 |
| >$Thresh_{x, high2}$ | OP | | Integer (0..31) | RSRQ, dB | REL-9 |
| >$Thresh_{x, low2}$ | OP | | Integer (0..31) | RSRQ, dB | REL-9 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUTRACellPerFreq> | | | REL-8 |
| >>Physical Cell identity | MP | | Integer (0..503) | A list of blacklisted cells can be signalled per frequency | REL-8 |
| >E-UTRA detection | MP | | Boolean | 'TRUE' means that the UE may detect the presence of a E-UTRA cell and report to NAS. NOTE 1. | REL-8 |
| NOTE 1: If the value of "E-UTRA detection" is not identical across the frequency layers, UE behaviour is unspecified. | | | | | |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

NOTE: The network should ensure that priorities for which both $Thresh_{x,high2}$ and $Thresh_{x,low2}$ are provided are always different from the priorities for which both $Thresh_{x,high2}$ and $Thresh_{x,low2}$ are not provided.

## 10.3.7.116 Intra-frequency cell info list on secondary UL frequency

NOTE: For FDD only.

Contains the information for the list of measurement objects for an intra-frequency measurement on secondary uplink frequency.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | measurement.<br>Bit 0 is the first/leftmost bit of the bit string.<br>Absence of this IE means all the timeslots can be used for measurement. | |

### 10.3.7.127 E-UTRA SI Acquisition

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E-UTRA carrier frequency | MP | | Integer (0..65535) | EARFCN of the downlink carrier frequency [64] | REL-9 |
| Physical Cell identity | MP | | Integer (0..503) | | REL-9 |

### 10.3.7.128 E-UTRA Results for SI Acquisition

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CGI-Info | MP | | | | REL-9 |
| >PLMN Identity | MP | | PLMN identity 10.3.1.11 | | REL-9 |
| > Cell Identity | MP | | Bit string (28) | Formatted and coded according to [67]. The first/leftmost bit of the bit string contains the most significant bit of the Cell Identity. | REL-9 |
| >Tracking Area Code | MP | | Bit string (16) | Setting specified in [67]. The first/leftmost bit of the bit string contains the most significant bit of the Tracking Area Code. | REL-9 |
| CSG Identity | OP | | CSG Identity 10.3.2.8 | | REL-9 |
| CSG Member indication | OP | | Enumerated(member) | | REL-9 |

## 10.3.8 Other Information elements

### 10.3.8.1 BCCH modification info

Indicates modification of the System Information on BCCH.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| MIB Value tag | MP | | MIB Value tag 10.3.8.9 | |
| BCCH modification time | OP | | Integer (0.. 4088 in step of 8) | All SFN values in which MIB may be mapped are allowed. |

### 10.3.8.2 BSIC

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Base transceiver Station Identity Code (BSIC) | MP | | | [11] |
| >Network Colour Code (NCC) | MP | | bit string(3) | The first/leftmost bit of the bit string contains the most significant bit of the NCC. |
| >Base Station Colour Code (BCC) | MP | | bit string(3) | The first/leftmost bit of the bit string contains the most significant bit of the BCC. |

### 10.3.8.3 CBS DRX Level 1 information

This information element contains the CBS discontinuous reception information to be broadcast for CBS DRX Level 1 calculations in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Period of CTCH allocation (N) | MP | | Integer (1..256) | $M_{TTI} \leq N \leq 256$, N multiple of $M_{TTI}$ | |
| CBS frame offset (K) | MP | | Integer (0..255) | $0 \leq K \leq N-1$, K multiple of $M_{TTI}$ | |
| Period of BMC scheduling messages (P) | CV-*SIB5* | | Integer (8, 16, 32, 64, 128, 256) | | REL-6 |

| Condition | Explanation |
|---|---|
| *SIB5* | The IE is optional when the IE "CBS DRX Level 1 information" in SIB5, otherwise the IE is not needed |

### 10.3.8.4 Cell Value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cell Value tag | MP | | Integer (1..4) | |

### 10.3.8.4a Ellipsoid point

This IE contains the description of an ellipsoid point as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer $(0...2^{23}-1)$ | The IE value ($N$) is derived by this formula: $N \leq 2^{23} X /90 < N+1$ $X$ being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer $(-2^{23}...2^{23}-1)$ | The IE value ($N$) is derived by this formula: $N \leq 2^{24} X /360 < N+1$ $X$ being the longitude in degree (-180°..+180°) |

### 10.3.8.4b Ellipsoid point with Altitude

This IE contains the description of an ellipsoid point with altitude as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer ($0...2^{23}-1$) | The IE value (*N*) is derived by this formula:<br>$N \leq 2^{23} X /90 < N+1$<br>*X* being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer ($-2^{23}...2^{23}-1$) | The IE value (*N*) is derived by this formula:<br>$N \leq 2^{24} X /360 < N+1$<br>*X* being the longitude in degree (-180°..+180°) |
| Altitude Direction | MP | | Enumerated (Height, Depth) | |
| Altitude | MP | | Integer ($0..2^{15}-1$) | The IE value (*N*) is derived by this formula:<br>$N \leq a < N+1$<br>*a* being the altitude in metres |

### 10.3.8.4c Ellipsoid point with Altitude and uncertainty ellipsoid

This IE contains the description of an ellipsoid point with altitude and uncertainty ellipsoid as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer ($0...2^{23}-1$) | The IE value (*N*) is derived by this formula:<br>$N \leq 2^{23} X /90 < N+1$<br>*X* being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer ($-2^{23}...2^{23}-1$) | The IE value (*N*) is derived by this formula:<br>$N \leq 2^{24} X /360 < N+1$<br>*X* being the longitude in degree (-180°..+180°) |
| Altitude Direction | MP | | Enumerated (Height, Depth) | |
| Altitude | MP | | Integer ($0..2^{15}-1$) | The IE value (*N*) is derived by this formula:<br>$N \leq a < N+1$<br>*a* being the altitude in metres |
| Uncertainty semi-major | MP | | Integer (0...127) | The uncertainty *r* is derived from the "uncertainty code" *k* by<br>$r = 10x(1.1^{k}-1)$ |
| Uncertainty semi-minor | MP | | Integer (0...127) | The uncertainty *r* is derived from the "uncertainty code" *k* by<br>$r = 10x(1.1^{k}-1)$ |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Orientation of major axis | MP | | Integer (0..89) | The IE value (*N*) is derived by this formula:<br>$2N \le a < 2(N+1)$<br>*a* being the orientation in degree (0°.. 179°) |
| Uncertainty Altitude | MP | | Integer(0..127) | The uncertainty in altitude, h, expressed in metres is mapped from the IE value (*K*), with the following formula:<br>$h = C\left((1+x)^K - 1\right)$<br>with $C = 45$ and $x = 0.025$. |
| Confidence | MP | | Integer (0..100) | in percentage |

## 10.3.8.4d Ellipsoid point with uncertainty Circle

This IE contains the description of an ellipsoid point with an uncertainty circle as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer $(0...2^{23}-1)$ | The IE value (N) is derived by this formula:<br>$N \le 2^{23} X / 90 < N+1$<br>*X* being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer $(-2^{23}...2^{23}-1)$ | The IE value (*N*) is derived by this formula:<br>$N \le 2^{24} X / 360 < N+1$<br>*X* being the longitude in degree (-180°..+180°) |
| Uncertainty Code | MP | | Integer (0...127) | The uncertainty *r* is derived from the "uncertainty code" *k* by<br>$r = 10x(1.1^k-1)$ |

## 10.3.8.4e Ellipsoid point with uncertainty Ellipse

This IE contains the description of an ellipsoid point with an uncertainty ellipse as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer $(0...2^{23}-1)$ | The IE value (N) is derived by this formula: $N \leq 2^{23} X /90 < N+1$ $X$ being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer $(-2^{23}...2^{23}-1)$ | The IE value (N) is derived by this formula: $N \leq 2^{24} X /360 < N+1$ $X$ being the longitude in degree (-180°..+180°) |
| Uncertainty semi-major | MP | | Integer (0...127) | The uncertainty $r$ is derived from the "uncertainty code" $k$ by $r = 10x(1.1^{k}-1)$ |
| Uncertainty semi-minor | MP | | Integer (0...127) | The uncertainty $r$ is derived from the "uncertainty code" $k$ by $r = 10x(1.1^{k}-1)$ |
| Orientation of major axis | MP | | Integer (0..89) | The IE value ($N$) is derived by this formula: $2N \leq a < 2(N+1)$ $a$ being the orientation in degree (0°.. 179°) |
| Confidence | MP | | Integer (0..100) | in percentage |

## 10.3.8.4ea ETWS information

Indication of an ETWS primary notification. The ETWS warning type is used to notify upper layers.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Warning Type | MP | | Octet string (1..2) | IE "Warning Type" as defined in [77] | REL-8 |
| Message Identifier | MP | | Octet string (2) | IE "Message Identifier" as defined in [77] | REL-8 |
| Serial Number | MP | | Octet string (2) | IE "Serial Number" as defined in [77] | REL-8 |

## 10.3.8.4eb Void

## 10.3.8.4f GERAN system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >>> GERAN System Info | MP | 1 to <maxGERAN SI> | | | REL-5 |
| >>>> GERAN system info block | MP | | Octet string(1..23) | The first octet contains octet 1 of the GERAN system information block, the second octet contains | REL-5 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | octet 2 of the GERAN system information block and so on. | |

## 10.3.8.4g GSM Target Cell Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| GSM Target Cell Info List | MP | 1 to <maxGSMTargetCells> | | | REL-6 |
| >BCCH ARFCN | MP | | Integer (0..1023) | [45] | REL-6 |
| >Band indicator | MP | | Enumerated (DCS 1800 band used, PCS 1900 band used) | Indicates how to interpret the BCCH ARFCN | REL-6 |
| >BSIC | OP | | BSIC 10.3.8.2 | | REL-6 |

## 10.3.8.4h Horizontal Velocity

This IE contains the description of a horizontal velocity as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |
| Horizontal Speed | MP | | Integer ($0...2^{11}-1$) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:<br>$N \le h < N + 0.5$, for (N=0)<br>$N-0.5 \le h < N + 0.5$, for ($0<N<2^{11}-1$)<br>$N - 0.5 \le h$, for ($N = 2^{11}-1$) |

## 10.3.8.4i Horizontal with Vertical Velocity

This IE contains the description of horizontal with vertical velocity as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Vertical Speed direction | MP | | ENUMERATED (upward, downward) | |
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Horizontal Speed | MP | | Integer ($0...2^{11}-1$) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:<br>$N \le h < N + 0.5$, for (N=0)<br>$N-0.5 \le h < N + 0.5$, for ($0<N<2^{11}-1$)<br>$N - 0.5 \le h$, for ($N = 2^{11}-1$) |
| Vertical Speed | MP | | Integer (0..255) | The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula:<br>$N \le v < N + 0.5$, for (N=0)<br>$N-0.5 \le v < N + 0.5$, for ($0<N<2^{8}-1$)<br>$N - 0.5 \le v$, for ($N = 2^{8}-1$) |

## 10.3.8.4j Horizontal Velocity with Uncertainty

This IE contains the description of horizontal velocity with uncertainty as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |
| Horizontal Speed | MP | | Integer ($0...2^{11}-1$) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:<br>$N \le h < N + 0.5$, for (N=0)<br>$N-0.5 \le h < N + 0.5$, for ($0<N<2^{11}-1$)<br>$N - 0.5 \le h$, for ($N = 2^{11}-1$) |
| Horizontal Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |

## 10.3.8.4k Horizontal with Vertical Velocity and Uncertainty

This IE contains the description of horizontal with vertical velocity and uncertainty as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Vertical Speed direction | MP | | ENUMERATED (upward, downward) | |
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| Horizontal Speed | MP | | Integer ($0...2^{11}-1$) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is:<br>$N \le h < N + 0.5$, for (N=0)<br>$N-0.5 \le h < N + 0.5$, for ($0<N<2^{11}-1$)<br>$N - 0.5 \le h$, for ($N = 2^{11}-1$) |
| Vertical Speed | MP | | Integer (0..255) | The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula:<br>$N \le v < N + 0.5$, for (N=0)<br>$N-0.5 \le v < N + 0.5$, for ($0<N<2^{8}-1$)<br>$N - 0.5 \le v$, for ($N = 2^{8}-1$) |
| Horizontal Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |
| Vertical Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |

## 10.3.8.4L E-UTRA Target Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E-UTRA Target Frequency Info List | MP | 1 to <maxEUTRATargetFreqs> | | | REL-8 |
| >DL Carrier frequency | MP | | Integer (0..65535) | EARFCN of the downlink carrier frequency [63] | REL-8 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUTRACellPerFreq> | | | REL-8 |
| >>Physical Cell identity | MP | | Integer (0..503) | | REL-8 |

## 10.3.8.4m HNB Name

This information element is used to carry the name of the home NodeB, coded in UTF-8 with variable number of bytes per character [75].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HNB Name | MP | | Octet string (1 to < maxHNBNameSize>) | Carries the name of the Home NodeB with a maximum of maxHNBNameSize octets, using UTF-8 coding. | REL-8 |

### 10.3.8.5 Inter-RAT change failure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-RAT change failure cause | MP | | Enumerated( Configuration unacceptable, physical channel failure, protocol error, unspecified) | Four spare values are needed. |
| Protocol error information | CV-*ProtErr* | | Protocol error information 10.3.8.12 | |

| Condition | Explanation |
|---|---|
| *ProtErr* | The IE is mandatory present if the IE "Inter-RAT change failure cause" has the value "Protocol error" and not needed otherwise. |

### 10.3.8.6 Inter-RAT handover failure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Inter-RAT handover failure cause | MD | | Enumerated( Configuration unacceptable, physical channel failure, protocol error, inter-RAT protocol error, unspecified) | Default value is "unspecified".<br><br>Eleven spare values are needed. |
| Protocol error information | CV-*ProtErr* | | Protocol error information 10.3.8.12 | |

| Condition | Explanation |
|---|---|
| *ProtErr* | The IE is mandatory present if the IE "Inter-RAT handover failure cause" has the value "Protocol error" and not needed otherwise. |

### 10.3.8.7 Inter-RAT UE radio access capability

This Information Element contains the inter-RAT UE radio access capability that is structured and coded according to the specification used for the corresponding system type.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *system* | MP | | | | |
| >GSM | | | | | |
| >>Mobile Station Classmark 2 | MP | | Octet string (5) | This IE is formatted as 'TLV' and is coded in the same way as the *Mobile Station Classmark 2* information element in [5]. The first octet is the *Mobile station classmark 2 IEI* and its value shall be set to 33H (except in the case of NOTE 2). The second octet is the *Length of mobile station classmark 2* and its value shall be set to 3. The octet 3 contains the first octet of the value part of the *Mobile Station Classmark 2* information element, the octet 4 contains the second octet of the value part of the *Mobile Station Classmark 2* information element and so on. For each of these octets, the first/ leftmost/ most significant bit of the octet contains b8 of the corresponding octet of the *Mobile Station Classmark 2.* See NOTE 2. | |
| >>Mobile Station Classmark 3 | MP | | Octet string (1..32) | This IE is formatted as 'V' and is coded in the same way as the value part in the *Mobile station classmark 3* information element in [5]. The first octet contains octet 1 of the value part of *Mobile station classmark 3*, the second octet contains octet 2 of the value part of *Mobile station classmark 3* and so on. See NOTE 1, NOTE 2. | |
| >>MS Radio Access Capability | OP | | Octet string (1..64) | This IE is formatted as 'V' and is coded in the same way as the value part in the *MS Radio Access Capability* information element in [5]. | REL-6 |
| >GERAN Iu | | | | | REL-5 |
| >>MS GERAN Iu mode Radio Access Capability | MP | | Bit string (1..170) | Formatted and coded according to [53]. The first/leftmost/most significant bit of the bit string contains bit 8 of the first octet of the IE. | REL-5 |
| >cdma2000 | | | | | |
| >>cdma2000Message | MP | 1.to.<maxInterSysMessages> | | | |
| >>>MSG_TYPE(s) | MP | | Bit string (8) | Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the MSG_TYPE. | |
| >>>cdma2000Messagepayload(s) | MP | | Bit string (1..512) | Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the first octet of the cdma2000 message. | |
| >E-UTRA | | | | | REL-8 |
| >>UE E-UTRA Capability | MP | | Octet string | Formatted and coded according to the *UE-EUTRA-Capability* information element in [67]. The first/leftmost/most significant bit of the first octet of the octetstring contains bit 8 of octet 1 of the | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | | *UE-EUTRA-Capability* IE. | |
| NOTE 1: The value part is specified by means of CSN.1, which encoding results in a bit string, to which final padding may be appended upto the next octet boundary [5]. The first/ leftmost bit of the CSN.1 bit string is placed in the first/ leftmost/ most significant bit of the first octet. This continues until the last bit of the CSN.1 bit string, which is placed in the last/ rightmost/ least significant bit of the last octet. | | | | | |
| NOTE 2: The information in these IEs is optionally present in the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES message, otherwise it is mandatory present. If the information in the IEs "Mobile Station Classmark 2" and "Mobile Station Classmark 3" is not included, it is indicated by setting the first octet (IEI) of the IE "Mobile Station Classmark 2" to 00H. In this case, the receiver should ignore the value parts of the *Mobile Station Classmark 2* and the *Mobile Station Classmark 3*. The contents of those are set to zero. | | | | | |

### 10.3.8.8 Void

### 10.3.8.8a Inter-RAT UE security capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *system* | MP | | | | |
| >GSM | | | | | |
| >>GSM security capability | MP | | | The value TRUE means that the indicated ciphering algorithm is supported. | |
| >>>A5/7 supported | MP | | Boolean | | |
| >>>A5/6 supported | MP | | Boolean | | |
| >>>A5/5 supported | MP | | Boolean | | |
| >>>A5/4 supported | MP | | Boolean | | |
| >>>A5/3 supported | MP | | Boolean | | |
| >>>A5/2 supported | MP | | Boolean | | |
| >>>A5/1 supported | MP | | Boolean | | |

### 10.3.8.9 MIB Value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| MIB Value tag | MP | | Integer (1..8) | |

### 10.3.8.10 PLMN Value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| PLMN Value tag | MP | | Integer (1..256) | |

### 10.3.8.10a PNBSCH allocation

UTRAN may use this IE to provide silent periods in the cell that may be used for cell synchronisation purposes.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Number of repetitions per SFN period | MP | | Integer(2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 14, 16, 18, 20, 24, 28, 32, 36, 40, 48, 56, 64, 72, 80) | | REL-4 |

### 10.3.8.11 Predefined configuration identity and value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Predefined configuration identity | MP | | Predefined configuration identity 10.3.4.5 | |
| Predefined configuration value tag | MP | | Predefined configuration value tag 10.3.4.6 | |

### 10.3.8.12 Protocol error information

This information element contains diagnostics information returned by the receiver of a message that was not completely understood.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| CHOICE *diagnostics type* | MP | | | One spare value is needed. |
| >Protocol error cause | | | Protocol error cause 10.3.3.26 | |

### 10.3.8.13 References to other system information blocks

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| References to other system information blocks | MP | 1 to <maxSIB> | | System information blocks for which multiple occurrences are used, may appear more than once in this list | |
| >Scheduling information | MP | | Scheduling information, 10.3.8.16 | NOTE 1 | |
| >SIB type SIBs only | MP | | SIB Type SIBs only, 10.3.8.22 | | |
| References to other extension system information blocks | OP | 1 to <maxSIB> | | System information blocks for which multiple occurrences are used, may appear more than once in this list | REL-6 |

|---|---|---|---|---|---|
| | | | | the CDMA_FREQ to the bit string, the first/leftmost bit of the bit string contains the most significant bit.. | |

## 10.3.8.16 Scheduling information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| CHOICE *Value tag* | OP | | | |
| >PLMN Value tag | | | PLMN Value tag 10.3.8.10 | This IE is included if the following conditions are fulfilled:<br>the SIB type equals system information block type 1<br>Note: IE 'PLMN value tag' is used for SIB1 but the area scope for SIB 1 is Cell. |
| >Predefined configuration identity and value tag | | | Predefined configuration identity and value tag 10.3.8.11 | This IE is included if the following conditions are fulfilled:<br>the SIB type equals system information block type 16 |
| >Cell Value tag | | | Cell Value tag 10.3.8.4 | This IE is included if the following conditions are fulfilled:<br>the SIB type does not equal system information block type 1; and<br>the area scope for the system information block is set to "cell" in table 8.1.1; and<br>a value tag is used to indicate changes in the system information block. |
| >SIB occurrence identity and value tag | | | SIB occurrence identity and value tag 10.3.8.20b | This IE is included if the following conditions are fulfilled:<br>the SIB type equals system information block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis |
| Scheduling | MP | | | |
| >SEG_COUNT | MD | | SEG COUNT 10.3.8.17 | Default value is 1 |
| >SIB_REP | MP | | Integer (4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096) | Repetition period for the SIB in frames |
| >SIB_POS | MP | | Integer (0 ..Rep-2 by step of 2) | Position of the first segment Rep is the value of the SIB_REP IE |
| >SIB_POS offset info | MD | 1..15 | | see below for default value |
| >>SIB_OFF | MP | | Integer(2..32 by step of 2) | Offset of subsequent segments |

| Field | Default value |
|---|---|
| SIB_POS offset info | The default value is that all segments are consecutive, i.e., that the SIB_OFF = 2 for all segments except when MIB segment/complete MIB is scheduled to be transmitted in between segments from same SIB. In that case, SIB_OFF=4 in between segments which are scheduled to be transmitted at SFNprime = 8 *n-2 and 8*n + 2, and SIB_OFF=2 for the rest of the segments. |

### 10.3.8.17 SEG COUNT

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SEG_COUNT | MP | | Integer (1..16) | Number of segments in the system information block |

### 10.3.8.18 Segment index

Each system information segment has an individual segment index.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Segment index | MP | | Integer (1..15) | Segments of a system information block are numbered starting with 0 for the first segment and 1 for the next segment, which can be the first subsequent segment or a last segment. |

### 10.3.8.18a SIB and SB type

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SIB and SB type | MP | | Enumerated, see below | Two spare values are needed |

| List of enumerated values | Version |
|---|---|
| System Information Type 1,<br>System Information Type 2,<br>System Information Type 3,<br>System Information Type 4,<br>System Information Type 5,<br>System Information Type 6,<br>System Information Type 7,<br>System Information Type 11,<br>System Information Type 12,<br>System Information Type 13,<br>System Information Type 13.1,<br>System Information Type 13.2,<br>System Information Type 13.3,<br>System Information Type 13.4,<br>System Information Type 14,<br>System Information Type 15,<br>System Information Type 15.1,<br>System Information Type 15.2,<br>System Information Type 15.3,<br>System Information Type 15.4,<br>System Information Type 15.5,<br>System Information Type 16,<br>System Information Type 17,<br>System Information Type 18,<br>Scheduling Block 1,<br>Scheduling Block 2, | |
| System Information Type 5bis | REL-6 |

## 10.3.8.18b SIB type extension

The SIB type identifies a specific extension system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| SIB type extension | MP | | Enumerated, see below | | REL-6 |

| List of enumerated values | Version |
|---|---|
| System Information Type 11bis | REL-6 |
| System Information Type 15bis,<br>System Information Type 15.1bis,<br>System Information Type 15.2bis,<br>System Information Type 15.3bis,<br>System Information Type 15.6,<br>System Information Type 15.7<br>System Information Type 15.8 | REL-7 |

## 10.3.8.18c SIB type extension2

The SIB type identifies a specific extension system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| SIB type extension2 | MP | | Enumerated, see below | Five spare values are needed | REL-8 |

| List of enumerated values | Version |
|---|---|
| System Information Type 19 | REL-8 |
| System Information Type 15.2ter | |
| System Information Type 20 | |

### 10.3.8.18d GANSS SIB type

The GANSS SIB type identifies a GANSS specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| GANSS SIB type | MP | | Enumerated, see below | Nine spare value is needed | REL-8 |

| List of enumerated values | Version |
|---|---|
| System Information Type 15.1bis,<br>System Information Type 15.2bis,<br>System Information Type 15.2ter,<br>System Information Type 15.3bis,<br>System Information Type 15.6,<br>System Information Type 15.7<br>System Information Type 15.8 | REL-8 |

### 10.3.8.19 SIB data fixed

Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with fixed length (segments filling an entire transport block).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SIB data fixed | MP | | Bit string ( 222) | The first bit contains the first bit of the segment. |

### 10.3.8.20 SIB data variable

Contains either a complete system information block or a segment of a system information block. Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with variable length. The system information blocks are defined in clauses10.2.48.8.1 to10.2.48.8.18.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SIB data variable | MP | | Bit string ( 1..214) | The first bit contains the first bit of the segment. |

### 10.3.8.20a SIB occurrence identity

This information element identifies a SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis. For System Information Block type 15.2, 15.2bis and 15.2ter, this identity is assigned to the visible satellite only. Unused identities are claimed by newly rising satellites.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SIB occurrence identity | MP | | Integer (0..15) | |

### 10.3.8.20b SIB occurrence identity and value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SIB occurrence identity | MP | | SIB occurrence identity 10.3.8.20a | |
| SIB occurrence value tag | MP | | SIB occurrence value tag 10.3.8.20c | |

### 10.3.8.20c SIB occurrence value tag

This information element is used to identify different versions of SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---|---|---|---|---|
| SIB occurrence value tag | MP | | Integer(0..15) | |

### 10.3.8.21 SIB type

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SIB type | MP | | Enumerated, see below | NOTE 1 |
| NOTE 1: If the value "Extension Type" is signalled, the UE shall use the scheduling information in the MIB and, if present, in the SB1 and SB2 to identify the specific type of system information block. | | | | |

| List of enumerated values | Version |
|---|---|
| Master information block,<br>System Information Type 1,<br>System Information Type 2,<br>System Information Type 3,<br>System Information Type 4,<br>System Information Type 5,<br>System Information Type 6,<br>System Information Type 7,<br>System Information Type 11,<br>System Information Type 12,<br>System Information Type 13,<br>System Information Type 13.1,<br>System Information Type 13.2,<br>System Information Type 13.3,<br>System Information Type 13.4,<br>System Information Type 14,<br>System Information Type 15,<br>System Information Type 15.1,<br>System Information Type 15.2,<br>System Information Type 15.3,<br>System Information Type 15.4,<br>System Information Type 15.5,<br>System Information Type 16,<br>System Information Type 17,<br>System Information Type 18,<br>Scheduling Block 1,<br>Scheduling Block 2, | |
| System Information Type 5bis,<br>Extension Type | REL-6 |

### 10.3.8.22 SIB type SIBs only

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SIB type SIBs only | MP | | Enumerated, see below | Four spare values are needed |

| List of enumerated values | Version |
|---|---|
| System Information Type 1,<br>System Information Type 2,<br>System Information Type 3,<br>System Information Type 4,<br>System Information Type 5,<br>System Information Type 6,<br>System Information Type 7,<br>System Information Type 11,<br>System Information Type 12,<br>System Information Type 13,<br>System Information Type 13.1,<br>System Information Type 13.2,<br>System Information Type 13.3,<br>System Information Type 13.4,<br>System Information Type 14,<br>System Information Type 15,<br>System Information Type 15.1,<br>System Information Type 15.2,<br>System Information Type 15.3,<br>System Information Type 15.4,<br>System Information Type 15.5,<br>System Information Type 16,<br>System Information Type 17,<br>System Information Type 18, | |
| System Information Type 5bis | REL-6 |

### 10.3.8.23 UE History Information

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE inactivity period | MP | | Integer (1..120) | Provides expired time since last u-plane activity. If the integer value x is between 1 and 59, it represents the expired time x in seconds. If the integer value x is between 60 and 119, it represents the expired time (x-59) in minutes. If integer value is set to 120, no u-plane activity has been for 60 minutes or more. | REL-8 |
| UE Mobility State indicator | OP | | Enumerated (High-mobilityDetected) | Absence of this IE implies that, according to [4] either the High mobility state is not applicable or it has not been detected by the UE. | REL-8 |
| UL data volume history | OP | | Data volume history 10.3.8.24 | | REL-8 |
| DL data volume history | OP | | Data volume history 10.3.8.24 | | REL-8 |

### 10.3.8.24 Data volume history

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Data volume monitoring window | MP | | Integer (1..120) | If the integer value x is between 1 and 59, it represents seconds. If the integer value is between 60 and 120, it represents the value minus 59 in minutes. | REL-8 |
| Data transmission frequency | OP | | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms | REL-8 |
| >Data transmission frequency granularity | MP | | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms | REL-8 |
| >Number of data transmission occasions | MP | | Integer (0..610) | Measure of data transmission frequency. The data volume monitoring window is organised in time periods of "Data transmission frequency granularity", and each transmission within such a period is counted. | REL-8 |
| Data volume per RB | OP | 1 to <maxRB> | | | REL-8 |
| >RB identity | MP | | RB identity 10.3.4.16 | | REL-8 |
| >Data volume | MP | | Integer (0..4294967295) | Data volume monitored during the data volume monitoring window, in byte. | REL-8 |

## 10.3.9 ANSI-41 Information elements

### 10.3.9.1 ANSI-41 Core Network Information

| Information element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| P_REV | MP | | P_REV 10.3.9.10 | |
| MIN_P_REV | MP | | MIN_P_REV 10.3.9.8 | |
| SID | MP | | SID 10.3.9.11 | |
| NID | MP | | NID 10.3.9.9 | |

### 10.3.9.2 ANSI-41 Global Service Redirection information

This Information Element contains ANSI-41 Global Service Redirection information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| ANSI-41 Global Service Redirection information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.3 ANSI-41 NAS parameter

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| ANSI-41 NAS parameter | MP | | Bit string (size (1..2048)) | The first bit contains the first bit of the ANSI-41 information. |

### 10.3.9.4 ANSI-41 NAS system information

This Information Element contains ANSI-41 system information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| NAS (ANSI-41) system information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.5 ANSI-41 Private Neighbour List information

This Information Element contains ANSI-41 Private Neighbour List information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| ANSI-41 Private Neighbour List information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.6 ANSI-41 RAND information

This Information Element contains ANSI-41 RAND information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| ANSI-41 RAND information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.7 ANSI-41 User Zone Identification information

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| ANSI-41 User Zone Identification information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

### 10.3.9.8 MIN_P_REV

This Information Element contains minimum protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| MIN_P_REV | MP | | Bit string (8) | Minimum protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the MIN_P_REV. |

### 10.3.9.9 NID

This Information Element contains Network identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| NID | MP | | Bit string (16) | Network identification. The first/leftmost bit of the bit string contains the most significant bit of the NID. |

### 10.3.9.10 P_REV

This Information Element contains protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| P_REV | MP | | Bit string (8) | Protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the P_REV. |

### 10.3.9.11 SID

This Information Element contains System identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SID | MP | | Bit string (15) | System identification. The first/leftmost bit of the bit string contains the most significant bit of the SID. |

# 10.3.9a MBMS Information elements

## 10.3.9a.1 MBMS Common CCTrCH identity

Identifies a Coded Composite Transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Common CCTrCh identity | MP | | Integer (1..32) | | REL-6 |

## 10.3.9a.2 MBMS Common PhyCh identity

Identifies a physical channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Common PhyCh identity | MP | | Integer (1..32) | | REL-6 |

## 10.3.9a.3 MBMS Common RB identity

Identifies a radio bearer channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Common RB identity | MP | | Integer (1..32) | | REL-6 |

## 10.3.9a.4 MBMS Common TrCh identity

Identifies a transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Common TrCh identity | MP | | Integer (1..32) | | REL-6 |

## 10.3.9a.5 MBMS Current cell S-CCPCH identity

Identifies one of the current cell's Secondary CCPCH's.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Current cell S-CCPCH identity | MP | | Integer (1..maxSCCPCH) | | REL-6 |

## 10.3.9a.6 Void

## 10.3.9a.7 MBMS L1 combining schedule

Includes information about the MBMS L1 combining schedule.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS L1 combining cycle length | MP | | Enumerated (32, 64, 128, 256, 512, 1024) | In number of radio frames | REL-6 |
| MBMS L1 combining cycle offset | MD | | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Start of the L1 combining cycle (relative to the timing of the current cell) in number of radio frames.<br>Default value is no offset | REL-6 |
| MTCH L1- combining period list | MP | 1 to < maxMBMS-L1CP> | | One or more periods in which L1 combining is performed | REL-6 |
| >Start | MP | | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Number of frames from the end of the previous combining period or the start of the cycle (for the first period) | REL-6 |
| >Duration | MP | | Integer (4.. MBMS L1 combining cycle length) by step of 4 | Number of frames (see note) | REL-6 |

NOTE: The MTCH L1- combining period should indicate one or more complete TTIs.

## 10.3.9a.7o MBMS p-t-m activation time

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS p-t-m activation time | MP | | Integer (0..2047) | The 11 LSB of the SFN. Note 1 and 2. | REL-6 |
| Note 1: The "MBMS p-t-m activation time" indicates the start of the 10 ms frame corresponding to the indicated SFN value and of the primary CCPCH of the cell where this IE is transmitted. | | | | | |
| Note 2: The range of the "MBMS p-t-m activation time" is from 10 ms after the beginning of the MCCH modification period wherein it is transmitted and to the end of next following MCCH modification period. The UE shall consider a value out of this range as expired. | | | | | |

## 10.3.9a.7a MBMS p-t-m RB information

Includes information about an MBMS p-t-m radio bearers mapped on a TrCH.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| RB information | CV-*Curr* | | MBMS Common RB identity 10.3.9a.3 | | REL-6 |
| MBMS short transmission ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-6 |
| MBMS logical channel identity | MP | | Integer (1..15) | This identifier is used to distinguish different MTCH mapped on to a TrCh ("MBMS-Id" within the MAC header[15]) | REL-6 |
| L1 combining status | CV-*Neigh* | | Boolean | The IE is only applicable in case of partial L1 combining, in which case value TRUE means that L1 combining is used for this radio bearer | REL-6 |

| Condition | Explanation |
|---|---|
| *Curr* | The IE is mandatory present if the IE "MBMS p-t-m RB information list" is included in the MBMS CURRENT CELL P-T-M RB INFORMATION message and not needed otherwise |
| *Neigh* | The IE is mandatory present if the IE "MBMS p-t-m RB information list" is included in the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message and not needed otherwise |

## 10.3.9a.7b MBMS Selected Service Info

This IE indicates whether the UE has any MBMS Selected Services, and if it does it includes the list of MBMS Selected Services.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *Status* | | | | | |
| >None | | | | (no data) | |
| >Some | MP | | MBMS Selected Services Full 10.3.9a.7c | | REL-6 |

## 10.3.9a.7c MBMS Selected Services Full

This IE provides the MBMS Selected Services by means of the full identity.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Selected Services | MP | 1 to < maxMBMSservSelect> | | | REL-6 |
| >MBMS Selected Service ID | MP | | MBMS service identity 10.3.9a.8 | | REL-6 |

## 10.3.9a.7d MBMS Selected Services Short

This IE indicates the MBMS Selected Services by means of a short identity to identify the MBMS transmission by referencing the services included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Selected Services | MP | 1 to < maxMBMSservSelect> | | | REL-6 |
| >MBMS Selected Service ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-6 |
| Modification period identity | MP | | Integer (0..1) | Indicates the modification period the MBMS short transmission identities refer to | REL-6 |

## 10.3.9a.8 MBMS Service identity

Includes information about the identity of an MBMS service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Service ID | MP | | MBMS Service ID 10.3.9a.8a | | REL-6 |
| CHOICE *PLMN identity* | MP | | | | REL-6 |
| >*SameAs-MIB* | | | | (No data) The PLMN identity is the same as indicated by the IE “PLMN identity” in MIB | REL-6 |
| >*SameAsMIB-MultiPLMN-Id* | | | | | REL-6 |
| >>Multi PLMN id | MP | | Integer (1..5) | The PLMN identity is one of the PLMN identities (1 to 5) in the IE "Multiple PLMN List" in MIB | REL-6 |
| >*ExplicitPLMN-Id* | | | | | REL-6 |
| >>PLMN identity | MP | | PLMN identity 10.3.1.11 | | REL-6 |

### 10.3.9a.8a MBMS Service ID

Uniquely identifies an MBMS bearer service within a PLMN.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Service ID | MP | | Octet string (3 ) | The content of the MBMS Service ID field is coded as octets 3 to 5 of the IE *Temporary Mobile Group Identity* [5] | REL-6 |

### 10.3.9a.9 MBMS Session identity

Includes information about the identity of a session of an MBMS service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Session ID | MP | | Octet string (1) | | REL-6 |

### 10.3.9a.10 MBMS Short transmission identity

Includes a short identity of the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS short transmission identity | MP | | Integer (1..maxMBMSservUnmodif) | Reference/ index to a transmission listed in the MBMS MODIFIED SERVICES INFORMATION or MBMS UNMODIFIED SERVICES INFORMATION | REL-6 |

### 10.3.9a.10a MBMS Soft Combining Timing Offset

Indicates the timing offset applied in the CFN calculation in sub-clause 8.5.15.5 for a secondary CCPCH carrying only MBMS logical channels. It is used for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >MBMS Soft Combining Timing Offset | MP | | Integer (0, 10, 20, 40) | Timing offset applied in the CFN calculation in sub-clause 8.5.15.5, in ms. | REL-6 |

## 10.3.9a.11 MBMS specific timers and counters

Includes MBMS specific timers and counters.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| T318 | MD | | Integer(250... 2000 by step of 250, 3000, 4000, 6000, 8000, 10000, 12000, 16000) | Value in milliseconds. Default value is 1000. | REL-6 |

## 10.3.9a.12 MBMS Transmission identity

Includes information about the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS Service ID | MP | | MBMS Service identity 10.3.9a.8 | | REL-6 |
| MBMS Session ID | OP | | MBMS Session identity 10.3.9a.9 | | REL-6 |

## 10.3.9a.12a MBSFN frequency list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBSFN frequency list | MP | 0 to <maxMBSFNclusters> | | | REL-7 |
| >MBSFN frequency | MP | | Frequency info 10.3.6.36 | | REL-7 |
| >IMB indication | OP | | Enumerated (TRUE) | If present: 3.84 Mcps TDD MBSFN IMB is applied on this frequency. | REL-8 |
| >Cell parameter ID | OP | <0..127> | Cell parameter Id 10.3.6.9 | Only for 1.28 Mcps TDD [32]. NOTE 1 | REL-7 |

NOTE 1: For 1.28 Mcps TDD the IE "Cell Parameter ID" indicates the cell which is providing MBMS service in MBSFN only mode on the corresponding frequency; if it is not included, the IE "MBSFN frequency" indicates the secondary frequency providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

## 10.3.9a.12b MBSFN TDM Information List

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBSFN TDM Information List | MP | 1 to <maxMBMSservUnmodif> | | | REL-7 |
| >MBMS short transmission ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-7 |
| >TDM_Rep | MP | | Integer (2..9) | | REL-7 |
| >TDM_Offset | MP | | Integer (0..8) | | REL-7 |
| >TDM_Length | MP | | Integer (1..8) | | REL-7 |

## 10.3.9a.13 MCCH configuration information

Includes information about the MCCH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Access Info Period coefficient | MP | | Integer (0..3) | Represents *a*, the access information coefficient. The number of repetitions per modification period equals $2^a$ while the actual access information period, in number of frames, equals MP DIV $2^a$ | REL-6 |
| Repetition Period coefficient | MP | | Integer (0..3) | Represents *r*, the repetition period coefficient. The number of repetitions per modification period equals $2^r$ while the actual repetition period, in number of frames, equals MP DIV $2^r$ | REL-6 |
| Modification period coefficient | MP | | Integer (7..10) | Represents *m*, the modification period coefficient. The actual modification period (MP), in number of frames, equals $2^m$ | REL-6 |
| RLC info | MP | | RLC info MBMS 10.3.4.23a | | REL-6 |
| TCTF presence | CV-*MBMS* | | Enumerated (FALSE) | By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent | REL-6 |

| Condition | Explanation |
|---|---|
| *MBMS* | This IE is not needed if the IE is contained within the IE "Secondary CCPCH system information", otherwise the IE is optional. |

## 10.3.9a.14 MICH configuration information

Includes information about the MICH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MICH Power offset | MP | | MICH Power offset 10.3.9a.15 | | REL-6 |
| CHOICE *mode* | MP | | | | REL-6 |
| >FDD | | | | | REL-6 |
| >>Channelisation code | MP | | Integer (0..255) | | REL-6 |
| >>Number of NI per frame | MP | | Integer (18, 36, 72, 144) | | REL-6 |
| >>STTD indicator | MP | | STTD Indicator 10.3.6.78 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE behaviour upon reception of this IE is unspecified. | REL-6 |
| >TDD | | | | | REL-6 |
| >>Timeslot number | MP | | Timeslot number 10.3.6.84 | | REL-6 |
| >>Midamble shift and burst type | MP | | Midamble shift and burst type 10.3.6.41 | For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, the UE shall ignore the contents of this IE. | REL-6 |
| >>CHOICE *TDD option* | MP | | | | REL-6 |
| >>>3.84 Mcps TDD | | | | | REL-6 |
| >>>>Channelisation code | MP | | Enumerated ((16/1)…(16/16)) | | REL-6 |
| >>>7.68 Mcps TDD | | | | | REL-7 |
| >>>>Channelisation code | MP | | Enumerated ((32/1)…(32/32)) | | REL-7 |
| >>>1.28 Mcps TDD | | | | | REL-6 |
| >>>>Codes list | MP | 1 to 2 | | | REL-6 |
| >>>>>Channelisation code | MP | | Enumerated ((16/1)…(16/16)) | | REL-6 |
| >>>> MBSFN Special Time Slot | OP | | Time Slot LCR Extension 10.3.6.83a | For 1.28 Mcps TDD MBSFN only mode, this IE indicates the SCCPCH is deployed on the MBSFN Special Time Slot [30]. The IE 'Timeslot number' shall be ignored if this IE appears. | REL-7 |
| >>Repetition period/length | MD | | Enumerated((4/2),(8/2 | Default value is "(64/2)". | REL-6 |

| | | | | | |
|---|---|---|---|---|---|
| | | | ), (8/4),(16/2), (16/4), (32/2),(32/4),(64/2),(64/4)) | | |
| >>Offset | MP | | Integer (0…Repetition period - 1) | SFN mod Repetitionperiod = Offset. | REL-6 |
| >>MBMS Notification indicator length | MD | | Integer (4, 8, 16) | Indicates the length of one MBMS Notification indicator in bits. Default value is 4. | REL-6 |
| >3.84 Mcps TDD MBSFN IMB | | | | | REL-8 |
| >>Channelisation code | MP | | Integer (0..255) | SF = 256; only the channelisation codes 2 to 15 are applicable | REL-8 |
| >>Number of NI per frame | MP | | Integer (16, 32, 64, 128) | | REL-8 |

## 10.3.9a.15 MICH Power offset

This is the power transmitted on the MICH minus power of the Primary CPICH in FDD and Primary CCPCH Tx Power in TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MICH Power offset | MP | | Integer(-10 .. +5) | Offset in dB | REL-6 |

## 10.3.9a.16 MSCH configuration information

Includes information about the MSCH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MSCH Scheduling information | MP | | | For FDD, scheduling information is provided starting at (SFN – (SCTO div 10ms)) mod MSCH_REP = MSCH_OFF<br>For TDD, scheduling information is provided starting at SFN mod MSCH_REP = MSCH_OFF | REL-6 |
| >Scheduling period | MD | | Enumerated (32, 64, 128, 256, 512, 1024) | The period, in number of frames, between MBMS scheduling messages (MSCH_REP)<br>Default value is the value included in the MBMS GENERAL INFORMATION message | REL-6 |
| >Scheduling offset | MD | | Integer (0..(MSCH_REP-1)) | The position of MBMS scheduling messages relative to timing of the corresponding cell (MSCH_OFF)<br>Default value is the value included in the MBMS GENERAL INFORMATION message | REL-6 |
| >RLC info | MD | | RLC info MBMS 10.3.4.23a | Default value is the one included in the MBMS GENERAL INFORMATION message | REL-6 |
| TCTF presence | OP | | Enumerated (FALSE) | By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent | REL-6 |

## 10.3.9a.17 Network Standard Time Information

NOTE: Only for 1.28Mcps TDD

This IE includes information about the Network Standard Time and a related SFN value. If Correlative SFN is absent, the default Correlative SFN is equal to zero, this means the "Network Standard Time" indicate the standard time value when SFN equal zero.

The "Network Standard Time" occupied 40 bits; the format refers to "ETSI EN 300 468 V1.5.1 (2003-05)".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Network Standard Time | MP | | BIT STRING (40) | Network Standard Time | REL-8 |
| Correlative SFN | OP | | Integer (0..4095) | System frame number which is correlative with Network Standard Time Information. If it is absent, Correlative SFN is equal to zero. | REL-8 |

## 10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

| Constant | Explanation | Value | Version |
|---|---|---|---|
| **CN information** | | | |
| maxCNdomains | Maximum number of CN domains | 4 | |
| **UTRAN mobility information** | | | |
| maxRAT | Maximum number or Radio Access Technologies | maxOtherRAT + 1 | |
| maxOtherRAT | Maximum number or other Radio Access Technologies | 15 | |
| maxURA | Maximum number of URAs in a cell | 8 | |
| maxInterSysMessages | Maximum number of Inter System Messages | 4 | |
| maxRABsetup | Maximum number of RABs to be established | 16 | |
| maxDedicatedCSGFreq | Maximum number of dedicated CSG frequencies | 4 | REL-8 |
| **UE information** | | | |
| maxtransactions | Maximum number of parallel RRC transactions in downlink | 25 | |
| maxPDCPalgoType | Maximum number of PDCP algorithm types | 8 | |
| maxFreqBandsFDD | Maximum number of frequency bands supported by the UE as defined in [21] | 8 | |
| maxFreqBandsFDD-ext | Maximum number of frequency bands as defined in [21] and treated by RRC | 22 | REL-6 |
| maxFreqBandsTDD | Maximum number of frequency bands supported by the UE as defined in [22] | 4 | |
| maxFreqBandsTDD-ext | Maximum number of frequency bands supported by the UE as defined in [22] | 16 | REL-8 |
| maxFreqBandsGSM | Maximum number of frequency bands supported by the UE as defined in [45] | 16 | |
| maxFreqBandsEUTRA | Maximum number of frequency bands supported by the UE as defined in [36.101] | 16 | REL-8 |
| maxPage1 | Number of UEs paged in the Paging Type 1 message | 8 | |
| maxSystemCapability | Maximum number of system specific capabilities that can be requested in one message. | 16 | |
| MaxURNTIgroup | Maximum number of U-RNTI groups in one message | 8 | REL-5 |
| maxCommonHRNTI | Maximum number of common H-RNTI per cell | 4 | REL-7 |
| maxERNTIgroup | Maximum number of common E-RNTI group per cell (1.28 Mcps TDD) | 32 | REL-8 |
| maxERNTIperGroup | Maximum number of common E-RNTI in a group (1.28 Mcps TDD) | 2 | REL-8 |
| **RB information** | | | |
| maxPredefConfig | Maximum number of predefined configurations | 16 | |
| maxRB | Maximum number of RBs | 32 | |
| maxSRBsetup | Maximum number of signalling RBs to be established | 8 | |
| maxRBperRAB | Maximum number of RBs per RAB | 8 | |

| Constant | Explanation | Value | Version |
|---|---|---|---|
| maxRBallRABs | Maximum number of non signalling RBs | 27 | |
| maxRBperTrCh | Maximum number of RB per TrCh | 16 | REL-6 |
| maxRBMuxOptions | Maximum number of RB multiplexing options | 8 | |
| maxLoCHperRLC | Maximum number of logical channels per RLC entity | 2 | |
| maxRLCPDUsizePerLogChan | Maximum number of RLC PDU sizes per logical channel mapped on E-DCH | 32 | REL-6 |
| MaxROHC-PacketSizes | Maximum number of packet sizes that are allowed to be produced by ROHC. | 16 | |
| MaxROHC-Profiles | Maximum number of profiles supported by ROHC on a given RB. | 8 | |
| maxRFC 3095-CID | Maximum number of available CID values per radio bearer | 16384 | REL-5 |
| **TrCH information** | | | |
| maxCommonQueueID | Maximum number of common Mac-ehs queues | 2 | REL-7 |
| maxE-DCHMACdFlow | Maximum number of E-DCH MAC-d flows | 8 | REL-6 |
| MaxHProcesses | Maximum number of H-ARQ processes | 8 | REL-5 |
| MaxHSDSCH_TB_index | Maximum number of TB set size configurations for the HS-DSCH. | 64 (FDD and 1.28 MCPS TDD); 512 (3.84 Mcps TDD); 1024 (7.68 Mcps TDD) | REL-5 |
| maxMACdPDUSizes | Maximum number of MAC-d PDU sizes per queue permitted for MAC-hs | 8 | REL-5 |
| maxTrCH | Maximum number of transport channels used in one direction (UL or DL) | 32 | |
| maxTrCHpreconf | Maximum number of preconfigured Transport channels, per direction | 16 | |
| maxCCTrCH | Maximum number of CCTrCHs | 8 | |
| maxQueueID | Maximum number of Mac-hs queues | 8 | REL-5 |
| MaxTF | Maximum number of different transport formats that can be included in the Transport format set for one transport channel | 32 | |
| maxTFC | Maximum number of Transport Format Combinations | 1024 | |
| maxTFCsub | Maximum number of Transport Format Combinations Subset | 1024 | |
| maxSIBperMsg | Maximum number of complete system information blocks per SYSTEM INFORMATION message | 16 | |
| maxSIB | Maximum number of references to other system information blocks. | 32 | |
| maxSIB-FACH | Maximum number of references to system information blocks on the FACH | 8 | |
| **PhyCH information** | | | |
| maxHSSCCHs | Maximum number of HSSCCH codes that can be assigned to a UE | 4 | REL-5 |
| maxHS-SCCHLessTrBlk | Maximum number of HS-DSCH Transport Block Sizes used for HS-SCCH-less operation | [4] | REL-7 |
| maxTDD128Carrier | The maximum number of carriers for 1.28 Mcps TDD | 6 | REL-7 |
| maxAC | Maximum number of access classes | 16 | |
| maxASC | Maximum number of access service classes | 8 | |
| maxASCmap | Maximum number of access class to access service classes mappings | 7 | |
| maxASCpersist | Maximum number of access service classes for which persistence scaling factors are specified | 6 | |
| maxPRACH | Maximum number of PRACHs in a cell | 16 | |
| maxEDCHs | Maximum number of common E-DCH resources in a cell | 32 | REL-8 |
| MaxPRACH_FPACH | Maximum number of PRACH / FPACH pairs in a cell (1.28 Mcps TDD) | 8 | REL-4 |
| maxFACHPCH | Maximum number of FACHs and PCHs mapped onto one secondary CCPCHs | 8 | |
| maxRL | Maximum number of radio links | 8 | |

| Constant | Explanation | Value | Version |
|---|---|---|---|
| maxEDCHRL | Maximum number of E-DCH radio links | 4 | REL-6 |
| maxSCCPCH | Maximum number of secondary CCPCHs per cell | 16 | |
| maxDPDCH-UL | Maximum number of DPDCHs per cell | 6 | |
| maxDPCH-DLchan | Maximum number of channelisation codes used for DL DPCH | 8 | |
| maxPUSCH | Maximum number of PUSCHs | (8) | |
| maxPDSCH | Maximum number of PDSCHs | 8 | |
| maxTS | Maximum number of timeslots used in one direction (UL or DL) | 14 (3.84 Mcps TDD and 7.68 Mcps TDD) | |
| | | 6 (1.28 Mcps TDD) | REL-4 |
| hiPUSCHidentities | Maximum number of PUSCH Identities | 64 | |
| hiPDSCHidentities | Maximum number of PDSCH Identities | 64 | |
| maxNumE-AGCH | Maximum number of E-AGCHs (TDD) | 4 | REL-7 |
| maxNumE-HICH | Maximum number of E-HICHs (1.28 Mcps TDD) | 4 | REL-7 |
| maxERUCCH | Maximum number of E-RUCCH on primary frequency (1.28Mcps TDD) | 256 | REL-8 |
| **Measurement information** | | | |
| maxTGPS | Maximum number of transmission gap pattern sequences | 6 | |
| maxAdditionalMeas | Maximum number of additional measurements for a given measurement identity | 4 | |
| maxMeasEvent | Maximum number of events that can be listed in measurement reporting criteria | 8 | |
| maxMeasEventOnSecULFreq | Maximum number of events that can be listed in measurement reporting criteria on the downlink frequency associated with secondary uplink frequency | 8 | REL-9 |
| maxMeasParEvent | Maximum number of measurement parameters (e.g. thresholds) per event | 2 | |
| maxMeasIntervals | Maximum number of intervals that define the mapping function between the measurements for the cell quality Q of a cell and the representing quality value | 1 | |
| maxCellMeas | Maximum number of cells to measure | 32 | |
| maxMeasCSGRange | Maximum number of ranges of cells for CSG measurement | 4 | REL-9 |
| maxSIrequest | Maximum number of cell request for reading System Information | 4 | REL-9 |
| maxCellMeasOnSecULFreq | Maximum number of cells to measure on the downlink frequency associated with the secondary uplink frequency | 32 | REL-9 |
| maxReportedGSMCells | Maximum number of GSM cells to be reported | 8 | |
| maxReportedEUTRAFreqs | Maximum number of E-UTRA frequencies to report | 4 | REL-8 |
| maxReportedEUTRACellperFreq | Maximum number of E-UTRA cells to report per frequency | 4 | REL-8 |
| maxFreq | Maximum number of frequencies to measure | 8 | |
| maxNumPrio | Maximum number of priorities to store | 11 | REL-8 |
| maxPrio | Maximum number of RAT or Frequency Priority levels | 8 | REL-8 |
| maxEUTRACellPerFreq | Maximum number of E-UTRA cells per frequency | 16 | REL-8 |
| maxSat | Maximum number of satellites to measure | 16 | |
| maxGANSSSat | Maximum number of GANSS satellites to measure | 64 | REL-7 |
| maxGANSS | Maximum number of GANSS supported | 8 | REL-7 |
| maxSgnType | Maximum number of additional signals in GANSS to measure | 8 | REL-7 |
| maxSatClockModels | Maximum number of clock models in a GANSS | 4 | REL-7 |
| maxSatAlmanacStorage | Maximum number of satellites for which to store GPS Almanac information | 32 | |
| HiRM | Maximum number that could be set as rate matching attribute for a transport channel | 256 | |
| maxDCHMeasurementOccasi | Maximum number of CELL_DCH measurement | 5 | REL-9 |

| Constant | Explanation | Value | Version |
|---|---|---|---|
| onPatternSequence | occasion pattern sequences | | |
| **Frequency information** | | | |
| MaxFDDFreqList | Maximum number of FDD carrier frequencies to be stored in USIM | 4 | |
| MaxTDDFreqList | Maximum number of TDD carrier frequencies to be stored in USIM | 4 | |
| MaxFDDFreqCellList | Maximum number of neighbouring FDD cells to be stored in USIM | 32 | |
| MaxTDDFreqCellList | Maximum number of neighbouring TDD cells to be stored in USIM | 32 | |
| MaxGSMCellList | Maximum number of GSM cells to be stored in USIM | 32 | |
| **Other information** | | | |
| MaxGERANSI | Maximum number of GERAN SI blocks that can be provided as part of NACC information | 8 | REL-5 |
| maxNumGSMFreqRanges | Maximum number of GSM Frequency Ranges to store | 32 | |
| MaxNumFDDFreqs | Maximum number of FDD centre frequencies to store | 8 | |
| MaxNumTDDFreqs | Maximum number of TDD centre frequencies to store | 8 | |
| maxNumCDMA200Freqs | Maximum number of CDMA2000 centre frequencies to store | 8 | |

| Constant | Explanation | Value | Version |
|---|---|---|---|
| maxGSMTargetCells | Maximum number of GSM target cells | 32 | REL-6 |
| maxNumGSMCellGroup | Maximum number of GSM frequency groups to store | 16 | REL-8 |
| maxNumEUTRAFreqs | Maximum number of EUTRA centre frequencies to store | 8 | REL-8 |
| maxEUTRATargetFreqs | Maximum number of target E-UTRA frequencies | 8 | REL-8 |
| maxHNBNameSize | Maximum number of octets for the HNB Name | 48 | REL-8 |
| **MBMS information** | | | |
| maxMBMS-CommonCCTrCh | Maximum number of CCTrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonPhyCh | Maximum number of PhyCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonRB | Maximum number of RB configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonTrCh | Maximum number of TrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-Freq | Maximum number of MBMS preferred frequencies | 4 | REL-6 |
| maxMBMS-L1CP | Maximum number of periods in which layer 1 combining applies | 4 | REL-6 |
| maxMBMSservCount | Maximum number of MBMS services in a Access Info message | 8 | REL-6 |
| maxMBMSservModif | Maximum number of MBMS services in a MBMS MODIFIED SERVICES INFORMATION message | 32 | REL-6 |
| maxMBMSservSched | Maximum number of MBMS services in a MBMS SCHEDULING INFORMATION message | 16 | REL-6 |
| maxMBMSservSelect | Maximum number of MBMS Selected Services in a CELL UPDATE or RRC CONNECTION REQUEST message | 8 | REL-6 |
| maxMBMSservUnmodif | Maximum number of MBMS services in a MBMS UNMODIFIED SERVICES INFORMATION message | 64 | REL-6 |
| maxMBMSTransmis | Maximum number of transmissions for which scheduling information is provided within a scheduling period | 4 | REL-6 |
| maxMBMS-Services | Maximum number of MBMS services the UE stores in the variable MBMS_ACTIVATED_SERVICES | 64 | REL-6 |
| maxMBSFNclusters | Maximum number of MBSFN clusters indicated in system information | 16 | REL-7 |

### 10.3.11 Void

# 11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in [14]. PDU and IE definitions are grouped into separate ASN.1 modules.

## 11.0 General

Some messages and/or IEs may include one or more IEs with name "dummy" that are included only in the ASN.1. The UE should avoid sending information elements that are named "dummy" to UTRAN. Likewise, UTRAN should avoid

sending IEs with name "dummy" to the UE. If the UE anyhow receives an information element named "dummy", it shall ignore the IE and process the rest of the message as if the IE was not included.

NOTE: An IE with name "dummy" concerns an information element that was (erroneously) included in a previous version of the specification and has been removed by replacing it with a dummy with same type.

The UE shall only include the "variable length extension container" when it sends a non critical extension that according to this specification shall be transferred within this container.

If the abstract syntax of an IE is defined using the ASN.1 type "BIT STRING", and this IE corresponds to a functional IE definition in tabular format, in which the significance of bits is semantically defined, the following general rule shall be applied:

The bits in the ASN.1 bit string shall represent the semantics of the functional IE definition in decreasing order of bit significance;

- with the first (or leftmost) bit in the bit string representing the most significant bit; and
- with the last (or rightmost) bit in the bit string representing the least significant bit.

# 12 Message transfer syntax

Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in X.691 [49], and with adapted final padding. If special encoding is used, it is indicated in the ECN module defined for each ASN.1 module. The use of special encoding is defined in [14].

The following encoding rules apply in addition to what has been specified in X.691 [49]:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in [11], the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

NOTE: The terms "leading bit" and "trailing bit" are defined in ITU-T Rec. X.680 | ISO/IEC 8824-1. When using the "bstring" notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

## 12.1 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities/ across the radio interface, is the concatenation of a basic production, an extension and padding, in that order.

RRC PDUs shall be mapped to and from RLC SDUs upon transmission and reception as follows:

- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and

- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

### 12.1.1 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691, except for the 0 to 7 bits added at the end to produce a multiple of 8 bits. The basic production can have any positive number of bits, not necessarily a multiple of 8 bits.

### 12.1.2 Extension

Emitters compliant with this version of the specification of the protocol shall, unless indicated otherwise on a PDU type basis, set the extension part empty. Emitters compliant with a later version might send non-empty extensions.

### 12.1.3 Padding

Emitters compliant with this version of the specification of the protocol shall, unless indicated otherwise on a PDU type basis, pad the basic production with the smallest number of bits required to meet the size constraints of the lower layers. Padding bits shall be set to 0.

Receivers compliant with this version of the specification have no need to distinguish the extension and padding parts, and shall, unless indicated otherwise on a PDU type basis, accept RRC PDUs with any bit string in the extension and padding parts.

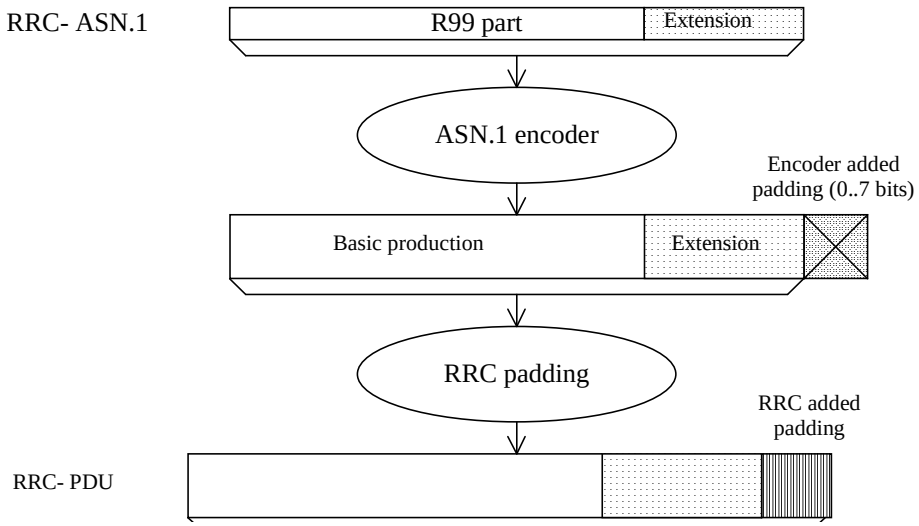

**Figure 12.1.3-1: Padding**

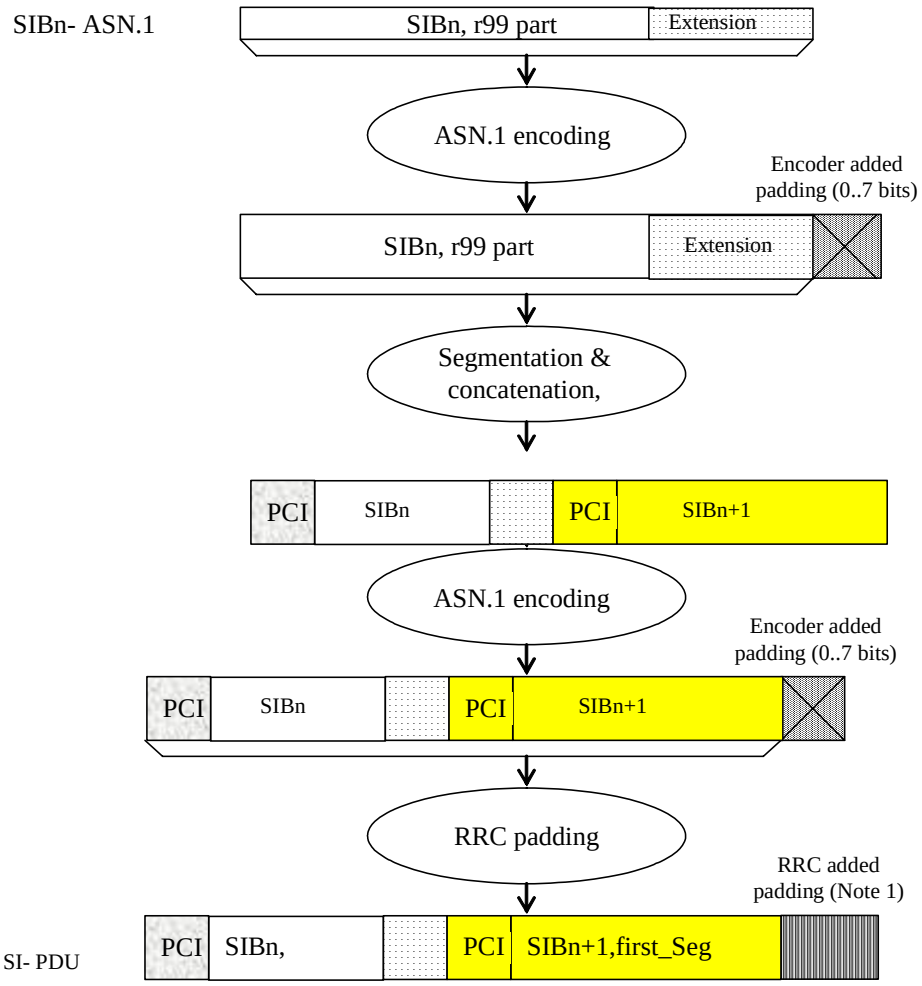

When using AM or UM mode, RLC requires that the RRC PDU length is a multiple of 8 bits.

When using Tr mode, RLC does neither impose size requirements nor perform padding. This implies that RRC has to take into account the transport format set defined for the transport channel across which the message is to be sent. RRC shall add the lowest number of padding bits required to fit the size specified for the selected transport format. In case of Enhanced Uplink in CELL_FACH state and Idle mode, when using Tr mode, RRC shall add the lowest number of padding bits to ensure octet alignment.

For paging type 1 messages, in case the PCCH is mapped on HS-DSCH, padding needs to apply only to ensure octet alignment.

For SYSTEM INFORMATION CHANGE INDICATION message, in case the BCCH is mapped on HS-DSCH, padding needs to apply only to ensure octet alignment.

For system information blocks, building the PDU involves two steps. The first step is the building of the System Information Blocks, in which step padding is not applied (the rules for extension apply). The second step is the building of the RRC PDUs, involving segmentation and concatenation of System Information Blocks, and then padding as described above for Tr mode if the BCCH carrying the System Information Blocks is mapped on BCH. The procedure is shown by means of an example as described in Figure 12.1.3-2. The example includes two System Information Blocks, SIBn and SIBn+1, of which only SIBn includes a protocol extension. The two System Information Blocks used in the example do not require segmentation and are concatenated into one SYSTEM INFORMATION message.

Note 1: RRC padding needs to be added only to octet align BCCH blocks which are mapped onto HS-DSCH

**Figure 12.1.3-2: Padding for System Information**

PCI: Protocol control information at SYSTEM INFORMATION message level

SI: SYSTEM INFORMATION message

For system information blocks, RRC may also add padding information at the end of IE "SIB data fixed", used both within IE "Last segment" and IE "Complete SIB". The IE "SIB data fixed" has a fixed length i.e. no length denominator used. In case the remaining amount of "SIB data" information is insufficient to fill the IE completely, RRC includes padding bits.

Since no length denominator is included, the receiving RRC cannot remove the padding added by the sender. However, since the padding used is the same as the padding added by the PER encoder to achieve octet alignment, the receiver can handle it.

NOTE 1 The mechanism described above implies that the PDU provided to the ASN.1 decoder may have more than 7 padding bits included. For a complete System Information Block of length 215 bits, 11 padding bits are added by RRC. Since the decoder requires an octet aligned input, 6 additional bits need to be added. In this (worst) case, a total of 17 padding bits is included.

NOTE 2 For the above cases, use of padding bits is possible and more efficient than including a length denominator.

When using the RRC padding described above, the segment has a fixed length, which completely fills the transport block. Therefore, in this case no RRC padding is added within the SYSTEM INFORMATION message. This is illustrated by means of the following figure.

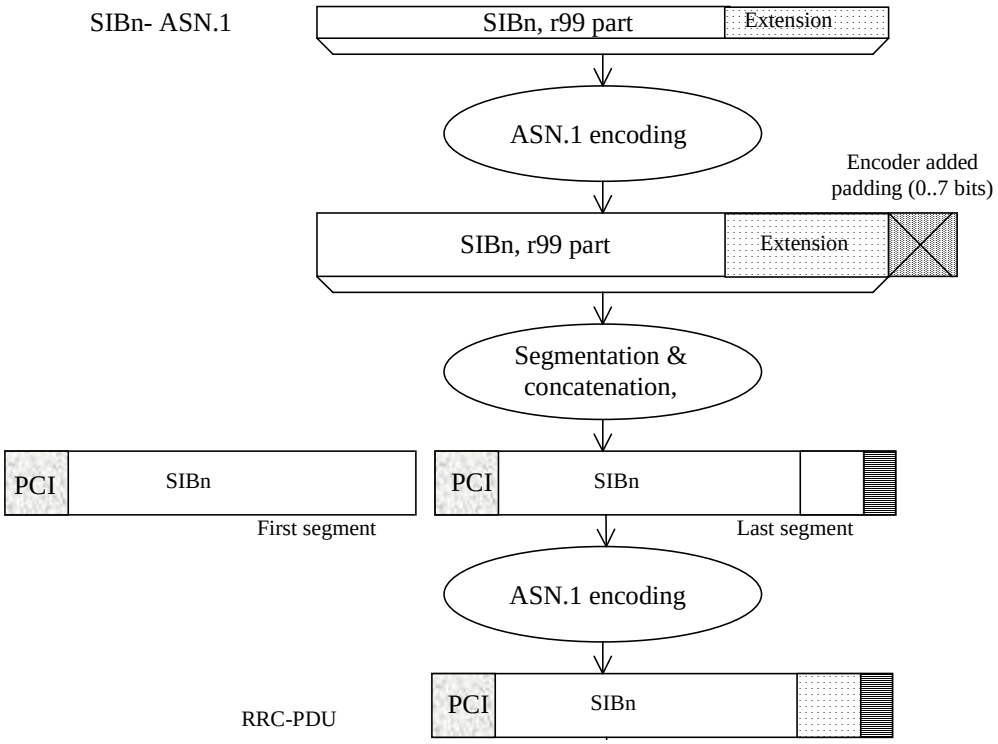

**Figure 12.1.3-3: No RRC padding for System Information**

# 12.2 ECN link module for RRC

# 12.4 RRC messages encoded otherwise

NOTE: The messages included in this section are not specified by means of ASN.1.

## 12.4.1 Messages using tabular encoding specification

The encoding of the message is specified by means of a table listing the information elements known in the message and their order of their appearance in the message.

When a field extends over more than one octet, the order of bit values progressively decreases as the octet number increases. The least significant bit of the field is represented by the lowest numbered bit of the highest numbered octet of the field.

### 12.4.1.1 TRANSPORT FORMAT COMBINATION CONTROL using transparent DCCH

#### 12.4.1.1.1 TRANSPORT FORMAT COMBINATION CONTROL, 3 bit format

The 3 bit format is as follows:

| **3** | **2** | **1** | Transport Format Combination Set Identity value |
|---|---|---|---|
| 0 | 0 | 0 | 0 |
| 0 | 0 | 1 | 1 |
| 0 | 1 | 0 | 2 |
| | | | |
| 1 | 1 | 1 | 7 |

12.4.1.1.2 Void

12.4.1.1.3 Void

# 13 Protocol timers, counters, other parameters and default configurations

The information provided in subclauses 13.1 and 13.2 shall be treated as informative. The normative text is specified in the relevant subclauses in clause 8 and clause 8 shall prevail.

## 13.1 Timers for UE

| Timer | Start | Stop | At expiry |
|---|---|---|---|
| T300 | Transmission of RRC CONNECTION REQUEST in case of connection establishment for reasons other than MBMS reception | Reception of RRC CONNECTION SETUP | Retransmit RRC CONNECTION REQUEST if V300 =< N300, else go to Idle mode |
| T302 | Transmission of CELL UPDATE/URA UPDATE | Reception of CELL UPDATE CONFIRM/URA UPDATE CONFIRM | Retransmit CELL UPDATE/URA UPDATE if V302 =< N302, else, go to Idle mode |
| T304 | Transmission of UE CAPABILITY INFORMATION | Reception of UE CAPABILITY INFORMATION CONFIRM | Retransmit UE CAPABILITY INFORMATION if V304 =< N304, else initiate a cell update procedure |
| T305 | Entering CELL_FACH or URA_PCH or CELL_PCH state. Reception of CELL UDPATE CONFIRM/URA UPDATE CONFIRM. | Entering another state. | Transmit CELL UPDATE if T307 is not activated and the UE detects "in service area". Otherwise, if T307 is not active, start T307. |
| T307 | When the timer T305 has expired and the UE detects "out of service area". | When the UE detects "in service area". | Transit to idle mode |
| T308 | Transmission of RRC CONNECTION RELEASE COMPLETE | Not stopped | Transmit RRC CONNECTION RELEASE COMPLETE if V308 <=N308, else go to idle mode. |
| T309 | Upon reception of CELL CHANGE ORDER FROM UTRAN message | Successful response to a connection establishment request in the new cell. | Resume the connection to UTRAN |
| T310 | Transmission of PUSCH CAPACITY REQUEST | Reception of PHYSICAL SHARED CHANNEL ALLOCATION | Transmit PUSCH CAPACITY REQUEST if V310 =< N310, else procedure stops. |
| T311 | Reception of PHYSICAL SHARED CHANNEL ALLOCATION message with the CHOICE "*PUSCH allocation*" set to "PUSCH allocation pending". | Reception of PHYSICAL SHARED CHANNEL ALLOCATION message with CHOICE "*PUSCH allocation*" set to "PUSCH allocation assignment". | UE may initiate a PUSCH capacity request procedure. |
| T312 | When the UE starts to establish dedicated CH. For 1.28 Mcps TDD, it can also apply for physical shared channel establishment. For FDD, timer T312 runs independently for the downlink frequency associated with the primary uplink frequency and for the downlink frequency associated with the secondary uplink frequency. | When the UE detects N312 "in sync" indication from L1. | The criteria for physical channel establishment failure is fulfilled |

| Timer | Start | Stop | At expiry |
|---|---|---|---|
| T313 | When the UE detects consecutive N313 "out of sync" indication from L1. For FDD, timer T313 runs independently for the downlink frequency associated with the primary uplink frequency and for the downlink frequency associated with the secondary uplink frequency. | When the UE detects consecutive N315 "in sync" indication from L1. | The criteria for Radio Link failure is fulfilled. |
| T314 | When the criteria for radio link failure are fulfilled. The timer is started if radio bearer(s) that are associated with T314 exist or if only RRC connection exists only to the CS domain. | When the Cell Update procedure has been completed. | See subclause 8.3.1.13. |
| T315 | When the criteria for radio link failure are fulfilled. The timer is started only if radio bearer(s) that are associated with T315 exist or if RRC connection exists to PS domain. | When the Cell Update procedure has been completed. | See subclause 8.3.1.14. |
| T316 | When the UE detects "out of service area" in URA_PCH or CELL_PCH state | When the UE detects "in service area". | Initiate cell update procedure if in service area is detected. Otherwise start timer T317, transit to CELL_FACH state and initiate cell update procedure when the UE detects "in service area". |
| T317 | When the T316 expires or when in CELL_FACH state, the UE detects "out of service area". | When the UE detects "in service area". | T317 never expires. |
| T318 | Transmission of RRC CONNECTION REQUEST in case of connection establishment for MBMS reception | Reception of RRC CONNECTION SETUP | Enter idle mode |
| T319 | When entering CELL_PCH or URA_PCH. | When leaving CELL_PCH or URA_PCH state. | The UE activates starts the DRX cycle based on “DRX cycle length coefficient”. |
| T320 | When receiving the CELL UPDATE CONFIRM message with IE “Wait time” and IE “RRC State Indicator” set to the value “CELL_PCH” or “URA_PCH”. | When initiating the cell update or URA update procedure, see subclause 8.3.1.2. | See subclause 8.3.1.16. |
| T321 | See subclause 8.5.49. | See subclause 8.5.49. | See subclause 8.5.49. |

| Timer | Start | Stop | At expiry |
|---|---|---|---|
| T322 | When received in UTRAN MOBILITY INFORMATION message in the IE “Dedicated Priority Information” or upon cell (re)selection to UTRA from another RAT with validity time configured for dedicated priorities (in which case the remaining validity time is applied). | When dedicated priorities are cleared, when new dedicated priorities are received, when PLMN selection is performed on request by NAS, or upon cell (re)selection to another RAT (in which case the timer is carried on to the other RAT). | See subclause 8.3.3.7 |
| T323 | When transmitting a SIGNALLING CONNECTION RELEASE INDICATION message including the IE "Signalling Connection Release Indication Cause" | See subclauses 8.2.2.3, 8.3.1.6, and 8.5.2. | See subclause 8.1.14.4 |
| T324 | When a measurement report is triggered by intra frequency event 1d and the table “Target cell preconfigurations” in the variable TARGET_CELL_PRECONFIGURATION includes the cell that triggered the event and an Activation time offset equal to 0 is configured | Upon successful reception of a Target cell HS-SCCH order or after 4 seconds or upon reception of any RRC reconfiguration message or ACTIVE SET UPDATE message | Stop monitoring target cell HS-SCCH |

## 13.2 Counters for UE

| Counter | Reset | Incremented | When reaching max value |
|---|---|---|---|
| V300 | When initiating the procedure RRC connection establishment | Upon expiry of T300. | When V300 > N300, the UE enters idle mode. |
| V302 | When initiating the procedure Cell update or URA update | Upon expiry of T302 | When V302 > N302 the UE enters idle mode. |
| V304 | When sending the first UE CAPABILITY INFORMATION message. | Upon expiry of T304 | When V304 > N304 the UE initiates the Cell update procedure |
| V308 | When sending the first RRC CONNECTION RELEASE COMPLETE message in a RRC connection release procedure. | Upon expiry of T308 | When V308 > N308 the UE stops re-transmitting the RRC CONNECTION RELEASE COMPLETE message. |
| V310 | When sending the first PUSCH CAPACITY REQUEST message in a PUSCH capacity request procedure | Upon expiry of T310 | When V310 > N310 the UE stops re-transmitting the PUSCH CAPACITY REQUEST message. |
| V316 | At transmission or reception of PS data or signalling on SRB3 or upwards, or entering RRC Connected mode, or successful SRNS relocation. | Upon sending the SIGNALLING CONNECTION RELEASE INDICATION message, with the IE "Signalling Connection Release Indication Cause" set to "UE Requested PS Data session end" in CELL_PCH state or URA_PCH state and the DRX cycle length in use is equal to or longer than the shorter CN domain specific DRX cycle length for the PS domain and CS domain and V316 < 1. | When V316 >= 1 the UE stops sending any further SIGNALLING CONNECTION RELEASE INDICATION messages, with the IE "Signalling Connection Release Indication Cause" set to "UE Requested PS Data session end" in CELL_PCH state or URA_PCH state for as long as the DRX cycle length in use is equal to or longer than the shorter CN domain specific DRX cycle length for the PS domain and CS domain. |

## 13.3 UE constants and parameters

| Constant | Usage |
|---|---|
| N300 | Maximum number of retransmissions of the RRC CONNECTION REQUEST message |
| N302 | Maximum number of retransmissions of the CELL UPDATE / URA UPDATE message |
| N304 | Maximum number of retransmissions of the UE CAPABILITY INFORMATION message |
| N308 | Maximum number of retransmissions of the RRC CONNECTION RELEASE COMPLETE message |
| N310 | Maximum number of retransmission of the PUSCH CAPACITY REQUEST message |
| N312 | Maximum number of "in sync" received from L1. |
| N313 | Maximum number of successive "out of sync" received from L1. |
| N315 | Maximum number of successive "in sync" received from L1 during T313 is activated. |

## 13.4 UE variables

### 13.4.ob AM_RLC_ERROR_PENDING_RB234

This variable indicates whether an AM RLC unrecoverable error has been detected during the current cell update procedure on RB 2, 3, or 4.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| AM RLC error pending | MP | | Boolean | TRUE means an unrecoverable error was detected on AM RLC during the current cell update procedure..<br>Set to FALSE when the cell update procedure is completed. |

## 13.4.oc AM_RLC_ERROR_PENDING_RB5_AND_UP

This variable indicates whether an AM RLC unrecoverable error has been detected during the current cell update procedure on RB 5 or above.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| AM RLC error pending | MP | | Boolean | TRUE means an unrecoverable error was detected on AM RLC during the current cell update procedure..<br>Set to FALSE when the cell update procedure is completed. |

## 13.4.0 CELL_INFO_LIST

This variable contains cell information on intra-frequency, inter-frequency and inter-RAT cells, as received in messages System Information Block Type 11, System Information Block Type 12, and MEASUREMENT CONTROL.

The first position in Intra-frequency cell info list corresponds to Intra-frequency cell id 0, the second to Intra-frequency cell id 1, etc.

The first position in Inter-frequency cell info list corresponds to Inter-frequency cell id 0, the second to Inter-frequency cell id 1, etc.

The first position in Inter-RAT cell info list corresponds to Inter-RAT cell id 0, the second to Inter-RAT cell id 1, etc.

This variable shall be cleared at cell re-selection, when leaving UTRA RRC connected mode, when switched off as well as at selection of a new PLMN.

| >>*Not present* | | | | No data | REL-5 |

NOTE: This IE is not used in this release of the specification.

## 13.4.00 Void

## 13.4.0a CELL_UPDATE_STARTED

This variable indicates whether a cell update or URA update procedure is in progress.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cell update started | MP | | Boolean | TRUE means a cell or URA update procedure is in progress.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.1 CIPHERING_STATUS

This variable contains information about the current status of ciphering in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Status for each CN domain | MP | <1 to maxCNDomains> | | |
| >CN domain identity | MP | | CN domain identity 10.3.1.1 | |
| >Status | MP | | Enumerated( Not started, Started) | Set to "Not started" when entering UTRA RRC connected mode.<br>Set to "Not started" when leaving UTRA RRC connected mode. |
| Reconfiguration | MP | | Boolean | TRUE means an RRC procedure performing reconfiguration of ciphering is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.1a COMMON_E_DCH_TRANSMISSION

This variable indicates whether E-DPDCH and E-DPCCH transmission procedures for FDD or E-RUCCH and E-PUCH transmission procedure for 1.28 Mcps TDD in CELL_FACH state or Idle mode are ongoing. See subclause 8.5.46 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Common E-DCH transmission | MP | | Boolean | See subclause 8.5.46 | REL-8 |

## 13.4.2 Void

## 13.4.2a CONFIGURATION_INCOMPLETE

This variable indicates whether a received measurement control message contains invalid an incomplete measurement configuration.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Configuration incomplete | MP | | Boolean | TRUE: An incomplete configuration has been detected.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.3 C_RNTI

This variable stores the assigned C-RNTI for this UE when in CELL_FACH state. For FDD and 1.28 Mcps TDD, this variable stores the assigned C-RNTI for this UE in CELL_PCH state, if in CELL_PCH state a HS-DSCH transport channel has been allocated.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| C-RNTI | OP | | C-RNTI 10.3.3.8 | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Cleared when leaving UTRA RRC connected mode. |

## 13.4.3a DEFERRED_MEASUREMENT_STATUS

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Deferred measurement status | MP | | Boolean | If TRUE, the UE can transmit RRC messages on RACH and receive RRC messages commanding it to enter CELL_DCH without having read and acted on SIB11, SIB11bis and 12. | REL-7 |

## 13.4.3b DTX_DRX_PARAMS

NOTE: For FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE parameters for DTX-DRX | MD | | DTX-DRX Information in 10.3.6.34a | | REL-7 |

## 13.4.3c DTX_DRX_STATUS

NOTE: For FDD only.

This variable indicates whether discontinuous UL DPCCH transmission and discontinuous reception of F-DPCH and HSPA DL channel procedures are ongoing. See subclause 8.5.34 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| DTX_DRX_STATUS | MP | | Boolean | TRUE: discontinuous transmission and reception is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-7 |

## 13.4.3d DSAC_PARAM

This variable contains Domain Specific Access Restriction Parameters during the connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CS Domain Specific Access Restriction | MP | | Domain Access Restriction 10.3.1.3b | This IE contains CS Domain Specific Access Restriction Parameters<br>Cleared when leaving UTRA RRC connected mode. | REL-6 |
| PS Domain Specific Access Restriction | MP | | Domain Access Restriction 10.3.1.3b | This IE contains PS Domain Specific Access Restriction Parameters<br>Cleared when leaving UTRA RRC connected mode. | REL-6 |

## 13.4.3e DSCH_RNTI

In TDD this variable stores the assigned DSCH-RNTI for this UE when in CELL_DCH state.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| DSCH-RNTI | OP | | DSCH-RNTI 10.3.3.9a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Cleared when leaving UTRA RRC connected mode. |

## 13.4.4 Void

## 13.4.4o E_DCH_TRANSMISSION

This variable indicates whether E-DPDCH and E-DPCCH transmission procedures are ongoing. See subclause 8.5.28 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E-DCH transmission | MP | | Boolean | TRUE: E-DCH transmission is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-6 |

## 13.4.4a E_RNTI

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Primary E-RNTI | OP | | E-RNTI 10.3.3.10a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Cleared when leaving UTRA RRC connected mode. | REL-6 |
| Secondary E-RNTI | OP | | E-RNTI 10.3.3.10a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Cleared when leaving UTRA RRC connected mode. | REL-6 |

## 13.4.5 ESTABLISHED_RABS

This variable is used to store information about the established radio access bearers and signalling radio bearers in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| RAB information | OP | 1 to <maxRABsetup> | | For each RAB established.<br>Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Cleared when leaving UTRA RRC connected mode. |
| >RAB info | MP | | RAB info 10.3.4.8 | |
| >RB information | MP | 1 to <maxRBper RAB> | | For each RB belonging to the RAB |
| >>RB identity | MP | | RB identity 10.3.4.16 | |
| >>Subflow | MP | | Integer(0..< | Reference to the RAB subflow |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| | | | maxSubflow count>) | implemented by this RB |
| >>RB started | MD | | Enumerated( stopped, started) | Default value is started |
| Signalling radio bearer information | OP | 1 to < maxSRBsetup> | | In the order of RB0 and upwards.<br>Cleared when leaving UTRA RRC connected mode. |
| >RB started | MD | | Enumerated( stopped, started) | Default value is started |

## 13.4.5a ESTABLISHED_SIGNALLING_CONNECTIONS

This variable is used to store information about established signalling connections.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Signalling connection list | OP | 1 to <maxCNdomains> | | For each established signalling connection.<br>Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Cleared when leaving UTRA RRC connected mode. |
| >Signalling connection identity | MP | | CN domain identity 10.3.1.1 | |

## 13.4.6 ESTABLISHMENT_CAUSE

This variable is used to store the cause for establishment of a signalling connection received by upper layers, to be used at RRC connection establishment or Initial Direct Transfer.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Establishment cause | OP | | Establishment cause 10.3.3.11 | Cleared when leaving UTRA RRC connected mode. |

## 13.4.6a EUTRA_FREQUENCY_INFO_LIST

This variable contains cell information on E-UTRA frequencies (possibly with associated blacklists), as received in messages System Information Block Type 19 and MEASUREMENT CONTROL.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Frequency Info List | MP | 1 to <maxNumEUTRAFreqs> | | | REL-8 |
| >EARFCN | MP | | Integer(0 .. 65535) | EARFCN of the downlink carrier frequency [36.101] | REL-8 |
| >Measurement Bandwidth | MD | | Enumerated(6, 15, 25, 50, 75, 100) | Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, $N_{RB}$ [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6. | REL-8 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUTRACellPerFreq> | | | REL-8 |
| >>Physical Cell identity | MP | | Integer (0..503) | A list of blacklisted cells can be signalled per frequency | REL-8 |

## 13.4.6b ETWS_DUPLICATE_DETECT_PARAM

This variable contains duplicate detection parameter for the ETWS information until the upper layer indicates to clear the variable. The UE should remove entries in this variable when they have been stored for three hours.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Duplication detection parameters list | MP | 0 to 2 | | | REL-8 |
| >Message Identifier | MP | | Octet String (2) | IE "Message Identifier" as defined in [77] | REL-8 |
| >Serial Number | MP | | Octet string (2) | IE "Serial Number" as defined in [77] | REL-8 |

## 13.4.6c ETWS_INFO_IN_PROGRESS

This variable is not used in this version of the specification.

## 13.4.7 FAILURE_CAUSE

This variable contains the cause for failure of a UE initiated procedure, to be reported in a retransmitted message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Failure cause | OP | | Failure cause 10.3.3.13 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |

## 13.4.8 FAILURE_INDICATOR

This variable indicates whether the procedure has failed for a UE initiated procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Failure indicator | MP | | Boolean | TRUE: Procedure has failed. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.8o H_RNTI

This variable stores the assigned H-RNTI for this UE when in CELL-DCH, CELL_FACH (FDD and 1.28 Mcps TDD only) or CELL_PCH (FDD and 1.28 Mcps TDD only) state, and when an HS-DSCH transport channel has been allocated.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| H-RNTI | OP | | H-RNTI 10.3.3.14a | Cleared when entering UTRA RRC connected mode when not otherwise stated in the procedure. Cleared when leaving UTRA RRC connected mode. | REL-5 |

## 13.4.8oo HS_DSCH_RECEPTION

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing. See subclause 8.5.25 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS-DSCH reception | MP | | Boolean | TRUE: HS-DSCH reception is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-5 |

## 13.4.8oa HS_DSCH_RECEPTION_CELL_FACH_STATE

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing in CELL_FACH for BCCH, DCCH and, if configured, DTCH reception. See subclause 8.5.36 for actions related to the setting of this variable.

NOTE: FDD and 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS-DSCH reception in CELL_FACH state | MP | | Boolean | TRUE: HS-DSCH reception in CELL_FACH is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode, CELL_PCH, URA_PCH and CELL_DCH.<br>Set to FALSE when leaving UTRA RRC connected mode, | REL-7 |

## 13.4.8ob HS_DSCH_RECEPTION_OF_CCCH_ENABLED

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are enabled for CCCH and BCCH, and for SRB1 if the UE is in CELL_FACH state. See subclause 8.5.37 for actions related to the setting of this variable.

NOTE: For FDD and 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS-DSCH reception of CCCH | MP | | Boolean | TRUE: HS-DSCH reception for the CCCH is enabled.<br>Set to FALSE when leaving UTRA RRC connected mode.<br>Set to FALSE when entering CELL_PCH, URA_PCH and CELL_DCH. | REL-7 |

## 13.4.8oc HS_DSCH_RECEPTION_GENERAL

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are ongoing in CELL_DCH, CELL_FACH, CELL_PCH, or URA_PCH. See subclause 8.5.37a for actions related to the setting of this variable.

NOTE: FDD and 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS-DSCH reception in all states | MP | | Boolean | TRUE: HS-DSCH reception in CELL_DCH, CELL_FACH, CELL_PCH or URA_PCH is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode | REL-7 |

## 13.4.8od SECONDARY_CELL_HS_DSCH_RECEPTION

This variable indicates whether HS-SCCH and HS-DSCH reception procedures are configured for a secondary serving.HS-DSCH cell See subclause 8.5.51 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS-DSCH reception | MP | | Boolean | TRUE: HS-DSCH reception is configured for a secondary serving HS-DSCH cell.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

## 13.4.8oe HS_DSCH_DRX_CELL_FACH_STATUS

This variable indicates whether HS-DSCH DRX operation is supported in CELL_FACH. See subclause 8.5.48 for actions related to the setting of this variable.

NOTE: FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS-DSCH DRX in CELL_FACH status | MP | | Boolean | TRUE: HS-DSCH DRX operation in CELL_FACH is supported.<br>Set to FALSE when leaving CELL_FACH or when dedicated H-RNTI is cleared. | REL-8 |

## 13.4.8of HS_DSCH_RECEPTION_OF_ETWS_ENABLED

This variable is not used in this version of the specification.

## 13.4.8ooo HS_SCCH_LESS_PARAMS

NOTE: For FDD only.

This variable contains the parameters for UE operation in HS-SCCH less mode. The parameters are listed in subclause 10.3.6.36ab.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE parameters for HS-SCCH less | MD | | HS-SCCH less Information in 10.3.6.36ab | | REL-7 |

## 13.4.8oooo HS_SCCH_LESS_STATUS

NOTE: For FDD only.

This variable indicates whether HS-SCCH less HS-DSCH transmission procedures are ongoing. See subclause 8.5.35 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS_SCCH_LESS_STATUS | MP | | Boolean | TRUE: HS-SCCH less HS-DSCH transmission is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-7 |

## 13.4.8a INCOMPATIBLE_SECURITY_RECONFIGURATION

This variable indicates whether an incompatible simultaneous reconfiguration of a security function has been received.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Incompatible security reconfiguration | MP | | Boolean | TRUE: An incompatible simultaneous security reconfiguration has been detected.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.8b Void

## 13.4.8c Void

## 13.4.8d HSPA_RNTI_STORED_CELL_PCH

This variable indicates whether variables H_RNTI, C_RNTI and E_RNTI are stored in CELL_PCH state.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HSPA RNTI_STORED_CELL_PCH | MP | | Boolean | TRUE: variables H_RNTI, C_RNTI and E_RNTI are stored in CELL_PCH state.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

## 13.4.9 INITIAL_UE_IDENTITY

In this variable the identity used by the UE when establishing an RRC connection is stored.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Initial UE identity | OP | | Initial UE identity 10.3.3.15 | Cleared when leaving UTRA RRC connected mode. |

## 13.4.9a INTEGRITY_PROTECTION_ACTIVATION_INFO

This variable contains information to be sent to UTRAN about when a new integrity protection configuration shall be activated in the uplink for signalling radio bearers in case of modification of integrity protection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Uplink Integrity protection activation info | OP | | Integrity protection activation info 10.3.3.17 | Cleared when entering UTRA RRC connected mode.<br>Cleared when leaving UTRA RRC connected mode. |

## 13.4.10 INTEGRITY_PROTECTION_INFO

This variable contains information about the current status of the integrity protection in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Status | MP | | Enumerated( Not started, Started) | Set to "Not started" when entering UTRA RRC connected mode.<br>Set to "Not started" when leaving UTRA RRC connected mode. |
| Reconfiguration | MP | | Boolean | TRUE means a reconfiguration of integrity protection is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |
| Signalling radio bearer specific integrity protection information | OP | 1 to <maxSRBsetup> | | When integrity protection is started, status information for RB0- RB4 in that order.<br>Cleared when entering UTRA RRC connected mode.<br>Cleared when leaving UTRA RRC connected mode. |
| >Uplink RRC HFN | MP | | Bit string (28) | |
| >Downlink RRC HFN | MP | | Bit string (28) | |
| >Uplink RRC Message sequence number | MP | | Integer (0..15) | |
| >Downlink RRC Message sequence number | OP | | Integer (0..15) | |

## 13.4.10a INTER_RAT_HANDOVER_INFO_TRANSFERRED

This variable stores information about the inter RAT handover info that has been transferred to another RAT.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Predefined configuration status information | OP | | Predefined configuration status information 10.3.4.5a | Cleared upon entering connected mode in another RAT | |
| Predefined configuration status information compressed | OP | | Predefined configuration status information compressed 10.3.4.5b | Cleared upon entering connected mode in another RAT | REL-5 |
| UE security information | OP | | UE security information 10.3.3.42b | Cleared upon entering connected mode in another RAT | |
| UE security information2 | OP | | UE security information2 10.3.3.42c | Cleared upon entering connected mode in another RAT | REL-6 |
| UE radio access capability | OP | | UE radio access capability 10.3.3.42 | Cleared upon entering connected mode in another RAT | |
| UE radio access capability extension | OP | | UE radio access capability extension 10.3.3.42a | Cleared upon entering connected mode in another RAT | |
| UE radio access capability compressed | OP | | UE radio access capability compressed 10.3.3.42o | | REL-5 |
| UE system specific capability | OP | 1 to <maxSystemCapability> | Inter-RAT UE radio access capability 10.3.8.7 | Cleared upon entering connected mode in another RAT | |
| >Inter-RAT UE radio access capability | MP | | Inter-RAT UE radio | | |

| | | | | | |
|---|---|---|---|---|---|
| | | | access capability 10.3.8.7 | | |

## 13.4.11 INVALID_CONFIGURATION

This variable indicates whether a received message contained an invalid configuration, by means of invalid values or invalid combinations of information elements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Invalid configuration | MP | | Boolean | TRUE: An invalid configuration has been detected.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.11a LATEST_CONFIGURED_CN_DOMAIN

This variable stores the CN-domain that was most recently configured to be used for ciphering and integrity protection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Latest configured CN domain | OP | | CN domain identity 10.3.1.1 | Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure.<br>Cleared when leaving UTRA RRC connected mode. |

## 13.4.11b LATEST_CONFIGURED_SRB_DELAY_AND_PC_PREAMBLE

This variable stores the SRB delay and PC preamble to be used for establishing the DPCH after failure of hard handover, inter-RAT handover from UTRAN, or cell change order from UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| SRB delay | OP | | Integer (0..7) | Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure. |
| PC preamble | OP | | Integer (0..7) | Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure. |

## 13.4.11c MBMS_ACTIVATED_SERVICES

This variable stores the MBMS multicast services the UE has joined as well as the MBMS broadcast services the UE is interested to receive. Whenever the list of joined multicast services and/ or interested broadcast services changes, upper layers provide an indication upon which the UE shall update the variable accordingly. In case upper layers de-select an MBMS Selected Services, the UE shall remove the concerned service from the variable. Likewise, when upper layers select an MBMS Selected Services, the UE shall add the concerned service to the variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Activated service list | OP | 1 to <maxMBMS-Services> | | |
| >Service Identity | MP | | MBMS Service identity 10.3.9a.8 | |
| >Service type | MP | | Enumerated (Multicast, Broadcast) | |
| >MBMS Selected Services Indicator | CV-*Broadcast* | | Boolean | TRUE means that the service is currently a MBMS Selected Service |

| Condition | Explanation |
|---|---|
| *Broadcast* | This IE is mandatory present if the IE "Service type" is set to 'Broadcast' and not needed otherwise. |

NOTE: An independent instance of the variable MBMS_ACTIVATED_SERVICES is used by UEs supporting reception of MBMS services from cells operating in MBSFN mode and will contain the services available in MBSFN mode only as indicated by higher layers.

## 13.4.11d MBMS_PREV_FREQUENCY_INFO

This variable stores the frequency information of the cell the UE is camped on, upon moving to the MBMS preferred layer indicated MBMS FLC preferred frequency information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| PREV Frequency Information | | | | | |
| CHOICE *mode* | | | | | |
| >FDD cell | | | | | |
| >>UARFCN downlink (Nd) | MP | | Integer(0 .. 16383) | [21] | |
| >3.84 Mcps TDD cell | | | | | |
| >>UARFCN (Nt) | MP | | Integer(0 .. 16383) | [22] | |
| >1.28 Mcps TDD cell list | | | | | |
| >>UARFCN (Nt) | MP | | Integer(0 .. 16383) | [22] | |

## 13.4.11e MBMS_PL_SERVICE_RESTRICTION_INFO_DEDICATED

This variable stores the value of the IE "MBMS PL Service Restriction Information" restriction applicable to preferred frequency received in the latest Radio Bearer Control or Cell Update Confirm message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MBMS_PL_SERVICE_RESTRICTION_INFO_DEDICATED | MP | | Enumerated (TRUE, FALSE) | Set to FALSE when entering UTRA connected mode. | REL-6 |

## 13.4.12 MEASUREMENT_IDENTITY

This variable stores the measurements configured in the UE. For each configured measurement, the information below shall be stored.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| MEASUREMENT CONTROL | OP | | MEASUREMENT CONTROL 10.2.17, System Information Block type 11 10.2.48.8.12, System Information Block type 12 10.2.48.8.13 | Information as contained in these messages. Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure (8.4.1.8-8.4.1.9). Cleared when leaving UTRA RRC connected mode when not stated otherwise in the procedure (8.4.1.9a). |

## 13.4.13 Void

## 13.4.13a MIMO_PARAMS

This variable indicates the values of the parameters for operation in MIMO mode. See subclause 8.5.xx for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE mode | MP | | | | REL-8 |
| >FDD | | | | | REL-8 |
| >>MIMO N_cqi_typeA/M_cqi ratio | OP | | Enumerated( 1/2, 2/3, 3/4, 4/5, 5/6, 6/7, 7/8, 8/9, 9/10, 1/1) | | |
| >>MIMO pilot configuration | OP | | MIMO pilot configuration 10.3.6.41b | | |
| >>Precoding weight set restriction | OP | | Enumerated (TRUE) | If present, UE applies precoding weight set restriction. | REL-7 |

| | | | | | |
|---|---|---|---|---|---|
| >TDD | | | | | REL-8 |
| >>CHOICE TDD option | MP | | | | REL-8 |
| >>>1.28 Mcps TDD | | | | | REL-8 |
| >>>>MIMO SF Mode for HS-PDSCH dual stream | MP | | Enumerated (SF1, SF1/SF16) | | REL-8 |
| >>>>HS-SICH Reference Signal Info | OP | <1 to maxHSSCCHs > | | The order of the list corresponds to the order of HS-SCCHs in HS-SCCH info | REL-8 |
| >>>>> Reference Signal Midamble configuration | MP | | Integer (2, 4, 6, 8, 10, 12, 14, 16) | Midamble Allocation mode is UE specific midamble allocation | REL-8 |
| >>>>>Reference Signal Midamble Shift | MP | | Integer (0..15) | The allocated midamble shift. | REL-8 |
| >>>>>Reference Signal Timeslot number | MP | | Integer (1..5) | | REL-8 |
| >>>3.84 Mcps TDD or 7.68 Mcps TDD | | | | (no data) | REL-8 |

## 13.4.13b MIMO_STATUS

This variable indicates whether the UE is operating in MIMO mode. See subclause 8.5.ww for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MIMO status | MP | | Boolean | TRUE means the UE is operating in MIMO mode.<br><br>Cleared when leaving CELL_DCH state. | |

## 13.4.14 ORDERED_RECONFIGURATION

This variable stores information about an ongoing Reconfiguration procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Ordered reconfiguration | MP | | Boolean | TRUE means that a Reconfiguration procedure is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.14a PDCP_ROHC_TARGET_MODE

This variable contains the ROHC target mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Target Mode | OP | | Enumerated (O-mode, R-mode) | The UE shall only transit to the signalled mode for operation of ROHC as decribed in [36]. | REL-5 |

## 13.4.15 PDCP_SN_INFO

This variable contains PDCP receive sequence numbers for one or several radio bearers to be included in a response message to UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| RB with PDCP information list | OP | 1 to <maxRBallRABs> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |
| >RB with PDCP information | MP | | RB with PDCP information 10.3.4.22 | |

## 13.4.15a PHYSICAL_SHARED_CHANNEL_CONFIGURATION

This variable is used only for TDD to store information about the physical shared channel configuration in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| PUSCH configuration | OP | | | Cleared when entering and leaving UTRA RRC connected mode. |
| >PUSCH info | MP | | PUSCH info 10.3.6.63 | |
| >PUSCH Identity | OP | | Integer(1..hiPUSCHidentities) | |
| >PUSCH power control info | OP | | PUSCH power control info 10.3.6.65 | |
| PDSCH configuration | OP | | | Cleared when entering and leaving UTRA RRC connected mode. |
| >PDSCH Info | MP | | PDSCH Info 10.3.6.44 | |
| >PDSCH Identity | OP | | Integer(1..hiPDSCHidentities) | |
| >PDSCH power control info | OP | | PDSCH power control info 10.3.6.45 | |
| ISCP Timeslot list | OP | 1 to maxTS | | Cleared when entering and leaving UTRA RRC connected mode. |
| >Timeslot number | MP | | Timeslot number 10.3.6.84 | Timeslot numbers, for which the UE shall report the timeslot ISCP in PUSCH CAPACITY REQUEST message |

## 13.4.15b PPAC_PARAM

This variable contains Paging Permission with Access Control Parameters during the connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Paging Response Restriction Indication | MP | | Enumerated( All, CS, PS, None) | Cleared when leaving UTRA RRC connected mode. | REL-8 |
| Location/Registration Restriction Indicator | MP | | Enumerated( All, CS, PS) | Cleared when leaving UTRA RRC connected mode. | REL-8 |
| Location/Registration | MP | | Location /Registration Parameters 10.3.1.7oa | Cleared when leaving UTRA RRC connected mode. | REL-8 |

## 13.4.15c PRIORITY_INFO_LIST

This variable contains cell information on UTRA and inter-RAT priorities to be applied to neighbour cells stored in CELL_INFO_LIST and EUTRA_FREQUENCY_INFO_LIST, as received in messages System Information Block Type 19 and UTRAN MOBILITY INFORMATION.

The contents of this variable are inherited at inter-RAT cell (re)selection, including the remaining validity time (i.e., T320 in E-UTRAN, T322 in UTRAN, and T3230 in GERAN), if configured.

This variable can be configured in CELL_DCH, CELL_FACH, CELL_PCH, URA_PCH and Idle states. However, it is only used in CELL_FACH, CELL_PCH, URA_PCH and Idle states.

In *Camped on any cell* in [4], the UE implicitly takes actions as described in subclause 8.1.1.6.19 assuming the IE "Priority status" equals "sys_info_priority" using stored System information Block type 19. In *Camped normally* in [4], if the UE assumes it has valid UE specific priorities according to [4], the UE implicitly takes actions as described in subclause 8.6.7.23 without stopping T322 using stored IE "Dedicated Priority Information".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Priority status | MP | | Enumerated (sys_info_priority, dedicated_priority) | | REL-8 |
| UTRA Serving Cell | OP | | | | REL-8 |
| >priority | OP | | Integer (0..<maxPrio–1>) | Absence of this IE indicates that the lowest priority is assigned to the serving frequency (lower than any assigned priority) | REL-8 |
| >$S_{prioritysearch1}$ | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >$S_{prioritysearch2}$ | MD | | Integer (0..7 by step of 1) | dB, default value is 0 | REL-8 |
| >$Thresh_{serving,low}$ | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >$Thresh_{serving,low2}$ | MD | | Integer (0..31) | Ec/N0, [dB], default value is 0 | REL-9 |
| Priority Info List | OP | 1 to <maxNumPrio> | | | REL-8 |
| >priority | OP | | Integer (0..<maxPrio–1>) | Absence of this IE indicates that no priority is assigned to the indicated frequencies | REL-8 |
| >CHOICE Radio Access Technology | MP | | | | REL-8 |
| >>UTRA FDD | | | | | REL-8 |
| >>>Frequency List | | 1 to <maxNumFDDFreqs> | | | |
| >>>>UARFCN | MP | | Integer (0..16383) | | REL-8 |
| >>>>QqualminFDD | MD | | Integer (-24..0) | Ec/N0, [dB] Default value is -24. | REL-8 |
| >>>>QrxlevminFDD | MD | | Integer (-119..-25 by step of 2) | RSCP, dBm Default value is -119. | REL-8 |
| >>>>$Thresh_{x, high}$ | OP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >>>>$Thresh_{x, low}$ | OP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >>UTRA TDD | | | | | REL-8 |

| >>>>QrxlevminEUTRA | MD | | Integer (-140..-44 by step of 2) | RSRP, dBm Default value is -140. | REL-8 |
| >>>> $Thresh_{x, high}$ | OP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >>>>$Thresh_{x, low}$ | OP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >>>>QqualminEUTRA | MD | | Integer (-34..-3) | RSRQ, dB default value is negative infinity | REL-9 |
| >>>>$Thresh_{x, high2}$ | OP | | Integer (0..31) | RSRQ, dB | REL-9 |
| >>>>$Thresh_{x, low2}$ | OP | | Integer (0..31) | RSRQ, dB | REL-9 |
| >>GSM | | | | | REL-8 |
| >>>NCC permitted | MD | | Bit string (8) {NCC 0 to 7} | Bitmap indicating NCC values; reselection of GERAN cells is permitted when the corresponding NCC bit = "1". Default is “11111111” | |
| >>>Frequency List | MP | 1 to < maxCellMeas> | | | REL-8 |
| >>>>Band indicator | MP | | Enumerated (DCS 1800 band used, PCS 1900 band used) | Indicates how to interpret the BCCH ARFCN | REL-8 |
| >>>>BCCH ARFCN | MP | | Integer (0..1023) | [45] | REL-8 |
| >>>>QrxlevminGSM | MD | | Integer (-115..-56 by step of 2) | GSM RSSI, dBm Default value is -115. | REL-8 |
| >>>>$Thresh_{x, high}$ | OP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |
| >>>>$Thresh_{x, low}$ | OP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |
| E-UTRA detection | OP | | Boolean | ‘TRUE’ means that the UE may detect the presence of a E-UTRA cell and report to NAS | REL-8 |

## 13.4.16 PROTOCOL_ERROR_INDICATOR

This variable indicates whether there exist a protocol error that is to be reported to UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Protocol error indicator | MP | | Protocol error indicator 10.3.3.27 | Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.17 PROTOCOL_ERROR_INFORMATION

This variable contains diagnostics to be reported to UTRAN for a message that was not completely understood.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Protocol error information | OP | | Protocol error information 10.3.8.12 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |

## 13.4.18 PROTOCOL_ERROR_REJECT

This variable indicates whether there has occurred a severe protocol error causing the ongoing procedure to fail.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Protocol error reject | MP | | Boolean | TRUE: a severe protocol error has occurred. Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.19 RB_TIMER_INDICATOR

This variable contains information to be sent to UTRAN if any of the timers T314 or T315 has expired when the UE sends a cell update with cause RL failure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| RB timer indicator | OP | | RB timer indicator 10.3.3.28 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |

## 13.4.20 RB_UPLINK_CIPHERING_ACTIVATION_TIME_INFO

This variable contains information to be sent to UTRAN about when a new ciphering configuration shall be activated in the uplink for radio bearers using RLC-AM or RLC-UM.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| RB uplink ciphering activation time info | OP | | RB activation time info 10.3.4.13 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |

## 13.4.20o RNC_CAPABILITY_CHANGE_SUPPORT

This variable indicates whether the serving RNC supports changes of UE capability in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| RNC support for change of UE capability | MP | | Boolean | Cleared when leaving UTRA RRC connected mode. |

## 13.4.20oo READY_FOR_COMMON_EDCH

In CELL_FACH state or Idle mode, this variable indicates whether E-DPDCH and E-DPCCH transmission procedures for FDD or E-RUCCH and E-PUCH transmission procedure for 1.28 Mcps TDD can be immediately started by the UE. See subclause 8.5.47 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Ready for common EDCH | MP | | Boolean | See subclause 8.5.47 | REL-8 |

## 13.4.20a SECURITY_MODIFICATION

This variable contains information on which CN domain is affected by the ongoing security reconfiguration.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Status for each CN domain | MP | <1 to maxCNDomains> | | |
| >CN domain identity | MP | | CN domain identity 10.3.1.1 | |
| >Status | MP | | Enumerated( Affected, Not Affected) | |

## 13.4.21 Void

## 13.4.22 START_THRESHOLD

This variable contains information about the maximum allowed value of the START for a CN domain.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| THRESHOLD | OP | | Integer (0..1048576) | 20 bits.<br>Cleared when entering UTRA RRC connected mode when not stated otherwise in the procedure.<br>Cleared when leaving UTRA RRC connected mode. |

## 13.4.23 START_VALUE_TO_TRANSMIT

This variable contains the value of START for new radio bearer(s) to be transmitted in a response message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| START | OP | | START 10.3.3.38 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |

## 13.4.23a TARGET_CELL_PRECONFIGURATION

This variable indicates whether HS-SCCH reception procedures are configured for a target cell for which HS-DSCH serving Cell Change may be initiated by HS-SCCH order sent from target cell. See subclause 8.3.4.3 and 8.5.52 for actions related to the setting of this variable.

NOTE: FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Serving Cell Change MAC reset | OP | | Boolean | | REL-8 |
| Serving Cell Change Message Type | OP | | Enumerated (RadioBearerSetup, RadioBearer Reconfiguration, TransportChannelReconfiguration, PhysicalChannelReconfiguration) | | REL-8 |
| Serving Cell Change Transaction Id | OP | | Integer (0..3) | | REL-8 |
| Target cell preconfigurations | OP | 1 to <maxRL> | | | REL-8 |
| >Primary scrambling code | MP | | Integer(0..511) | | REL-8 |
| >Target cell preconfiguration information | MP | | Target cell preconfiguration information 10.3.6.79a | | REL-8 |

## 13.4.24 TFC_SUBSET

This variable contains information about the TFC subset(s) applicable to the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *mode* | MP | | | | |
| >FDD | | | | | |
| >>Current TFC subset | MP | | Transport Format Combination Subset 10.3.5.22 | Set to "Full transport format set" when entering UTRA RRC connected mode when not stated otherwise in the procedure. | |
| >>Duration | OP | | TFC Control duration 10.3.6.80 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |
| >>Default TFC subset | OP | | Transport Format Combinati | The TFC subset to go back to when any temporary limitation is | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| | | | on Subset 10.3.5.22 | released.<br>Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |
| >>TFC subset list | MP | 1 to <maxTFCsub> | | | REL-4 |
| >>>TFC subset | MP | | Transport Format Combination Subset 10.3.5.22 | | REL-4 |
| >TDD | | | | | |
| >>TFCS list | MP | 1 to < maxCCTrCH > | | One TFCS is created when entering UTRA RRC connected mode when not stated otherwise in the procedure. | |
| >>>TFCS identity | MP | | Transport Format Combination Set Identity 10.3.5.21 | "TFCS ID" is set to 1 when entering UTRA RRC connected mode when not stated otherwise in the procedure.<br>"Shared channel indicator" is set to FALSE when entering UTRA RRC connected mode when not stated otherwise in the procedure. | |
| >>>Current TFC subset | MP | | Transport Format Combination Subset 10.3.5.22 | Set to "Full transport format set" when entering UTRA RRC connected mode when not stated otherwise in the procedure. | |
| >>>>Duration | OP | | TFC Control duration 10.3.6.80 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |
| >>>>Default TFC subset | OP | | Transport Format Combination Subset 10.3.5.22 | The TFC subset to go back to when any temporary limitation is released.<br>Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| >>TFC subset list | MP | 1 to <maxTFCsub2> | | | REL-4 |
| >>>TFCS identity | MP | | Transport Format Combination Set Identity 10.3.5.21 | | REL-4 |
| >>>TFC subset | MP | | Transport Format Combination Subset 10.3.5.22 | | REL-4 |

## 13.4.25 TGPS_IDENTITY

This variable contains the configuration parameters of all the configured compressed mode transmission gap pattern sequences.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Transmission gap pattern sequence | OP | 1 to <maxTGPS> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |
| >TGPSI | MP | | TGPSI 10.3.6.82 | |
| >TGPS Status Flag | MP | | Enumerated( activate, deactivate) | This flag indicates whether the Transmission Gap Pattern Sequence shall be activated or deactivated. |
| > Current TGPS Status Flag | MP | | Enumerated( active, inactive) | This flag indicates the current status of the Transmission Gap Pattern Sequence, whether it is active or inactive |
| >TGCFN | CV-*Active* | | Integer (0..255) | Connection Frame Number of the first frame of the first pattern within the Transmission Gap Pattern Sequence. |
| >Transmission gap pattern sequence configuration parameters | MP | | | Information as contained in the IE group "Transmission gap pattern sequence configuration parameters" in IE "DPCH compressed mode info" 10.3.6.33. |

| Condition | Explanation |
|---|---|
| *Active* | This IE is mandatory present when the value of the IE "TGPS Status Flag" is "Activate" and not needed otherwise. |

## 13.4.26 TGSN_REPORTED

This variable specifies whether an IE "Proposed TGSN" was reported to the UTRAN

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Proposed TGSN reported | MP | | Boolean | Set to FALSE when entering UTRA RRC connected mode. Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.26a TIMERS_AND_CONSTANTS

This variable contains the values for all timers and constants used in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| UE Timers and constants in connected mode | MD | | UE Timers and constants in connected mode 10.3.3.43 | Default value means that for all timers and constants<br>- for parameters with need MD, the defaults specified in 10.3.3.43 apply and<br>- for parameters with need OP, the parameters are absent.<br>All parameters are set to the default value when leaving UTRA RRC connected mode to another RAT. |

## 13.4.27 TRANSACTIONS

This variable stores the identifications of the ongoing RRC procedure transactions.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Accepted transactions | OP | 1 to <maxtransactions> | | Cleared when leaving UTRA RRC connected mode. |
| >Message type | MP | | Message Type | |
| >RRC transaction identifier | MP | | RRC transaction identifier 10.3.3.36 | |
| Rejected transactions | OP | 1 to <maxtransactions> | | Cleared when leaving UTRA RRC connected mode. |
| >Message type | MP | | Message Type | |
| >RRC transaction identifier | MP | | RRC transaction identifier 10.3.3.36 | |
| Processed transactions | OP | 1 to <maxtransactions> | | Cleared when leaving UTRA RRC connected. |
| >Message type | MP | | Message Type | |
| >RRC transaction identifier | MP | | RRC transaction identifier 10.3.3.36 | |

## 13.4.27o Void

## 13.4.27a TRIGGERED_1A_EVENT

This variable contains information about a 1a event that has been triggered in the UE. There is one such variable per 1a event per active set configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCellMeas> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| >sent reports | MP | | Integer(1..Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting |
| Cells recently triggered | OP | 1 to < maxCellMeas> | | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| >sent reports | MP | | Integer(1..Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting |
| Periodical reporting running | MP | | Boolean | |

## 13.4.27b TRIGGERED_1B_EVENT

This variable contains information about a 1b event that has been triggered in the UE. There is one such variable per 1b event per active set configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCell Meas> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | | |
| >sent reports | MP | | Integer(1.. Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting | REL-5 |
| Cells recently triggered | OP | 1 to < maxCell Meas> | | | REL-5 |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | | REL-5 |
| >sent reports | MP | | Integer(1.. Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting. | REL-5 |
| Periodical reporting running | MP | | Boolean | | REL-5 |

## 13.4.27c TRIGGERED_1C_EVENT

This variable contains information about a 1c event that has been triggered in the UE. There is one such variable per 1c event per active set configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCellMeas> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| >sent reports | MP | | Integer(1..Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting |
| Cells recently triggered | OP | 1 to < maxCellMeas> | | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| >sent reports | MP | | Integer(1..Infinity) | Number of reports sent to UTRAN in case of event triggered periodical reporting |
| Periodical reporting running | MP | | Boolean | |

## 13.4.27d BEST_CELL_1D_EVENT

This variable contains information about a 1d event that has been triggered in the UE. There is one such variable per 1d event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Best cell | OP | | Primary CPICH info 10.3.6.60 | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |

## 13.4.27e TRIGGERED_1E_EVENT

This variable contains information about a 1e event that has been triggered in the UE. There is one such variable per 1e event per active set configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCellMeas> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| Cells recently triggered | OP | 1 to < maxCellMeas> | | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |

## 13.4.27f TRIGGERED_1F_EVENT

This variable contains information about a 1f event that has been triggered in the UE. There is one such variable per 1f event per active set configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCellMeas> | | Cleared when entering UTRA RRC connected mode. Cleared when leaving UTRA RRC connected mode. |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |
| Cells recently triggered | OP | 1 to < maxCellMeas> | | |
| >primary CPICH | MP | | Primary CPICH info 10.3.6.60 | |

## 13.4.27f1 TRIGGERED_1G_EVENT

This variable contains information about a 1g event that has been triggered in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCellMeas> | | |
| >Primary CCPCH info | MP | | Primary CCPCH info 10.3.6.57 | |

## 13.4.27f2 TRIGGERED_1H_EVENT

This variable contains information about a 1h event that has been triggered in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCellMeas> | | |
| >Primary CCPCH info | MP | | Primary CCPCH info 10.3.6.57 | |

## 13.4.27f3 TRIGGERED_1I_EVENT

This variable contains information about a 1i event that has been triggered in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Cells triggered | OP | 1 to < maxCellMeas> | | |
| >Primary CCPCH info | MP | | Primary CCPCH info 10.3.6.57 | |

## 13.4.27f4 BEST_FREQUENCY_2A_EVENT

This variable contains information about a 2a event that has been configured in the UE. There is one such variable per 2a event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Best frequency | MP | | Frequency info 10.3.6.36 | |

## 13.4.27f5 TRIGGERED_2B_EVENT

This variable contains information about a 2b event that has been configured in the UE. There is one such variable per 2b event configured in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Frequency triggered | OP | 1 to < maxCellMeas> | | |
| >Frequency | MP | Frequency info 10.3.6.36 | | |

## 13.4.27f6 TRIGGERED_2C_EVENT

This variable contains information about a 2c event that has been configured in the UE. There is one such variable per 2c event configured in the UE.

| Condition | Explanation |
|---|---|
| *GANSS-ID-SBAS* | The IE is mandatory present if the IE "GANSS ID" is "SBAS" and never stored otherwise. |

## 13.4.29 UNSUPPORTED_CONFIGURATION

This variable indicates whether a received message contained a configuration that is not supported by the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| Unsupported configuration | MP | | Boolean | TRUE: An unsupported configuration has been detected.<br>Set to FALSE when entering UTRA RRC connected mode.<br>Set to FALSE when leaving UTRA RRC connected mode. |

## 13.4.30 URA_IDENTITY

This variable stores the assigned URA identity for this UE when in URA_PCH state.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| URA identity | OP | | URA identity 10.3.2.6 | Cleared when entering UTRA RRC connected mode.<br>Cleared when leaving UTRA RRC connected mode. |

## 13.4.31 U_RNTI

This variable stores the assigned U-RNTI for this UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| U-RNTI | OP | | U-RNTI 10.3.3.47 | Cleared when leaving UTRA RRC connected mode. |

## 13.4.32 VALUE_TAG

This variable contains information about the value tag for the last received system information block of a given type, for all system information blocks using value tags. The UE shall maintain one instance of this variable for the current selected cell. The UE may store several instances of this variable, one for each cell, to be used if the UE returns to these cells.

All IEs in this variable shall be cleared when switched off. All IEs in this variable except for the IE "SIB 16 value tag list" shall be cleared at selection of a new cell and this cell broadcasts an IE "PLMN Identity" in the MIB which is different from the IE "PLMN Identity" broadcast in the MIB in the previously selected cell. The IE "SIB 16 value tag list" is cleared when NAS informs AS about a new selected PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MIB value tag | OP | | MIB value tag 10.3.8.9 | Value tag for the master information block | |
| SB 1 value tag | OP | | Cell value tag 10.3.8.4 | Value tag for the scheduling block type 1 | |
| SB 2 value tag | OP | | Cell value tag 10.3.8.4 | Value tag for the scheduling block type 2 | |
| SIB 1 value tag | CV-*GSM* | | PLMN value tag 10.3.8.10 | Value tag for the system information block type 1<br>Note: IE 'PLMN value tag' is used for SIB1 but the area scope for | |

| Condition | Explanation |
|---|---|
| *GSM* | This information is optional when the UE is operating in "GSM-MAP mode" and never stored otherwise. |
| *ANSI* | This information is optional when the UE is operating in "ANSI-41 mode" and never stored otherwise. |
| *GANSS-ID-SBAS* | The IE is mandatory present if the IE "GANSS ID" is "SBAS" and never stored otherwise. |

## 13.4.33 CONTROL_CHANNEL_DRX_PARAMS

NOTE: For 1.28 Mcps TDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE parameters for Control Channel DRX | MP | | Control Channel DRX Information 1.28Mcps TDD in 10.3.6.107 | | REL-8 |

## 13.4.34 CONTROL_CHANNEL_DRX_STATUS

NOTE: For 1.28 Mcps TDD only.

This variable indicates whether discontinuous reception of Control Channel procedures is enable. See subclause 8.5.53 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CONTROL_CHANNEL_DRX_STATUS | MP | | Boolean | TRUE: control channel discontinuous reception is enable. Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure. Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

## 13.4.35 E_DCH_SPS_PARAMS

NOTE: For 1.28 Mcps TDD only.

This variable contains the parameters for E-DCH Semi-persistent Scheduling. The parameters are listed in subclause 10.3.6.111.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE parameters for E-DCH SPS | MP | | E-DCH SPS Information 1.28Mcps TDD in 10.3.6.111 | | REL-8 |

## 13.4.36 E_DCH_SPS_STATUS

NOTE: For 1.28 Mcps TDD only.

This variable indicates whether E-DCH Semi-persistent Scheduling procedures are ongoing. See subclause 8.5.54 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| E_DCH_SPS_STATUS | MP | | Boolean | TRUE: E-DCH SPS operation is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

## 13.4.37 HS_DSCH_SPS_PARAMS

NOTE: For 1.28 Mcps only.

This variable contains the parameters for HS-DSCH Semi-persistent Scheduling. The parameters are listed in subclause 10.3.6.112.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| UE parameters for HS-DSCH SPS | MP | | HS-DSCH SPS Information 1.28Mcps TDD in 10.3.6.112 | | REL-8 |

## 13.4.38 HS_DSCH_SPS_STATUS

NOTE: For 1.28 Mcps only.

This variable indicates whether HS-DSCH Semi-persistent Scheduling procedures are ongoing. See subclause 8.5.55 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| HS_DSCH_SPS_STATUS | MP | | Boolean | TRUE: HS-DSCH SPS is ongoing.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-8 |

## 13.4.39 SECONDARY_CELL_MIMO_PARAMS

This variable indicates the values of the parameters for operation in MIMO mode in the secondary serving HS-DSCH cell. See subclause 8.5.57 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MIMO N_cqi_typeA/M_cqi ratio | OP | | Enumerated( 1/2, 2/3, 3/4, 4/5, 5/6, 6/7, 7/8, 8/9, 9/10, 1/1) | | REL-9 |
| MIMO pilot configuration | OP | | MIMO pilot configuration 10.3.6.41b | | REL-9 |
| Precoding weight set restriction | OP | | Enumerated (TRUE) | | REL-9 |

## 13.4.40 SECONDARY_CELL_MIMO_STATUS

This variable indicates whether the secondary serving HS-DSCH cell of the UE is operating in MIMO mode. See subclause 8.5.57 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| MIMO status | MP | | Boolean | TRUE means the secondary cell of the UE is operating in MIMO mode.<br><br>Cleared when leaving CELL_DCH state or leaving dual cell operation. | REL-9 |

## 13.4.41 SECONDARY_CELL_E_DCH_TRANSMISSION

This variable indicates whether E-DPCCH and E-DPDCH transmission procedures are configured on the secondary UL frequency. See subclause 8.5.58 for actions related to the setting of this variable.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| Secondary cell E-DCH transmission | MP | | Boolean | TRUE: E-DCH transmission is configured on the secondary uplink frequency.<br>Set to FALSE when entering UTRA RRC connected mode when not otherwise stated in the procedure.<br>Set to FALSE when leaving UTRA RRC connected mode. | REL-9 |

## 13.4.42 CELL_INFO_CSG_LIST

This variable contains CSG/Hybrid cell information on intra-frequency and inter-frequency cells as received in MEASUREMENT CONTROL message.

This variable shall be cleared at cell re-selection, when leaving UTRA RRC connected mode, when switched off as well as at selection of a new PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CSG Intra-frequency cell info | OP | | 10.3.7.121 | | REL-9 |
| CSG Inter-frequency cell info | OP | | 10.3.7.120 | | REL-9 |

### 13.4.43 DCH_MOPS_IDENTITY

This variable is use to store the CELL_DCH measurement occasion pattern sequences configured to the UE for 1.28Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---|---|---|---|---|
| CELL_DCH measurement occasion pattern sequence | OP | | CELL_DCH measurement occasion info LCR 10.3.7.126 | Information as contained in these messages. Cleared when leaving CELL_DCH state. |

### 13.4.44 SYSTEM_INFORMATION_CONTAINER

This variable contains the system information for the current serving cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| System Information Container | OP | | System Information Container 10.2.48a | Cleared when leaving UTRA RRC connected mode and when UE changes a serving cell to the other cell than the cell associated with this variable. | REL-9 |

## 13.5 UE RRC Procedure Performance

This subclause defines the performance requirements related to RRC procedures in the UE. Where the total delay is impacted by processing of variable length on the physical layer (e.g. physical layer synchronisation), references to appropriate specifications are given.

### 13.5.1 Definitions

The following definitions of N1 and N2 are valid only for this UE RRC Procedure Performance specification.

N1 = upper limit on the time required to execute modifications in UE after the reception of a UTRAN -> UE message has been completed. Where applicable (e.g. the physical layer transmission is impacted), the changes shall be adopted in the beginning of the next TTI starting after N1. N1 is specified as a multiple of 10 ms.

N2 = number of 10 ms radio frames from end of reception of UTRAN -> UE message on UE physical layer before the transmission of the UE -> UTRAN response message must be ready to start on a transport channel with no access delay other than the TTI alignment (e.g. DCH, therefore excluding delays caused by RACH procedure etc). The UE response message transmission from the physical layer shall begin at the latest (N2*10)+TTI ms after completion of the reception of the last TTI carrying the triggering UTRAN -> UE message. When Target State is CELL_DCH, the UE response message transmission from the physical layer may be additionally delayed by the value of IE "SRB delay".

N1 and N2 are independent (e.g. N2-N1 is not restricted to being less than or equal to 10ms).

## 13.5.2 RRC procedure performance values

NOTE: Times indicated in the table do not include cell reselection.

| Procedure title: | UTRAN -> UE | UE -> UTRAN | N1 | N2 | Notes |
|---|---|---|---|---|---|
| **RRC Connection Management Procedures** | | | | | |
| Broadcast of system information | SYSTEM INFORMATION | | | | N2 is not applicable for any system information messages, because there is no response message from the UE. |
| Master Information Block | SYSTEM INFORMATION | | 5 | NA | No system information data shall be lost due to processing of a MIB received with no detectable errors. This means that the UE shall buffer all system information data received after the MIB until the data can be processed according to the information in the MIB, unless the MIB was received erroneously. |
| System Information Block type 1 | SYSTEM INFORMATION | | 10 | NA | |
| System Information Block type 2 | SYSTEM INFORMATION | | 10 | NA | |

| Active set update | ACTIVE SET UPDATE | ACTIVE SET UPDATE COMPLETE / FAILURE | NA | 5 | The requirements on UE combining and power control performance for both UL and DL are specified by RAN WG4 in [21] and [19].<br><br>Also in case of branch addition the COMPLETE / FAILURE message is transmitted without waiting for the new branch to stabilise, therefore N2 is specified. |

| Procedure title: | UTRAN -> UE | UE -> UTRAN | N1 | N2 | Notes |
|---|---|---|---|---|---|
| Inter-RAT handover to UTRAN | HANDOVER TO UTRAN COMMAND (other system) | HANDOVER TO UTRAN COMPLETE | NA | NA | The performance of this procedure is specified in 3GPP TS 45.010 in case of handover from GSM and 3GPP TS 36.133 in case of handover from E-UTRA. |
| Inter-RAT handover from UTRAN | HANDOVER FROM UTRAN COMMAND | HANDOVER FROM UTRAN FAILURE | NA | NA | The performance of this procedure is specified in [19] and [20]. |
| **Measurement procedures** | | | | | |
| Measurement control | MEASUREMENT CONTROL | MEASUREMENT CONTROL FAILURE | 5 | 8 | Response to measurement inquiry depends on physical layer measurement. Response time is defined in [19] and [20]. N1 and N2 only define the processing of the message. |

NOTE 1: The lower value applies when the UE is ordered to do a serving HS-DSCH cell change, changing no other information than contained in the IE "H-RNTI", the IE "Downlink HS-PDSCH information", the IE "Uplink DPCH power control info" and/or the IE "Serving HS-DSCH radio link indicator" (FDD only).

# 13.6 RB information parameters for signalling radio bearer RB 0

The following Radio Bearer parameter values apply for signalling radio bearer RB0 for TDD and for FDD, if either UE or UTRAN do not support common channel mapping on HS-DSCH:

| Information element/ Group name | Value | Comment |
|---|---|---|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| >>DL UM RLC LI size | 7 | |
| RB mapping info | | Single multiplexing option |
| >Uplink mapping info | | |
| >>UL transport channel | RACH | RACH corresponding with selected PRACH |
| >>RLC size list | N/A | If available the size in the IE “Additional Dynamic Transport Format Information for CCCH” for the transport channel used.<br>Else the first TF defined in the Transport Format Set for the transport channel is used. |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | FACH | |

Procedure descriptions in subclause 8.6.4.8 shall not be applied for the IE "RB mapping info" that is used for signalling radio bearer RB0.

# 13.6a RB information parameters for SHCCH

The following Radio Bearer parameter values apply for SHCCH:

| Information element/ Group name | Value | Comment |
|---|---|---|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| RB mapping info | | |
| >Uplink mapping info | | Option 1 |
| >>UL transport channel | RACH | RACH corresponding with selected PRACH |
| >>RLC size list | N/A | The first TF defined in the Transport Format Set for the transport channel that is used |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | FACH | |
| >Uplink mapping info | | Option 2 |
| >>UL transport channel | USCH | |
| >>UL Transport Channel Identity | 1 | |
| >>MAC logical channel priority | 1 | |
| >>RLC size list | N/A | The first TF defined in the Transport Format Set for the transport channel that is used |
| >Downlink mapping info | | |
| >>DL transport channel | DSCH | |
| >>DL Transport Channel Identity | 1 | |

## 13.6b RB information parameters for BCCH mapped to FACH

The following Radio Bearer parameter values apply for BCCH mapped to FACH:

| Information element/ Group name | Value | Comment |
|---|---|---|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |

## 13.6c RB information parameters for PCCH mapped to PCH

The following Radio Bearer parameter values apply for PCCH mapped to PCH:

| Information element/ Group name | Value | Comment |
|---|---|---|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |

## 13.6d Parameters for BCCH mapped to BCH

The transport format parameters for BCH are specified in [34].

## 13.6e RB information parameters for signalling radio bearer RB 0 mapped on HS-DSCH and RACH

The following Radio Bearer parameter values apply for signalling radio bearer RB0, if UE and UTRAN support common channel mapping on HS-DSCH:

NOTE: FDD only.

| Information element/ Group name | Value | Comment |
|---|---|---|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| >>Length indicator size | 7 | |
| RB mapping info | | Single multiplexing option |
| >Uplink mapping info | | |
| >>UL transport channel | RACH | RACH corresponding with selected PRACH |
| >>RLC size list | N/A | If available the size in the IE “Additional Dynamic Transport Format Information for CCCH” for the transport channel used.<br>Else the first TF defined in the Transport Format Set for the transport channel is used. |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | HS-DSCH | |

# 13.6f RB information parameters for BCCH mapped to HS-DSCH

The following Radio Bearer parameter values apply for BCCH mapped to HS-DSCH:

NOTE: FDD and 1.28 Mcps TDD only.

| Information element/ Group name | Value | Comment |
|---|---|---|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |
| MAC-ehs reordering queue | N/A | No MAC-ehs reordering queue is configured for BCCH reception. |

# 13.6g RB information parameters for PCCH mapped to HS-DSCH

The following Radio Bearer parameter values apply for PCCH mapped to HS-DSCH:

NOTE: FDD and 1.28 Mcps TDD only.

| Information element/ Group name | Value | Comment |
|---|---|---|
| Downlink RLC mode | TM | |
| Segmentation indication | FALSE | |
| MAC-ehs reordering queue | N/A | No MAC-ehs reordering queue is configured for PCCH reception. |

# 13.6h RB information parameters for signalling radio bearer RB 0 mapped on HS-DSCH and common E-DCH

The following Radio Bearer parameter values apply for signalling radio bearer RB0, if UE and UTRAN support common channel mapping on HS-DSCH and E-DCH:

NOTE: FDD and 1.28 Mcps TDD only.

| Information element/ Group name | Value | Comment |
|---|---|---|
| RLC info | | |
| >Uplink RLC mode | TM | |
| >>Transmission RLC discard | omitted | Neither discard is used, nor will there be a reset |
| >>Segmentation indication | FALSE | |
| >Downlink RLC mode | UM | |
| >>Length indicator size | 7 | |
| RB mapping info | | Single multiplexing option |
| >Uplink mapping info | | |
| >>UL transport channel | E-DCH | E-DCH corresponding with the Node B allocated common E-DCH resource, i.e. UL DPCCH/E-DPCCH/E-DPDCH. |
| >>RLC size list | N/A | |
| >>MAC logical channel priority | 1 | |
| >Downlink mapping info | | |
| >>DL transport channel | HS-DSCH | |

# 13.7 Parameter values for default radio configurations

The UE shall support the use of the default radio configurations that are specified in the following.

NOTE 1: These configurations are based on [41] and cover a number of RAB and signalling connection configurations.

In the table that is used to specify the parameter values for these default configurations, the following principles are used:

- Optional IEs that are not used are omitted;
- In case no parameter value is specified in a column, this means the value given the previous (left side) column applies.

NOTE 2: If needed, signalling radio bearer RB4 is established after the completion of handover.

NOTE 3: For each default configuration, the value of FDD, 3.84 Mcps TDD, 7.68 Mcps TDD and 1.28 Mcps TDD parameters are specified. All parameters apply to FDD, 3.84 Mcps TDD, 7.68 Mcps and 1.28 Mcps TDD modes, unless explicitly stated otherwise. It should be noted that in this respect default configurations differ from pre-defined configurations, which only include parameter values for one mode.

NOTE 4: The transport format sizes, indicated in the following table, concern the RLC PDU size, since all configurations concern dedicated channels. The transport block sizes indicated in TS 34.108 are different since these include the size of the MAC header.

NOTE 5: The tabular values included in this subclause, represent the actual IE values as in clause 10, and not the ASN.1 representation of these values.

NOTE 5A: For TDD, default configurations 0, 1, 5, 6, 7 and 22 are incorrect and they should not be used in this version of the specification.

NOTE 7: The difference between default configuration #23 and default configuration #17 (Signalling on E-DCH + HS-DSCH) resides in the IE "E-DCH MAC-d flow identity" and IE "MAC-d Flow Identity" (6 in #23, 0 in #17), in IE "transmissionGrantType" (scheduledTransmissionGrantInfo in #23, non-ScheduledTransGrantInfo in #17) and in IE "Include in Scheduling Info" (TRUE in #23, FALSE in #17).

# 13.8 Parameter values for default radio configurations in CELL_FACH

The UE shall support the use of the default parameter values that are specified in the following. Optional IEs that are not used, are omitted. The tabular values included in this subclause, represent the actual IE values as in clause 10, and not the ASN.1 representation of these values.

The UE shall for each RB with radio bearer identity n listed in the default configuration with the Default configuration identity given in IE "Default configuration identity for CELL_FACH":

1> if a multiplexing option containing the combination "FACH" for the DL and "RACH" for the UL for a RB with radio bearer identity n is included in the default configuration:

2> if the radio bearer identity n is listed in explicit or another default configuration in the message received by the UE:

3> if there is no multiplexing option containing the combination "FACH" for the DL and "RACH" for the UL for this radio bearer identity n:

4> append the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n to the radio bearer mapping information for RB with radio bearer identity n.

2> else

3> store the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n and configure the transmitting and receiving RLC entities in the UE for that radio bearer according to Table 13.8.1

1> if a multiplexing option containing the combination "HS-DSCH" for the DL and "RACH" for the UL for a RB with radio bearer identity n is included in the default configuration:

2> if the radio bearer identity n is listed in explicit or another default configuration in the message received by the UE:

3> if there is no multiplexing option containing the combination "HS-DSCH" for the DL and "RACH" for the UL for this radio bearer identity n:

4> append the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n to the radio bearer mapping information for RB with radio bearer identity n.

2> else

3> store the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n and configure the transmitting and receiving RLC entities in the UE for that radio bearer according to Table 13.8.1

1> if a multiplexing option containing the combination "HS-DSCH" for the DL and "E-DCH" for the UL for a RB with radio bearer identity n is included in the default configuration:

2> if the radio bearer identity n is listed in explicit or another default configuration in the message received by the UE:

3> if there is no multiplexing option containing the combination "HS-DSCH" for the DL and "E-DCH" for the UL for this radio bearer identity n:

4> append the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n to the radio bearer mapping information for RB with radio bearer identity n.

2> else

3> store the radio bearer mapping information in accordance with the default parameters for RB with radio bearer identity n and configure the transmitting and receiving RLC entities in the UE for that radio bearer according to Table 13.8.1

NOTE: In SRNC relocation, the target SRNC shall check IE "Signalling RB information" in IE "SRNS RELOCATION INFO" to find out the current RLC info and RB mapping info used by the UE.

# 14 Specific functions

## 14.1 Intra-frequency measurements

### 14.1.1 Intra-frequency measurement quantities

A measurement quantity is used to evaluate whether an intra-frequency event has occurred or not. It can be:

1 Downlink $E_c/N_0$.

2 Downlink path loss.

For FDD:

Pathloss in dB = Primary CPICH Tx power - CPICH RSCP.

For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.

CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

Pathloss in dB = Primary CCPCH TX power - Primary CCPCH RSCP.

For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.

Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.
Results higher than 158 shall be reported as 158.
Results lower than 46 shall be reported as 46.

3 Downlink received signal code power (RSCP) after despreading.

4 ISCP measured on Timeslot basis.

A description of those values can be found in [7] and [8].

## 14.1.2 Intra-frequency reporting events for FDD

Within the measurement reporting criteria field in the Measurement Control message the UTRAN notifies the UE which events should trigger a measurement report. If present, the "reporting criteria for secondary UL frequency" notifies the UE which events should trigger a measurement report for the secondary uplink frequency. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All the specified events are measured with respect to any of the measurement quantities given in subclause 14.1.1. The measurement quantities are measured on the monitored primary common pilot channels (CPICH) of the cell defined in the measurement object and measurement object on secondary UL frequency.

Special mechanisms for the events are illustrated in subclause 14.1.4 and 14.1.5.

NOTE: The events below are numbered 1A, 1B, 1C,… since all intra-frequency reporting events would be labelled 1X, inter-frequency reporting events would be labelled 2X, and so on for the other measurement types.

When one intra-frequency measurement identity corresponds to multiple intra-frequency events with identical event identities, the UE behaviour is not specified.

### 14.1.2.1 Reporting event 1A: A Primary CPICH enters the reporting range

When an intra-frequency measurement configuring event 1a is set up, the UE shall:

1> create a variable TRIGGERED_1A_EVENT per active set related to that measurement, which shall initially be empty;

1> delete the corresponding variable when the measurement is released.

When event 1A is configured in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell; and

2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2", and if that primary CPICH is not included in the "cells triggered" in the corresponding variable TRIGGERED_1A_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the corresponding variable TRIGGERED_1A_EVENT.

1> if the value of "Reporting deactivations threshold" for this event is greater than or equal to the current number of cells in the active set or equal to 0 and any primary CPICHs are stored in the "cells recently triggered" in the corresponding variable TRIGGERED_1A_EVENT:

2> if "Reporting interval" for this event is not equal to 0:

3> if the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1A_EVENT is set to FALSE:

4> start a timer with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1A_EVENT to TRUE;

3> set "sent reports" for the primary CPICHs in "cells recently triggered" in the corresponding variable TRIGGERED_1A_EVENT to 1.

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1a"; and

3> include in "cell measurement event results" or in "cell measurement event results on secondary UL frequency" all entries of the "cells recently triggered" in the corresponding variable TRIGGERED_1A_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

3> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> move all entries from "cells recently triggered" to "cells triggered" in the corresponding variable TRIGGERED_1A_EVENT.

1> if the timer for the corresponding periodical reporting has expired:

2> if any primary CPICH is included in the "cells triggered" in the corresponding variable TRIGGERED_1A_EVENT:

3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for any of these primary CPICHs, in "cells triggered" in the corresponding variable TRIGGERED_1A_EVENT:

4> increment the stored counter "sent reports" for all CPICHs in "cell triggered" in the corresponding variable TRIGGERED_1A_EVENT;

4> start a timer with the value of "Reporting interval" for this event;

4> send a measurement report with IEs set as below:

5> set in "intra-frequency measurement event results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1a"; and

5> include in "cell measurement event results" or in "cell measurement event results on secondary UL frequency" all entries of the corresponding variable TRIGGERED_1A_EVENT with value of IE "sent reports" equal to or smaller than value of "Amount of reporting" in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

5> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

4> if "sent reports" in the corresponding variable TRIGGERED_1A_EVENT is equal to "Amount of reporting" for all entries:

5> set the IE "Periodical Reporting running" in the corresponding variable TRIGGERED_1A_EVENT to FALSE and disable the timer for the corresponding periodical reporting.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 2":

2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the corresponding variable TRIGGERED_1A_EVENT:

3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the corresponding variable TRIGGERED_1A_EVENT.

3> if no entry in the corresponding variable TRIGGERED_1A_EVENT has a value of "sent reports" smaller than "Amount of reporting"; or

3> if there is no entry in the corresponding variable TRIGGERED_1A_EVENT:

4> if the corresponding reporting interval timer is running:

5> stop the reporting interval timer;

5> set the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1A_EVENT to FALSE.

This event is only applicable to the CELL_DCH state. When the measurement is setup in CELL_DCH or upon transition to CELL_DCH the UE shall:

1> if the "Triggering condition 2" includes active set cells:

2> include the primary CPICH of all cells in the current active set into the "cells triggered" in the variable TRIGGERED_1A_EVENT with the counter "sent reports" set to "Amount of reporting".

Equation 1 (Triggering condition for pathloss)

$$10 \cdot LogM_{New} + CIO_{New} \le W \cdot 10 \cdot Log\left(1/\sum_{i=1}^{N_A}(1/M_i)\right) + (1-W) \cdot 10 \cdot LogM_{Best} + (R_{1a} - H_{1a}/2),$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \cdot LogM_{New} + CIO_{New} \ge W \cdot 10 \cdot Log\left(\sum_{i=1}^{N_A} M_i\right) + (1-W) \cdot 10 \cdot LogM_{Best} - (R_{1a} - H_{1a}/2),$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \cdot LogM_{New} + CIO_{New} > W \cdot 10 \cdot Log\left(1/\sum_{i=1}^{N_A}(1/M_i)\right) + (1-W) \cdot 10 \cdot LogM_{Best} + (R_{1a} + H_{1a}/2),$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \cdot LogM_{New} + CIO_{New} < W \cdot 10 \cdot Log\left(\sum_{i=1}^{N_A} M_i\right) + (1-W) \cdot 10 \cdot LogM_{Best} - (R_{1a} + H_{1a}/2),$$

The variables in the formula are defined as follows:

$\boldsymbol{M_{New}}$ is the measurement result of the cell entering the reporting range.

$\boldsymbol{CIO_{New}}$ is the individual cell offset for the cell entering the reporting range if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

$\boldsymbol{M_i}$ is a measurement result of a cell not forbidden to affect reporting range in the active set.

$N_A$ is the number of cells not forbidden to affect reporting range in the current active set.

For pathloss

$M_{Best}$ is the measurement result of the cell not forbidden to affect reporting range in the active set with the lowest measurement result, not taking into account any cell individual offset.

for other measurements quantities.

$M_{Best}$ is the measurement result of the cell not forbidden to affect reporting range in the active set with the highest measurement result, not taking into account any cell individual offset.

$W$ is a parameter sent from UTRAN to UE.

$R_{1a}$ is the reporting range constant.

$H_{1a}$ is the hysteresis parameter for the event 1a.

If the measurement results are pathloss or CPICH-Ec/No then $M_{New}$, $M_i$ and $M_{Best}$ are expressed as ratios.

If the measurement result is CPICH-RSCP then $M_{New}$, $M_i$ and $M_{Best}$ are expressed in mW.

### 14.1.2.2 Reporting event 1B: A primary CPICH leaves the reporting range

When an intra-frequency measurement configuring event 1b is set up, the UE shall:

1> create a variable TRIGGERED_1B_EVENT per active set related to that measurement, which shall initially be empty;

1> delete the corresponding variable when the measurement is released.

When event 1B is configures in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 1", and if that primary CPICH is not included in the "cells triggered" in the corresponding variable TRIGGERED_1B_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the corresponding variable TRIGGERED_1B_EVENT.

1> if any primary CPICHs are stored in the "cells recently triggered" in the corresponding variable TRIGGERED_1B_EVENT:

2> if "Periodic reporting info-1b" is present, and "Reporting interval" for this event is not equal to 0:

3> if the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1B_EVENT is set to FALSE:

4> start a timer with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1B_EVENT to TRUE;

3> set "sent reports" for the primary CPICHs in "cells recently triggered" in the corresponding variable TRIGGERED_1B_EVENT to 1.

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1b"; and

3> include in "cell measurement event results" or in "cell measurement event results on secondary UL frequency" all entries of "cells recently triggered" in the corresponding variable

TRIGGERED_1B_EVENT in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

3> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> move all entries from IE "cells recently triggered" to "cells triggered" in the corresponding variable TRIGGERED_1B_EVENT.

1> if the timer for the corresponding periodical reporting has expired:

2> if any primary CPICH is included in the "cells triggered" in the corresponding variable TRIGGERED_1B_EVENT:

3> if "Periodic reporting info-1b" is present:

4> if "Reporting interval" is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for any of these primary CPICHs, in "cells triggered" in the corresponding variable TRIGGERED_1B_EVENT:

5> increment the stored counter "sent reports" for all CPICHs in "cell triggered" in the corresponding variable TRIGGERED_1B_EVENT;

5> start a timer with the value of "Reporting interval-1b" for this event;

5> send a measurement report with IEs set as below:

6> set in "intra-frequency measurement event results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1b"; and

6> include in "cell measurement event results" or in "measurement event results on secondary UL frequency" all entries of the corresponding variable TRIGGERED_1B_EVENT with value of IE "sent reports" equal to or smaller than value of "Amount of reporting" in ascending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

6> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

5> if "sent reports" in the corresponding variable TRIGGERED_1B_EVENT is equal to "Amount of reporting" for all entries:

6> set the IE "Periodical Reporting running" in the corresponding variable TRIGGERED_1B_EVENT to FALSE and disable the timer for the corresponding periodical reporting.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 1":

2> if that primary CPICH is included in the "cells triggered" in the corresponding variable TRIGGERED_1B_EVENT:

3> remove the entry of that primary CPICH from "cells triggered" in the variable corresponding TRIGGERED_1B_EVENT;

3> if there is no entry in the corresponding variable TRIGGERED_1B_EVENT:

4> if the corresponding reporting interval timer is running:

5> stop the reporting interval timer;

5> set the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1B_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \cdot LogM_{Old} + CIO_{Old} \geq W \cdot 10 \cdot Log\left(1/\sum_{i=1}^{N_A}(1/M_i)\right) + (1-W) \cdot 10 \cdot LogM_{Best} + (R_{1b} + H_{1b}/2),$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \cdot LogM_{Old} + CIO_{Old} \leq W \cdot 10 \cdot Log\left(\sum_{i=1}^{N_A} M_i\right) + (1-W) \cdot 10 \cdot LogM_{Best} - (R_{1b} + H_{1b}/2),$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \cdot LogM_{Old} + CIO_{Old} < W \cdot 10 \cdot Log\left(1/\sum_{i=1}^{N_A}(1/M_i)\right) + (1-W) \cdot 10 \cdot LogM_{Best} + (R_{1b} - H_{1b}/2),$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \cdot LogM_{Old} + CIO_{Old} > W \cdot 10 \cdot Log\left(\sum_{i=1}^{N_A} M_i\right) + (1-W) \cdot 10 \cdot LogM_{Best} - (R_{1b} - H_{1b}/2),$$

The variables in the formula are defined as follows:

$\boldsymbol{M_{Old}}$ is the measurement result of the cell leaving the reporting range.

$\boldsymbol{CIO_{Old}}$ is the individual cell offset for the cell leaving the reporting range if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

$\boldsymbol{M_i}$ is a measurement result of a cell not forbidden to affect reporting range in the active set.

$\boldsymbol{N_A}$ is the number of cells not forbidden to affect reporting range in the current active set.

For pathloss

$\boldsymbol{M_{Best}}$ is the measurement result of the cell not forbidden to affect reporting range in the active set with the lowest measurement result, not taking into account any cell individual offset.

for other measurements quantities.

$\boldsymbol{M_{Best}}$ is the measurement result of the cell not forbidden to affect reporting range in the active set with the highest measurement result, not taking into account any cell individual offset.

$\boldsymbol{W}$ is a parameter sent from UTRAN to UE.

$\boldsymbol{R_{1b}}$ is the reporting range constant.

$\boldsymbol{H_{1b}}$ is the hysteresis parameter for the event 1b.

If the measurement results are pathloss or CPICH-Ec/No then $\boldsymbol{M_{Old}}$, $\boldsymbol{M_i}$ and $\boldsymbol{M_{Best}}$ are expressed as ratios.

If the measurement result is CPICH-RSCP then $\boldsymbol{M_{Old}}$, $\boldsymbol{M_i}$ and $\boldsymbol{M_{Best}}$ are expressed in mW.

### 14.1.2.3 Reporting event 1C: A non-active primary CPICH becomes better than an active primary CPICH

When an intra-frequency measurement configuring event 1c is set up, the UE shall:

1> create a variable TRIGGERED_1C_EVENT per active set related to that measurement, which shall initially be empty;

1> delete the corresponding variable when the measurement is released.

When event 1C is configured in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell; and

2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the active set but the other primary CPICH is any of the primary CPICHs included in the active set, and if that first primary CPICH is not included in the "cells triggered" in the corresponding variable TRIGGERED_1C_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the corresponding variable TRIGGERED_1C_EVENT.

1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the corresponding variable TRIGGERED_1C_EVENT:

2> if "Reporting interval" for this event is not equal to 0:

3> if the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1C_EVENT is set to FALSE:

4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1C_EVENT to TRUE.

3> set "sent reports" for that primary CPICH in the corresponding variable TRIGGERED_1C_EVENT to 1.

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1c"; and

3> include in "cell measurement event results" or in "cell measurement event results on secondary UL frequency" all entries of the "cells recently triggered" in the corresponding variable TRIGGERED_1C_EVENT not in the active set as well as the "primary CPICH info" of all the primary CPICHs in the active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value taking into account their cell individual offset. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;

3> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> move all entries from "cells recently triggered" to "cells triggered" in the corresponding variable TRIGGERED_1C_EVENT.

1> if the timer for the periodical reporting has expired:

2> if any primary CPICH is included in the "cells triggered" in the corresponding variable TRIGGERED_1C_EVENT, and not included in the current active set:

3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for that primary CPICH, in "cells triggered" in the corresponding variable TRIGGERED_1C_EVENT:

4> increment the stored counter "sent reports" for all CPICH in "cell triggered" in the corresponding variable TRIGGERED_1C_EVENT;

4> start a timer with the value of "Reporting interval" for this event;

4> send a measurement report with IEs set as below:

5> set in "intra-frequency measurement event results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1c"; and

5> include in "cell measurement event results" or in "measurement event results on secondary UL frequency" all entries of the corresponding variable TRIGGERED_1C_EVENT with value of IE "sent report" equal to or smaller than value of "Amount of reporting" and that are not part of the active set as well as the "primary CPICH info" of all the primary CPICHs in the active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell triggered" that has the best measured value, ordering the "primary CPICH info" according to their measured value beginning with the best cell to the worst one, taking into account the cell individual offset for each cell;

5> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

4> if "sent reports" in the corresponding variable TRIGGERED_1C_EVENT is equal to "Amount of reporting" for all entries:

5> set the IE "Periodical Reporting running" in the corresponding variable TRIGGERED_1C_EVENT to FALSE and disable the timer for the corresponding periodical reporting.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH or;

1> if a primary CPICH is added to the active set:

2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the corresponding variable TRIGGERED_1C_EVENT:

3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1C_EVENT.

3> if no entry in the corresponding variable TRIGGERED_1C_EVENT has a value of "sent reports" smaller than "Amount of reporting" or

3> if there is no entry in the corresponding variable TRIGGERED_1C_EVENT:

4> if the corresponding reporting interval timer is running:

5> stop the reporting interval timer;

5> set the IE "Periodical reporting running" in the corresponding variable TRIGGERED_1C_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 \cdot Log M_{New} + CIO_{New} \leq 10 \cdot Log M_{InAS} + CIO_{InAS} - H_{1c}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 \cdot Log M_{New} + CIO_{New} \geq 10 \cdot Log M_{InAS} + CIO_{InAS} + H_{1c}/2,$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 \cdot Log M_{New} + CIO_{New} > 10 \cdot Log M_{InAS} + CIO_{InAS} + H_{1c}/2,$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 \cdot Log M_{New} + CIO_{New} < 10 \cdot Log M_{InAS} + CIO_{InAS} - H_{1c}/2,$$

The variables in the formula are defined as follows:

$M_{New}$ is the measurement result of the cell not included in the active set.

$CIO_{New}$ is the individual cell offset for the cell becoming better than the cell in the active set if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

For pathloss:

$M_{InAS}$ is the measurement result of the cell in the active set with the highest measurement result.

For other measurement quantities:

$M_{InAS}$ is the measurement result of the cell in the active set with the lowest measurement result.

$CIO_{InAS}$ is the individual cell offset for the cell in the active set that is becoming worse than the new cell.

$H_{1c}$ is the hysteresis parameter for the event 1c.

If the measurement results are pathloss or CPICH-Ec/No then $M_{New}$ and $M_{inAS}$ are expressed as ratios.

If the measurement result is CPICH-RSCP then $M_{New}$ and $M_{inAS}$ are expressed in mW.

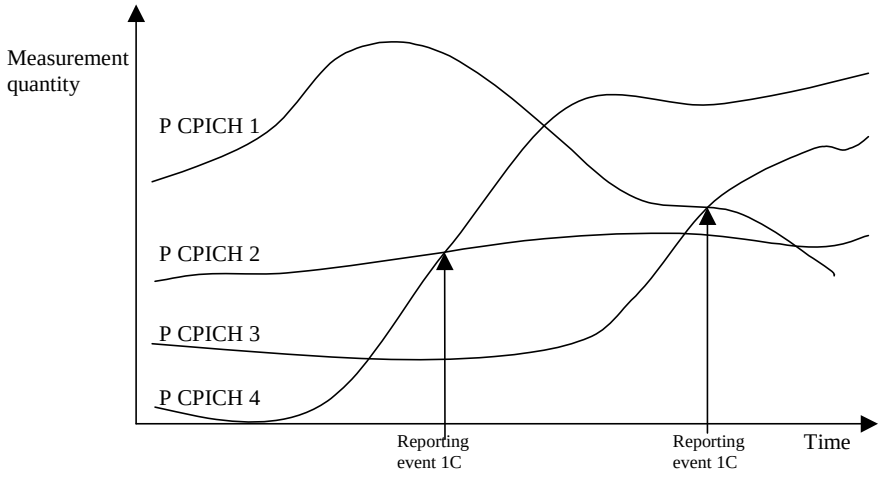

**Figure 14.1.2.3-1 [Informative]: A primary CPICH that is not included in the active set becomes better than a primary CPICH that is in the active set**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0. In this example the cells belonging to primary CPICH 1 and 2 are in the active set, but the cells transmitting primary CPICH 3 and CPICH 4 are not (yet) in the active set.

The first measurement report is sent when primary CPICH 4 becomes better than primary CPICH 2. The "cell measurement event result" of the measurement report contains the information of primary CPICH 4 and CPICH 2.

Assuming that the active set has been updated after the first measurement report (active set is now primary CPICH 1 and primary CPICH 4), the second report is sent when primary CPICH 3 becomes better than primary CPICH 1. The "cell measurement event result" of the second measurement report contains the information of primary CPICH 3 and primary CPICH 1.

### 14.1.2.4 Reporting event 1D: Change of best cell

When an intra-frequency measurement configuring event 1d is set up, the UE shall:

1> create a variable TRIGGERED_1D_EVENT related to that measurement, which shall initially contain the best cell in the active set when the measurement is initiated;

1> delete this variable when the measurement is released.

1> As soon as the best cell in the active set has been evaluated by the UE (and stored in the TRIGGERED_1D_EVENT variable) and provided that there is more than one cell in the active set, trigger an immediate measurement report with IEs set as below:

2> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH stored in the TRIGGERED_1D_EVENT variable;

2> set the IE "measured results" and the IE "additional measured results", and the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2

When event 1D is configured in the UE, the UE shall:

1> if IE "useCIO" is present and its value is TRUE, take into account the Cell Individual Offset for evaluation of the Equation 1 and 2, otherwise do not take it into account.

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for a primary CPICH that is not stored in "Best cell" in variable BEST_CELL_1D_EVENT:

NOTE: If the equations are simultaneously fulfilled for more than one primary CPICH, the UE should report only one event 1D, triggered by the best primary CPICH.

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger" and if IE "Triggering condition 2" is absent or if it is present and that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2":

3> set "best cell" in the variable BEST_CELL_1D_EVENT to that primary CPICH that triggered the event;

3> send a measurement report with IEs set as below:

4> set in "intra-frequency measurement event results"; "Intrafrequency event identity" to "1d" and "cell measurement event results" to the CPICH info of the primary CPICH that triggered the report.

4> set the IE "measured results" and the IE "additional measured results", and the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2.

This event is only applicable to the CELL_DCH state. Upon transition to CELL_DCH the UE shall:

1> set "best cell" in the variable BEST_CELL_1D_EVENT to the best cell of the primary CPICHs included in the active set.

Equation 1 (Triggering condition for pathloss)

$$10 Log M_{NotBest} + CIO_{NotBest} \leq 10 Log M_{Best} + CIO_{Best} - H_{1d}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 Log M_{NotBest} + CIO_{NotBest} \geq 10 Log M_{Best} + CIO_{Best} + H_{1d}/2,$$

The variables in the formula are defined as follows:

$M_{NotBest}$ is the measurement result of a cell not stored in "best cell" in the variable BEST_CELL_1D_EVENT.

$CIO_{NotBest}$ is the cell individual offset of a cell not stored in "best cell" in the variable BEST_CELL_1D_EVENT.

$M_{Best}$ is the measurement result of the cell stored in "best cell" in variable BEST_CELL_1D_EVENT.

$CIO_{Best}$ is the cell individual offset of a cell stored in "best cell" in the variable BEST_CELL_1D_EVENT.

$H_{1d}$ is the hysteresis parameter for the event 1d.

If the measurement results are pathloss or CPICH-Ec/No then $M_{Not\ Best}$ and $M_{Best}$ are expressed as ratios.

If the measurement result is CPICH-RSCP then $M_{Not\ Best}$ and $M_{Best}$ are expressed in mW.

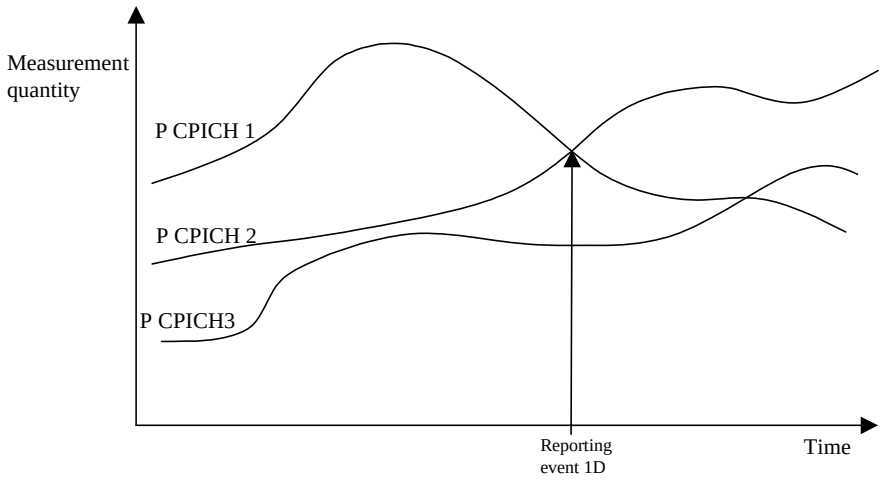

**Figure 14.1.2.4-1 [Informative]: A primary CPICH becomes better than the previously best primary CPICH**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

### 14.1.2.5 Reporting event 1E: A Primary CPICH becomes better than an absolute threshold

When an intra-frequency measurement configuring event 1e is set up, the UE shall:

1> create a variable TRIGGERED_1E_EVENT per active set related to that measurement, which shall initially be empty;

1> delete the corresponding variable when the measurement is released.

When event 1E is configured in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 2", and that primary CPICH is not included in the "cells triggered" in the corresponding variable TRIGGERED_1E_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the corresponding variable TRIGGERED_1E_EVENT.

1> if any primary CPICHs are stored in the "cells recently triggered" in the corresponding variable TRIGGERED_1E_EVENT:

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1e"; and

3> include in "cell measurement event results" or in "cell measurement event results on secondary UL frequency" all entries of the "cells recently triggered" in the corresponding variable TRIGGERED_1E_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

3> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> move all entries from "cells recently triggered" to "cells triggered" in the corresponding variable TRIGGERED_1E_EVENT.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 2":

2> if that primary CPICH is included in the "cells triggered" in the corresponding variable TRIGGERED_1E_EVENT:

3> remove that primary CPICH and sent reports from "cells triggered" in the corresponding variable TRIGGERED_1E_EVENT.

This event is only applicable to the CELL_DCH state. When the measurement is setup in CELL_DCH or upon transition to CELL_DCH the UE shall:

1> if the "Triggering condition 2" includes active set cells:

2> include the primary CPICH of all cells in the current active set that fulfil the equations 1 or 2 according to the "Measurement quantity" of event 1e into the "cells triggered" in the corresponding variable TRIGGERED_1E_EVENT.

Equation 1 (Triggering condition for pathloss)

$$10 Log M_{New} + CIO_{New} \leq T_{1e} - H_{1e}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 Log M_{New} + CIO_{New} \geq T_{1e} + H_{1e}/2,$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 Log M_{New} + CIO_{New} > T_{1e} + H_{1e}/2,$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 Log M_{New} + CIO_{New} < T_{1e} - H_{1e}/2,$$

The variables in the formula are defined as follows:

$M_{New}$ is the measurement result of a cell that becomes better than an absolute threshold.

$CIO_{New}$ is the individual cell offset for the cell becoming better than the absolute threshold. Otherwise it is equal to 0.

$T_{1e}$ is an absolute threshold.

$H_{1e}$ is the hysteresis parameter for the event 1e.

If the measurement results are pathloss or CPICH-Ec/No then $M_{New}$ is expressed as ratios.

If the measurement result is CPICH-RSCP then $M_{New}$ is expressed in mW.

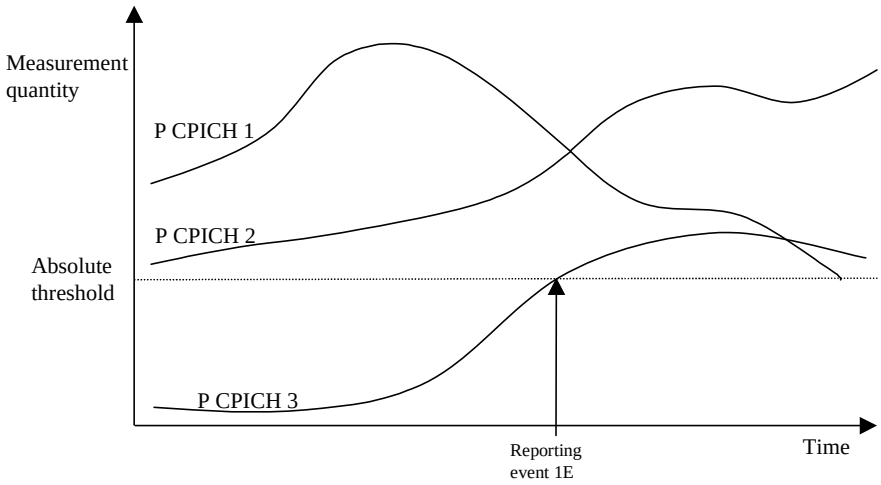

**Figure 14.1.2.5-1 [Informative]: Event-triggered report when a Primary CPICH becomes better than an absolute threshold**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

### 14.1.2.6 Reporting event 1F: A Primary CPICH becomes worse than an absolute threshold

When an intra-frequency measurement configuring event 1F is set up, the UE shall:

1> create a variable TRIGGERED_1F_EVENT per active set related to that measurement, which shall initially be empty;

1> delete the corresponding variable when the measurement is released.

When event 1F is configured in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell, and if the equations have been fulfilled for a time period indicated by "Time to trigger", and if that primary CPICH is part of cells allowed to trigger the event according to "Triggering condition 1", and that primary CPICH is not included in the "cells triggered" in the corresponding variable TRIGGERED_1F_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the corresponding variable TRIGGERED_1F_EVENT.

1> if any primary CPICHs are stored in the "cells recently triggered" in the corresponding variable TRIGGERED_1F_EVENT:

2> send a measurement report with IEs set as below:

3> set in "intra-frequency event measurement results" or in "cell measurement event results on secondary UL frequency": "Intrafrequency event identity" to "1f"; and

3> include in "cell measurement event results" or in "cell measurement event results on secondary UL frequency" all entries of the "cells recently triggered" in the corresponding variable TRIGGERED_1F_EVENT in descending order according to the configured measurement quantity taking into account the cell individual offset for each of those cells;

3> set the IE "measured results" and the IE "additional measured results", and/or the IE "measured results on secondary UL frequency" and the IE "additional measured results on secondary UL frequency" according to subclause 8.4.2, not taking into account the cell individual offset for each cell;

2> move all entries from "cells recently triggered" to "cells triggered" in the corresponding variable TRIGGERED_1F_EVENT.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH; or

1> if a primary CPICH is no longer part of the cells allowed to trigger the event according to the "Triggering condition 1":

2> if that primary CPICH is included in the "cells triggered" in the corresponding variable TRIGGERED_1F_EVENT:

3> remove that primary CPICH from "cells triggered" in the corresponding variable TRIGGERED_1F_EVENT.

Equation 1 (Triggering condition for pathloss)

$$10 Log M_{Old} + CIO_{Old} \geq T_{1f} + H_{1f}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 Log M_{Old} + CIO_{Old} \leq T_{1f} - H_{1f}/2,$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 Log M_{Old} + CIO_{Old} < T_{1f} - H_{1f}/2,$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 Log M_{Old} + CIO_{Old} > T_{1f} + H_{1f}/2,$$

The variables in the formula are defined as follows:

$M_{Old}$ is the measurement result of a cell that becomes worse than an absolute threshold

$CIO_{Old}$ is the individual cell offset for the cell becoming worse than the absolute threshold. Otherwise it is equal to 0.

$T_{1f}$ is an absolute threshold

$H_{1f}$ is the hysteresis parameter for the event 1f.

If the measurement results are pathloss or CPICH-Ec/No then $M_{Old}$ is expressed as ratios.

If the measurement result is CPICH-RSCP then $M_{Old}$ is expressed in mW.

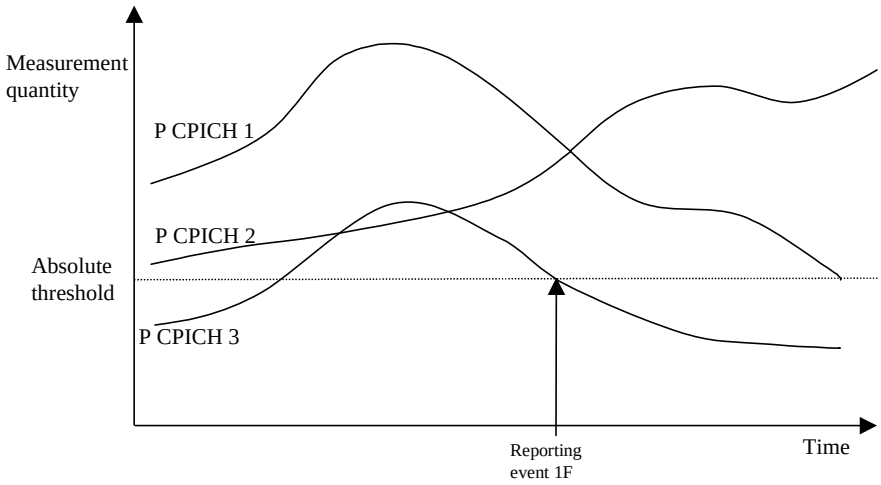

**Figure 14.1.2.6-1 [Informative]: Event-triggered report when a Primary CPICH becomes worse than an absolute threshold**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0.

### 14.1.2.7 Reporting event 1J: A non-active E-DCH but active DCH primary CPICH becomes better than an active E-DCH primary CPICH

When an intra-frequency measurement configuring event 1j is set up, the UE shall:

1> create a variable TRIGGERED_1J_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 1J is configured in the UE, the UE shall:

1> if "Measurement quantity" is "pathloss" and Equation 1 below is fulfilled for one or more primary CPICHs, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 2 below is fulfilled for one or more primary CPICHs, for each of these primary CPICHs:

2> if all required reporting quantities are available for that cell; and

2> if the equations have been fulfilled for a time period indicated by "Time to trigger", and if the primary CPICH that is better is not included in the E-DCH active set but included in DCH active set and the other primary CPICH is any of the primary CPICHs included in the E-DCH active set, and if that first primary CPICH is not included in the "cells triggered" in the variable TRIGGERED_1J_EVENT:

3> include that primary CPICH in the "cells recently triggered" in the variable TRIGGERED_1J_EVENT.

1> if the value of "Replacement activation threshold" for this event is less than or equal to the current number of cells in the E-DCH active set or equal to 0 and if any primary CPICHs are stored in the "cells recently triggered" in the variable TRIGGERED_1J_EVENT:

2> if "Reporting interval" for this event is not equal to 0:

3> if the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT is set to FALSE:

4> start a timer for with the value of "Reporting interval" for this event and set the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT to TRUE.

3> set "sent reports" for that primary CPICH in the variable TRIGGERED_1J_EVENT to 1.

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1J"; and

3> include in "cell measurement event results" all entries of the "cells recently triggered" in the variable TRIGGERED_1J_EVENT not in the E-DCH active set but included in DCH active set as well as the "primary CPICH info" of all the primary CPICHs in the E-DCH active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell recently triggered" that has the best measured value taking into account their cell individual offset. The "primary CPICH info" for those cells shall be ordered according to their measured value taking into account their cell individual offset, beginning with the best cell to the worst one;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

2> move all entries from "cells recently triggered" to "cells triggered" in the variable TRIGGERED_1J_EVENT.

1> if the timer for the periodical reporting has expired:

2> if any primary CPICH is included in the "cells triggered" in the variable TRIGGERED_1J_EVENT, and not included in the current E-DCH active set but included in DCH active set:

3> if "Reporting interval" for this event is not equal to 0, and if "Amount of reporting" is greater than "sent reports" stored for that primary CPICH, in "cells triggered" in the variable TRIGGERED_1J_EVENT:

4> increment the stored counter "sent reports" for all CPICH in "cell triggered" in variable TRIGGERED_1J_EVENT;

4> start a timer with the value of "Reporting interval" for this event;

4> send a measurement report with IEs set as below:

5> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1J"; and

5> include in "cell measurement event results" all entries of the variable TRIGGERED_1J_EVENT with value of IE "sent report" equal to or smaller than value of "Amount of reporting" and that are not part of the E-DCH active set but included in DCH active set as well as the "primary CPICH info" of all the primary CPICHs in the E-DCH active set for which the measured value is worse (i.e. greater for pathloss and less for the other measurement quantities) than the one of the entry in "cell triggered" that has the best measured value, ordering the "primary CPICH info" according to their measured value beginning with the best cell to the worst one, taking into account the cell individual offset for each cell;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

4> if "sent reports" in variable TRIGGERED_1J_EVENT is equal to "Amount of reporting" for all entries:

5> set the IE "Periodical Reporting running" in the variable TRIGGERED_1J_EVENT to FALSE and disable the timer for the periodical reporting.

1> if "Measurement quantity" is "pathloss" and Equation 3 below is fulfilled for a primary CPICH, or if "Measurement quantity" is "CPICH Ec/N0" or "CPICH RSCP", and Equation 4 below is fulfilled for a primary CPICH or;

1> if a primary CPICH is added to the E-DCH active set:

2> if that primary CPICH is included in the "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1J_EVENT:

3> remove the entry of that primary CPICH from "cells triggered" or "cells recently triggered" in the variable TRIGGERED_1J_EVENT.

3> if no entry in the variable TRIGGERED_1J_EVENT has a value of "sent reports" smaller than "Amount of reporting" or

3> if there is no entry in the variable TRIGGERED_1J_EVENT:

4> if the reporting interval timer is running:

5> stop the reporting interval timer;

5> set the IE "Periodical reporting running" in the variable TRIGGERED_1J_EVENT to FALSE.

Equation 1 (Triggering condition for pathloss)

$$10 Log M_{New} + CIO_{New} \leq 10 Log M_{InAS} + CIO_{InAS} - H_{1j}/2,$$

Equation 2 (Triggering condition for all the other measurement quantities)

$$10 Log M_{New} + CIO_{New} \geq 10 Log M_{InAS} + CIO_{InAS} + H_{1j}/2,$$

Equation 3 (Leaving triggering condition for pathloss)

$$10 Log M_{New} + CIO_{New} > 10 Log M_{InAS} + CIO_{InAS} + H_{1j}/2,$$

Equation 4 (Leaving triggering condition for all the other measurement quantities)

$$10 Log M_{New} + CIO_{New} < 10 Log M_{InAS} + CIO_{InAS} - H_{1j}/2,$$

The variables in the formula are defined as follows:

$M_{New}$ is the measurement result of the cell not included in the E-DCH active set but included in DCH active set.

$CIO_{New}$ is the individual cell offset for the cell not included in the E-DCH active set but included in DCH active set becoming better than the cell in the E-DCH active set if an individual cell offset is stored for that cell. Otherwise it is equal to 0.

For pathloss:

$M_{InAS}$ is the measurement result of the cell in the E-DCH active set with the highest measurement result.

For other measurement quantities:

$M_{InAS}$ is the measurement result of the cell in the E-DCH active set with the lowest measurement result.

$CIO_{InAS}$ is the individual cell offset for the cell in the E-DCH active set that is becoming worse than the new cell.

$H_{1J}$ is the hysteresis parameter for the event 1J.

If the measurement results are pathloss or CPICH-Ec/No then $M_{New}$ and $M_{inAS}$ are expressed as ratios.

If the measurement result is CPICH-RSCP then $M_{New}$ and $M_{inAS}$ are expressed in mW.

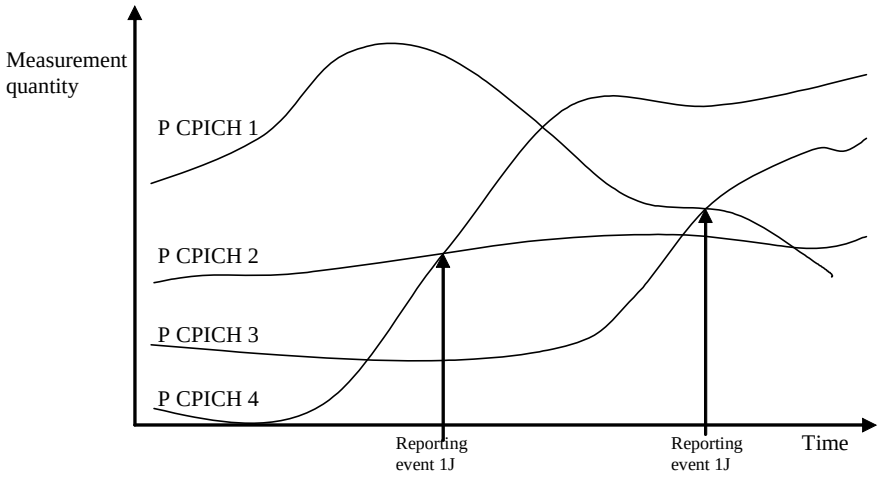

**Figure 14.1.2.7-1 [Informative]: A primary CPICH that is not included in the E-DCH active set but included in DCH active set becomes better than a primary CPICH that is in the E-DCH active set**

In this figure, the parameters hysteresis and time to trigger, as well as the cell individual offsets for all cells are equal to 0 and replacement activation threshold is equal to 0 or 1 or 2. In this example the cells belonging to primary CPICH 1 and 2 are in the E-DCH active set, but the cells transmitting primary CPICH 3 and CPICH 4 are not (yet) in the E-DCH active set but included in DCH active set.

The first measurement report is sent when primary CPICH 4 becomes better than primary CPICH 2. The "cell measurement event result" of the measurement report contains the information of primary CPICH 4 and CPICH 2.

Assuming that the E-DCH active set has been updated after the first measurement report (E-DCH active set is now primary CPICH 1 and primary CPICH 4), the second report is sent when primary CPICH 3 becomes better than primary CPICH 1. The "cell measurement event result" of the second measurement report contains the information of primary CPICH 3 and primary CPICH 1.

## 14.1.3 Intra-frequency reporting events for TDD

### 14.1.3.1 Reporting event 1G: Change of best cell (TDD)

When an intra-frequency measurement configuring event 1g is set up, the UE shall:

1> create a variable TRIGGERED_1G_EVENT related to that measurement, which shall initially be empty.

1> store the P-CCPCH of the serving cell in the variable TRIGGERED_1G_EVENT as the best cell .

1> delete this variable when the measurement is released.

When event 1G is configured in the UE, the UE shall:

1> if the equation 1 is fulfilled for one or more P-CCPCHs during the time "Time to trigger"

2> if those P-CCPCHs are not included in the "primary CCPCH info" in the variable TRIGGERED_1G_EVENT:

3> include those P-CCPCHs in "cells triggered" in the variable TRIGGERED_1G_EVENT;

2> update the prebest cell to the best P-CCPCH and for each cell in the variable TRIGGERED_1G_EVENT:

3> if Equation 2 below is fulfilled for a primary CCPCH:

4> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1G_EVENT;

2> send a measurement report with IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1g";

3> set the first entry in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH which was stored in the variable TRIGGERED_1G_EVENT;

3> include all entries in "cells triggered" in variable TRIGGERED_1G_EVENT in "cell measurement event results" in the measurement report in descending order according to:

$$10 \cdot LogM + O$$

where ***M*** is the P-CCPCH RSCP and ***O*** the individual offset of a cell;

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

1> if Equation 2 below is fulfilled for a primary CCPCH:

2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1G_EVENT:

3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1G_EVENT;

The UE shall use the equations below for evaluation of reporting event 1g:

Equation 1

$$10 \cdot LogM_i + O_i - H_{1g} > 10 \cdot LogM_{previous_best} + O_{previous_best}$$

The variables in the formula are defined as follows:

$M_{previous_best}$ is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{previous_best}$ is the cell individual offset of the previous best cell

$M_i$ is the current P-CCPCH RSCP of the currently evaluated cell ***i*** expressed in mW

$O_i$ is the cell individual offset of the currently evaluated cell ***i***

$H_{1g}$ is the hysteresis parameter for the event 1g.

Equation 2

$$10 \cdot LogM_i + O_i + H_{1g} < 10 \cdot LogM_{previous_best} + O_{previous_best}$$

The variables in the formula are defined as follows:

$M_{previous_best}$ is the current P-CCPCH RSCP of the previous best cell expressed in mW

$O_{previous_best}$ is the cell individual offset of the previous best cell

$M_i$ is the current P-CCPCH RSCP of the currently evaluated cell ***i*** expressed in mW

$O_i$ is the cell individual offset of the currently evaluated cell ***i***

$H_{1g}$ is the hysteresis parameter for the event 1g.

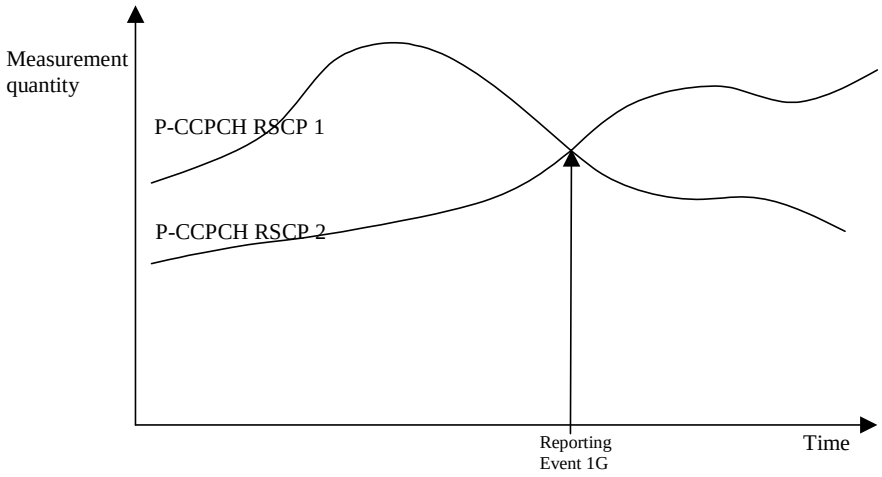

**Figure 14.1.3.1-1: A P-CCPCH RSCP becomes better than the previous best P-CCPCH RSCP**

### 14.1.3.2 Reporting event 1H: Timeslot ISCP below a certain threshold (TDD)

When an intra-frequency measurement configuring event 1h is set up, the UE shall:

1> create a variable TRIGGERED_1H_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 1h is configured in the UE, the UE shall:

1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED_1H_EVENT:

2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED_1H_EVENT;

2> send a measurement report with the IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1h" and in "cell measurement event results" the "Cell parameters ID" of the P-CCPCH that triggered the report;

3> include in "Cell measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED_1H_EVENT and "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset for each cell.

1> if Equation 2 below is fulfilled for a primary CCPCH:

2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1H_EVENT:

3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1H_EVENT.

The UE shall use the equations below for evaluation of reporting event 1h:

Equation 1

$$10 \cdot LogM_i + H_{1h} + O_i < T_{1h},$$

Equation 2

$$10 \cdot LogM_i - H_{1h} + O_i > T_{1h},$$

The variables in the formula are defined as follows:

$\boldsymbol{M_i}$ is the Timeslot ISCP of the currently evaluated cell ***i*** expressed in mW

$\boldsymbol{O_i}$ is the cell individual offset of the currently evaluated cell ***i***

$\boldsymbol{T_{1h}}$ is the Threshold for event 1h

$\boldsymbol{H_{1h}}$ is the hysteresis parameter for the event 1h.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2.

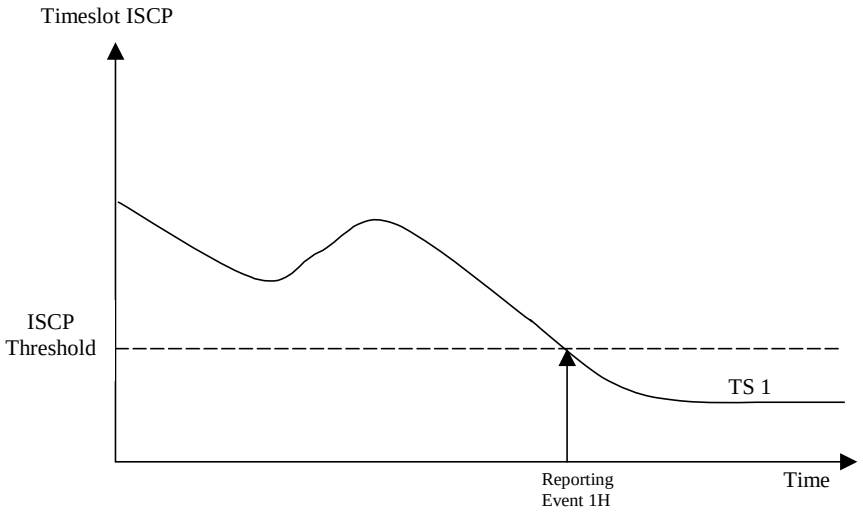

**Figure 14.1.3.2-1: An ISCP value of a timeslot drops below an absolute threshold**

## 14.1.3.3 Reporting event 1I: Timeslot ISCP above a certain threshold (TDD)

When an intra-frequency measurement configuring event 1i is set up, the UE shall:

1> create a variable TRIGGERED_1I_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 1i is configured in the UE, the UE shall:

1> if equation 1 is fulfilled for a time period indicated by "Time to trigger" and if that P-CCPCH is not included in the IE "cells triggered" in the variable TRIGGERED_1I_EVENT:

2> include that P-CCPCH in the IE "cells triggered" in the variable TRIGGERED_1I_EVENT;

2> send a measurement report with the IEs set as below:

3> set in "intra-frequency measurement event results": "Intrafrequency event identity" to "1i" and in "cell measurement event results" to the "Cell parameters ID" of the P-CCPCH that triggered the report;

3> include in "measured results" the "Timeslot ISCP" of those cells that are included in the variable TRIGGERED_1I_EVENT and "additional measured results" according to 8.4.2, not taking into account the cell individual offset for each cell.

1> if Equation 2 below is fulfilled for a primary CCPCH:

2> if a primary CCPCH is included in the "cells triggered" in the variable TRIGGERED_1I_EVENT:

3> remove the entry of that primary CCPCH from "cells triggered" in the variable TRIGGERED_1I_EVENT.

The UE shall use the equation below for evaluation of reporting event 1i:

Equation 1

$$10 \cdot LogM_i - H_{1i} + O_i > T_{1i},$$

Equation 2

$$10 \cdot LogM_i - H_{1i} + O_i < T_{1i},$$

The variables in the formula are defined as follows:

$\boldsymbol{M_i}$ is the Timeslot ISCP of the currently evaluated cell ***i*** expressed in mW

$\boldsymbol{O_i}$ is the cell individual offset of the currently evaluated cell ***i***

$\boldsymbol{T_{1i}}$ is the Threshold for event 1i

$\boldsymbol{H_{1i}}$ is the hysteresis parameter for the event 1i.

Before any evaluation is done, the Timeslot ISCP expressed in mW is filtered according to subclause 8.6.7.2.

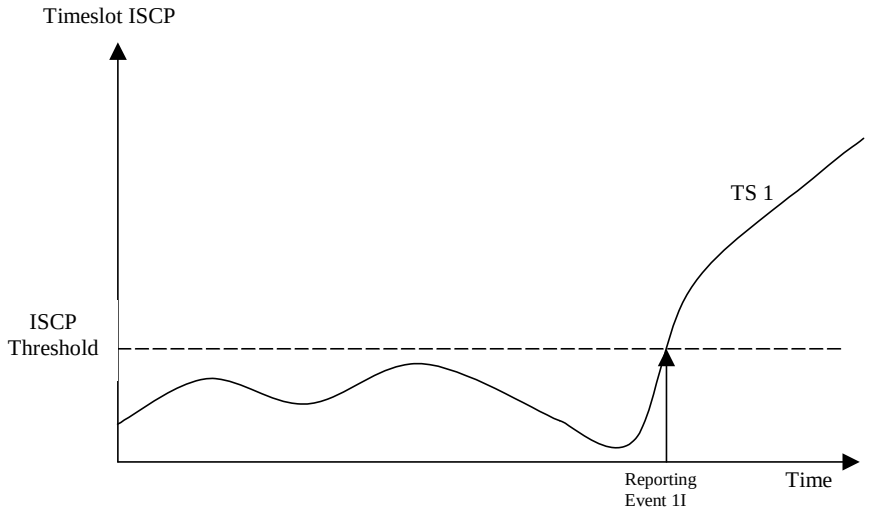

**Figure 14.1.3.3-1: An ISCP value of a timeslot exceeds a certain threshold**

## 14.1.4 Event-triggered periodic intra-frequency measurement reports (informative)

### 14.1.4.1 Cell addition failure (FDD only)

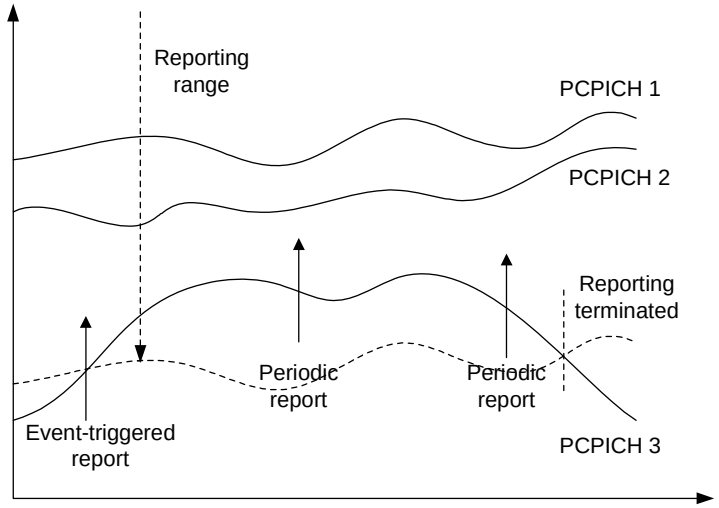

**Figure 14.1.4.1-1: Periodic reporting triggered by event 1A**

When a cell enters the reporting range and triggers event 1A, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in an update of the active set. However, in some situations the UTRAN may be unable to add a strong cell to the corresponding active set typically due to capacity shortage for example.

The UE shall continue reporting after the initial report by reverting to periodical measurement reporting if the reported cell is not added to the corresponding active set. This is illustrated in Figure 14.1.4.1-1. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals. The reports shall include reporting information of the cells in the current active set and of the monitored cell(s) in the reporting range.

Event-triggered periodic measurement reporting shall be terminated if:

1> there are no longer any monitored cell(s) within the reporting range; or

1> the UTRAN has added cells to the corresponding active set so that it includes the maximum number of cells (defined by the **reporting deactivation threshold** parameter), which are allowed for event 1A to be triggered; or

1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the **amount of reporting** parameter).

The reporting period is assigned by the UTRAN (with the **Reporting interval** parameter). If the reporting interval is set to zero event-triggered periodic measurement reporting shall not be applied.

### 14.1.4.1a Cell removal failure (FDD only)

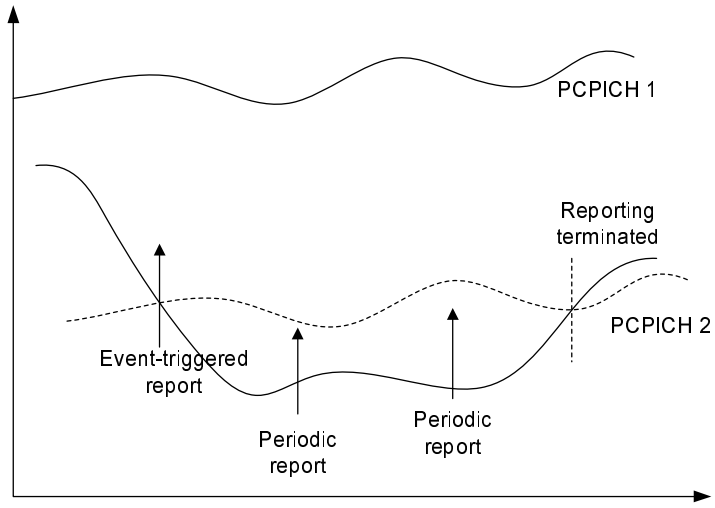

**Figure 14.1.4.1a: Periodic reporting triggered by event 1B**

When a cell enters the removal range and triggers event 1B, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in the removal of the weakest active cell. If the UTRAN is unable to receive MEASUREMENT REPORT after the maximum retransmission, it is beneficial to receive continuous reports in this case as well.

The UE shall revert to periodical measurement reporting if the UTRAN does not update the corresponding active set after the transmission of the measurement report. This is illustrated in Figure 14.1.4.1a. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals.

Event-triggered periodic measurement reporting shall be terminated if:

1> there are no longer any monitored cell(s) within the removal range; or

1> the UTRAN has removed cells from the corresponding active set so that there are no longer the minimum amount of active cells for event 1B to be triggered; or

1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the "amount of reporting" parameter).

The reporting period is assigned by the UTRAN (with the "Reporting interval" parameter). If the reporting interval is set to zero, event-triggered periodic measurement reporting shall not be applied.

### 14.1.4.2 Cell replacement failure (FDD only)

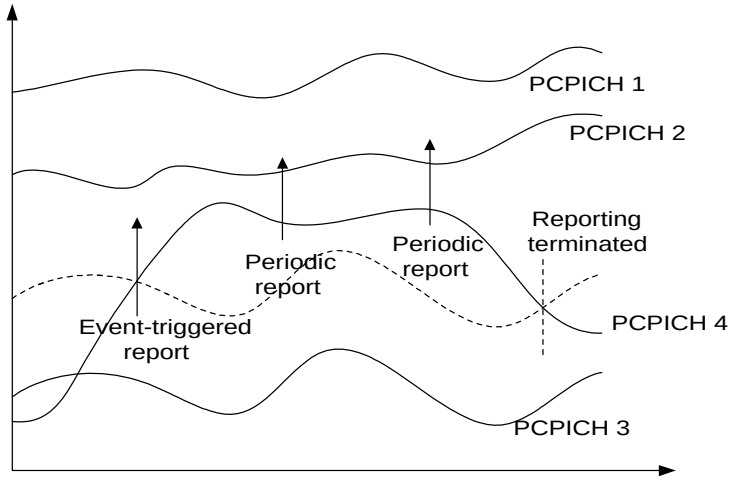

**Figure 14.1.4.1-2: Periodic reporting triggered by event 1C**

When a cell enters the replacement range and triggers event 1C, the UE shall transmit a MEASUREMENT REPORT to the UTRAN and typically this may result in the replacement of the weakest active cell. If the UTRAN is unable to replace the cell due to for example capacity shortage, it is beneficial to receive continuous reports in this case as well.

The UE shall revert to periodical measurement reporting if the UTRAN does not update the corresponding active set after the transmission of the measurement report. This is illustrated in Figure 14.1.4.1-2. During periodic reporting the UE shall transmit MEASUREMENT REPORT messages to the UTRAN at predefined intervals. The reports shall include reporting information of the cells in the current active set and of the monitored cell(s) in the replacement range.

Event-triggered periodic measurement reporting shall be terminated if:

1> there are no longer any monitored cell(s) within the replacement range; or

1> the UTRAN has removed cells from the corresponding active set so that there are no longer the minimum amount of active cells for event 1C to be triggered (as defined by the **replacement activation threshold** parameter); or

1> the UE has sent the maximum number of MEASUREMENT REPORT messages (defined by the **amount of reporting** parameter).

The reporting period is assigned by the UTRAN (with the **Reporting interval** parameter). If the reporting interval is set to zero, event-triggered periodic measurement reporting shall not be applied.

## 14.1.5 Mechanisms available for modifying intra-frequency measurement reporting behaviour (informative)

### 14.1.5.1 Hysteresis

To limit the amount of event-triggered reports, a hysteresis parameter may be connected with each reporting event given above. The value of the hysteresis is given to the UE in the Reporting criteria field of the Measurement Control message.

In the example in Figure 14.1.5.1-1, the hysteresis ensures that the event 1D (FDD) or IG(TDD) (primary CPICH(FDD)/CCPCH(TDD) 2 becomes the best cell) is not reported until the difference is equal to the hysteresis value. The fact that primary CPICH(FDD)/CCPCH(TDD) 1 becomes best afterwards is not reported at all in the example since the primary CPICH(FDD)/CCPCH(TDD) 1 does not become sufficiently better than the primary CPICH(FDD)/CCPCH(TDD) 2.

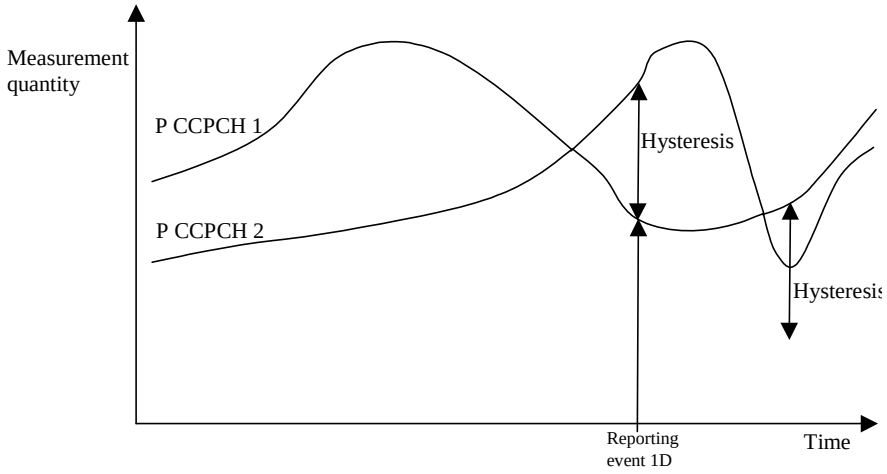

**Figure 14.1.5.1-1: Hysteresis limits the amount of measurement reports**

### 14.1.5.2 Time-to-trigger

To limit the measurement signalling load, a time-to-trigger parameter could be connected with each reporting event given above. The value of the time-to-trigger is given to the UE in the Reporting criteria field of the Measurement Control message.

The effect of the time-to-trigger is that the report is triggered only after the conditions for the event have existed for the specified time-to-trigger. In the following FDD example in Figure 14.1.5.2-1, the use of time-to-trigger means that the event (primary CPICH 3 enters the reporting range) is not reported until is has been within the range for the time given by the time-to-trigger parameter.

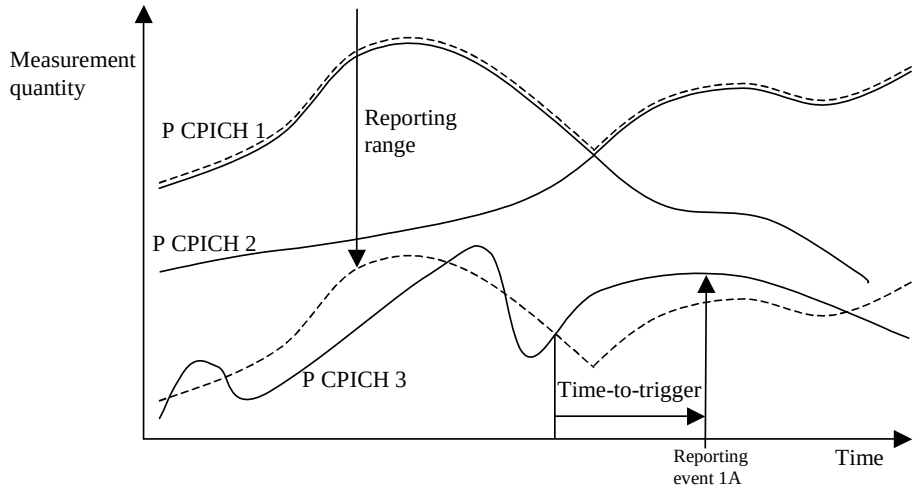

**Figure 14.1.5.2-1: Time-to-trigger limits the amount of measurement reports**

In the following TDD example in Figure 14.1.5.2-2, the use of time-to-trigger means that the event (Timeslot ISCP upon certain threshold) is not reported until it has been upon the threshold for the time given by the time-to trigger parameter.

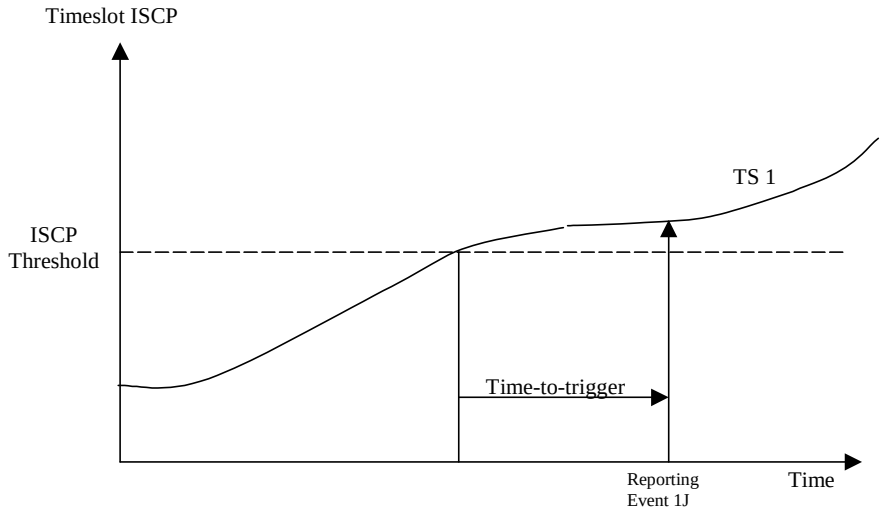

**Figure 14.1.5.2-2: Time-to-trigger limits the amount of measurement reports**

NOTE: The time-to-trigger could be combined with hysteresis, i.e. a hysteresis value is added to the measurement quantity before evaluating if the time-to-trigger timer should be started.

### 14.1.5.3 Cell individual offsets

For each cell that is monitored, an offset can be assigned with inband signalling. The offset can be either positive or negative. The offset is added to the measurement quantity before the UE evaluates if an event has occurred. The UE receives the cell individual offsets for each primary CPICH(FDD)/CCPCH(TDD) in the IE "Cell individual offset" included in the IE "Cell info" associated with each measurement object and with each measurement object on secondary UL frequency included in the MEASUREMENT CONTROL message.

For the FDD example, in Figure 14.1.5.3-1, since an offset is added to primary CPICH 3, it is the dotted curve that is used to evaluate if an event occurs. Hence, this means that measurement reports from UE to UTRAN are triggered when primary CPICH plus the corresponding offset, i.e. the dotted curve, leaves and enters the reporting range and when it gets better than primary CPICH 1 (if these events have been ordered by UTRAN). This offset mechanism provides the network with an efficient tool to change the reporting of an individual primary CPICH.

By applying a positive offset, as in Figure 14.1.5.3-1, the UE will send measurement reports as if the primary CPICH is offset *x* dB better than what it really is. This could be useful if the operator knows that a specific cell is interesting to monitor more carefully, even though it is not so good for the moment. In the example in Figure 14.1.5.3-1, the operator might know by experience that in this area primary CPICH 3 can become good very quickly (e.g. due to street corners) and therefore that it is worth reporting more intensively. Depending on the implemented handover evaluation algorithm, this may result in the cell with primary CPICH 3 being included in the active set earlier than would have been the case without the positive offset.

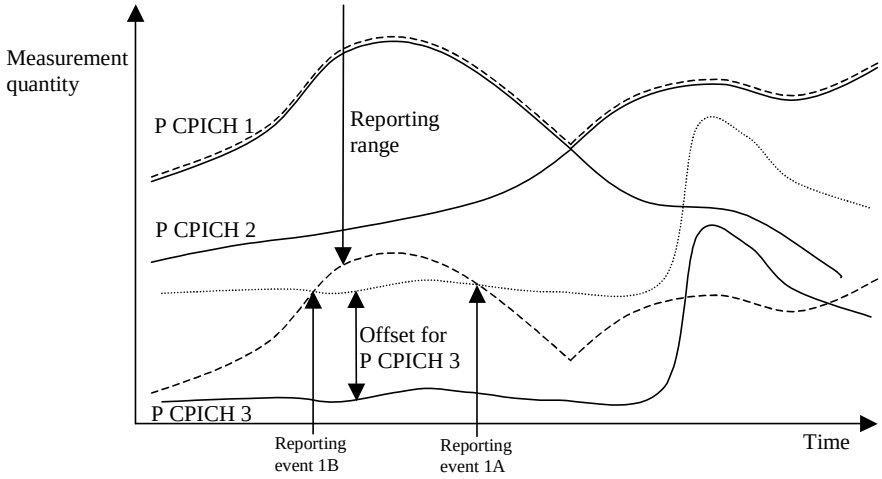

**Figure 14.1.5.3-1: A positive offset is applied to primary CPICH 3 before event evaluation in the UE**

For the TDD example, in Figure 14.1.5.3-2, an offset is added to primary CCPCH2, it is the dotted curve that is used to evaluate if the primary CCPCH2 becomes better than primary CCPCH1 (ordered by the UTRAN).

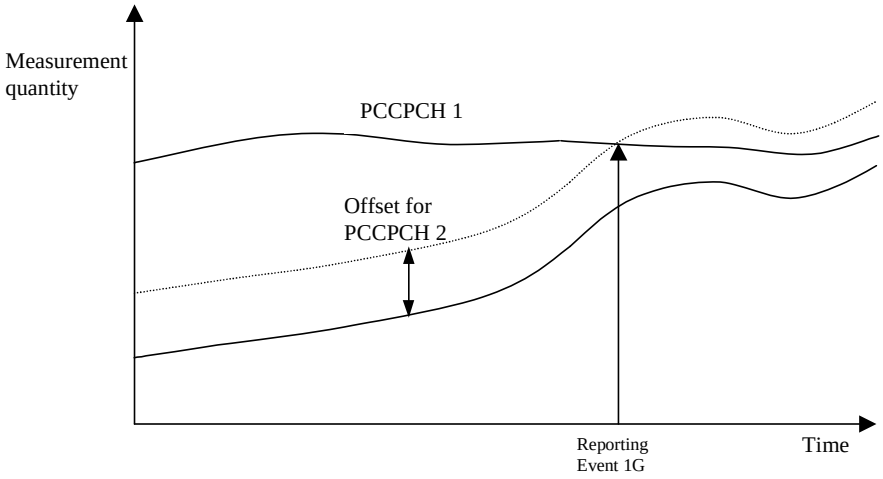

**Figure 14.1.5.3-2: A positive offset is applied to primary CCPCH 2**

Correspondingly, the operator can choose to apply a negative offset to a primary CCPCH. Then the reporting on that primary CCPCH is limited and the corresponding cell may be, at least temporarily excluded from the active set or as a target cell for handover.

It is important to note that the offset is added before triggering events, i.e. the offset is added by the UE before evaluating if a measurement report should be sent as opposed to offsets that are applied in the network and used for the actual handover evaluation. It should also be noted that the cell individual offset is not used in all measurement reporting events, and that it is not applied to all events in the same way.

### 14.1.5.4 Forbid a Primary CPICH to affect the reporting range (FDD only)

The reporting range affects the reporting events 1A and 1B presented above. The reporting range is defined as a function of all the Primary CPICHs in the active set (see 14.1.2.1 and 14.1.2.2). If the parameter W is set to 0, the reporting range is defined relative to the best Primary CPICH. However, there could be cases where it is good to forbid a specific Primary CPICH to affect the reporting range. For example in Figure 14.1.5.4-1 the network has requested the UE to not let Primary CPICH 3 affect the reporting range. This mechanism could be effective if the operator knows by experience that the quality of Primary CPICH 3 is very unstable in a specific area and therefore should not affect the reporting of the other Primary CPICHs.

The UE shall ignore that a Primary CPICH is forbidden to affect the reporting range if all of the following conditions are fulfilled:

- the Primary CPICH is included in active set; and
- all cells in active set are defined as Primary CPICHs forbidden to affect the reporting range.

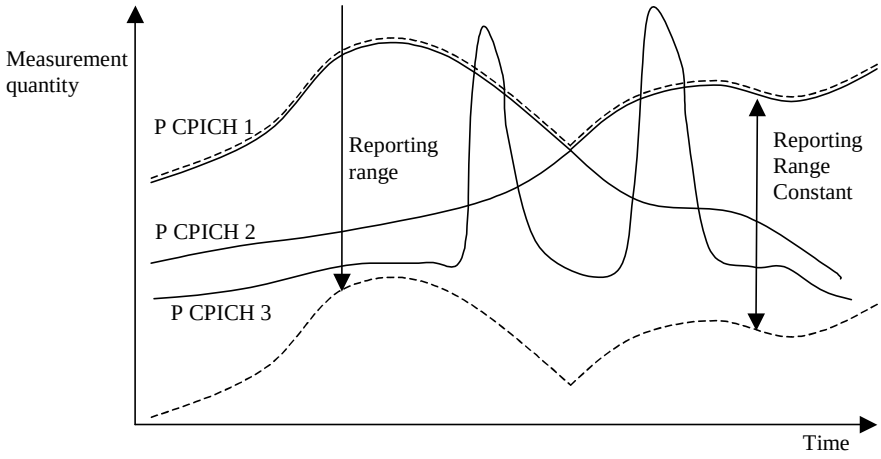

**Figure 14.1.5.4-1: Primary CPICH 3 is forbidden to affect the reporting range**

## 14.1.6 Report quantities in intra-frequency measurements

The quantities that the UE shall report to UTRAN when the event is triggered for an intra-frequency measurement are given by the IE "Intra-frequency reporting quantity" stored for this measurement and can be the following:

1 SFN-SFN observed time difference

2 Cell synchronisation information

3 Cell Identity

4 Downlink $E_c/N_0$ (FDD).

5 Downlink path loss.

For FDD:

Pathloss in dB = Primary CPICH Tx power - CPICH RSCP.

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

Pathloss in dB = Primary CCPCH TX power - Primary CCPCH RSCP.

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.
Results higher than 158 shall be reported as 158.
Results lower than 46 shall be reported as 46.

6 Downlink received signal code power (RSCP) after despreading (of a primary CPICH for FDD, and of a primary CCPCH for TDD).

7 ISCP measured on Timeslot basis. (TDD)

8 Proposed TGSN (TDD)

A description of those values can be found in [7] and [8].

# 14.2 Inter-frequency measurements

## 14.2.0a Inter-frequency measurement quantities

The two first measurement quantities listed below are used by the UE to evaluate whether an inter-frequency measurement event has occurred or not, through the computation of a frequency quality estimate. The quantity to use to compute the frequency quality estimate for an inter-frequency measurement is given in the "Inter-frequency measurement quantity" stored for that measurement.

1 Downlink Ec/No (FDD)

2 Downlink received signal code power (RSCP) after despreading.

3 Downlink path loss.

For FDD:

Pathloss in dB = Primary CPICH Tx power - CPICH RSCP.

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

Pathloss in dB = Primary CCPCH TX power - Primary CCPCH RSCP.

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

A description of those values can be found in [7] and [8].

## 14.2.0b Frequency quality estimate

### 14.2.0b.1 FDD cells

The frequency quality estimate used in events 2a, 2b 2c, 2d, 2e and 2f is defined as:

$$Q_{frequencyj} = 10 \cdot LogM_{frequency\ j} = W_j \cdot 10 \cdot Log\left(\sum_{i=1}^{N_{A\,j}} M_{i\,j}\right) + (1 - W_j) \cdot 10 \cdot LogM_{Best\ j},$$

The variables in the formula are defined as follows ("the virtual active set on frequency j" should be understood as the active set if frequency j is the used frequency or understood as the secondary E-DCH active set if frequency j is the downlink frequency associated with the secondary uplink frequency. If frequency j is a non-used frequency and is not the downlink frequency associated with the secondary uplink frequency, the way the virtual active set is initiated and updated is described in subclause 14.11):

$Q_{frequency\ j}$ is the estimated quality of the virtual active set on frequency j.

$M_{frequency\ j}$ is the estimated quality of the virtual active set on frequency j.

$M_{i\,j}$ is a measurement result of cell i in the virtual active set on frequency j.

$N_{A\,j}$ is the number of cells in the virtual active set on frequency j.

$M_{Best\ j}$ is the measurement result of the cell in the virtual active set on frequency j with the highest measurement result.

$W_j$ is a parameter sent from UTRAN to UE and used for frequency j.

If the measurement result is CPICH-Ec/No then $\boldsymbol{M_{Frequency}}$, $\boldsymbol{M_{i\,j}}$ and $\boldsymbol{M_{Best}}$ are expressed as ratios.

If the measurement result is CPICH-RSCP or PCCPCH-RSCP then $\boldsymbol{M_{Frequency}}$, $\boldsymbol{M_{i\,j}}$ and $\boldsymbol{M_{Best}}$ are expressed in mW.

### 14.2.0b.2 TDD cells

$$Q_{i,\,frequency\,j} = 10 \cdot LogM_i + O_{i,j},$$

$\boldsymbol{Q_{i\,,frequency\,j}}$ is the estimated quality of cell i on frequency j.

$\boldsymbol{M_i}$ is the measurement result for Primary CCPCH RSCP of cell i on the primary frequency expressed in mW.

$\boldsymbol{O_{i,j}}$ is the cell individual offset of the currently evaluated cell *i* on frequency j. $\boldsymbol{O_{ij}}$ is set by IE " Cell individual offset"

## 14.2.0c Inter-frequency reporting quantities

The quantities that the UE shall report for each cell to UTRAN when the event is triggered for an inter-frequency measurement is given by the "Inter-frequency reporting quantity" IE stored for this measurement and can be the following, from 1 to 8. The quantity number 9 can be reported for each frequency that triggered the report.

1 Cell identity

2 SFN-SFN observed time difference

3 Cell synchronisation information

4 Downlink Ec/No (FDD)

5 Downlink path loss.

For FDD:

Pathloss in dB = Primary CPICH Tx power - CPICH RSCP.

- For Primary CPICH Tx power the IE "Primary CPICH Tx power" shall be used. The unit is dBm.
- CPICH RSCP is the result of the CPICH RSCP measurement. The unit is dBm.

For TDD:

Pathloss in dB = Primary CCPCH TX power - Primary CCPCH RSCP.

- For Primary CCPCH TX power the IE "Primary CCPCH TX Power" shall be used. The unit is dBm.
- Primary CCPCH RSCP is the result of the Primary CCPCH RSCP measurement. The unit is dBm.

If necessary Pathloss shall be rounded up to the next higher integer.
Results higher than 158 shall be reported as 158.
Results lower than 46 shall be reported as 46.

6 Downlink received signal code power (RSCP) after despreading (of a primary CPICH for FDD, and of a primary CCPCH for TDD).

7 ISCP measured on Timeslot basis. (TDD)

8 Proposed TGSN (TDD)

9 UTRA carrier RSSI

A description of those values can be found in [7] and [8].

## 14.2.1 Inter-frequency reporting events

Within the measurement reporting criteria field in the MEASUREMENT CONTROL message UTRAN notifies the UE which events should trigger the UE to send a MEASUREMENT REPORT message. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All events are evaluated with respect to one of the measurement quantities given in subclause 14.2.0a. The measurement quantities are measured on the monitored primary common pilot channels (CPICH) in FDD mode and the monitored primary common control channels (PCCPCH) in TDD mode of the cell defined in the measurement object. A "non-used frequency" is a frequency that the UE has been ordered to measure upon but is not used for the connection. A "used frequency" is a frequency that the UE has been ordered to measure upon and is also currently used for the connection. An exception to the definition of used and non-used frequency is the frequency of the secondary serving HS-DSCH cell which shall be treated as a non-used frequency for the purpose of inter-frequency measurement, and when more than one uplink frequency is configured, shall be treated as a used frequency for the purposes of intra-frequency measurement.

If the non-used frequency is the downlink frequency associated with the secondary uplink frequency and if intra-frequency measurement reporting on this frequency is configured, the "monitored set on non-used frequency" consists of cells in the IE "Intra-frequency cell info on secondary UL frequency" in the variable CELL_INFO_LIST that are not part of the secondary E-DCH active set; Otherwise, the "monitored set on non-used frequency" consists of cells in "cells for measurement" (or all cells in CELL_INFO_LIST if "cells for measurement" is not present) in the IE "Inter-frequency cell info" in the variable CELL_INFO_LIST that are not part of the virtual active set on that non-used frequency.

When one inter-frequency measurement identity corresponds to multiple inter-frequency events with identical event identities, the UE behaviour is not specified.

### 14.2.1.1 Event 2a: Change of best frequency.

When event 2a is configured in the UE within a measurement, the UE shall:

1> when the measurement is initiated or resumed:

2> store the used frequency in the variable BEST_FREQUENCY_2A_EVENT.

1> if equation 1 below has been fulfilled for a time period indicated by "Time to trigger" for a frequency included for that event and which is not stored in the variable BEST_FREQUENCY_2A_EVENT; or

1> if the CSG virtual active set has been updated, since the last measurement report for this event associated with CSG measurement, and equation 1 below has been fulfilled for a time period indicated by "Time to trigger", for a frequency included for that event and which is stored in the variable BEST_FREQUENCY_2A_EVENT:

2> send a measurement report with IEs set as below:

3> set in "inter-frequency measurement event results":

4> "inter-frequency event identity" to "2a"; and

4> "Frequency info" to the frequency that triggered the event; and

4> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells in case of non-CSG measurements or "Primary CPICH info" of the cell present in CSG virtual active set in case of CSG measurements or "Primary CCPCH info" to the "Cells parameters ID" of the best primary CCPCH for TDD cells on that frequency, not taking into account the cell individual offset.

3> if a non-used frequency triggered the measurement report:

4> include in IE "Inter-frequency measured results list" the measured results for the non-used frequency that triggered the event, not taking into account the cell individual offset.

3> if the used frequency triggered the measurement report:

4> do not include the IE "Inter-frequency measured results list" in the measurement report.

3> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset;

2> update the variable BEST_FREQUENCY_2A_EVENT with that frequency.

1> if equation 1 below has been fulfilled but the CSG virtual active set is updated for a frequency included for that event:

2> restart evaluation of this event for this frequency.

Equation 1:

$$Q_{NotBest} \geq Q_{Best} + H_{2a}/2$$

The variables in the formula are defined as follows:

$Q_{Not\ Best}$ is the quality estimate of a frequency not stored the "best frequency" in the variable BEST_FREQUENCY_2A_EVENT.

$Q_{Best}$ is the quality estimate of the frequency stored in "best frequency" in the variable BEST_FREQUENCY_2A_EVENT.

$H_{2a}$ is the hysteresis parameter for the event 2a in that measurement.

#### 14.2.1.2 Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

When an inter-frequency measurement configuring event 2b is set up, the UE shall:

1> create a variable TRIGGERED_2B_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 2b is configured in the UE within a measurement, the UE shall:

1> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to Trigger" from the same instant, respectively for one or several non-used frequencies included for that event and for the used frequency:

2> if any of those non-used frequency is not stored in the variable TRIGGERED_2B_EVENT; or

2> if the CSG virtual active set has been updated, since the last measurement report for this event associated with CSG measurement, for any of those non-used frequency which are stored in the variable TRIGGERED_2B_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2B_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2b"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells in case of non-CSG measurements or "Primary CPICH info" of the cell present in CSG virtual active set in case of CSG measurements or "Primary CCPCH

info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.

4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if this equations 1 and 2 below have been fulfilled but the CSG virtual active set is updated for a frequency included for that event:

2> restart evaluation of this event for this frequency.

1> if equation 3 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2B_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2B_EVENT.

1> if equation 4 below is fulfilled for the used frequency:

2> clear the variable TRIGGERED_2B_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Non used} \geq T_{Non used 2b} + H_{2b}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Non\ used}}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$\boldsymbol{T_{Non\ used\ 2b}}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$\boldsymbol{H_{2b}}$ is the hysteresis parameter for the event 2b.

Equation 2:

$$Q_{Used} \leq T_{Used 2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Used}}$ is the quality estimate of the used frequency.

$\boldsymbol{T_{Used\ 2b}}$ is the absolute threshold that applies for the used frequency in that measurement.

$\boldsymbol{H_{2b}}$ is the hysteresis parameter for the event 2b.

Leaving triggered state condition:

Equation 3:

$$Q_{Non used} < T_{Non used 2b} - H_{2b}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Non\ used}}$ is the quality estimate of a non-used frequency that is stored in the variable TRIGGERED_2B_EVENT.

$\boldsymbol{T_{Non\ used\ 2b}}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$\boldsymbol{H_{2b}}$ is the hysteresis parameter for the event 2b.

Equation 4:

$$Q_{Used} > T_{Used 2b} + H_{2b}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2b}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{2b}$ is the hysteresis parameter for the event 2b.

#### 14.2.1.3 Event 2c: The estimated quality of a non-used frequency is above a certain threshold

When an inter-frequency measurement configuring event 2c is set up, the UE shall:

1> create a variable TRIGGERED_2C_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 2c is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":

2> if any of those non-used frequencies is not stored in the variable TRIGGERED_2C_EVENT; or

2> if the CSG virtual active set has been updated, since the last measurement report for this event associated with CSG measurement, for any of those non-used frequency which are stored in the variable TRIGGERED_2C_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2C_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2c"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells in case of non-CSG measurements or "Primary CPICH info" of the cell present in CSG virtual active set in case of CSG measurements or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.

4> include in IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2 not taking into account the cell individual offset.

1> if equation 1 below has been fulfilled but the CSG virtual active set is updated for a non-used frequency included for that event:

2> restart evaluation of this event for this frequency.

1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2C_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2C_EVENT.

Triggering condition:

Equation 1:

$$Q_{Non used} \geq T_{Non used 2c} + H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency that becomes better than an absolute threshold.

$T_{Non\ used\ 2c}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2c}$ is the hysteresis parameter for the event 2c.

Leaving triggered state condition:

Equation 2:

$$Q_{Non used} < T_{Non used 2c} - H_{2c}/2$$

The variables in the formula are defined as follows:

$Q_{Non\ used}$ is the quality estimate of a non-used frequency stored in the variable TRIGGERED_2C_EVENT.

$T_{Non\ used\ 2c}$ is the absolute threshold that applies for this non-used frequency in that measurement.

$H_{2c}$ is the hysteresis parameter for the event 2c.

#### 14.2.1.4 Event 2d: The estimated quality of the currently used frequency is below a certain threshold

A UE shall be able to perform this measurement and the corresponding event reporting without requiring compressed mode.

When an inter-frequency measurement configuring event 2d is set up, the UE shall:

1> create a variable TRIGGERED_2D_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When event 2d is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":

2> if the variable TRIGGERED_2D_EVENT is set to FALSE:

3> set the variable TRIGGERED_2D_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency event results": "inter-frequency event identity" to "2d" and no IE "Inter-frequency cells", not taking into account the cell individual offset;

4> include in IE "Inter-frequency measured results list" the measured results for the used frequency, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if the variable TRIGGERED_2D_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:

2> set the variable TRIGGERED_2D_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \leq T_{Used 2d} - H_{2d}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2d}$ is the absolute threshold that applies for the used frequency and event 2d.

$H_{2d}$ is the hysteresis parameter for the event 2d.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} > T_{Used\ 2d} + H_{2d}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used frequency.

$T_{Used\ 2d}$ is the absolute threshold that applies for the used frequency and event 2d.

$H_{2d}$ is the hysteresis parameter for the event 2d.

### 14.2.1.5 Event 2e: The estimated quality of a non-used frequency is below a certain threshold

When an inter-frequency measurement configuring event 2e is set up, the UE shall:

1> create a variable TRIGGERED_2E_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 2e is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for one or several non-used frequencies included for that event during the time "Time to trigger":

2> if any of those non-used frequencies is not stored in the variable TRIGGERED_2E_EVENT; or

2> if the CSG virtual active set has been updated, since the last measurement report for this event associated with CSG measurement, for any of those non-used frequency which are stored in the variable TRIGGERED_2E_EVENT:

3> store the non-used frequencies that triggered the event and that were not previously stored in the variable TRIGGERED_2E_EVENT into that variable;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency measurement event results":

5> "inter-frequency event identity" to "2e"; and

5> for each non-used frequency that triggered the event, beginning with the best frequency:

6> "Frequency info" to that non-used frequency; and

6> "Non frequency related measurement event results" to the "Primary CPICH info" of the best primary CPICH for FDD cells in case of non-CSG measurements or "Primary CPICH info" of the cell present in CSG virtual active set in case of CSG measurements or "Primary CCPCH info" to the "Cell parameters ID" of the best primary CCPCH for TDD cells on that non-used frequency, not taking into account the cell individual offset.

4> include in the IE "Inter-frequency measured results list" the measured results for each non-used frequency that triggered the event, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if equation 1 below has been fulfilled but the CSG virtual active set is updated for a non-used frequency included for that event:

2> restart evaluation of this event for this frequency.

1> if equation 2 below is fulfilled for a non-used frequency stored in the variable TRIGGERED_2E_EVENT:

2> remove that non-used frequency from the variable TRIGGERED_2E_EVENT.

Triggering condition:

Equation 1:

$$Q_{Nonused} \leq T_{Nonused2e} - H_{2e}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Non\ used}}$ is the quality estimate of a non-used frequency that becomes worse than an absolute threshold.

$\boldsymbol{T_{Non\ used\ 2e}}$ is the absolute threshold that applies for that non-used frequency for that event.

$\boldsymbol{H_{2e}}$ is the hysteresis parameter for the event 2e.

Leaving triggered state condition:

Equation 2:

$$Q_{Nonused} > T_{Nonused2e} + H_{2e}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Non\ used}}$ is the quality estimate of a non-used frequency stored in the variable TRIGGERED_2E_EVENT.

$\boldsymbol{T_{Non\ used\ 2e}}$ is the absolute threshold that applies for that non-used frequency for that event.

$\boldsymbol{H_{2e}}$ is the hysteresis parameter for the event 2e.

### 14.2.1.6 Event 2 f: The estimated quality of the currently used frequency is above a certain threshold

A UE shall be able to perform this measurement and the corresponding event reporting without requiring compressed mode.

When an inter-frequency measurement configuring event 2f is set up, the UE shall:

1> create a variable TRIGGERED_2F_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When event 2f is configured in the UE within a measurement, the UE shall:

1> if equation 1 below has been fulfilled for the used frequency during the time "Time to trigger":

2> if the variable TRIGGERED_2F_EVENT is set to FALSE:

3> set the variable TRIGGERED_2F_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "inter-frequency event results": "inter-frequency event identity" to "2f", and no IE "Inter-frequency cells";

4> include in IE "Inter-frequency measured results list" the measured results for the used frequency, not taking into account the cell individual offset;

4> set the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if the variable TRIGGERED_2F_EVENT is set to TRUE and if equation 2 is fulfilled for the used frequency:

2> set the variable TRIGGERED_2F_EVENT to FALSE.

Triggering condition:

Equation 1:

$$Q_{Used} \geq T_{Used\,2f} + H_{2f}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Used}}$ is the quality estimate of the used frequency.

$\boldsymbol{T_{Used\,2f}}$ is the absolute threshold that applies for the used frequency and event 2f.

$\boldsymbol{H_{2f}}$ is the hysteresis parameter for the event 2f.

Leaving triggered state condition:

Equation 2:

$$Q_{Used} < T_{Used\,2f} - H_{2f}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Used}}$ is the quality estimate of the used frequency.

$\boldsymbol{T_{Used\,2f}}$ is the absolute threshold that applies for the used frequency and event 2f.

$\boldsymbol{H_{2f}}$ is the hysteresis parameter for the event 2f.

# 14.3 Inter-RAT measurements

## 14.3.0a Inter-RAT measurement quantities

A measurement quantity is used by the UE to evaluate whether an inter-RAT measurement event has occurred or not.

The measurement quantity for UTRAN is used to compute the frequency quality estimate for the active set, as described in the next subclause, and can be:

1 Downlink Ec/No.

2 Downlink received signal code power (RSCP) after despreading.

The measurement quantity for GSM can be:

1 GSM Carrier RSSI

The measurement quantity for E-UTRA can be:

1 E-UTRA RSRP

2 E-UTRA RSRQ

A description of those values can be found in [7] and [8].

## 14.3.0b Frequency quality estimate of the UTRAN frequency

The estimated quality of the active set in UTRAN in event 3a is defined as:

$$Q_{UTRAN} = 10 \cdot LogM_{UTRAN} = W \cdot 10 \cdot Log\left(\sum_{i=1}^{N_A} M_i\right) + (1-W) \cdot 10 \cdot LogM_{Best},$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{UTRAN}}$ is the estimated quality of the active set on the currently used UTRAN frequency.

$M_{UTRAN}$ is the estimated quality of the active set on currently used UTRAN frequency expressed in another unit.

$M_i$ is the measurement result of cell i in the active set, according to what is indicated in the IE "Measurement quantity for UTRAN quality estimate".

$N_A$ is the number of cells in the active set.

$M_{Best}$ is the measurement result of the cell in the active set with the highest measurement result.

W is a parameter sent from UTRAN to UE.

If the measurement result is CPICH-Ec/No $\boldsymbol{M_{UTRAN}}$, $\boldsymbol{M_i}$ and $\boldsymbol{M_{Best}}$ are expressed as ratios.

If the measurement result is CPICH-RSCP or PCCPCH-RSCP, $\boldsymbol{M_{UTRAN}}$, $\boldsymbol{M_i}$ and $\boldsymbol{M_{Best}}$ are expressed in mW.

## 14.3.0c Inter-RAT reporting quantities

The quantities that the UE shall report to UTRAN when the event is triggered for an inter-RAT measurement are given by the IE "Inter-RAT reporting quantity" stored for that measurement, and can be the following:

In the case the other RAT is GSM:

1 GSM carrier RSSI

In the case the other RAT is E-UTRA:

1 Measurement Quantity: In case the measurement quantity is RSRP then only RSRP is reported; in case the measurement quantity is RSRQ then only RSRQ is reported.

2 Both: both RSRP and RSRQ are reported.

A description of those values can be found in [7], [8] and [74].

## 14.3.1 Inter-RAT reporting events

Within the measurement reporting criteria field in the MEASUREMENT CONTROL message the UTRAN notifies the UE which events should trigger the UE to send a MEASUREMENT REPORT message. The listed events are the toolbox from which the UTRAN can choose the reporting events that are needed for the implemented handover evaluation function, or other radio network functions.

All events are measured with respect to one of the measurement quantities given in subclause 14.3.0a, and of the frequency quality estimate given in subclause 14.3.0b. For UTRAN the measurement quantities are measured on the monitored primary common pilot channels (CPICH) in FDD mode and the monitored primary common control channels (PCCPCH) in TDD mode of the cell defined in the measurement object. For other RATs the measurement quantities are system-specific. A "used UTRAN frequency" is a frequency that the UE have been ordered to measure upon and is also currently used for the connection to UTRAN. "Other system" is e.g. GSM or E-UTRA.

In the text below describing the events:

- "The BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement" shall be understood as the BCCH ARFCN and BSIC combinations of the inter-RAT cells pointed at in the IE "Cells for measurement" if it has been received for that inter-RAT measurement, or otherwise of the cells included in the "inter-RAT cell info" part of the variable CELL_INFO LIST.

- "The BCCH ARFCNs considered in that inter-RAT measurement" shall be understood as the BCCH ARFCNs of the inter-RAT cells pointed at in the IE "Cells for measurement" if it has been received for that inter-RAT

measurement, or otherwise of the cells included in the "inter-RAT cell info" part of the variable CELL_INFO LIST.

- "The E-UTRA frequencies considered in that inter-RAT measurement" shall be understood as the E-UTRA frequencies whose EARFCNs is included in the variable EUTRA_FREQUENCY_INFO LIST.

When one inter-RAT measurement identity corresponds to multiple inter-RAT events with identical event identities, the UE behaviour is not specified.

#### 14.3.1.1 Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

When an inter-RAT measurement configuring event 3a is set up, the UE shall:

1> create a variable TRIGGERED_3A_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 3a is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> if equations 1 and 2 below have both been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> if the Inter-RAT cell id of any of those GSM cells is not stored in the variable TRIGGERED_3A_EVENT:

4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable.

4> send a measurement report with IEs set as below:

5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 4 is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3A_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3A_EVENT.

2> if equation 3 is fulfilled for the used frequency in UTRAN:

3> clear the variable TRIGGERED_3A_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCNs is not stored into the variable TRIGGERED_3A_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> in "inter-RAT measurement event result": "inter-RAT event identity" to "3a", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> "measured results" and possible "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 4 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3A_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3A_EVENT.

2> if equation 3 is fulfilled for the used frequency in UTRAN:

3> clear the variable TRIGGERED_3A_EVENT.

1> if the other RAT is E-UTRA:

2> if equations 1 and 2 below have been fulfilled for a time period indicated by "Time to trigger" from the same instant, respectively for the used UTRAN frequency and for one or several E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:

3> if any of those E-UTRA cells are not stored into the variable TRIGGERED_3A_EVENT:

4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED_3A_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> in "E-UTRA event results": "inter-RAT event identity" to "3a", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (best one first);

5> "E-UTRA measured results" according to subclause 8.6.7.5.

2> if equation 4 is fulfilled for a cell that is stored in the variable TRIGGERED_3A_EVENT:

3> remove that cell from the variable TRIGGERED_3A_EVENT.

2> if equation 3 is fulfilled for the used frequency in UTRAN:

3> clear the variable TRIGGERED_3A_EVENT.

Triggering conditions:

Equation 1:

$$Q_{Used} \leq T_{Used} - H_{3a}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{Q_{Used}}$ is the quality estimate of the used UTRAN frequency.

$\boldsymbol{T_{Used}}$ is the absolute threshold that applies for the used frequency in that measurement.

$\boldsymbol{H_{3a}}$ is the hysteresis parameter for event 3a.

Equation 2:

$$M_{Other\ RAT} + CIO_{otherRAT} \geq T_{Other\ RAT} + H_{3a}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{M_{Other\ RAT}}$ is the measurement quantity for the cell of the other system.

$\boldsymbol{CIO_{Other\ RAT}}$ is the cell individual offset for the cell of the other system.

$\boldsymbol{T_{Other\ RAT}}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3a}$ is the hysteresis parameter for event 3a.

Leaving triggered state conditions:

Equation 3:

$$Q_{Used} > T_{Used} + H_{3a}/2$$

The variables in the formula are defined as follows:

$Q_{Used}$ is the quality estimate of the used UTRAN frequency.

$T_{Used}$ is the absolute threshold that applies for the used frequency in that measurement.

$H_{3a}$ is the hysteresis parameter for event 3a.

Equation 4:

$$M_{Other\ RAT} + CIO_{OtheRAT} < T_{Other\ RAT} - H_{3a}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3a}$ is the hysteresis parameter for event 3a.

### 14.3.1.2 Event 3b: The estimated quality of other system is below a certain threshold

When an inter-RAT measurement configuring event 3b is set up, the UE shall:

1> create a variable TRIGGERED_3B_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 3b is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED_3B_EVENT:

4> store the inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (worst one first), taking into account the cell individual offset of the GSM cells;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3B_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3B_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED_3B_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3b", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (worst one first), taking into account the cell individual offset of the GSM cells;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 2 below is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3B_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3B_EVENT.

1> if the other RAT is E-UTRA:

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:

3> if any of those E-UTRA cells is not stored into the variable TRIGGERED_3B_EVENT:

4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED_3B_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "E-UTRA event results": "inter-RAT event identity" to "3b", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (worst one first);

5> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

2> if equation 2 below is fulfilled for a cell that is stored in the variable TRIGGERED_3B_EVENT:

3> remove that cell from the variable TRIGGERED_3B_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ RAT}+CIO_{Other\ RAT} \leq T_{Other\ RAT}-H_{3b}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{M_{Other\ RAT}}$ is the measurement quantity for the cell of the other system.

$\boldsymbol{CIO_{Other\ RAT}}$ is the cell individual offset for the cell of the other system.

$\boldsymbol{T_{Other\ RAT}}$ is the absolute threshold that applies for the other system in that measurement.

$\boldsymbol{H_{3b}}$ is the hysteresis parameter for event 3b.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ RAT}+CIO_{Other\ RAT} > T_{Other\ RAT}+H_{3b}/2$$

The variables in the formula are defined as follows:

$M_{Other\ RAT}$ is the measurement quantity for the cell of the other system. $M_{Other\ RAT}$ is expressed in dBm.

$CIO_{Other\ RAT}$ is the cell individual offset for the cell of the other system.

$T_{Other\ RAT}$ is the absolute threshold that applies for the other system in that measurement.

$H_{3b}$ is the hysteresis parameter for event 3b.

#### 14.3.1.3 Event 3c: The estimated quality of other system is above a certain threshold

When an inter-RAT measurement configuring event 3c is set up, the UE shall:

1> create a variable TRIGGERED_3C_EVENT related to that measurement, which shall initially be empty;

1> delete this variable when the measurement is released.

When event 3c is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> if the inter-RAT cell id of any of those GSM cell is not stored in the variable TRIGGERED_3C_EVENT:

4> store the Inter-RAT cell ids of the GSM cells that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cells that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 2 below is fulfilled for a GSM cell whose inter-RAT cell id is stored in the variable TRIGGERED_3C_EVENT:

3> remove the inter-RAT cell id of that GSM cell from the variable TRIGGERED_3C_EVENT.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several of the BCCH ARFCNs considered in that inter-RAT measurement:

3> if any of those BCCH ARFCN is not stored into the variable TRIGGERED_3C_EVENT:

4> store the BCCH ARFCNs that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3c", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to BCCH ARFCNs that triggered the event (best one first), taking into account the cell individual offset of the GSM cells;

5> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 2 is fulfilled for a BCCH ARFCN that is stored in the variable TRIGGERED_3C_EVENT:

3> remove that BCCH ARFCN from the variable TRIGGERED_3C_EVENT.

1> if the other RAT is E-UTRA:

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one or several E-UTRA cells on any of the frequencies considered in that inter-RAT measurement and that are not included in the blacklist:

3> if any of those E-UTRA cells is not stored into the variable TRIGGERED_3C_EVENT:

4> store the E-UTRA cells that triggered the event and that were not previously stored in the variable TRIGGERED_3C_EVENT into that variable;

4> send a measurement report with IEs set as below:

5> set in "E-UTRA event results": "inter-RAT event identity" to "3c", and "E-UTRA carrier frequency" and "Physical cell identity" to the EARFCN and physical cell identity of the cells that triggered the event (best one first);

5> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

2> if equation 2 is fulfilled for a cell that is stored in the variable TRIGGERED_3C_EVENT:

3> remove that cell from the variable TRIGGERED_3C_EVENT.

Triggering condition:

Equation 1:

$$M_{Other\ RAT}+CIO_{Other\ RAT} \geq T_{Other\ RAT}+H_{3c}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{M_{Other\ RAT}}$ is the measurement quantity for the cell of the other system. $\boldsymbol{M_{Other\ RAT}}$ is expressed in dBm.

$\boldsymbol{CIO_{Other\ RAT}}$ is the cell individual offset for the cell of the other system.

$\boldsymbol{T_{Other\ RAT}}$ is the absolute threshold that applies for the other system in that measurement.

$\boldsymbol{H_{3c}}$ is the hysteresis parameter for event 3c.

Leaving triggered state condition:

Equation 2:

$$M_{Other\ RAT}+CIO_{Other\ RAT} < T_{Other\ RAT}-H_{3c}/2$$

The variables in the formula are defined as follows:

$\boldsymbol{M_{Other\ RAT}}$ is the measurement quantity for the cell of the other system. $\boldsymbol{M_{Other\ RAT}}$ is expressed in dBm.

$\boldsymbol{CIO_{Other\ RAT}}$ is the cell individual offset for the cell of the other system.

$\boldsymbol{T_{Other\ RAT}}$ is the absolute threshold that applies for the other system in that measurement.

$\boldsymbol{H_{3c}}$ is the hysteresis parameter for event 3c.

### 14.3.1.4 Event 3d: Change of best cell in other system

When an inter-RAT measurement configuring event 3d is set up, the UE shall:

1> create a variable BEST_CELL_3D_EVENT related to that measurement;

1> delete this variable when the measurement is released.

When event 3d is configured in the UE within a measurement, the UE shall:

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "required":

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the Inter-RAT cell id of the GSM cell that has the best measured quantity among the GSM cells that match any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement, not taking into account the cell individual offset of the GSM cells;

3> send a measurement report with IE set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell that is stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 1 has been fulfilled for a time period indicated by "time to trigger" for a GSM cell that is different from the one stored in BEST_CELL_3D_EVENT and that matches any of the BCCH ARFCN and BSIC combinations considered in that inter-RAT measurement:

3> store the Inter-RAT cell id of that GSM cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "verified BSIC" and "Inter-RAT cell id" to the GSM cell is now stored in BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

1> if the other RAT is GSM, and if IE "BSIC verification required" is set to "not required":

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the BCCH ARFCN of the GSM cell that has the best measured quantity among the BCCH ARFCNs considered in that inter-RAT measurement;

3> send a measurement report with IE set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCH ARFCN that is stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.6.7.5 and 8.4.2, respectively, not taking into account the cell individual offset.

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for one of the BCCH ARFCNs considered in that inter-RAT measurement and different from the one stored in BEST_CELL_3D_EVENT:

3> store the BCCH ARFCN of that GSM cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "inter-RAT measurement event result": "inter-RAT event identity" to "3d", "CHOICE BSIC" to "non verified BSIC" and "BCCH ARFCN" to the BCCH ARFCN that is now stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2, not taking into account the cell individual offset.

1> if the other RAT is E-UTRA:

2> when the measurement is initiated or resumed:

3> store in the variable BEST_CELL_3D_EVENT the EARFCN and Physical Cell Identity of the E-UTRA cell that has the best measured quantity among the EARFCNs considered in that inter-RAT measurement;

3> send a measurement report with IE set as below:

4> set in "E-UTRA measurement results": "inter-RAT event identity" to "3d", and "E-UTRA Carrier Frequency" and "Physical Cell Identity" to the EARFCN and the Physical Cell Identity that are stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

2> if equation 1 below has been fulfilled for a time period indicated by "time to trigger" for a cell on one of the EARFCNs considered in that inter-RAT measurement and different from the cell stored in BEST_CELL_3D_EVENT:

3> store the EARFCN and Physical Cell Identity of that E-UTRA cell in the variable BEST_CELL_3D_EVENT;

3> send a measurement report with IEs set as below:

4> set in "E-UTRA event results": "inter-RAT event identity" to "3d", and "E-UTRA carrier frequency" and "Physical Cell Identity" to the EARFCN and the Physical Cell Identity that are now stored in the variable BEST_CELL_3D_EVENT;

4> set the IE "E-UTRA measured results" according to subclause 8.6.7.5.

Equation 1:

$$M_{New} \geq M_{Best} + H_{3d}/2$$

The variables in the formula are defined as follows:

$M_{New}$ is the measurement quantity for a cell of the other system that is not stored in the variable BEST_CELL_3D_EVENT.

$M_{Best}$ is the measurement quantity for a cell of the other system that is stored in the variable BEST_CELL_3D_EVENT.

$H_{3d}$ is the hysteresis parameter for event 3d.

## 14.3.2 GSM measurements in compressed mode

### 14.3.2.1 GSM RSSI measurements

The UE shall perform GSM RSSI measurements in the gaps of compressed mode pattern sequence specified for GSM RSSI measurement purpose.

### 14.3.2.2 Initial BSIC identification

The UE shall perform Initial BSIC identification in compressed mode pattern sequence specified for Initial BSIC identification measurement purpose.

The parameter "N identify abort" in the IE "DPCH compressed mode info" indicates the maximum number of patterns that the UE shall use to attempt to decode the unknown BSIC of the GSM cell in the initial BSIC identification procedure.

The BSIC identification procedure is defined in detail in [19].

### 14.3.2.3 BSIC re-confirmation

The UE shall perform BSIC re-confirmation in compressed mode pattern sequence specified for BSIC re-confirmation measurement purpose.

The parameter "T reconfirm abort" in the IE "DPCH compressed mode info" indicates the maximum time allowed for the re-confirmation of the BSIC of one GSM cell in the BSIC re-confirmation procedure.

The BSIC re-confirmation procedure is defined in detail in [19].

### 14.3.3 E-UTRA measurements in compressed mode

#### 14.3.3.1 E-UTRA RSRP measurements

The UE shall perform E-UTRA RSRP measurements in the gaps of compressed mode pattern sequence specified for E-UTRA measurement purpose.

#### 14.3.3.2 E-UTRA RSRQ measurements

The UE shall perform E-UTRA RSRQ measurements in the gaps of compressed mode pattern sequence specified for E-UTRA measurement purpose.

## 14.4 Traffic Volume Measurements

### 14.4.1 Traffic Volume Measurement Quantity

Traffic volume measurements may be configured by RRC to assist with dynamic radio bearer control. The reported quantities that can be configured are:

1 Buffer Occupancy.

2 Average of Buffer Occupancy.

3 Variance of Buffer Occupancy.

A description of these values can be found in [15].

When a report is triggered, the UE shall provide the requested quantities for the acknowledged and unacknowledged mode RBs mapped onto the transport channels identified.

When the RLC buffer payload, Average of RLC buffer payload or Variance of RLC buffer payload is reported, the measured quantity shall be rounded upwards to the closest higher value possible to report. When the measured quantity is over the highest value possible to report, it shall be set to the highest value.

### 14.4.2 Traffic Volume reporting triggers

Traffic volume measurement reports can be triggered using two different mechanisms, periodical and event triggered. The reporting criteria are specified in the measurement control message.

All the specified events are evaluated with respect to the Transport Channel Traffic Volume (TCTV). This quantity is equal to the sum of the Buffer Occupancy for all logical channels mapped onto a transport channel. The events on a given transport channel shall be evaluated at least at every TTI (may be more often) as described in [15].

When one traffic volume measurement identity corresponds to multiple traffic volume events with identical event identities for the same transport channel, the UE behaviour is not specified.

When a traffic volume measurement is set up, the UE shall:

1> for FDD, if variable READY_FOR_COMMON_EDCH is set to TRUE:

2> if one transport channel that is referenced in the IE "Traffic volume measurement object" as "DCH" and IE "measurement validity" is set to "all states except CELL_DCH":

3> the uplink transport channel on which the UE is supposed to report in CELL_FACH state is of type E-DCH.

1> for 1.28 Mcps TDD, if one transport channel that is referenced in the IE "Traffic volume measurement object" as "USCH" and the IE "UL target transport channel id" is set to 32 and IE "measurement validity" is set to "all states" or "all states except CELL_DCH":

2> the uplink transport channel on which the UE is supposed to report is of type E-DCH.

1> if the IE "report criteria" is set to "Traffic volume measurement reporting criteria":

2> for each IE "Parameters sent for each transport channel":

3> if the IE "Uplink transport channel type" is not included; or

3> if the IE "Uplink Transport Channel Type" has the value "DCH" or "USCH" and the IE "UL transport channel id" is not included:

4> for each IE "Parameters required for each Event":

5> for each uplink transport channel on which the UE is supposed to report (see below):

6> configure an event trigger defined by the values in the IEs "Measurement Identity", "Traffic volume event identity", "Reporting threshold", "Time to trigger", "Pending time after trigger" and "Tx Interruption after trigger".

3> else:

4> for each IE "Parameters required for each Event":

5> for the uplink transport channel defined by the IEs "Uplink transport channel type" and "UL transport channel id":

6> configure an event trigger defined by the values in the IEs "Measurement Identity", "Traffic volume event identity", "Reporting threshold", "Time to trigger", "Pending time after trigger" and "Tx Interruption after trigger".

1> else:

2> if the IE "report criteria" is set to "Periodical reporting criteria":

2> configure periodical triggers with period equal to the value in the IE "Reporting Interval" and with number of transmissions equal to the value in the IE "Amount of reporting" for the measurement identified by the IE "Measurement Identity".

For each transport channel for which an event trigger has been configured, the UE shall:

1> for each event configured for this transport channel:

2> if the TCTV is larger than the threshold in IE "Reporting threshold" at TVM setup or modify; or

2> if the TCTV becomes larger than the threshold in IE "Reporting threshold" while the event is configured:

3> if the IE "Traffic volume event identity" has value "4a":

4> if the IE "Time to trigger" is not present; and

4> if the Pending-time-after-trigger timer for this event is not active:

5> if the IE "Pending time after trigger" is included:

6> start the Pending-time-after-trigger timer for this event with the value in this IE.

5> trigger a report for the measurement identified by the IE "Measurement Identity".

4> else:

5> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

3> if the IE "Traffic volume event identity" has value "4b":

4> if the Time-to-trigger timer for this event is active:

5> stop this timer.

2> if the TCTV is smaller than the threshold in IE "Reporting threshold" at TVM setup or modify; or

2> if the TCTV becomes smaller than the threshold in IE "Reporting threshold" while the event is configured:

3> if the IE "Traffic volume event identity" has value "4a":

4> if the Time-to-trigger timer for this event is active:

5> stop this timer.

3> if the IE "Traffic volume event identity" has value "4b":

4> if the IE "Time to trigger" is not present; and

4> if the Pending-time-after-trigger timer for this event is not active:

5> if the IE "Pending time after trigger" is included:

6> start the Pending-time-after-trigger timer for this event with the value in this IE.

5> trigger a report for the measurement identified by the IE "Measurement Identity".

4> else:

5> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

When the Time-to-trigger timer for an event elapses:

1> if the Pending-time-after-trigger timer for this event is not active:

2> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;

2> if the IE "Pending time after trigger" is included:

3> start the Pending-time-after-trigger timer for this event with the value in this IE.

When the Pending-time-after-trigger for an event elapses:

1> if the IE "Traffic volume event identity" has value "4a":

2> if the TCTV is larger than the threshold in IE "Reporting threshold":

3> if the IE "Time to trigger" is not present:

4> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;

4> start the Pending-time-after-trigger timer for this event with the value in the IE "Pending time after trigger".

3> else:

4> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

1> if the IE "Traffic volume event identity" has value "4b":

2> if the TCTV is smaller than the threshold in IE "Reporting threshold":

3> if the IE "Time to trigger" is not present:

4> trigger a report for the measurement identified by the IE "Measurement Identity" corresponding to this event;

4> start the Pending-time-after-trigger timer for this event with the value in the IE "Pending time after trigger".

3> else:

4> start the Time-to-trigger timer for this event with the value in the IE "Time to trigger".

When a periodical trigger elapses, the UE shall:

1> trigger a report for the measurement identified by the IE "Measurement Identity";

1> if the number of reports triggered by this periodical trigger reaches the value in the IE "Amount of reporting":

2> disable this periodical trigger.

When a report is triggered for a given IE "Measurement Identity", the UE shall:

1> consider the variable MEASUREMENT_IDENTITY corresponding to this measurement identity;

1> if the report is triggered by an event trigger:

2> include the IE "Event results";

2> if variable READY_FOR_COMMON_EDCH is set to FALSE:

3> set the IE "Uplink transport channel type causing the event" to the type of the transport channel which triggered the report;

3> if the transport channel type is "DCH" or "USCH":

4> include the IE "UL Transport Channel identity" and set it to the identity of the transport channel which triggered the report.

3> else:

4> not include the IE "UL Transport Channel identity".

2> else:

3> for FDD:

4> set the IE "Uplink transport channel type causing the event" to the value "DCH";

4> include the IE "UL Transport Channel identity" and set it to any value.

3> for 1.28 Mcps TDD:

4> include the IE "UL Transport Channel identity" and set it to the identity of the transport channel which triggered the report.

2> set the IE "Traffic volume event identity" to the identity of the event that triggered the report;

2> if the IE "Tx interruption after trigger" for the event that triggered the report is included:

3> if the UE is in CELL_FACH state and

3> if the variable READY_FOR_COMMON_EDCH is set to FALSE:

4> prohibit DTCH transmissions on the RACH;

4> if the Tx interruption timer is not running; or

4> if the Tx interruption timer is running and still has a value larger than the IE "Tx interruption after trigger" for the event, i.e. it was started earlier by another event with a larger value in IE "Tx interruption after trigger":

5> start the Tx interruption timer with the value in the IE "Tx interruption after trigger" for this event.

4> when it receives from the UTRAN a message causing the transition to CELL_DCH state; or

4> when the Tx interruption timer elapses:

5> stop the timer;

5> resume these transmissions.

1> if the IE "Traffic volume measurement object" is not included:

2> report on all the uplink transport channels as specified below.

1> if the IE "Traffic volume measurement object" is included:

2> report on the uplink transport channels identified in this IE as specified below.

1> for each UM or AM RB mapped onto a transport channel on which the UE is expected to report:

2> add an element in the IE "Traffic volume measurement results";

2> set the value of the IE "RB Identity" to the identity of the considered radio bearer;

2> if the RB is mapped onto one logical channel:

3> if the IE "RLC Buffer Payload for each RB" is set to TRUE:

4> include the IE "RLC Buffers Payload" and set it to the Buffer Occupancy value for this logical channel, rounded up to the next allowed value.

3> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:

4> include and set the IE "Average of RLC Buffer Payload" to the Buffer Occupancy for this logical channel averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.

3> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:

4> include and set the IE "Variance of RLC Buffer Payload" to the variance of the Buffer Occupancy for this logical channel computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.

2> if the RB is mapped onto two logical channels:

3> if one logical channel is mapped onto transport channels on which the UE is supposed to report:

4> if the IE "RLC Buffer Payload for each RB" is set to TRUE:

5> include and set the IE "RLC Buffers Payload" to the Buffer Occupancy value for this logical channel, rounded up to the next allowed value.

4> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:

5> include and set the IE "Average of RLC Buffer Payload" to the Buffer Occupancy for this logical channel averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.

4> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:

5> include and set the IE "Variance of RLC Buffer Payload" to the variance of the Buffer Occupancy for this logical channel computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]), rounded up to the next allowed value.

3> if both logical channels are mapped onto transport channels on which the UE is supposed to report:

4> if the IE "RLC Buffer Payload for each RB" is set to TRUE:

5> include and set the IE "RLC Buffers Payload" to the sum of the Buffer Occupancy values for the two logical channels, rounded up to the next allowed value.

4> if the IE "Average of RLC Buffer Payload for each RB" is set to TRUE:

5> include and set the IE "Average of RLC Buffer Payload" to the sum of the Buffer Occupancy for the two logical channels averaged over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]) and rounded up to the next allowed value.

4> if the IE "Variance of RLC Buffer Payload for each RB" is set to TRUE:

5> include and set the IE "Variance of RLC Buffer Payload" to the variance of the sum of the Buffer Occupancy for the two logical channels, computed over the interval specified in the IE "Time Interval to take an average or a variance" (see [15]) and rounded up to the next allowed value.

### 14.4.2.1 Reporting event 4 A: Transport Channel Traffic Volume becomes larger than an absolute threshold

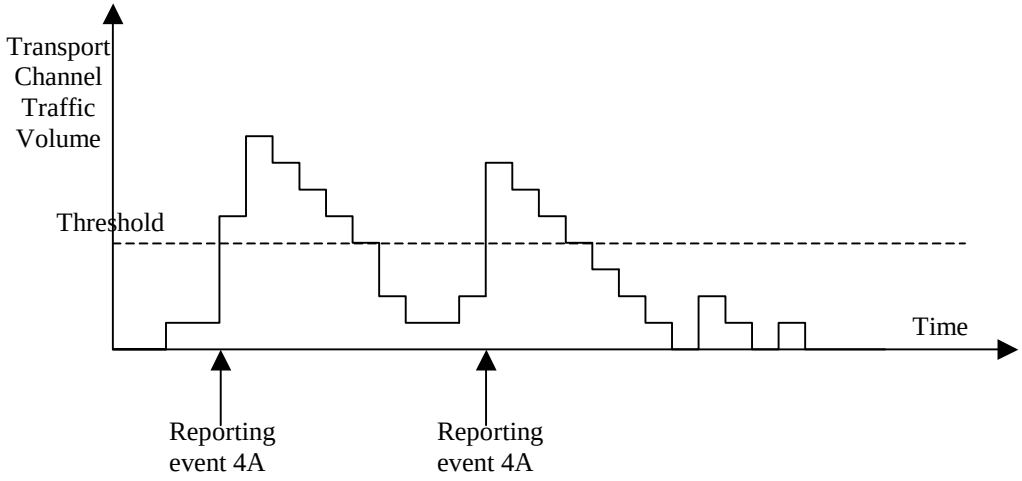

**Figure 14.4.2.1-1: Event triggered report when Transport Channel Traffic Volume becomes larger than a certain threshold**

If the monitored Transport Channel Traffic Volume (TCTV) [15] is larger than an absolute threshold at TVM setup or modify, or is larger at activation of the monitored transport channel, or becomes larger than an absolute threshold while the event is configured i.e. if TCTV>Reporting threshold, this event could trigger a report. The event could be triggered again only if TCTV becomes smaller than the Reporting threshold and later TCTV>Reporting threshold is verified again.

### 14.4.2.2 Reporting event 4 B: Transport Channel Traffic Volume becomes smaller than an absolute threshold

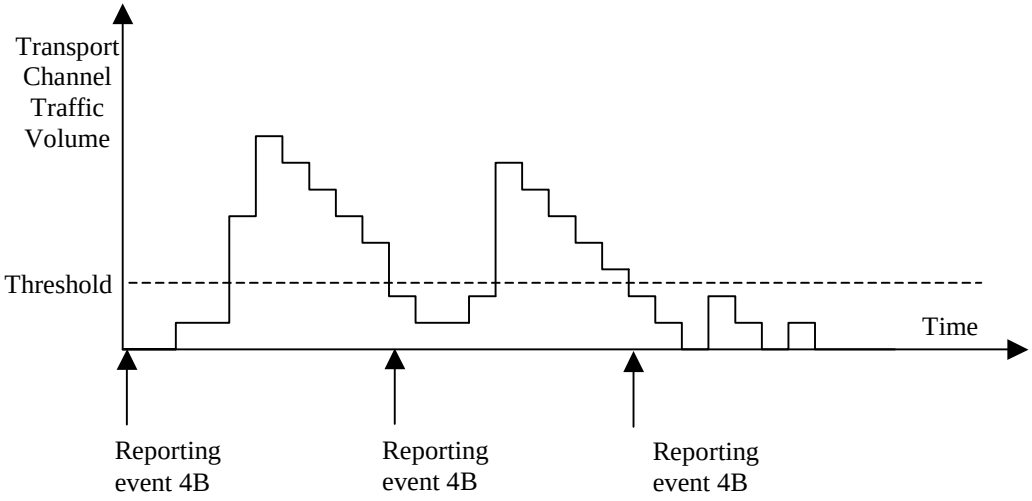

**Figure 14.4.2.1-2: Event triggered report when Transport Channel Traffic Volume becomes smaller than certain threshold**

If the monitored Transport Channel Traffic Volume (TCTV) [15] is smaller than an absolute threshold at TVM setup or modify, or is smaller at activation of the monitored transport channel, or becomes smaller than an absolute threshold while the event is configured i.e. if TCTV<Reporting threshold, this event could trigger a report. The event could be triggered again only if TCTV becomes bigger than the Reporting threshold and later TCTV<Reporting threshold is verified again.

## 14.4.3 Traffic volume reporting mechanisms

Traffic volume measurement triggering could be associated with both a *time-to-trigger* and a *pending time after trigger*. The time-to-trigger is used to get time domain hysteresis, i.e. the condition must be fulfilled during the time-to-trigger time before a report is sent. Pending time after trigger is used to limit consecutive reports when one traffic volume measurement report already has been sent and enables periodic reporting while the TCTV remains above(4a) or below(4b) the threshold. This is described in detail below.

### 14.4.3.1 Pending time after trigger

This timer is started in the UE when a measurement report has been triggered by a given event. The UE is then forbidden to send new measurement reports triggered by the same event during this time period. Instead the UE waits until the timer has expired. If the Transport Channel Traffic Volume [15] is still above the threshold for event 4a, or below the threshold for event 4b when the timer expires, the UE sends a new measurement report, and the timer is restarted. Otherwise it waits for a new triggering.

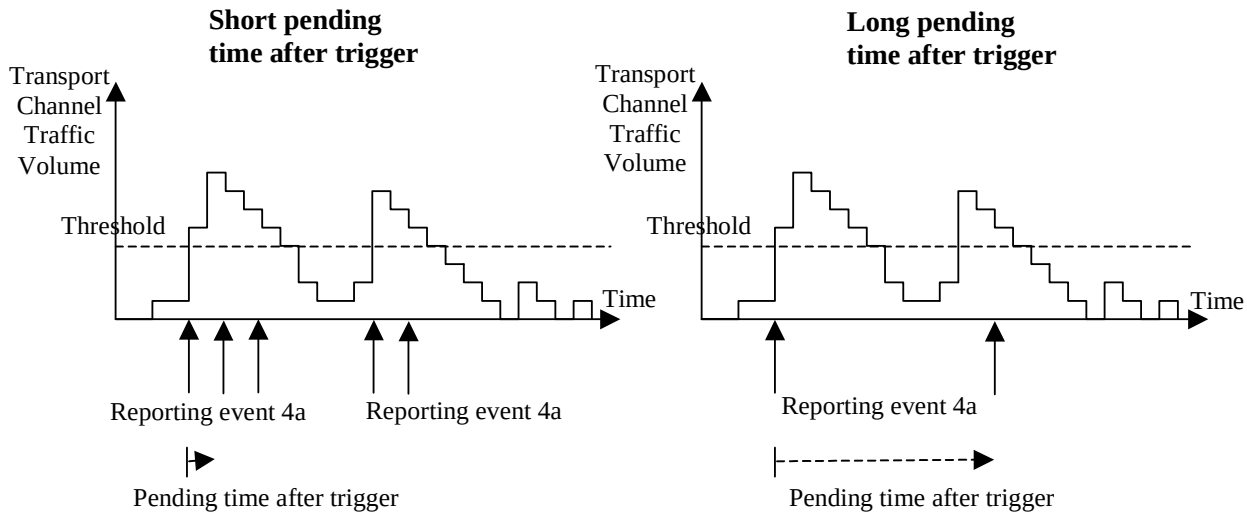

**Figure 14.4.3.1-1: Pending time after trigger limits the amount of consecutive measurement reports**

Figure 14.4.3.1-1 shows that by increasing the pending time after trigger a triggered second event does not result in a measurement report. The figure assumes absence of the IE "Time to trigger".

### 14.4.3.2 Time-to-trigger

The timer is started in the UE when the Transport Channel Traffic Volume triggers the event. If the TCTV crosses the threshold before the timer expires, the timer is stopped. If the timer expires then a report is triggered.

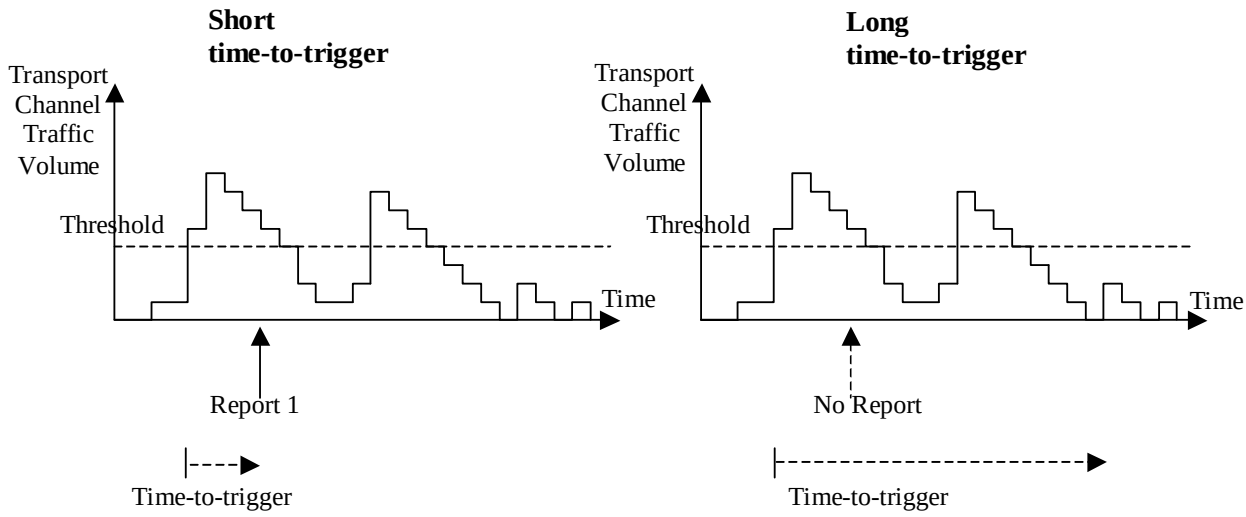

**Figure 14.4.3.1-2: Time-to-trigger is used to achieve time hysteresis**

Figure 14.4.3.1-2 shows that by increasing the time-to-trigger the report is not triggered.

## 14.4.4 Interruption of user data transmission

By including the IE "Tx Interruption after trigger", a UE in CELL_FACH state may be instructed by the UTRAN to prohibit transmission of user data on the RACH temporarily after a measurement report has been triggered.

The UE shall only resume transmission of user data, when:

1> it receives from the UTRAN a message allocating a dedicated physical channel, leading to the transition to CELL_DCH state; or

1> the time period indicated by the IE "Tx Interruption after trigger" elapses.

The transmission on signalling radio bearers shall not be interrupted.

# 14.5 Quality Measurements

## 14.5.1 Quality reporting measurement quantities

For quality measurements, the following measurement quantities are used:

1. Downlink transport channel BLER
2. Timeslot SIR (TDD only)

## 14.5.2 Quality reporting events

When one measurement identity corresponds to multiple quality events for the same transport channel, the UE behaviour is not specified.

### 14.5.2.1 Reporting event 5A: A predefined number of bad CRCs is exceeded

When this event is ordered by UTRAN in a measurement control message, the UE shall send a measurement report when the amount of bad CRCs during a predefined sliding window exceeds a predefined number.

The following three parameters are used in the scheme:

- **Total CRC** = the length of the sliding window over which the number of bad CRCs are counted.

- **Bad CRC** = the number of bad CRC that is required within the latest "Total CRC" received CRCs for the event to be triggered.
- **Pending after trigger** = a new event can not be triggered until "Pending after trigger" CRCs have been received,

When a DCH is established, the UE shall begin to count the number of bad CRCs within the last "Total CRC" received CRCs. No event can be triggered until at least "Total CRC" CRCs have been received. For each new received CRC, the UE shall compare the number of bad CRCs within the latest "Total CRC" received CRCs with the parameter "Bad CRC". An event shall be triggered if the number of bad CRCs is equal or larger than "Bad CRC".

At the time when the event is triggered a pending time after trigger timer is started with the length of "Pending after trigger" CRCs. A new event can not be triggered until Pending after trigger" CRCs have been received. When Pending after trigger" CRCs have been received the event evaluation start again and a new event can be triggered.

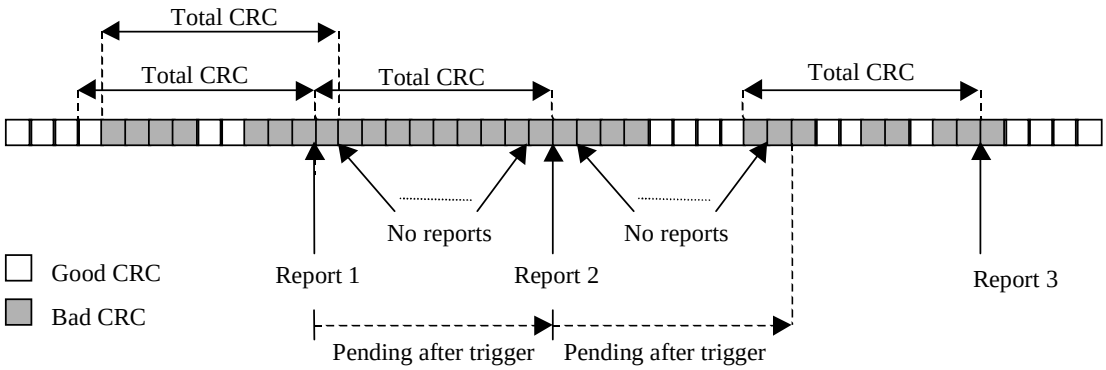

**Figure 14.5.2.1-1: Event triggered CRC error reporting**

# 14.6 UE internal measurements

## 14.6.1 UE internal measurement quantities

For UE internal measurements the following measurement quantities exist:

1. UE transmission (Tx) power, for TDD measured on a timeslot basis.
2. UE received signal strength power (RSSI).
3. UE Rx-Tx time difference (FDD only).
4. $T_{ADV}$ (1.28 Mcps TDD).

## 14.6.2 UE internal measurement reporting events

In the Measurement reporting criteria field in the Measurement Control messages, the UTRAN notifies the UE of which events should trigger a measurement report. UE internal measurement reporting events that can trigger a report are given below. The reporting events are marked with vertical arrows in the figures below. All events can be combined with time-to-trigger.

NOTE: The reporting events are numbered 6A, 6B, 6C,.. where 6 denotes that the event belongs to the type UE internal measurements.

When one measurement identity corresponds to multiple internal events with identical event identities, the UE behaviour is not defined.

### 14.6.2.1 Reporting event 6A: The UE Tx power becomes larger than an absolute threshold

When a UE internal measurement configuring event 6a is set up, the UE shall:

1> create a variable TRIGGERED_6A_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE Tx power (for TDD within a single TS) is greater than the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6A_EVENT is set to FALSE:

3> set the variable TRIGGERED_6A_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6a";

4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.

1> if the variable TRIGGERED_6A_EVENT is set to TRUE and if the UE Tx power (for TDD within a single TS) is less or equal the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY:

2> set the variable TRIGGERED_6A_EVENT to FALSE.

#### 14.6.2.2 Reporting event 6B: The UE Tx power becomes less than an absolute threshold

When a UE internal measurement configuring event 6b is set up, the UE shall:

1> create a variable TRIGGERED_6B_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE Tx power (for TDD within a single TS) is less than the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6B_EVENT is set to FALSE:

3> set the variable TRIGGERED_6B_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6b";

4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.

1> if the variable TRIGGERED_6B_EVENT is set to TRUE and if the UE Tx power (for TDD within a single TS) is greater or equal the value in IE "UE Transmitted Power Tx power threshold" stored for this event in the variable MEASUREMENT_IDENTITY:

2> set the variable TRIGGERED_6B_EVENT to FALSE.

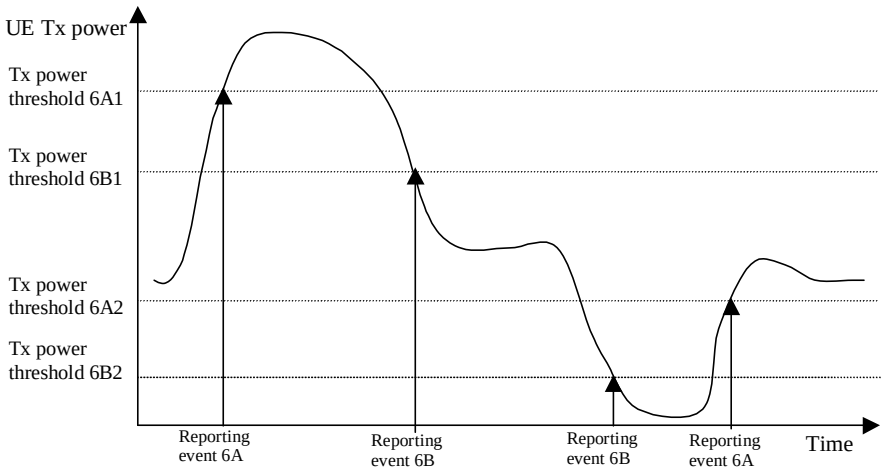

**Figure 14.6.2.2-1: Event-triggered measurement reports when the UE Tx power becomes larger or less than absolute thresholds**

### 14.6.2.3 Reporting event 6C: The UE Tx power reaches its minimum value

When a UE internal measurement configuring event 6c is set up, the UE shall:

1> create a variable TRIGGERED_6C_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE Tx power is equal its minimum value (for TDD its minimum value on a single TS) for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6C_EVENT is set to FALSE:

3> set the variable TRIGGERED_6C_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6c";

4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.

1> if the variable TRIGGERED_6C_EVENT is set to TRUE and if the UE Tx power is greater than its minimum value:

2> set the variable TRIGGERED_6C_EVENT to FALSE.

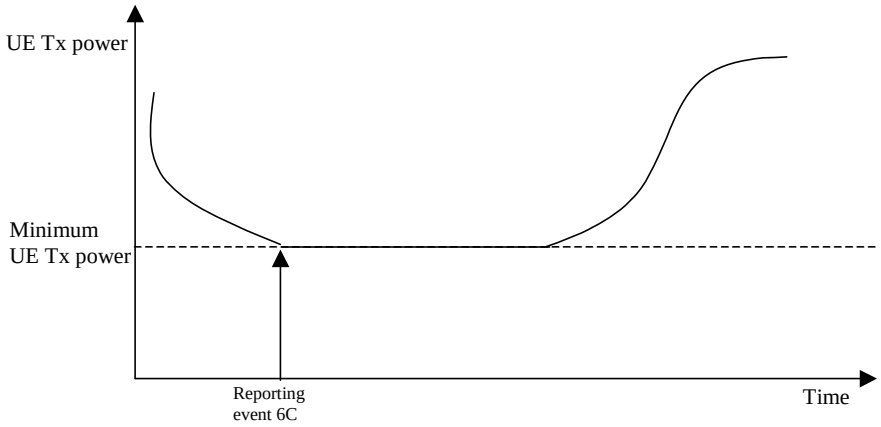

**Figure 14.6.2.3-1: Event-triggered measurement report when the UE Tx power reaches its minimum value**

### 14.6.2.4 Reporting event 6D: The UE Tx power reaches its maximum value

When a UE internal measurement configuring event 6d is set up, the UE shall:

1> create a variable TRIGGERED_6D_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE Tx power equals the maximum power the UE can transmit, i.e. the maximum UE TX power reduced by the power reduction used by the UE (for TDD its maximum value on a single TS) for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6D_EVENT is set to FALSE:

3> set the variable TRIGGERED_6D_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6d";

4> set the IE "measured results" and the IE "additional measured results" according to 8.4.2.

1> if the variable TRIGGERED_6D_EVENT is set to TRUE and if the UE Tx power is less than the maximum UE TX power:

2> set the variable TRIGGERED_6D_EVENT to FALSE.

NOTE: The maximum UE TX power is defined in subclause 8.6.6.8 and the maximum allowed power reduction is defined in subclause 6.2.2 in [21].

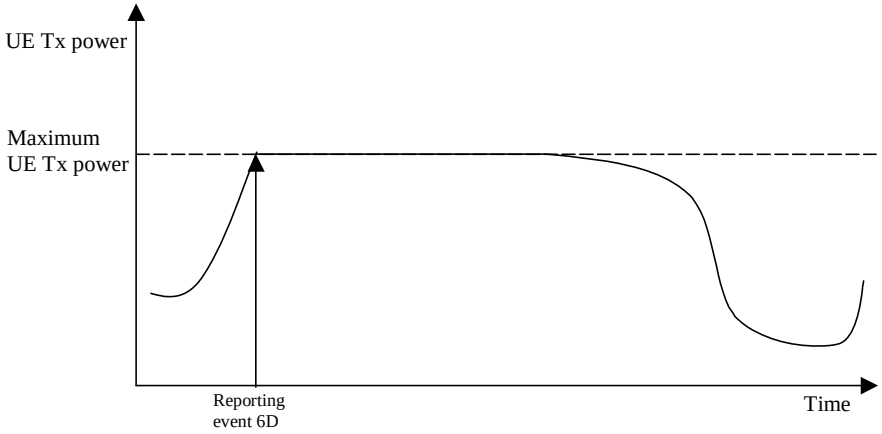

**Figure 14.6.2.4-1: Event-triggered report when the UE Tx power reaches its maximum value**

### 14.6.2.5 Reporting event 6E: The UE RSSI reaches the UE's dynamic receiver range

When a UE internal measurement configuring event 6e is set up, the UE shall:

1> create a variable TRIGGERED_6E_EVENT related to that measurement, which shall initially be set to FALSE;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE RSSI is greater or equal the UE's dynamic receiver range for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6E_EVENT is set to FALSE:

3> set the variable TRIGGERED_6E_EVENT to TRUE;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6e";

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

1> if the variable TRIGGERED_6E_EVENT is set to TRUE and if the UE RSSI is less than the UE's dynamic receiver range:

2> set the variable TRIGGERED_6E_EVENT to FALSE.

### 14.6.2.6 Reporting event 6F (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

When a UE internal measurement configuring event 6f is set up, the UE shall:

1> create a variable TRIGGERED_6F_EVENT related to that measurement, which shall initially be set to FALSE for each RL;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE Rx-Tx time difference for a RL included in the active set is greater than the value in the IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6F_EVENT is set to FALSE for this RL:

3> set the variable TRIGGERED_6F_EVENT to TRUE for this RL;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6f";

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

1> if the variable TRIGGERED_6F_EVENT is set to TRUE for a RL and if the UE RX-Tx time difference for this RL included in the active set is less than or equal to the value in the IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY:

2> set the variable TRIGGERED_6F_EVENT to FALSE for this RL.

### 14.6.2.6a Reporting event 6F (1.28 Mcps TDD): The time difference indicated by $T_{ADV}$ becomes larger than an absolute threshold

When a UE internal measurement configuring event 6f is set up, the UE shall:

1> create a variable TRIGGERED_6F_EVENT related to that measurement, which shall initially be set to the currently measured $T_{ADV}$;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the absolute value of the difference between the measured $T_{ADV}$ and the $T_{ADV}$ stored in the variable TRIGGERED_6F_EVENT is greater than the predefined threshold configured with the IE "$T_{ADV}$ Threshold" for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":

2> set the variable TRIGGERED_6F_EVENT to the currently measured $T_{ADV}$;

2> send a measurement report with IEs set as below:

3> set the IE "$T_{ADV}$" to the measured value, and the IE "SFN" to the SFN during which the latest measurement was performed, in the IE "$T_{ADV}$ Info";

3> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

### 14.6.2.7 Reporting event 6G: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

When a UE internal measurement configuring event 6g is set up, the UE shall:

1> create a variable TRIGGERED_6G_EVENT related to that measurement, which shall initially be set to FALSE for each RL;

1> delete this variable when the measurement is released.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE Rx-Tx time difference for a RL included in the active set is less than the value in IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY for a time period indicated by the IE "time_to_trigger":

2> if the variable TRIGGERED_6G_EVENT is set to FALSE for this RL:

3> set the variable TRIGGERED_6G_EVENT to TRUE for this RL;

3> send a measurement report with IEs set as below:

4> set in "UE internal measurement event results": "UE internal event identity" to "6g";

4> set the IE "measured results" and the IE "additional measured results" according to subclause 8.4.2.

1> if the variable TRIGGERED_6G_EVENT is set to TRUE for a RL and if the UE RX-Tx time difference for this RL included in the active set is greater or equal the value in IE "UE Rx-Tx time difference threshold" stored for this event in the variable MEASUREMENT_IDENTITY:

2> set the variable TRIGGERED_6G_EVENT to FALSE for this RL.

# 14.7 UE positioning measurements

## 14.7.1 UE positioning measurement quantities

The quantity to measure for UE positioning is dependent on the positioning method and the method type requested in the IE "UE positioning reporting quantity".

1 SFN-SFN observed time difference type 2, optional.

2 Rx-Tx time difference type 2, optional.

3 GPS timing of cell fames, optional.

The definition of other GPS measurements is not within the scope of this specification.

## 14.7.2 Void

## 14.7.3 UE positioning reporting events

In the IE "UE positioning reporting criteria" in the Measurement Control messages, the UTRAN notifies the UE of which events should trigger a measurement report. UE positioning reporting events that can trigger a report are given below. The content of the measurement report is dependant on the positioning method and method type requested in the IE "UE positioning reporting quantity" of the Measurement Control message and is described in detail in [18].

When one measurement identity corresponds to multiple positioning events with identical event identities, the UE behaviour is not defined.

### 14.7.3.1 Reporting Event 7a: The UE position changes more than an absolute threshold

This event is used for UE-based methods only.

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> if the UE changes its position compared to the last reported position by more than the threshold defined by the IE "Threshold position change"; or

1> if no position has been reported since the event was configured and the UE changes its position compared to the first position estimate obtained after the event was configured by more than the threshold defined by the IE "Threshold position change":

2> send a measurement report as specified in subclause 8.6.7.19.1b;

2> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:

3> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.

2> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:

3> delete this event from the list of events in variable MEASUREMENT_IDENTITY.

1> if the UE is unable to evaluate the event because a position measurement is not available:

2> not send a report.

### 14.7.3.2 Reporting Event 7b: SFN-SFN measurement changes more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> send a measurement report when the SFN-SFN time difference measurement type 2 of any measured cell changes more than the threshold defined by the IE "Threshold SFN-SFN change"; and

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-based":

2> act as specified in subclause 8.6.7.19.1b.

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-assisted":

2> act as specified in subclause 8.6.7.19.1a.

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE-assisted preferred but UE-based allowed" or "UE-based preferred but UE-assisted allowed":

2> the UE may choose to act according to either subclause 8.6.7.19.1a or 8.6.7.19.1b.

1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:

2> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.

1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:

2> delete this event from the list of events in variable MEASUREMENT_IDENTITY.

### 14.7.3.3 Reporting Event 7c: GPS time and SFN time have drifted apart more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> send a measurement report when the GPS Time Of Week and the SFN timer have drifted apart more than the threshold defined by the IE "Threshold SFN-GPS TOW"; and

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE based":

2> act as specified in subclause 8.6.7.19.1b.

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted":

2> act as specified in subclause 8.6.7.19.1a.

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted preferred but UE based allowed" or "UE based preferred but UE assisted allowed":

2> act as specified in subclause 8.6.7.19.1a or in subclause 8.6.7.19.1b depending on the method type chosen by the UE.

1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:

2> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.

1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:

2> delete this event from the list of events in variable MEASUREMENT_IDENTITY.

#### 14.7.3.4 Reporting Event 7d: GANSS time and SFN time have drifted apart more than an absolute threshold

When this event is ordered by UTRAN in a measurement control message, the UE shall:

1> send a measurement report when the GANSS Time Of Week and the SFN timer have drifted apart more than the threshold defined by the IE "Threshold SFN-GANSS TOW"; and

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE based":

2> act as specified in subclause 8.6.7.19.1b.

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted":

2> act as specified in subclause 8.6.7.19.1a.

1> if UTRAN set IE "Method Type" in "UE positioning reporting quantity" in the MEASUREMENT CONTROL message to "UE assisted preferred but UE based allowed" or "UE based preferred but UE assisted allowed":

2> act as specified in subclause 8.6.7.19.1a or in subclause 8.6.7.19.1b depending on the method type chosen by the UE.

1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is greater than zero:

2> decrease IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event by one.

1> if the value of IE "Amount of Reporting" in variable MEASUREMENT_IDENTITY for this event is equal to zero:

2> delete this event from the list of events in variable MEASUREMENT_IDENTITY.

## 14.7a Measurements related to CSG/Hybrid cells

### 14.7a.1 Intra-frequency measurements for CSG/Hybrid cells

For each cell reported in the IE "Cell measured results" of an intra-frequency Measurement Report, which is also included in the IE "Intra-frequency SI Acquisition" associated with the measurement:

1> if the UE managed to acquire the valid system information of the concerned cell:

2> include the following IEs in the IE "Cell measured results":

3> "Cell Identity" IE.

3> if the concerned cell broadcasts a CSG identity:

4> "CSG Identity" IE.

4> "CSG Member indication" IE and set it to "member" if the concerned cell is CSG member cell.

The system information of the reported cell(s) can be acquired by the UE without any measurement gaps.

### 14.7a.2 Inter-frequency measurements for CSG/Hybrid cells

For each cell reported in the IE "Cell measured results" of an inter-frequency Measurement Report, which is also included in the IE "Inter-frequency SI Acquisition" associated with the measurement:

1> if the UE managed to acquire the system information of the concerned cell:

2> include the following IEs in the IE "Cell measured results":

3> "Cell Identity" IE;

3> if the concerned cell broadcasts a CSG identity:

4> "CSG Identity" IE.

4> "CSG Member indication" IE and set it to "member" if the concerned cell is CSG member cell.

If the UE needs measurement gaps to read the system information on the non-used frequency, the system information of the reported cell can be acquired by the UE via autonomous measurement gaps when the IE "Inter-frequency SI Acquisition" is received by the UE, i.e., UE is allowed to temporarily abort communication with the serving cell to perform SI acquisition within the limits as specified in [19]. UE shall send the measurement report before the maximum provided time specified in IE “Periodical reporting criteria” if the UE is able to acquire SI early.

## 14.7a.3 CSG Proximity detection

The UE shall:

1> if the IE "UTRA CSG Proximity detection" is present and has the value "enable":

2> enable the proximity detection function of entering or leaving the proximity of UTRA CSG member cell(s).

1> else:

2> disable the proximity detection function of entering or leaving the proximity of UTRA CSG member cell(s).

1> if the IE "E-UTRA CSG Proximity detection" is present and has the value "enable":

2> enable the proximity detection function of entering or leaving the proximity of E-UTRA CSG member cell(s).

1> else:

2> disable the proximity detection function of entering or leaving the proximity of E-UTRA CSG member cell(s).

## 14.7a.4 CSG Proximity Indication

If proximity detection function is enabled for a RAT, the UE shall initiate the transmission and set the contents of IE "CSG Proximity Indication" in the MEASUREMENT REPORT message as follows:

1> if the UE is aware that it is in the proximity of one or more CSG member cell(s) on a frequency of the enabled RAT, the UE shall:

2> if the UE has not transmitted a “CSG Proximity Indication" for the RAT and frequency since the enabling of proximity detection function, or

2> if the last “CSG Proximity Indication” transmitted for the concerned RAT and frequency was a leaving indication, and more than 5 s has elapsed since its transmission,

3> set the IE "CSG Proximity Indication" to "entering";

3> set the IE "CSG Frequency info for UTRA" or "CSG Frequency info for E-UTRA " to the frequency of the cell(s) for which the Proximity Indication was triggered.

1> if the UE leaves the proximity of all the CSG member cell(s) on a frequency of the enabled RAT, the UE shall:

2> if the last “CSG Proximity Indication” transmitted for the concerned RAT and frequency was an entering indication, and more than 5 s has elapsed since its transmission,

3> set the IE "CSG Proximity Indication" to "leaving";

3> set the IE "CSG Frequency info for UTRA" or "CSG Frequency info for E-UTRA" to the frequency of the cell(s) for which the Proximity Indication was triggered.

### 14.7a.5 E-UTRA measurements for CSG/Hybrid cells

For each cell reported in the IE "E-UTRA measured results" of an E-UTRA inter-RAT Measurement Report, which is also included in the IE "E-UTRA SI Acquisition" associated with the measurement:

1> if the UE acquired the system information of the concerned cell:

2> include the following IEs in the IE "E-UTRA Results for SI Acquisition":

3> "CGI-Info" IE;

3> if the concerned cell broadcasts a CSG identity:

4> "CSG Identity" IE.

4> "CSG Member indication" IE and set it to "member" if the concerned cell is CSG member cell.

If the UE needs measurement gaps to read the system information on the E-UTRA cell, the system information of the reported cell can be acquired by the UE via autonomous measurement gaps when the IE " E-UTRA SI Acquisition" is received by the UE, i.e., UE is allowed to temporarily abort communication with the serving cell to perform SI acquisition within the limits as specified in [74]. UE shall send the measurement report before the maximum provided time specified in IE “Periodical reporting criteria” if the UE is able to acquire SI early.

## 14.8 Void

## 14.9s Downlink power control

### 14.9.1 Generalities

This function is implemented in the UE in order to set the SIR target value on each CCTrCH used for the downlink power control. This SIR value shall be adjusted according to an autonomous function in the UE in order to achieve the same measured quality as the quality target set by UTRAN. The quality target is set as the transport channel BLER value for each transport channel as signalled by UTRAN.

When transport channel BLER is used the UE shall run a quality target control loop such that the quality requirement is met for each transport channel, which has been assigned a BLER target.

The UE shall set the SIR target when the physical channel has been set up or reconfigured. It shall not increase the SIR target value before the power control has converged on the current value. The UE may estimate whether the power control has converged on the current value, by comparing the averaged measured SIR to the SIR target value.

NOTE: The power control function for F-DPCH is specified in [29].

### 14.9.2 Downlink power control in compressed mode

In compressed mode, the target SIR needs to be changed in several frames compared to normal mode. For this purpose, four values DeltaSIR1, DeltaSIRafter1, DeltaSIR2 and DeltaSIRafter2 are signalled by the UTRAN to the UE (see subclause 10.3.6.33).

For each frame, the target SIR offset during compressed mode, compared to normal mode is:

$$\Delta SIR = \max(\Delta SIR1_compression, \ldots, \Delta SIRn_compression) + \Delta SIR1_coding + \Delta SIR2_coding$$

where n is the number of TTI lengths for all TrChs of the CCTrCh, $F_i$ is the length in number of frames of the i-th TTI and where ΔSIR_coding fulfils:

- ΔSIR1_coding= DeltaSIR1 if the start of the first transmission gap in the transmission gap pattern is within the current frame.
- ΔSIR1_coding= DeltaSIRafter1 if the current frame just follows a frame containing the start of the first transmission gap in the transmission gap pattern.
- ΔSIR2_coding= DeltaSIR2 if the start of the second transmission gap in the transmission gap pattern is within the current frame.
- ΔSIR2_coding= DeltaSIRafter2 if the current frame just follows a frame containing the start of the second transmission gap in the transmission gap pattern.
- ΔSIR1_coding= 0 and ΔSIR2_coding= 0 otherwise.

and ΔSIRi_compression is defined by :

- ΔSIRi_compression = 3 dB for downlink frames compressed by reducing the spreading factor by 2.
- ΔSIRi_compression = 0 dB in all other cases.

Several compressed mode patterns applying to the same frames should be avoided as much as possible.

In case several compressed mode patterns are used simultaneously, a ΔSIR offset is computed for each compressed mode pattern and the sum of all ΔSIR offsets is applied to the frame.

## 14.10 Calculated Transport Format Combination

The Calculated Transport Format Combination (CTFC) is a tool for efficient signalling of transport format combinations.

Let *I* be the number of transport channels that are included in the transport format combination. For DCHs, all configured DCHs are included in the transport format combination. Each transport channel $TrCH_i$, $i = 1, 2, \ldots, I$, has $L_i$ transport formats, i.e. the transport format indicator $TFI_i$ can take $L_i$ values, $TFI_i \in \{0,1,2,\ldots,L_i - 1\}$.

*Define* $P_i = \prod_{j=0}^{i-1} L_j$ *, where i = 1, 2, …, I, and* $L_0 = 1$.

Let $TFC(TFI_1, TFI_2, \ldots, TFI_I)$ be the transport format combination for which $TrCH_1$ has transport format $TFI_1$, $TrCH_2$ has transport format $TFI_2$, etc. The corresponding $CTFC(TFI_1, TFI_2, \ldots, TFI_I)$ is then computed as:

$$CTFC(TFI_1, TFI_2, \ldots, TFI_I) = \sum_{i=1}^{I} TFI_i \cdot P_i .$$

For FACH and PCH transport channels, "$TrCH_1$" corresponds to the transport channel listed at the first position in IE "FACH/PCH information" in IE "Secondary CCPCH System Information", "$TrCH_2$" corresponds to the transport channel listed at the second position in IE "FACH/PCH information" and so on.

For all other transport channels in FDD and for all configured transport channels of the same transport channel type (i.e. DCH, DSCH, USCH) in TDD, "$TrCH_1$" corresponds to the transport channel having the lowest transport channel identity in the transport format combination mapped to the TFCI field. "$TrCH_2$" corresponds to the transport channel having the next lowest transport channel identity, and so on.

## 14.10.1 Default TFCS for MBMS

### 14.10.1.1 S-CCPCH configuration including a FACH carrying MSCH

In case the S-CCPCH configuration includes a FACH carrying MSCH, the default TFCS is defined according to the following:

Let TrCH 1 be the FACH carrying MSCH, TrCH 2 be the first TrCH carrying MTCH listed in the IE "TrCh information list", TrCH 3 be the second TrCH carrying MTCH listed in the IE "TrCh information list" etc. and let TrCH I be the last TrCH carrying MTCH listed in the IE "TrCh information list".

Each transport channel $TrCH_i$, $i$ = 1, 2, …, $I$, has $L_i$ transport formats, i.e. the transport format indicator $TFI_i$ can take $L_i$ values.

Each transport format combination set is defined by the transport formats of each transport channel mapped on this S-CCPCH:

TFC = ($TFI_1$, $TFI_2$, …, $TFI_I$).

The "MBMS implicit TFCS" contains then the following set of TFCs:

TFCS = {(0,0,…,0),(0,1,…,0),…,(0,$L_2$,…,0),(0,0,1,…,0),…,(0,0,$L_3$,…,0),…,(0,0,0,…,1),…,(0,0,0,…,$L_I$),
(1,0,…,0),(1,1,…,0),…,(1,$L_2$,…,0),(1,0,1,…,0),…,(1,0,$L_3$,…,0),…,(1,0,0,…,1),…,(1,0,0,…,$L_I$),
(2,0,…,0),…,($L_1$,0,…,0)}

### 14.10.1.2 S-CCPCH configuration not including a FACH carrying MSCH

In case the S-CCPCH configuration does not include a FACH carrying MSCH, the default TFCS is defined according to the following:

Let TrCH 1 be the first TrCH listed in the IE "TrCh information list", TrCH 2 be the second TrCH listed in the IE "TrCh information list" etc. and let TrCH I be the last TrCH listed in the IE "TrCh information list".

Each transport channel $TrCH_i$, $i$ = 1, 2, …, $I$, has $L_i$ transport formats, i.e. the transport format indicator $TFI_i$ can take $L_i$ values.

Each transport format combination set is defined by the transport formats of each transport channel mapped on this S-CCPCH:

TFC = ($TFI_1$, $TFI_2$, …, $TFI_I$).

The "MBMS implicit TFCS" contains then the following set of TFCs:

TFCS = {(0,…,0), (1,…,0),…,($L_1$,…,0),(0,1,…,0),…,(0,$L_2$,…,0),…,(0,0,…,1),…,(0,0,…,$L_I$)}

# 14.11 UE autonomous update of virtual active set on non-used frequency (FDD only)

In the text that follows:

- a "non-used frequency" is a frequency that the UE has been ordered to measure upon but is not used for the connection. A "used frequency" is a frequency that the UE has been ordered to measure upon and is also currently used for the connection;

- a "non-used frequency (resp. cell) considered in an inter-frequency measurement" shall be understood as a non-used frequency (resp. cell) included in the list of cells pointed at in the IE "cells for measurement" if it was received for that measurement, or otherwise as a non-used frequency (resp. cell) included in the "Inter-frequency cell info" part of the variable CELL_INFO_LIST.

For event-triggered inter frequency measurements it is possible to use intra-frequency measurement reporting events for support of maintenance of an active set associated with a non-used frequency considered in that measurement, a "virtual

active set" and used in the evaluation of the frequency quality estimates. The "initial virtual active set" for a frequency is the virtual active set that is associated to that frequency just after a message was received that sets up or modifies the inter-frequency measurement.

The way the virtual active sets are initiated and updated for the non-used frequencies considered in an inter-frequency measurement is described in the two subclauses below.

The UE shall support a single virtual active set per non-used frequency for non-CSG measurements. If any measurement is configured for CSG cells (using CELL_INFO_CSG_LIST) then the UE shall additionally maintain a "CSG virtual active set" for this purpose.

The virtual active set is not initialised and maintained for an inter frequency measurement with periodic reporting. A virtual active set initialised and maintained by another inter-frequency measurement does not affect reporting of the periodic inter-frequency measurement.

## 14.11.1 Initial virtual active set

If the UE receives a MEASUREMENT CONTROL message that sets up or modifies an inter-frequency measurement and includes the IE "Inter-frequency set update"; or

If at least one cell can be measured on a non-used frequency for which the current virtual active set is empty (see subclause 14.11.2), the UE shall:

1> for each non-used frequency $F_i$ considered in the measurement where cells can be measured:

2> if event 1a is configured for the used frequency in an intra-frequency measurement and the CSG virtual active set is not used:

3> include in the initial virtual active set the $N_i$ cells that have either the greatest downlink $E_c/N_0$ or the greatest downlink RSCP after despreading or the lowest pathloss (the measurement quantity to be used is determined by the IE "intra-frequency measurement quantity" of the intra-frequency measurement from which the event 1a configuration is taken), among the cells on frequency $F_i$ considered in that inter-frequency measurement, where:

$$N_i = \min(N_{1a} \ , \ N_{Cells\,Fi}) \text{ if } N_{1a} \neq 0 \text{ and } N_i = N_{Cells\,Fi} \text{ otherwise.}$$

where:

$N_{1a}$ is the "Reporting deactivation threshold" included in the intra-frequency measurement for the first event 1a defined in the intra-frequency measurement with the lowest identity at the time the inter-frequency measurement was received with the IE "Inter-frequency set update" present.

$N_{Cells\,Fi}$ is the number of cells on frequency $F_i$ considered in that inter-frequency measurement.

2> else if the CSG virtual active set is used and event 1c is configured for the used frequency in an intra-frequency measurement:

3> include in the initial CSG virtual active set 1 cell that has either the greatest downlink $E_c/N_0$ or the greatest downlink RSCP after despreading or the lowest pathloss (the measurement quantity to be used is determined by the IE "intra-frequency measurement quantity" of the intra-frequency measurement from which the event 1c configuration is taken), among the cells on frequency $F_i$ in CELL_INFO_CSG_LIST.

$$N_i = 1$$

2> else:

$$N_i = N_{Cells\,Fi}$$

where:

$N_{Cells\ Fi}$ is the number of cells on frequency $F_i$ considered in that inter-frequency measurement.

NOTE1: The UE initialises the virtual active set with up to the maximum number of inter-frequency cells supported by the UE as defined in [19].

NOTE2: If the UTRAN configures more than one measurement using events 2A, 2B, 2C or 2E the UE measurement capabilities may be exceeded due to the necessary copying of 1A, 1B, 1C criteria. To avoid this the UTRAN may configure one measurement to apply to multiple frequencies so that the 1A, 1B, and 1C criteria will only be copied once.

NOTE3: After a hard handover (see subclause 8.3.5), if the MEASUREMENT CONTROL message that restarts an inter-frequency measurement using the virtual active set does not include the IE "Inter-frequency set update", the UE behaviour regarding the virtual active set is not specified.

## 14.11.2 Virtual active set update during an inter-frequency measurement

For an inter-frequency measurement, the UE shall:

1> apply the events of type 1a, 1b and 1c that were defined for the used frequency in other stored measurements of type "intra-frequency" at the time the inter-frequency measurement was last received with the IE "Inter-frequency set update" present; and

1> update the virtual active set for the non-used frequencies considered in that measurement according to the following rules:

2> if several events of type 1c were defined for the used frequency when the inter-frequency measurement was last received with the IE "Inter-frequency set update" present, and the inter-frequency measurement applies to cells in the CELL_INFO_CSG_LIST then only the first 1c event that was defined in the measurement with the lowest measurement identity shall apply to the non-used frequencies and replace the "Replacement activation threshold" with 0 to update the CSG virtual active set;

2> if several events of type 1a (resp. 1b,1c) were defined for the used frequency when the inter-frequency measurement was last received with the IE "Inter-frequency set update" present, only the first 1a event (resp 1b, 1c) that was defined in the measurement with the lowest measurement identity shall apply to the non-used frequencies;

2> all the cells considered in the inter-frequency measurements shall be able to affect the reporting range for event 1a and 1b. (i.e. the IE "Cells forbidden to affect reporting range" possibly stored for the intra-frequency measurements on the used frequency does not apply to the non-used frequencies considered in the inter-frequency measurement);

2> the IEs "amount of reporting" and "reporting interval" that were stored for the intra-frequency measurements on the used frequency shall not be considered if reports of the virtual active set updates are needed.

2> the measurement quantity and filter coefficient to be used is determined by the IE "intra-frequency measurement quantity" of the intra-frequency measurement from which the intra-frequency event configuration is taken.

NOTE: If the measurement quantity and filter coefficients to be used differ for the 1a, 1b, and 1c events applied then the UE behaviour is unspecified.

1> if event 1a is applicable to the non-used frequencies considered in the inter-frequency measurement, always only consider monitored cells that are not in the virtual active set for this event, and:

2> when this event is triggered (according to the criteria described in subclause 14.1.2.1) by a cell for a non-used frequency considered in that measurement:

3> if the "Reporting deactivation threshold" is equal to 0, or if the "Reporting deactivation threshold" is different from 0 and the number of cells included in the virtual active set for that frequency is less than or equal to the "Reporting deactivation threshold":

4> add the primary CPICH that enters the reporting range to the "virtual active set".

2> if event 1b is applicable for the non-used frequencies considered in that inter-frequency measurement, always only consider cells in the virtual active set for this event, and when this event is triggered (according to the criteria described in subclause 14.1.2.2) by a cell for a non-used frequency considered in that measurement:

3> if the number of cells included in the virtual active set is greater than 1:

4> remove the primary CPICH that leaves the reporting range from the "virtual active set".

2> if event 1c is applicable for the non-used frequencies considered in that inter-frequency measurement, always only consider monitored cells for this event, and when this event is triggered (according to the criteria described in subclause 14.1.2.3) by a cell for a non-used frequency considered in that measurement:

3> if the "Replacement activation threshold" is equal to 0, or if the "Replacement activation threshold" is different from 0 and the number of cells included in the virtual active set for that frequency is greater than or equal to the "Replacement activation threshold":

4> rank all active and non-active primary CPICHs and take the *n* best cells to create a new "virtual active set", where *n* is the number of active primary CPICHs in the "virtual active set".

1> if event 1c is applicable to the non-used frequencies considered in the inter-frequency measurement applying to cells in the CELL_INFO_CSG_LIST, always only consider cells in the CELL_INFO_CSG_LIST, and when this event is triggered (according to the criteria described in subclause 14.1.2.3) by a cell for a non-used frequency considered in that measurement :

2> rank all active and non-active primary CPICHs and take the best cell to create a new "CSG virtual active set".

1> if Event 1a is not defined for the used frequency in other stored measurements of type "intra-frequency" at the time the inter-frequency measurement was set up and the CSG virtual active set is not used for the measurement:

2> the UE shall continuously update the virtual active set to consist of all cells on frequency $F_i$ considered in that inter-frequency measurement.

NOTE: The UE needs to only update the virtual active set with up to the maximum number of interfrequency cells supported by the UE as defined in [19].

If none of the cells that are considered in the measurement on this frequency were measured, the UE may treat the virtual active set as empty and follow the appropriate initialisation procedure in subclause 14.11.1 when any relevant cell can first be measured.

If a cell is a member of the virtual active set and is removed from the variable CELL_INFO_LIST or removed from the list of cells pointed at by the IE "Cells for measurement" for the inter-frequency measurement then the UE shall remove the cell from the virtual active set.

If an inter-frequency measurement that initialised a virtual active set is released, then any virtual active set associated with this measurement shall also be released.

# 14.12 Provision and reception of RRC information between network nodes

## 14.12.0 General

In certain cases, e.g., when performing handover to UTRAN or when performing SRNC relocation, RRC information may need to be transferred between UTRAN nodes, between UTRAN and another RAT, between nodes within another RAT or between the UE and another RAT.

The RRC information exchanged between network nodes or between the UE and another RAT is typically transferred by means of RRC information containers. An RRC information container is a self-contained and extensible RRC information unit that may be used to transfer a number of different RRC messages, one at a time. As stated before, RRC information containers may be used to transfer RRC messages across interfaces other than the Uu interface. The RRC messages that may be included in RRC information containers have similar characteristics as the RRC messages that are transferred across the Uu interface.

The RRC messages that are sent to/ from the UE, e.g., HANDOVER TO UTRAN COMMAND, INTER RAT HANDOVER INFO are covered by (sub)clauses 8, 9, 10, 11.0-11.4 and 12 of this specification. The following subclauses concern RRC messages exchanged between network nodes.

In future versions of this specification, it is possible to extend the RRC messages transferred across interfaces other than Uu. For these RRC messages the same extension mechanism applies as defined for RRC messages transferred across the Uu interface, as is specified in subclause 10.1, i.e., both critical and non-critical extensions may be added.

The transfer syntax for RRC information containers and RRC messages transferred between network nodes is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned (X.691). It should be noted that the encoder adds final padding to achieve octet alignment. The resulting octet string is, carried in a container, transferred between the network nodes.

When using a separate RRC information container for each endpoint, the receiving RRC protocol entity is able to interpret the received container; this means that the receiver need not take into account information about the (network interface) message used in transferring the container.

The following encoding rules apply in addition to what has been specified in X.691 [49]:

1> When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in [11], the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field.

NOTE: The terms "leading bit" and "trailing bit" are defined in ITU-T Rec. X.680 | ISO/IEC 8824-1. When using the "bstring" notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

## 14.12.0a General error handling for RRC messages exchanged between network nodes

The error handling for RRC messages that are exchanged between network nodes applies the same principles as defined for other RRC messages.

Although the same principles apply for network nodes receiving unknown, unforeseen and erroneous RRC messages received in RRC information containers, the notification of the error should be done in a different manner, as specified in the following:

The network node receiving an invalid RRC message from another network node should:

1> if the received RRC message was unknown, unforeseen or erroneous:

2> prepare an RRC FAILURE INFO message, including the IE "Failure cause" set to "Protocol error" and the IE "Protocol error information" including an IE "Protocol error cause" which should be set as follows:

3> to "ASN.1 violation or encoding error" upon receiving an RRC message for which the encoded message does not result in any valid abstract syntax value;

3> to "Message type non-existent or not implemented" upon receiving an unknown RRC message type;

3> to "Message extension not comprehended" upon receiving an RRC message including an undefined critical message extension;

3> to "Information element value not comprehended" upon receiving an RRC message including an mandatory IE for which no default value is defined and for which either the value is set to spare or for which the encoded IE does not result in a valid transfer syntax. The same applies for conditional IEs, for which the conditions for presence are met, the IE is present but has a value set to spare or for which the encoded IE does not result in a valid transfer syntax;

3> to "Information element missing" upon receiving an RRC information container with an absent conditional IE for which the conditions for presence are met.

1> if there was another failure to perform the operation requested by the received RRC message:

2> prepare an RRC FAILURE INFO message, including the IE "Failure cause" set to a value that reflects the failure cause.

1> send the RRC FAILURE INFO message to the network node from which the invalid RRC protocol information was received.

NOTE 1: The appropriate (failure) messages used across the network interfaces may not support the inclusion of a RRC information container. In this case, the information contained in the RRC FAILURE INFO message may need to be transferred otherwise e.g. by mapping to a cause value (e.g. a cause value in the RR-HANDOVER FAILURE message when there is a error associated with the RRC-HANDOVER TO UTRAN COMMAND message).

NOTE 2 In case the RRC procedure used to perform SRNS relocation fails e.g. due to non comprehension, the source RNC may notify the target RNC by including the diagnostics information (IEs "Protocol error" and "Protocol error information") in the "RRC message "SRNS Relocation" Info sent in the RRC information container" used for a subsequent relocation request.

## 14.12.1 RRC Information to target RNC

The RRC information container "RRC Information to target RNC" may either be sent from source RNC or from another RAT. In case of handover to UTRAN, this information originates from another RAT, while in case of SRNC relocation the RRC information originates from the source RNC. In case of handover to UTRAN, the RRC information transferred may provide UTRAN specific information, as defined in the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES message, that the target RNC needs when preparing the handover command message. In case of SRNC relocation and handover/cell reselection from GERAN *Iu mode*, the RRC information transferred specifies the configuration of RRC and the lower layers it controls, e.g., including the radio bearer and transport channel configuration. It is used by the target RNC to initialise RRC and the lower layer protocols to facilitate SRNC relocation and handover/cell reselection from GERAN *Iu mode* in a manner transparent to the UE.

RFC 3095 CONTEXT INFO is used to transfer the compressor and decompressor context information of the RFC 3095 protocol from source RNC to target RNC.

| Information Element/Group Name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| CHOICE *case* | MP | | | At least one spare choice, Criticality: Reject, is needed | |

| >SRNC relocation | | | SRNS RELOCATION INFO 14.12.4.2 | | |
| >RFC 3095 context info | | | RFC 3095 CONTEXT INFO 14.12.4.4 | | REL-5 |

## 14.12.2 RRC information, target RNC to source RNC

There are 2 possible cases for RNC relocation:

1. The UE is already under control of target RNC; and
2. The SRNC Relocation with Hard Handover (UE still under control of SRNC), but UE is moving to a location controlled by the target RNC (based on measurement information).

In case 1 the relocation is transparent to the UE and there is no "reverse" direction container. The SRNC just assigns the 'serving' function to the target RNC, which then becomes the Serving RNC.

In case 2 the relocation is initiated by SRNC, which also provides the RRC Initialisation Information to the target RNC. Base on this information, the target RNC prepares the Hard Handover Message ( "Physical channel reconfiguration" (subclause 8.2.6), "radio bearer establishment" (subclause 8.2.1), "Radio bearer reconfiguration" (subclause 8.2.2), "Radio bearer release" (subclause 8.2.3) or "Transport channel reconfiguration" (subclause 8.2.4).

In case 2 two possibilities are defined in order to transmit the relocation message from the target RNC to the source RNC which can be chosen by the source RNC by including or not including the IE "RB Id for handover message" in the IE "SRNS Relocation Info".

In case the IE "RB Id for handover message" has been received by the target RNC in the IE "SRNS Relocation Info", the target RNC should choose the IE "DL DCCH message" and include the DL DCCH message that should be transmitted transparently to the UE by the source RNC. In that case, the target RNC is integrity protecting the message if applicable.

If the target RNC did not receive the IE "RB Id for handover message" in the IE "SRNS Relocation Info" the target RNC should use another choice. In that case, the source RNC should integrity protect the message before transmitting it to the UE if applicable.

The source RNC then transmits the Handover Message to the UE, which then performs the handover.

In the successful case, the UE transmits an XXX COMPLETE message, using the new configuration, to the target RNC.

In case of failure, the UE transmits an XXX FAILURE, using the old configuration, to the source RNC and the RRC context remains unchanged (has to be confirmed and checked with the SRNS relocation procedure).

## 14.12.3 Void

## 14.12.4 RRC messages exchanged between network nodes

### 14.12.4.0 HANDOVER TO UTRAN COMMAND

This RRC message is sent between network nodes to transfer the actual handover command including the details of the radio configuration to be used upon handover to UTRAN as compiled by the target RNC.

Direction: target RNC →source RAT

The message is exactly the same as the HANDOVER TO UTRAN COMMAND defined in subclause 10.2.16a.

### 14.12.4.0a INTER RAT HANDOVER INFO

This RRC message is sent between network nodes to transfer information relevant for the target RNC when preparing for handover to UTRAN.

Direction: source RAT node→target RAT node

The message is exactly the same as the INTER RAT HANDOVER INFO defined in subclause 10.2.16d.

### 14.12.4.1 INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES

This RRC message is sent between network nodes when preparing for an inter RAT handover to UTRAN.

The radio access capabilities for the source RAT and target RAT shall always be included; the radio access capabilities for other RATs may be included if available at the source RAT.

Direction: source RAT→target RNC

| Protocol error information | CV-*ProtErr* | | Protocol error information 10.3.8.12 | | |
| UE inactivity period | OP | | Integer (1..120) | Provides expired time since last u-plane activity. If the integer value x is between 1 and 59, it represents the expired time x in seconds. If the integer value x is between 60 and 119, it represents the expired time (x-59) in minutes. If integer value is set to 120, no u-plane activity has been for 60 minutes or more. | REL-9 |

| Condition | Explanation |
|---|---|
| *ProtErr* | This IE is mandatory present if the IE "Protocol error indicator" is included and has the value TRUE. Otherwise it is not needed. |

NOTE1: To facilitate that network nodes can transparently forward the RRC information received, the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES should include the entire INTER RAT HANDOVER INFO message. The network node, which may not be able to decode the information received, may only append some information to what was received.

NOTE2: The above table does not need to reflect the order of the information elements in the actual encoded message. The order, that is reflected in the ASN.1, should be chosen in a manner that avoids that network nodes need to perform reordering of information elements.

### 14.12.4.2 SRNS RELOCATION INFO

This RRC message is sent between network nodes when preparing for an SRNS relocation or a handover/cell reselection from GERAN *Iu mode*.

With the presence or absence of the IE "RB identity for Hard Handover message" the source RNC indicates to the target SRNC whether the source RNC expects to receive the choice "DL DCCH message" in the IE "RRC information, target RNC to source RNC" in case the SRNS relocation is of type "UE involved". Furthermore the target RNC uses this information for the calculation of the MAC-I.

Direction: source RNC/RAT→target RNC

| Information Element/Group Name | Need | Multi | Type and reference | Semantics description | Version |
|---|---|---|---|---|---|
| **Non RRC IEs** | | | | | |
| >RB identity for Handover message | OP | | RB identity 10.3.4.16 | Gives the id of the radio bearer on which the source RNC will transmit the RRC message in the case the relocation is of type "UE involved". In handover from GERAN *Iu mode* this IE is always set to 2. | |

# Annex B (informative): Description of RRC state transitions including GSM and E-UTRA

This annex contains Stage 2 description of RRC states and state transitions.

## B.1 RRC states and state transitions

After power on, the UE stays in Idle Mode until it transmits a request to establish an RRC Connection. In Idle Mode the connection of the UE is closed on all layers of the access stratum. In Idle Mode the UE is identified by non-access stratum identities such as IMSI, TMSI and P-TMSI. In addition, the UTRAN has no own information about the individual Idle Mode UEs, and it can only address e.g. all UEs in a cell or all UEs monitoring a paging occasion. The UE behaviour within this mode is described in [4].

The UTRA RRC Connected Mode is entered when the RRC Connection is established. The UE is assigned a radio network temporary identity (RNTI) to be used as UE identity on common transport channels.

The RRC states within UTRA RRC Connected Mode reflect the level of UE connection and which transport channels that can be used by the UE.

For inactive stationary data users the UE may fall back to PCH on both the Cell and URA levels. That is, upon the need for paging, the UTRAN checks the current level of connection of the given UE, and decides whether the paging message is sent within the URA, or should it be sent via a specific cell.

## B.2 Transition from Idle Mode to UTRA RRC Connected Mode

The transition to the UTRA RRC Connected Mode from the Idle Mode can only be initiated by the UE by transmitting a request for an RRC Connection. The event is triggered either by a paging request from the network or by a request from upper layers in the UE.

When the UE receives a message from the network that confirms the RRC connection establishment, the UE enters the CELL_FACH or CELL_DCH state of UTRA RRC Connected Mode.

In the case of a failure to establish the RRC Connection the UE goes back to Idle Mode. Possible causes are radio link failure, a received reject response from the network or lack of response from the network (timeout).

### B.2.1 Transitions for Emergency Calls

Refer to [4] for all states and procedures referred to in this subclause. When UE leaves idle mode from state *Camped on any cell* in order to make an emergency call, moving to state *Connected mode (emergency calls only)*, the UE shall attempt to access the current serving cell. If the access attempt to the serving cell fails the UE shall use the *Cell Reselection* procedure. If no acceptable cell is found, the UE shall use the *Any cell selection*. When returning to idle mode, the UE shall use the procedure *Cell selection when leaving connected mode* in order to find an acceptable cell to camp on, state *Camped on any cell*.

## B.3 UTRA RRC Connected Mode States and Transitions

### B.3.1 CELL_DCH state

The CELL_DCH state is characterised by

- For TDD: A dedicated physical channel is allocated to the UE in uplink and downlink or a dedicated physical channel is allocated to the UE in the uplink and HS_DSCH_RECEPTION is set to TRUE.

- A dedicated physical channel is allocated to the UE in uplink and downlink.
- For TDD:
  - E_DCH_TRANSMISSION is set to TRUE and HS_DSCH_RECEPTION is set to TRUE.
  - E_DCH_TRANSMISSION is set to TRUE and a dedicated physical channel is allocated to the UE in the downlink.
- The UE is known on cell level according to its current active set.
- Dedicated transport channels, downlink and uplink (TDD) shared transport channels, and a combination of these transport channels can be used by the UE.

The CELL_DCH-state is entered from the Idle Mode through the setup of an RRC connection, or by establishing a dedicated physical channel from the CELL_FACH state.

In TDD a PDSCH may be assigned to the UE in this state, to be used for a DSCH. A PUSCH may also be assigned to the UE in this state, to be used for a USCH. If PDSCH or PUSCH are used for TDD, a FACH transport channel may be assigned to the UE for reception of physical shared channel allocation messages.

#### B.3.1.1 Transition from CELL_DCH to Idle Mode

Transition to Idle Mode is realised through the release of the RRC connection.

#### B.3.1.2 Transition from CELL_DCH to CELL_FACH state

Transition to CELL_FACH state occurs when all dedicated channels have been released, which may be

a) via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

at the end of the time period for which the dedicated channel was allocated (TDD)

#### B.3.1.3 Transition from CELL_DCH to CELL_PCH state

Transition to CELL_PCH state occurs via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

#### B.3.1.4 Transition from CELL_DCH to URA_PCH state

Transition to URA_PCH state occurs via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

#### B.3.1.5 Radio Resource Allocation tasks (CELL_DCH)

For the DCH, several physical channel allocation strategies may be applied. The allocations can be either permanent (needing a DCH release message) or based on time or amount-of-data.

Resource allocation can be done separately for each packet burst with fast signalling on the DCH

For each radio frame the UE and the network indicate the current data rate (in uplink and downlink respectively) using the transport format combination indicator (TFCI). However, in TDD, DCH and DSCH or USCH may be mapped on different CCTrCHs, their TFCI are totally independent. DCH transmission is not modified by the simultaneous existence of DSCH/USCH. If the configured set of combinations (i.e. transport format set for one transport channel) are found to be insufficient to retain the QoS requirements for a transport channel, the network initiates a reconfiguration of the transport format set (TFS) for that transport channel. This reconfiguration can be done during or in between data transmission. Further, the network can reconfigure the physical channel allowing an increase or decrease of the peak data rate.

For the uplink data transmission, the UE reports the observed traffic volume to the network in order for the network to re-evaluate the current allocation of resources. This report contains e.g. the amount of data to be transmitted or the buffer status in the UE.

### B.3.1.6 RRC Connection mobility tasks (CELL_DCH)

Depending on the amount and frequency of data macrodiversity (soft handover) may or may not be applied.

The RRC Connection mobility is handled by measurement reporting, soft handover and Timing re-initialised or Timing-maintained hard handover procedures.

### B.3.1.7 UE Measurements (CELL_DCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the connected mode measurement control information received in other states until new measurement control information has been assigned to the UE.

### B.3.1.8 Acquisition of system information (CELL_DCH)

FDD UEs with certain capabilities reads system information broadcast on FACH.

TDD UEs reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

## B.3.2 CELL_FACH state

The CELL_FACH state is characterised by:

- No dedicated physical channel is allocated to the UE.
- The UE continuously monitors in the downlink:
  - In 3.84 Mcps TDD and 7.68 Mcps TDD mode:
    - a FACH.
  - In FDD and 1.28 Mcps TDD mode:
    - a FACH; or
    - an HS-DSCHs and optionally a FACH for MBMS reception.
- The UE is assigned a default common or shared transport channel in the uplink (e.g. RACH or common E-DCH (FDD and 1.28 Mcps TDD only)) that it can use anytime according to the access procedure for that transport channel.
- The position of the UE is known by UTRAN on cell level according to the cell where the UE last made a cell update.
- In TDD mode, one or several USCH or DSCH transport channels may have been established.

### B.3.2.1 Transition from CELL_FACH to CELL_DCH state

A transition occurs, when a dedicated physical channel is established via explicit signalling (e.g. PHYSICAL CHANNEL RECONFIGURATION, RADIO BEARER RECONFIGURATION, RADIO BEARER RELEASE, RADIO BEARER SETUP, TRANSPORT CHANNEL RECONFIGURATION, etc.).

### B.3.2.2 Transition from CELL_FACH to CELL_PCH state

The transition occurs when UTRAN orders the UE to move to CELL_PCH state, which is done via explicit signalling (e.g. CELL UPDATE CONFIRM, RADIO BEARER RECONFIGURATION, etc.).

### B.3.2.3 Transition from CELL_FACH to Idle Mode

Upon release of the RRC connection, the UE moves to the idle mode.

### B.3.2.4 Transition from CELL_FACH to URA_PCH State

The transition occurs when UTRAN orders the UE to move to URA _PCH state, which is done via explicit signalling (e.g. URA UPDATE CONFIRM, RADIO BEARER RECONFIGURATION, etc.).

### B.3.2.5 Radio Resource Allocation Tasks (CELL_FACH)

For 3.84 Mcps TDD and 7.68 Mcps TDD, in the CELL_ FACH state the UE will monitor a FACH.

For FDD in the CELL_FACH state the UE will monitor a FACH, if the UE does not support HS-DSCH reception in CELL_FACH state or IE "HS-DSCH common system information" is not included in the system information. Otherwise the UE will monitor the common HS-DSCH(s), and FACH monitoring is restricted to MBMS reception.

For 1.28 Mcps TDD in the CELL_FACH state the UE will monitor a FACH, if the UE does not support HS-DSCH reception or IE "HS-DSCH common system information" and IE "Common E-DCH system info" are not included in the system information. Otherwise the UE will monitor the common HS-DSCH(s), and FACH monitoring is restricted to MBMS reception.

For 3.84 Mcps TDD and 7.68 Mcps TDD, the UE is enabled to transmit uplink control signals and it may be able to transmit small data packets on the RACH.

For FDD and 1.28 Mcps TDD, the UE is enabled to transmit uplink control signals and it may be able to transmit small data packets on the RACH, if the UE does not support Enhanced Uplink in CELL_FACH state and Idle mode, and if IE "HS-DSCH common system information" and IE "Common E-DCH system info" are not included in the system information. Otherwise the UE enabled to transmit uplink control signals and it may be able to transmit data packets on common E-DCH.

The network can assign the UE transport channel parameters (e.g. transport format sets) in advance, to be used when a DCH is used. Upon assignment of the physical channel for DCH, the UE moves to CELL_DCH state and uses the pre-assigned TFS for the DCH.

If no UE dedicated physical channel or transport channel configuration has been assigned, the UE uses the common physical channel and transport channel configuration according to the system information.

For the uplink data transmission, the UE reports the observed traffic volume to the network in order for the network to re-evaluate the current allocation of resources. This report contains e.g. the amount of data to be transmitted or the buffer status in the UE.

When there is either user or control data to transmit, a selection procedure determines whether the data should be transmitted on a common transport channel, or if a transition to CELL_DCH should be executed. The selection is dynamic and depends on e.g. traffic parameters (amount of data, packet burst frequency).

In the TDD mode, the UTRAN can assign USCH / DSCH resources to the UE in CELL_FACH state. When USCH / DSCH resources are assigned, the UE will continue to monitor FACHs, depending on the UE capability. The UE may use the USCH / DSCH to transmit signalling messages or user data in the uplink and / or the downlink using USCH and / or DSCH when resources are allocated to cell and UE is assigned use of those USCH / DSCH.

For the uplink data transmission on USCH the UE reports to the network the traffic volume (current size of RLC data buffers), The UTRAN can use these measurement reports to re-evaluate the current allocation of the USCH / DSCH resources.

#### B.3.2.6 RRC Connection mobility tasks (CELL_FACH)

In this state the location of the UE is known on cell level. A cell update procedure is used to report to the UTRAN, when the UE selects a new cell to observe the common downlink channels of a new cell. Downlink data transmission on the FACH or HS-DSCH (FDD and 1.28 Mcps TDD only) can be started without prior paging.

The UE monitors the broadcast channel and system information on BCCH of its own and neighbour cells and from this the need for the updating of cell location is identified.

The UE performs cell reselection and upon selecting a new UTRA cell, it initiates a cell update procedure. Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and makes an access to that system according to its specifications.

#### B.3.2.7 UE Measurements (CELL_FACH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

By default, the UE uses the measurement control information broadcast within the system information. However, for measurements for which the network also provides measurement control information within a MEASUREMENT CONTROL message, the latter information takes precedence.

#### B.3.2.8 Transfer and update of system information (CELL_FACH)

The UE reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

When the system information is modified, the scheduling information is updated to reflect the changes in system information transmitted on BCH. The new scheduling information is broadcast on FACH and/or on the common HS-DSCH(s) (FDD and 1.28 Mcps TDD only) in order to inform UEs about the changes. If the changes are applicable for the UE, the modified system information is read on BCH.

### B.3.3 CELL_PCH state

The CELL_PCH state is characterised by:

- For FDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL_PCH and URA_PCH state, and for TDD, no dedicated physical channel is allocated to the UE.

  For FDD, if "HS-DSCH paging system information" is included in System Information and the UE does support HS-DSCH reception in CELL_PCH and URA_PCH state, dedicated physical channel may be allocated to the UE.

- For FDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL_PCH and URA_PCH state, and for TDD, the UE selects a PCH with the algorithm specified in subclause 8.5.19, and uses DRX for monitoring the selected PCH via an associated PICH.

- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is included in System Information and the UE supports HS-DSCH reception in CELL_PCH and URA_PCH state, the UE selects a HS-DSCH mapped on the HS-PDSCH with algorithms specified in 8.5.41, 8.5.39 and 8.5.40 for FDD and 8.5.40a for 1.28 Mcps TDD, and uses DRX for monitoring the selected HS-DSCH via an associated PICH.

- No uplink activity is possible.

- The position of the UE is known by UTRAN on cell level according to the cell where the UE last made a cell update in CELL_FACH state.

The DCCH and DTCH logical channels can only be used in this state if HS-DSCH is used and a dedicated H-RNTI is configured and for 1.28 Mcps TDD a dedicated E-RNTI is configured. Otherwise, if the network wants to initiate any activity, it needs to make a paging request on the PCCH logical channel in the known cell to initiate any downlink activity.

#### B.3.3.1 Transition from CELL_PCH to CELL_FACH state

The UE is transferred to CELL_FACH state:

a) by paging from UTRAN (PAGING TYPE1 message)

b) through any uplink access

#### B.3.3.2 Radio Resource Allocation Tasks (CELL_PCH)

In CELL_PCH state no resources have been granted for data transmission. For this purpose, a transition to another state has to be executed.

The UE may use Discontinuous Reception (DRX) in order to reduce power consumption. When DRX is used the UE needs only to receive at one paging occasion per DRX cycle. The UE may be instructed to use specific DRX cycle lengths by the network. The UE determines its paging occasions in the same way as for Idle Mode, see [4].

#### B.3.3.3 RRC Connection mobility tasks (CELL_PCH)

In the CELL_PCH state, the UE mobility is performed through cell reselection procedures, which may differ from the one defined in [4].

The UE performs cell reselection and upon selecting a new UTRA cell, it moves to CELL_FACH state and initiates a cell update procedure in the new cell. After the cell update procedure has been performed, the UE changes its state back to CELL_PCH state if neither the UE nor the network has any more data to transmit.

Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and make an access to that system according to its specifications.

In case of low UE activity, UTRAN may want to reduce the cell-updating overhead by ordering the UE to move to the URA_PCH State. This transition is made via the CELL_FACH state. UTRAN may apply an inactivity timer, and optionally, a counter, which counts the number of cell updates e.g. UTRAN orders the UE to move to URA_PCH when the number of cell updates has exceeded certain limits (network parameter).

#### B.3.3.4 UE Measurements (CELL_PCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the measurement control information according to the system information when no UE dedicated measurement control information has been assigned.

#### B.3.3.5 Transfer and update of system information (CELL_PCH)

The UE reads the BCH to acquire valid system information. For each acquisition, the UE may need different combinations of system information broadcast on BCH. The scheduling on the broadcast channel is done in such way that the UE knows when the requested information can be found.

### B.3.4 URA_PCH State

The URA_PCH state is characterised by:

- No dedicated channel is allocated to the UE.
- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is not included in System Information or the UE does not support HS-DSCH reception in CELL_PCH and URA_PCH state, and for TDD, the UE selects a PCH with the algorithm specified in subclause 8.5.19, and uses DRX for monitoring the selected PCH via an associated PICH.

- For FDD and 1.28 Mcps TDD, if "HS-DSCH paging system information" is included in System Information and the UE supports HS-DSCH reception in CELL_PCH and URA_PCH state, the UE selects a HS-DSCH mapped on the HS-PDSCH with algorithms specified in 8.5.41, 8.5.39 and 8.5.40 for FDD and 8.5.40a for 1.28 Mcps TDD, and uses DRX for monitoring the selected HS-DSCH via an associated PICH.

- No uplink activity is possible.

- The location of the UE is known on UTRAN Registration area level according to the URA assigned to the UE during the last URA update in CELL_FACH state.

The DCCH logical channel cannot be used in this state. If the network wants to initiate any activity, it needs to make a paging request on the PCCH logical channel within the URA where the location of the UE is known. If the UE needs to transmit anything to the network, it goes to the CELL_FACH state. The transition to URA_PCH State can be controlled with an inactivity timer, and optionally, with a counter that counts the number of cell updates. When the number of cell updates has exceeded certain limits (a network parameter), then the UE changes to the URA_PCH State.

URA updating is initiated by the UE, which, upon the detection of the Registration area, sends the network the Registration area update information on the RACH of the new cell.

### B.3.4.1 Transition from URA_PCH State to CELL_FACH State (URA_PCH)

Any activity causes the UE to be transferred to CELL_ FACH State.

a) Uplink access is performed by RACH.

b) by paging from UTRAN ( PAGING TYPE1 message ).

NOTE: The release of an RRC connection is possible in the URA_PCH state. UE in URA_PCH is able to go to idle when triggered by paging type 1 message in case "Release indicator" has the value "Release".

### B.3.4.2 Radio Resource Allocation Tasks (URA_PCH)

In URA_PCH State no resources have been granted for data transmission. For this purpose, a transition to CELL_FACH State has to be executed.

The UE may use Discontinuous Reception (DRX) in order to reduce power consumption. When DRX is used the UE needs only to receive at one paging occasion per DRX cycle. The UE may be instructed to use specific DRX cycle lengths by the network. The UE determines its paging occasions in the same way as for Idle Mode, see [4].

### B.3.4.3 RRC Connection mobility tasks (URA_PCH)

In URA_PCH State the location of a UE is known on UTRAN Registration area level.

In this state, the UE mobility is performed through URA reselection procedures, which may differ from the definitions in [4]. The UE performs cell reselection and upon selecting a new UTRA cell belonging to a URA that does not match the URA used by the UE, the UE moves to CELL_FACH state and initiates a URA update towards the network. After the URA update procedure has been performed, the UE changes its state back to URA_PCH state if neither the UE nor the network has any more data to transmit.

Upon selecting a new cell belonging to another radio access system than UTRA, the UE enters idle mode and makes an access to that system according to its specifications.

### B.3.4.4 UE Measurements (URA_PCH)

The UE performs measurements and transmit measurement reports according to the measurement control information.

The UE uses the measurement control information according to the system information when no UE dedicated measurement control information has been assigned.

### B.3.4.5 Transfer and update of system information (URA_PCH)

The same mechanisms to transfer and update system information as for state CELL_PCH are applicable for UEs in URA_PCH state.

## B.3.5 States and Transitions for Cell Reselection in URA_PCH, CELL_PCH, and CELL_FACH

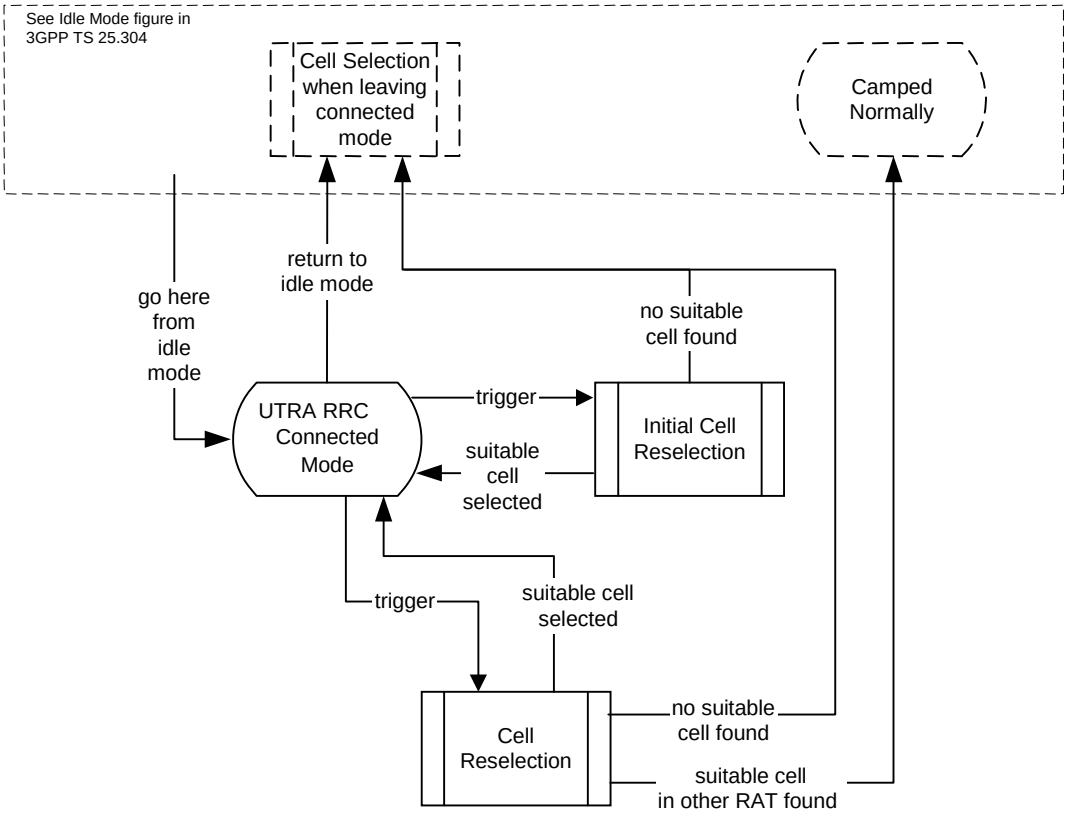

**Figure B.3.5-1: UTRA RRC Connected mode cell reselection for URA_PCH, CELL_PCH, and CELL_FACH**

In some states the UE performs cell reselection procedures. The UE selects a suitable cell (defined in [4]) and radio access technology based on connected mode radio measurements and cell reselection criteria.

Figure B.3.5-1 shows the states and procedures in the cell reselection process in connected mode.

When a cell reselection is triggered, the UE evaluates the cell reselection criteria based on radio measurements, and if a better cell is found that cell is selected, procedure Cell reselection (see [4]). If the change of cell implies a change of radio access technology, the RRC connection is released, and the UE enters idle mode of the other RAT. If no suitable cell is found in the cell reselection procedure, the UE eventually enters idle mode.

When an Initial cell reselection is triggered, the UE shall use the Initial cell reselection procedure (see [4]) to find a suitable cell. One example where this procedure is triggered is at radio link failure, where the UE may trigger an initial cell reselection in order to request re-establishment of the RRC connection. If the UE is unable to find a suitable cell, the UE eventually enters idle mode.

# B.4 Inter-RAT handover with CS domain services

When using CS domain services, UTRAN is using an Inter-Radio access system Handover Procedure and GSM is using a Handover procedure for the transition from UTRA RRC Connected Mode to GSM Connected Mode.

# B.5 Inter-RAT handover with PS domain services

When using PS domain services, the UE can initiate cell reselection from a GSM/GPRS cell to a UTRAN cell and then uses the RRC Connection Establishment procedure for the transition to UTRA RRC Connected mode. It is also possible for the BSS to initiate a UTRA Inter-RAT Handover to seamlessly relocate the UE to UTRAN. In this latter case there is no need to return the UE to Idle Mode (GPRS Packet Idle Mode) and the UE immediately moves to RRC connected state in the UTRAN.

In the case that cell reselection is used, when the RRC Connection is established from Idle Mode (GPRS Packet Idle Mode) the RRC CONNECTION REQUEST message contains an indication, that UTRAN needs to continue an already established GPRS UE context from the CN. This indication allows UTRAN to e.g. prioritise the RRC CONNECTION REQUEST from the UE.

It is possible for a E-UTRA eNodeB to initiate a Inter-RAT Handover to UTRAN to seamlessly relocate the UE to the RRC connected state in UTRAN.

In UTRA RRC connected mode UTRAN may use UE or network initiated cell reselection to change from a UTRAN cell to a GSM/GPRS cell. If the cell reselection was successful the UE enters Idle Mode (GPRS Packet Idle Mode). The UE sends a packet channel request from Idle Mode (GPRS Packet Idle mode) to establish a Temporary Block flow and enter GPRS Packet Transfer Mode. In the GPRS Packet Transfer Mode the UE sends a RA Update request message. The RA Update Request message sent from the UE contains an indication that GSM/GPRS need to continue an already established UTRAN UE context from the CN. This means that the RA Update request is always sent for the transition from UTRA RRC Connected Mode to GSM/GPRS regardless if the RA is changed or not.

Alternatively, the UTRAN may use an Inter-System Relocation (PS Handover) to relocate a UTRA RRC connected UE directly to GPRS Packet Transfer Mode in GERAN.

NOTE: The reason for using RA update instead of a new message is to reduce the impact on the existing GSM/GPRS specification.

The UTRAN may use an Inter-RAT Handover to relocate a UTRA RRC connected UE directly to RRC_CONNECTED mode in E-UTRAN.

# B.6 Inter-RAT handover with simultaneous PS and CS domain services

## B.6.1 Inter-RAT handover UTRAN to GSM / BSS

For a UE in CELL_DCH state using both CS and PS Domain services the Inter-RAT handover procedure is based on measurement reports from the UE but initiated from UTRAN.

The UE performs the Inter-RAT handover from UTRA RRC Connected Mode to GSM Connected Mode first. When the UE has sent handover complete message to GSM / BSS the UE initiates a temporary block flow towards GPRS and sends a RA update request.

If the Inter-RAT handover from UTRA RRC Connected Mode to GSM Connected Mode was successful the handover is considered as successful regardless if the UE was able to establish a temporary block flow or not towards GPRS.

In case of Inter-RAT handover failure the UE has the possibility to go back to UTRA RRC Connected Mode and re-establish the connection in the state it originated from.

## B.6.2 Inter-RAT handover GSM / BSS to UTRAN

For a UE in GSM Connected Mode using both CS and PS domain services the Inter-RAT handover procedure is based on measurement reports from the UE but initiated from GSM / BSS.

The UE performs the Inter-RAT handover from GSM Connected Mode to UTRA RRC Connected Mode.

In UTRA RRC Connected Mode both services are established in parallel.

If the Inter-RAT handover from GSM Connected mode to UTRA RRC Connected Mode was successful the handover is considered as successful.

In case of Inter-RAT handover failure the UE has the possibility to go back to GSM Connected Mode and re-establish the connection in the state it originated from.

# Annex C (informative): Description for the Compressed Coding of Pre-defined configurations included in the INTER RAT HANDOVER INFO message

This annex contains a description of the compressed coding of the IE "Predefined configuration status information compressed" (see subclause 10.3.4.5b) included in the INTER RAT HANDOVER INFO message.

## C.1 Definitions

**Pre-defined configuration set with different value tags:** This is a set of consecutive positions for which pre-defined configurations are stored with different value tags. The set cannot include positions for which no pre-defined configuration is stored.

**Pre-defined configuration list with variable size:** This is the variable sized list consisting of the value tags corresponding to the remaining positions after the "Pre-defined configuration sets with different value tags" have been formed. This will also indicate not stored pre-defined configurations, either explicitly or implicitly (i.e. in the case that there are no more stored configurations until the end of the variable sized list). This is highlighted in figures C.2-1 and C.2-2.

## C.2 Examples of the methodology

From figure C.2-1 it can be seen that there are two "Pre-defined configuration sets with different value tags".

The start position of Set1 is "1" with a list of 7 pre-defined configurations {1, 2, 3, 4, 5, 6, 7}.

The start position of Set2 is "10" with a list of 6 pre-defined configurations {10, 11, 12, 13, 14, 15}.

The "Pre-defined configurations list with variable size" has a start position of 0, and includes all of the pre-defined configurations not included in the sets {0, 8, 9}. The value tag at position 9 is not stored. This does not need to be explicitly indicated in the coding as "not stored" because there are no stored pre-defined configurations positioned after this in the list.

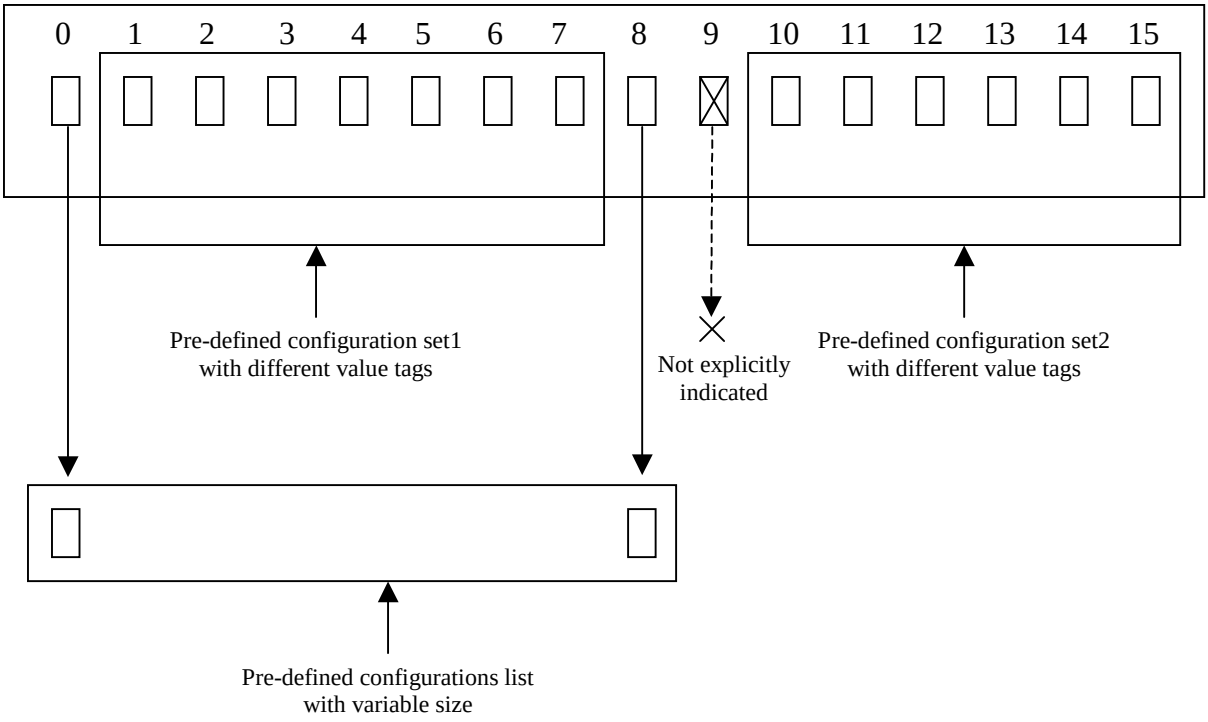

**Figure C.2-1: Example scenario where non-stored pre-defined configurations do not need to be explicitly indicated**

Figure C.2-2 is similar to Figure C.2-1. However in this case for the "Pre-defined configurations list with variable size", the pre-defined configuration in position 8 is not stored. This needs to be explicitly indicated in the coding as "not stored" because there is a stored pre-defined configuration (position 9) positioned after this in the list.

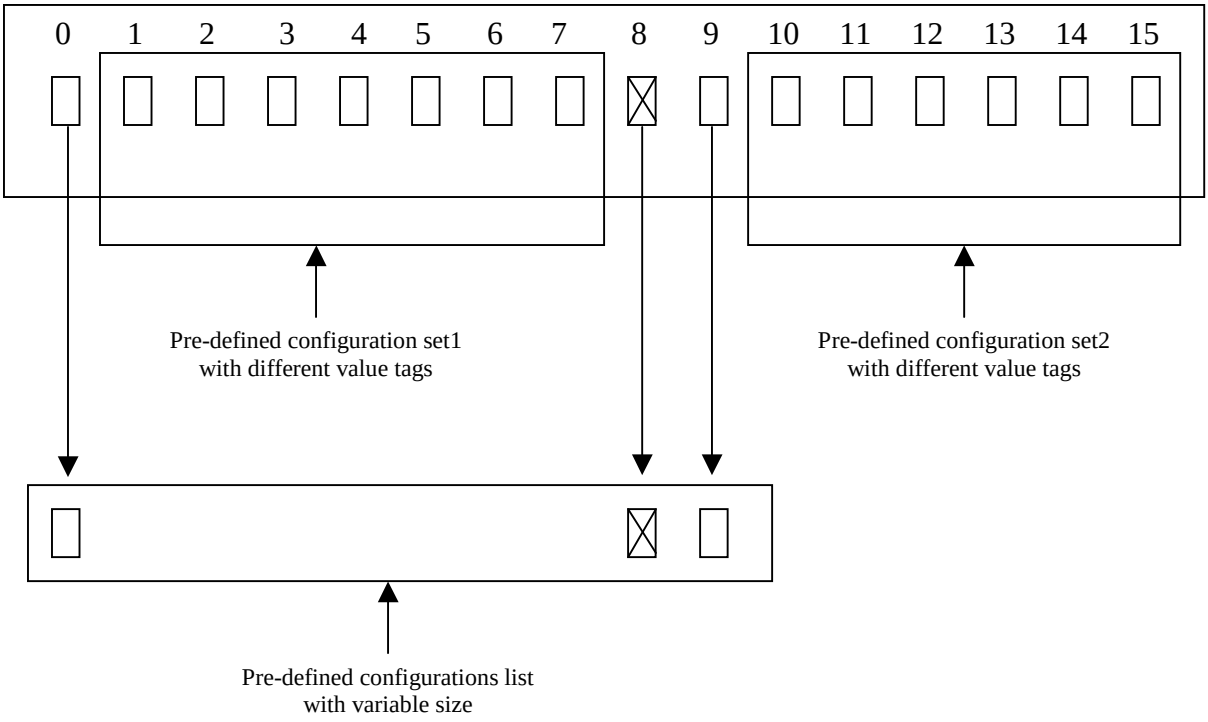

**Figure C.2-2: Example scenario where non-stored pre-defined configurations need to be explicitly indicated**

# Annex D (Normative): Implementation of Domain Specific Access Control (DSAC) in UEs of 3GPP Release 5

UEs of 3GPP Release 5 implementing the domain specific access class control feature but not implementing the network sharing feature shall act on the domain specific access class restriction indicated by the IE "Domain Specific Access Restriction Parameters For PLMN Of MIB" if present, and otherwise apply the access restrictions indicated by the IE "Cell Access Restriction".

# Annex E (Normative): EUTRA Feature group indicators

This annex contains the definitions of the bits in EUTRA Feature Group Indicators.

In this release of the specification the UE shall include the optional EUTRA Feature Group Indicators IE in the UE multi-mode/multi RAT capability IE of the RRC message. For a specific indicator, if all functionalities for a feature group listed in Table E.1 have been implemented and tested, the UE shall set the indicator as "true" (as one), else (i.e., if any one of the functionalities in a feature group listed in Table E.1 have not been implemented or tested), the UE shall set the indicator as "false" (as zero).

The UE shall set all indicators that correspond to RATs not supported by the UE as "false" (as zero).

The UE shall set all indicators, which do not have a definition in Table E.1, as "false" (as zero).

If the optional EUTRA Feature Group Indicators IE is not included by a UE of a future release, the network may assume that all features pertaining to the RATs supported by the UE, listed in Table E.1 and deployed in the network, have been implemented and tested by the UE.

**Table E.1: Definitions of feature group indicators**

| Index of indicator (bit number) | Definition (description of the supported functionality, if indicator set to 'true') | Notes |
|---|---|---|
| 1 (leftmost bit) | - UTRA CELL_PCH to EUTRA RRC_IDLE cell reselection<br>- UTRA URA_PCH to EUTRA RRC_IDLE cell reselection | UE supporting E-UTRAN shall set this bit to 'TRUE' in this version of specification. |
| 2 | EUTRAN measurements and reporting in connected mode | UE supporting E-UTRAN shall set this bit to 'TRUE' in this version of specification. |
| 3 | - UTRA CELL_FACH absolute priority cell reselection for high priority layers | |
| 4 | - UTRA CELL_FACH absolute priority cell reselection for all layers | |

**Clarification for mobility to EUTRAN**

For mobility to E-UTRAN, it is assumed that we have 8 main "functions":

A. Support of measurements and cell reselection procedure in idle mode

B. Support of measurements and cell reselection procedure in CELL/URA_PCH

C. Support of RRC release with redirection procedure

D. Support of RRC reject with redirection procedure

E. Support of EUTRAN measurements and reporting in connected mode

F. Support of handover procedure in connected mode

G. Support of high priority layer measurements and cell reselection procedure in CELL_FACH

H. Support of all priority layer measurements and cell reselection procedure in CELL_FACH

Of the above, all UEs that indicate support of E-UTRA in UE capability signalling "Support of E-UTRA FDD" or "Support of E-UTRA TDD" support A), C) and D) for all EUTRA bands they support.

For B) above, UEs indicates support by the Group 1 indicator bit (if Group 1 is set to "true", it is supported for all EUTRA bands the UE supports).

For E) above, UEs indicate support by the Group 2 indicator bit (if Group 2 is set to "true", it is supported for all EUTRA bands the UE supports). The compressed mode capability for supported E-UTRA frequency bands ('Need for compressed mode') in "Measurement capability extension" is ignored by the network when Group 2 is set to "false". In this version of the specification, the UE supporting E-UTRAN shall set the Group 2 indicator bit to "true".

For F) above, UEs indicate support by the separate UE capability signalling "Support of Inter-RAT PS Handover to E-UTRA FDD/TDD" defined in TS 25.306 (if this bit is set to "true", PS handover is supported for all EUTRA bands the UE supports). This bit can only be set to "true" if the UE has set the Group 2 indicator bit to "true".

For G) above, UEs indicates support by the Group 3 indicator bit (if Group 3 is set to "true", it is supported for all EUTRA bands the UE supports). If the separate UE capability "Support for absolute priority based cell re-selection in UTRAN" is also set to "true", UEs indicate support of high priority layer measurements and cell reselection procedure in CELL_FACH also for UTRA inter-frequency.

For H) above, UEs indicates support by the Group 4 indicator bit (if Group 4 is set to "true", it is supported for all EUTRA bands the UE supports). If the separate UE capability "Support for absolute priority based cell re-selection in UTRAN" is also set to "true", UEs indicate support of high priority layer measurements and cell reselection procedure in CELL_FACH also for UTRA inter-frequency. UEs that indicate support for H also indicate support for G.

# Annex F (informative): Change history
